At Helensburgh eight motorists caught in local traps were fined between £40 and £50 in the aggregate one day last week.

Earl Compton, of the Royal Horse Guards, took a novel way of answering a summons against him for driving his motor-car at an excessive speed in St. James's Park, which came up at Bow Street (London). Instead of appearing himself or employing a solicitor he sent a district messenger with a letter pleading guilty and enclosing a £5 note to pay any fine that might be imposed. Park-keeper Gould said he timed the car as having covered a measured furlong at the rate of 21 miles an hour. When Lord Compton was stopped and told the pace he had been driving at he remarked: "Cannot deny it. How is it done?" The system of timing the car was explained to him, and he expressed himself satisfied. The magistrate imposed a penalty of 40s. and 2s. costs, the balance of the £5 note being returned to the messenger.

Four motorists have been fined £23, in addition to costs, at Lytham for exceeding the speed limit on the North Drive, St. Anne's.

The Kingston justices on Thursday week established a record in the imposition of fines upon motorists for exceeding the speed limit. In the first court thirteen defendants had their cases dealt with in nine and a half minutes, the fines and costs amounting to £58 13s. 6d., which is at the rate of about £6 a minute.

On Saturday, at Horsham, five motorists were fined £2 each and costs for exceeding the legal limit at Cowfold; fines amounting to £26 10s. were also imposed on motorists at Guildford.

Thirteen motorists were fined at the Arundel County Bench on Monday for exceeding the legal limit; on the same day six cases at Horsham added £15 to the county revenues.

DISMISSALS.

Some time was spent by the Guildford magistrates on Saturday in the case of Mr. A. Campbell Swinton, of 66, Victoria Street, S.W., who denied that he drove a car to the danger of the public at Thursby on April 16th. The police stated that the speed was 48½ miles per hour, but admitted that the road was clear for over a mile, and that there was no one on the road. Defendant, who said he was an expert on motor traffic and had given evidence before Royal Commissions on the subject, estimated the speed at from thirty to thirty-five miles an hour. The case was dismissed.

At Westminster Police Court, on the 14th inst., Mr. Staplee Firth appeared for Mr. R. W. A. Brewer, who was summoned by the police for driving in a manner dangerous to the public. The gist of the case was as follows. On May 2nd the car was stopped for passing round a refuge, which was situated in a somewhat peculiar position at the entrance of a road which branched out of a main road. Mr. Firth made a particular point of the fact that in the ordinary way this refuge may have been taken as a dividing point between traffic crossing the main road from either the north or south end in order to enter the side road, and his argument was upheld by the magistrate, who dismissed the case with the remark that he considered that Mr. Brewer had endeavoured to take the most reasonable course in passing this refuge.

THE LONG DISTANCE TRAP.

At the Haywards Heath Petty Sessions, on Monday, several cases were before the Justices, arising out of the new system of long distance motor-car timing on the London and Brighton road during the Easter holidays. Mr. C. F. Gill, K.C., and Mr. W. W. Grantham (instructed by Mr. Lawson Lewis) appeared for the prosecution, and Mr. Marshall Hall, K.C., and Mr. Rowland Harker (instructed by Messrs. Parkes and Mackin, solicitors for the Automobile Association) for the defendants.

Mr. Marshall Hall said he was prepared to deal with the cases against Mr. Warwick Wright and Mr. Powell, but in the other cases the summonses were only served on Friday last, and he asked that they might be deferred. Mr. Gill, K.C., opening for the prosecution, said Major Lang, the Chief Constable for East Sussex, had received many complaints from many different sorts of users of the highway, and he had from time to time made tests over measured furlongs, and a great number of prosecutions had resulted. It had been suggested that these tests were rather a hardship, and that motorists' times should not be tested over so short a distance. It had been determined that the tests should be made over a distance of thirteen miles, and the selected days had been Good Friday, Saturday, and Monday, last Easter. The result had been that eighty summonses had been taken out. Mr. G. D. Powell was summoned for an average speed of thirty miles, between Patcham and Slaughtam, on April, 17th and for an average speed of thirty-one miles the same evening, between Slaughtam and Patcham. P.C. Waghorn, Lewes, said he and P.C. Terry were stationed at a cottage at Patcham on Good Friday, Saturday, Sunday and Monday. They had to take the numbers of the cars from the back registration plates. When defendant told witness he was driving on Good Friday, he also said he generally drove his car. Witness could not personally see who was driving. P.S. Budgen said he was with P.C. Pilbeam on Good Friday, and after comparing watches, they were stationed about a quarter of a mile south of the Slaughtam cross roads. He recorded the time defendant's car passed him.

Mr. Marshall Hall said he was authorized by the Automobile Association to say it was the aim and object of all people interested in motoring to see that the speed limit was not abused and that motoring was exercised at the minimum of inconvenience to other people.

who used the roads. The weakness of that class of trap (he did not use the word at all offensively) was demonstrated by the evidence before the Bench. It would be perfectly useless against the class of men it was intended to catch—the "scorcher"—whose repression was the aim and object of the various associations, as it was that of the police, and the man whom all respectable motorists abominated. That man would be immune from discovery from the very nature of the "trap," because, were it not for the admission of defendant himself, there would be no evidence upon which to identify him as the driver of the car, and so bring a case before the Bench for their consideration. The man who deliberately intended to drive through a trap of this description had only to put on a pair of motor-goggles to conceal his identity and refuse to give any information to incriminate himself. The defendant had given the police every information. But supposing Waghorn, on putting the inquiry, "Were you driving on that occasion?" was met with the answer "That's your part of the business to find out," the police would have had no evidence as to who was driving the car. The police had to prove that there was no change of driver during the distance, for if there were no evidence that one man was driving at the speed alleged, the charge of reckless driving against that individual could not be sustained, and the very class aimed at would escape. It was in the interests of the Automobile Association to see that the speed limit was not recklessly broken. Although Section 9 existed there was no obligation to enforce that section. There would be places where twenty miles an hour would be perfectly safe, but at other places four or five miles would be a dangerous pace, and Section 1 should be enforced. He would ask Major Lang, and put it forward as a serious suggestion, that, if he and other Chief Constables would submit to the officials of the Automobile Association the places within which extra caution should be taken by motorists in driving, the Association would do everything they could to enforce a safe speed upon their members, and others. They would patrol these places and warn motorists to be extra cautious, and they would undertake to furnish the Chief Constables with all information in their possession as to motors passing over those portions of road. He would ask the Bench to treat the case before them as a test case and inflict a nominal penalty.

Mr. Gill said Major Lang was not in a position to enter into any arrangement, but he was very glad to see the way in which the case had been approached.

Mr. Warwick Wright, Marylebone Road, London, W., was summoned for a speed averaging twenty-six miles, seven furlongs, twenty yards per hour, between Patcham and Slaugham, on April 17th, and for a speed averaging twenty-six miles between Patcham and Slaugham on April 20th.

The Chairman announced that the penalties in each case would be £5, and the costs £55s. on each summons. As regards the points raised as to a consultation between Major Lang and the Automobile Association the chairman said they did not consider it a point upon which they could express an opinion, and that it was a matter that rested entirely with Major Lang and the Association.

At Reading Police Court, on Tuesday, Edwin Feis, and Alfred Ellis, chauffeur, were summoned for driving motor-cars on the Bath road, the former at a speed of thirty-one miles an hour, and the latter at over twenty-six, in what is known as "the long distance trap." Mr. Rowland Harker, who defended on behalf of the Automobile Association, said that the only evidence as to the identification of the defendants was that when the police-sergeant served the summons they made voluntary admissions. That, however, he contended, was not evidence. The chairman of the magistrates pointed out that it would be difficult for the police to stop motor-cars which were exceeding the speed limit. If an officer in uniform stood at either end of the "trap," the motorists would naturally slow down. Feis was fined £4 and costs, and Ellis £3 and costs.

LIABILITY FOR COLLISION.

THE appeal in the case of the City of London Electric Lighting Company, Ltd., against the Vanguard Motor-bus Company, Ltd., was decided on the 15th inst. The plaintiffs had claimed £75, the cost of repairing an electric light standard and lamp in Threadneedle Street, damaged by the skidding of motor-buses belonging to the defendants, owing to the negligent driving, as was contended, of their servants. Mr. Justice Ridley had held that there was no evidence to go to the jury of negligence on the part of the defendants as to the accident on June 25th, but he left to the jury the question whether there was any negligence in the other accident, and whether the omnibuses of the defendants were a nuisance in law. The jury found a verdict for the plaintiffs, on the ground that there was negligence on the part of the defendants' driver on the occasion of the accident on June 15th, but that the vehicle was not a legal nuisance. Judgment was entered for the plaintiffs for £43 3s. 4d., being the amount attributable to the accident.

After hearing counsel the Appellate judges on the 15th intimated that in their view the verdict was unsatisfactory, and they must set it aside as a whole and order a new trial. They directed that the costs of the first trial and of the appeal should be left to be dealt with by the judge at the second trial.

THE Director of the Customs of Teheran, Persia, has recently bought an 18-h.p. Minerva car.

ROAD REPORTS.

LONDON.—The General Purposes Committee of the Paddington Borough Council have arrived at the conclusion that "the speed limit of motor vehicles throughout the County of London should be reconsidered with a view to the police authorities being empowered to exercise greater control."

HEATHFIELD.—Several improvements in widening the Heathfield roads and removing some extremely awkward corners thereon have been sanctioned by the Hailsham Rural Council.

WORTHING.—The police have been timing motor-cars on the Upper Arundel Road at Worthing. Several motorists who have exceeded the speed limit have lately found their way to the Worthing Petty Sessions in consequence.

RICHMOND.—The Surrey County Council has decided to make a contribution of £1,475 to the Richmond Corporation towards the removal of Chancellors' Corner, an obstructive property at the bottom of Richmond Hill.

DEVON.—We hear that in several smaller towns in Devonshire the authorities are arranging to tar the main roads for the forthcoming touring season. The authorities at Exmouth have been the first to do this.

WANDSWORTH.—Reporting upon his experience with tar macadam paving, Mr. P. Dodd, the borough engineer of Wandsworth, says that the advantages in roads of medium traffic are that it is cleaner, more silent, costs less in scavenging, reduces the quantity of mud to a minimum, and requires less watering. It is, however, not suitable for roads with heavy or 'bus traffic. The disadvantages are greater initial cost, it is slippery in frosty weather, and the work, to be successful, must be done in fine warm weather.

MIDLOTHIAN.—The Midlothian County Council have had before them a report from their Road Board to the effect that on the three miles

A White Steam Lorry for Sumatra.

This has been supplied to a mining firm in Sumatra by Mr. Frederic Coleman, the European representative of the White Company. The vehicle has a standard 30-h.p. chassis with a 10 ft. 2 in. wheelbase, the lorry body having been built by Messrs. Cann, Ltd., of Camden Town, N.W.

of road on which motor-buses travel an additional outlay of £678 during the last two years has been incurred.

WOKING.—It is proposed by the County Council to suggest the ten-mile speed limit for motor-cars applicable to Chertsey Road and High Street, which are the most congested business thoroughfares of the town. The Urban Council are considering a proposal to adopt road-tarring as a means of minimizing the amount of dust raised in the principal streets.

LANARKSHIRE.—At a meeting of the Lanarkshire County Council held in Lanark last week, proposals from the district committees of the Lower and Middle Wards for the imposition of ten miles an hour limits in villages and populous places were negatived by very considerable majorities. In view of this discussion, Councillor John Adam, the chairman of the Scottish A.C., arranged beforehand to have a considerable number of the members of the Council driven to the meeting on motor-cars, in order that they might have some experience of various rates of speed and of the control of cars. Messrs. David Provan, Geo. F. Paisley, John H. Rose, and Robert J. Smith assisted him in this matter.

HENDON.—At the Hendon Rural District Council Mr. C. H. Wainwright called attention to the great danger that existed at the junction of the Edgware and Watford roads by the absence of notice boards warning motorists and others of the presence of the electric trams. The stopping-point being round the angle, the trams were not seen until the motorists were turning the corner. It was agreed to communicate with the County Council of Middlesex on the subject.

THE British Petroleum Company, Ltd., advise us that the price of their "Shell" motor spirit and 760 spirit was reduced on the 18th inst. by one halfpenny per gallon.

FORTHCOMING EVENTS.

MAY.

- 21st (Th.)-25th.—Reliability Trial of the Irish A.C.
 23rd (Sat.).—Clipstone race meeting of the Notts A.C.
 Meeting of the Yorkshire A.C. at Helmsley.
 Meet of the Motor Union at Bournemouth.
 Motor Cycling Club—Albert Brown Challenge Cup for cars.
 Meet of the Sheffield A.C. at the Royal Oak at Edwinstone 2.30 p.m.
 S.r C. B. Locock, Bt., will entertain the Essex C.A.C. at Braintree.
 Meet of the Kent A.C. at the Mote House, Ightham.
 Cheshire A.C. meet at Acton Park, Wrexham, 3.30 p.m.
 Essex M.C. Inter-club Competition with W. Essex A.C.
 I.L.A.E.: Graduates' Section. Visit to the Clement-Talbot Works, 2.30.
 Midland A.C. closed hill climb, Shelsley Walsh.
 24th (S.).—Cardiff M.C. run to Whitechurch.
 Richmond M.C.C. hill climb, Duncton Hill.
 Southern M.C. run to Rickmansworth; meet, Green Man, Putney Heath, 11 a.m.
 Worcestershire M.C.C. run to Bridgnorth, 3 p.m.
 25th (M.).—Industrial Vehicle Competition of the A.C. de France.
 26th (Tu.).—Motor Gymkhana on the links of the Ross Golf Club at Alton Court.
 Meet of the Cambridge A.C. at Croxton Park.
 27th-(Sat.) 30th.—International Aeronautical Federation, Royal United Service Institution, Whitehall.
 28th (Th.).—Visit of the Aero Club to Aldershot.
 30th (Sat.).—Meet of the Herts C.A.C. at Hatfield Park.
 Devon and Cornwall A.C. hill climb at Moorahop, Tavistock.
 Lancashire A.C. speed judging contest.
 Open hill climb of the Auto Cycle Union up the Sutton Bank, in conjunction with the Newcastle and District Motor Cycle Club.
 A.C. of N. Wales meet at Wygfair, St Asaph.
 A.C.U. open hill climb, Sutton Bank, near Tairak.
 Birmingham M.C.C. run to Weston Bank.
 Blackheath A.C. reliability run.
 Coventry M.C. touring reliability run to Holyhead and back.
 Derby and District A.C. speed-judging competition.
 Herts C.A.C. meet at Hatfield Park.
 Manchester A.C. run to Vale Royal.
 N.W. London M.C.C. run to the Whitehorse, Shenley.
 31st (Sun.).—Southend M.C. run to Saracen's Head Hotel, Dunmow.
 Penalty run of the Southern M.C. to Goring.
 The Lincolnshire Motor Cycle Club's open-air service in the Dukeries.

THE MOTOR UNION TOUR IN FRANCE.

THE following is an outline of the arrangements for the organised tour of the Motor Union to the Valley of the Loire at Whitsuntide. Cars will be embarked at Southampton and will rendezvous at Havre, where the Customs formalities will be seen to by the local agent of the Union. On the Friday morning (June 5th) the run will be to Rouen (56 m.), lunching at Caudebec on the way. The second day's run will be to Chartrea (81 m.) via Evreux. On the third day the Loire Valley will be reached at Orleans (46 m.), and the fourth day will see the party to Blois (50 m.) having previously lunched at Chambord. As the fifth day's run a tour from Blois to the chateaux of Taley and Beaugency has been arranged, returning to Blois in the afternoon (66 m.). A short run to Tours (37 m.) is planned for the sixth day. A circular run will be made on the seventh day from Tours to the chateaux of Chenonceaux, Montrichard, and B'ere, returning to Tours in time for dinner (51 m.).

Arrangements for the eighth day comprise a run to the castles of Loches (the State prison of Cardinal Mazarin) and Ligneil (62 m.).

Leaving Tours on the ninth day, the members will continue down the Valley of the Loire to Chinon (32 m.), visiting the chateau of Azay le Rideau on the way, and arriving at Chinon. On the tenth day the homeward route will be begun, the run being to Le Mans (74 m.), via Chateau la Vallière, where are the ruins of the chateau of Vaujours. For the eleventh day there will be a short run to Alençon (31 m.), but it would be advisable to continue to Caen, a further 63 miles. The opportunity could then be taken to run over to Bayeux, in the cathedral of which town is the famous Bayeux tapestry. Le Havre (79 m.) will be the destination on the thirteenth day. The party will be met by the local agent of the M.U., who will see to the cars being embarked.

It is estimated that the average daily cost per head for hotel expenses may be taken as 15f. (12s.)—that is to say, £8 10s. for the entire duration of the tour. Arrangements will be made for the supply of petrol, but it is advisable that all cars should carry two spare tyres. For the benefit of members owning high-powered cars, and who desire to make longer runs, more ambitious schedules, including other interest-

ing sites, will be arranged. The charge for joining the tour is £1 1s. per head, to cover the cost of making arrangements, organisation, courier, &c. The tour will not be undertaken unless at least forty persons (say, twelve cars) join.

INTERNATIONAL TOURING CAR TRIAL.

It was decided that the following addition to the supplementary regulations be put in under Regulation 19: "All tyres must be changed before the Brooklands race, and only rubber tyres will be allowed during the race."

Also that the following addition be put in under Regulation 17:—"The observer appointed at the commencement of the trial shall not be changed during the trial, except in the case of illness or in such other case as may be approved by the judges."

Benz Motors have changed their entry from Class 7 to Class 4.

BUSINESS NEWS.

THOSE who intend spending their Whitsuntide holidays touring the countryside will do well to get into communication with the Daimler Hire Department, 112, Wardour Street, Oxford Street, London, W., immediately, as, although it is yet three weeks to the vacation, enquiries for cars are being received by every post.

MESSRS. HARVEY FROST AND COMPANY, LTD., have issued an illustrated catalogue of their vulcanizing appliances, which can be had on application to 27, Charing Cross Road, London, W.C. The list is replete with particulars and prices of all the various H.F. vulcanizers, from the smallest to the large vulcanizing plants, and should be regarded as indispensable for purposes of reference by every motorist.

As there will undoubtedly be a very large contingent of British motorists desirous of viewing the A.C.F. Grand Prix races, Weigel Motors (1907), Ltd., have made arrangements with Messrs. Thos. Cook and Sons, the well-known tourist agents, to issue return tickets from London to Dieppe, July 3rd, 4th, 5th, and 6th, by day and night services, at the fare of 30s. first-class, and 22s. second-class, with facility for returning by both services up to and including the night service on Wednesday, July 8th. For the accommodation of passengers going over to Dieppe by the night service on Monday, July 6th, arrangements have been made for the passengers to remain on board the steamer until 5.30 on Tuesday morning if desired. Anyone desirous of obtaining these tickets should apply to Messrs. Thos. Cook and Sons, Ludgate Circus, E.C.

THE Secretary of the Cab Proprietors' Federation, which represents 8,000 of the 10,000 horse-drawn cabs in the Metropolitan Police District, is authority for the statement that more than 2,000 horse-drawn cabs have been taken from the London streets during the last twelve months.

A MASS car, fitted with Henderson patent wheels, has been entered for a 1,000 miles long distance trial in order to make an independent test of these wheels, and this trial will take place under the auspices of the Scottish A.C. within the next week or two.

A NEAT little guide to Crickhowell has been issued by Mr. W. Howells, of Victoria House, in that interesting centre of the Garden of Wales. This is one of the "borough" guides that are published for 300 towns in the United Kingdom by Mr. E. J. Burrow, of Cheltenham.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

To insure insertion communications and contributions must be in the Editors' hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case, otherwise no liability will be accepted.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment for same is directly specified in forwarding, and the terms arranged before publication.

THE Motor-Car Journal.

VOL. X.]

LONDON, SATURDAY, MAY 30, 1908.

[No. 482

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

THE many motorists who will visit the Franco-British Exhibition at Shepherd's Bush will feel grateful to the Automobile Association for their enterprise in arranging for garage facilities. They have secured extensive accommodation for the cars of members almost directly opposite the Wood Lane entrance to the Exhibition, and affording standing room for about 120 automobiles at one time. There is a separate exit from the grounds,

so that confusion will be avoided when the cars are driven through the open garage to a public street at right angles to Wood Lane. A staff of A.A. officials as well as a mechanic will be in daily attendance from 11 a.m. to 11.30 p.m., and the presence of the Association's badge on the car will be an indispensable qualification for securing admittance to the garage. This advantage is exclusively confined to the members of the A.A., and testifies to the earnest way in which the policy of the committee to be of service to the individual motorist is being pursued.

Jaunting Car V. Motor 'Bus.

THE jaunting car of Ireland is not likely to be easily set aside, although it is apparent that the jarveys of Dublin feel they have a strong competitor in the motor-'bus. During recent years the Dublin car driver has been severely hit by innovations in traffic which have provided passengers with less vibration and more speed than is associated with the national vehicle of the Emerald Isle. First the tramcar and then the loop line railway linking up all the termini in the city were great blows to the prosperity of the jarveys. Now the motor-'bus has appeared, and so great was the enmity aroused by its introduction that, having exhausted their stock of caustic comments on its appearance, a band of jarveys recently turned on the driver, who had many marks of their attention when he was later carried to the hospital. Several summonses and cross-summonses followed the mimic battle between the jarveys and the motor-'bus men, and although the former may have won on that encounter, we are afraid they will in the long run find themselves on the losing side.

The Motor Union at Bournemouth.

THE provincial meeting of the Motor Union at Bournemouth on Saturday last took place in glorious weather, and was, perhaps, one of the most pleasant functions which has lately taken place in the automobile world. With that excellent organisation for which the Motor Union is well known, and combined with the hearty co-operation of the local motoring club, nothing less than success was anticipated. An additional attraction to the "Meet" was the first public appearance of the new Chairman of the Union, Mr. Joynson Hicks, M.P., at an automobile gathering. This gentleman, by his *bonhomie* and evident strong personal interest in Motoring, soon gained the goodwill of all who came in contact with him, and he was certainly the "man of the hour." Mr. Rees Jeffreys, the ubiquitous Secretary, was well to the front, as was also Mr. Ballin Hinde, the popular Treasurer. This enthusiastic motorist was regarded with

envious eyes when it was known that he was the keeper of the invested funds of the Union, now amounting to the handsome sum of £11,000. Mr. G. T. Langridge paid a flying visit on a Swiss-built chassis without mud-guards, and provided with an egg-box for a seat. Mr. E. C. Dodd, the Chairman of the committee, and Mr. Moresby White were among those present, while the popularity of Lord Montagu of Beaulieu, the President of the New Forest A.C., received cordial demonstration when he rose to respond to a toast. The various events of the day passed off with aplomb, and the dinner, at which there was a good sprinkling of ladies, was one of the best we have enjoyed in automobile circles, and reflected great credit on the manager of the Mont Dore Hotel, Mr. W. H. Kneese. The after-dinner oratory was of the high standard that is associated with functions held under the auspices of the Motor Union, the badge of which was well in evidence on cars in and about Bournemouth during the day.

A Bad Policy.

IN the early days of the motor movement the way in which, for a season, owners of motor-cars ignored Brighton in consequence of the number of traps with which the road from London was infested served its purpose in demonstrating to the Brighton people the folly of "killing the goose that lays the golden eggs." We understand that quite spontaneously similar action seems to have been taken by many motorists towards the southern watering resorts since Easter. The operation of the "long-distance trap" has neither brought peace on the road nor prosperity to the hotels at the end thereof. Doubtless those who are interested in the welfare of Brighton and other places in the vicinity will not be long ere they bring to the notice of the authorities the fact that people are not likely to wittingly enter towns to reach which they have to run the gauntlet of police espionage on the road.

Heavy Motor-cars at Limerick.

AT Limerick, Mr. Saunderson, on behalf of the Local Government Board for Ireland, has held an enquiry into a request from the Corporation of the town that a regulation should be made limiting the speed of heavy motor-wagons to 2½ miles an hour while passing through certain streets of the city. In support of the contention of the Corporation the City Surveyor gave it as his opinion that the speed of steam motor vehicles at present in use in Limerick was excessive and certainly more than five miles an hour. An ex-town councillor gave evidence to the fact that his house had suffered seriously owing to the vibration caused by the motor vehicles passing round the old portion of the town; but on the other hand it was admitted by the City Surveyor that tests made in some dilapidated houses did not indicate any extraordinary vibration—in fact a pencil placed perpendicularly on a window sash remained in position in front of the house. Several engineers opposed the application and evidence was also given to a similar effect on behalf of Messrs. Cleeve Bros., who use a large number of steam motor vehicles in the ordinary course of their business. We believe this is the first occasion on which any attempt has been made to bring the limit of the speed of heavy motor-cars below the "five miles an hour if the car exceeds in weight three tons unladen, or has any axle with an axle-weight exceeding six tons, or draws a trailer."

An "Accumulator."

THE warning to motorists when leaving their vehicles standing unattended on the public highway not to allow loose articles to remain on the seats has been given with such frequency that those who are careless in this respect really deserve to suffer loss. But a correspondent brings to our notice a novel form of theft which proves a growing knowledge of technical matters as well as some criminal courage on the part of an unknown person. A motor-van was standing in one of the side turnings in Holloway Road, N., when the driver left the vehicle a few minutes. On trying to re-start the car he was greatly surprised to find that the machinery would not act, and after a short examination he discovered that the box containing the accumulators had been opened and the contents stolen. In view of the extension of automobile knowledge to all classes of the community, motorists should not trust too much to chance.

The New Bridge at Littlehampton.

MOTORISTS along the South coast will hail with joy the opening of the new bridge over the river Arun at Littlehampton, which now replaces the intensely slow and dangerous ferry that has long been the bugbear of every traveller along that portion of Sussex. To cross by the old ferry involved at best a delay of fifteen minutes, and often, when one missed the

Sketch Map showing the saving in distance effected by the new Route through Littlehampton.

boat and had to wait for its return, three-quarters of an hour had elapsed before one was safely over, with the result that many preferred to take the longer and more hilly route *via* Arundel. The new bridge, which has been built at a cost of £27,000, and which was opened on Wednesday by the Duke of Norfolk, opens up, as will be seen from the accompanying sketch map, what is practically a new and direct coast route for those travelling by road between Brighton and Worthing, and Bognor, Caichester, and Portsmouth. The general view of the bridge given on page 289 shows that it is a very novel structure, as the whole of the big main span, 188 ft. long, swings round to let ships pass through, the machinery being actuated by a 10-h.p. petrol engine. The span can be completely swung round in 1½ minutes.

Beyond the Fringe.

THE motor-car is probably responsible for some of the empty houses that now cause London estate agents to pause and wonder whether the city is over-built. People are going further from the centre of the City, and a number of hamlets within a radius of twenty miles have become great populated areas, many of the new residents insisting on the provision of motor houses and accommodation for cars. The week-end motorist does not care about tram lines and crowded streets, and if he can find residence so that runs into the country can be taken without the discomfort of winding through streets of con-

gested traffic, it is all to his advantage. But what London loses in rateable value the nation gains in the physical well-being of its people who are able to maintain a motor-car.

A Trial Innovation.

THIS has been the week of the Irish Trials over a course of 806 miles of varied country in equally varied weather. One little point in the organisation deserves recognition, viz., that by which late comers whose unpunctuality was a matter of a few minutes only were not barred from the contest, but were fined £1 per hour's delay up to 6 p.m. This actually secured £4 for the coffers of the club, and did not baulk any from their intention to compete. The latitude, hedged as it was by a monetary consideration, was wisely conceded in view of what has previously proved a hardship to some competitors in the Scottish and Tourist Trophy Trials.

Holidays by Motor-Car.

ONE of the most useful features of the Trials nowadays is the impetus they give to motorists to use their cars when on holiday bent. Thus the Scottish trials have done much to open up the Highlands as a motor-touring land, and a chief concern of the Irish A.C. in the event it has just successfully negotiated has been to make more widely known the pleasures of touring on the Irish roads. Some are good, many are bad, and there is a large proportion that might be assigned to the category of the indifferent. The influence of an organised trial is greatest on these latter, for many are capable of distinct improvement with only a little expenditure. And the authorities may be expected to prove susceptible to the undoubted national advantage that would accrue from a proper maintenance of the highways.

Trials Abandoned in India.

IN view of the frequent questionings in this country as to the need of further official trials of cars such as are to be held within the next few weeks, some remarks that fell from the chairman's lips on the occasion of the annual dinner of the Motor Union of Western India are of more than passing interest. The Hon. G. O. Dunn has done much to further the motor movement in the great Dependency, and has worthily fulfilled his office of chairman of the Union. He announced, on the occasion referred to, that the committee had definitely decided to organise no more trials such as have recently been held. They have had their day, and he went on to observe that "there is so little to choose nowadays between the best cars of different makes that such trials have become unnecessary." Much remains for the motoring associations of India to do in other directions. There is opportunity for improvement on the highways, particularly below the ghats in the neighbourhood of Bombay. One motor-retarding force in India is the system of tolls—expensive and irritating seeing that, as carried out in the Bombay and Madras presidencies, it is used as the method of raising funds for the upkeep of the roads. So that the Motor Union of Western India, having abandoned its trials, can now set to work resolutely to raise the standard of travel generally throughout its area.

The Thirteen Days' Trial.

WE are now within easily measurable distance of the long Trial, and yet there is no enthusiasm for the event. Several of the entrants are reported to be sadly contemplating their self-imposed fate, and many feel that had they confined their activities to the Scottish section of the event it would have been trial enough. As it stands it spells tribulation for many who will participate in its wearisome length. Even the prospect of a hurried scamper round Brooklands—entering, of course, by the new way that will have to be provided for competing vehicles in consequence of the decision in the courts—does not quicken the languid interest of those who entered in haste and are already

repenting. After the preliminaries have been got over in the London garage the Trial will start on Thursday week, the 11th prox., for Nottingham; on the following day the run will be to Newcastle-on-Tyne, and then on the Saturday the journey will be taken to Glasgow for the Scottish section, which, on the 15th, 16th and 17th, will follow the track of last year's Scottish Reliability Trial, the headquarters being Aberdeen, Inverness and Pitlochry respectively. On the 18th a run will be taken to Oban, whence the journey will be to Windermere for the week-end. On the 24th the trip will be to Church Stretton, and then the last stage will be to Brooklands on the thirteenth day of the Trial.

The City's Nerves.

APPARENTLY the motor-'bus is getting on the nerves of City men, and the petition addressed to the Lord Mayor of London by some of the leading bankers, financiers, and steamship and insurance companies is a notable proof of the impression made by the motor-'bus that noisily makes its way along. True, the vehicle is more silent to-day than it was a year

Clerk if he would allow his fifty-guinea prize to be given to the best car in this respect in a long-distance trial carried out under the observation of the Club. Mr. Dugald Clerk has agreed to this arrangement, and a further recommendation is now to be made that competitors may at their option enter for the prize as part of a long-distance trial, or for a special one-day trial of about 100 miles on the road.

The Streets of Great Cities.

IN the Council Chamber of one of the most important municipalities in the country we recently had a chat with a gentleman who, as chairman of the Highways Committee, realises more than the average municipal expert the advantage that motor traffic will be to the authorities responsible for keeping clean the streets of great boroughs. In an early issue his views will have due prominence in our columns; meanwhile, suffice it to say that he is of opinion that the death-knell of the horse has been sounded, and that the time is coming when instead of new roads being made for motorists the old thoroughfares will be improved with a view of meeting the conditions that

The new Swing Bridge over the River Arun at Littlehampton, and the Old Ferry which it has replaced.
The new bridge, which was opened on Wednesday last, opens up a new coast route between Portsmouth, Worthing, Littlehampton, Bognor and Chichester.

ago, but the indictment is still comprehensive, including the "speed, noise, noxious fumes, and escape of oil." It is urged that the narrow winding streets of the City were never designed for such traffic, that the noise and vibration are detrimental to the health and comfort of those who sit at desks in the vicinity of motor-'bus routes, and that "concentrated thought and attention" has been banished from the congested districts served by the motor-'bus. Hence the demand for a meeting at the Mansion House, when denunciatory speeches will be made—and the motor-'bus subsequently pursue the improving tenour of its way.

Exhaust Gases.

AFTER the Vapour Emission Competition promoted by the R.A.C. in March of last year, Mr. Dugald Clerk, one of the judges, offered a prize of fifty guineas to be given to the winner of the next Vapour Emission Competition. It has been decided, however, not to hold a separate competition of this character during the present year, but, in order to encourage makers to give their attention to this important subject, the technical committee decided to ask Mr. Dugald

are essential to the universal development of mechanical traction. The presence of the horse on our streets is a menace to the sanitation of the cities and an expensive privilege for which the authorities have to pay pretty heavily. But if motor vehicles are to take their place, care must be taken that they shall not surround their early career with such fumes and prejudices as have become associated with the motor-'bus.

Illegal Speeds a Mechanical Impossibility.

At a meeting of the Road Surveyors' Association in Scotland a suggestion was made that not only should the speed of motor vehicles be restricted by law to twenty miles per hour, but that no cars should be allowed on the road which were not mechanically controlled with that end in view. This was brought before the Selkirk County Council a day or two ago by the convener of the county, who not only recommended the adoption of the suggestion, but also the taxation of cars in proportion to their horse-power. Both these views were approved by the County Council, and are being transmitted to the Secretary of Scotland. Whether they will come further south to Westminster is a very open question.

MOTERING NOTES FROM BRIGHTON.

THE latest development of police persecution on the London-Brighton road—the long-distance trap—is undoubtedly exercising a baneful influence on Brighton's perennial attractiveness to the metropolitan motorist. The fact that the week-end traffic down here has fallen off considerably since Easter is, no doubt, partly due to the reincarnation of summery diversions in town, but, nevertheless, I gather from the principal garages and the hotels, outside which one usually sees quite a regiment of cars drawn up for the return journey on Sunday afternoons, that there is a growing disinclination among motorists to drive as freely as of yore, not merely to Brighton, but to Hastings, Eastbourne, and the other neighbouring sea-coast towns, on account of the unreasonable and often grossly unfair treatment which even the most careful and considerate among them have experienced at

ALTHOUGH Major Lang's attitude at the test case last week was politely non-committal, the impression now prevails in motoring circles in Brighton that there will be some sort of informal *rapprochement* between the authorities and the responsible motor organisations. At least, that is the hope expressed in influential quarters, for, as I have said, the recent activities of the police have seriously diminished the car traffic on the Brighton road, and a number of fashionable local hotels have experienced a correspondingly substantial "slump" in business. At the Royal York Hotel, on Sunday, the resident company at luncheon were supplemented by from twenty-five to thirty car-arrivals during the morning. Mr. "Jack" Dones, the brother of the sisters Dare, Zena and Phyllis, and the driver of the car which was erroneously alleged to have been concerned in the serious spill near Albourne, on the London road, last Easter, drove down with his father in a speedy

The Targa Florio Race.—Truce at the wheel of the winning Isotta-Fraschini Car.

the hands of the Sussex police. For by means of the long-distance trap the latter sweep into their net all and sundry who, timed by unseen and unsuspected "recording angels," are found to have travelled between two points, perhaps fifteen miles apart, at a greater average speed than twenty-five miles an hour.

THIS concession of five miles grace—in itself a remarkable piece of indulgence on the part of the trappists!—does not mitigate the injustice of the proceeding. Even on the busy Brighton road there are stretches where speed bursts may be safely indulged in by the "model" driver without the slightest twinge of conscience, but if he does so he is almost bound to send up his average. And the magisterial sequel is inevitable and expensive! Whether this new species of tyranny is to be perpetuated I know not. Its inauguration during the Easter holidays led to the issue of no less than eighty summonses to appear before the Haywards Heath bench—and at the time of writing the bulk of these have still to be heard.

little Metallurgique, and Mr. Powell, one of the two Haywards Heath "martyrs," arrived in his fine 120-h.p. Mercedes. Mr. Holt, the owner of a big Daimler, was there too, and among others lunching were Mr. Mack and Mr. Wm. Griggs, who each brought friends in powerful cars—a Fiat and a Napier respectively.

THE week and week-end visitors at the Metropole and Grand included the Spanish Conte Pedro Agote, Mr. Davenport-Powell another fortunate 120-h.p. Mercedes owner, Mr. S. Lampard, with a Lanchester car, Mr. Carter, Mr. Butterworth, and Mr. Barnes (Humbers), Mr. de Pinna, Mr. O'Donoghue, and Mr. Benson (Renaults), Mr. Taylor (Benz), Mr. T. Manning and Mr. Sanderson, each driving a De Dietrich, Mr. Hemmings (Metallurgique), Mr. A. Lidington (Rover), Mr. Coates (Jackson), Mr. Knowles (Iris), Mr. Pookman (Darracq), Mr. Gordon (Napier), Mr. Houldsworth (Argyll), Mr. Howes (Clement), and Mr. Burbridge (Daimler).

SAXONIAN.

THE IRISH TRIAL.

PREVIOUS articles have given the reader a clear idea of the itinerary of this tour of 806 miles, and also of the cars participating therein. They assembled, as we recorded last week, in Dublin, and on the morning of Friday, the 22nd, set forth from the Royal Dublin Society's premises at Ball's Bridge. On the previous day sixty-one had reported themselves by 3 p.m., and, with the two late comers, who were fined for their unpunctuality, made a total of sixty-three that started on the long jaunt. One of the absentees from the original entries was the S.K. Simplex car, that unfortunately met with an accident a few days before.

The cavalcade was led out of Dublin by the 6-h.p. Rover, which got away by 7.45 a.m. By 9 a.m. the crowd at Ball's Bridge had dispersed, and the early cars were engaged on the hill climb at the Hollywood cross roads, or were on the way to the Wicklow Gap. The cars were timed over a distance of 1 mile 71 yards, the average gradient being 1 in 13.3 over the greater part of the hill. The surface was somewhat greasy

16-20-h.p. Calthorpe, 2 min. 55 2-5 sec.; 18-24-h.p. Swift, 3 min. 24 2-5 sec.; 14-16-h.p. Argyll, 5 min. 29 1-5 sec.; 15-h.p. Coventry Humber, 5 min. 42 2-5 sec.

CLASS E.—18-22-h.p. C.C.C., 3 min. 28 2-5 sec.; 15-h.p. Clement-Talbot, 2 min. 30 2-5 sec.; 14-16-h.p. Berliet, 4 min. 15 2-5 sec.; 16-20-h.p. Stella, 3 min. 58 1-5 sec.; 20-h.p. Scout, 4 min. 8 1-5 sec.; 20-h.p. Beeston-Humber, 3 min. 7 2-5 sec.; 20-h.p. Rover, 4 min. 6 4-5 sec.; 20-h.p. Cadillac, 4 min. 16 1-5 sec.; 15-h.p. Clement-Talbot, 2 min. 30 2-5 sec.; 14-22-h.p. Germain, 3 min. 48 4-5 sec.; 12-14-h.p. De Dion, 4 min. 40 4-5 sec.; 16-20-h.p. Argyll, 5 min. 12 2-5 sec.

CLASS F.—20-h.p. Sunbeam, 3 min. 45 2-5 sec.; 25-h.p. Clement-Talbot, 2 min. 7 sec.; 25-35-h.p. Darracq, 3 min. 12 2-5 sec.; 28-h.p. Minerva, 2 min. 37 1-5 sec.; 22-h.p. Berliet, 3 min. 51 sec.; 18-24-h.p. Gladiator, 3 min. 17 2-5 sec.; 20-24-h.p. Clement-Talbot, 2 min. 53 sec.

CLASS G.—48-h.p. Daimler, 1 min. 52 1-5 sec.; 35-45-h.p. Gladiator, 3 min. 55 1-5 sec.; 40-h.p. Berliet, 2 min. 57 2-5 sec.; 25-30-h.p. Austin, 3 min. 20 sec.; 24-30-h.p. De Dietrich, 3 min. 19 3-5 sec.; 48-h.p. Daimler, 1 min. 59 sec.

CLASS H.—60-h.p. Napier, 1 min. 46 4-5 sec.

The hill climb over, there was a good run to Kilkenny, where lunch was taken, and on the journey being resumed we were not long in reaching Co. Tipperary, where the good effects of steam-rolling were observable. Beyond Clonmel a corkscrew

The Irish Reliability Trials.—The Cars in the Corn Market at Cork.

owing to rain overnight, and a shower of hailstones added to the variety of the experiences. Sixty-two cars were timed up the hill as follows:—

CLASS A.—6-h.p. Rover, 7 min. 14 4-5 sec.; 8-h.p. Phoenix, 6 min. 24 4-5 sec.; 8-h.p. Imperial Starling, 7 min. 32 4-5 sec.; 10-h.p. Royal Starling, 5 min. 45 3-5 sec.; 10-h.p. Royal Starling, 5 min. 10 2-5 sec.; 15-18-h.p. Ford, 3 min. 37 sec.

CLASS B.—8-h.p. Rover, 5 min. 55 3-5 sec.; 8-10-h.p. Rover, 6 min. 7 2-5 sec.; 9-10-h.p. Cadillac, 5 min. 52 sec.; 9-h.p. Adler, 5 min. 52 1-5 sec.; 10-12-h.p. Chambers, 6 min. 40 4-5 sec.; 10-12-h.p. Swift, 3 min. 56 2-5 sec.; 10-12-h.p. Swift, 5 min. 54 4-5 sec.; 15-18-h.p. Ford, 3 min. 31 1-5 sec.; 15-20-h.p. Buick, 4 min. 42 sec.; 8-10-h.p. Darracq, 21 min. 1 3-5 sec.; 8-h.p. Rover, 5 min. 50 2-5 sec.

CLASS C.—10-12-h.p. Humber, 5 min. 22 4-5 sec.; 10-12-h.p. Humber, 3 min. 41 2-5 sec.; 12-h.p. Riley, 4 min. 2 sec.; 10-12-h.p. Chambers, 6 min. 2 1-5 sec.; 10-12-h.p. Chambers, 6 min. 20 2-5 sec.; 10-h.p. Cadillac, 7 min. 3 2-5 sec.; 14-16-h.p. Belsize, 4 min. 6 1-5 sec.; 12-18-h.p. Riley, 6 min. 17 1-5 sec.

CLASS D.—12-14-h.p. Gladiator, 4 min. 31 3-5 sec.; 15-h.p. Humber, 2 min. 55 4-5 sec.; 14-16-h.p. Argyll, 3 min. 21 4-5 sec.; 14-16-h.p. Darracq, 4 min. 3 2-5 sec.; 16-h.p. Bell, 3 min. 55 sec.; 16-20-h.p. Calthorpe, 3 min. 7 1-5 sec.; 16-20-h.p. Calthorpe, 3 min. 31 2-5 sec.;

road was taken along the ledge of a spur of the Knockmealdown mountains to Lismore—the nearest hanlet in all Ireland. Then on through Tallow and Middleton the cars reached Cork.

Of the cars that started forty-five had an unblemished record, while some of the lost marks were of a trivial description—the 48-h.p. Daimler losing a minute owing to the stopping of the engine in colliding with an artillery wagon, and the Napier and Royal Starling losing time in fixing their number plates, which became loose. Among those that did not finish were the 8-h.p. Rover, driven by Mr. T. W. Murphy, which in rounding a corner near Cork seems to have side-slipped and dashed into a piece of masonry with such violence that the body was forced from the chassis and the observer and driver thrown from the car. Mr. Murphy was projected against the masonry, striking it with his head. Towards the end of the day the 15-20-h.p. Buick side-slipped at Middleton, breaking a couple of wheels.

The run from Cork to Killarney on Saturday was in delightful weather and through some of the grandest scenery in the

Emerald Isle—desolate passes being alternated with woodland glens. On the whole the road surfaces were not bad—for Ireland. All who got to the city by the Lee on the previous evening went off for the run to the lakes with the exception of the 12-14-h.p. De Dion. We went by way of Macroom and Bealnageary through the Pass of Keimaneigh. Those who were familiar with the country would have liked to have whiled away some hours by the Lakes of Inchigeala, or have turned aside before entering the Pass to the lonely shrine of Gougane Barra—most solitary of all Irish solitudes. But the road lay straight ahead, and up the Pass the cars went by lovely Glengariff, through the tunnel of Kenmare, to Parknasilla for lunch. Shortly after the 28 h.p. Minerva slid into a bog, from whence it was rescued by the natives. In passing a horse-drawn vehicle it drew closely to the side of the road and went on the grass—grass which proved to be a bog. This was recognised as a traffic stop and the journey was resumed. Just beyond Glenbeigh, Rosbeigh was reached, and there, on the Strand, the speed trials were run over a mile and a-half measured distance, the cars being given a flying start of 400 yards. The fastest time was made by the Napier, its speed being at the rate of 62.94 m.p.h. The three fastest cars in the several classes were as follows:—

where Sunday was spent, most of the motorists exploring the beautiful country of this part of Kerry, visiting the Gap of Dunloe, boating on the lakes, and generally enjoying the concentrated beauty of the south-western corner of the Emerald Isle.

Monday's route was the longest of the trial, the journey from Killarney to Dublin being one of 184½ miles. Luncheon was taken at Limerick and tea at Kildare, while the run across the Curragh to Naas brought memories for those of us who had participated in the busy doings of Jenatzy's year, 1904, when Mr. Winton came from America and found the Curragh a very different place to that which he had imagined. But, although there were no exciting aspects of the trial, the day was not without incident—especially to some vehicles that had been prominent successes thus far. Mr. S. T. Robinson's 15-h.p. Clement-Talbot was worsted, owing to trouble with a big end bearing, and Mr. T. Henshaw's 48-h.p. Daimler had a broken petrol pipe, which caused a brief delay; the 60-h.p. Napier suffered from running short of spirit. Mr. Henshaw's mishap was all the more irritating as, besides making the fastest time in Class G in the speed test, he was anxious to preserve the non-stop record he established with a similar vehicle in last year's event. Unhappily, too, for the 15-h.p. Humber, a hole in its lubricating feed pipe

The Irish Reliability Trials.—The scene at the start of the Hollywood Hill Climb.

CLASS A.—15-h.p. Ford, 2 min. 46 sec.; 8-h.p. Starling, 3 min. 32 2-5 sec.; 8-h.p. Starling, 3 min. 57 sec.

CLASS B.—15-h.p. Ford, 2 min. 35 1-5 sec.; 10-h.p. Swift, 3 min. 32 4-5 sec.; 10-h.p. Swift, 3 min. 32 4-5 sec.

CLASS C.—14-h.p. Belsize, 2 min. 39 1-5 sec.; 12-h.p. Riley, 2 min. 47 1-5 sec.; 10-h.p. Humber, 2 min. 59 3-5 sec.

CLASS D.—16-h.p. Calthorpe, 2 min. 17 1-5 sec.; 14-h.p. Gladiator, 2 min. 21 2-5 sec.; 16-h.p. Calthorpe, 2 min. 21 4-5 sec.

CLASS E.—15-h.p. Talbot, 1 min. 57 4-5 sec.; 15-h.p. Talbot, 2 min. 21 4-5 sec.; 18-h.p. C.C.C., 2 min. 28 3-5 sec.

CLASS F.—25-h.p. Talbot, 1 min. 56 2-5 sec.; 25-h.p. Darracq, 2 min. 12 4-5 sec.; 18-h.p. Gladiator, 2 min. 20 2-5 sec.

CLASS G.—48-h.p. Daimler, 1 min. 45 sec.; 35-h.p. Gladiator, 2 min. 6 2-5 sec.; 40-h.p. Berliet, 2 min. 23 sec.

An unfortunate and regretted mishap occurred to the 48-h.p. Daimler entered by Mr. T. L. Plunkett in the amateur section. He was rounding an acute bend four or five miles from Waterville, when the car is said to have skidded so violently that it overturned, and the passengers were thrown out. The honorary observer, Mr. J. E. St. George, was pinned under the front wheel and seriously injured. Mr. Cundy, on the Napier, conveyed him to the hotel at Waterville, where medical assistance was available, and it was found that his thigh was fractured.

The speed trial over, there was a brisk run to Killarney,

caused a loss of oil that led to the bearings becoming overheated, with the result that the car was withdrawn—altogether a piece of bad luck entirely undeserved.

On Tuesday fifty-four of the sixty-three cars that started from Dublin on the 22nd inst. set forth again from the Irish capital, this time for a journey north to Belfast. An improvement in the surface of the roads as compared with those through which we had journeyed in the south was noticeable, and competitors began to discuss the chances of awards. Thus far the following had made non-stop runs:—

CLASS A.—6-h.p. Rover and 15-h.p. Ford.

CLASS B.—8-h.p. Rover, 15-h.p. Adler, 15-18-h.p. Ford, and 8-h.p. Rover.

CLASS C.—10-12-h.p. Humber, 10-12-h.p. Chambers, and 14-16-h.p. Belsize.

CLASS D.—14-16-h.p. Argyll, 16-20-h.p. Calthorpe, and 18-24-h.p. Swift.

CLASS E.—18-22-h.p. C.C.C., 14-16-h.p. Berliet, 16-20-h.p. Stella, 20-h.p. Beeston Humber, 20-h.p. Cadillac, and 15-h.p. Clement-Talbot.

CLASS F.—20-h.p. Sunbeam, 25-h.p. Clement-Talbot, 25-35-h.p. Darracq, 18-24-h.p. British Gladiator, and 20-24-h.p. Clement-Talbot.

CLASS G.—35-45-h.p. Gladiator, 40-h.p. Berliet, 25-30-h.p. Austin, and 24-30-h.p. De Dietrich.

Wednesday saw the return to Dublin and conclusion of the Trial. In the afternoon a hill-climb was held at Ballinaslaught,

GOSSIP FROM PARIS.

A CHIEF of the police can rarely boast of popularity, but M. Lepine can. Though not tender towards them, he is almost as great a favourite with the revolutionary socialists of Belleville, Menilmontant and La Villette as he is with the aristocratic inhabitants of the Faubourg Saint Germain and the wealthy denizens of the Arc d'Etoile and Parc Monceau quarters of the French capital. The Prefect of Police has also from the very beginning always enjoyed the confidence of motorists, because he was just if not indulgent towards them, and foresaw and encouraged the transformation which the horseless vehicles were destined to operate in the traffic. The drivers of automobiles knew that if the Paris and provincial police-courts earned for themselves a detestable reputation for the manner in which they pronounced on alleged infringements of the traffic laws and regulations, M. Lepine was not to be blamed for it, and they are now grateful to him for seeking to defend them against such injustice. Knowing that an extraordinary number of condemnations to fine and imprisonment have been pronounced on innocent persons for infringements of the traffic regulations, the Prefect of Police has just addressed a circular to all his subordinates in Paris and the suburbs ordering them to modify their mode of procedure.

TILL now when a policeman took the number of a motor-car which in his opinion was travelling at too high a speed or emitting smoke, the owner of the vehicle was prosecuted and invariably condemned, very often without even having any knowledge that the alleged offence had been noted. It happened constantly that the *sergent de ville*, though animated with the best intentions, failed to take down the number correctly, 3 being mistaken for 5, 9 for 0, &c. The result was that the owners of cars were sometimes fined for alleged offences committed in Paris, when their cars had been travelling in distant parts of France, or had not left their garages. By the new instructions, if a policeman takes the number of an automobile which for one reason or another he is unable to stop, the owner of the vehicle will not be prosecuted till he has been summoned before the police commissary to give explanations. This method of proceeding gives general satisfaction, as it is calculated to conciliate the interests of the public and of the motorists. It will not prevent the prosecution and condemnation of those drivers who, by breaking the rules of the road, endanger the lives of other persons using the thoroughfares, but it will save innocent persons suffering for their offences.

WHEN the list of entries for the Grand Prix was closed on February 15th forty-five racing cars had been inscribed, of which twenty were French and twenty-five foreign. Since then three Mors cars, a Rochet-Schneider, and a third Porthos have been entered at double fees. The number of French racers will thus be exactly equal to that of their foreign competitors. The reports circulated about their trials are of the most glowing description. If implicit confidence is to be placed in them, the ten laps of the Dieppe circuit, or the 770 kilometres (478 miles and a half), will be covered on July 7th next in a much shorter time than it was last year. However, from what I hear from competent judges, the French drivers are "bluffing." The motors, with their cylinders limited to a maximum stipulated bore, can scarcely be more powerful than their predecessors, and the cars must by the new regulations be heavier. In spite of this, I know many people who affirm that last year's time will easily be beaten. But, on the other hand, I am acquainted with others who are willing to back their opinion that Nazzaro's record of 770 kilometres in 6 hours 46 minutes and 33 seconds will not be surpassed.

ACCORDING to a telegram received from New York the Brothers Wright refused to accept Mr. Henry Farman's challenge, because, to use the words put into their mouth, "That is not businesslike." Everyone here who interests himself in aviation regrets the Americans' decision, and no one more than the challenger, who, however, fails to see in what way his pro-

posed match was not sufficiently "businesslike." If he had known the Brothers Wright's business arrangements for Europe he would perhaps have felt less surprise. They have signed a contract with M. Lazare Weiller for the sale of their invention, the price stipulated being £20,000, on condition that the Brothers Wright effect two successive flights of fifty kilometres within an hour each, and in France. It is to be supposed M. Weiller believed when he gave his signature that the working of the Wright patents in the old world would under those circumstances be worth the money he agreed to pay for that privilege, but I have been informed that he would now gladly accept a partner in the venture. As the Brothers Wright will have to come to France to validate their contract, the French aviators and aeronauts do not despair of seeing them and their wonderful machine. They all regret sincerely the accident which happened to them and trust it will not long delay their visit to Europe.

SUMMER seems to have come at last, but the Parisians, who, in that respect, resemble the rest of the world, are never satisfied with the weather. They now find it too hot, and when they

A 20-h.p. Coltman Car at the Summit of the Heights of Abraham Matlock.

Some excitement was caused at Matlock last week, when a motor-car—a 20-h.p. Coltman—made its first appearance at the summit of the Heights of Abraham. The vehicle was driven by Mr. W. Wilson, of Messrs. H. Coltman and Sons, who was accompanied by Dr. Inchley, of Loughborough. In addition 8 cwt. of sand were carried as ballast, the total load, including passengers, being 71 stone. The climb is a notable one owing to the exceedingly steep gradient of the footpath—which is the only means of ascending—and also the very sharp turns.

take a drive into the country in an automobile to get a little fresh air they come home complaining they have been choked with dust. And their complaint is only too well justified, because the motor-car traffic on the main thoroughfares in the vicinity of the French capital, especially on those leading to Saint Germain and Versailles, has become so intense that the task of keeping the roads in repair is well nigh hopeless. In any case the authorities have not succeeded in curing the dust evil, the existence of which has already, since the introduction of horseless vehicles, brought down the price of house property bordering the most frequented suburban highways more than 50 per cent.

MARNEY.

A NEW gear-case to protect the chains of chain-driven motor-cars has just been introduced by Messrs. Grose, Ltd., Northampton.

THE "S.K. SIMPLEX" LIGHT CAR.

A NEW light two-seated car, which was to have made its first appearance in the Irish Trials, is the "S.K. Simplex," of which we are this week able to give some illustrations. The vehicle is being built by the Smeddle-Kennedy

Fig. 1.—Part Sectional Elevation of S.K. Simplex 8-10-h.p. Two-Cylinder Engine.

Motor Company, of St. James's Street, Newcastle-on-Tyne, and, as will be seen from the subjoined description, novel features are to be found both in the motor and transmission.

that it may be instantly removed by slackening the hinged wing nuts. A point of interest is that both pistons are set to rise and fall together, thus giving a steady torque; the difficulty of balancing is got over by employing two heavy internal flywheels in addition to the external one. The water circulation is on the thermo-syphon system, no pump being employed. The cooling effect of the radiator is assisted by a fan formed in the engine flywheel. The ignition is by low tension magneto, thus reducing the wiring on the car to one wire. The igniters are of special design; they only comprise one spring, and have no rocking or swivelling action.

Fig. 2.—Part Sectional Plan of Gear Box and Back Axle of S.K. Simplex Car.

Passing now to the transmission, a clutch of the internal expanding metal-to-metal type is employed; the expansion is effected by a sliding cone, which allows of the use of a very weak clutch spring. The drive is conveyed by a cardan shaft to a combined gear-box and back axle (Fig. 2), which are fitted with ball bearings throughout. The torque is taken through a torque tube on to a ball bearing mounted on the cardan shaft close up to the universal joint. Three speeds and a reverse are controlled through a "gate" type of quadrant. Only a single selecting rod is used to obtain the various speeds. The brakes are of the internal expanding type. The makers prefer to take all braking

Fig. 3.—Chassis of S.K. Simplex 8-10-h.p. Car.

The motive power is supplied by an 8-10-h.p. twin-cylinder engine, a part sectional view of which is given in Fig. 1. The bore is $3\frac{1}{2}$ in. and the stroke $4\frac{1}{2}$ in.; it will be noticed that all the moving parts are on top of the cylinders; the valves, low tension igniters, &c., being driven through bevels by a vertical shaft. The camshaft, which runs on ball bearings, is enclosed in an aluminium casing, which also carries the valve and igniter tappets; it is attached to the top of the cylinder casting in such a way

strains at the point where they are required—viz., at the road wheels, both the foot and hand brakes working in drums attached to the rear road wheels (see Fig. 2). A single drip lubricator is carried on the dashboard, and as the magneto switch and oiling tap are inter-connected, it is impossible for the driver to start up without turning on the oil. We may add that Rubery-Owen pressed steel frames are employed, and that the wheel base is 7 ft. 6 in. and the track 4 ft. 3 in.

CONTINENTAL NOTES.

Motor-Buses and Collieries.

In order to increase the area from which labour for the mines can be drawn a French coal-mining concern—the Compagnie des Mines d'Ostricourt, of Oignies (Pas de Calais)—has lately acquired two 15-h.p. 13-seated single-deck motor-buses for the conveyance of the miners to and from their homes.

The St. Petersburg-Moscow Race.

No less than twenty-seven entries have been received for the St. Petersburg-Moscow race, which is to be held on the 1st June. The vehicles entered are:—Class 1, three De Dietrichs, two Fiats, a Darracq, a Mercedes, a Benz, an Itala, a Berliet, and an Argus; Class 2, one each Berliet, Nagant, N.A.G., Fiat, Darracq, Mercedes, and S.P.A.; Class 3, a Diatto-Clement and a Humber; Class 4, two Laurin-Klements, a Sizaire-Naudin, a

and Lady Monson (30-h.p. Delahaye), and Colonel J. B. Doncaster, Winchester (12-h.p. Humber).

A Record Run from Paris to Moscow.

A 40-h.p. Lorraine-Dietrich limousine has just been driven from Joinville-le-Pont, near Paris, to Moscow, in record time. Leaving at 9.30 p.m. on Thursday, the 21st inst., the Russian city was reached at 11 a.m. on Monday. The vehicle was driven continuously by Messrs. Sorel and Rougier, folding beds being provided in the interior so that one could sleep while the other was at the wheel. It was hoped that, by running day and night, the distance of about 1,900 miles could be accomplished in 66 hours. Heavy rains and drenched roads were, however, encountered in Germany, while the roads in Russia were also very bad, and three bridges had been carried away, with the result that the time worked out at 85½ hours, which, in view of the conditions, is a wonderful performance.

The two De Dion 15-h.p. Single-Deck Motor-Buses lately put in service by the Compagnie des Mines d'Ostricourt, of Oignies (Pas de Calais), France, for the conveyance of miners to and from their homes.

Werner, and a Loreley; and Class 5, two Lion-Peugeots. The De Dietrich cars are to be driven by Messrs. C. Jarrott, Duray, and Rougier, while Mr. Pope, of Itala Automobiles, Ltd., will be at the wheel of the Itala.

A Swedish Automobile Tour.

The Swedish Automobile Club will next month hold an automobile tour. The start will take place at Malmo on the 18th, and after travelling along the coast of the Cattegat and visiting the famous Trollhatten Waterfalls the trip will terminate at Elfkäro, about 100 miles from Stockholm, on the 23rd; altogether about 1,000 kilometres will be covered.

British Motorists in France.

Among the recent British visitors in France are Mr. W. A. Stephens, London (20-h.p. Renault), Mr. and Mrs. James C. Low, London (40-h.p. Delaunay Belleville), Lady Emily Dyke (40-h.p. Delaunay-Belleville), Sir William Lancaster (20-h.p. Thornycroft), Mr. and Mrs. Duveen, London (35-h.p. Panhard), Lord

Miscellaneous Items.

The Swedish Imperial Automobile Club of Stockholm is taking steps for the formation of a motor volunteer corps in Sweden. —Altogether 149 entries have been received for the Prince Henry of Prussia touring competition, which is to be held in Germany next month. —A combined tour of the members of the German and Austrian Motor Volunteer Corps is to take place from July 27th to 30th. —A De Dietrich motor fire engine has lately been added to the equipment of the fire brigade at Vierzon (Cher), France. —So far only ten entries have been received for the Criterium de Petit Tourisme contest, which is to be held on the Dieppe circuit on August 2nd next, and only fifteen for the Coupe de la Presse event, which is to be run off on August 3rd and 4th. —Prince Antoine d'Orleans Braganca has lately acquired a 60-h.p. De Dietrich car. —“Fakirit” is the name of a new filling for the inner tubes of pneumatic tyres in place of air, which has lately been introduced in Germany. —The police authorities of Hamburg have lately put in service an electrical motor ambulance; it is of the Lohner-Porsche type, and is fitted with a 44-cell battery of 186 ampere hours capacity.

SOME CURRENT TOPICS.

'Ware Trams.

All the main arteries out of London are for the first few miles now encumbered with tram lines, and although the distance these extend has gradually been increased—they go as far as Uxbridge westwards, to mention only one instance—the motorist who wishes to keep clear of accidents is well advised to carefully follow the rule of keeping to one's own side of the road, even if so doing fractionally increases the duration of the journey. Quite recently there have been one or two serious accidents owing to a car being sandwiched between two tram-cars, the driver of the motor vehicle, in endeavouring to pass a tram in front, pulling out to the right, only to find another one rapidly advancing upon him in the opposite direction. That veritable death-trap, Brentford High Street, is one place that I have particularly in mind, where no risks of this kind should be taken, as I learnt by experience some two or three years ago. Fortunately I got safely out of an awkward predicament, but it taught me that it is better to crawl through the place behind a tram than to place the lives of one's passengers in danger, not to speak of one's own personal safety.

Why not an Automobile Museum?

The account of the early work of Herr Carl Benz in a late issue of the *M.C.J.* was extremely interesting. The illustrations

The "Standard" 20-h.p. Car fitted with a special body by Messrs. Friswell, Ltd., for Mr. Leon Vint.

When the hood and glass screen are up the occupants of the car are absolutely enclosed and the car is weatherproof. Mr. Vint uses the car for the purpose of visiting his variety houses throughout the kingdom.

of the first Benz car which accompanied the article, coupled with the picture of an early American automobile in a previous issue, all point to the desirability of the establishment of an automobile museum. Progress in motor-car construction has been so astoundingly rapid that the machine of a decade ago compares with its present-day successor much the same as the first locomotive of Stephenson does with the beautiful engines of to-day. The progress that it required almost a century to compass in the latter field of engineering has been condensed into a period of from ten to twenty years in the case of the motor vehicle, so that it would seem fitting that steps should be taken to preserve the prototypes of the power-driven road vehicle in the manner accorded the locomotives of bygone generations. I should like to see an automobile section established in connection with South Kensington Museum, and am sure that if the movement could only be officially taken in hand, the nucleus of a very interesting collection could be got together. The first Wolseley machine is, I know, still in existence; the last time I saw it, it was lying in a corner of the works at Adderley Park, Birmingham, and no doubt other British manufacturers could furnish an early if not the first example of their productions. The matter is one, however, which should be taken up without delay, for things move so fast nowadays that, within a few years, it is doubtful if many of these early cars will still be in existence. They are equally as venerable as the first locomotives, so highly treasured, and should not be allowed to find their way to the scrapheap unhonoured.

ARCANUM.

A MOTORING NOVEL.

MODERN novelists have the utmost difficulty in keeping the motor-car out of their pages. In some cases the automobile is used to despatch the villain; in others to break down, so that the heroine may speak to the hero without the dismal formality of an introduction. Mr. James Blyth, whose new romance, "The Weaning," has just been published by Mr. Werner Laurie, strikes

an original note in the fact that the car is apparently introduced in order to enable the author to indulge in some moralising on the roadside manners of motorists and the business methods of traders. A motoring party stop at a garage where are "Four-cylinder twenties and forties, six-cylinder thirties, forties, and sixties." The lady driver describes her woes:—"The steering rod is like a piece of chewed string, and the fan got stuck the first time she went out, the engine got hot, and the radiator squirted all over me. I didn't give eighty-five for a jerked-up, tin-kettle, gipsy caravan like this." Then the author grows severe, and the suggestion is made "that to be honest in the motoring or cycle industry is to figure in the 'Gazette'"—a piece of fiction that is out of place, even in a novel. The car itself is as badly treated as the trade, and in eighteen lines, with a full stop in the centre, and another, as a matter of course, at the end, we are told that

"The car vanished in a cloud of foetid dust, which carried its poison across the lovely marshland a full quarter of a mile to leeward. Reeking with too much lubricating oil, foul with the stench of petrol, the modern Juggernaut burnt on its demoniacal course, giving comfort, excitement, keen pleasure, and imminent peril of life, to those it bore, and making the country roads an abomination and a desolation to all others, turning the wayside houses into dusty germ incubators, ruining the gardens, the fruit-beds and trees, even spoiling the hay crops with the foul dust and reek of its passage. Before the altar of self had been raised as a modern substitute for the golden calf by the plutocrats (who find that by honouring their despicable selves they can sacrifice to the golden calf also), the common sense of the nation would have prevented the safety, peace, healthy enjoyment of nature of those who love the country roads and lanes, from being utterly destroyed by the dangers and offence of the flying engines of the few."

The motorist, of course, knows nothing of the perfumed gases which are exhausted into the rural air. He, or rather she, only felt the "kiss of the wind," and no sound other than the "fascinating hum of the noble engines" reached her ears, which are described as "small and transparent," as well becomes one coloured "ripe barley as to her soft hair; small, dainty rose-bud as to her mouth." Speed trials are introduced into the matter, and these afford opportunity for a revel of words in which something of Henley's poetry of speed is brought into vivid and realistic prose. Those pages are the best in the book; but, alas! we soon come upon a description of the scene at the start of the trials, which is written in too superlative a key, and contains one of those general indictments which, as Edmund Burke said, when applied to nations cannot be true. And even the introduction of the word "percentage" in the following quotation scarcely saves the picture:—

In a percentage of the motoring world courtesy, or what used to be known as decent conduct, seems to have become atrophied. As the cars coughed along, edging each other's wings, stopping, going ahead, turning, the manners of some of the motorists (although many ladies were present—indeed, more ladies than men) would have done justice to the crews of a number of herring boats jammed in the harbour mouth, the official would have beaten the harbour master at his own game, the shouting, the stench, the self-contradicting orders, the grunting of the horns, the incessant maddening rumble of a score of engines, were as close an approximation to pandemonium as is possible on this earth.

Anyhow, "all's well that ends well," and the touch of sentimental fever with which the book opens expires in a conventional "happy end" that is justified artistically by the way in which it is brought about.

MAJOR MACGILLICUDDY, of Ballinagurin, Annascaul, Ireland, has lately acquired a 25-h.p. Siddeley shooting brake.

THE Bromyard Rural District Council having withdrawn their opposition to the Frome's Hill climb, the contest will take place on July 10th.

It is being suggested locally that the restriction of the speed of motor-cars which the Surrey County Council is petitioning for in Godalming, Farnham and Haslemere should also be enforced on Hindhead.

AN interesting compilation made by Messrs. W. Preston and Co., of Dublin, showed that 60 per cent. of the competing cars in the Irish Reliability Trial went through the event with Carburine and that 52 per cent. were lubricated with Morganol.

IN connection with the General Assemblies held at St. Giles, Edinburgh, a motor-car has just been seen in the procession from Holyrood Palace for the first time. It belonged to Mr. Alexander Ure, K.C., M.P., the Solicitor-General for Scotland.

ALREADY many of the drivers of the ordinary horse cabs in Lincoln have applied to Messrs. R. M. Wright and Co. for training in motor-cab driving, and with the adoption of 10-12-h.p. Humber vehicles the service inaugurated by the firm should be a private success as well as a public convenience.

FROM the R.A.C. comes a pamphlet dealing with the advantages of associateship and setting forth the various inducements that are offered, including the storage and cleaning of cars at a specially reduced tariff by the Thames Bank Wharf Motor Works, Ltd., 112, Grosvenor Road, Westminster, S.W.

WE learn that Mr. F. Wellington is severing his connection with the Trompenburg Manufacturing Company, of Amsterdam, the makers of the Spyker cars, at the end of June, and that he will be glad to hear, through the *M.C.J.*, of any appointment in which his experience of the motor-car trade can be utilised.

THE Great Central Railway have issued an extensive programme of excursions for Whitsuntide, one commendable feature of their enterprise being frequent day and half-day trips to the beauty spots of Middlesex, Hertfordshire, and Buckinghamshire, some of which were referred to in the article on a run on the 40-h.p. Argyll described in our issue of last week.

FROM Mr. Paul Metz, 12, Bristol Road, Birmingham, comes a sample of the "Knallfix" harmless pistols he has lately introduced for the use of motorists, cyclists, and tourists, to frighten away dogs and tramps, to start races, &c. The cartridge consists of a specially-prepared cork, which is pushed firmly into the open end of the barrel. When the trigger is pulled the cork is fired with a loud explosion, without, it is claimed, danger to anyone, the object of the Knallfix being merely to frighten those dogs which persist in chasing cars and cycles. Mr. Metz states that no licence is required to use the pistol. While it is undoubtedly an effective noise-producing instrument, we are somewhat sceptical as to whether it is likely to become popular, or indeed whether the police will permit its use.

SOME interesting trials of the chain track tractor known as the "Caterpillar" engine took place at Aldershot last week in the presence of the King and Queen and the Prince and Princess of Wales. On the occasion of the King's visit on the 18th inst. the large oil tractor built by Messrs. R. Hornsby and Sons for the War Office was brought from Salisbury Plain, and the smaller petrol tractor from Grantham. Both engines were shown in motion over rough ground, the petrol car having a gun trailer attached. His Majesty complimented Mr. D. Roberts, M.I.Mech.E., upon the ingenuity and useful character of the invention, the principle of which has now been accepted by the Army Service Corps for the work of drawing heavy guns over rough country. The trials before the Prince and Princess of Wales on the 21st inst. occupied half an hour. The small petrol car made several sharp turns, and then proceeded across the sand hills covered with tussocky grass at a rate of eight miles an hour. Returning with its trailer, the vehicle crossed a ditch in the sand 3 ft. 6 in. wide and 4 ft. deep. Meanwhile the heavy tractor was taken over the rough sandy ground, and demonstrated the ease with which it surmounted obstacles and turned while going at full speed at right angles to its path.

HERE AND THERE.

A MOTOR-CAR has been presented to the New York Society for the Prevention of Cruelty to Animals for use in its ambulance service.

COMPLAINT is being made in India that the Government of the Dependency, in ordering motor-cars required for its officials through the director of stores in England, is not acting quite fairly towards resident importers of automobiles.

MR. J. D. CROSBIE, D.L., Ballyheigue Castle, Ballyheigue, Ireland, has lately purchased a 14-16-h.p. Argyll car from the Tralee Motor Garage, Ltd.

MESSRS. EASTON AND JONES, directors of the Grande Maison d'Automobiles, Ltd., the proprietors of the Motor House, 314-316 and 366-368, Euston Road, London, N.W., are well known in the trade, as well as to private motorists wishing to dispose of, or anxious to purchase, motor-cars. They have just issued a new list of motor accessories and clothing which will be of value to all motorists anxious to complete their equipment for the season. Ignition sundries, lamps, lifting jacks, tool kits, tyres, including the non-slipping "Garantire" grooved tyre, foot

Mr. Percy Easton.

Mr. E. H. Jones.

pumps, rugs, and motor clothing are set forth in these pages with a regard for the pockets of purchasers that should command good business. The burst of fine weather has had a favourable effect upon the car demand as well as the accessory branch of the firm's operations. We are informed that among the cars disposed of at the Motor House last week were the following:—Two 70-h.p. Mercedes, three 45-h.p. 1908 Mercedes, 40-60-h.p. Gobron-Brillie, 80-h.p. Napier, 35-h.p. Mercedes, 45-h.p. 1907 Mercedes, and a 20-30-h.p. Renault.

IN the course of a lecture at a meeting of the Sidcup Literary and Scientific Society last week, Mr. Clayton Beadle said, perhaps the most important discovery in connection with rubber, which turned it from a mere curiosity into something to be useful in a thousand and one ways, was the fact that when rubber was incorporated with sulphur, and raised to a certain temperature, the substances combined and would possess permanent and useful properties. England was one of the pioneer countries in the making of rubber goods, due largely to the discovery of Mackintosh, of Manchester, the firm which gave its name to the mackintosh. Of recent years large numbers of factories had grown up in America, Germany, and Russia, but at present this country was the great market. Elastic webbing was of the purest form of rubber.

THE President of the Republic of Mexico has lately acquired a 65-h.p. Mercedes car.

RECENT purchasers of 25-h.p. Weigel cars include Lord Atkinson and Sir Hugo de Bathe.

THE Edmonton Board of Guardians are making inquiries as to the cost of a motor-ambulance.

MOTOR horns have lately been heard above the din of meetings in connection with the women's suffrage movement.

HEAVY motor-omnibuses running from Aberayron to Lampeter, and thence to Llandyssul, are said to be causing damage to the roads.

MR. F. R. FRY has entered for the O'Gorman Trophy at Brooklands. The previous entrants were Messrs. S. F. Edge and C. Jarrott.

MESSRS. JOHN HARPER AND SONS have enlarged their motor garage in Perth Street, Blairgowrie, and have also introduced power plant into their workshop to cope with all classes of motor-car repairs.

DURING the past month Messrs. Alley and MacLellan, Ltd., secured orders for seven six-ton Sentinel steam wagons (five of them repeat orders), and one three-tonner, also a repeat order. Two of the six-ton vehicles are for use abroad—one for Rangoon and one for Italy.

The 18-h.p. Siddeley Van which is being used in the Motor Mail Service between London and Aylesbury.

The vehicle, which is supplied by the Wolseley Tool and Motor Car Company, Ltd., leaves Aylesbury at 7.30 each evening, and, calling at Tring, Berkhamsted, Two Waters, Kings Langley, Watford, Stanmore and Edgware to take up, arrives at Mount Pleasant, E.C., just before midnight. Less than half an hour later it starts back again, and, stopping at the same places as on the up journey, reaches Aylesbury just before 5 a.m. The distance run is just over 40 miles each way. The van carries, in addition to the mails, a sorter, whose operations are conducted by acetylene gas light, for which an installation has been fitted. The same driver makes both journeys.

THE Yorkshire Patent Steam Wagon Company report that amongst the contracts they have recently received is a third repeat order from the Norwich Corporation for one of their latest type six-ton steam tipping wagons with interchangeable steel tank and sprinklers for street-watering purposes.

A PUBLIC demonstration was recently given of the utility of the Snercold non-explosive reservoir when attached to receptacles used in the storage or transport of petrol, benzine, &c. We understand that the London Fire Brigade have their petrol receptacles fitted with this safety device, which can be tested at 62, Frith Street, Soho, London, W.

MESSRS. S. F. EDGE, LTD., have sent us a photo of an 80-h.p. six-cylinder Napier car, with side entrance double phaeton body, just supplied to Mr. J. C. Eaton, of Toronto. Mr. Eaton, who previously had a 60-h.p. six-cylinder, and his father before him two 40-h.p. vehicles of the same make, is known in the commercial world throughout the length and breadth of Canada; his chief hobby is motoring, and his private garage is of the most up-to-date description.

A 10-h.p. Alldays motor-car is to be purchased by the L.C.C. for the service of the fire brigade officers.

A MOTOR lifeboat is to be established at the Broughty Ferry Station of the National Lifeboat Institution.

A REVIVAL of the old-fashioned coal-scuttle or poke bonnet is the latest among millinery modes for lady motorists.

AT Alloa, Mr. J. B. White has a garage and motor works in Bedford Place, from which he also lets out motor-cars on hire to visitors.

MESSRS. NICHOLLS, SON & CO. have enlarged their garage in the Union Place, Stonehouse—one of the Three Towns—and will be pleased to render service to motorists in that part of Devon.

MR. F. DENEHEY, of 57 and 58, Lower Baggot Street, Dublin, is holding quarterly auction sales of motor-cars. He has also facilities for motor body building, and renders service to motorists whose cars are under repair by hiring out other motor vehicles by the day or week.

IN the course of a few days the three racers which Weigel Motors, Ltd., have built for the A.C.F. Grand Prix contest will be on view for a couple of days at the premises of Messrs. J. Keele and Co., 72, New Bond Street, London, W., where they will be open to the inspection of visitors.

MOTOR delivery vans are gradually coming into use in Mexico; the Compania El Buen Tono is now using a Mors van for the delivery of cigars, while Messrs. Roves and Co., a leading drapery firm, are employing a 14-20-h.p. Renault vehicle for conveying goods to the residences of purchasers.

VOL. V. of the *Automobiltechnische Bibliothek*, published by Herr M. Krayn's Verlag, of Berlin, W., has just been issued. It is entitled "Die Kugellagerungen," and is from the pen of Herr August Bauschlicher, who deals exhaustively with the subject of ball bearings, their design and application in motor-car construction, and in engineering work generally.

A FIRE which occurred at the Vulcan Motor Works, Southport, on Wednesday of last week, completely destroyed the paint or finishing department. The firemen were, fortunately, able to prevent the flames spreading to the other part of the premises where the motor-cars are stored. Many vehicles were early on dragged into the streets for safety, but a number of cars in a finished state were destroyed.

WE understand that up to quite recently the Post Office has insisted on charging "non-stop" when used in telegrams as two words. Messrs. Drake and Gorham, Ltd., recently took the matter up at headquarters, and have received from the Postmaster General an intimation that in future the expression "non-stop" when so written as a single word will be charged for as one word in an inland telegram.

AT the last meeting of the Brighton Town Council a resolution asking the Watch Committee not to grant any additional licences for vehicles to ply for hire during the ensuing year has been carried by a large majority. This was brought forward in view of the threatened introduction of a large number of motor-cabs. In the course of the discussion it was mentioned that Brighton had already fifty-five licensed motor-vehicles.

A MONTH or so ago, when we described the engines of the Weigel racing cars for the A.C.F. Grand Prix contest, we were unable to give the stroke of the pistons, Mr. Weigel not wishing to make this known at the time. He now writes:—"As there is now no necessity to continue to hide the facts, we have pleasure in permitting you to make the statement that the bore and stroke of the Weigel engines is 155 mm. by 120 mm. This stroke is the shortest on any of the engines in the race, and we hope that the experiment will be justified by the result."

ACCORDING to the Canadian commercial agent at Port of Spain, Trinidad, an opening for motor-cars exists in the island. "This country is especially adapted for motor-cars," he states, "having excellent roads for hundreds of miles. Very few cars have been imported, and those only by people who have been abroad and selected for themselves. The number of persons here who are in a position to drive their own vehicles is comparatively large, and if a handy, reliable, and fairly cheap car were introduced there would be, I think, a good market for them."

Correspondence.

[Letters to the Editor should be addressed to the offices 27-33, Charing Cross Road, London, W.C.]

HANDICAPPING OF MOTOR-CARS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I am particularly pleased to see that the very vexed question of handicapping is being raised. It is perfectly obvious that to all who have given the matter any thought, or who have watched results, that the R.A.C. rating formula in ignoring stroke has made it impossible for cars having short stroke engines to compare favourably from a point of so-called efficiency with cars with long stroke engines. Clearly, therefore, the rating formula should be amended by the R.A.C., so that the stroke be taken into account in its correct proportion. The R.A.C. would be well advised in dealing with this important matter at once; their rating may pass for a simple catalogue comparison, but it is quite unfitted for comparisons of efficiency in competitions.

I quite agree with Mr. Jarrott that much interest is lost by the long delay before the placings are worked out, and this, perhaps, is the biggest argument one can bring against any complicated formula, even if it be necessarily complicated to admit of proper comparison between large and small cars. It appears to me that when competing cars are grouped within reasonably narrow limits of h.p., the question of wind and rolling resistances might well be ignored, especially now that we have fixed body standards. This would leave the very simple calculation of time, weight and h.p. Where, however, there are cars competing ranging from 6 to 60-h.p., as in Club competitions, or where cars are competing for an

owing to the frequent propinquity of the accelerator pedal to the usual brake pedal the mistake of depressing the former instead of the latter may be very easily made, and no doubt the instances of awkward predicaments arising from such errors being made could be largely multiplied by other of your readers who have experience of this type of control. Besides this objection, the ordinary type of accelerator control is open to at least one other, viz., the difficulty of securing a delicately accurate adjustment. The remedy which your correspondent "Harrogate" suggests—to place the accelerator pedal at the minimum distance of four inches to the right of the brake pedal—would be an inconvenient matter to arrange in many instances where separate pedals are employed for the clutch and foot brake, and further it must be remembered that whilst there is certainly a risk of depressing the wrong pedal unintentionally when these are placed closely together, the converse also applies in that when the accelerator pedal may be required for its legitimate purpose of increasing speed, if placed too far away that disadvantage becomes apparent with almost equal force.

In view of the undoubted interest attaching to this matter, which, as one correspondent remarks, "has an important bearing on the general ease of control," I may perhaps be pardoned for drawing attention to the method employed in the Sheffield-Simplex cars. Our system is to unite the functions of the clutch and brake pedal in one, such pedal being placed conveniently for use by the left foot, whilst the control of the throttle is entirely and solely regulated by what may be better described

The Fleet of Rover Cars which took part in the Motor Cycling Club's Competition for the Albert Brown Trophy. The winning car—a 20-h.p. driven by Mr. F. J. Jenkins—is seen at the extreme right.

award open to all classes, it is quite clear that wind and rolling resistance must be considered unless the large cars are seriously handicapped. In such cases, or where the R.A.C. principle be adopted, would it be expecting too much to ask officials (previous to the competitions) to work out the time which each car is expected to make? To do this competitors would have to declare their weight (providing their own ballast to make up their own errors) and their wind areas. Both these could be checked, and knowing, of course, the length and rise of the hill, a simple calculation on each car could be made. It would then be a simple matter to set the actual against the estimated, and so show the winner.

Some clubs show great promptitude in working out placings. I might mention the Notts Club, which announced results immediately at the close of their hill climb, although they were using the R.A.C. formula, while the Midland and Bristol and Gloucester Automobile Clubs posted results within a few minutes of each competitor's arrival at the top of the hill; in the latter two cases, however, a simpler formula than the R.A.C. was used. Hoping that something may come of the discussion.

—Yours truly,

VICTOR RILEY.

THE POSITION OF PEDALS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—The discussion on the above subject, which has taken place in recent issues of the *M.C.J.*, seems to reveal several weak points in regard to the usual type of accelerator pedal, and emphasises the great desirability of a control system, which ensures certainty of operation and minimises to the utmost possible degree any chances of unintentional operation. Your correspondents seem to agree that

as a foot rest than a pedal, which has a lateral movement and is so placed that the driver's right foot rests naturally and conveniently upon it. These two pedals enable the following driving functions to be carried out:—1, Clutch withdrawn; 2, foot brakes applied; 3, Engine to be used as a brake; 4, Engine to be driven at desired speed; whilst the side-moving pedal which controls the engine, and on which the foot rests easily and naturally, obviates the following disadvantages associated with the popular press-down foot accelerator.

1. The tiring necessity of holding accelerator down when throttle is full open.
2. The tiring necessity of having to hold the foot in a suspended position when varying the throttling, as when driving in traffic.
3. The involuntary operating of foot accelerator caused when travelling over uneven roads by the natural tendency for the foot to press down when bumping over rough places.

With our system no possible confusion can arise, as the driver never requires to remove his right foot from this side-moving pedal, although if he did no confusion could arise, because no amount of downward pressure has any effect on its operation. The first instinct, probably, of any driver on an emergency arising is to depress something—it is owing, on these occasions, to a driver depressing everything that trouble arises. In the case of our car there is only the one pedal to depress, the slightest pressure disengaging the clutch, and further application applying one set of brakes (actuating, by the way, within drums on the rear wheels distinct from the drums on which the hand-applied brakes operate). It will be seen, therefore, that by this arrangement of control we reduce the number of depression-pedals to one, which in combination with our side-moving throttle pedal, as above described, enables

the whole of the operations of control to be performed with the least possible effort of mind or otherwise.

It might be thought that a driver accustomed to the ordinary type of press-down pedal would experience difficulty in becoming accustomed to the side moving type, but this is not our experience in practice, and indeed many users agree that with this side-moving pedal the foot is even more responsive to the brain than is the hand in conjunction with the more usual method of operating the throttle normally by a lever on the steering wheel.—Yours truly,

PERCY RICHARDSON.

AN IGNITION DIFFICULTY.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—In the correspondence section of a recent number of the *M.C.J.* R. Johnson describes a trouble and asks advice. From the description of his trouble I imagine that he experiences it in connection with a 10-12-h.p. Coventry-Humber 1905 type. If I am correct in this assumption I may be able to help him, as I have experienced precisely similar trouble in connection with a car of this type which forms one of the stud of cars of which I am in charge. In the first instance I diagnosed the

trouble on precisely the same lines as yourself in your reply to R. Johnson and took the same steps as suggested, result, as far as remedy went, nil. I next suspected the induction, and constructed and fitted new induction pipes of an entirely different pattern as per rough diagram herewith; result: sweeter running and reduced petrol consumption. The trouble still remained, however, and arose spasmodically as described by your correspondent.

My next experiment was to convert my roller into a wipe contact, drill a hole in lid of commutator, into which I passed a small round-headed pin with strong spring between head of pin and inside of lid (see below), thus securing very firm earth return; in addition to this I have

a small wire connection from one of the nuts on the induction pipe to the lid of the commutator; result: trouble ended, increased power, no missing. Deductions: film of grease in bevel pinions of commutator spindle, possible wear and consequent looseness at this point accounting for poor contact; likewise grease round spindle of roller in roller contact, having contributory tendencies to same result.

I may add that after making the described alteration to the induction pipe I found it necessary not only to use my smallest jet, but to further decrease the size of that.—Yours truly,

SPANNER.

TYRE INFLATION.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—It was stated recently by Mr. S. F. Edge in a paper read before the Midland A.C. at Birmingham that he did not know where to get a tyre made that could be used with a 3,000 lb. car at 45 lb. pressure, and yet not cause heating owing to the bending action at the sides. In making this statement Mr. Edge evidently had in mind only canvas-lined tyres, because it will be abundantly clear from the table given below that there is a tyre which will give him all and even more than he requires.

Assuming that the weight of Mr. Edge's 3,000 lb. car is fairly evenly distributed between the front and back axles, 135 mm. cord tyres would carry the load at 40 lb. pressure, 5 lb. less than Mr. Edge asked for, the equivalent minimum pressures for the same size canvas tyres, quoted from a well-known manufacturer's list, being 100 lb. back and 90 lb. front. A smaller Palmer, the 120 mm., would carry the stipulated load of 750 lb. per wheel at 47 lb. pressure. At the low pressure mentioned there is with this cord tyre no appreciable bending action at the sides, nor any noticeable heating, outstanding

features directly traceable to the special construction of the cord tyre. Let any should think that cord tyres at low pressure would not be fast, it only remains to be said that the greatest distance ever traversed in this or any other country in the space of two hours—189 miles, 615-6 yards—was covered on the Brooklands track, by a car fitted with Palmer cord tyres, run at a lower pressure than had ever previously been attempted in long distance, high speed motor racing.

It is interesting to note how much the larger tyres contribute to comfortable running on account of the lower air pressures necessary. For example, a load of 8 cwt. per wheel, calling for a pressure of 80 lb. per square inch, with a 90 mm. tyre, can be carried on a 135 mm. tyre at 48 lb., the pressures for 100, 105 and 120 mm. tyres being respectively 72, 64 and 56 lb. per square inch.

PALMER CORD TYRE INFLATION TABLE.

| Load per wheel. cwt. | Size of Tyre. | | | | | | Load per wheel. lbs. |
|-------------------------|---|--------|---------|---------|---------|---------|-------------------------|
| | 75 mm. | 90 mm. | 100 mm. | 105 mm. | 120 mm. | 135 mm. | |
| | Inflation pressure in lbs. per square inch. | | | | | | |
| 3 | 40 | 30 | — | — | — | — | 336 |
| 3½ | 45 | 35 | — | — | — | — | 392 |
| 4 | 50 | 40 | 36 | 32 | — | — | 448 |
| 5 | — | 50 | 45 | 40 | 35 | — | 560 |
| 6 | — | 60 | 54 | 48 | 42 | — | 672 |
| 7 | — | 70 | 63 | 56 | 49 | 42 | 784 |
| 8 | — | 80 | 72 | 64 | 56 | 48 | 896 |
| 9 | — | — | 81 | 72 | 63 | 54 | 1,008 |
| 10 | — | — | — | 80 | 70 | 60 | 1,120 |
| 11 | — | — | — | — | 77 | 66 | 1,132 |
| 12 | — | — | — | — | 84 | 72 | 1,344 |
| 13 | — | — | — | — | — | 78 | 1,456 |

The above table shows the pressure required with Palmer tyres for the maximum loads usually specified for the respective sizes by manufacturers of canvas tyres, but as the cord tyre is far stronger and has a much greater load carrying capacity, a supplementary table of pressures for the heavier loads is appended.

PALMER CORD TYRE.

SUPPLEMENTARY INFLATION TABLE FOR HEAVY LOADS.

| Load per wheel. cwt. | Size of Tyre. | | Load per wheel. lbs. |
|-------------------------|---|---------|-------------------------|
| | 120 mm. | 135 mm. | |
| | Inflation pressure in lbs. (per square inch). | | |
| 13 | 91 | — | 1,456 |
| 14 | 98 | 84 | 1,568 |
| 15 | 105 | 90 | 1,680 |
| 16 | — | 96 | 1,792 |
| 17 | — | 102 | 1,904 |
| 18 | — | 108 | 2,016 |
| 19 | — | 114 | 2,128 |
| 20 | — | 120 | 2,240 |

The difficulties encountered in making large size canvas lined tyres are fully appreciated by Mr. Edge and were referred to in his paper, but with the Palmer cord automatic tyre-making machines it is quite a simple undertaking to produce perfectly balanced tyres of seven or eight inches cross section capable of carrying loads at present unthought of in pneumatic tyre construction.—Yours truly,

ERNEST J. MITCHELL.
General Manager, Palmer Tyre, Ltd.

THE RULE OF THE ROAD.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—As there appears to be considerable misconception with regard to the rule of the road—the very existence of which has sometimes been disputed—and as the majority of street accidents occur owing to ignorance of the true facts of the case, may I be permitted to point out that there is a very decided legal rule of the road, clearly laid down by Act of Parliament. This rule is set forth in what is known as the Highways Act of 1835. This, to quote the preamble, "Is an Act to consolidate and amend the Laws relating to Highways." The Act is a most elaborate one, but the portion with which I am concerned is Section LXXVIII. This, after setting forth a number of offences of which a person in charge of a cart or carriage may be guilty—and in order to avoid any misconception I would point out that, owing to the efforts of Mr. E. R. Shipton, in the early days of the Cyclists' Touring Club, the bye-laws relating to cycles were brought under statute law, and a cycle was ruled to be a carriage within the meaning of the Act—the section goes on:—"Or if the driver of any waggon, cart or other carriage whatsoever, or horses, mules, or other beasts of draught or burden, meeting any other waggon, cart, or other carriage, or horses, mules, or other beasts of burden, shall not keep his waggon, cart, or carriage, or horses, mules, or other beasts of burden, on the left or near side of the road; or if any person shall in any manner wilfully prevent any other person from passing him, or any waggon, cart, or other carriage, or horses, mules, or other beasts of burden, under his

care, upon such highway, or by negligence or misbehaviour prevent, hinder, or interrupt the free passage of any person, waggon, cart, or other carriage, or horses, mules, or other beasts of burden, on any highway, or shall not keep his waggon, cart, or other carriage, or horses, mules, or other beasts of burden, on the left or near side of the road, for the purpose of allowing such passage; or if any person riding any horse or beast, or driving any sort of carriage, shall ride or drive the same furiously, so as to endanger the life or limb of any passenger; every person so offending in any of the cases aforesaid, and being convicted of any such offence, either by his own confession, the view of the justice, or by the oath of one or more credible witnesses, before any two justices of the peace, shall, in addition to any civil action to which he may make himself liable, for every such offence forfeit any sum not exceeding five pounds, in case such driver shall not be the owner of such waggon, cart, or other carriage, and in case the offender be the owner of such waggon, cart, or other carriage, then any sum not exceeding ten pounds, and in either of the said cases shall, in default of payment, be committed to the common goal or house of correction, there to be kept to hard labour for any time not exceeding six weeks, unless such forfeiture shall be sooner paid; and every such driver offending in either of the said cases shall and may, by the authority of this Act, with or without any warrant, be apprehended by any person who shall see such offence committed and shall be conveyed before any justice of the peace, to be dealt with according to law; and if any such driver in any of such cases aforesaid shall refuse to discover his name, it shall and may be lawful for the said justice of the peace before whom he shall be taken, or to whom any such complaint shall be made, to commit him to the common goal or house of correction, there to be kept to hard labour for any time not exceeding three months, or to proceed against him for the penalty aforesaid by a description of his person and the offence only, without adding any name or designation, but expressing in the proceedings that he refused to discover his name."

This is the clear rule of the road, and it will be seen that the Act positively authorises the arrest of any person not obeying it and so causing an obstruction, and, further, vests the powers of arrest not only with the police, but with any member of the public. The importance of the matter in these days of great revival in the use of the roads is my excuse for trespassing upon your valuable space.—Yours truly,

C. W. BROWN.
Hon. Sec. Junior Automobile Club.

A SILENCER QUERY.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Having noticed from time to time answers to enquiries regarding matters in connection with cars, I venture to ask if it is impossible to reduce the noise made by the explosion in cylinder head. My engine is a four-cylinder Aster, and, with the exception of the noise, I have nothing against my car. I have been told that it is impossible to in any way alter it. May I ask if you could suggest anything? The exhaust box, from which there is scarcely any noise to speak of, is fitted at the back of the car. Being of a sensitive nature, this, to me, is very annoying, as I sometimes have the engines running after many of my neighbours are enjoying their night's sleep.—Yours truly,

F. H.

[An engine in which the noise of the explosion can be heard inside the cylinder head with sufficient loudness to prevent the neighbours of "F. H." enjoying their night's sleep must be something of a freak; for, as a rule, the only noise of the explosion that can be heard at any distance is that proceeding from the exhaust box.

We presume "F. H." is not alluding to a "knock," but if this is the cause, it can easily be remedied. A very puzzling noise, and one that sounds as if it is in the cylinder, is sometimes produced by a leaking exhaust flange, and if the leak is under the flange and quite a small hole, it is difficult for an amateur to locate the cause of the noise; perhaps this is the trouble our correspondent is experiencing with his engine.]

A CARBURETTOR QUERY.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I should be much obliged if you would state what, in your opinion, is the best carburettor (automatic), to fit to a four-cylinder 10-12-h.p. Coventry Humber car (1906 model), in place of the present Longuemare. I propose to have an inlet pipe made with four branches, instead of the present straight one, so it is not requisite that the carburettor should fit the present inlet pipe. A carburettor with an adjustable float would be preferable, as I find that I get considerably more power from Major's Pyramid brand motor spirit than from any of the petroleum spirits or from Bowley's Benzolite, but it is not obtainable everywhere. I have disconnected the butterfly throttle valve at the top of the inlet pipe from the governor, and connected it to the clutch pedal, so that it is closed on withdrawal of the clutch, also to lever above steering wheel and to the accelerator pedal.—Yours truly,

WILFRID A. R. HOARE.

[There are several carburettors that would suit this car if properly tuned up; in fact, the adjustment of a carburettor is the secret of success or failure in a great many instances. The Trier-Martin is a carburettor that lends itself nicely to the requirements indicated by the

querist, and the new Brown and Barlow and the Aster are also capable of giving equally good results. In order to compensate for the different specific gravities of various kinds of spirit, with carburettors in which the level of the jet is not adjustable, it is an easy matter to tune up the carburettor for the lighter spirit used and to weight the float with a little lead washer to adapt it for a heavier variety.]

WET DRIVING SEATS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—May I suggest another sure preventive from the great danger of wet driving seats? A pair of ordinary oilskin sailor's overalls, cut short at the knees or not, as the driver prefers—I prefer them long. These can be kept rolled up in the tool box or folded up under the driving seat itself until wanted, and take up little room.—Yours truly,

YACHTSMAN.

CARE NECESSARY ON THE BATH ROAD.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—We should like to warn all motorists to be extremely careful not to fall into the clutches of the Brentford magistrates. The following incident speaks for itself. One of our 12-h.p. Duhanot cars was trapped on April 25th last, at Heston, on the Bath road, and the driver summoned for travelling at the rate of thirty-two and a quarter miles per hour. The fine was £8, which in itself was bad enough, but, the driver not having enough money with him, he was locked in a cell till the amount was forthcoming.—Yours truly,

A. J. PINTO LEITE.

The Motor Ambulance recently constructed for the War Office by Messrs. Sidney Straker and Squire, Ltd.

The ambulance is mounted on one of the firm's 16-20-h.p. chassis. Special attention has been paid to the springing, while it will be noticed that the exhaust is taken out through the roof.

THE maker of the "H. D. W." pump gauge perfecter is invited to send his address to a correspondent, "F. J."

REPLYING to "H. R.," the makers of the hood materials exhibited at the Cordingley Show were Messrs. George Johnston and Co., 110, Cannon Street, London, E.C.

THE wheel cap of a Weigel car was found near St. Quinton's Park, London, W., on the 22nd inst. The owner can obtain the same by applying at the Westminster Motor-Car Garage, 17½, Kensington Place, Westminster, S.W.

A BRASS Salisbury tail lamp has been found in the neighbourhood of Hindhead. If the loser will communicate with the secretary of the Automobile Association, Princes' Buildings, Coventry Street, W., every assistance will be afforded him.

THE accumulators from a motor-van belonging to Messrs. J. E. Sharp and Sons, Ealing, have been stolen under circumstances narrated in our Comments. The following is a description of same:—Latest Lithanode pattern, 4 volt, 40 amp., celluloid case, two terminals painted red. In square tin case. Information that will lead to their recovery will be welcomed at Scholefield Road Police Station, N.

THE ALBANY AUTOMOBILE COMPANY, of 106 and 110, Albany Street, London, N.W., are holding their first auction sale at one o'clock on June 4th at their new sale rooms, 23, Augustus Street, N.W. Fifty up-to-date and modern cars will be offered. We may also mention that Mr. George Elkin, formerly of Messrs. Straker and McConnell's and the Motorists' Purchasing Association, Ltd., has been appointed secretary of the Albany Company.

THE MOTOR UNION AT BOURNEMOUTH.

FAVOURED by fine weather and attended by a numerous company of members, the provincial meeting of the Motor Union of Great Britain and Ireland at Bournemouth on Saturday must be regarded as a great success. The proceedings took the familiar form of a business session in the morning, an inter-club gathering in the afternoon, and a dinner in the evening, at which speeches exhorting motorists to become attached to the Motor Union were made.

The Corporation gave the use of the Council Chamber for the General Committee, and Councillor G. S. Bridge, the Mayor, Mr. G. W. Bailey, the Town Clerk, and Mr. C. J. Haydon, hon. sec. of the New Forest A.C. and the Hampshire M.U., welcomed the visitors to the town. Mr. Joynson Hicks, M.P., who was motoring from town, not having arrived, Mr. C. H. Dodd acknowledged the mayoral welcome and the committee then proceeded to business. Those present included Messrs. C. H. Dodd (Maidenhead), G. T. Langridge (Epsom), H. Hamilton Palairret (Chippenham), J. W. Coade (London), Lieut. A. F. G. Tracy (Portsmouth Naval Club), A. McAlpin (Leicester), W. Martin Burnham (London), F. E. Cobb (Brighton), C. W. L. Thisleton (London) Herbert R. Oldfield (Henley-on-Thames), Walter Bourke (Maidenhead), Dr. G. R. Russell Mathews (London), Ballin Hinde (Birmingham, vice-president Midland Club), A. Moresby White (London), L. Beadle (Blackheath), Reginald Hannam (Richmond), R. C. Sharman (Hitchin), Claude Rippon (Oxford), Charles McWhirter (Watford), A. Scrase Dickens (Horsesham, chairman Sussex Club), and Rees Jeffreys, secretary.

Union," and dwelt on the sylvan beauties of the New Forest as among the great attractions to motorists to visit Bournemouth. In addition they had excellent facilities for motoring, both by sea or land. He did not think that as a body they could look for much help from the Legislature or the County Councils. At the last meeting of the Hampshire Council a report was presented dealing with corners and precipitous places. Only twenty-five such places had been scheduled for the whole of that large county. If that line were generally adopted motorists would have to fall back on their own organisations to make the main roads of the country safe and pleasant to strangers.

Response was made by Mr. Joynson Hicks, who referred to the fact that this was the first year of their existence as an entirely independent body. They had a membership of 15,000, an income of £8,000 and accumulated funds of £11,000. They had no hostility to the R.A.C., but the democratic constitution of the M.U. secured that some work could be done by it better than by other organisations. They would try and settle the dust question, discourage dangerous and inconsiderate driving, and also protect themselves from being downtrodden either by Parliament at the top or the Bobby at the bottom.

Mr. A. Moresby White proposed "The New Forest A.C. and the Hampshire M.U.," response being given by Lord Montagu, who referred to the good work done by the local organisation. He did not think Mr. John Burns was likely to produce a bill that would do harm. There must be unity among motorists. If they each supported different policies, the time would come when, apart from the clubs, there must be a general council of automobilists, which could speak for them all. Otherwise they would get no unity, and would thereby lose a great deal of their

The Motor Union Meet at Bournemouth.—The Cars lined up at the Pier entrance.

It was decided to endeavour to obtain certain amendments of the Licensing Bill in the direction of improved hotel accommodation for travellers. The general principle of the Daylight Saving Bill was supported. A scheme for the examination of drivers was initiated, with the object of eliminating that class of driver who is an habitual source of danger to other users of the highway. Next to public safety, one of the chief reasons was the increasing number of requests to recommend drivers, and the Union felt they were not in a position to issue such recommendations without actual investigation of the experience and qualifications of drivers. It was also in view of the growth of public motor services and the number of local authorities wishing to obtain from an expert and responsible body like the Motor Union a certificate of the driver's fitness. Correspondence was reported with the Board of Inland Revenue regarding the further concessions in the use of alcohol duty free as fuel. The Legal Reports Committee reported that during the month 105 applications for information and assistance were dealt with. It was reported that 120 licensing authorities under the Motor Car Act had agreed to distribute with the driver's licence copies of "Rules and Courtesies of the Road," which the Union had compiled, and that 4,000 copies had been prepared for this purpose.

In the afternoon the members of the M.U. and their friends assembled at the pier approach, having been driven in their cars from Under Cliff Drive. About seventy cars were present, and the passengers adjourned to the Pier, where a concert was greatly enjoyed. Subsequently the visitors proceeded to the Winter Gardens, where the New Forest and Hampshire organisation entertained them to tea.

The dinner was held at the Hotel Mont Dore, where Mr. W. Joynson Hicks, M.P., presided. After the loyal toasts had been honoured Col. J. Roberts Thompson, J.P., proposed "The health of the Motor

strength. Speaking on the long-distance police traps, his lordship remarked that having had the honour of being in more than one police trap, he could speak impartially, and preferred the one covering 13 miles to the short one of 220 yards, which the most considerate drivers might fall into. He thought a *modus vivendi* between the two opposing bodies was embodied in the suggestion that only long distance traps should be used generally—except at particular danger spots—and that cars should not be summoned unless exceeding twenty-five miles an hour over the thirteen miles. If round table conferences between chief constables and motor organisations could undertake this and fix twenty to twenty-five miles an hour on open country roads, he thought there was a means of settlement. If it included the abandonment of the trap as a mere means for the acquisition of fines they might relieve Parliament of the necessity for future legislation.

The "Local Authorities of Hampshire" was proposed by Mr. C. H. Dodd, who commended the attitude of the Bournemouth authorities in preliminary warning to motorists. Though there were 700 motorists in the town, police traps had not yet been required. The Mayor of Bournemouth and also the Town Clerk responded.

The Hon. F. E. Guest acknowledged the toast of "The Visitors," and remarked his initiation to motoring consisted of the purchase of the smallest imaginable car, which he helped to push a great part of the 110 miles from London to his home after having followed it nearly 30 ft. through a hedge at a notoriously dangerous corner near Romsey. He agreed in the necessity for combination, to bring about desired reforms. The three large associations had objects in common, and by combining their forces could bring pressure that no political party could stand against.

The toast of "The Chairman" concluded the proceedings.

THE WEATHERPROOF CAR.

On all the lines of development along which the evolution of the present-day motor-car has progressed, there is hardly any of greater importance than that which has rendered it to an almost complete degree independent of the elements. So long as the automobile was subject to derangement by rain, flying water and mud, or by changes of temperature, or so long as its mechanism was subject to rapid deterioration through the entrance of dust and grit, self-propelled transportation could not be regarded as an everyday institution, and the motor-car was justly looked upon as distinctively a fair-weather vehicle. The weatherproofing of the motor-car, if so it may be called, has brought it into the field of utilitarian application as has hardly any other line of improvement to which it has been subjected.

Anyone who can remember the machines of the late '90's and of the beginning of this decade will recall the fact that they frequently went out of service as soon as rainy weather and muddy roads were encountered; short-circuited ignition apparatus, stuck inlet valves, water in the carburettor, or stretched auxiliary driving belts, putting them *hors de combat* after a rather brief time. The cars of to-day, on the other hand, can "swash" through mud puddles and plaster themselves with the soil of the region for hours on end, in the midst of pitiless rain or snowstorms, without any serious likelihood of disarrangement.

Probably the principal factor which has tended to bring about this beneficent change is the general adoption of the continuous metal pan under the engine and gear, and indeed the whole mechanical plant from front to rear axle.

lowed, and many private owners and most manufacturers adopted the practice of stretching a tarpaulin covering under the car, so as to cut off the road splash from the mechanism. This arrangement was the precursor of the metal shield. Sparking plug covers, consisting of rubber or porcelain housings enclosing the entire plug, were also brought out. In the standard cars of to-day the entire ignition system is protected by the cast or sheet metal pan beneath it, but matters are so much improved that the ignition equipment would be nearly weatherproof if the shield were not used. The plugs, being located at the top of the engine, are out of the way of the splash, and the distributor, usually carried on a vertical shaft well up toward the top of the hood, is remote from flying road dirt. All wiring is now of special cable, rubber covered, with a protective oil and weatherproof covering, or paper insulated with a protective braid, but the insulation of the conductor is not now depended upon. Primary wires are often run in copper tubing or in interior conduit tubing, and secondary wires are enclosed in fibre, metal, or hard rubber tubing entirely closed against the weather. Where the batteries are used they are carried in a moisture-proof box, usually mounted on the running board and connected by weatherproof leads. In the case of magnetos, not only are they located under the bonnet, and driven by enclosed gears, so that their operation cannot be interfered with by water, but they are, in the best forms, almost completely enclosed, and in many instances protected from water, oil, and dust by an enamel cloth cover. It is a question, remarks Mr. A. L. Clough in an American contemporary, whether the dashboard-mounted coil enjoys quite as good protection from rain as could easily be accorded it. Instances of water entering the coil-box and producing short circuits are by no

M. Sisaire on the Car which he drove in the Targa Florio Voiturette Race in Sicily.

The single-cylinder motor has a bore of 100 mm. and a stroke of 160 mm.; at a speed of 1,800 revolutions it gives close on 18-h.p. M. Sisaire had hard luck in the race; he was leading by nearly half an hour when he unfortunately broke a wheel through a bad skid 10 kilometres from the finish, and had to abandon the race.

Interruption of ignition by the action of muddy water has probably been the cause of more interruptions of service due to weather conditions than anything else. Many of the early horizontal motors were fitted with jump sparking plugs, horizontally inserted into the valve chambers. When the car passed through a puddle dirty water splashed upon them, short-circuiting them and cutting off ignition, if indeed the hot porcelains were not cracked by the cold water and rendered useless. The secondary leads were thoroughly soaked with the dirt-impregnated water, and, as their insulation was usually none too good, they frequently broke down at some point where they were close to an earthed portion of the car. On these motors the contact maker was generally carried on the side of the crank case, driven by the end of the half-time shaft. It was thus exposed to flying mud and water, which finally found access to the mechanism, even if a cover was provided, as was by no means always the case. Not only were electrical difficulties thus developed in the primary circuit, but the bearings of the contact maker were filled with grit and caused to wear out rapidly. As the insulating covering of the wiring was relied upon to prevent escapes—no enclosing tubes being used—and as the wires usually ran in exposed positions along the frame line, short circuits, due to mud, were very common. The magnetos which were sometimes used often became wet, and an armature short circuit resulted, or the belts which were generally used for magneto driving were soaked in water and failed. When frictionally driven from the engine flywheel, mud and water on the frictional surfaces often spoiled their action.

Some horizontal motors came to have sparking plugs inserted vertically from above into the valve chamber, and this reduced the liability of short circuiting. A better location for the contact maker finally fol-

means unknown, and it would seem that a boot of weatherproof fabric, covering the box and the high-tension terminals below it, with an aperture for the switch, would be a good thing in rainy weather.

In many of the old cars, especially those with horizontal engines, the carburettor was mounted very low, and in running during rainy weather became plastered with mud and drenched with dirty water. Water, and oftentimes mud, was sucked into the air-intake, and so much foreign matter might in some instances be drawn through the mixture piping as to cause the inlet valves to stick as well as to clog the throttle mechanism. Water occasionally entered the float chamber through the vent hole or beside the priming needle, and finally lodged in the spray nozzle, giving rise to much trouble. Carburettors are now so protected as never to be exposed to flying mud and water. The air intake is usually a sleeve placed in proximity to the exhaust pipe, so close to it that there is hardly any chance for foreign matter to enter. When not so arranged, air intakes are screened and located in a protected position. The throttle-operating mechanism is all protected by the dust shield. Fine dust in considerable quantities is still drawn in with the entering charge, but mud and water have ceased to be a menace to effective carburation.

(To be concluded.)

THE "Warrior" plug is being supplied to motorists by the Sphinx Manufacturing Company, of Bradford Street, Birmingham. This is suitable for accumulator or high tension magneto ignitions, is easily cleaned, and will fit any engine—points which have greatly contributed to its success.

CLUBS AND ASSOCIATIONS.

MOTOR UNION.

THE Parliamentary Committee has had under consideration a clause in a bill promoted by the Burnley Corporation, empowering that authority to erect sheds, shelters, or waiting-rooms for the accommodation of passengers and tramway servants in the public streets, and is therefore taking steps to endeavour to secure the amendment of the clause, so as to ensure that any such shelters shall be erected upon the pavement.

ADDITIONAL agents appointed by the M.U. are Messrs. Hankey, Gellatley and Co., of Marseilles; Messrs. Hendy and Co., Southampton; and Messrs. Player, Folkestone.

The references made at the April meeting of the General Committee to the advisability of heavy vehicles being fitted with mirrors to enable drivers to see side and rear traffic have resulted in a number of communications being received and considered by the Highways Protection Committee. Evidence is now being collected as to the use of mirrors in the metropolis, and the secretary will be glad to receive information from any users who may not receive the inquiry form.

THE AUTOMOBILE ASSOCIATION.

THE Association is taking strong action with reference to the furious driving of motor-cars, and a sub-committee has been formed to deal with this question. Every case reported by the special patrols on point duty will be carefully investigated, and those members who, having been warned by the Association's official, still persist in causing annoyance to the public will in the general interests of automobilism be called upon to resign.

THE COMMERCIAL MOTOR-USERS' ASSOCIATION.

A MEETING of the executive committee of the Association was held at 1, Albemarle Street, Piccadilly, W., recently, when Messrs. Hicks, Davies and Hunt were appointed solicitors to the Association. The secretary reported the donations that had been made towards the cost of approaching the Local Government Board with respect to the closing of Wark Bridge. The secretary was instructed to write to the chief makers with a view to their making a contribution.

A letter was read from the Secretary of the Royal Automobile Club stating that the Technical Committee approved the suggestion of the Association that the R.A.C. should undertake a series of acceleration tests, extending over one or two days, and in respect of public service vehicles constructed to comply with Metropolitan Police regulations, limited to a maximum of 35-h.p., R.A.C. rating, and to carry a standard double-decked omnibus body, and had appointed a sub-committee to draft the preliminary lines of these tests.

Colonel Crompton reported that he had been appointed Chairman of an Advisory Committee on mechanical transport for the Territorial Army. Messrs. F. C. A. Coventry, S. D. Gilbert and W. G. Lobjoit were appointed a sub-committee to assist Colonel Crompton in preparing the report of the committee.

The secretary reported that Mr. C. A. Elgood had interviewed the engineer of the Metropolitan Water Board with regard to the charges to be made by the Board for water supplies in respect of trade motors. The engineer stated that it had been found impossible to arrive at a general basis for commercial motor vehicles, and it was therefore proposed that each vehicle should be separately inspected and separately assessed, having regard to the amount of water consumed. He also stated that the Board had decided to erect penny-in-the-slot meters in the streets. Messrs. L. G. Oldfield, J. C. Mitchell and S. D. Gilbert were appointed a sub-committee to co-operate with Mr. Elgood in the question of the charges.

CARDIFF.

THE following awards have been made in connection with the recent hill-climbing competition of the Cardiff Motor Club:—

| | CYCLES. | Figure of Merit. |
|----------------------|--------------------|------------------|
| 1. W. Pollard ... | 34-h.p. T.S. ... | 7.72 |
| 2. J. H. Wyndham ... | 2-h.p. Minerva ... | 6.23 |

| | CARS. | Figure of Merit. |
|------------------------|------------------------|------------------|
| 1. E. M. Griffiths ... | 12-14-h.p. De Dion ... | 7.96 |
| 2. H. J. Norton ... | 12-14-h.p. Singer ... | 7.22 |

Winner of Motor Union medal for best figure of merit:—E. M. Griffiths, 12-14-h.p. De Dion car.

HEREFORDSHIRE.

A SPECIAL meeting of the Herefordshire Automobile Club was held on Friday of last week at the Mitre Hotel, Hereford, to consider the question of the hill-climb trials for the Hereford Trophy. Col. Hopton, of Canon Frome Court, presided, and the others present were Mr. F. Cuddon, Mr. Graystone (Hay), Mr. J. H. Hall (Ross), Dr. Herbert Jones, and Messrs. T. A. King, W. E. Langford, F. A. Cuddledale, J. Harley Nott (Leominster), J. Parker, W. Farrar Roberts, W. L. Tittley (Ledbury), J. C. M. Vaughan, and A. Townsend (hon. secretary). Mr. Townsend said he was pleased to inform them that the Mayor of Hereford (Mr. James Mitchell), Mr. Langford and himself went as a deputation to the Bromyard District Council on the subject of the

use of Frome's Hill for the annual reliability trials, and the Council unanimously decided to rescind the resolution passed in February last. That left the club in the position of being able to hold the trials unopposed on Frome's Hill. It was decided that the hill climb trials should be held on Friday, July 10th. Hereford regatta would be held on the Thursday, and the Royal A.C. had selected Saturday, July 11th, for the holding of their second provincial meeting at Hereford.

NOTTINGHAMSHIRE.

ON the private track at Clipstone Drive, near Mansfield, which the Duke of Portland is always ready to place at the service of the Nottinghamshire A.C., an interesting race meeting was held on Saturday afternoon. There was a good entry and a large attendance of the public. Although the rain held off the track was entirely free from dust, an advantage due to the fact that Lieut.-Col. R. L. Birkin, D.S.O., had had 3 tons 12 cwts. of calcium chloride solution applied over the mile and a half of track. Capt. R. K. Bagnall Wild, R.E., was the judge, and Mr. Charles Hardy and Mr. A. R. Atkey were starters. There were three events in the programme, and in the scratch race each competitor was allowed two runs.

The One Mile Handicap from a standing start was won by Dr. Tresidder's 15-h.p. Clement-Talbot in 1 min. 20 sec., a speed of forty-five miles per hour. The result was as follows:—

| Owner. | Car. | Time. | Percentage of efficiency. | M.p.h. |
|--|------|----------|---------------------------|--------|
| 1 Dr. Tresidder's 15-h.p. Clement-Talbot ... | | 1 20 | 65 | 45 |
| 2 C. A. Bird's 40-h.p. Mercedes ... | | 1 17 1-5 | 47.2 | 46.63 |
| 3 Capt. Newsum's 45-h.p. Daimler ... | | 1 4 | 46.9 | 58.23 |
| 4 H. Dennis Bayley's 6-h.p. Rover ... | | 2 9 | 44.6 | 27.90 |
| 5 Charles Hardy's 10-12-h.p. Humber ... | | 2 2 2-5 | 41.4 | 29.36 |
| A. N. Lee's 16-20-h.p. Humber ... | | 1 26 3-5 | 40.5 | 41.50 |
| T. Cuthbert's 8-h.p. Rover ... | | 2 10 | 33.5 | 27.40 |
| Geoffrey Bird's 30-h.p. Ariel-Simplex ... | | 1 19 3-5 | 32 | 45.40 |
| H. Bowden's 40-h.p. Darracq ... | | 1 22 1-5 | 29.7 | 43.90 |

Considerable interest was taken in the competition for the Wilson Challenge Cup, there being no fewer than twenty-two starters, the winner proving to be Mr. Cecil Edge's 40-h.p. Napier, which was driven by Mr. Ross Browne. Over the flying kilometre he attained a speed of 73.64 miles per hour. The gold medal for the fastest time in this event was won by Mr. E. M. C. Instone's 58-h.p. Daimler, which reached the speed of 74.02 miles per hour. The performances of various cars were:—

| Owner. | Car. | Time. | Percentage of efficiency. | M.p.h. |
|---|------|----------|---------------------------|--------|
| 1 Cecil Edge's 40-h.p. Napier ... | | 30 2-5 | 91 | 73.64 |
| 2 Dr. Tresidder's 15-h.p. Clement-Talbot ... | | 39 2-5 | 68.6 | 56.74 |
| 3 Dr. Hogarth's 25-h.p. Clement-Talbot ... | | 48 | 67.9 | 46.57 |
| 4 Dr. Hogarth's 8-h.p. Clyde ... | | 59 4-5 | 67.3 | 37.38 |
| 5 H. Belcher's 15-h.p. Clement-Talbot ... | | 46 3-5 | 60 | 53.22 |
| Geoffrey Bird's 30-h.p. Ariel Simplex ... | | 38 | 56.2 | 58.82 |
| V. Riley's 12-h.p. Riley ... | | 46 3-5 | 50.8 | 47.97 |
| M. Ross Browne's 15-h.p. Mass ... | | 43 1-5 | 49.8 | 51.7 |
| S. Downing's 14-h.p. Alldays ... | | 44 3-5 | 47.1 | 50.12 |
| Capt. Newsum's 45-h.p. Daimler ... | | 31 3-5 | 45.7 | 70.73 |
| H. Belcher's 14-h.p. Siddeley ... | | 53 | 44 | 42.18 |
| E. M. C. Instone's 58-h.p. Daimler ... | | 30 1-5 | 42.8 | 74.02 |
| R. M. Wright's 28-43 h.p. Daimler ... | | 40 3-5 | 40.1 | 55. |
| C. Lock's 20-h.p. Sunbeam ... | | 47 1-5 | 35.1 | 47.36 |
| P. Richardson's 40-h.p. Sheffield Simplex ... | | 37 2-5 | 33.5 | 59.77 |
| C. A. Bird's 40-h.p. Mercedes ... | | 42 4-5 | 33.3 | 52.23 |
| F. Mitchell's 8-h.p. Rover ... | | 1 9 | 31.6 | 32.4 |
| H. Dennis Bayley's 6-h.p. Rover ... | | 1 13 2-5 | 29.5 | 30.45 |
| H. Bowden's 40-h.p. Darracq ... | | 40 4-5 | 29.1 | 54.79 |
| L. Fawcaker's 14-16-h.p. Belsize ... | | 52 | 29 | 42.99 |
| Charles Hardy's 10-12-h.p. Humber ... | | 1 13 1-5 | 25.1 | 30.60 |
| A. N. Lee's 16-20-h.p. Humber ... | | 46 2-5 | 23.2 | 43.17 |

In the Scratch Race there were eight competitors, and F. Newton, driving a 60-h.p. Napier, was credited with 22 2-5 sec. on his second attempt, this working out at 104 miles per hour. Mr. E. M. C. Instone reached ninety miles an hour and Mr. J. C. Wilson on his 45-h.p. Deasy car was also credited with a good performance, as will be seen from the results given below.

| Owner. | Car. | First Run. | Second Run. |
|---|------|------------|-------------|
| 1 Mr. Cecil Edge's 60-h.p. Napier ... | | 21 1-5 | 20 2-5 |
| 2 Mr. E. C. Instone's 58-h.p. Daimler ... | | 26 2-5 | 24 3-5 |
| 3 Mr. J. C. Wilson's 45-h.p. Deasy ... | | 30 3-5 | 25 |
| Mr. P. Huskinson's 38-h.p. Daimler ... | | 27 3-5 | 28 2-5 |
| Mr. E. Lewis's 35-h.p. Deasy ... | | 30 4-5 | 33 3-5 |
| Capt. Newsum's 45-h.p. Daimler ... | | 31 4-5 | — |
| Mr. R. M. Wright's 28-43-h.p. Daimler ... | | 38 1-5 | — |
| Mr. H. Bowden's 40-h.p. Darracq ... | | 40 | — |

Of the three cars winning first position two were fitted with Dunlop tyres.

AERO CLUB.

No fewer than thirty-one aeronautes have entered for the International Balloon contest from the Hurlingham Club grounds to-day (Saturday). The following is the order in which the competitors will start:—

| Balloon. | Pilot. | Nation. |
|--------------------------|--|---------------|
| 1 Le Faune ... | Ernest Zens ... | France |
| 2 Bonn ... | Prof. Milarch ... | Germany |
| 3 Eden ... | E. Boulenger ... | France |
| 4 Luciole ... | Payret Dortail ... | France |
| 5 Quo Vadis ... | A. Schelcher ... | France |
| 6 Icarus ... | Frank H. Butler ... | Great Britain |
| 7 Don Quichotte ... | Ernest Barbotte ... | France |
| 8 Enchantress ... | Ernest Bucknall ... | Great Britain |
| 9 Satellite ... | Viscount Royston ... | Great Britain |
| 10 Venus ... | J. T. C. Moore-Brabazon ... | Great Britain |
| 11 Simoun ... | Count H. d'Oultremont ... | Belgium |
| 12 Le Roitelet ... | A. de la Hault ... | Belgium |
| 13 Leprehaun ... | Hon. Cland Brabazon ... | Great Britain |
| 14 Le Ludion ... | Paul Tissandier ... | France |
| 15 Tschudi ... | — Sticker ... | Germany |
| 16 Nebula ... | Capt. A. H. W. Grubb ... | Great Britain |
| 17 Cognac ... | Victor de Beauclair ... | Switzerland |
| 18 Valkyrie ... | C. F. Pollock ... | Great Britain |
| 19 Abercorn ... | Capt. von Abercon ... | Germany |
| 20 Rolla VI. ... | Etienne Giraud ... | France |
| 21 L'Escapade ... | Count Henry de la Vaux ... | France |
| 22 Lotus ... | Griffith Biewer ... | Great Britain |
| 23 Kokoro ... | Prof. A. K. Huntingdon ... | Great Britain |
| 24 La Mascote ... | John Dunville ... | Great Britain |
| 25 L'Abeille ... | Albert Omer Decugis ... | France |
| 26 Aero Club IV. ... | H. Demoor ... | Belgium |
| 27 L'Albatros ... | A. Leblanc ... | France |
| 28 Corona ... | Hon. C. S. Rolls ... | Great Britain |
| 29 Pegasus ... | Col. J. E. Capper, C.B., R.E. ... | Great Britain |
| 30 Le Nephkys ... | Count de Castillon de Saint-Victor ... | Belgium |
| 31 Emulation du Nord ... | Albert Crombez ... | Belgium |

MOTOR-CYCLING CLUB.

ON Saturday the contest for the Albert Brown trophy was again held under the auspices of the Motor-Cycling Club. This year the course was from Slough, via Henley, to High Wycombe and back, this being traversed until a mileage of 150 was obtained. There were half a dozen starters, the consumption and marks obtained by the four leaders being as follows:—

| | Consumption. | Marks. |
|------------------------------------|--------------|--------|
| | Pts. oz. | |
| F. J. Jenkins, 20-h.p. Rover ... | 36 8 | 1,162 |
| Dr. H. A. Jowett, 8-h.p. Rover ... | 34 9 | 824 |
| J. S. Harwood, 8-h.p. Rover ... | 36 0½ | 794 |
| B. Holland, 12-14-h.p. Singer ... | 59 8 | 427 |

Mr. F. J. Jenkins thus became the winner of the trophy. Dr. Jowett won the event last year, and it is interesting to note that after twelve months' hard work the petrol consumption was the same for the journey as on the former occasion.

The principle underlying the rules is that the trial is a test of reliability and running to schedule time coupled with a calculation on the weight of the car and passengers for petrol consumed. The full complement of passengers or ballast to the equivalent of ten stone per passenger had to be carried, and the competition was confined to British-built cars.

MANCHESTER AND DISTRICT CYCLE TRADES ASSOCIATION.

THE general meeting of this association is being held on Friday, the 29th inst., at the Palatine Hotel, Manchester. In the report to be submitted reference is made to steps which have been taken to amalgamate the different interests in the motor trade of Manchester and district. Following the ordinary meeting an extraordinary general meeting is to be held, at which the directors were to submit a resolution changing the name of the society to the Manchester and District Motor Trades Association, Ltd.

THE AUTO-CYCLE UNION.

The A.C.U., in conjunction with the Newcastle and District Motor Cycle Club, is holding an open hill climb up the Sutton Bank to-day (Saturday). The length of the hill is a shade under one mile, and the average gradient is 1 in 8, portions of it being 1 in 3.96 and 1 in 4.91. It is approached by an S bend, not very sharp, but sharp enough to reduce pace materially, and the road, about two-thirds of the way up, doubles right back upon itself in a rounded V. Immediately this corner is turned the machine strikes a bad piece of 1 in 8.18 and then follow portions varying from 1 in 5.52 to 1 in 23.81.

The end to end run is to be held from July 13th to 18th next. The entries include J. Tassell, Matchless; W. H. Wells, Vindec Special; S. W. Carty, N.S.U.; W. Ridler, Leader; E. Nelson, Rex.

ESSEX COUNTY.

A SUCCESSFUL gymkhana was held by the Essex County A.C. at Braintree, in an enclosure lent by Sir Charles Locock, Bart., at Oaklands, on Saturday. The prize for the best appearance went to Mr. E. J. Boake, 40-h.p. Napier, the obstacle race was won by Mr. Walter Lawrence, 12-16-h.p. Clement-Talbot, the starting and stopping competition went to Mr. Lyndhurst Forge, 12-16-h.p. Vauxhall, and the passenger race was won by Mr. Lawrence, Sir Charles Locock being second. In the hat trimming race Mr. J. Gurney Fowler, 35-h.p. Renault, was first, and Dr. Young, 9-h.p. Singer, next, and in musical chairs the winner was Mr. Boake, Mr. Edward Bryant, 14-h.p. Humber, being second.

KENT.

By the courtesy of Mr. T. Colyer Fergusson the members of the club spent a delightful afternoon on Saturday last going over the ancient "Mote House" at Ightham, dating back some 700 years. Among those present were:—Mr. and Mrs. Booth Hearn, Mr. and Mrs. Wyllie, Mr. and Mrs. Schooling, Col. E. Latter, Mr. and Mrs. Waddington, Mr. and Mrs. Fraser, Dr. and Mrs. Steen, Mr. and Mrs. Batchelor, Mr. and Mrs. White, the Rev. Mr. Wright and Mrs. Wright, Mrs. Kenyon, and the hon. secretary.

Mr. W. T. Chatfield, of 3, Grosvenor Park, Tunbridge Wells, has been awarded the gold medal for mechanical proficiency at the recent R.A.C. examination.

Mr. P. R. Lamb, the travelling representative of Ariel Motors, Ltd., at the wheel of the 30-40-h.p. Ariel.

The photo, which was taken at Oswestry, shows the Old Stone, now railed in, which in years gone by was used as a receptacle for cleansing coins during the plague, which Oswestry struggled to subdue between 800 and 850 years ago. At the time, it is believed, there were several of these hollow stones—one at each entry to the town—and a guardian was placed with each, who demanded the immersion of all coins the farmers, villagers, &c., may have brought with them to purchase food, &c. This one stone is all that remains of Oswestry's precautions of over three centuries ago, and is suitably inscribed by a tablet on the wall as "the Croeswylan Stone," which, however, does not convey any idea of its history or use. As regards the Ariel shown in the illustration, this has now travelled roughly 30,000 miles, and has visited almost every part of Great Britain.

YORKSHIRE.

THE Yorkshire A.C. had a most enjoyable meet at Helmsley on Saturday last, where some 100 members and friends met at the Black Swan Hotel. After tea the party visited Duncombe Hall, the seat of the Earl of Feversham, the Home Terrace, and Rievaulx Abbey. Mr. and Mrs. E. H. Hepper (chairman of the club), Mr. and Mrs. and Miss Penrose Green (vice-president), Mr. G. Scoby-Smith (chairman Cleveland A.C.), Mr. J. Constantine, and Mr. and Mrs. C. P. Wilson (hon. secretary and treasurer) were present.

In connection with the meet, Dr. and Mrs. J. L. Kirk, of the Low Hall, Pickering, entertained the officials of the club to luncheon, which hospitality was much appreciated by those present.

LIVERPOOL.

THE Liverpool Automobile Club and Self-propelled Traffic Association held their first club meet of the season at Rufford Old Hall, near Burscough, lent by Sir Thomas Hesketh, Bart., Vice-President of the Northampton A.C., on the 16th inst., when they were the guests of the chairman, Mr. A. Lyle Rathbone, J.P., C.C., and Mrs. Rathbone, who also extended a cordial invitation to the members of the Cheshire Automobile Club. The weather was very favourable for the occasion and some 200 motorists and their friends attended from both clubs, the cars numbering over forty.

BLANDFORD.

MR. H. F. W. FARQUHARSON is the president of the Blandford and District Automobile Club, which held its opening meet on the 27th inst. at Eastbury Park, Blandford. The club is now in its second year and has a membership of between forty and fifty. It has arranged an interesting series of fixtures for the season, including gymkhanas, hill climbs, and a paper chase. The hon. secretary, Mr. M. J. Curtis, of the Market Place, Blandford, will be pleased to supply information as to its policy to motorists in the district.

LINCOLNSHIRE.

A WELL-ATTENDED meeting of the committee was held at Woodhall Spa. Col. J. S. Ruston was unanimously elected chairman of the committee for the rest of the year and Capt. H. E. Newsom was elected to the vacant place on the committee. The following were elected members of the club:—Col. C. A. Swan, C.M.G., the Hon. Richard Stanhope, Mr. H. V. Hotchin, Rev. R. Meddings, and Major J. H. W. Rennie.

THE Brentford District Council has agreed to comply with the request of the Motor Union to permit the erection of an automatic water-meter for use of motorists passing the town.

THE Scottish A.C. will be represented at the International Road Congress by Comte Louis de Clercq (a vice-president of the club), Mr. J. R. Nisbet, and Mr. Robert Munro.

At the hill-climbing competition held at Carnmoney, near Belfast, by the Ulster centre of the Motor Cycle Union of Ireland, Mr. H. G. Ferguson's 14-16-h.p. Argyll car made the fastest net time.

ROAD REPORTS.

CARMARTHENSHIRE.—A correspondent at Ystradgynlais, R.S.O., writes warning motorists to be wary when travelling from Swansea and Neath to Llandilo in Carmarthenshire. He suggests that notice boards should be set up near the colliery level crossing at Glanamman.

BRENTFORD.—At the last meeting of the Brentford District Council attention was drawn to the excessive speed of motor-cars through the town. It was suggested that either notices should be posted asking drivers to proceed with caution, or that application be made to the Middlesex County Council for an eight-mile speed limit. Several members objected to posting notices, as the cars went too fast for the drivers to read them, and it was finally decided to ask the County Council for a ten-mile limit through Brentford.

CO. DUBLIN.—The County Council of Dublin are applying to the L.G.B. for the prohibition of motor-cars on the road running from Malahide along by the sea to the Velvet Strand at St. Marnock's.

SELBY.—Near the Fryston Park corner, not far from Selby, on the York road, a police trap of a quarter of a mile in length has lately been in frequent operation.

SHEFFIELD.—The Highway Department of Sheffield has made a beginning with its tarspra efforts, and is so far pleased with the results in preventing the dust-clouds. The Manchester road was the first to receive attention.

CHESHIRE.—According to the chairman of the Main Roads Committee of the Cheshire County Council calcium chloride has proved the most efficacious means of allaying the dust in the county.

BREKSHIRE.—There are 375 miles of main roads in the county of Berkshire, of which twenty-seven miles are urban roads repairable by the seven different urban authorities of the county, and the remainder are rural roads repaired by the County Council.

CARDIFF.—At a meeting at Cardiff, Mr. Harpur (city engineer) has presented a report on the question of treating certain of the macadamised street surfaces with a dust palliative. The report stated that Dr. Vachell had complained of the dust nuisance in Park Place when a westerly wind blew, owing to the great quantity of dust rising from the large area of macadamised roads in the neighbourhood of the City Hall, and he had offered to gratuitously supply calcium chloride providing the Corporation applied it on the piece of road in Cathays Park nearest his house. The joint committee responsible for the roads have decided to tar-spray sections of the Newport and Penylan roads.

WANSTEAD.—The measured furlong in the Blake Hall Road, Wanstead—commencing at the end of Wanstead Flats—is in frequent operation at the week-end.

LANCASTER.—Police traps have lately been in almost constant working order at Galgate, in the Burton Road, and at Ellet Grange—all in the vicinity of Lancaster.

BEACONSFIELD.—A police trap was working on Sunday morning on the main London-Oxford road, about a mile on the Oxford side of Beaconsfield.

THE Abec motor-jack has been introduced by the Aston Brass and Engineering Co., Ltd., of Aston Lane, Birmingham, its novel form securing ease and rapidity in lifting.

OWING to want of space, Messrs. Perry, Thornton and Schreiber, Ltd., the British agents for Ford cars, have let their show room, 117, Long Acre, W.C., and have temporarily taken two floors of a large warehouse at 14, Langley Street, London, W.C. The offices of the company will still remain at 118, Long Acre, W.C.

CASES UNDER THE MOTOR CAR ACT.

IMPRISONMENT.

William Jones, motor driver, of Rothchild Road, Acton Green, Chiswick, has been sent to Cambridge Prison by the Norman Cross Bench for a month in default of paying a fine of £10 and £2 15s. 6d. costs, imposed for driving a motor-car to the danger of the public at Water Newton on April 14th.

Harry Bland, chauffeur, has been sent to prison for a month in the second division for being drunk while in charge of a motor-car at Addlestone on the 12th inst. He was also fined £5 and costs for recklessly driving the car on the same date. Bland, while in charge of a car, ran into two boys, fracturing the arm of one and injuring the other. The defence was a total denial of the charge.

JUSTICE WITH DISCRETION.

Dr. R. B. Debenham was summoned at Greenwich for driving a motor-car at a speed exceeding twenty-seven miles an hour at Catford. Defendant said he had been called to a patient who was very ill. Mr. Rose: I think there must be occasions when some people are entitled to go beyond the ordinary speed; or, rather, not entitled, but the fine in their case ought to be merely nominal. I think a doctor's is one of those cases. I cannot take the responsibility of fining you. I think you had better pay the costs of the summons.

EXCEEDING LEGAL LIMIT.

At Midhurst fines of £34 have been inflicted on five motorists who travelled too speedily at Cocking Causeway; on the same day four motorists were fined £29 for motoring at excessive speed on the Bath Road, Hounslow.

Four motorists were fined sums of £5 each at Fareham on the 20th inst. for driving at a dangerous speed at Cosham.

On Saturday a number of motorists were summoned at Grantham for driving motor-cars too speedily on the Great North Road.

At Lancaster on Saturday seven motorists were fined for exceeding the legal limit.

On Saturday six motorists were fined sums of £3 each at Chichester for exceeding the speed limit on the Chichester and Arundel road at Boxgrove.

Edward Gillett was fined £25 at Beaconsfield Petty Sessions, on Tuesday, for exceeding the legal limit at Farnham Royal, on the Bath road. Four other motorists were also summoned on the same occasion.

DISMISSALS.

At the Corwen Police Court on Friday week, Mr. W. H. Procter, a departmental manager for the Daimler Motor Company, Ltd., Coventry, was summoned for driving his motor-car at a speed dangerous to the public at Glyndyfrdwy on April 18th last. Mr. Jordan prosecuted on behalf of the police, and Mr. W. E. Rowcliffe, Manchester, defended. From the evidence of P.C. Morgan Jones, it was alleged that the defendant had covered a measured distance of 330 yards in twenty-five seconds, about twenty-seven miles per hour. The constable stated that in company with P.C. John Jones he stood on a stone at the end of the village, whence they could see the defendant come into view, and timed him down to the Post Office. Cross-examined by Mr. Rowcliffe, he admitted that there was no traffic on the road, that there were very few people about, and that he saw no one in danger. Mr. Rowcliffe stated that he had been to the spot and suggested to the witness that it was quite impossible for two persons to stand on the stone at the same time, and that it was also impossible from this point to see the car the whole of the measured distance. The witness denied this, and thereupon Mr. Rowcliffe offered to convey the magistrates to the spot by motor-car, and eventually suggested that Mr. Jelf Pettitt (the chairman of the North Wales A.C., who was present in court) should make the inspection and be called as an independent witness. This course was agreed to, and accordingly Mr. Pettitt and the Chief Constable went to Glyndyfrdwy to make observations. Subsequently Mr. Pettitt gave the result of his observations. He stated he had stood upon the stone and instructed an open car, having as its passenger the Chief Constable, to run down the hill first. This had been done and he lost sight of it for about 70 yards of the measured distance. A covered car had also run down, and in this case he had been able to keep just the top of the hood of the car in view only. The Chief Constable and himself had endeavoured to stand on the stone at the same time, in the manner in which the police stated they had done, but found that that operation was absolutely impossible. This closed the case for the prosecution. Mr. Rowcliffe then addressed the Bench, commenting upon the unreasonable and unsatisfactory method adopted by the police in timing the car and upon the evidence produced for the prosecution, and contended that it was absolutely impossible at a distance of a quarter of a mile to say exactly when a car approaching passed a certain point, and this was admitted by one of the constables. The summons was dismissed.

The witness of a speedometer has been accepted in the Kingston Police Court. A motorist was the defendant, and the charge was furious driving. The defendant said he was on his guard, because he had been warned of the police "trap" and he was watching his speed indicator. Two other pairs of eyes were also on the indicator, and so there were three witnesses ready to say the speed was not excessive. The only remaining thing was to test the indicator. This was proved to be accurate and the charge was dismissed.

WARNING OF APPROACH.

At Jeddburgh Sheriff Court, Robert Nairn, motor-car driver, Edinburgh, was charged with having, on March 28th, on the public highway in Kelso, driven a motor-car and failed to give audible and sufficient warning of its approach by a bell or other instrument required for that purpose, such warning being necessary, and colliding with a trap. He pleaded not guilty, and was defended by Mr. Anderson, Mr. Sidney Hilton conducting the case for the prosecution. The former stated that the case was unique. There had never been a case of the kind before in Scotland.

The Sheriff retired about half an hour to consider the point, and on returning to the Court said that the section which he had to particularly construe was article 4, sub-section 5, of the Motor Cars Order of 1904, which pointed out that "whenever necessary" the driver shall blow the horn. The legal question he had to decide was what was the construction of the sub-section and what meaning was to be attached to the words whenever necessary. These meant that, whenever in the interest of the safety of passengers and other traffic on the highways it was essential that the approach should be given by the sound of the horn, it should be done, and in this particular case he thought there was no breach of the regulation. He thought the legislature had purposely avoided laying down any hard and fast rule, and purposely introduced the extremely vague words. He dealt with the facts of the case, and said the circumstances indicated that there was no necessity for the chauffeur to sound his horn. There was no evidence to show that there were pedestrians or any traffic in Simon Square to make the chauffeur sound his horn. While there was a duty on the part of a chauffeur, there was also a duty on the part of drivers of horses and vehicles, and it appeared that Elliot was driving with a slack rein and his horse was going in a careless fashion that afternoon, because where the accident occurred was almost just at the corner of Simon Square, and consequently a considerable way from the line which, if Elliot had been driving according to the rule of the road, he would have passed along. The chauffeur had brought his car to a standstill, and it was quite unnecessary to sound his horn. He assailed the accused, but thought the Fiscal was quite right to bring up the case. He thought in many cases, however, motorists would do no harm in sounding their horn.

ON CLOSED ROADS.

In the Perth Sheriff Court, James C. Wright, Dunblane, admitted to Sheriff Sym that on April 27th he drove a motor-lorry along the Broomhall road, between Dunning and Forteviot, the road being closed to motor traffic. The road had only been closed to motor-cars for thirteen days before this offence was committed. The Procurator-Fiscal, Mr. Melville Jameson, said the sign at the entrance to the road was quite distinct, and the driver ought to have been acquainted and ought to have kept a look-out. The Sheriff imposed a fine of 10s.

At Dunblane a motorist has been fined £5 and costs for motoring on the Trossachs road, which is prohibited to motor traffic.

DANGEROUS DRIVING.

Albert Mansfield was summoned at the Barnet Petty Sessions (1) for driving his motor-car to the public danger on Barnet Hill, and (2) for failing to stop when an accident occurred to a governess car. Mr. Staples Firth defended. It appeared that defendant drove down the hill behind the governess car, which followed a hay cart. The governess car pulled out to the off side to pass the cart, and defendant, pulling out to the off to pass the governess car, scraped it. The speed at which he was travelling, he said, was ten to twelve miles an hour. Defendant was fined £5 and costs on the first summons. The second summons was dismissed.

The Haywards Heath magistrates on Monday resumed the hearing of the summons against John Dones, of Maida Vale, for driving a motor-car to the danger of the public at Albourne on March 29th. At the previous hearing Mr. Lawson Lewis, who appeared for the prosecution, described how a car, driven by Mr. Ernest Bowden, came to grief, and its occupants were pitched out and injured. It was alleged that the defendant's car, travelling at forty miles an hour, struck Mr. Bowden's car. Mr. Humphrys said he thought he should be able to prove that a mistake had been made with regard to defendant's car being the car that was responsible for the accident. Defendant went into the witness-box and said that his car came into collision with no other car. He was travelling at a speed of between twenty and thirty miles an hour. In his opinion it was not possible to mistake his car for a yellow car. Defendant remembered sounding his horn and one car drawing to the side of the road—but not on to the grass. That was about five or six miles on the Brighton side of Crawley. It was a landaulet, and he thought the colour was dark blue. Corroborative evidence was given by Reginald Hemming, of London, who was in Mr. Dones's car. Mr. Warren, of Brighton, said he was driving from Crawley to Brighton. At Handcrosses Hill he passed a yellow car and it drove him on to the grass. It was not defendant's car to the best of his belief. The Bench decided to dismiss the case against Mr. Dones and ordered each party to pay his own costs.

OWING to increasing business Messrs. Corry Hurford, Ltd., have extended their establishment at 171, Great Portland Street, London, W., by taking in the adjoining premises. The additional show-room, which is of nearly the same size as their present garage with offices above, is to be devoted to a display of high-class second-hand cars of moderate power, while their old depot will be confined to low-power second-hand vehicles.

COMPANY NEWS.

UNITY MOTOR, ELECTRICAL AND ENGINEERING COMPANY.—£1,000. To acquire business of Unity Motor, Electrical, and General Engineering Works, Orchard Street, Bristol, and to adopt an agreement with A. A. Taylor. 52, Queen Street, Bristol.

MADDOX STREET MOTOR COMPANY, LTD.—Capital £3,000. To adopt an agreement with F. W. Jenkins, and to carry on the business of manufacturers of, and dealers in, motor-cars, motor-car parts, and accessories of all kinds, &c. The first directors are:—W. J. Wright (chairman), and F. W. Jenkins. Registered office: 40, Great James Street, Bedford Row, W.C.

BANNER MOTORS, LTD.—28-30, Redcliff Buiks, Bristol.—Capital £10,000, in £1 shares. Objects, to work under agreement with the Bann Motor Company, Ltd.

CHARRON, LTD.—Mr. Davison Dalziel presided at the first ordinary general meeting of Charron, Ltd., held in London on the 21st inst. The net profits were £73,270, and the chairman said that despite the crisis through which the motor manufacturing industry was passing, he looked for a decided improvement. A new cab has just been submitted to the authorities at Scotland Yard for their approval, and orders for 150 have been received. Apart from that there was a growing demand for the lighter and cheaper form of motor-car, and he believed the production of that type would not only be large but also profitable. The motion for the adoption of the report and balance-sheet was carried, as was also that for the payment on July 1st of an interim dividend at the rate of 7 per cent. per annum on the preferred ordinary shares and an interim distribution of 51. per share on the preferred ordinary shares and 3s. per share on the deferred shares.

Mr. Walter C. White on his 30-h.p. White Car.

This car took first honours in the Harrisburgh (U.S.A.) Endurance Run. Mr. White is at the wheel, and the Official Observer (in the tonneau) is apparently making up his report.

(See page 288 last issue.)

ENFIELD AUTOCAR COMPANY, LTD.—This company has been registered, with a capital of £20,000, to carry on the business of manufacturers and factors of, and dealers in, motor-cars, motors and engines, carriages, wagons, tramcars, omnibuses and locomotives, engineers. No initial public issue. The first directors are E. Tailby and W. Allday.

THE BROOKLANDS TRACK.

The final stage of the Brooklands motor track case has been reached before Mr. Justice Parker. The action was brought by Mr. C. J. David, of Walpole House, and Mr. T. Meares and Miss Meares, of The Summit, Weybridge, against Mr. H. F. Locke King, for an injunction to restrain an alleged nuisance caused by motor racing on the track at Brooklands.

His lordship suggested that defendants had given an undertaking that the private road upon which plaintiffs' premises abut should be discontinued as an entrance to the racecourse for motor traffic.

Mr. Dickens offered an undertaking to erect a barrier cutting off the track from the private road for all traffic except pedestrian and ordinary bicycles, and to put up notices at the top that motor-cars and motor-cycles would not be allowed down the road so long as the course exists.

Mr. Buckmaster said he was willing to accept this provided that defendant undertook not to dedicate the private road to the public so long as the track existed, a course to which Mr. Dickens agreed.

His lordship said that the defendant had substantially failed, and must pay the costs of the action, and there would be an enquiry as to damages.

FORTHCOMING EVENTS.

-4-

MAY.

- 27th-30th.—International Aeronautical Federation, Royal United Service Institution, Whitehall.
- 28th (Th.).—Visit of the Aero Club to Aldershot.
- 30th (Sat.).—Meet of the Herts C.A.C. at Hatfield Park.
Devon and Cornwall A.C. hill climb at Moorshap, Tavistock.
Lancashire A.C. speed judging cont. st.
Open hill climb of the Auto Cycle Union up the Sutton Bank, in conjunction with the Newcastle and District Motor Cycle Club.
A.C. of N. Wales meet at Wygfair, St Asaph.
A.C.U. open hill climb, Sutton Bank, near Thirsk.
Birmingham M.C.C. run to Weston Bank.
Blackheath A.C. reliability run.
Coventry M.C. touring reliability run to Holyhead and back.
Derby and District A.C. speed-judging competition.
Herts C.A.C. meet at Hatfield Park.
Manchester A.C. run to Vale Royal.
N.W. London M.C.C. run to the Whitehorse, Shenley.
Crystal Palace A.C. open flexibility competition.
Worcestershire M.C.C. run to Stourport.
- 31st (Sun.).—Southend M.C. run to Saracen's Head Hotel, Dunmow.
Penalty run of the Southern M.C. to Goring.
The Lincolnshire Motor Cycle Club's open-air service in the Dukeries.
Southern M.C. penalty run to Goring.

JUNE.

- 5th-8th.—London-Edinburgh twenty-four hours' run of the Motor Cycling Club.
- 6th (Sat.).—Brooklands A.R.C.
- 8th (M.).—Cars competing in the International Touring Car Trial will arrive at the "White" depot, Camden Town.
Brooklands A.R.C.
- 9th (Tu.).—Touring competition for Prince Henry of Prussia's prize begins.
- 11th (Th.).—Start of the International Touring Car Trial of the R.A.C.
- 13th (Sat.).—Hill climb of the Notts A.C. at Oakmoor.
Speed Trials of the Linca. A.C. at Grimsthorpe.
N. Middlesex A.C. speed judging competition for the Gamage Cup.
Essex C.A.C. hill climb at Bottledown Hill, Billericay.
- 14th (Sun.).—Monte Carlo hill climb for voiturettes.
Lincolnshire M.C.C. attends morning service at Gayton.
Lunch at Mablethorpe.
- 15th-19th.—Scottish Reliability Trial.
- 17th.—Close of Prince Henry Touring Competition in Germany.
- 18th (Th.).—Meet of the Cambridge A.C. at Hatley Park by invitation of Sir C. Hamilton.
- 20th (Sat.).—Meet of the Hull Auto Cycle Club and the Lincolnshire Motor Cycle Club at Brigg.
Annual Hill Climb of the Bristol and Gloucestershire A.C.
Lunch of the Kent A.C. at Dover.
- 27th (Sat.).—Saltburn beach races.
Baxton meet of the Manchester, Sheffield, and Lincolnshire clubs.
Members of the Cheshire A.C. will participate in the Gymkhana of the Manchester A.C.
Visit of the Essex C.A.C. to Audley End.
Meet of the Kent A.C. at Holwood by permission of the Earl of Derby.
- 28th. (Sun.).—Southend M.C. run to Grand Hotel, Clacton.

JULY.

- The Land's End to John o' Groat's Trial of the Auto C.C. will be held.
- 6th (M.).—Grand Prix A.C.F. (Voiturette section).
- 7th (Tu.).—Grand Prix A.C.F. on the Dieppe Circuit.
- 8th (W.).—Meet of the Cambridge A.C. at Wareley Park by invitation of Col. Duncombe.
- 9th (Th.).—Meet of the Ladies' A.C. at Hanworth Park, Middlesex.
- 11th (S.).—Provincial meet of the R.A.C. at Hereford.
Essex C.A.C. gymkhana at Brentwood.
- 16th (Th.).—Club meet of the Notts A.C. at the Hop Pole, Ollerton.
- 18th (Sat.).—Annual Gymkhana of the Herts C.A.C. at The Grove, Watford, by permission of the president, the Earl of Clarendon.
Gymkhana of the Kent A.C. at Maidstone.
Meet of the Liverpool and Cheshire A.C.'s at Delamere.
New Forest and Dorset A.C.'s joint hill climb.
Hill Climb of the Essex C.A.C.

INCORPORATED INSTITUTION OF AUTOMOBILE ENGINEERS.

THE first session of the graduates' section of the Incorporated Institution of Automobile Engineers concluded on the 19th inst. with a lecture by Mr. William Gilchrist on "Coach-springs as applied to the Motor-car." By the courtesy of Messrs. James and Browne, Ltd., the meeting was held at Westcroft Works, Hammersmith, and the chair was taken by Mr. T. B. Browne. Mr. Gilchrist gave a short résumé of the history of coach-springs, which he illustrated by a number of drawings showing the development of coach-springs from the days of the cross-bow to the modern elliptic springs. He also presented a number of very interesting diagrams illustrating the evolution of coach-springs. The discussion was opened by Mr. L. H. Hounsfield. At the close of the proceedings a vote of thanks was accorded to Mr. Gilchrist for his lecture.

AUTOMOBILE ACCIDENTS.

A CHAUFFEUR employed by Viscount Downe gave evidence at the inquest at Kettering on Saturday with reference to the death of his child, Delia Frost, who was killed as the result of a motoring accident. Frost said that the car had been to London for repairs, and he was taking it back to Dingley Hall. His wife and twin children and a nurse girl were riding in the car, but he did not have Lord Downe's permission for them to do so. He did not see a sharp turn at the foot of the hill until it was too late to pull up, and the car dashed through a hedge. He had not travelled that way before, and was quite ignorant of the road. He picked up his child Delia and carried her to a cottage, but she lived only a few minutes. The coroner reprimanded Frost for driving at such a speed on an imperfectly known road. The jury returned a verdict of "Accidental death," and decided to call the attention of the County Council to the spot, at which several accidents had previously occurred.

A SHOCKING accident happened at Hove at midnight on Saturday to a young man named Harold Clifton, the hon. secretary of the Brighton and District Motor-cyclist Club. He was returning home on his motor-cycle, and whilst passing along the drive on the sea front he came into collision with a taxi-cab. A number of people at once went to his assistance, and he was conveyed to the Hove Dispensary, where it was found that his skull was fractured and he was otherwise seriously injured. Death ensued on Sunday afternoon.

BUSINESS NEWS.

By one post last week orders for 650 spare wheels were received by the Stepney Wheel Company, including one for fifty-two wheels for Java.

THE Stepney Wheel Company have taken premises at 168, Great Portland Street, W., which will be opened shortly as London showrooms. The primary object of this step is to facilitate the introduction of the new Stepney flange, for which the company expect an immediate success.

MR. P. B. BERESFORD-HOPE has written to the Mors Company giving particulars of a successful trip on his 28-35-h.p. Mors car. "We did much climbing in the Alps and she behaved splendidly. She is the first car that has crossed the Mont Cenis Pass this year. There was 15 ft. of snow, and though it was cut through, yet it was a most difficult task, and we were warned that it was impossible, but we got through all right."

MESSRS. JAS. THOMSON AND SON, Lady Lawson Street, Edinburgh, have been appointed sole agents for Scotland for the well-known Crypto accumulator charging plants. The firm are also sole Scottish agents for the lathes and machine tools manufactured by Messrs. Drummond Bros., of Guildford.

MR. W. S. COLLIS, of Dublin, writes that he has had his Beeston Humber in use for over a year, having covered some 5,000 miles, and that after expert examination nothing could be found requiring either improvement or repair. He adds that "I have never had any trouble with engine, gear, or differential."

MESSRS. MARTIN, of Bow Bridge, London, E., propose to hold regular monthly auction sales of second-hand commercial motor vehicles. These will be held on the first Thursday of each month at 11.30 a.m., commencing on Thursday next.

THE Isotta-Fraschini car which won the Targa-Floria race was fitted with and run on an Eisemann magneto, for which United Motor Industries, Ltd., are the British agents.

A FULL and interesting description of the new works of Messrs. Hans Renold, Ltd., at Didbury, near Manchester, commenced in the last number of "Engineering." Not only does this give technical information as to the construction of the new works, but it deals with the general question of chain driving as compared with belt driving in a very thorough way.

IN Wells Street, Jermyn Street, W., the Jermyn Street motor hire and repair works of Mr. Nicholas Lechmere are undertaking all kinds of motor repairs.

THE KEMPSHALL TYRE COMPANY OF EUROPE, LTD., 1, Trafalgar Buildings, Northumberland Avenue, London, W.C., have been advertising for 150 pneumatic tyre makers to make the Kempshall pneumatic non-skid rubber tyres in their Manchester works.

THE Motor-Car Journal.

VOL. X.]

LONDON, SATURDAY, JUNE 6, 1908.

[No. 483.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

IT is generally understood in the locality that the intimation of the police to the Bristol and Gloucestershire A.C., that they will proceed against the drivers of any cars ascending the hill in their competition at a speed exceeding twenty miles an hour, was prompted by the speed at which cars have been travelling through the county of late. This has led to the abandonment of the proposed competition, and observant resident motorists are fearful lest the county police, who have hitherto maintained a considerate attitude towards them, may lead to an imitation of Southern measures. Around Cheltenham complaints have lately been very frequent, and suggestions from motorists in the county that visitors on cars should exercise care in travelling through towns and villages will, we hope, secure universal endorsement.

Dust Trials.

FURTHER trials with regard to the raising of dust by motor-cars are to be held on the Brooklands Track by the R.A.C. during the summer. The present intention is to divide the competitors into three classes, viz.:—(a) Makers' standard cars, (b) an inter-club competition for amateurs' cars, and (c) experimental vehicles. With reference to the Inter-club Competition, it is suggested that those organisations which intend to compete should prepare by arranging for a preliminary trial limited to their own members, so that the best cars in the club would be sent to Brooklands for the final test. Each competing club will be allowed two vehicles, and the prizes will be decided on the joint performance, and not on the best individual car. Owing to the vagaries of the weather, we have not heard so much of the dust this year as in some former seasons, but should the present spell of fine weather be protracted, there will doubtless be many reminders that the problem is not yet solved.

Needless Comment.

RUMOUR—which, we need scarcely remind our readers, is sometimes a lying jade—says that "the recent acceptance by Prince Francis of Teck of the position of chairman of the R.A.C. may be the beginning of a development which promises to revolutionise clubland, and may possibly have a marked effect on the hotel and restaurant life of London. The Club has bought the site of the old War Office in Pall Mall. Here a club-house on entirely new lines is to be erected. It will contain all the best features of the hotel de luxe. French styles will be introduced. Its reading-room will take the form of a winter garden. There will be a large number of bedrooms and a bathroom to each. Ample space will be devoted to the restaurant, which will be run on the same lines as the best ones in London. Banquets will be fairly frequent, and private parties will be a daily feature of club life. Members will be allowed to introduce ladies. Supper after a theatre will be a special attraction, for it will be enjoyed in peace, with no cry of "Lights out!" followed by a hasty scramble. One room, and one room only, will be consecrated to the old club life. Its furniture will be

entirely of mahogany and mulberry-coloured leather, its walls will be hung with cobwebs. The number of members will be increased to at least 5,000. The R.A.C. of the future will strike a death blow at the club as we know it to-day. The scheme and plans of the club are being closely watched in the catering world, more especially in view of the present Licensing Bill. It is obvious that in face of recent severe competition any further State-created restrictions must tend towards disaster. It is even possible that in the future some of London's hotels may form themselves into clubs simply from motives of self-protection." And there the rumour ends.

The Reliability of the Modern Car.

THE record of the marks obtained in the Irish Trial for reliability confirms the view we have previously expressed in these columns that the need for trials to prove the ability of cars to undergo tests of endurance is no longer of such importance as was the case a few years ago. Of the fifty-one cars that finished, twenty-four secured the full 850 marks obtainable, viz., the 10-h.p. Royal Starling, the 8-h.p. Rover, the 9-h.p. Adler, the 10-12 h.p. Swift, two 10-12-h.p. Humbers, 14-16-h.p. Argyll, 16-20-h.p. Calthorpe, 18-24-h.p. Swift, 18-22-h.p. C.C.C., 16-20-h.p. Stella, 20-h.p. Beeston-Humber, 20-h.p. Rover, 20-h.p. Cadillac, 15-h.p. Clement-Talbot, 20-h.p. Sunbeam, 25-h.p. Clement-Talbot, 18-24-h.p. Gladiator, 25-30-h.p. Austin, 10-12-h.p. Swift, 20-h.p. Cadillac, 14-22-h.p. Germain, 18-24-h.p. Gladiator, and 24-30-h.p. De Dietrich. Of the others only four were below 830 marks, thus evidencing an uniformity in reliability which is a great testimony to the present excellence of the automobile.

Who Pays?

A CURIOUS point has arisen at Leeds, where a chauffeur in the employ of the Corporation managed to get into a police trap on the Harrogate road at Moortown. This was operated by a couple of constables, who were, like the chauffeur, directly responsible to the Corporation. When the defendant was stopped he explained his official position to the constable, and told him that the car belonged to the Corporation and was engaged on important business for the Waterworks Department. That, however, did not assist his escape. In the police court the prosecution was led by Mr. Bateson, from the Town Clerk's office, who, when asked as to the ultimate persons to pay, suggested that the ratepayers, as employers, might consider themselves called upon to reimburse the chauffeur any costs he incurred in their service.

Reflecting Mirrors and the Rule of the Road.

AMONG the accessories which have recently met with a large degree of popularity in motoring circles is the reflecting mirror, which, placed in a suitable position near the driver, enables the latter to see any traffic that may be approaching from the rear. There is no question that the device serves a useful purpose, and it is one that might well find a place on all cars, and indeed on all classes of vehicles. As was pointed out in our Correspondence columns last week, the rule of the road is that drivers shall keep to the left in order

not to obstruct any other vehicles desirous of passing. While there are a few users of the road who seem to delight in holding to the middle of the highway, despite all signals, there are many others who do so unwittingly, owing to the ordinary hooter being often insufficient, on the country road, to give the necessary warning that a more speedy car is approaching and is anxious to pass. The difficulty is one which would be entirely overcome if, as we suggest they should, mirrors were regarded as a standard fitting on all motor-vehicles.

The Danger of Cap Throwing.

IN the course of a case heard the other day at West Hartlepool, in which a lad was charged with throwing his cap at a motor-car, the Chairman of the Bench, Alderman Wilson, remarked upon the danger of such an act, and gave an instance in support of his view. He mentioned that a boy had thrown his headgear at an automobile, with the result that it caught the exhaust pipe and set the vehicle on fire, doing damage to the extent of £500. Doubtless with the advent of fine weather the mischievous instincts of the modern boy will again be a feature of road touring, and motorists will be performing a general service if they take steps to bring such delin-

Mr. F. J. Jenkins at the wheel of the 20-h.p. Rover Car on which he won the Albert Brown Trophy.

quents before the Bench. Kindness is often misplaced when dealing with the gamin's attitude towards the motor-car.

Withholding Subscriptions.

WHILE we do not like the idea of retaliation on good causes, there is much to be said in support of the notion ventilated by Mr. Edmund Sharpe at a meeting of the Lancaster Regatta Committee. The Lancaster police and magistrates have shown little, if any, consideration for motorists. Traps and fines have been as familiar in the county as in a southern area, and things have come to a sorry pass. Few people, other than the police, are regarded as trustworthy in court, and the evidence of motorists is generally ignored or disbelieved. Thus it has come about that Mr. Edmund Sharpe, of Halton Hall, told the meeting referred to that he and other motorists in the district had resolved to take the drastic step of withdrawing subscriptions from all institutions and societies in Lancaster owing to the action of the county magistrates and as a protest against their persecution of motorists. They had no other method of retaliating than by bringing it home to the people of the district in this way. Mr. Turney, a town councillor, said that if a poll of the people of Lancaster was taken 95 per cent. would express similar opinions to those of Mr.

Sharpe. A few years ago a similar policy was advocated in Surrey; it will be interesting to watch the effect of such a plan if carried out, in Lancashire.

The Motor-Bus Again.

QUITE a number of attacks have been made upon the motor-bus, not only by the general public at Mile End, but also by the local authorities in the metropolis. At Stepney the Borough Council on Wednesday had a report from the Works Committee urging the reduction of the speed of such vehicles to ten miles per hour, and similar proposals were also before the Borough Councils of Chelsea and Fulham, whilst the Home Secretary is now making inquiries with regard to the motor-bus traffic in the areas beyond the City of London itself. On Monday, too, the Mayor of Holborn and a deputation from the Borough Council, over which he presides, interviewed the Commissioner of Police with regard to the number of fatal accidents which have lately occurred in Theobalds Road, with the result that Sir Edward Henry promised to have two officers always on patrol near Red Lion Street. At such points where tramcars join with the ordinary traffic of the street special regulations are undoubtedly necessary, and the public authorities have most important duties to consider.

The Touring Car Trial.

ON Whit-Monday the cars which have entered for the International Touring Car Trial will assemble in London; their fuel tanks will be filled on the afternoon of Wednesday next, and a start will be made at 9 a.m. on the Thursday morning for Nottingham. In our issue of April 11th we gave the list of entrants for both this event and also for the Scottish Reliability Trial, which forms a portion of the 2,000 mile pilgrimage upon which the cars will be engaged. Last week we published the itinerary, and it now remains but to hope that the present weather continues to enable something approaching the uniform excellent results of the Irish Trials to be attained. To the depot of the White Company in Carlow Street, Camden Town, N.W., the R.A.C.'s weighbridge, previously used for weighing the Tourist Trophy cars, has been taken from the Isle of Man for the purpose of weighing the cars, and it is of interest to note that the responsibility for seeing that the required number of passengers and amount of ballast are on the car at the time of starting rests with the driver.

Progress.

THE Automobile Club of Canada recently held a great gathering, which serves to emphasise the importance of the automobile movement throughout the world; for among the visitors was the Secretary of the Automobile Club of Buffalo, which claims to be one of the largest clubs in the States, with its 11,000 members. He told of a great motor-car convention to be held in his city in July, at which over 1,000 automobiles will parade the place. Mr. W. Dandurand, the pioneer motorist of Montreal, stated how, nine years ago, when his was the only motor-car in the city, he found the traffic blocked along his line of progress whenever he went out; then there were only seventy cars in New York—events, as well as cars, have moved rapidly since then.

A Police Mistake.

THAT the police are not infallible is a truism accepted by motorists generally, although it has proved somewhat difficult to secure its recognition from those who have had no dealings with the custodians of law and order. The other Saturday Sergeant Waghorn, whose fame is known far beyond the area of his county of operations, called on Mr. German, of Guildford Street, London, W., and served him with a summons alleging that he had exceeded the legal limit on the Brighton road. Mr. German denied all knowledge of the matter, and on the

succeeding Monday Sergeant Waghorn visited him again in company with another officer. Together they inspected the car and came to the conclusion that they had made a mistake. Thereupon they asked Mr. German to return the summons, assuring him that he would hear nothing more of the matter. The incident is interesting as illustrating the possibility of mistaken identity, and as showing that the police, even though armed with stop watches and other instruments of their craft, are not infallible.

The Motor as a Means to Health.

authorities of Battersea have employed tar macadam with such good results that a marked improvement has been noted in the public health statistics. The municipal officers have been watching the effect of tar paving in certain side streets of the borough, particularly those in which epidemic diarrhoea has been prevalent in past summers. In their annual report the Council state that there is no doubt that this paving is of great service

THE value of the motor-car as a direct aid to the enjoyment of good health is generally acknowledged; now its indirect utility is being officially recognised. To obviate the dust that it raises in its passage through their area the sanitary

will be satisfactory for this purpose and for holding down a heavy surface dressing, is a matter for the future to decide. On the whole, however, it seems to be agreed that the surface treatment of roads with tar is more of a palliative than a preventive of the dust nuisance.

Doctors and the Car.

MEDICAL men are among the most enthusiastic section of the automobile community, and so frequently use their cars when on professional errands that they are agitating for preferential treatment with regard to any alterations in motor-car taxation that may be proposed. So far it has been generally employed merely for the conveyance of the doctor, but from the United States we hear of a further adaptation which may be of interest to the many medical men who regularly read our columns. That an automobile and its searchlight equipment may become a very important aid to the country surgeon was proved in the case of Dr. Reid, of Rome, N.Y., who received a hurry-up call from fifteen miles out in the country to attend prepared to operate for appendicitis. Arriving at 6 p.m., after a half-hour ride, it was found that the condition of the patient was very serious, and an operation urgent. In the farm-

H.H. The Maharajah of Cooh Behar at the wheel of his 40-h.p. Six-Cylinder Delaunay-Belleville Car with his eldest daughter. The car, which was supplied by the Burlington Carriage Company, Ltd., who also built the body for the same, is painted French grey, trimmed in red leather and silver-plated mountings.

in the prevention of infection. Out of 35 streets imperviously paved, 10 are in North-West Battersea, and in that district the deaths from summer sickness were less in 1906 (the hottest and driest summer for several years) than in 1905. We trust the investigation will be carefully continued.

Combatting the Dust Nuisance.

SOME results are now to hand of experiments with tar as a dust preventive carried out by the Office of Public Roads in the United States. The road in Massachusetts selected for the purpose is part of the main thoroughfare connecting New York with Boston, and is located about sixteen miles from the centre of the latter city. Thirteen different trials were carried out, four with water gas tar alone, three with coal tar, three with mixtures of water gas tar and coal tar, and three with special tar preparations. Some of the conclusions are of interest. It has been shown that water-gas tar is a satisfactory dust layer and preventive when used in moderate quantities on roads already in fairly good condition. It must necessarily be applied more frequently than the heavier tars, owing to its lack of body. Where extensive repairs have to be made before treatment it has but little value as a binder for the large, loose material, and whether its use even in large quantities

house, as is usual, kerosene oil lamps formed the sole source of illumination—not light enough for conducting a delicate surgical operation. More light was essential, and a piece of rubber tubing was accordingly run from the automobile through the window into the room in which the patient lay. Then, removing one of the gas lamps, it was pressed into service in the improvised operating room. Turning on the gas, lighting the lamp, the resulting illumination permitted the successful carrying out of the operation.

ON Monday, in the House of Commons, Mr. H. Bottomley made a speech on the Budget, in which he asked "why had not a tax on motor-cars been proposed?"

A RECEPTION was held on Thursday at the formal opening of the Trevor Motor School and Information Bureau, 162, Great Portland Street, London, W.

THE list in connection with the Daimler Company's Scholarships is closed, and no further applications can be received for this year's competition. The arrangements for next year have not yet been decided upon.

A REPORT is to be presented to the Senate proposing that no Cambridge undergraduate be allowed to keep a motor-car unless he shall have previously obtained a licence from the senior proctor.

A HOLIDAY TOUR THROUGH THE ENGLISH NORMANDY.

UNDOUBTEDLY a feature of the Easter holidays was the striking popularity of motor touring. I can quite believe the report that over a hundred cars passed through Canterbury in a single hour on Good Friday, as I was one of a party that carried out an enjoyable run that way. The day was a delightful one, and the promise of fine weather must have tempted a number of motorists out, for on the Maidstone and Charing road there seemed a procession of cars. Personally, I should say the feature of the holidays was the number of cars with two-seated bodies. I suspect the fashion is set by Brooklands, for some number were of a racy type with little protection in the way of hoods and screens, and the fashion for the passenger's seat to be lower than the driver's, another racing idea, seemed general. I did not fancy, however, the sporting rig-out of one car that I noticed near Maidstone; the driver and two passengers were each seated on sugar boxes lashed to the chassis. The passenger at the rear sat over the differential and apparently had nothing more than the box to hold on to. It is hardly a standard type of touring body, but the luggage-carrying capacity of a sugar box may be points in its favour, apart from which it is cheap and certainly easily detached, and in these days of trade depression one cannot always pick and choose.

An early start has been made in tarring the Maidstone road, for on the outward bound trip we struck a long and freshly tarred stretch near Maidstone, a caution board at each end warning cyclists to this effect. Mr. Maybury, the county surveyor, promises that, by early summer, the whole of the road down to Folkestone will be tarred, and I think motorists ought to show their appreciation of this enterprising road treatment by patronising Folkestone. Already the road is given as a quiet tip to those in search of a really decent run, with nice scenery and roads, and who want to steer clear of traps. The stretch from Wrotham right into Maidstone is of a billiard-table smoothness, and is far in advance of the Brighton road. There are only a couple of towns *en route*, and a big point about Folkestone is the absence of any trams or buses. It is known as the "English Cannes," and it is really an excellent place. One can go there at any time of the year and find some amusement, which is more than can be truthfully said of many seaside resorts.

We stopped the first night at Margate, and, although it was a brilliant day on Friday, the weather quite changed the following morning. Didn't it blow along the front! The sea was quite choppy, and a nor'easter came right bang off the German Ocean. Up fairly early, we got the car out, oiled up, and filled with petrol and water, and were soon heading for Ramsgate along the tram road. We had our first adventure at Broadstairs, for they had been oiling the rails, and, although our pace was slow, the car executed a double movement and turned round, ending up on the pavement. Fortunately, no harm was done. Turning the narrow road into Broadstairs we had a rather alarming escape from cannoning another car. A stop for refreshments and to buy picture postcards and we were soon running along to Pegwell Bay, the favourite haunt of trippers, but this time we had the road very much to ourselves. The road through Deal and Walmer is excellent, and we made good time over this stretch. The stiff drop into Dover, where the afternoon was spent, was safely made, and after an inland *détour* Folkestone was reached early in the evening. We found plenty to eat and much to interest us, including the harbour, with a couple of cross-Channel steamers lying berthed in it, which made us bemoan our luck that we were not going over to Boulogne for a French tour.

The following morning we left Folkestone by way of Sandgate and Hythe, and soon struck the outskirts of Romney, a district which is by no means as well known as it deserves. The country is immortalised by Ingoldsby, and we found the road to Romney *via* Dymchurch in splendid order. The long straight stretches called for speed, though it is really too interesting a district to pass through rapidly. Old Romney is a

quaint little place, though there is a very sharp turn at the end of the village that calls for care. The road is winding to Brookland, and at its only inn we asked the landlord if there were any traps about, and as he did not seem to quite understand our query, we added, "Motor traps." "Oh, police traps! there's none of them in these parts; why, there's only two policemen for twenty miles round," was his reply. A heavy downpour caused an hour's stay at the inn at Brookland, but, as there was then no prospect of improvement in the weather, we started off again. The rain had ceased, but the wind roared over the marshes. We tacked over to Lydd in the teeth of the wind, and then visited one or two other marshland villages, presently sighting Rye in the distance through the mist.

Rye is a nearer approach to a French village than any other town or village I know of. It is French every bit of it; French in the straight road lined with tall poplars on each side, which leads into it from the marshes. You can see Rye for miles away over the green level lands at first rising like a tall ship on the horizon, then a confusion of towers and gables, cutting the sky line, and at last, when you are quite near, a little tiny town set upon a hill, of red houses with red roofs, of tall, solemn houses, each of a different style, built round a great church, whose high red roofs and tower seem to occupy the picture with a sense of completion and repose. There are fragments of old walls, too, a wooden gabled house, high-pitched stone houses of an older time, the old town walls, which once the sea surrounded; the Ypres gate, in the crevices of whose towers so many weeds have made their habitation. You can see the long levels of rich green grasses extending for miles ahead, the miniature port in the distance, with the masts of the little ships peeping over the houses, and beyond, filling the horizon, the large and spacious Channel, blue and sparkling in the sunshine, with the great ships sailing over it, all as if woven of the stuff of dreams.

Such is Rye in the summer time and fine weather. In the storms and winds of the Easter which has just passed it presented another vision. The great space of level land lay under brooding clouds. The winds that blew in from the Channel tore and beat through the narrow streets and clamoured round the old church tower; sometimes the sand was swept for miles in great blinding storms across the marshes; sometimes the sheets of rain obscured the grey distance. And across the plain at such times there always comes the dull note of disquietude, the note of pain, the sound of the moaning of the restless awakened sea, hungry for the lives of men.

Leaving Rye, we steered along the strand facing the canal to a toll gate, where we were relieved of sixpence. The way then led along a straight road terminating in a very sharp pull to Winchelsea, and through Guestling into Ore, and the long drop into Hastings; the last ten miles from Winchelsea are especially interesting, though much more enjoyable on a fine summer day, when the views are really grand. We stayed the night at Hastings. The return run the following day, *via* Bodiam, Flimwell, and Tunbridge Wells, calls for little comment, apart from the snowstorms and absence of any other traffic save motors and cycles.

Despite the weather the trip was pronounced most enjoyable, and it was certainly bracing. The route outlined is quite sufficient distance for a holiday tour under unfavourable weather, and, apart from the absence of traps, I can recommend Romney and Rye as places well worth a week-end visit.

S. B.

At the Westport Works, Cupar, Fife, Mr. Roland Outhwaite has a motor garage and repair works, from which he also lets cars out on hire.

THE question as to whether owners of motor-cars should contribute towards the cost of repairing the damage on roads occasioned, or alleged to have been caused, by them is to receive the consideration of the Local Government Board. Such, at least, was the reply of the new Parliamentary Under-Secretary, Mr. C. F. G. Masterman, to a question by Mr. J. R. Clynes in the House of Commons a few days ago.

GOSSIP FROM PARIS.

THE Marquis de Dion, the champion of automobilism in the Chamber of Deputies, has already in his portfolio more than a hundred thousand signatures against M. Barthou's obnoxious Automobile Traffic Bill, and before the projected measure comes on for discussion he will certainly have received so many more petitions that if it were necessary to produce them at the tribune he would require an automobile van to carry them to the Palais Bourbon. Fortunately the agitation which followed the presentation of the Minister's bill to Parliament had the desired effect of inducing the Public Works Committee, to which it was referred, to amend the measure in a liberal spirit. It will, therefore, be quite sufficient for the Vice-President of the Automobile Club of France to announce the result of the petitioning to his colleagues of the Chamber. There are still in the French Parliament a few obstinate adversaries of the new means of locomotion who regret the remodelling of M. Barthou's Bill, but the efforts they will doubtlessly make to restore the original text are destined to failure.

THE amended Bill is not perfect, but the driver of an automobile will not, as it was at first proposed, be liable to have his licence withdrawn by a police magistrate or a justice of the peace for the infringement of the regulations concerning the escape of smoke from the exhaust pipe or for a lamp being extinguished, perhaps accidentally or unknown to him. No, to be deprived even for a day of his driver's licence a motorist must have committed a sufficiently serious offence to have entailed his condemnation by the Correctional Police Court. Then the long list of public servants who were to have been empowered to note legally infringements of the traffic laws and regulations is reduced to the engineers of the Ponts et Chaussées and the gendarmes and ordinary police. On the whole, if, as seems likely, the amended Barthou Bill is adopted in its present form, French motorists will not have much to complain of, especially as it is almost certain to be made a stepping-stone towards the complete reform of the highway laws affecting not only horseless but all kinds of vehicles.

BEFORE placing their money on any particular man or machine as the winner of the A.C.F. Grand Prix, run on July 7th, sportsmen should glance at the betting list of the Agents de Change and Coullissiers of the Paris Bourse, who are for the most part fervent motorists. I advise British sportsmen, however, not to pin their faith implicitly on the French boursemen, who are just as liable to error in their predictions on sporting events as they are in their indications concerning the probable rise or fall in the price of speculative securities. Yet their list, even as it now stands six weeks before the event, is interesting. Nazzaro and Théry, who will drive respectively a Fiat and a Brasier car, are the favourites. They stand at 15 to 1. Rigal and Duray (Clement-Bayard and Lorraine Dietrich) come next at 18 to 1. Hemery and Wagner (Benz and Fiat), 19 to 1. Hauvast, Cagno, and Lancia (Clement-Bayard, Itala, and Fiat), 20 to 1. Siz (Renault), 25 to 1. Salzer and Baras (Mercedes and Brasier), 21 to 1. Gabriel and Jenatz (Clement-Bayard and Mors), 30 to 1. None of the other drivers find backers at the present moment at less than 50 to 1, and in some cases nobody will back them at any price.

THE bet made at the dinner given at the Cafe de Paris on March 9th last is already gained! So recently as eleven weeks ago the possibility of flying a kilometre with two persons on an aeroplane was regarded as so problematical that M. Charron wagered 12,000 francs against 6,000 francs put up by Messrs. Archdeacon, Santos Dumont, and Henry Farman that it would not be achieved within twelve months. The telegram I received from M. Archdeacon, dated Ghent, May 30th, told me that, seated beside Henry Farman on his aeroplane, he had covered 1,236 metres, or close on one kilometre and a quarter, and that nothing but the dimensions of the field prevented a much longer flight.

On the same day, at Rome, M. Delagrange remained in the air on his aeroplane no less than a quarter of an hour and 26 sec., thus beating all his former records of time and distance. Any one who only a year ago should have predicted such events would have been dubbed a madman. But those flights have been made here in Europe in the presence of thousands of people, and everyone must admit they are calculated to dispel incredulity in the reported performances of the Brothers Wright in America. All that twelve months ago seemed still to belong to the realm of imagination now appears within reach in a near future.

MR. WILBUR WRIGHT is in Paris, and the French need not be greatly surprised if he should not only accept Farman's challenge, but, after beating him, set to work to win the Michelin prize of £4,000 by flying from Paris to Clermont Ferrand, a distance of 237 miles, as well as the prize of £5,000 for a flight from London to Manchester, a distance of about 180 miles. Then there is the flying machine Mr. Herring is building, and which, if it realises half the expectations of its already celebrated inventor, will throw even the Brothers Wright's aeroplane into the shade. I have within the last few days conversed with quite a number of Frenchmen more or less directly interested in aviation, and I found that much of their former scepticism has given way to confidence in the Brothers Wright's achievements.

The 40-h.p. Lorraine-Dietrich Limousine which was last week driven from Paris to Moscow in record time by Messrs. Sorel and Rougier.

It may be taken for a certainty that if only the American aviators on their machine, together or separately, make their promised public demonstration that they have really solved the problem of equilibrium in the air, they will receive an ovation the cordiality and heartiness of which they will never forget.

MARNEY.

THE new list for 1908 issued by Messrs. Chater Lea, Ltd., of 114-120, Golden Lane, E.C., comes at an opportune moment for those who are overhauling their machines for the coming season. The pages are arranged in such a way as to facilitate reference, the information relating to similar types of accessories being kept together where possible. Every variety of spare part is illustrated, and the Fafnir, Minerva, J.A.P., and the Sarolea engines for motor-cycles also find a place in these pages.

WE have received the first number of the Architectural and Topographical Record issued by the Society of that name, which has been formed to make a survey of objects of architectural and archaeological interest in the British Islands. The work should be of interest to the many motorists who visit places which are beyond the beaten track or the usual line of railway communication. Examples of the exhaustive character of the work are given in the way in which certain parishes in Dorset and Kilkeny are dealt with in the journal before us.

B

NOTES FROM BOURNEMOUTH.

WITH the continuance of sunny skies and balmy air there has been a large influx of motorists into Bournemouth, which, if it ever merited the apt description applied to it by Mr. William Mate as the evergreen valley, does so more particularly at this period of the year. Indeed, Hampshire during the past fortnight has been visited by more devotees of the automobile than ever before. Many of those who came for the recent Motor Union gathering from the more distant parts have made Bournemouth their headquarters whilst making tours into the New Forest, with its ever-changing scenery, or else into Dorset.

THE recent rains have come not only as a blessing to the agriculturists but also to the motorists. The main roads, however, owing to the heavy traffic, are still in a dusty condition, and further showers would be most welcome. Amongst the visitors who have recently garaged at the Imperial, of which Mr. North Brown is the manager, were Mr. F. E. Cobb, Hove (Minerva), Mr. W. M. Burnham, Brixton Hill, London (Dennis), Mr. E. R. Martin, Henstaff Court, Glamorgan (Siddeley), the Rev. T. Knapp, Cranborne (Darracq), and Major Murray, Lymington.

Paderewski, the famous pianist, starting for a motor excursion in Detroit, U.S.A.

THE Whitsuntide attractions in Bournemouth include a fête on an extensive scale, in which one of the principal features will be a motor gymkhana at Boscombe Manor Park, by permission of Lord Abinger, the proceeds being devoted to the building fund of the Royal Boscombe and West Hants Hospital. A distinguished company of motorists is expected to take part, and the gymkhana is held under the patronage of Lord and Lady Abinger, the Countess of Malmesbury, Lady Manners, Lady Meyrick, Lady Alabaster, the Right Hon. Mrs. Robinson, and many other county ladies and gentlemen. Motorists who propose to visit this resort during the holiday will do well to drive with care, as it is rumoured that the police in the county are already preparing themselves for those unsuspecting drivers who exceed the statutory speed limit. The 220 yards "traps" is the area that will be marked out, because certain difficulties are foreseen if the long distance suggested by Major Lang, of the East Sussex Constabulary, were tried in Hampshire. **WESSEX.**

IMPRESSED by the courtesy of the A.A. scouts whom he has met on the road when coaching, Mr. Vanderbilt has just joined the Automobile Association.

TENDERS for the petrol motor fire tender escape for the Dundee Fire Brigade should be delivered to the Town Clerk by noon on Tuesday next.

CONTINENTAL NOTES.

The A.C.F. Grand Prix Race.

The entry list for the light and heavy car races for the A.C.F. Grand Prix, which are to be held on the Dieppe circuit on July 6th and 7th, was finally closed on the 1st inst. In the light car section late entries were a Certus friction-driven car entered by the Certus Company, Ltd., London, and a Demeester, bringing the total number of competitors in this event to sixty-four. As regards the heavy cars the three Mors cars have now been definitely entered, the total being thus increased to forty-nine. France will thus be represented by twenty-four cars, Great Britain by six, Germany by nine, Belgium by three, Italy by six, and the United States by one.

The St. Petersburg-Moscow Race.

The annual motor-car race organised by the Moscow section of the Russian Automobile Club was held on Monday last, the course this year being from the outskirts of St. Petersburg to Moscow. Altogether thirty-two entries were received, these being divided into five categories. The start took place at 1.30 a.m., the powerful cars in which the interest was mainly centred being sent off first. The competing vehicles in this class comprised a Darracq, a Benz, a Fiat, an Argus, a Berliet, an Itala driven by Mr. H. R. Pope, a Mercedes, and three Lorraine-Dietrichs, the drivers being respectively Messrs. C. Jarrott, Duray and Rougier. The contest resulted in a victory for the Benz, which, driven by Hemery, covered the distance of approximately 430 miles in 8 h. 30 min., Demogeot on a Darracq being second in 8 h. 42 min., and Pope (Itala) third. Jarrott was unable to finish owing to a mishap to his car.

British Motorists in France.

The numerous British tourists who may propose to motor from Paris to Normandy will be pleased to learn that they can for the future take the direct road on the right bank of the Seine, passing by Pontoise, Magny-en-Vexin, Thilliers, Ecouis, and Boos, the pavé having been removed since May 1st between Pontoise and Magny. Recent British visitors to France include:—Mr. and Mrs. H. E. Hooper (45-h.p. Mercedes), Mrs. Steward Clerk, Edinburgh (35-h.p. Mercedes), Lady Fitzgerald (35-h.p. Renault), Captain Clyde (50-h.p. Panhard), Lord and Lady Armstrong (30-40-h.p. Mercedes), Mr. and Mrs. Harry Buddison, London (30-h.p. Daimler), Colonel and Mrs. Doncaster (40-h.p. Daimler), Mr. and Mrs. Greatorex, Shrewsbury (18-h.p. Napier), Mrs. Holdsworth, of Westward Ho, Devonshire (58-h.p. Daimler).

Motor Racing in Spain.

Considerable interest was shown in the race for light cars which was held on the 27.8 kilometre circuit near Barcelona on the 28th ult. The event, which was known as the Copa Catalunya, was open for cars with single-cylinder engines up to 100 mm. bore, and weighing (empty) 500 kilogs.; and ditto with two-cylinder motors up to 80 mm. bore, weight 600 kilogs.; and three four-cylinder engines, maximum bore 65 mm., weight 650 kilogs. Nineteen entries were received, and of these fifteen started in the race, which was over a distance of 250 kilometres (nine laps). The winner proved to be Giuppone, who on a Lion-Peugeot covered the 157 miles in 4 h. 23 min., Brousserolles on a De Dion being second in 4 h. 31 min., and Rodriguez on a Lion-Peugeot third in 4 h. 34 min. Six other cars finished—a De Dion, three Lion-Peugeots, a Fouillaron, and a Werner.

The French Industrial Vehicle and Motor-Cab Trials.

The reliability trial of industrial vehicles and motor-cabs, organised by the French Automobile Club, which commenced on May 1st, came to an end on the 31st ult., during which period a distance ranging from 3,035 to 4,006 kilometres, according to class, had been covered. Altogether thirty-six vehicles started in the industrial vehicle section and eleven in the motor-cab class, the numbers finishing being, respectively, twenty-seven and ten, as follows:—Class 1, a Contal tri-car; Class 2, a Pan-

hard; Class 3, a Lorraine-Dietrich, a Panhard and a Brouhot; Class 4, a Peugeot, a De Dion and two Berliets; Class 5, a Vinot-Deguingand, a Panhard, a Saurer and two Berliets; Class 6, a Lorraine-Dietrich, a De Dion, two Bretin-Cohendets, a Saurer and a Berliet; Class 8, a Lorraine-Dietrich, a De Dion, a Peugeot and two Berliets; Class 9, a Lorraine-Dietrich and a Saurer. Motor-cabs: A Bayard-Clement, three Brouhots, a Doriot-Flandrin, a Gladiator, two Brasiers, a Prod'homme de Poorter and a Lethemonnier. The judges are now busily engaged in working out the awards.

The Florio Cup Race.

The Automobile Club of Bologna (Italy) is busily engaged in the organisation of the circuit on which the Florio Cup race will be held on September 6th next. The contest will be held on a 53-kilometre circuit, which takes in Borgo Panigale, Castelfranco, Santa Agata and San Giovanni, and which will have to be covered ten times, making a total of 331 miles. The event is reserved for cars with engines of a bore of 155 mm. in the case of four cylinders, and 127 mm. in the case of six cylinders. Five prizes are offered, comprising the Florio, Salemi, Italian, Estoro and Bologna cups. The A.C. of Bologna has made arrangements

there has been a falling off in the shipments to practically all the leading markets, the decline in the case of England being from £917,520 to £756,400.

Public Services in Austria.

A public motor-car service has just been inaugurated between Pardubitz and Bodhanec on the one hand and between Pardubitz and Holice on the other. Four 35-h.p. single-deck 'buses have been built for the service by Messrs. Laurin and Klement, of Jungbunzlau, Bohemia. A view of the vehicles is given in the accompanying illustration; it will be noticed that one of the 'buses is provided with a two-wheeled trailer, which is to be employed in transporting the products of the many shoe-making establishments in the Pardubitz district.

The Ardennes Circuit Races.

It has been decided by the Sporting Commission of the Belgian Automobile Club that the Circuit des Ardennes race shall be held on the Bastogne circuit on August 12th. Entries at £200 per car will be received up to June 15th, and at double fees to July 30th. The annual Coupe de Liedekerke contest will be held over the same circuit and on the same day, but at an earlier hour.

Jenatzy at the wheel of the Mors Car he will drive in the A.C.F. Grand Prix Race.

to have the entire course perfectly tarred for a width of fifteen feet. The work is to be completely finished by August 29th, so as to give competitors a chance of making themselves acquainted with the circuit.

Motor Cabs in Vienna.

It is reported that the municipal authorities of Vienna have granted a concession to a British firm to operate motor taxi-meter cabs in the Austrian capital for a long term of years. It is expected that the services will be commenced in October next with three to four hundred cabs.

French Motor-car Imports and Exports.

A return just issued shows that the value of the foreign motor-cars and parts imported into France during the four months ending with April last only amounted to £82,760, as compared with £112,280 in the corresponding period of last year. As regards the exportation of French motor-cars and parts, the serious shrinkage which set in at the beginning of the year is still the predominant feature. The aggregate exports during the four months lately ended only totalled £1,675,280, as contrasted with £2,077,520 in the corresponding period of 1907. With the exception of the United States, Spain, and Russia

Miscellaneous Items.

Strang, with the Thomas racing car, on which he will take part in the A.C.F. Grand Prix contest, reached Havre from New York on the 29th ult.—A public motor-car service is about to be started between Laigle and Vermoutieres (Orne) France.—The Automobile Club du Rhone is organising a series of flying kilometre speed trials on the roads between Chers and Anse, for June 21st.—The annual automobile meeting at Ostend is to be held about the middle of July.—Motorists passing through Ville d'Avray, near Paris, will do well to remember that a speed limit of 7½ miles per hour is now being enforced, and that the use of sirens and exhaust cut-outs is forbidden.—The French post and telegraph authorities are at present inviting tenders for the transport of the mails by motor-cars between Pont de l'Arche and Lyon la Foret.—The Mont Cenis hill-climbing competition, which was to have been held on June 14th, has been postponed until the 21st.—The Forezien Automobile Club held a hill-climbing competition near St. Etienne on Sunday last, when the best time of the day (18 min. 31 sec.) was made by M. Deydier on a Cottin-Desgouttes car.—A Syndicat de Defence des Interets Automobiles has just been formed at Nice.—The Belgium State Railway authorities are about to make some experiments with motor-vehicles in connection with their express parcel delivery service in Brussels.

A REMEDY FOR FIERCE CLUTCHES.

WHILE the majority of clutches on modern motor-cars are exceedingly smooth in their action, the main object in nearly all the recent improvements in clutches that have been made has been to obtain a smooth engagement when the engine takes up the load from rest. Skilful drivers never have been wont to complain of the performance of the leather-lined cone clutch in this respect, nor have they habitually failed to obtain good running results with it. Hence it would appear that, in many respects, some device calculated to ensure the same method of engagement by amateurs as is used by the

Figs. 1 and 2.

skilled driver would go a long way toward solving the problem of smooth and progressive clutching of the load, regardless of the type of clutch employed.

One of the most obvious expedients which could possibly be employed in this connection is the use of the plain suction dash-pot for checking the motion of engagement, and ensuring its progression at a stated rate. Such a system has been recently introduced by the firm of Outhenin Chalandre, of Rue de Chartres, Neuilly-sur-Seine, France. It comprises nothing more nor less than a small attachment which may be connected to almost any form of clutch, and which serves merely to check the rate of engagement according to the adjustment of the escape valve upon which its action depends. From the sectional drawing, Fig. 1, it will be seen that the device consists principally of a small cup or shell, c, fitted with a screw top and containing a small cylinder, d, mounted centrally within it in such a way as to leave an annular space within the outer shell, this space being filled with oil. The plunger, a, is connected by means of its forked end with some movable portion of the clutch-actuating mechanism, while the shell is attached permanently to the frame of the car. A small orifice, e, in the side of the inner cylinder permits a certain amount of the fluid contained in the device to circulate as the plunger moves up and down, until the latter closes the opening. Thereafter the flow between the cylinder and the outer space must take place through the small hole, e, which is regulated in area by means of the screw, f, and its lock nut.

Attached to a clutch of the familiar Panhard type, the arrangement is as shown in Fig. 2, P being the piano-type of pedal, t the actuating arm connected to the collar which disengages the clutch, and l the arm, to which the regulator a is attached by means of its plunger. The shell of the device is mounted on the dashboard of the car, as shown, and is articulated to provide for a certain amount of radial movement.

When the clutch is to be engaged, instead of releasing the pedal gradually, as must be done ordinarily, the operator merely lifts his toe entirely clear of the pedal, permitting the spring to draw in the clutch until the small orifice in the cylinder of the

device has been passed by the plunger, when the resistance to its motion becomes sufficiently great to slow it down to the desired rate. Thereafter, the engagement proceeds at a controlled speed and is rapid or slow, according to the adjustment of the regulating screw. The action is precisely the same as is employed in the ordinary form of hydraulic door check. The acceleration of the car from a condition of rest is thus regulated to a uniform degree, and all starting jolts and shocks eliminated.

SIGNALS FOR ROAD RACES.

THE course on which the recent Briarecliff Trophy race in the United States was held was, judging from the photographs that have reached this country, an extremely dangerous one, and it is, perhaps, very largely due to the very complete system of signals employed that the number of accidents was not considerably larger than it was. In the accompanying sketch are reproduced a few of the signals employed, these being painted on large streamers hung across the road some distance before the places to which they bear reference. In No. 1 the wavy black line is the signal for a meandering wavy course ahead, which admirably indicated the tortuous courses around the lakes, hills, water reservoirs, and streams. No. 2 indicates a 90-deg. or right-angled turn to the right; No. 3 a similar turn to the left. In interpreting all these signs start at the bottom and read upwards. Nos. 4 and 5 are S turns, the first one showing the turn to be first left, then right, followed by a final left; whereas in No. 5 the turn is first right, then left, and lastly right. Signals Nos. 6 and 7 are for turns sharper than right angles, and which can be used down to the most acute hairpin, the only difference in the sign being the size of the angle, which is less according to the acuteness of the turn. No. 6 is a hairpin turn to the left, and No. 7 one to the right. Sign No. 8 signifies a bridge, the graphic nature of it being much in conformity with the general conception of a bridge, so much so that scarcely an amateur seeing this signal for the first time but recognises it. The "Motor Age," to which we are indebted for the illustrations, suggests that the signals might form a

standard for adoption in all important motor races, so that any possibility of confusion as to the interpretation of the signs employed might be avoided.

At the Bridge of Allan, Perthshire, Messrs. Menzies Bros. have a garage and motor works well equipped for repair work for cars.

MESSRS. BARTLETT AND SHANKS have removed to 17, Little Kings Street, Camden Town, N.W., where, besides the repairing and overhauling of motor-vehicles, they are making a speciality of the modernising of second-hand cars.

THE UTILITY MOTOR.

CORNWALL, made famous by artists and writers, is brought more accessible by the motor-car. Those who journey thither by automobile find many hills in the county, but none so high as in the neighbouring county of Devon. It has fairly good roads when allowance is made for the fact that the population is somewhat sparse; most of the surface is good. The main artery originally was the Fosseway, crossing the river Tamar from Dartmoor and cutting the Bodmin moors to Marazion.

Not only are privately-owned motor-cars finding their way into Cornwall in increasing numbers, but the railway company

is adding public service vehicles to its equipment for travellers. In fact, the Great Western Railway Company is depending on motor services for many purposes, and by the permission of the editor of the excellent organ of the company, the G.W.R. Magazine, we are able to illustrate a novel use for the motor vehicle that has lately been found between Newlyn and St. Ives.

Newlyn is a little place only a mile away from Penzance, and has received prosperity from its fish and its painters—the former attracted by the nets of the sturdy Cornish fishermen; the latter by the quaint grouping of old cottages and other delightful features of the village. Both Mr. Stanhope Forbes and Mr. Frank Bramley have painted in the place. Penzance is very different to Newlyn, and is the largest town in Cornwall, with a long lineage, for Defoe found it a town “well built and populous,” while earlier writers knew something of its sound foundation.

The illustration shows an exceptional load recently conveyed from Newlyn to St. Ives, a distance of thirteen miles, by the G.W.R. goods motor lorry attached to the Penzance motor depot. The structure was a fish office, which it was required to move from the little village to the little town. The wooden hut is 13 ft. high, 11 ft. 6 in. long, and 8 ft. wide. It was removed complete as it stood with desks, fittings, &c., intact. Practically the only difficulty experienced with the load was in passing the narrow streets of St. Ives, where at one point it was necessary to take down a street lamp in order to avoid a hazardous passage. The incident is interesting as showing the universal utility of the motor.

An engineering firm which has gained considerable prominence in the motor industry is Messrs. Webster and Bennett, Ltd., of the Atlas Works, Coventry, who have for some years devoted special attention to the production of high-class machine tools for use in connection with the construction of automobiles. The firm have sent us a copy of a new sectional catalogue they have just issued, which deals exclusively with vertical boring and turning mills, of which they make a speciality. The list is very complete, the descriptions being accompanied not only by illustrations giving general views of the various machines, but also of some of their applications. Thus one depicts a boring mill being employed in machining up a flywheel, and another in boring the cylinder of a petrol motor.

SOME CURRENT TOPICS.

Oil on the Roads.

Even among the ranks of motorists few will, I fancy, be found inclined to disagree with the recent action of the police in prosecuting motor-bus drivers for allowing their vehicles to shed thick black oil on the road. For some time it was a question whether the drivers could be held responsible for the nuisance, but finally it was found that they could be summoned for contravening the bye-laws framed under the Public Health Act, 1891. These being the first cases in the City, merely nominal fines were imposed, the Lord Mayor expressing the opinion that the bus companies were as much responsible as the drivers and that they ought to indemnify the men in respect of the penalties incurred. Most buses are now fitted with trays to catch any escaping oil, and while these have no doubt helped to keep down the nuisance there are still many points at which motor-buses congregate where the road is not merely bespattered with oil, but on which are small pools of thick dirty grease, which is extremely dangerous to pedestrians. It was hoped that the supersession of horses by automobiles would result in rendering our streets cleaner, but, judging from experience, it would seem that the oil-droppings from motor-buses are quite as obnoxious, if not more so, than horse droppings, and it is to be hoped that the action of the police will quickly put a stop to the nuisance.

A Miniature Four-cylinder Engine.

The accompanying illustration depicts what is claimed to be the smallest and lightest four cylinder engine in the world. It was built by Mr. D. Stanger, of Tottenham, for experimental aeroplane work. The motor is of the V type, with steel cylinder $1\frac{1}{2}$ in. bore by $1\frac{1}{2}$ in. stroke, and develops about $1\frac{1}{2}$ h.p. at a speed of 1,300 revs. per minute. The ignition is by single coil and distributor; a float feed double carburettor is fitted; some idea may be gained of the size of the engine by comparing it with an ordinary sparking plug. I learn from Mr. Stanger that the

engine easily drives a two foot diameter propeller (set at an angle of 30 deg.), at 1,300 revs. per minute. The weight of engine complete as illustrated is 8 lbs. ARCANUM.

In addition to their triple-jet carburettor, Messrs. Trier and Martin, Ltd., of New Church Road, Camberwell, S.E., have lately introduced a new synchronized ignition system, which can be used with either a trembler or non-trembler coil—one for each cylinder. The feature of the method is the employment of a low-tension distributor in series with a single positive make-and-break. The chief advantages claimed for the arrangement are that no high-tension distributor is required, and that only one positive make-and-break is employed. Furthermore, by using one coil for each cylinder, total breakdown, due to collapse of coil, is rendered impossible, while, owing to the fact that there is no sparking at the distributor, wear is reduced to a minimum.

AN EXHAUST DEODORISER.

THERE is still a large section of the public who regard motor-buses, motor-cabs, and in fact all automobiles, as evil smelling abominations. While there has been during the past twelve months a considerable diminution in the obnoxious smoke given off by motor vehicles, due to improved methods of lubrication, there are still some machines on the road to which the opprobrious term is not misapplied, while even the best behaved 'bus will at times demonstrate its annoyance at an overdose of lubricating oil by a visible and noisome cloud of smoke. A somewhat novel method of coping with the difficulty, that of deodorising the exhaust by means of the cylinder cooling water, has lately been brought to our notice; it has been worked out by Mr. W. R. C. Wakley and Mr. R. Parsons, and is being introduced by Messrs. Deas and Co., of 15, Gt. Winchester Street, E.C. Referring to the accompanying sketch, which merely shows the arrangement diagrammatically, it will be seen that from the usual silencer D the gases pass to a deodoriser which outwardly resembles in size and shape an ordinary exhaust box. The cooling water, instead of passing directly from the engine cylinder jackets to the radiator, is led into the deodoriser by the pipe F. The latter is provided with a series of holes G, through which the water falls on to gauze screens I, to the rear of which wicks of asbestos or cocoanut fibre, K, are attached. The gases on

Diagram of the Wakley-Parsons Exhaust Deodorising System.

- | | |
|-----------------------------------|------------------------------|
| A. Radiator. | G. Water outlets in pipe F. |
| B. Engine. | H. Deflecting plates. |
| C. Water circulating pump. | I. Gauze screens. |
| D. Silencer. | K. Asbestos wicks. |
| E. Deodoriser. | L. Filter and clearing sump. |
| F. End of pipe from water jacket. | M. Exhaust pipe. |

entering the deodoriser are "spread" by the deflector H, so that they pass through the whole area of the screens instead of concentrating on one point. The object of the wicks is to arrest any carbon or other pungent matter in the burnt gases, which, owing to the constant stream of water, is washed away into the sump L, a filter preventing any of it being carried back with the water through the pump C. We have not as yet had an opportunity of seeing the deodoriser at work, but it has been tested on one of the London Road Car Company's motor-buses, which, even when purposely over-lubricated, emitted only a white vapour that was quite free from odour. Again, in the case of a Wolseley car, we have seen a letter from the owner, in which he states that even when endeavouring to create a maximum amount of noxious fumes it was found to be possible to hold a sheet of white paper as close to the outlet of the deodoriser as the pressure would allow without any deposit being left on it. The idea is undoubtedly ingenious, and if the deodoriser can be made in such a way that it can be easily adapted to different cars and at a moderate price, it should meet with a ready sale.

THE car which has been built for the A.C.F. Grand Prix race by the E. R. Thomas Motor Company, of Detroit, U.S.A., was shipped to France on the 20th ult. The vehicle is of the company's standard type, with the exception of the bore of the cylinders, which has been increased to 6.1 inches. It is to be driven by Mr. L. Strang, winner of the recent Briarcliff Trophy race, and in its trial runs is stated to have attained a speed of ninety-three miles per hour.

IRISH NOTES.

ON another page we give the class results of the Trial, and also the winners of the medals. It will be seen that gold medals go to the 15-18-h.p. Ford, the 10-12-h.p. Swift (two), the 10-12-h.p. Humber, the 16-20-h.p. Calthorpe, the 15-h.p. Clement-Talbot, the 25-h.p. Clement-Talbot, the 14-22-h.p. Germain (fitted with Hutchinson tyres) and the 48-h.p. Daimler. The latter was driven by Mr. Henshaw, and secured gold medals in both the open and the amateur sections. Silver medals have been awarded to the 15-h.p. Coventry Humber and the 20-24-h.p. Clement-Talbot. The Dunlop cups have been won by the 15-h.p. Talbot and the 48-h.p. Daimler, while the Swift cars have won the Goff challenge cup as a team.

DURING the course of the Trial few places gave such a welcome to the cars as did the city of Limerick, where the police had great difficulty in keeping the street on either side of the motor-cars clear for vehicular traffic. The District Inspector was assisted in preserving something like order by the High Sheriff, Sir Thomas Cleeve, whose firm employ several heavy vehicles in connection with their business, Mr. Ellis Goodbody, and other enthusiastic motorists.

THE first ten cars to finish in the Irish Trial were Dunlop tyre fitted, while fourteen out of the nineteen cars which made non-stop runs throughout the Trial were fitted with the same make of tyre. Six gold medal and one of the silver medal cars were also fitted with Dunlop tyres.

THE three Swift cars in the Trial all accomplished non-stop runs. Special mention may be made of the 10-12-h.p. car driven by Mr. F. E. Carter, which was inadvertently omitted from our list of successes in Class B last week. All these cars were fitted with Castle coils.

THE following cars made the best times in the hill-climb at Ballinaslough Hill, near Newtown Mount Kennedy, on the 27th ult., the results reaching us after we had gone to press with our last issue:—

- CLASS A.—1, 15-18-h.p. Ford, 4 min. 58 sec.; 2, 10-h.p. Royal Starling, 7 min. 52 4-5 sec.; 3, 8-h.p. Imperial Starling, 10 min. 12 sec.
- CLASS B.—1, 10-12-h.p. Swift, 6 min. 10 sec.; 2, 10-12-h.p. Swift, 7 min. 36 3-5 sec.; 3, 15-18-h.p. Ford, 8 min. 7 4-5 sec.
- CLASS C.—1, 12-h.p. Riley, 5 min. 17 2-5 sec.; 2, 10-12-h.p. Humber, 5 min. 25 sec.; 3, 14-16-h.p. Belsize, 6 min. 25 sec.
- CLASS D.—1, 16-20-h.p. Calthorpe, 4 min. 9 sec.; 2, 16-20-h.p. Calthorpe, 4 min. 14 1-5 sec.; 3, 18-24-h.p. Swift, 4 min. 25 sec.
- CLASS E.—1, 15-h.p. Clement-Talbot, 3 min. 11 sec.; 2, 20-h.p. Beeston Humber, 4 min. 8 4-5 sec.; 3, 14-22-h.p. Germain, 5 min. 6 2-5 sec.
- CLASS F.—1, 25-h.p. Clement-Talbot, 2 min. 53 4-5 sec.; 2, 28-h.p. Minerva, 3 min. 40 sec.; 3, 20-h.p. Sunbeam, 4 min. 51 4-5 sec.
- CLASS G.—1, 48-h.p. Daimler, 2 min. 30 2-5 sec.; 2, 40-h.p. Berliet, 3 min. 24 3-5 sec.; 3, 35-45-h.p. Gladiator, 4 min. 2 3-5 sec.
- CLASS H.—60-h.p. Napier, 2 min. 38 sec.

THE 10-12-h.p. Coventry Humber and the 15-h.p. Coventry Humber did exceptionally well in their class. The former and the 20-h.p. Beeston Humber made non-stop runs throughout, and the other 10-12-h.p. Humber only lost a minute through the driver stopping his engine before leaving the garage, a technical error which alone has caused the car to lose its non-stop certificate. The performance of Mr. G. A. Phillips on the 10-12-h.p. Coventry Humber is a triumph for youth, as Mr. Phillips is only nineteen years of age, and this is the first occasion on which he has driven in a Reliability trial. The 20-h.p. Beeston Humber maintained the reputation of this car for non-stops, and it was driven by Mr. Simmons, who has now for three years in succession made absolutely non-stop runs in the Irish Trials on Beeston Humber cars.

WE learn from the Gas Lighting Improvement Co., Limited, manufacturers of the well-known "Carburine" motor spirit, that in the trials the cars winning the Goff and Dunlop Cups, and eight out of ten of the gold medals, were using "Carburine" motor spirit.

TWELVE motor yachts and launches took part in the opening cruise of the Sussex Motor Boat Club on Saturday. A regatta will be held in July.

AFTER watching the ascent of the balloons at Hurlingham last Saturday the Chinese Ambassador drove in Mr. C. I. Thornton's car to the "Hut" at Wisley, where his Excellency enjoyed a hearty tea.

LA SOCIÉTÉ LORRAINE DE DIETRICH AND CIE. have now opened large new showrooms at 5 and 7, Regent Street, Waterloo Place, London, S.W., where a large selection of the latest model Lorraine Dietrich cars can be inspected.

NEAR the main entrance to the Franco-British Exhibition Messrs. Brown and Hughes have an automobile garage, where they also stock petrol and oil as well as undertake repairs. It is situated in the Netherwood Road, Shepherd's Bush, W.

ON Sunday evening the King and Queen motored from Buckingham Palace to Coombe Warren, Kingston Hill, and honoured Lord and Lady de Grey by dining with them at Coombe Court. The King went in his own car and the Queen in her cream-coloured motor-car.

THE annual exhibition of drawings sent in for competition for the prizes offered by the Worshipful Company of Coach Makers and Coach Harness Makers is being held at the Baker Street Carriage Bazaar, London, W. It closes on the 10th inst., but will not be open on Whit Monday.

AMONG the signatories to the requisition to the Lord Mayor of London to call a meeting to direct attention to the "danger, annoyance, and inconvenience" of motor-omnibuses in the City are Lord Northcliffe, Sir Horace Marshall, Major Coates, M.P., and Mr. D. J. Morgan.

CEDRINO, who, driving a Fiat car, won the 100 mile race at the Florida race meeting in March last, and was second in the recent Briarcliff Trophy contest, met with a fatal accident at a track race meeting at Baltimore on the 29th ult. It is reported that a tyre burst at one of the bends, causing the car to turn over, the driver being pitched on his head.

AT the Bath and West of England Agricultural Show, at Dorchester, Messrs. M. H. Tilley and Sons, of that town, undertook the care of the motor-cars of visitors to the Exhibition, in addition to making a display of their interest in motor-car work. Messrs. E. Channon and Sons and Messrs. Northover Bros., also of Dorchester, made similar exhibits.

IN order to gauge the provision to be made for garaging the cars entered for the forthcoming R.A.C., we recently visited the new White building in Camden Town. Calling at Kingly Street, W., which still serves as a showroom for the steam cars known as White, we suggested a run out to the new place by steam car as far more in keeping with the idea than to go to Mornington Crescent on the Hampstead Tube—which station, by the way, is only three or four minutes' walk from Carlow Street, in which the new premises are located. In six minutes an 18-h.p. White car was driven from the showroom, and we were quickly gliding among the traffic until we emerged into Regent's Park, and were quickly taken into Camden Town. The experiment was of no scientific importance, but it demonstrated the readiness with which the White steam car can be prepared for its business—a point that doubtless Earl Russell, whom we saw driving his White steamer through Piccadilly Circus one day last week, would emphasize. The depot and repair works devoted to the assembling and body building for these vehicles is an addition to the motor establishments in London, and Mr. Frederic Coleman wears no look of the depression which is now said to prevail; nor does the arena of the operations which he directs show signs of contraction. The premises have a million feet of floor space; they consist of a four storey building around an open quadrangle, in which cars can be washed and similar work carried out. The stock of spare parts is wonderfully complete and well classified, while the various departments in connection with carriage work are admirably designed and arranged. Evidently the White car people are having a busy season.

HERE AND THERE.

THE Urban Council of Radcliffe, Lancashire, has decided to acquire a petrol motor fire engine, with a pumping capacity of 450 gallons per minute.

THE members of the Motor Club, of Coventry Street, are *ipso facto* members of the Crystal Palace Motor Club, and on the first fireworks night, on Thursday week, the members of the Clubs dined together, and a pleasant evening was spent, Colonel W. J. Bosworth presiding.

FROM Messrs. R. Reynold Jackson and Co., High Street, Notting Hill Gate, London, W., comes a copy of the latest catalogue of the popular Jackson cars. The list gives full particulars and illustrations of the various models, including the two-seater, a dog-cart, a doctor's car, and a phaeton. Several pages at the end are devoted to testimonials of satisfied users of these well-known vehicles.

THE want of a garage for motor repairing and supplies has long been felt in the neighbourhood of Fort Augustus, and it has now been made good by Messrs. Grant Brothers, from Glen Garry, who have opened an establishment there and are letting motor-cars on hire. Hitherto it has been impossible to obtain a motor-car nearer than from Inverness on the one hand, or from Oban on the other.

The 25-30-h.p. Ariel Car which has been entered in Class 5 of the Scottish Reliability and International Touring Car Trials.

The vehicle is entirely a new model, built on the same lines as the 30-40-h.p. and 40-50-h.p. Ariels, the cylinder bore and stroke being respectively 112 mm. and 135 mm. Both dual ignition is fitted, the gear-controlled change-speed gear has four speeds, and the final drive is by a cardan shaft and bevel gear to a live axle of the Ariel standard design. Down-pipe detachable rims are fitted, and Dunlop tyres will be used throughout the trials.

MR. CHARLES IGGLESDEN'S new volume of "A Saunter through Kent with Pen and Pencil" maintains the standard of earlier writings, and deals with the interesting country around Herne and Bloomfield. Much valuable historical information is given in the work and the sketches are well above the average of such publications. To all who motor through that corner of our most south-easterly county the book will be of considerable interest.

FROM Messrs. G. Philip and Son, Ltd., comes one of their Finger-post Strip Maps, compiled by Mr. Gerald Fothergill. The excellent principle on which these maps are arranged has been previously eulogised in our columns; and it is now only necessary to remind readers that the object of this route map is to enable motorists to know before reaching junctions on the highways which turning should be taken, thus avoiding confusion and possible risk of accident on the Brighton road.

MESSRS. MERRYWEATHER AND SONS have lately supplied a self-propelled cesspool exhauster for use in the higher parts of Epsum. It consists of a steam-wagon, on which is mounted a cylindrical tank of 750 gallons capacity. A vacuum is produced in the tank by means of a steam-ejector, flexible pipes being arranged to connect it with the cesspool, the contents of which are sucked up into the tank. The vehicle is propelled by a double-cylinder vertical steam engine. It is stated that the new vehicle will effect an economy of 80 per cent. in the cost of clearing the cesspools as compared with the older method.

THE net profit on the Eastbourne motor-buses for the past financial year was £560.

AN advertiser in last week's *M.C.J.*, seeking a position as driver-mechanic, added to his qualifications that he would get "married when suited."

IN connection with the note in our last issue under the heading, "Why not an Automobile Museum?" it is interesting to learn that the first chassis built by the Albion Company has found a resting-place in the Glasgow Art Galleries and Museum, at Kelvingrove, Glasgow. This vehicle, which is of the 8-h.p. type, was constructed in 1900, since when it has seen various kinds of service, and has covered fully 40,000 miles.

IN our Correspondence columns there recently appeared a query from a steam car owner with regard to a two-speed and free engine gear suitable for Serpollet vehicles. Such an arrangement is, we find, being made by the Sheppee Motor Company, of Thomas Street, York, and we are able to give herewith a plan drawing of the gear as designed for 6-h.p. cars of the make alluded to. It will be seen that it forms an extension to one side of the engine crank case. The chain wheel F, by which the power is transmitted to the back axle, is formed in one with the pinion D, and normally runs free on the shaft. On a squared portion of the shaft is a pinion A, built up with the jaw-clutch E. On a short parallel shaft at the rear is a movable sleeve carrying two pinions B C. To get the top speed, which

is a direct drive, the pinion A is moved by a lever to the left, bringing the jaw clutch into engagement. The low speed, which is entirely out of gear when the top one is in use, is obtained by sliding pinion A into mesh with B, the drive being then conveyed to the sprocket F through the spur wheels C D. The Sheppee Company inform us that they found a two-speed gear on 6-h.p. Serpollet cars a very great advantage, as it enables the vehicle to be driven out of the very worst of places and up the steepest hills with a minimum of strain on the engine and generator, thereby adding very greatly to their life. Furthermore, by being able to make the engine free, the car is able to be easily pushed by hand when not under steam, and also the engine can be properly warmed up before starting.

A COPY of the 1908 catalogue of "Talbot" cars is to hand from Messrs. Clement-Talbot, Ltd.; this is a very elaborate and complete production, extending as it does to over 100 pages. Full particulars are given of the eight different models, ranging from 8-10-h.p. two-cylinder to 50-60-h.p. four-cylinder, now being turned out, about twenty pages being devoted to a technical description illustrated by line drawings of the main components of the chassis. Other pages of the list deal with the various types of bodies that can be fitted thereto, hints on the care and management of Talbot cars, &c., while a number of full page illustrations give an excellent idea of the extent of the company's large works at Barlby Road, North Kensington, W.

MR. G. W. HOUK will shortly be organising motor-car tours for visitors to the Metropolis.

THE Hon. Sir John Forrest, K.C.M.G., ex-Premier of Western Australia, has placed an order with Messrs. Clement-Talbot, Ltd., for a 25-h.p. Talbot landaulet.

AN ice company in Havana, Cuba, has recently placed in service a 24-h.p. three-ton motor-van for delivering ice. The body of the vehicle is insulated with a layer of cork 1½ in. thick.

THE electro-'bus was honoured the other day, when it was the first public licensed vehicle to be admitted to the Royal Parks. Several electro-buses were engaged to convey a contingent of French sailors from Charing Cross to the Franco-British Exhibition.

MESSRS. SMITH SAVORY, LTD., of Horn Hill, South Lowestoft, have a fully-equipped repair shop, a commodious motor-car garage, and a well-designed jetty for motor-boats, thus being able to offer a triple convenience to the forthcoming motoring events in and near the town.

THE British Motor Boat Club are holding a regatta at Lowestoft to-day (Saturday). The Thames meeting will be held at Nuthalls, Kingston-on-Thames, on the 16th inst., when Admiral Sir William Kennedy, the Commodore, Mr. W. M. Green, and Colonel Bosworth will be present.

THE American Automobile Association has decided to hold the Vanderbilt Cup race on October 24th next on a 28-mile course on Long Island. It is probable that the Automobile Club of America will organise a race under the A.C.F. Grand Prix rules to be held at Savannah, Georgia, in the autumn.

MESSRS. DENNIS BROS., LTD., have sent us a photograph of a 30 cwt. motor-van they have just supplied as a repeat order to the Bradford Dyers' Association. This vehicle is fitted with a Dennis 20-h.p. four-cylinder engine. The covered body is of attractive appearance, the roof being curved, a cabin front being provided for the driver.

FROM Liverpool comes an effective publication setting forth the various departments in the motor activity which Argylls Liverpool, Ltd., conduct from 25, Leese Street. They undertake the free inspection of cars purchased from their establishment, the repair of vehicles by mechanics who have specialised on this type of car, the teaching of drivers, the hiring out of cars for long or short trips, the supply of accessories and spare parts, and, in fact, everything that the motorist desires to secure the ease of his task.

IN addition to their well-known petrol, the British Petroleum Company, Ltd., of 22, Fenchurch Street, E.C., are now devoting attention to the question of reliable motor lubricating oils, and have introduced a series of "Shell" lubricants suitable for all kinds of steam or internal combustion engines, all of which are guaranteed to be perfectly pure and reliable. Altogether seven grades are being marketed, viz.:—No. 1, "High Viscosity Grade" (for use in summer and in warm climates), for the lubrication, through sight-feed or pump-oil, of all air and water-cooled engines; No. 2, "Viscous Grade"; No. 3, "Medium Grade"; No. 4, "Semi-thin Grade"; No. 5, "Thin Grade" (for use in winter); No. 6, "Thick Grade," for bearings, gear, and change-speed case lubrication; and No. 8, "Cylinder Oil," for steam and superheated steam cylinders.

MR. C. G. WRIDGWAY, the present manager of the Peerless Motor Car Company, of New York, is an Englishman who was well known in the motor industry in its early days on this side of the Atlantic. He has just designed a shade for acetylene headlights designed to modify the glare at short range, and yet not interfering with the brilliancy when seen at a distance. It consists of a series of thin horizontal plates extending across the face of the lamp behind the front glass. These plates are dull black on the top, so that upward-cast rays of light are absorbed. The lower side of each plate is silver-plated, thus intensifying the light rays which are thrown below the level of the eye. At a distance of 200 yards from the lamp it is impossible to see any effect of the shade, the same not being visible at this distance. As the distance is decreased, however, the screen comes more and more into effect, so that at close range the blinding glare is entirely eliminated, and the light appears dull.

THE SETTING OF VALVES.

IN several issues of the *M.C.J.* since the beginning of the current year we have devoted considerable space to the question of the setting of the valves of petrol motors, and have published diagrams showing the setting adopted for many of the well-known engines at present on the market. There would seem to be a very great diversity of opinion among engine designers in this country as to the best setting, for hardly any two of those we have given are alike. Judging from the particulars given in our French contemporary, "*Omnia*," which, following the *M.C.J.*'s lead, has got together a very instructive table of the setting of the valves of French petrol engines, there appears to be quite as much variation in this direction in France.

In the hope and belief that it will prove useful to motor engineers and repairers, we have compiled the following table, based on the particulars published both in our own pages and in those of the contemporary above referred to, giving in a succinct form the details of the valve setting of no less than thirty-nine different engines. To repairers who are expected to be *au fait* with all types of cars the table should be especially useful, inasmuch as it will afford a handy means of reference as to the setting recommended by individual makers for their own particular motors.

DETAILS OF THE VALVE SETTING OF PETROL MOTORS.

At the annual meeting of the County Councils' Association, Lord Belper referred to the increased cost of main roads, and urged that the recommendation of the Royal Commission on Motor Cars as to the up-keep of the roads being made a national service should be taken in hand without delay.

THE second anniversary of the formation of the Northern Automobile Company, Ltd., of the Oak Lane Garage, Manningham, was celebrated on the 24th ult. by the directors inviting the staff, along with their friends, to join them in an outing to Burnsall. A fleet of eight Spyker cars, containing about thirty persons, left the garage shortly after ten a.m., and proceeded *via* Skipton and Cracoe to Burnsall, where dinner was served at the Red Lion Hotel. Afterwards Mr. J. Grange, chairman of the company, in the course of a short speech, stated that the concern was doing well, and attributed this fact to the energies of the manager, Mr. A. House.

TARVIATED ROADS.

AMONG the many suggestions made for securing economy in the construction of roads and the mitigation not only of the dust but also of the mud that arises therefrom, that made by Messrs. Bristowe and Co. has attracted attention from the leading road authorities as securing these desirable results with little trouble. We are able to illustrate some examples of the Tarviated roads near Slough, which, having had considerable motor-car traffic, present excellent examples to those who own and drive automobiles. The upper illustration is that of a road laid just over a year ago at Stoke Green, near Slough; the central picture is that of a water-bound road after a storm, the section of Tarviated road being clearly indicated by the improved appearance beyond that of the forefront of the illustration. The other photograph shows a section of a Tarviated road

photographed after a storm, and the dried-off surface is clearly indicated from the appearance of the roadway.

These results have been obtained by the use of Tarvia, which is an exceedingly cohesive preparation, bituminous in character, made under conditions which ensure uniformity of quality and consistent suitability for all purposes of road-making. It is supplied in fluid form as a preparation viscous, flexible and tenacious when cold; or alternatively as Tarviated granite or hard stone chippings. Tarvia has been used by the Eton Rural District Council, where it has done much to consolidate the road metal and render the roads waterproof. At Batley it has proved satisfactory under the heavy traffic of that Yorkshire town, and the Liversedge Urban District Council, who were the first in the north of England to apply the Gladwell system of road maintenance, used Tarvia as a binding material. Messrs. Bristowe and Company, of 20, Tothill Street, Westminster, S.W., are the manufacturers of this material, and to them we are indebted for the use of the accompanying illustrations.

Correspondence.

[Letters to the Editor should be addressed to the offices 27-33, Charing Cross Road, London, W.C.]

DOCTORS AND URGENT CASES.

TO THE EDITOR OF *The Motor-Car Journal*

SIR,—With regard to doctors and urgent cases, could they not carry on their cars a flag with a red cross on it or some such sign, to prevent their being held up by the police? Of course, even then, there must be a certain speed limit.

Some time since you had an article in your paper about leakages in petrol pipes. These are worrying faults; but I find if you wrap the affected part round with cotton wool soaked with secotone, then wind insulation tape tightly over same, it then must dry, and it is really excellent. Everybody laughs at me for my odd suggestions and ideas on cars, but they are useful, inexpensive and good. Again, I have a small bicycle lamp fixed at the back of the gear quadrant for dark nights, so as I can see absolutely what I am doing. This is not necessary on all cars, no doubt, but mine is very peculiar, working thus:—Reverse, first gear; neutral, second, third and fourth gears.—Yours truly,

E. M. T.

HILL CLIMBING IN INDIA.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I noticed in your issue of April 25th that a 10-12-h.p. Humber car had been driven to a height of 4,300 feet above sea level. Excellent as the performance is, I think you will agree that it hardly comes up to a

The Irish Reliability Trials.—The Cars in Messrs. J.E. Ferguson Ltd.'s new Garage.

The photograph only shows the garage. The front portion of the building is taken up with the showrooms and offices. The building has only just been completed, and is situated in the centre of Belfast, close to the City Hall.

climb I made on a 10-12-h.p. two-cylinder Darracq with a five-seated body, last July. I drove the car from Mettapalayem to Ootacamund, nearly 8,000 ft. above the level of the sea. This height is reached in a drive of twenty-six miles, as the first five or six miles are level, and the whole distance is thirty-two miles. The run was done in two hours twenty-five minutes. Ootacamund is reached in the ordinary way by track railway to Coonoor, sixteen miles. This takes about two hours and three-quarters, and then by tonga eleven miles. Coming down it is possible to coast for about twenty-five miles without having the engine running. This hill might appeal to some of our friends at home who are always on the look-out for extraordinary hills, but I think it would find out the capabilities of their cooling arrangements. I hope to go again this year on a car of higher power, and will endeavour to send you some photographs. Trusting this may be of interest to your readers.—Yours truly,

F. ROBINSON-WARD.

SELF STARTING DEVICES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—In reply to the letter Mr. Burgess wrote to your paper, will you allow me to say that several cars are being driven in Norwich fitted with the Boswell self-starting device (foot). So satisfactory is it that one gentleman, the driver of a Humber, has had his starting handle removed and for the past eleven months has relied entirely on his starter. It is the invention of a non-motorist and is certainly a very wonderful and simple arrangement. It has the further advantage of not requiring any structural alterations to the car. I am so delighted with

its reliability and the ease with which the car can be started from the seat that I have ordered one for my six-cylinder Napier. The cost is about that of one pneumatic cover.—Yours truly,

JOHN GRIFFIN.

SUNDAY MOTORING.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Your correspondent who recently referred, with evident glee, to the innovation of the Lincolnshire Motor Cycle Club as providing a solution of the Sunday motoring problem, will be surprised to learn that the open-air service which had been announced for last Sunday in the Dukeries was postponed, and that the attendance at the Croft church service was so poor as to elicit a growl in the Club's local organ.—Yours truly,

A RIDER.

SOME FACTS IN THE SELECTION OF MOTOR OILS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I hope your correspondent "C. T. W. H." will take my remarks on his letter in your journal of the 23rd ult. in good part. I am sure that he is anxious for the truth. His appeal to the muses proves it no less than his love of beautiful thoughts. Personally, I am ready to learn, and will humbly take any correction. Such a greasy subject as oils does not appeal to my poetic instinct. "Men are four. He who knows not and knows not he knows not—he is a fool, shun him. He who knows not and knows he knows not—he is simple; teach him. He who knows and knows not he knows—he is asleep; wake him. He who knows, and knows he knows—he is wise; follow him." (Arabic proverb.)

In the first place I take it that a water-cooled petrol or gas engine is comparatively a cold engine. For some years steam practice has, I think, wrongly influenced our choice of oils, and hence, even at the present day, most petrol engines are run on heavy oils, causing a considerable loss of engine power. I possess two cars, one having the ordinary type of four-cylinder vertical engine, the other a single-cylinder horizontal motor; the latter car has been in use about five years. After about two years' running I happened one day, some distance from home, to run out of oil, through carelessness. The oil then in use cost 4s. 6d. per gal., and was strongly recommended by the people from whom I purchased the car. In the village where I was stranded no motor oils were to be had, and, in desperation, I bought half a dozen small tins of thin cycle oil from a cycle repairer and emptied them into the oil box supplying the engine. What a marvellous change! the engine became quite lively, and the increase in power was so marked that I felt that I had made a little discovery. I purchased more of the oil and had a careful analysis made; I also, as a check, analyzed it myself. It was entirely mineral oil, and so light that on fractional distillation more than half of it came off at 180 deg. F. The difference in the running of the engine was so marked that I would not return to the old oil.

On mentioning the matter to some of my expert friends, I was warned that I should have serious wear, especially on the cylinder and piston surfaces, so I proceeded cautiously and for several months made careful periodical examinations of the piston and cylinder. Finding them with beautifully polished surfaces, I decided to go on, and have done so ever since. Last year I had the car overhauled, and, without saying anything to the man sent to do the work, he came to me and said: "What have you been doing with your engine?" I asked what was the matter. He replied: "Have you been cleaning the engine?" I said "No." "Well," said he, "I have never seen a piston and cylinder in such a beautiful condition. I generally have to chip out a lot of cokey stuff. There is nothing in the compression space and the surfaces are like glass."

I was pleased. After five years, in which I estimated the car has run over 30,000 miles, the compression is perfect. The valves have never been ground in during this time and they are perfectly tight, and from the analysis I concluded that in bulk the oil would be very cheap, and so it proved. I bought twenty-five gallons at 1s. per gallon. The price has since gone to 1s. 4d. per gallon. On further inquiry I found that the manufacturers made a still thinner oil, but more carefully manufactured, at 2s. per gallon; it looks lighter in colour and brighter, but I have not analyzed this particular oil. I rather prefer it, but two of my friends, with similar cars, prefer the cheaper oil, as it does not leak so much from their crank cases and bearings. I, however, have no trouble from this. Three similar cars are, through me, running on these cheap oils, and their owners have given me their thanks, not for the cheapness, but because of the greater power and easy running of the engines. So much for these facts.

Now, I must mention that these engines have white metal bearings, also the connecting rod has white metal in the gudgeon and crank-head bearings. This is important in relation to what I am going to say:—Those who have studied the problems of lubrication will recall the difficulties met with in the early trials of mineral oils in place of

animal and vegetable oils in marine engineering. The change was desired for three reasons, cheapness, and particularly the action of fatty acids on the metals, and gumming, but for actual lubrication no mineral oil could ever compare with sperm, tallow, or vegetable oils on large surfaces. I have run many dynamos with oils of every procurable viscosity; nothing ever approached sperm for cool running, and especially on white metal. Apart from mere viscosity, the power of a lubricant to spread rapidly is all-important, and some engines having slide valves with large surfaces had dry spots when lubricated with purely mineral oils, and it was absolutely necessary to add some tallow to flash over the surfaces. It is instructive to note how tallow oil will run over a hot plate in comparison with heavy mineral oils.

It must be remembered that cylinders and pistons in petrol engines have large surfaces moving at great velocity, and that it is necessary to have a lubricant that will completely spread all over these surfaces. A heavy oil in a cold cylinder cannot do this, and, as I remarked before, a petrol engine is, comparatively, a cold engine. In a properly cooled engine the working piston and cylinder surfaces probably are considerably under 212 deg. F. Then what reason have we to insist, as "C. T. H. W." does, that an oil must not lose 2 per cent. in weight at 300 deg. F.? Apart from want of spreading power, any viscosity more than required to keep the surfaces apart at their temperature and weight means loss in power. The tests for oils given by "C. T. W. H." are doubtless excellent for choosing oils of a particular character, but my point is that such oils are not those we want for water-cooled cylinders and pistons, though excellent for certain kinds of bearings.

With regard to my car with vertical four-cylinder engine I found the same beneficial effect with the cylinders and pistons, but the bearings, not having white metal (they are bronze) required something a little heavier, and as they are supplied from the same box as supplies the cylinders, I made a regrettable compromise by mixing. I may mention that I witnessed workshop tests of a 30-h.p. four-cylinder engine in which a mysterious scrunching knock occurred several times per minute. All the engines of this type had the knock which completely puzzled the makers. I diagnosed the trouble as simply occasional dry spots on the pistons from insufficient spreading of the oil. It is easy to suppose that an oil having some easily evaporated portions would tend by partial evaporation to cause spreading mechanically. This must not be confounded with the peculiar spreading power of animal oils, in spite of their much higher flash points. We do not, however, want fatty acids in our engines if we can help it, and the cold petrol cylinder can be admirably suited with purely mineral oils. Price is not the question as regards efficiency; in my opinion, anything over 2s. per gallon is money thrown away. I have said nothing about air-cooled engines, they are well catered for.

There is a clerical error in your report of Mr. G. H. Baillie's interesting paper. The oxygen has been left out of the formulae of ethyl and methyl alcohols; they should, of course, be C_2H_6O and CH_4O respectively. Criticism of this, to me, most interesting paper is very tempting, but, I fear, would be too technical for most readers.

Under the head of "Some Current Topics," by "Arcanum," damage by self-ignition is referred to. I do not think the explanation by Mr. J. S. Critchley is the correct one. It would not be possible to ignite petrol vapour by a hot exhaust pipe unless it was at a temperature of quite a bright red heat. If your readers will try to ignite petrol in a saucer by a well-drawn cigarette or cigar they will be surprised to find that it cannot be done. Flame, electric sparks or bright incandescence will do it, not ordinary red heat. I think the explanation as follows: a weak mixture burns slowly, and after ignition in the cylinder combustion is still going on in the residual exhaust gases in the cylinder during suction of the next incoming charge, which becomes ignited and fires the petrol or its vapour in or near the carburettor. This is the so-called popping in the carburettor and is very dangerous should there be any leakage of petrol about.—Yours truly,

VERITAS PREVALEBIT.

REPAIRING A LEAKY RADIATOR.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I should be obliged if you could give me some directions for repairing a leak in my radiator, which is of the honeycomb type. The leak is a slight one, and I believe that it is possible sometimes to repair such a leak without taking down the radiator and soldering it. Can a repair be effected by running some solution through the water systems.—Yours truly,

F. R. WALKER.

[A honeycomb radiator is a very difficult job for an amateur to tackle the repair of, and it is one of those things that tinkering with in any shape or form is most unwise. Attempts to repair internally by solutions is a makeshift way of dealing with the matter that can only lead to dissatisfaction sooner or later. If the radiator is leaking at some point due to a blow, it should be taken down and soldered carefully by someone who is an adept at handling an iron; but if the radiator is springing leaks generally (through no specific ill-treatment) the best thing to do, and the cheapest in the end, is to send it to some reputable firm of radiator makers, and have it rebuilt. The Coventry Motor Fittings Company, for instance, would put a radiator right in a proper manner and without delay. For temporary repairs of honeycomb radiators there are some little fittings sold that are screwed through the tube adjacent to the leak and which hold a pad of leather or rubber

close up against the damaged part and so render it water-tight. Owners of cars with honeycomb radiators should never be without some of these handy appliances.]

A CARBURETTOR TROUBLE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have an 8-h.p. small motor-car; it has a Longuemare carburettor. The fault I have is that I have to adjust the air and gas; there are two small handles, one for gas, one for air, and one can never get the proper adjustment. Is there any improvement that can be effected on the present carburettor, or could you advise me any way how to remedy the difficulty?—Yours truly,

SIMPLETON.

[The old type Longuemare carburettors such as our correspondent finds difficulty with are certainly ticklish to adjust and to keep right for varying speeds. Sometimes the shifting of the gas throttle disturbs the air sleeve by causing the latter to rotate slightly with it, for the two sleeves are concentric and are a "working fit" together, and in consequence are apt to stick occasionally. Besides this, there is no doubt that the opening and closing of the throttle (independent of any accompanying and unintentional movement of the air sleeve) does *ipso facto* interfere somewhat with the mixture. The best plan is to purchase a more modern type of carburettor, but failing this, "Simpleton" might try fixing the throttle at its best working position for full power, and then fit another throttle remote from the carburettor and close up to the cylinder. At the same time a spring loaded valve to admit auxiliary air, placed in some convenient position on the induction pipe, will no doubt help matters considerably.]

The Star 12-h.p. Live Axle Car just completed and dispatched by the Star Engineering Company to the order of their agent in Singapore, for a Chinese Mandarin.

THE RULE OF THE ROAD.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I was much interested in Mr. C. W. Brown's letter in the last issue of the *M.C.J.* with regard to the rule of the road. As an owner of a small car I have always endeavoured to adhere to it as far as possible, and make a point of giving way when I become aware that a faster car is approaching from the rear and which is anxious to pass. There is one practice on the part of owners of speedy cars to which I should like to draw attention, especially as it is fraught with danger. I was out driving last week end, and on two occasions, just as I had pulled out to pass cyclists, a fast car came up without any warning and passed me very closely on my right. As the road was not a very wide one this meant that the driver of the speedy vehicle had pulled over to his wrong side of the road. With all due regard to the rule of the road, I do not feel it incumbent for me, if the way is clear ahead, to pull up behind a cyclist to allow another car travelling in the same direction to pass, nor do I think the driver of the latter should attempt to do so in such a case.—Yours truly,

SURBITONIAN.

THE Star Engineering Company write:—"It having come to our knowledge that a report is being circulated of the scarcity of work in Wolverhampton with firms connected with the making and production of motor-cars, we should like to inform you that, however much this report may be true with regard to other firms in the town, it does not affect us, as we are at the present moment busier than we have ever been, and there is every prospect of the work getting heavier still, as orders continue to come in fast."

THE WEATHERPROOF CAR.

(Concluded from page 303.)

THE earlier engines were commonly fixed with exposed cam shaft gears, and these were rapidly worn out and caused to run very noisily by the mud with which they were covered. Dirt was likely to work in around the cam and crank shaft and wear out the bearings. Now cam shaft and auxiliary driving gears are usually completely enclosed in cases in which lubricant is carried. The housing of these gears is most important, for the reason that, even with a good shield under the motor, considerable dust is drawn in through the radiator by the fan action, and the first thing it settles upon is the timing gears. Many of the motors used in the earlier cars were fitted with automatic inlet valves. When these valves were used in horizontal engines they were very much exposed to splashing mud. The fouling of the valve stems and springs with mud would often prevent their seating, and, after a few back explosions, the motor would stop. Mud entering the valve stem guides or rocker arm pivots of mechanically-operated valves has caused a great deal of unnecessary wear, resulting in faulty timing and an abnormal amount of noise. A good dust-pan construction prevents

are very generally provided with compression grease cups, or at least with spring-closed oil retainers, which exclude dirt. Operating linkages of all kinds, the steering connections and distance rods were among the parts referred to. Many of these parts are now protected, like the engine, by the dust shield.

As regards the change speed gears, those of the planetary type were upon many of the earlier cars imperfectly encased, as were also their operating rods, and consequently wear was very rapid, due to the entrance of grit. Such gears are now quite commonly enclosed in an extension of the engine crank case, which is dust-tight, and where not so located are of better design and protected by an under-cover. The sliding gear transmission was always fully enclosed, even in its earliest forms, and never was very susceptible to disarrangement from mud and water. Its operating mechanism was, however, frequently imperfect in this regard, a rod sliding through the wall of the gear-box effecting the gear changes. Any grit which collected upon this rod was likely to be carried into the box, and to wear not only the bearings of the rod, but the gear shaft bearings. The shield, unknown on the older cars, is now universally extended so as to include the gear-box.

Perhaps the most striking contrast between old and new methods as regards "mud-proofing" may be observed in the final drive to the

The French Industrial Vehicle Trials.—Some of the Vehicles on the Hill at Bonnières.

this evil in great measure, but even in good modern cars there is some mud and considerable dust carried in by the fan action. In a recently-designed engine easily removable covers are arranged to fit tightly over the valve stems, springs, and push rods.

Engine cooling systems are not very seriously affected by splashing mud and water. Radiators may get fairly well clogged with mud, and if the mud is of a clayey nature it may bake into the meshes of a honeycomb radiator. Of course, this affects the radiator's capacity very seriously. Perhaps a location for the radiator just to the rear of the engine, as practised on one or two foreign makes of cars, will be found to possess an advantage in this direction, which is of considerable importance. The under-hung tubular finned type of radiator does not foul with mud as badly as might be expected, possibly on account of the absence of the fan action. Pump troubles were frequent with the old cars, which often had belts, chains, or friction drives. The pumps of modern cars being driven by enclosed gears and protected by the shield hood are not thus subject to disablement.

While engine lubrication was never very prone to disarrangement by road splash, there were on the earlier cars a large number of uncovered oil holes in various parts of the mechanism, which became filled with mud if the car were used in wet weather. The next application of the oil can to these oil holes washed in the grit, and a very rapid deterioration of the parts ensued. In modern cars these parts

back axle. Single chain drive to a live rear axle was very general on early American cars, and manufacturers made no pretence of protecting the chains and sprockets. There were even examples of differential gears entirely unenclosed. Occasionally an owner arranged some sort of a makeshift chain cover of tarpaulin, but this was very exceptional. The wear of chains was very rapid, even though they were frequently cleaned and lubricated. With the adoption of the shaft drive, which has since become so general, the final transmission has become practically mudproof, and the rate of wear in this part of the mechanism has been reduced to a minimum. The early shaft drives employed universal joints, which were almost completely exposed to the weather, but these have now been replaced by joints carrying their own nearly complete spherical casings, and even these are often further protected by means of tight leather boots filled with lubricant. In the single chain drive there was generally a chance for grit to work into the axle casing and differential on each side of the sprocket. In the bevel gear drive there is a continuous tight metal sleeve reaching from each wheel and including the differential bevel gears, and sometimes extending forward uninterruptedly to the change gear box.

In the present-day touring car it is to be found a continuous protective shield connecting the widely flaring guards and the running board, which intervenes between them, with the body itself and the shield, which completely underlies it.

THE IRISH RELIABILITY TRIAL.

THE results of the Irish Automobile Club's Reliability Trial have been announced as follows, fifty marks being the maximum for hill climbs and the speed test. G.M. indicates Gold Medal, S.M. Silver Medal, and W. withdrawn:—

SECTION I.—OPEN.

CLASS A.—PRICE NOT EXCEEDING £150.

| Name of Car. | Reliability. | Hollywood Hill. | Ballinasloe Hill. | Rosbeigh Speed Test. | Total Marks obtained. |
|--------------------------|--------------|-----------------|-------------------|----------------------|-----------------------|
| 6-h.p. Rover | — | 24.95 | — | 24.81 | W. |
| 8-h.p. Phoenix | — | 29.90 | — | 32.81 | W. |
| 8-h.p. Imperial Starling | 830 | 23.96 | 24.35 | 29.64 | 907.95 |
| 10-h.p. Royal Starling | 850 | 31.33 | 31.51 | 35.02 | 947.86 |
| 10-h.p. Royal Starling | — | 34.95 | — | 39.08 | W. |
| 15-18-h.p. Ford, G.M. | 846 | 50.00 | 50.00 | 50.00 | 996 |

CLASS B.—PRICE EXCEEDING £150, BUT NOT EXCEEDING £250. TWO SEATS.

| | | | | | |
|------------------------|-----|-------|-------|-------|--------|
| 8-h.p. Rover | 850 | 29.69 | 29.20 | 29.66 | 938.55 |
| 8-10-h.p. Rover | — | 28.74 | — | — | W. |

200-GUINEA DUNLOP CUP.

For the car entered in the open section securing the highest aggregate marks, the hill climbs and speed test being calculated on a formula basis, the order of placing was as follows:—

| Class. | Marks. |
|---|--------|
| Winner ... E ... 15-h.p. Clement-Talbot | 992.51 |
| 2nd ... F ... 25-h.p. Clement-Talbot | 986.49 |
| 3rd ... G ... 48-h.p. Daimler | 970.55 |
| 4th ... H ... 60-h.p. Napier | 968.85 |
| 5th ... D ... 16-20-h.p. Calthorpe | 956.66 |
| 6th ... C ... 10-12-h.p. Humber | 944.73 |
| 7th ... B ... 10-12-h.p. Swift | 930.82 |
| 8th ... A ... 15-18-h.p. Ford | 922.31 |

The 100-guinea Dunlop Cup Competition for the Limited Section resulted as follows:—

| Class. | Marks. |
|---------------------------------------|--------|
| Winner ... G ... 48-h.p. Daimler | 997.00 |
| 2nd ... F ... 20-h.p. Clement-Talbot | 973.33 |
| 3rd ... E ... 14-22-h.p. Germain | 963.07 |
| 4th ... B ... 10-12-h.p. Swift | 934.98 |
| 5th ... D ... 15-h.p. Coventry Humber | 929.69 |

ROAD REPORTS.

DARLINGTON.—Between the Monument in North Gate and Russell Street, Darlington, is a distance of 286 yards which the police have measured and over which they have frequently timed motorists.

BARNET.—The county council of Hertford is applying to the L.G.B. for a restriction of the speed of motor-cars in that portion of the Great North Road situated in the urban district of Barnet and some other roadways in the locality. Objections should be lodged before Tuesday next, the 9th inst.

SHERBURN.—At the last meeting of the Sherburn Rural District Council, Mr. Francis Ware, hon. secretary of the North Yorkshire A.C., wrote to the effect that he understood from the Clerk to the East Riding County Council that the Rural Council raised no objection to a proposed alteration at Spittal Corner, Staxton, on the road from Malton to Scarborough, provided that any cost was not to be a charge on their funds. Lord Londesborough had undertaken to give all the necessary land free of charge if the expense of widening the road could be defrayed from other sources. If the corner of the road were widened off, and the fence set back, it would add very greatly to the safety of the road and the comfort of those using it. The cost of carrying out the work was estimated at £60 or £70. Both the Yorkshire Automobile Club and the East Riding County Council were prepared to contribute towards the cost if the Rural Council would share the expense. This proposition was declined.

AYLESBURY.—The County Surveyor, Mr. R. J. Thomas, states that the London and Bath road is being "Tarmac'd" from Colnbrook to Langley. Special caution should be exercised when driving through the narrow village of Well End, on the Bourne End and Marlow road.]

THE rapid progress of the Rudge-Whitworth detachable wheel in the esteem of private owners of the better class of motor-cars is well borne out by the fact that His Highness Prince Ranjitsinhji, Jam of Nawanganar, has recently given the Lanchester Company instructions to equip his fifth Lanchester car with these wheels.

CLUBS AND ASSOCIATIONS.

ROYAL.

AN advantage of the R.A.C. system of handicapping is demonstrated by the fact that at the recent hill-climb at Cat Hill, near Southgate, promoted by the North Middlesex A.C., the results were announced to the competitors fifteen minutes after the last car had completed the course.

MOTOR UNION.

MR. ROWLAND WINN, of Leeds, has been appointed to the list of Motor Union consulting engineers.

The number of individual members of the M.U. on the 31st ult. was 4,593 as compared with 3,553 on the same date in 1907.

Harrogate has been suggested as the place for the July provincial meet, and the Oxford and District A.C. has offered to assist the Union in every possible way for the September gathering.

MOTOR CLUB.

THE Committee of the Motor Club, Coventry Street, London, W., have made special arrangements with the committee of the Phyllis Court, in connection with their visitors' enclosure at the Henley Regatta on July 1st to 3rd. There is a large paddock for motor-cars, and the secretary will be pleased to send particulars of the excellent arrangements made for the convenience and entertainment of the members of the club.

which has a very fine minstrels' gallery, then, by way of the armoury, they visited all the rooms of interest in the mansion. The members and their friends also explored the gardens and grounds, and many passed an amusing half-hour in the intricacies of the well-kept maze. Then a move was made to the cars again, and, headed by Mr. Young's car, a tour of the whole park was made, involving a drive of some nine or ten miles and passing en route the vineries, the peacocks, and Queen Elizabeth's oak.

When this delightful journey was completed a move was made to the Red Lion Hotel, where, by the kindness of Mr. S. Saker, the chairman of the county club, and Mrs. Saker, every member of each club had been invited to tea. In the banqueting room of this old-fashioned hostelry 110 members and friends assembled (seventy-five H.C.A.C. and thirty-five N.H.A.C.), and Mr. and Mrs. Saker's hospitality was very much appreciated, and elicited a very cordial expression of thanks.

LANCASHIRE.

A SPEED-JUDGING competition was held by the Lancashire Automobile Club on Saturday, on the main road from Preston to Blackpool. There were thirty entries, and the course was about five miles long. Mr. A. Birtwistle, the secretary of the club, acted as judge. The results were:—1, Mr. Herbert Lonsdale, of Blackpool, on a 28-35-h.p. F.I.A.T., three seconds off scheduled time; 2, Mr. W. Huck, of Leyland (9-h.p. Darracq), thirteen seconds off; 3, Mr. Havelock Lonsdale, of Accrington (30-40-h.p. Daimler), thirty-three seconds off; 4, Miss L. Nuttall, Accrington (18-h.p. White steam car), forty seconds off.

The Staff and Friends of the Northern Automobile Company, Ltd., Manningham, Bradford, at Burnshall.

THE AUTO-CYCLE UNION.

THE annual hill-climbing competition of the Auto-cycle Union was held at Sutton Bank, near Thirsk, on Saturday, in charming weather. The facts that the hill is one of the worst in the kingdom, having portions 1 in 5.8 and 1 in 3.96, and that it contains an elbow bend, drew a large crowd of spectators. There were forty-nine entries, and the results were as follow:—

Light Weights: R. C. Bell (Motoreve), the only starter, failed to reach the top. Single-cylinders, not exceeding 82 mm. bore: 1, R. M. Brice (Brown); 2, F. Scrivener (Rex); 3, S. W. Carty (N.S.U.). Single-cylinders, not exceeding 85 mm. bore: 1, G. Marshall (Triumph) 2, Brice; 3, W. G. M'Minnies (Triumph). Twin-cylinders, not exceeding 75 mm. bore each: 1, O. C. Godfrey (Rex); 2, F. Applebee, jun. (Rex); 3, F. W. Applebee (Rex). Twin-cylinders, not exceeding 85 mm. bore each: 1, Godfrey; 2, Applebee, jun.; 3, Scrivener. Class open to all the foregoing: 1, Godfrey; 2, Applebee, jun.; 3, Marshall. Variable gears: 1, G. Raper (N.S.U.); 2, C. A. Palmer (Rex); 3, W. Milnes (Phelon and Moore). Passenger machines: R. B. Smith (N.S.U.)

HERTFORDSHIRE.

A MOST successful inter-club meet took place on Saturday last, when the Hertfordshire C.A.C. invited the members of the North Herts. A.C. to join them at Hatfield. The forty cars met outside the main entrance gates to Hatfield Park, and they proceeded through the Park to the house, Lord Salisbury having accorded the Hertfordshire C.A.C. the privilege of seeing over his historic residence in addition to driving through the park. The visitors then assembled in the Marble Hall, which contains some very valuable tapestries and paintings, and

HUDDERSFIELD.

ON Saturday the annual hill-climbing competition under the auspices of the Huddersfield branch of the Yorkshire Automobile Club took place on a stretch of wide road, a mile and 48 yards long, leading from Meltham to Isle of Skye. There were four classes—Class A, for cars of 8-h.p. and under, two entries; Class B, cars of over 8-h.p. and not exceeding 18-h.p., eleven entries and nine competitors; Class C, over 18-h.p. and not exceeding 30-h.p., ten entries and eight competitors; and Class D, over 30-h.p., four entries and two competitors. The competition was on a handicap basis, and was not decided till late in the evening, when the following results were announced by the president and referee, Mr. W. H. Jessop:—

Class A: 1, A. H. Young, 6-h.p. Gladiator (78.8); 2, T. E. Dyson, 6-h.p. De Dion (50.3).

Class B: 1, T. H. Kaye, 10-h.p. Alldays (97.1); 2, R. H. Hartley, 12-h.p. De Dion (88.8).

Class C: 1, J. H. Crowther, 14-16-h.p. Argyll (93.6); 2, G. A. Crowther, 14-16-h.p. Argyll (87.4).

Class D: 1, A. Farnell (Bradford), 30-h.p. Daimler (97.9); 2, P. S. Crowther, 43-h.p. Napier (86.5).

LINCOLNSHIRE MOTOR-CYCLE CLUB.

THE Shades, Spilsby, East Lincolnshire, long popular with cyclists and motorists, was on Saturday the rendezvous of the Lincolnshire Motor-Cycle Club, and there was a very representative muster. On Monday the reliability trial on two routes, one taking in Grantham, Stamford, Spalding, Holbeach, and Boston, and the other taking in Spilsby, Grimsby, Scunthorpe and Gainsboro', will be held.

CRYSTAL PALACE.

TWELVE cars only entered for the Open Flexibility competition of the Crystal Palace A.C. on Saturday last. This was limited to touring cars as defined by the "Touring Car Standards" formulated by the Society of Motor Manufacturers and Traders and adopted by the R.A.C. At 8.30 a.m. the competitors had a flying half mile speed test on the Brookland track, when the following speeds were attained:—

| | M.p.h. | | M.p.h. |
|--------------------------|--------|--------------------------|--------|
| 60-h.p. Napier | 69.5 | 15.9-h.p. Vinot | 38.54 |
| 35.7-h.p. Dennis | 51.3 | 13.9-h.p. De Dion | 37.1 |
| 38.2-h.p. Belsize | 44.67 | 7.96-h.p. De Dion | 35.22 |
| 22-h.p. Vinot | 40.27 | — Duhanot | 35.02 |
| 8.9-h.p. Sizaire | 39.74 | | |

Then the cars proceeded through Ripley and Guildford over Hog's Back, through Farnham and Hindhead to Petersfield, where luncheon was taken at the Red Lion Hotel. The journey was one of 42½ miles, which was made up to 84½ miles by returning *via* Midhurst, Haslemere, Hindhead, Milford, Godalming and Guildford to the White Lion Hotel at Cobham.

Fortunately the weather and roads were equally good despite a shower in the afternoon. Many bends and several narrow roads, where stops for traffic were practically inevitable, made the route particularly well adapted for the purposes of such a trial. Unfortunately the Belsize lost 200 marks through a heated bearing caused by a broken lubricating pipe. The maximum marks attainable in each class was 1,250, and the results were as follows:—

| Class. | Make. | Flexibility. | Speed. | Total Marks. |
|--------|-----------------------|--------------|---------|--------------|
| 1 ... | 8.9-h.p. Sizaire ... | 790 ... | 250 ... | 1,040 |
| 1 ... | 7.96-h.p. De Dion ... | 750 ... | 160 ... | 910 |
| 2 ... | 15.9-h.p. Vinot ... | 771 ... | 250 ... | 1,021 |
| 2 ... | 13.9-h.p. De Dion ... | 784 ... | 220 ... | 1,004 |
| 3 ... | 22-h.p. Vinot ... | 914 ... | 250 ... | 1,164 |
| 4 ... | 35.7-h.p. Dennis ... | 951 ... | 250 ... | 1,201 |
| 4 ... | 38.2-h.p. Belsize ... | 667 ... | 120 ... | 787 |
| 5 ... | 60-h.p. Napier ... | 1,000 ... | 250 ... | 1,250 |

The drivers of the various vehicles engaged were Messrs. G. F. Scantlebury, W. V. Jolly, H. Ramolay, J. W. Stocks, N. Doherty, Gordon Usmar, R. Downing, P. Runciman and F. G. Cundy.

MANCHESTER.

THE Manchester Automobile Club held a meet on Saturday, when, by permission of Mr. Robert Dempster, they visited Vale Royal, near Hartford. Over forty motor-cars travelled from various quarters of Manchester and district. The foliage, freshened by a morning shower, was seen to great advantage, and the bright, sunny afternoon made tea on the lawn most enjoyable. Opportunity was afforded of inspecting the collection of big game hunting trophies of Lord Delamere.

SCARBOROUGH AND DISTRICT.

THE Scarborough and District Motor Club on Wednesday, last week, held a competition at Sherburn, which consisted of locating faults in the electrical parts of the machines, purposely made by the judges, Mr. R. W. Ringrose and Mr. J. W. F. Tranmer. Mr. Chas. Pugh was the winner of the first prize, very smartly getting away in four minutes, Mr. Fred Robson winning the second prize in twenty minutes. The prizes were given respectively by Mr. J. S. Atkinson and by the secretary.

COVENTRY MOTOR.

ON Saturday North Wales was invaded by motor-cars, and much interest was taken in the reliability run of the Coventry Motor Club from Coventry to Holyhead, in which there were thirty-one participants. The route was *via* Shrewsbury to Llangollen, where lunch was partaken of, and thence to Menai Bridge for tea, Holyhead being reached about 6 p.m. The run was a fast one, and the first arrival was that of Miss Hind, who reached the terminus at 5.43 p.m., having started at 7 a.m. Mr. K. Starley arrived at 5.49 p.m., and the last car arrived at 7.30. The club started on the homeward journey at seven o'clock on Sunday morning.

AERO CLUB.

THE International balloon race on Saturday was from Hurlingham to Burchetts Green Inn, near Maidenhead, a motorist being despatched along the Bath road with a flag to mark the goal as soon as it was decided by the judges. None of the balloons got nearer than 1,900 yards of goal. Of the others, one failed to start, two came down early on account of lack of ballast, and the rest finished anywhere within a radius of eight miles, Mr. C. F. Pollock (Valkyrie) and Mr. Griffith Brewer (Lotus) descending about a mile from the winning post. Some difficulty also arose in regard to awarding third prize, as the third, fourth, fifth, and sixth balloons to descend came down in Waltham St. Lawrence, at about equal distance from the winning post, and it was requisite to take measurements to decide which was the nearest to the goal.

Mr. H. E. Perrin, secretary of the Aero Club, on Monday made an official inspection of the places at which the balloons alighted after taking part in the contest on Saturday. The distance at which ea

competitor descended from the spot selected as the winning post at Burchetts Green Inn, Maidenhead, was measured, the following official result being declared:—

| | Nationality. | Yards from Goal. |
|--------------------------------|--------------|------------------|
| 1. Mr. Griffiths Brewer | Britain ... | 1,966 |
| 2. Mr. C. F. Pollock | Britain ... | 2,166 |
| 3. M. G. Geerts | Belgium ... | 5,533 |
| 4. Mr. Frank Butler | Britain ... | 6,425 |
| 5. Hon. Claude Brabazon | Britain ... | 6,683 |

The special prize of £80 presented by the Royal Automobile Club to the foreign competitor who did best in the contest was therefore won by M. G. Geerts.

THE INSTITUTION OF AUTOMOBILE ENGINEERS.

A VISIT to the Clement-Talbot Motor Works at North Kensington was made last week by the graduates from the Incorporated Institution of Automobile Engineers. Under the guidance of Mr. Garrard, the works manager, and his assistants, a complete tour of inspection round the various shops was made. Much time was spent in the machine department, where the visitors were particularly interested in the fine and up-to-date machinery, and inspected very closely the automatic machines which handle some of the largest work. Much surprise was expressed on learning that many of these machines are left entirely to themselves once the job is set up, and are not touched until a bell rings to indicate to the attendant that the work is finished. Passing on to the erecting shop, the party came upon the two cars that are being prepared for the Two Thousand miles trials, and it was explained that this was the first time the Talbot Company had ever built special cars for competition work, all their previous successes having been made on standard pattern vehicles. After the remaining shops had been

visited, the party retired to one of the spacious reception rooms in the office building, where Mr. Garrard gave a short address, and stated that he would be pleased to reply to any questions asked. Many of the graduates took advantage of the opportunity, and although many of the questions touched on metallurgical subjects, the principal one debated was the remarkable efficiency of the Talbot engine. No objection was made to discussing every detail that led up to this, and the discussion was highly interesting and instructive to all present. At the conclusion a hearty vote of thanks was passed to Mr. Garrard and his assistants for the kind attention they had shown during the afternoon. The photo reproduced herewith was taken in the works before the party left, Mr. Garrard, the works manager and designer of the Talbot cars, being seen seated in the centre.

COMMERCIAL MOTOR USERS' ASSOCIATION.

THIS Association is organising two competitions for drivers of commercial motor vehicles, to be held in Manchester and London on July 18th and October 3rd respectively. Those in the employ of firms in Birmingham and the north thereof will be eligible for the Manchester competition and those south of Birmingham for that in London. For each competition fifteen prizes will be awarded, and particulars of the scheme may be obtained on application to the Secretary, 1, Albemarle Street, London, W.

SOUTHERN.

THIS club held the second of its speed-judging contests on Saturday last, starting from its country headquarters at the Glyn Arms, Ewell, the course including Epsom and Leatherhead *en route*. The competitors drew lots for their respective speeds, and the penalties were 6d. per mile in error, with a maximum of 2s. The results were as follows:—1, Mr. and Mrs. Guttridge (12-h.p. Gladiator); 2, Mr. Brodie and friend (tandem motor-cycle); 3, Mr. and Mrs. Holt, tri-car; 4, Mr. G. Aldington; 5, Mr. and Mrs. Jones; 6, Mr. Davies; 7, Mr. Abellott;

8. Mr. Pole. The competition arrangements were in the hands of Mr. A. W. Holt, hon. sports sec., and Mr. A. Vicars officiated as time-keeper.

WOLVERHAMPTON.

THE Hill-climbing Competition to be held on Coalport Hill, near Ironbridge (Salop) by the Wolverhampton and District A.C. will take place on July 11th, not July 4th, as was stated in the preliminary announcement. Alderman John Marston, J.P., will be judge and Mr. T. T. Mills chairman of the committee responsible for the arrangements. The R.A.C. formula will be used for handicapping and entries will close on the 1st prox., but will be received up to the following Saturday at double fees. Entry forms may be obtained from the hon. secretary at Royal London Buildings, Wolverhampton.

THE MOTOR-CYCLING CLUB.

THE list of entries for the M.C.C. London to Edinburgh twenty-four hours' run, the Schulte cup and the M.C.C. challenge cup competition, has now closed with the record number of about 130 entrants, of which between 90 and 100 are motor-bicycles.

The start of the run northward will take place at 10 p.m. on the evening of Friday, the 5th inst., near the Old Gatehouse at the top of Highgate Hill, London, W.

place on July 25th. Entries should reach Mr. F. H. Cerrito, at the Grand Hotel, Birmingham, not later than July 20th.

ON Saturday the members of the Kent A.C. were most hospitably entertained by Mr. and Mrs. J. S. Darwen at their residence, Combe Lea, Bickley.

THE Blandford and District A.C. held their postponed opening meet for the season recently in Eastbury Park, the residence of their president, Mr. H. F. W. Farquharson.

As we intimated last week was likely to be the case, the Manchester and District Motor and Cycle Trades' Association has now taken the reference to the cycle trade from its title.

THE Automobile Club of North Wales has now a total membership of 128 members, of whom forty-four are in the county of Carnarvon, twenty-seven in Denbigh, twenty-three in Anglesey, eleven in Flintshire, five in Merioneth, three in Montgomery and fifteen outside the Principality.

ALLEGED PERJURY BY A CHAUFFEUR.

SENTENCE of six months' imprisonment with hard labour was passed by the Common Serjeant at the Old Bailey on Monday on Herbert H. Price, of South Tottenham, who was found guilty of committing perjury. Proceedings were taken against the owner of a car, which nearly knocked down a policeman, and Price, as a witness, swore he was not out with the car at the time, but that it was locked up in the garage at South Kensington.

The Single-Deck Motor-Bus lately put in Service in Vienna.

[Allgemeine Automobil Zeitung.]

MID-STAFFORDSHIRE.

THERE were twelve cars competing in the hill climb of the Mid-Staffordshire A.C. at Stile Cope, Rugeley. The hill is about two miles out of the town and the measured distance was just over 1,200 yards, with a gradient of one in twelve. The first three cars were Mr. A. G. Harley-Jones's 15-20-h.p. Clément-Talbot, Mr. A. C. Wenger's 18-22-h.p. Humber, and Mr. W. H. Ryley's 22-h.p. Standard.

MOTOR-CYCLE UNION OF IRELAND.

THE members of the Dublin centre of the Motor-Cycle Union opened their competitive season on Saturday last with the first of a series of speed trials at Portmarnock.

Two Miles Members' Handicap (run over an out-and-home course).—C. E. Murphy (84-86 mm. Triumph), 25 sec. start, 1; S. Findlater (85-76 mm. J.A.P.), 30 sec., 2; P. H. Gurse (75-76 mm. Peugeot), 61 sec., 3. Winner's time, 3 min. 35-3-5 sec.

Twenty Miles Open Handicap (run over a mile out-and-home course).—S. Findlater (85-76 mm. J.A.P.), 3 min., 1; C. E. Murphy (80-86 mm. Triumph), 4 min., 2; B. Dunphy (85-71 mm. J.A.P.), 4 min., 3. Winner's time, 36 min. 20-3-5 sec.

THE open hill climb of the Midland Automobile Club at Shelsley Walsh, Worcestershire, by permission of Mr. M. C. Taylor, will take

ton. Following this, the owner caused inquiries to be made, and the fact was discovered that, quite unknown to him, Price had taken the car out, and, with three or four persons, had a midnight ride to Hampton Court. The jury strongly recommended Price to mercy on the ground that he did not appreciate the gravity of the offence. An appeal was intimated.

THE motor garage at the Royal Counties Agricultural Society's Show at Southampton is under the direction of the Parsons Motor Company, Ltd., of that town.

FROM the Coventry Chain Company, Ltd., comes a number of illustrations of the large new works they have lately completed in Coventry. The buildings are of the single storey type, and are well lighted. Altogether they appear to be well adapted for the purpose of manufacturing motor-car and cycle chains, the plant being throughout of an up-to-date character.

SOME little time ago Ariel Motors, Ltd., despatched a 30-40-h.p. Ariel car to Lisbon. The owner of the vehicle, Senor Joao da Fonseca Cruz, has now written to the builders expressing his delight with the general finish and power of the car. He states "The engine is running well, the car having gone to the palace at Cintra on top speed without changing gear. The road is a series of hills, and it is difficult to get there unless negotiated on second and third speeds."

CASES UNDER THE MOTOR CAR ACT.

DISMISSAL OF AN APPEAL.

In the King's Bench the case of *Jessop v. Clarke* came before the Lord Chief Justice and Justices Darling and Sutton, sitting as a Divisional Court, on appeal by A. L. Jessop, from a conviction by the justices of the Parts of Kesteven, Lincolnshire, for the alleged driving of a motor-car at an excessive speed, namely, more than twenty miles an hour, contrary to the provisions of Section 9 (1), of the Motor Car Act, 1903.

The evidence given before the justices was by P.C. Grist, who proved that on February 5th, on the Great North Road, about the seventh milestone from Grantham in the direction of Newark, a car marked AL511 passed him at eight minutes past two o'clock in the afternoon, going in the direction of Newark. He took the time by his watch, which had been set with that of P.C. Benson. Benson also gave evidence that at the tenth milestone from Grantham, in the direction of Newark, seeing a motor-car with the same markings approaching from the direction of Grantham at what he considered an excessive speed, he stopped the car at 13½ minutes past two o'clock p.m. by his watch. This witness told the appellant that he thought he was exceeding the speed limit, but that if, after he had compared the time with that of the other constable, it should appear that the defendant had not exceeded the speed limit over the three miles between himself and P.C. Grist, he (the appellant, would hear nothing further about it.

The appellant did not call any evidence, and did not deny that he drove the car in question at the time and place referred to, but he claimed on the following grounds, that he could not be convicted:—(1) That there was no corroboration as to speed, and that under Section 9 (1) of the Motor Car Act, 1903, he could not be convicted merely on the opinion of the witness as to the rate of speed; (2) that he was not warned of the intended prosecution at the time the alleged offence was committed, as required by Section 9 (2) of the Act; and (3) that it had not been proved that any notice of the intended prosecution had been sent to him, or to the owner of the car, as entered on the register in pursuance of Section 9 (2) of the Act. The justices, however, were of opinion that the evidence proved that the defendant's car covered the three miles between the two constables at an average speed exceeding 20 miles per hour. They also considered that the appellant had been previously warned of the intended prosecution, and they accordingly convicted him, and fined him £5 and costs. Mr. Horace Ivory, K.C., in support of the appeal, said he abandoned the first point raised before the magistrates as a reason why they could not convict, but he insisted that the conviction ought to be quashed upon the ground that there was no warning at the time of the offence that the appellant would be prosecuted.

The Lord Chief Justice, however, held that the statement of the police-constable that if it appeared that he had not exceeded the speed limit, he would hear no more of the matter, was a sufficient warning, and, therefore, the appeal must be dismissed. The other judges concurred, and the appeal was accordingly dismissed, with costs.

EXCEEDING LEGAL LIMIT.

Half-a-dozen cases against motorists for travelling too rapidly through the police traps at Ellel Grange, near Galgate, at Conder Green, and on a road north of Lancaster, were heard at Lancaster on Saturday, and fines ranging from £5 to £10 each were imposed.

Sixteen cases against motorists were heard at the Horsham Petty Sessional Court on Saturday. Fines amounting to £31 10s. plus costs were inflicted. All the cases of exceeding the legal limit were declared proven; two in connection with rear lights being dismissed.

On Monday five motorists were fined an aggregate sum of more than £30 at Arundel, for exceeding the legal limit in the parish of Houghton.

At Lewes Petty Sessions, on Tuesday, seven motorists were fined sums ranging from £2 to £8 for exceeding the legal limit in Polegate, and the vicinity.

DISMISSAL.

A matter of minutes engaged the attention of the Hull Stipendiary Magistrate in connection with a summons against a driver employed by Mr. Farr, manager of the Hull Parcels Express Company, for driving a motor-car on the Beverley road on the evening of April 27th without a light after the stipulated lighting up time, viz., 8.14. Mr. Farr, on behalf of the defendant, admitted that the car was being driven at 8.25, but contended that the Hull time was eleven minutes behind that of Greenwich, and produced a special calendar to that effect prepared by a Manchester cycling firm.

There was considerable discussion, the result being that the Stipendiary Magistrate dismissed the summons, and expressed his approval of the calendar, one of which Mr. Farr promised to supply to the court.

A TRIO OF SUMMONSES.

The Hillcrest Oil Company, Limited, of Parsonage Road, Bradford, were summoned on the 19th ult. at the Bradford City Court for three offences under the Motor-cars (Use and Construction) Order, 1904, namely, failing to cause to be painted on a trailer attached to a motor-car, the weight of the trailer unladen; permitting a motor-car to be used without two efficient independent brakes; and permitting a motor-car to be used for drawing another vehicle without carrying on the latter a person competent to apply the brakes attached.

Mr. Sydney Newmann, who appeared for the defendants, pleaded guilty to the first charge, but contended with regard to the other two

that the order under which the proceedings were taken did not apply to motor-cars of over three tons in weight, the weight of the vehicle in this case—a steam lorry—being 4 tons 19 cwt., and that a second efficient brake was obtained by the use of the reversing gear.

George Clixby, works manager for the Yorkshire Patent Steam Wagon Company, Ltd., of Leeds, the builders of the lorry, said that the reversing gear would bring the vehicle to a standstill on the steepest gradient in England, and was so simple in operation that it became a frequent source of complaint that drivers relied on it to the exclusion of the block brake, which got rusted up through disuse.

Mr. H. R. Watling, who prosecuted, in reply to Mr. Newmann's contention with regard to the application of the order, said that the Motor Car Act of 1903 gave the Local Government Board power to increase the weight of cars to which the Motor-cars (Use and Construction) Order applied, and the weight has been increased to five tons by the Heavy Motor-car Order of 1904. With regard to the reversing gear, he submitted that that was not a brake within the meaning of the order, which required two independent brakes acting on the wheels.

The case was adjourned until the 22nd ult., in order that the point of law involved might be considered by the magistrates' clerk. At the adjourned hearing the magistrates announced that they had decided that all the offences alleged had been committed, and that a fine of 10s., with 7s. costs, would be imposed in each of the three cases.

INTERNATIONAL "FOUR-INCH" RACE FOR THE TOURIST TROPHY.

THE following entries have been received for this race which will be held in the Isle of Man, probably at the end of September:—

1. 25-6-h.p. Rover, Mr. J. K. Starley (holder of trophy).

The above illustration depicts the novel method of bringing the Kempshall non-skid tyre before the notice of the public which has been adopted by the Kempshall Tyre Company of Europe, Ltd.

2. 25-6-h.p. Napier, Mr. S. F. Edge.
3. 25-6 h.p. Arrol-Johnston, Mr. Ernest A. Rosenheim.
4. 25-6-h.p. Arrol-Johnston, Mr. Ernest A. Rosenheim.
5. 25-6-h.p. Rover, Mr. Harry Smith.

The entrance fee is £35 per car. Entries at this fee will be received up to July 1st, 1908, after which date the fee will be increased to £45. The entry list will be closed on August 1st, at 12 noon. The entrance fee will be returned in full if no race be held, but will not otherwise be returnable.

THE Lion-Peugeot car which won the Targa-Florio voiturette race was fitted with and ran on an Eisemann magneto, for which United Motor Industries, Ltd., are the British agents.

MESSRS. BROWN BROTHERS, LTD., send an interesting booklet dealing with the Gabriel horn illustrated and described in the *M.C.J.* of April 18th. The horn can now be heard at their West End show-rooms 15, Newman Street, Oxford Street, W.

THE Ara vulcanizing device will execute an average repair to cover or tube in about five minutes. It can be obtained from the Ara Material Patents and Manufacturing Corporation, 350, Chancery Lane, London. W.C., or seen at the demonstrating depot, 100, Long Acre, London, W.C.

FROM M. F. Gebert, 31, Boulevard Magenta, Paris, comes a copy of the 1908 edition of the *Annuaire I.V.A. de l'Industrie Velocipedique et Automobile en France*. This is a very useful work for all having dealings with our neighbours across the Channel, as it gives the names and addresses of the makers and agents of motor-cars, motors, automobile components, cycles, &c., throughout France. The book extends to close upon 900 pages and is arranged for convenient reference.

FORTHCOMING EVENTS.

JUNE.

- 6th-8th.—London-Edinburgh twenty-four hours' run of the Motor Cycling Club.
 6th (Sat.).—Brooklands A.R.C.
 8th (M.).—Cars competing in the International Touring Car Trial will arrive at the "White" depot, Camden Town.
 Brooklands A.R.C.
 9th (Tu.).—Touring competition for Prince Henry of Prussia's prize begins.
 10th (W.).—Gymkhana of the Dorset A.C. at Wimborne.
 11th (Th.).—Start of the International Touring Car Trial of the R.A.C.
 13th (Sat.).—Hill climb of the Notts A.C. at Oakmoor.
 Speed Trials of the Lincs. A.C. at Grimsthorpe.
 N. Middlesex A.C. speed judging competition for the Gamage Cup.
 Essex C.A.C. hill climb at Bottledown Hill, Billericay.
 14th (Sun.).—Lincolnshire M.C.C. attends morning service at Gayton.
 Lunch at Mablethorpe.
 15th-19th.—Scottish Reliability Trial.
 17th.—Close of Prince Henry Touring Competition in Germany.
 18th (Th.).—Meet of the Cambridge A.C. at Hatley Park by invitation of Sir C. Hamilton.
 20th (Sat.).—Meet of the Hull Auto Cycle Club and the Lincolnshire Motor Cycle Club at Brigg.
 Annual Hill Climb of the Bristol and Gloucestershire A.C.
 Lunch of the Kent A.C. at Dover.
 Herts C.A.C.'s climb for cars at Aston Hill.
 26th (F.).—Welsh A.C. reliability trial for motor-cycles.
 27th (Sat.).—Saltburn beach races.
 Buxton meet of the Manchester, Sheffield, and Lincolnshire clubs.
 Members of the Cheshire A.C. will participate in the Gymkhana of the Manchester A.C.
 Visit of the Essex C.A.C. to Audley End.
 Meet of the Kent A.C. at Holwood by permission of the Earl of Derby.
 28th. (Sun.).—Southend M.C. run to Grand Hotel, Clacton.

AUTOMOBILE ACCIDENTS.

At the inquest at Hove touching the death of Mr. Harold Clifton, whose death from injuries caused while riding a motor-cycle, by coming into collision with a taxi-cab, was recorded in our columns last week, a verdict of accidental death was returned, and the jury exonerated the driver of the taxi-cab from all blame.

ON Sunday morning two motor-cars collided in Church Street, Seaford. As his Honour Judge Scully and Mrs. Scully were being driven up Church Street in their motor-car and approaching the turning, another car, driven by its owner, turned out of the Eastbourne road in Church Street, and the cars collided. Both vehicles were damaged, though fortunately the occupants escaped with only a shaking.

ON Sunday afternoon three gentlemen and a lady were conveyed to Devonshire Hospital, Buxton, all injured, as the result of a motor accident. The car was turning a sharp corner at Crongetone, near Buxton, when the steering gear is said to have broken, and the car dashed into a hillside. The vehicle was completely wrecked, and the four occupants and the chauffeur were thrown in all directions. Another car was produced, and the injured were conveyed to Buxton.

THE City Coroner of Hereford has held an inquest respecting the death of Joseph Griffiths, who was killed by a motor-car owned by Sir John Cotterell, and driven by Andrew Hamilton. Mr. J. S. Blanckensee, solicitor, of London, represented the owner of the car. Among the evidence was that of the chauffeur, who said when he got to Stretton Sugwas, Griffiths ran right across the road in front of the car, apparently making for a horse and cart which were standing near. When he was partly across he seemed to turn or step back again in front of the car. Had he not turned he might probably have reached the other side of the road in safety. He (the chauffeur) had slowed down because he thought the horse might bolt. A verdict of "Accidental death" was returned.

AN inquest was held at Greenwich, on Tuesday, on John Noon, a carman, of Fulham, who died from fracture of the skull caused by being run into by a motor-car at Blackheath. It appears that Noon was driving his van, and the motor-car was going in the same direction as he was, towards London. All the witnesses agreed that the van suddenly turned into Hyde Vale, a thoroughfare leading off Blackheath, and that the deceased man in doing so gave no signal of his intention to turn off. The chauffeur did all he could to avoid an accident, but the car caught the end of the van, with the result that Noon was thrown off on to his head. The jury returned a verdict of "Accidental death," exonerating the chauffeur from blame.

THE WHITSUN MEET AT BROOKLANDS.

FOR the meeting to be held to-day (Saturday) at Weybridge, the Brooklands A.R.C. have received the following entries:—

Match for £250 a side, between Mr. S. F. Edge's 25.6-h.p. Napier and Mr. Oscar Cüpper's 25.6-h.p. Metallurgique car.

Match for £250 a side, between Mr. S. F. Edge's 40-h.p. Napier and Mr. Oscar Cüpper's 40-h.p. Metallurgique car.

Second All-comers' Handicap.—H. G. Nalder, 35.7-h.p. Berliet; F. R. Fry, 76-h.p. Mercedes; G. C. G. Moss, 27.2-h.p. Arrol-Johnston; P. D. Stirling, 35.7-h.p. Berliet; J. W. Stocks, 25.6-h.p. De Dion; G. Russell-Miller, 22.4-h.p. de la Buire; S. F. Edge "Vicaroy" Napier; S. F. Edge, "Medusa" Napier; F. N. Lloyd, 23.1-h.p. Clement-Talbot; D. Pigot, 35.7-h.p. Berliet; E. de Wilton, 76-h.p. Mercedes; J. L. Bromfield, 62.5-h.p. Darracq; Clement Hobson, 27.9-h.p. Nagant Hobson.

Second Limit Stakes (to be run in two heats and a final).—H. G. Nalder, 35.7-h.p. Berliet; G. C. G. Moss, 27.2-h.p. Arrol-Johnston; D. Pigot, 35.7-h.p. Berliet; J. Keele, 41.9-h.p. Weigel; J. W. Stocks, 25.6-h.p. De Dion; Sir Duncan Hay, Bt., 41.9-h.p. Daimler; J. E. Hutton, 25.6-h.p. Hutton; B. S. Millard, 8.9-h.p. Sizaire; W. Oates, 22.4-h.p. Clement; J. Keele, 53.6-h.p. Darracq; Sir George Abercromby, Bt., 58.1-h.p. F.I.A.T.; E. de Wilton, 76-h.p. Mercedes; Clement Hobson, 27.9-h.p. Nagant Hobson; W. M. Letts, 8.9-h.p. Sizaire; John L. Poole, 22.5-h.p. Buick.

90-h.p. Sweepstakes.—F. R. Fry, 76-h.p. Mercedes; E. de Wilton, 62.5-h.p. Darracq; J. E. Hutton, 76-h.p. Mercedes; Warwick J. Wright, 89.5-h.p. Darracq; S. F. Edge, 90-h.p. Napier.

For Monday's meeting entries have been received as follows:—

Match for £250 a side, between Mr. S. F. Edge's 20-h.p. Napier and Mr. D'Arcy Baker's 90-h.p. F.I.A.T.

Training Plate (for the Grand Prix racing cars).—Four 58.1-h.p. Austin cars entered by Mr. H. Austin.

Household Brigade Cup.—Mr. J. Bullough (Coldstream), 44.5-h.p. Junior; Mr. G. C. G. Moss (Grenadiers), 27.2-h.p. Arrol-Johnston; Sir G. Abercromby, Bart. (Scots), 58.1-h.p. F.I.A.T.; Mr. D. C. Bingham (Coldstreams), 8.9-h.p. Sizaire; Mr. T. R. Clutterbuck (Coldstreams), 35.7-h.p. F.I.A.T.

Fifth 26 h.p. Race.—J. W. Stocks, 25.6-h.p. De Dion; S. F. Edge, "Firefly" Napier; S. F. Edge, "Medusa" Napier; J. E. Hutton, 25.6-h.p. Hutton; O. Cüpper, 25.6-h.p. Metallurgique.

President's Cup (Handicap for Private Competitors), to be run in two heats and a final.—A. van Hoboken, 71.7-h.p. Mercedes; O. L. Bickford, 22.4-h.p. Ford; H. G. Nalder, 35.7-h.p. Berliet; T. Faulkner, 24.3-h.p. Mercedes; H. Musker, 44.5-h.p. Daimler; G. Duveen, 34.5-h.p. Mercedes; J. Bullough, 44.5-h.p. Junior; Sir Duncan Hay, Bart., 41.9-h.p. Daimler; G. C. G. Moss, 27.9-h.p. Arrol-Johnston; G. M. Kenyon, 25.8-h.p. Minerva; O. S. Thompson, 36.1-h.p. Austin; P. D. Stirling, 35.7-h.p. Berliet; Colonel T. Cowper-Essex, 8.9-h.p. Sizaire; G. Russell-Miller, 22.4-h.p. de la Buire; Captain J. C. Tattersall, 25.8-h.p. Metallurgique; A. G. Fentiman, 31.1-h.p. M.P.; W. Whiteway, 21.4-h.p. Calthorpe; G. Bliss, 41-h.p. Vinot; Sir George Abercromby, Bart., 58.1-h.p. F.I.A.T.; C. L. Woodward, 24.8-h.p. Renault; Clement Hobson, 27.9-h.p. Nagant Hobson; Clement Hobson, 48.6-h.p. Brasier.

BUSINESS NEWS.

THE winning car in the Targa Florio race, like all other Isotta Fraschini's, was fitted with Renold chains.

THE JUNIOR AND OTAV CAR COMPANY, LTD., have secured the sole concession for the United Kingdom of the Junior and O.T.A.V. cars, which are manufactured at Milan and Turin. The new concern have opened a depot at 117, Long Acre, London, W.C., where owners of either of these vehicles can procure all spare parts, and the assistance of skilled engineers from the Italian works.

MESSRS. LEGROS AND KNOWLES, LTD., have recently completed a 35-h.p. Iris chassis for Mr. H. Perronet Sells, to the specification of Messrs. O'Gorman and Coxens-Hardy, who required that the petrol consumption, with full load equivalent to a 7 cwt. body, fuel, oil, spares, driver and full complement of seven persons, should not be less than fifteen miles per gallon, should climb Kensington Park Road at a speed not exceeding eight miles per hour on top gear, and do 45 miles per hour on the flat. The engineers also specified that not more than 2 per cent. of carbon monoxide by volume should be present in the exhaust gases and also not more than 10 per cent. of the total heat of combustion should have been exceeded in the form of unburnt gases. The test was to be over not less than 150 miles. In respect to this chassis the engineers reported as follows:—"We are glad to say that the petrol consumption and exhaust gas analysis are extraordinarily good. The percentage by volume of CO is 1.5 and the efficiency of combustion works out at 96 per cent. Only 4 per cent. of the carbon is incompletely burnt and 4.4 per cent. of the hydrogen. The gross ton-miles per gallon works out at 50.3, the consumption being one gallon per twenty-five miles." The net weight of the chassis unloaded, but in working order, with four gallons of petrol, five gallons of water, and about two gallons of oil in the crank chamber, and with the normal quantity of oil in the back axle and gear-box, was subsequently ascertained to be 1 ton 1 cwt. 2 qrs. The samples of exhaust gas were taken with the engine under full load up the hill between Westerham and Edenbridge. The actual speed on Kensington Park Road on the top gear was six miles per hour and the maximum on the flat sixty miles per hour.

THE Motor-Car Journal.

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

AN Irish motorist draws attention to police activity in Dublin, and to an aspect of their policy with regard to automobiles which has not previously occurred in the city on the Liffey. This is regarded as the consequence of a recent accident in Phoenix Park, by which a motor-cyclist collided with a pedestrian, inflicting considerable injury. The registration number of the machine was observed, but when the police endeavoured to trace its whereabouts it was discovered that the vehicle had changed hands several times and that the licence had not been renewed by subsequent holders. The result of this was that practically all the available police force of Dublin were engaged one day last week at certain points in the outlying suburbs stopping motor-cyclists with a view to the examination of their licences. It is probable that similar action will shortly be taken towards the owners of motor-cars, and we would emphasise, for the benefit of readers on both sides of the Irish Sea, the fact that when a car changes hands attention should be paid to the matter of re-registration or transfer of the number without delay.

Tyres and the Trials.

RECENTLY we referred to the negotiations upon which the Scottish A.C. had entered with a view to preventing the displays along the line of route of the forthcoming Trial such as spoiled the landscape on the last occasion. When we wrote a few weeks ago the hope of combined action was clouded by the disinclination of one firm to forego its rights and privileges. We are glad, however, to have now received official intimation that the half-dozen motor tyre firms who have been most prominently identified with this landscape publicity in previous years have agreed that they will not show at any point within sight of the cars any form of advertisement along the route. This arrangement will not be operative so far as the towns and cities of Glasgow, Aberdeen, Inverness, Pitlochry, and Oban are concerned, nor does it relate to the permanent hoardings at present used by any of the companies. It is satisfactory, however, that this general agreement has been arrived at, and probably the tyre companies themselves will be the first to appreciate the economy of the arrangement.

Hotels and their Customers.

THE proprietors and managers of hotels on the main and other roads of the country may, perhaps, be usefully warned against the folly of regarding all motorists as millionaires, and welcoming them as lambs to be fleeced. Now that the motor touring season may fairly be said to have commenced, they will be well advised in recognising the necessity of fair and equitable terms to those who own cars. Several complaints have been made from time to time as to the exalted views which many managers have of the capacity of those who journey by motor-car to pay exorbitant amounts for ordinary attention. Though this may be profitable on one or two occasions, the

practice of such hotels gets bruited abroad, and ultimately may lead to a decrease in the attendance of customers. Since writing the foregoing lines we are officially informed by the Motor Union that 1s. per night is their recognised charge for garage accommodation, and that the free standing of cars while the motorists are having meals is a condition of their recommendation to members.

Motor Patents.

THE report of the Comptroller General of Patents, Designs and Trade Marks, which has just been issued, shows that there was a falling off of about 1,000 applications for patents in 1907 as compared with 1906. The number of readers who used the excellent Library at the Patent Office was 148,198—an increase of over 4,000—the largest number recorded in one year. This is a feature of the work of the Office which should have greater publicity amongst the students of the various educational institutes in and about the Metropolis. With regard to patents in the automobile industry, the Comptroller remarks:—"The great inventive activity in connection with the motor-car industry, which has produced such a large number of applications for patents in recent years, now shows signs of falling off. Judging from the titles only, the number of inventions relating to motor road vehicles during the year 1907, although still large, has decreased nearly 35 per cent. from that of the previous year. Great attention has been given to devices for making the wheels, hubs, and rims readily detachable, and there are still a considerable number of inventions for preventing side-slipping or skidding, although the total number for the year is less than that for the last quarter of 1896."

Rivalry in Good Work.

THE rivalry between the various organisations concerned with motoring in being of service to the movement should conduce to the exposure of many grievances that have hitherto been but inadequately brought to public notice. Both the R.A.C. and the M.U. are apparently watching every development likely to prove of interest to their members as well as to the general body of motorists, while the A.A. continues its policy of safeguarding the interest of those who travel. Within the last few days the Piccadilly association has entered into communication with the cycling organisations as to the practice of cyclists running together in large numbers and causing serious obstruction to other users of the roads. Where such is done, it is noticed that the members of the cycling clubs often refuse to give way to automobiles, or, for the matter of that, to other traffic either overtaking or meeting them. It is to be hoped that the influence of the C.T.C. and the N.C.U. will be brought to bear to prevent the continuance of a practice which is associated with a risk that may ultimately prove fatal. The M.U. is also taking up the question of the exemption of motorists from other countries, who are visiting England for only a few days, from liability to the carriage tax. This matter has previously been ventilated by the Irish A.C. and also in our own columns. Now that the Union has its chairman in Parliament, it may be able to carry the issue a step nearer success, and this is rendered all the more probable by the general feeling of inter-

national goodwill which has had so many testimonies during the present year. The latest development of the A.A. is in connection with the leading hotels in towns and villages throughout the country, by which they are linked with the existing road organisation so as to add to the complete assistance they are able to render to motorists. Elsewhere we give the details of this latest enterprise of the youngest of the motoring societies.

A Colonial Premier at Wolverhampton.

ON Tuesday the Hon. Tom Price, the working man Premier of South Australia, left England after a three months' holiday in the Old Country, from which he went more than twenty years ago. While here he has visited many of the leading industrial districts, and one of his latest provincial visits was to Wolverhampton, where he made a tour of inspection of many factories and works in the town. Throughout his stay in the Midland centre he had a 16-h.p. Star landaulet. In the photograph Mr. Price is seen by the side of Mr. W. Bullock (wearing a straw hat), the chairman of the Wolverhampton Chamber of Commerce, and on the front seat beside the driver is Mr. W. D.

The Hon. Thomas Price, Premier of South Australia, at Wolverhampton.

Ponder, M.P. for Adelaide. Both the visitors from the Colonies were conducted over the Star Works, in which they were much interested.

Motor-car Imports and Exports.

ANOTHER quiet month has to be recorded as regards the imports of foreign motor-cars and parts into this country, the returns for May showing a decrease, as compared with the corresponding month of 1907, of no less than £16,921. Of complete cars only 340 were imported during the month, of the value of £121,128. The number of chassis imported was 289, valued at £106,280, while parts were responsible for £150,286, giving a combined total for May of only £377,704, as against £394,268 in the corresponding month of last year. The gross imports of cars (1,931 in number), chassis (1,267), and parts during the first five months of the current year amounted to only £1,759,920, as contrasted with £2,086,890 in the corresponding period a year ago. Turning now to the section relating to the exports of British automobile productions, these also show a slight decrease—from, in the aggregate, £91,581 in May, 1907, to £86,527 last month. Altogether 144 complete cars (£25,870) and 15 chassis (£5,147) were despatched from this country in May, as well as parts to the extent of £25,510. The gross shipments during the five months ending with May are returned at £496,026, which contrasts with £499,666 in the similar period of last year.

Cambridge and the Car.

WITH reference to the brief mention made last week as to the use of motor-cars by undergraduates at Cambridge, we understand that the matter has been considered by the Proctorial Syndicate at Cambridge owing to the many complaints they have received of reckless and inconsiderate driving. They propose that no one *in statu pupillari* shall keep or use a motor-car unless he shall have got permission from a proctor, and that this permission shall not be granted unless a description of the car shall have been given to the proctors and permission also granted by the college. They also recommend that motor-cars should not be used on Sundays, a prohibition that already exists in the case of horse-drawn vehicles. Recommendations are made to the Senate embodying these views.

A New Policy in the North.

AT the annual meeting of the North Eastern Automobile Association some discussion took place on the recent decision of magistrates at Hexham and Darlington, who had expressed a view that certain arbitrary speeds, lower than the legal speed limit, were all that could be allowed for stretches of road where police traps have been placed. It was felt that any such arbitrary speed, having no reference to the amount of traffic or number of persons on the road at the time, was most unfair, and the committee was asked to look further into the matter and take such steps as were thought advisable. We hope the Association, which by its comprehensive constitution is well able to look after the interests of motorists in its particular corner of England, will succeed in preventing an apparent suggestion to get behind the intentions of Parliament without consultation with the Local Government Board.

Horses and Motor-Cars.

THAT motorists are not the foes of the horse is well known, and the fact that the new chairman of the Royal Automobile Club is to preside at the Richmond Horse Show need occasion no surprise. In connection with the equine position in this country it is lamented in one of the leading journals that the Royal Commission on Horse Breeding is becoming apathetic, and that England is being left without an adequate supply of horses for defensive purposes. There was a large deficiency in the number of horses bred last year in comparison to the year before, there will be a further diminution this year, and probably a still greater one next, with the probability that the numbers required by the bus and tram companies will decrease, and a likely drop in the demand from the brewers owing to the favour with which they are regarding motor traction. Thus many farmers have every inclination to go out of horse-breeding altogether.

Another Appeal to Motorists.

RECENTLY we were asked by one of the South-western automobile clubs to urge upon motorists the necessity of driving with proper care through some of the villages in its area, as the police had threatened to adopt the methods of more South-easterly counties if such practices were repeated. Now we have a communication from the Derby and District A.C., which has had its attention drawn to the complaints of inconsiderate driving that have occurred in the Matlock district. There is reason to believe that unless motorists generally, when passing through the Peak district, do not exercise more care several applications for restricted speed limits are likely to ensue, and thus the majority will be harassed because of the delinquencies of the minority. There is no doubt that around Matlock, Bakewell, Buxton and other delightful resorts in Derbyshire, the sharp turns and many cross roads at the bottom of hills necessitate not only vigilance on the part of drivers, but also a considerable slackening of speed, if motoring is to be a safe and

enjoyable pastime. Doubtless the police will recognise the public spirit of the Derbyshire Club in urging attention to this matter by motorists throughout the country, and the authorities should not be hasty in taking action which—like that on the Brighton road—would prove inimical to the interests of many of the traders upon whose prosperity so much depends.

The "Motor-Car Journal" Deposit System.

FOR the convenience of the readers of the *M.C.J.* we have decided to introduce, in connection with our Small Advertisement Section, the Deposit System. The intending buyer forwards to the office of the *M.C.J.*, 27-33, Charing Cross Road, London, W.C., the amount of the purchase money of any article sent by a seller on approval, stating for whom and for what it is intended. The receipt of the deposit will be notified to both parties. Cheques must be made payable to Cordingley and Co.; time will, however, be saved if notes or postal orders are sent. Upon the intimation of the acceptance of the goods the money is

up were being distributed over the fields beyond the possibility of collection. Consequently the audience were treated to an extempore address, a feat for which we have no doubt, paradoxical as it may seem, the Bishop was well prepared. Now that motor-cars are fitted with pockets of every description for all kinds of accessories, there will doubtless be an increasing tendency for public speakers to prepare their addresses when motoring, so that the warning of the Bishop of Blackburn comes at an opportune moment.

Motor-Buses v. Tramcars.

THE coming of the motor-bus and the undoubted popularity which it has quickly gained, is causing considerable worry to those responsible for the maintenance of the municipal tramway systems of the eastern suburbs of London. As we have previously shown, the service of motor-buses now running from the City to Seven Kings obviates changing into no fewer than five different sets of trams. Under the circumstances

The St. Petersburg-Moscow Race.—Hemery on the winning Benz Car at the Cathedral of St. Peter, Moscow.

forwarded to the seller. If no sale is made the amount deposited is returned. In either case we deduct a fee of $1\frac{1}{2}$ per cent. (3d. in the £, minimum 1s.) on the amount deposited, to cover expenses of booking, postages, &c. In making use of the Deposit System, it is understood that—(1) Articles sent on approval are not to be retained more than three days, unless by arrangement between the parties; (2) Carriage is to be paid by the buyer, except the article is returned, when each party pays one way; (3) The risk of damage in transit is the seller's.

Public Men and the Car.

Now that Bishops, Cabinet Ministers, and public men generally are making use of the motor-car to get to various meetings, we may sound a note of warning based on the experience of Bishop Thornton, of Blackburn. He had an unfortunate experience the other night when motoring from Blackburn to Morecambe. The Bishop was looking over the notes of his sermon while the car was going at a good pace "when it was thought that the police were not in sight." Unfortunately the papers were blown from his hand, and before the chauffeur could pull

it is small wonder that the ratepayers are showing a preference for the vehicle that carries them to their destination without unnecessary inconvenience, and that the officials of the tramways department are wondering what to do to prevent the diversion of custom now going on. At Ilford the matter has assumed sufficient importance to cause quite a plethora of letters in the local Press, and some of the ministers have gone so far as to advise their congregations to give a preference to the trams on the grounds that they belong to the municipality, and should, therefore, be supported by the ratepayers. The facts, however, that motor-bus fares are cheaper than those of the trams, and that they are able to effect a substantial saving in time, are likely to have more weight even than pastoral declamations.

THE United Motor Industries, Ltd., of Poland Street, London, W., have lately introduced a little device which will be useful to all motorists whose cars are fitted with Eise-mann high-tension magnetos. It is a double-ended spanner, about $2\frac{1}{4}$ in. long, having one open end to fit the various hexagonally-shaped lock nuts on the make-and-break plate of the magneto.

REMINISCENCES OF A TRIP FROM CAPE TOWN TO JOHANNESBURG.

It is just over two years ago that we started from Cape Town with the hope of accomplishing a successful tour to Johannesburg. The day was just breaking as we quietly ran down Adderley Street and turned off along the Sir Lowry Road. We intended to reach Matjesfontein or Laingsburg the first day, but unexpected occurrences prevented our object being achieved. Everything went well for about the first fifty miles, when we came to fork roads; we considered our choice and took the left-hand road. After proceeding a little way we met an ox-wagon and enquired of the driver if we were right for Villersdorp. We received a reply in the affirmative, so off we went again and almost immediately commenced to climb a mountain pass, which I believe is known as the White Elephant. It was quite a new road and very good, but on reaching the other side it suddenly ceased, and continued only as an ordinary Cape cart track, which is generally two deep ruts, the crown of the road being so high in places that it touches the axles.

After a while we came to a small river, and on reaching the centre the car dropped into a hole and the bump caused my foot to slightly withdraw the clutch; the water rushing in behind prevented it from engaging again, so there was nothing for it but to get out and rig up the tackle we carried for emergencies of this sort. This consisted of block and fall, log line and a large crowbar. The latter driven into the bank and tackle rigged up, the two of us then proceeded to pull for all we were worth; we could make very little headway, however, so lightened the car by taking out the baggage and spare petrol, consisting of five ten-gallon cans. We were then successful, but pulling on a wet and sandy rope makes one's hands rather sore. We loaded up again and proceeded, but had not travelled very far when the ruts got so deep that the car stuck with the axles and flywheel riding on the crown. I then decided to give up the track and run across the veldt. The car had to be reversed to a suitable place to get out of the ruts, and it was not until after several attempts that this was done. The travelling was better, and we were just congratulating ourselves, when the car suddenly sunk down in a bog.

After several unsuccessful attempts to get it out, we went off in search of help, and eventually came to a Boer farm, where we made our trouble known through a little girl, who was the only one who could speak English. The farmer turned out with two of his Kaffir boys to help us the best he could, and after levering under the back axle with a large piece of timber and our tackle rigged up in front we managed to get the car on firm ground again. We then retired to the farm for something to eat, as we had not broken fast since five o'clock that morning, and it was then five o'clock in the afternoon.

After bidding farewell to our host we took to the road once more, which improved greatly after a few miles, and we ran through Villersdorp and on to Worcester without further trouble, arriving there about 10.30, with several leaves broken in one of the back springs. For the first day's run we had covered only 110 miles, and with troubles that were not very encouraging.

The next morning we had the broken leaves replaced with new ones, and an extra leaf added to the other spring. This prevented us from getting away till past four o'clock in the afternoon, so we decided to make Touws River our destination for the day, a distance of about fifty miles. The first incident we had occurred whilst climbing Hex Mountain; we suddenly came to a water sluit, round a sharp bend, and before we could

slacken speed we dropped into it with a bang. On reaching the top we discovered that one of the portmanteaus was missing, so concluded it had jumped off when we dropped in the sluit. We consequently turned round and went down again with the hope that the bag had remained on the road, and not gone over the side and into the valley. We found it, and after strapping it on securely we had to go very nearly to the bottom before finding a suitable place to turn round.

Reaching the top again, we lit our lamps and pursued our course, which were tracks we could hardly discern in the sand at night. At this point we were entering the Great Karroo Desert. After several miles we could see the reflection of the lights of Touws River over to our right, but had evidently missed the right track, as we could not discover one leading in that direction, so we kept straight on, and eventually reached Matjesfontein at 12.30, with Worcester eighty miles behind us.

We started at 9 o'clock the following morning, and had good travelling to Laingsburg, where we called at the station for the petrol which had been sent on ahead. Then we proceeded to Prince Albert Road and Fraserberg Road. In places we had very loose and heavy sand to go through, but the car regularly churned its way along. After travelling several hours through barren stretches of desert it was quite a welcome sight to see a living person, black or white. We arrived at Beaufort West that evening in good time for dinner, having covered 150 miles, being the first good day's run since leaving Cape Town.

We visited the local blacksmith the next morning to have some additional leaves fitted to strengthen the back springs. We got away about 3.30 in the afternoon, and had the misfortune to take the wrong road directly on leaving the town. We proceeded about ten miles before discovering our mistake, and were informed that we would have to return to Beaufort West, but happened to meet a farmer who showed us a short cut through an ostrich farm. The road was very good, and several times we were racing with ostriches, then we would suddenly surprise a herd of springbok, which would rush off towards a kopje close by. We presently struck the railway and

ran alongside of it for some little way pacing with a train, until we had to pull up to cross the line. On reaching the other side we joined the road that we should have taken at first. We had not proceeded far when a deep water sluit confronted us. It was shaped like a V, and I was afraid the front springs would stick in the opposite bank before the car had finished descending, but fortunately it just cleared. We then did good running till we came to Salt River, which was quite dry, with very heavy sand in the bed, and a steep slanting shelf to get out by on the opposite bank. I ploughed across the bed and made a run at it, but the steering wheels would not answer very well in the sand, and I got too near the edge to be pleasant, so had to gently run down backwarks and have another try. I ran a little higher this time but still too near the edge. However, on the third time I succeeded in reaching the top. After that we had fairly good running to Three Sisters Station, and after encountering a good deal of heavy sand we reached a farm where we enquired the way. The occupier gave us an enthusiastic welcome, and said he had been on the look-out for us, as he had read in the papers of our intended trip, and expected we would pass that way. He invited us to stay the night, but we declined with thanks, as we were determined to reach Victoria West that evening.

F. C.

(To be concluded.)

Dragging the Car out of the River near Richmond Road Station on the way to Johannesburg.

GOSSIP FROM PARIS.

IN the semi-scientific world surrounding the automobile industry there is at the present moment a veritable mania for calculating the horse-power of the motors which will figure in the Grand Prix and the consequent chances of the various cars of winning the race. It originated in the new regulation limiting the bore of the four cylinders to 155 mm., and leaving the length of the piston stroke to the choice of the makers. The other day I showed a big packet of those calculations to a driver who will pilot one of the racing cars over the Dieppe circuit on July 7th. On seeing the conflicting results of the calculations he said, "Science is a very fine thing, and the results of mathematical calculations are naturally irrefutable. But in such automobile matters I find the 'proof of the pudding is in the eating.'" Most of the theorists have demonstrated to their own complete satisfaction that almost all this year's racing cars are able to beat Nazzaro's time of 6 h. 46 min. 33 sec. in 1907, but my sporting friend advised me not to bet on the unerring results of a mathematical problem when it was a question of motors. As I never bet on automobile races I shall surely follow his counsel, but I cannot resist the temptation of giving the result of the carefully-worked-out calculations, occupying a column in the "Auto." The horse-power of the cars competing in the Grand Prix is shown to vary between 103-h.p. and 133-h.p. Adopting 125-h.p. as the average of the forty-nine cars, it is demonstrated mathematically that their speed should be 159 kilometres an hour on the level, and that the Clement-Bayard car, with its 133-h.p. motor, should travel at the formidable speed of 165, or at least 164 kilometres an hour. Of course the corners and hills on the Dieppe circuit must reduce this very considerably, but, after taking everything into account, the calculator declares that last year's time should be reduced by about 12 min.

WHO has not lost his temper and felt inclined to use strong language when driving along a shady road, especially in the evening? I confess I have frequently. Almost every time I go out towards sunset to get a little fresh air, my drive through the woods of Boulogne, Saint Cloud, and Ville d'Avray is spoiled by the myriads of insects which fly into one's eyes, mouth, and nose, to say nothing of their getting down one's neck. For ladies while motoring the insects are in summer a veritable torment. They get into their hair and into the folds of their costumes. With a closed automobile it is even worse than with an open car. If the front glass is put down for a moment the carriage is full of the objectionable midges. One of my friends to whom I spoke of this great drawback to motoring in the evening gave me a really good tip. He has a country house, and after business hours drives back to it every evening in his closed carriage. Until quite recently he had to keep the front glass hermetically closed, or to suffer the invasion of swarms of insects of all sorts. But a week ago he had a wire gauze screen adapted to his vehicle. It slides up and down at will, replacing the front glass. He tells me it is effectual against the insects and lets in the fresh air. It does not intercept the view sufficiently to inconvenience the driver, who in my friend's car is seated behind the wire gauze screen, which can, of course, be adapted with equal advantage to an open vehicle. Those who suffer from the insect plague while motoring will do well to try this simple and inexpensive remedy, which is not patented.

M. ARCHDEACON, who spent the best part of a week at Ghent with Mr. Henry Farman, has returned to Paris. He is delighted with his stay in Belgium and with his aerial trip of close on one kilometre and a quarter, by which he, Henry Farman, and Santos Dumont gained their bet with M. Charron that an aeroplane carrying the driver and at least one passenger would fly a kilometre before the expiration of twelve months. The wager was made last March, and it was won on May 30th. M. Archdeacon regards his flight sitting beside Mr. Farman as most important. It was the practical demonstration that for the future it will be possible for the few existing aviators who, with

endless experiments and numerous mishaps, learned the art of flying, to take apprentices on their aeroplanes to teach them the manner of managing flying machines. That he told me was, in his opinion, the interesting point established by his flight with Mr. Henry Farman. As to the sensations he experienced while in the air, the most remarkable was that of safety. He knew that his pilot was as prudent as he was experienced and skilful. Yet when he mounted beside him he felt a slight qualm, which lasted as long as the machine was rolling on the ground. But immediately it left the earth and was in its ethereal element it glided so smoothly and answered the will of the pilot with such docility that all sentiment of danger vanished. M. Archdeacon declared he would never forget the pleasurable sensation of riding in the air for the first time on an aeroplane. It was absolutely different from that of being carried up from the earth in the car of a balloon. In the latter case a man feels himself at the mercy of the element in which he is floating like a soap bubble, whereas in the former case he is conscious of having vanquished it.

M. DE LA HAULT, a Belgian gentleman of considerable renown, is constructing an ornithoptère, or flying machine, with beating wings. He is convinced it will outdo all that the Wrights, Delagrange, and Henry Farman have accomplished already, or will ever achieve with their present machines. With

The 60-h.p. Six-Cylinder Napier, supplied to Mr. F. C. Brandauer, of Munich, Bavaria.

The photograph was taken on the Kesselberg, near the Kochel-See, the road being part of the route that was followed in last year's Herkomer Touring Trophy Competition.

his ornithoptère there will, he affirms, be no need to roll along the ground to attain the velocity necessary to rise into the air, and the descent will be equally easy and safe. The turning in the air will, moreover, offer no difficulty or danger. M. Archdeacon was sorry the building of the machine was not sufficiently advanced to permit of his examining it while he was in Belgium. But it is evident the description given him by M. de La Hault failed to inspire him with confidence. Indeed, he bet M. de La Hault 2,000 francs that no ornithoptère (flying machine with beating wings) would within the next twelve months maintain itself in the air ten seconds.

MARNEY.

A BANQUET which was held at the French Automobile Club on Sunday in connection with the decennial celebrations of the Aero Club has had a startling sequel, the majority of the guests having been seized with severe pains, due, it is stated, to the duck which formed part of the menu. M. Georges Tampier, the well-known timekeeper, succumbed on Monday after great suffering, and it has been ascertained that death was due to poisoning. Ten others, including the Marquis de Dion, are still dangerously ill.

MOTORING IN SIAM.

TO the average reader Siam will be better known as the land of the White Elephant than of the motor-car. But, while the White Elephant is emblazoned on flags and very nearly everything else in the country, and the sacred white elephants are still housed in the palace stables, the motor-car is seen everywhere in the capital, and motor-boats ply in ever increasing numbers on the rivers and countless canals throughout the country. There are now in Bangkok over three hundred cars in constant use, and it was therefore by no means surprising that H.M. King Chulalongkorn, who is himself an ardent motorist, should issue invitations to the more prominent of the motor-car owners for an automobile meet and a little run round some of the suburbs. This took place on May 3rd, when, pursuant to His Majesty's invitation, eighty-seven cars, of all sizes and makes, from a 45-h.p. Brasier to the smallest run-about, assembled at the Summer Palace. Here they drew up in two rows, and the King drove between to inspect them, after which he led the way for a little twelve-mile spin, and then back to the Palace, where the guests were entertained to tea in the

THE TOURING CAR TRIAL.

ON Monday forty-six of the fifty-one cars entered for the 2,000 miles International Touring Car Trial assembled at the White Company's Depot in Carlow Street, Camden Town, London, N.W. On Tuesday and Wednesday they were weighed as ready for the road; measurements were also taken to ascertain whether they conformed to the Table of Touring Car Standards, and yesterday (Thursday) they left for Nottingham, where they were garaged on the premises of Messrs. Atkey and Co., Limited; to-day (Friday) they are journeying to Newcastle-on-Tyne, where they will be staged on the grounds of the Royal Agricultural Society, and on Saturday they will reach Glasgow for the Scottish part of the Trial, which commences on Monday.

From the list of entrants published in our issue of April 11th there will be five non-starters, the following having failed to put in an appearance on Monday, viz.: Class D, the 15.9-h.p. Star; Class H, 38.4-h.p. Napier; Class K, 48.6-h.p. Sheffield Simplex, and Class L, 60-h.p. Napier and 59.5-h.p. Mercedes. The three

A Motor-car Meet at Bangkok, Siam.

The cars awaiting the arrival of the King on the Boulevard leading to the Summer Palace. The Siamese officer walking up the middle with a camera is Phya Sri Sahathep, the Vice-Minister of the Interior.

gardens. His Majesty went round amongst his visitors all smiles, and bestowing amusing nicknames (in Siamese) on the cars—the "Flying Elephant" and the "Coffee Grinder" being fair samples.

Each of the owners was invited to dip into a kind of lucky-bag for tickets entitling him to a souvenir of the occasion presented by the King, these taking the form of acetylene head-lamps, horns, wallets of tools, and similar articles of use to the motorist. The assemblage was a decidedly polyglot one, and the cars included representatives of Great Britain, France, Germany, Belgium, Denmark, Italy, Holland, Austria, and the United States, the two first leading in point of both numbers and quality. All but one were petrol driven, and about half were owned by Siamese nobles and others, some fifteen Princes of the Blood Royal being present, including the Crown Prince, while cars from the Royal garage were at the disposal of the various foreign diplomats. Of course, the whole populace turned out to see the procession, and seemed to enjoy it hugely.

WM. W. FEGEN.

Zedels and the 18-h.p. Thornycroft arrived after noon, but being present before 2 p.m. were admitted into the garage on paying a fine.

At least a couple of cars that were originally entered for the Scottish Trial as well as the 2,000 mile event have scratched from the former, their entrants realising that they would be at a disadvantage as compared with the vehicles entered for the shorter test only. One interesting point of difference is that those engaged only in the Scottish Trial will be allowed ten minutes for oiling up at the start every day, while only one minute is the allowance for those going right through the 2,000 miles.

Twenty-five per cent. of the cars are fitted with wire wheels; other features will be detailed in subsequent reports.

We learn that the bridge at Allargue Hotel, Corgarf, Strathdon, popularly known as Cockbridge, is at present under repair, and that the whole road from Strathdon to Tomintoul, on the Scottish route, is not available for traffic. It is expected that it will be the middle of July before the road is again open for traffic.

NOTES FROM BATH.

THE name of Bath conjures up memories of a long and glorious past, and it must still be regarded as one of England's foremost inland health resorts. Its history dates back to the Roman era, and the fame of its thermal springs is world-wide. The Corporation of this ancient borough, fully alive to the responsibility resting upon them of keeping the city in the forefront of British spas, are shortly to have presented to them a report from the Bath Chamber of Commerce, in which suggestions will be contained for the further popularisation of the city. The Pump Rooms and the Roman Promenade Annexe are the centres of attraction during the season, though both places are open daily all the year round, the one for the drinking of the waters, the other for the visiting and inspection of the unique Roman remains, including the great Roman bath. But the Chamber of Commerce has for a long period felt that it is now time that a more "forward policy" should be adopted, and that something in the nature of a kursaal scheme—thus following the example set by Harrogate and Brighton—should be taken in hand.

AT present Bath is not so full of visitors, the beautiful weather which we have had of late having sent away many people who find Bath too relaxing during the summer months. But, while this is so, the number of motorists who pass through the city is surprising, many staying several nights at the principal hotels, and then continuing their journey. There are several garages admirably adapted for the storage as well as the repair of cars. The Pulteney Garage, in connection with the Pulteney Hotel, is claimed to be one of the best in the West of England, a sum of £2,000 having been spent on its erection. Among the cars that have been sheltered in this garage are those of his Honour Judge Gwynne Jones, County Court Judge for the Bath circuit, who now drives a 28-h.p. Delaunay-Belleville, and Lord De Blaquiere, a resident of the city, who drives a Talbot. Another important garage is that belonging to the Bath Garage and Motor Co. (Fuller's), Ltd.; it is centrally situated, and is very spacious.

AMONG some of the principal motorists who have recently visited Bath are the Marquis of Bath, who possesses a Daimler, Sir John Thursby, on a fine 40-h.p. Leon Bollée, and Sir John Millar (Westbury) on a Napier. Lord Ludlow on his Daimler has also passed through, and Lord Roberts, who is a frequent visitor, his sister, Mrs. Sherston, having resided here for many years, has stabled his Napier car at the Bath Motor Garage. Visitors to the York House Hotel are also numerous, and many devotees of motoring stay there. Only a few days ago a party of officers from North Camp, Aldershot, arrived by motor-car, making the Empire Hotel their headquarters.

AS a sign of the times it may be mentioned that one local firm of tradesmen have acquired a petrol motor delivery van which is now in daily use. No doubt other firms will follow suit. The majority of the members of the medical profession now use motor-cars in connection with their work, several having dispensed with what is almost now regarded as old-fashioned—a carriage and pair of horses.

SOMERSET.

THE Saltash District Council has given motorists some acceptable concessions in connection with the steam chain ferry across the Tamar, between Saltash and Passage Inn, St. Budeaux (Devonshire), on the road from Callington and Launceston. Hitherto the return charges for motor-cars have been 1s. 6d. for two seats, and 2s. 6d. for four seats or more, the return having to be made the same day. The charges have now been fixed as follows:—Car not exceeding 10½ ft. over all, 1s. 6d.; 12½ ft., 2s.; 16 ft., 2s. 6d.; exceeding 16 ft. over all, 3s.; motor omnibus, 5s. The return portion of the ticket is in each case available for seven days.

CONTINENTAL NOTES.

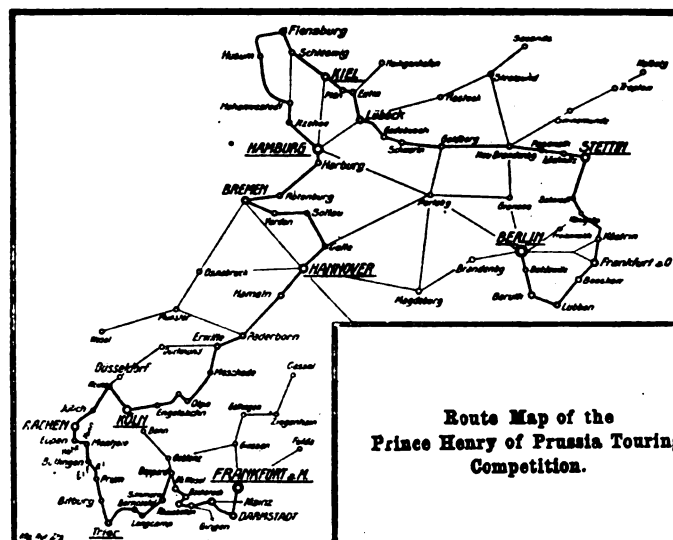

The A.C.F. Grand Prix Races.

The ballot for the order of starting in the A.C.F. Grand Prix races on July 6th and 7th took place in Paris last week. In that for the heavy car section the first place was taken by an Austin car, so that to Great Britain falls the honour of leading off in this great international event. The starting order for the forty-nine competitors is as follows:—

| Nos. | Car. | Nos. | Cars. |
|---------------|-------------------|----------------|----------------|
| 1, 18, 34 ... | Austin | 10, 27, 43 ... | Opel |
| 2, 19, 35 ... | Mercedes | 11, 28, 44 ... | Clement-Bayard |
| 3, 20, 36 ... | Motobloc | 12, 29, 45 ... | Itala |
| 4, 21, 37 ... | Renault | 13, 30, 46 ... | Weigel |
| 5, 22, 38 ... | Lorraine-Dietrich | 14, 31, 47 ... | Mors |
| 6, 23, 39 ... | Benz | 15 ... | Thomas |
| 7, 24, 40 ... | Fiat | 16, 32, 48 ... | Panhard |
| 8, 25, 41 ... | Brasier | 17, 33, 49 ... | Germain |
| 9, 26, 42 ... | Porthos | | |

The Prince Henry of Prussia Touring Competition.

The "great event" of the 1908 season in Germany—the Prince Henry of Prussia Touring Competition—commenced on Monday with the weighing-in of the cars at Berlin, when of the 149 vehicles entered 130 duly put in an appearance. The only British representative is a 45-h.p. six-cylinder Napier, which is

Route Map of the
Prince Henry of Prussia Touring
Competition.

being driven by Miss Dorothy Levitt. The programme is as follows:—June 9th, Berlin-Stettin, 309 kilometres; June 10th, Stettin-Kiel, 392 kilometres; June 11th, rest; June 12th, Kiel-Hamburg, 335 kilometres, and a speed trial on the level near Nienjahn; June 13th, rest; June 14th, Hamburg-Hanover, 314 kilometres; June 15th, Hanover-Cologne, 330 kilometres; June 16th, Cologne-Treves, 253 kilometres; June 17th, Treves-Frankfort-am-Main, 282 kilometres; and a hill-climbing competition between Steeg and Rheinbollen.

The Vanderbilt Cup Race.

The rules of the Vanderbilt Cup race which is being organised by the American Automobile Association not being in accordance with those adopted at the International Congress at Ostend, the Automobile Club of France has resolved to disqualify from its events any make of car which participates in the race if the present regulations are maintained. It is anticipated that a similar course will be adopted by all the national clubs affiliated to the International Congress.

British Motorists in France.

Recent British motoring visitors to France include Colonel and Mrs. W. Hunter, of London (36-h.p. Daimler), Sir William Lancaster (50-h.p. Thornycroft), Lady Holland (50-h.p. Itala), Mr. Wright (60 h.p. Napier), Mr. W. Hill (40-h.p. Daimler), Mrs. Clutterbuck and Mrs. Holland Hilbert, of Watford (30-h.p.

Renault), Mr. and Mrs. Van Gruisen, of Liverpool (40-h.p. Weigel).

The French Industrial Vehicle Trials.

The results of the competition of industrial motor vehicles and motor-cabs held last month by the Automobile Club of France were announced at a banquet given at the A.C.F. clubhouse in Paris last week to celebrate the successful conclusion of the event. The winners in each category are as follows:—

| Class. | For | Winner. | Co-efficient. |
|--------|--|---------------------|---------------|
| 2. | Vehicles for loads 201-900 kilog. ... | Panhard ... | 9.91 |
| 3. | Vehicles for loads 901-1,500 kilog. ... | De Dion ... | 6.11 |
| 4. | Vehicles for loads 1,501-2,000 kilog. ... | Peugeot ... | 14.20 |
| 5. | Vehicles for loads 2,001-3,000 kilog. ... | Saurer ... | 8.01 |
| 6. | Vehicles for loads over 3,000 kilog. ... | Saurer ... | 5.77 |
| 8. | Public service vehicles for 6-10 passengers ... | Erliet ... | 11.49 |
| 9. | Public service vehicles for over 10 passengers ... | Saurer ... | 7.45 |
| - | Motor-cabs ... | Doriot Flandrin ... | 3.33 |

The object of art, valued at £320, offered by the French Ministry of War, is awarded to the De Dion vehicle, No. 2, category 6; the silver gilt medal of the Ministry of Commerce to the Saurer,

next. The event, which will be held on a circuit taking in Compiègne, Pierrefonds, and Crepuy-en-Valois, is open for single-cylinder cars up to 100 mm. bore, two-cylinder cars up to 78 mm. bore, and four-cylinder cars up to 62 mm. bore. The first day will be devoted to an eliminating contest, the final being decided on September 13th.

German Motor-Car Imports and Exports.

It is not only France that is experiencing a quieter state of affairs as regards the imports and exports of motor-cars. It is the same in Germany, where the imports of pleasure and industrial motor vehicles and chassis during the three months ending with March last only attained a value of £141,700, as compared with £234,900 in the first quarter of 1907. During the same periods the value of the similar exports from Germany declined from £220,650 to £138,850.

Belgian Motor-car Imports and Exports.

The value of the foreign motor-cars and parts imported into Belgium during the four months ending with April last amounted to £49,619, as compared with £51,299 in the corresponding period of last year. On the other hand, there has been

Perpere at the wheel of the Germain Car he will drive in the A.C.F. Grand Prix contest.

M. Emile Perpere is the chief tester of the Germain Company; he is well known on the Continent as a skilful and brilliant driver, and has successfully driven Germain Cars in many competitions. The vehicle is fitted with a four-cylinder engine, 155 mm. bore by 153 mm. stroke; the power developed is stated to be 110-h.p. A new departure in connection with these vehicles is the adoption of side chain transmission.

No. 26, Class 6; the gold medal of the Ministry of Agriculture for the best vehicle using alcohol as fuel throughout the trial to the Brouhot, No. 23, category 3; and the silver medal of the Automobile Club of France to the Lorraine Dietrich, No 4, Class 9.

Touring in France.

The French Automobile Club has just issued the ninth edition of its "Annuaire de Route," which is an indispensable aid to motorists touring in France. Extended by the addition of about seventy pages and 150 new plans of towns, the work gives most of the main routes in France and on the Continent, and information regarding hotels, repairers, telegraphs, and railways in every town and village in France, and all the important and more or less important places of the principal European countries. One chapter deals fully with the Customs duties and motor traffic regulations.

The Coupe des Voiturettes.

The "Auto" of Paris has decided to hold the annual contest for the Coupe des Voiturettes on September 11th and 13th

an increase in the exports of Belgian motor-cars and parts—from £117,074 in the first four months of 1907 to £149,370 in the similar period of the current year.

A Light Car Race in Normandy.

The Etoile Sportive Caennaise is organising a race for light cars to be held early in August. The event, which is to be known as the Coupe de Normandie, will be held on a 67-kilometre circuit, taking in Caen, Bayeux, and Tilly-sur-Seules, this having to be covered four times.

Miscellaneous Items.

Mr. D. M. Weigel was practising on the Dieppe circuit last week-end.—The annual hill-climbing competition on the Val-Suzon hill, near Dijon, organised by the Automobile Club-Bourguignon, is to be held on the 28th inst.—Owing to the paucity of entries, the Automobile Club of France has decided to postpone until next year the Coupe de la Presse event, which was to have been held on the Dieppe circuit on August 3rd and 4th next.—It is reported that a race for six-cylinder cars is to be organised in connection with the Ardennes meeting in August.

It seems to have escaped general observation that the late Sir Redvers Buller was a member of the general council of the R.A.C.

MR. W. BLUES, of the motor garage at Pitlochry, will again be the local agent in connection with the stay of the cars in the Scottish Reliability Trial at that pleasant resort.

THE *agent de police* with his white baton is now a common if unlikely figure at the junctions of many crowded streets in Paris, and as far as his services go they are fairly efficient, though not yet up to the London standard.

AMONG the orders recently secured by the Daimler Company are a 58-h.p. chassis for the Right Hon. the Earl of Plymouth and a 30-h.p. car for the Right Hon. Lord Bernard Gordon Lennox, the latter having been secured through Mr. H. J. Lloyd, of York.

IN furtherance of its policy of adopting standard forms of construction wherever these may be consistently used, the American Association of Licensed Automobile Manufacturers has drawn up specifications for standard sizes of yoke and eye-rod ends. This is the third formal set of standards adopted by the Association, the first being that for screws, nuts, and bolts, while the second was a standard sparking plug.

WE regret to learn that Mr. Walter C. White, who is well known on both sides of the Atlantic in connection with the White steam car, has suffered a compound fracture of the right leg at a hill-climbing contest at Cincinnati. Towards the close of the day the spectators had come upon the course at the end of the half-mile on the hill, and Mr. White, in avoiding them, struck a turn in the road and was thrown from the car.

A MONTH or so ago Messrs. Easton and Melville, Ltd., of 85, Shaftesbury Avenue, London, W.C., sent us a sample tin of Ilo motor lubricating oil, which is specially blended for them by Messrs. W. B. Dick and Co., Ltd. The new lubricant, which has quickly secured a large measure of popularity among motorists, appears to fully bear out in practice the many claims made for it in the way of freedom from charring and clogging the valves, as during the time we have been using Ilo none of these troubles have been experienced, while the engine has never run better than it is doing at the present time—a sufficient indication that it is being well lubricated. Ilo is being made in three grades—heavy, medium and light, the latter being intended for use in winter.

THE North Wales Cyclists' and Motorists' Guide, published by Mr. T. Throup, of Bradford, has in previous years been favourably noticed in our columns. The new edition just to hand maintains the early reputation, and should be of considerable service to northern motorists as well as to those from other districts who wish to enjoy the beauties of North Wales, Cheshire, Shropshire, and the pleasant resorts in propinquity. In addition to mileages between important centres the road surface is described and gradients given. Where tolls exist, as they do over the bridge at Penrhyn, the charges are also recorded.

THE Mayor of Accrington (Alderman T. E. Higham) has placed an order with Messrs. Atkinson for a 35-h.p. Daimler live axle car.

THE North London Garage, of Corsica Street, Highbury, London, N., is now specialising on the tuning up of motor-cycles for hill-climbs and club competitions.

IN St. Michael's Lane, Headingley, Leeds, the Headingley Motor and Engineering Company, Ltd., have a large and well-equipped motor-house and repair works.

THE Thornton Engineering Company, Ltd., of Belle Vue, Bradford, whose garage is open by night as well as by day, have been appointed official repairers to the R.A.C.

THE Automobile Club of America has decided to organize and conduct each year the following events:—(1) The International Road Race for "The Grand Prize of the Automobile Club of America," under the rules of the International Association of Recognised Automobile Clubs as may be adopted each year; (2) an international stock car race for the Briarcliff Trophy; (3) a long-distance touring car contest; and (4) a hill-climbing contest.

THE annual exhibition of drawings sent in for competition for the prizes offered by the Worshipful Company of Coachmakers and Coach Harness Makers at the Baker Street Carriage Bazaar produced some excellent work in connection with designs for automobiles. Mr. W. Hutchings, of Coventry, won the first prize, and Mr. C. D. Morgan, of Liverpool, the second for drawings of a motor phaeton to carry two on the driver's seat and one on a small seat behind. For the working drawings of a side-entrance motor-car body, to carry two persons in the front, three on the hind principal seat, and two on moveable or folding seats, the first prize was won by Mr. E. W. Jones, of Bath, Mr. Morgan being second in this class.

The Premier Car which recently made a non-stop engine run of 4,906 miles.

This record was made on the wet and muddy roads of Connecticut, under the official observation of the Bridgeport (Conn.) Automobile Club. The secretary of the club officially started the engine, and from that time the car, which was built by the Premier Motor Manufacturing Company, of Indianapolis, U.S.A., continued to run until it had made over twenty round trips from Bridgeport to New York. The party then started to cover the State of Connecticut, and kept on until the grand total of nearly 5,000 miles was covered before the accidental breaking of a terminal off a battery wire brought the noteworthy experiment to an end.

MR. MAHER-LOUGHNAN, the chairman of the Killarney Urban District Council and the proprietor of the Royal Victoria Hotel at the Lakes, is a motorist, his favourite car being the Argyll.

UNDER the title "The Economy of Motoring," Messrs. Burgess and Harvey, Ltd., of 463, Oxford Street, London, W., have issued an interesting pamphlet describing their facilities for undertaking motor-car repairs of all kinds, and their plan of dealing with vehicles that are sent to them suffering from loss of power or other ills to which automobiles are subject. Briefly the method is for the car to be taken for a run on the road by the tester, who has with him a testing card on which he has to enter the general condition of the vehicle. From this card a full explanatory report is sent to the owner as to the condition and what the firm advise. Should the car show general wear, they recommend an overhaul, and request an opportunity of submitting an estimate. Upon receiving the consent of the owner of the car they dismantle the principal wearing parts and submit a detailed estimate, fully explanatory, so that it is left to the owner to say what part or whether the whole of the estimate shall be carried out.

MOTOR-LAUNCH racing is now a recognised feature of the sports on the Clyde.

MR. VERNON ABBOTT'S motor garage at Surbiton is well equipped for motor repair work.

It is hoped to hold the International "Four-Inch" race for the Tourist Trophy in the Isle of Man during the week beginning with September 21st.

WE illustrate herewith an ingenious yet simple sparking plug cut-out which has lately been put on the market by Mr. R. Tingey, of the Regent Hotel Garage, Leamington Spa. The

arrangement is intended to be fitted permanently to each of the sparking plugs of a petrol engine of any number of cylinders. As will be seen from the sketch, it consists of an L-shaped wire rod carried in a small bracket in such a way that it can, by means of the insulated handle, be turned round through an angle of 180 deg. The bracket is supported on the upper end of the central rod of the plug below the high-tension wire connection. When not in use the end of the cut-out is turned upwards, as shown in dotted lines. When it is desired to test the ignition the current in any cylinder is short circuited by turning the cut-out through a semi-circle, and bringing the end in contact with the metal part of the plug. By means of the device the usual method of testing by holding down the tremblers of the coils is rendered unnecessary, and any possibility of breaking down the insulation of the latter or fusing of the platinum points is obviated; further, in the case of multi-cylinder engines with single trembler coil and high-tension distributor, as well as with many magnetos, the new cut-out, which is being put on the market at a cheap rate, is a great time-saver, being always ready for use.

THE mails from Aylesbury are now brought to London by motor-van, leaving the town at 7.30 p.m., and calling at Tring, Berkhamsted, King's Langley, Watford, Stanmore, and Edgware, getting to Mount Pleasant just before midnight. The return to Aylesbury is made during the night.

MR. W. CHRISTY has lately added to his already extensive garage in Limerick, so that it is now approached from no fewer than four streets, namely, those designated as George, Glentworth, Mallow and Catherine. The workshops are well adapted to be of service to motorists travelling that way.

It is announced that the Franklin Manufacturing Company of Syracuse, U.S.A., the makers of the Franklin cars, have perfected an alcohol motor, which shows as high a degree of efficiency as one using petrol, and that without the expedient of employing a very high compression, as has usually been found necessary. It also has the further advantage of being equally economical in the use of fuel, a consumption of as low as 1.05 pounds per brake horsepower hour having been achieved.

CONVENIENTLY situated in the Windsor Road, Holloway, near where the Seven Sisters Road runs into the Holloway Road and not far from the new tube railway station, the repair establishment of Messrs. Hurst and Middleton is well able to be of assistance to motorists in North London in particular and the northern suburbs in general. Calling there a few days ago we found Mr. Middleton, who has now the sole control of the firm, superintending the repair of an engine of somewhat intricate design which had previously been sent to other repairers who had been unable to make the necessary parts to complete the job. Well staffed with capable mechanics, the establishment, which has a good selection of modern machine tools, is able to undertake any class of motor work and to execute it with despatch. Mr. Middleton is also placing his services at the disposal of commercial firms owning motor delivery vans, and will undertake their overhaul with a view to keeping them up to running pitch.

MR. GEORGE PENMAN has a motor-car garage and repair shop in Caledonia Place, Dumfries.

A MOTOR ferry boat is being obtained by the Aberdeen Harbour Commissioners to ply within the harbour.

THE Kildare County Council had, up to Tuesday, issued 286 motor-car registration numbers. The number of drivers' licences granted is 545.

MESSRS. C. C. PATERSON AND CO., 137, Upper Hill Street, Liverpool, are about to put on the road a double-decked Pullman motor-omnibus for private touring parties.

THE Cuckfield Urban District Council has appointed a committee to investigate the effect of the surface drainage from the tar-painted roads on the water in the local ponds.

As the result of a car running out of petrol on the Spittal of Glenshee the other day, the hotel there, which is many miles from any supply depot, has now arranged to keep a small stock of spirit for the convenience of motorists.

COL. D. A. KINLOCH, of 52, Cornhill, London, E.C., has introduced into his Lloyd's motor-car policy a clause under which 25 per cent. to 30 per cent. of the premium paid is returned when no claim is made on the underwriters during the year.

WHEN the French sailors visited London the other week they were given a jaunt on a fleet of electro-buses, which enabled them to see a good many sights in the minimum of time at their disposal. Similarly on the occasion of the recent visit of the American fleet to the cities of California automobiles were the medium of transportation, the entertainment committee selecting the White car for the purpose, its advantages in the parade work for which it was generally required having led to its selection.

AMONG the novel fittings recently placed on the American market is the Triumph spring repairer. The illustrations reproduced herewith show the object of the new device so clearly that no description is necessary. The repairer is made of forged steel, is 16½ in. long, and very light in weight.

Fig. 1.—Two Applications of the Device.

Fig. 2.—View of Spring Repairing Set.

It is provided with adjustable clamps, by means of which it can be applied to any part of the defective spring within from three to five minutes, and without in any way interfering with the operation of the springs. The device is handled by the Excelsior Supply Co., Randolph Street, Chicago.

A NOVEL form of bonnet for petrol motor-cars has recently been patented by Mr. G. H. Jones, of Ilbury House, Deddington, Oxfordshire. It is constructed of flexible material, and arranged to be rolled up on spring rollers when access to the engine is required.

JOTTINGS FROM A MOTORIST'S NOTEBOOK.

—♦—

IGNITION torts are without doubt the most common cause of trouble and roadside stoppage, and the majority of them are due to short circuits caused by defective insulation, the result of friction or wear. Prevention is better than cure, so I suggest encasing each electric lead in gas rubber tubing, and in addition bringing all the accumulator leads into a 2 in. lead pipe, one end of which is brought through the battery box and then burred over; the other extremity can be fixed by a strip of brass and two screws to the dashboard. Numbering the wires, or rather tubes with wires in them, prior to pushing them through the lead pipe obviates confusion, or the tubes can be coloured, different colours being used for each destination. Red fibre tubes can also be employed, but personally I prefer gas rubber tubing with lead outside. I adopted this plan on a two-cylinder car three years ago, and since then I have been free from ignition disorders.

I strongly advocate the use of high-tension 15 mm. thick tinned copper wire for both the high and low tension connections.

Little strainer washers are sold that can be fitted at the point where the petrol enters the mixing chamber, and even though gauze funnels are provided in the petrol tank, these should be used. Through the neglect to do so only the other day a friend was "hung up," and he unfortunately had some trouble in getting at the jet, and when he did it was found to be blocked, which would not have happened if a washer had been fitted. Where used, however, even the washers need occasional cleaning. With gravity-fed carburettors there is occasionally on a hill not enough spirit in the tank to reach the pipe that supplies the carburettor; if so, and more petrol is not at hand, the fable of the stork and the water in the narrow mouthed pitcher may suggest a cure for the trouble. Pick up and clean some small stones, big enough to pass through the mouth of the petrol tank, but not so small as to enter the petrol pipe, then drop them into the tank until the petrol lever is high enough to reach the pipe. Another method is to pump air with the tyre pump into the tank, and the petrol is, of course, then pressure fed; to do this the plug of the tank must be tapped to take a nipple for the pump connection. It is better, however, to always carry a spare tin of petrol.

A fierce clutch is unpleasant, and in addition can do a great

The four Laurin-Klement Motor-Buses lately put in service between Pardubitz, Bodhanec and Holitz, Austria.
(Allgemeine Automobil Zeitung.)

It may be dearer, but it seems to last for ever and therefore is much cheaper in the long run. The ends when stripped of the insulation can be divided into two bundles and then twisted into a loop, or some form of terminal may be used. The eyelet is one of the best; it consists of a double ring of copper, between which the wires are placed, and then the two parts are pinched or knocked together, a solid end resulting, with a central hole that can be slipped over the coil, accumulator or other terminal.

On some cars the carburettor needs "tickling" before the engine will start, and occasionally the opening of the bonnet means taking off a lamp. A simple carburettor agitator is soon made. Put a stout split pin through the top of the stem of the carburettor needle valve, and make a cut in a piece of sheet tin. To the end facing the cut attach a rod or piece of wire, which can be brought outside the bonnet. To the split end hinge a bit of tin an inch long; with this folded up, place the cut through the stem of the needle valve, underneath the split pin, then, when a pull is given to the tin by the wire or rod, the folded part pushes against the cover of the carburettor, and the other piece against the split pin, and so the needle valve is lifted and the carburettor flooded. This arrangement, though it takes rather long to describe, can be made in a few minutes, and from experience I know that it answers well.

Usually in leather-faced friction clutches, which I still believe want a lot of beating, the trouble is due to a little irregularity on the leather surface. Spinning in the lathe is the cure. If the clutch is then still too quick in taking up its grip, the treatment is to remove the male portion; on its circumference, at equal distances apart, file three recesses, each about an inch long and an eighth of an inch deep. Into these grooves slip in similar sized pieces of watch spring and then replace the leather. The springs will cause a slight bulging, which is gradually overcome as the clutch engages, all fierceness or jerky motion being thus obviated.

Occasionally the paint of the mud guards or body of a car gets damaged, and if it is slight the owner may wish to be his own painter. In such a case I can strongly recommend Velure, which is a Japan paint and does not need varnishing. Recently a milk cart attempted to pass me on the wrong side, and in doing so coiled up my near mud guard and scraped the paint off the back panel. It was not convenient to send the car to the coach-builder, so I straightened the mud guard with a hammer and a bit of lead, and, after well sand-papering, applied Velure with a varnish brush, well crossed. The result was so satisfactory that I can strongly recommend it to all fellow motorists.

C. T. W. H.

MOTORING ACCESSORIES.

An Electric Cigar Lighter.

We illustrate in Fig. 1 a useful little accessory which has recently been introduced by Messrs. Ward and Goldstone, Springfield Lane, Salford, Manchester. It takes the form of an electric cigar lighter, which can be fitted in any suitable position on a motor-car, the flexible cord being attached to the ignition or lighting accumulator. By pressing a button the burner of the device is heated to a white heat, and on releasing the button the current automatically switches off. The arrangement is a very neat one, and, being low in price, should find a ready sale among motorists owing to the advantage of having a cigar lighter which will not blow out and is always ready for use.

Fig. 1.

The same firm are also supplying some useful sets of motor-car side and tail lamps, especially adapted for electrical illumination.

Maxfield's Auto Tyre Inflator.

Now that the hot weather is upon us devices intended to ease the work of dealing with motor tyres naturally

receive an increasing amount of attention. In this connection attention may be drawn to the mechanical tyre inflator made by Messrs. Maxfield and Co., Victoria Road, Aston, Birmingham. A full description with illustration of this apparatus was given in the *M.C.J.* of February 22nd last, so that we need only mention that it consists of an air compressor driven by friction direct from the flywheel of the motor, and actuated by a small lever from the dashboard.

A small space just under the footboard, opposite the flywheel, can in most cases be found, where the inflator can be attached to the sub or main frame direct, or by interposing a small stiff bracket. The apparatus itself is bolted to the bracket by a swing back, so that the friction wheel can be brought into contact with the periphery of the flywheel of the motor by means of a flexible cable attached to a lever fixed in any convenient position near the driver that gives a direct pull to the cable. All that it is necessary to do is to attach the tube from the air chamber to the tyre to be inflated, start up the engine and bring the friction wheel, by means of the lever provided, into contact with the motor flywheel. A 10 ft. length of flexible tubing with connections is supplied with the inflator, which weighs only 5 lb. complete; its dimensions are very small, viz., 7 in. high by 4 in. by 4 in. In addition to inflating tyres, the device can also be used for operating pneumatic jacks and raising the pressure in fuel tanks. The firm inform us that they are experiencing a growing demand for the apparatus, not only in this country, but on the continent and in the colonies.

The "De Fornier" Non-Skid.

In a recent issue we illustrated the motor-van used by the Paris authorities. The tyres of this are fitted with the "De Fornier" protector, for which Mr. W. J. Mayer, of 27, Chapel Place, Brompton Road, London, S.W., is the licensee in this country. This device is composed of a protective envelope of chrome leather, completely covering the pneumatic tyre, and of an extra leather band round the tread, to which are fitted hand-riveted metal non-slipping studs. Each of the two metal circles of forged iron (one on each side of the protector) is divided into six sections, joined by screw bolts, to secure constant tension. They are of smaller diameter than the rim and felloe of the wheel, and being entirely independent, the protector cannot separate therefrom should the tyre become deflated. The "De Fornier" protector is easy of attachment and detachment, and is being well appreciated in this country. We learn that the Plymouth Fire Brigade committee has just decided to have the tyres of their motor fire-engine fitted with this device.

The Bowden Auxiliary Air Inlet.

In a recent issue we referred to the record performance of Mr. J. Elliott Young in the Hertfordshire A.C. consumption trial. On a car and take course the driver, E. Spillett, of his 10-12-h.p. Argyll car drove 43.6 miles on one gallon of spirit, thus beating his previous best, which was 40 miles per gallon. That was officially certified last September in

the course of a trial under R.A.C. observation. This economical and efficient driving was secured with the help of the Bowden Auxiliary Air Inlet, as we learned when calling at Baldwin's Gardens, Gray's Inn Road, Holborn, W.C., the other morning. This air inlet is of a cylindrical form and is pierced with a number of air-holes as well as being curved at the base to fit the shape of the inlet pipe. A plunger is fitted within the body in such a way as to close the holes when in the normal position. By means of the Bowden wire mechanism this is drawn upwards so as to gradually uncover the holes when more air is required. Many cars, otherwise of excellent type, have an insufficient air supply—a defect fully remedied by this device of the E. M. Bowden's Patents Syndicate, Ltd. The operation is very simple, all the necessary adjustment being controlled by the No. 21 lever through a length of the Bowden wire mechanism. As the lever is placed at any point conveniently handy to the driver the mixture can be regulated while travelling, thus providing for the varying conditions of road temperature, &c., as they occur. Efficiency in power and economy in consumption are thus secured, as was abundantly proved in the trial of the Hertfordshire Club already referred to.

A New Motor Horn.

We illustrate in Fig. 2 a novel type of motor alarm, known as the "Serpent," which has lately been put on the market by Messrs. Brown

Fig. 2.

Bros., Ltd. The flexible tube of the horn being tapered, the volume of sound is, it is claimed, considerably increased.

If desired, it can be supplied with ordinary trumpet in place of the serpent's head.

Another useful device recently introduced by Messrs. Brown Bros. Ltd., is the "Neptune" wheel setter or alignment gauge (Fig. 3) for chain-driven motor-cars. The instrument has been designed for the purpose of testing the accuracy of the centres of the two driving wheels with the sprockets, correct alignment being most essential to good running, as well as to prevent undue strain on the tyres. The setter

Fig. 3.

can be easily drawn out to the required length, and then locked by the thumb screws on the slide, the short point being applied to the centre of the hub, and the long point to the centre of the sprocket; any small adjustment can then be made by the long point, as it easily slides either way. Having got the correct centres of one hub and sprocket, try the other side, when the difference in centres will be correctly given, and the adjustment made accordingly. The standard gauge centres up to 3 ft., but a longer one can be supplied if necessary.

MESSRS. HANS RENOLD, LTD., Manchester, the well-known manufacturers of motor and cycle chains, have sent us a copy of a very interesting and instructive pamphlet they have just issued, giving comparative results of a series of tests of live shaft and machine tool driving by chains and belts. The figures show a remarkable efficiency in favour of the first named. Users of power will find much valuable information in the booklet, a copy of which will be sent on application.

Correspondence.

[Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.]

PROTECTION FROM LIGHTNING.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—As the experience I underwent in the thunderstorm of Thursday last week may easily befall others, I write to ask whether the subject of the safeguarding of motor-cars from lightning has been considered generally, and to ask the opinion of experts as to the best means of protection.

We were suddenly caught in the very centre of the thunderstorm on the exposed top, or plateau, of an exceedingly high hill in the neighbourhood of Ashdown Forest, in Sussex; there was no shelter of any kind possible, and I can hardly imagine a more dangerous position than that in which we unexpectedly found ourselves. One flash was blinding,

this desirable effect? If cars are to be vehicles of utility as well as of pleasure the call for this is great.—Yours truly,
JOHN DARLINGTON.

SOME FACTS IN THE SELECTION OF MOTOR OILS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I was very much interested in the letter on the above subject by "Veritas Prevalabit" in the last issue of the *M.C.J.* After reading his experience of using ordinary cycle oil in the engines of his cars, I mean to give the same a trial on my own machine, not so much on account of the reduced cost as because of the better running he has obtained. Just, however, as there are motor oils and motor

The New Club House of the Automobile Club of Mexico.

The building, which has been specially erected for the purpose, is beautifully situated on the margin of the lake on the north side of Chapultepec Park. Rowing boats and a library are at the service of the members, and outdoor sports will be held periodically. A project to add a garage to the premises is now under consideration. [El Automovil en Mexico.]

followed by a smell of burning, and three out of the party of four got out of the car. We lay down on the ground by a little heap of hay, and it was like one imagines it must feel to be in the midst of bursting shells or bombs. We could almost feel the storm touching us. When it was over the car would not go properly, and we found that the insulating wires had evidently been struck by the lightning and the rubber was melted as if it had been in a furnace; moreover, we carried three accumulators, and the two spare ones had been completely discharged by the lightning.

Motor trips of extended length are now becoming increasingly common, and anyone may run into a thunderstorm in a particularly dangerous place. What do your correspondents advise as the best method of protection for a car, which undoubtedly has an attraction to the lightning and which in elevated or exposed situations is more likely than not to form a target for the electric current? I take it that the ground is the safest, if not the driest place, in a position of extreme danger such as we found ourselves in; one feels, however, that some means should be found to make the car itself lightning-proof and the proper shelter in such emergency. Has anything been found to have

oils, so, I presume, there are different grades of cycle lubricants on the market, and I should, therefore, be glad if your correspondent would state the brand he is using and with which he has obtained such good results.—Yours truly,

R. F. H.

COURTESY ON THE ROAD.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—A few weeks ago my car was nearly overturned, having to suddenly avoid an enormous horse drawn vehicle which was pulled right across the road without a moment's warning on the part of the driver.

The man's language, on being remonstrated with, was of the vilest character. I, therefore, on my return to town, asked the Automobile Association to take it up, and am pleased to say that they have heard from the employers of the driver, who have written as follows:—

"We are in receipt of your letter of yesterday, and can assure you that we are extremely sorry for the unpleasantness and danger the gentleman on whose behalf you are writing was put to by any employee of ours,

especially his rudeness when spoken to about it. We have now discharged the man and shall never take him on again, and trust that your client will accept this apology from yours respectfully, Dudley and Co."

I think you will agree that every credit is due to the Automobile Association for having secured this satisfactory result, and also a certain amount of credit is due to Messrs. Dudley and Co. for the extremely just and unbiased view they took of the matter.—Yours truly,

COLIN DEFRIES.

THE ROVER CARS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I enclose two photos of my 6-h.p. Rover car for reproduction in the *M.C.J.*, as you sometimes illustrate private owners' cars. The picture with the hood up was taken to show the side pieces with the

talc windows in them. I find the car has a good reserve of power—it will easily, with two persons, ascend Red Hill, near Uxbridge, with the second speed in gear. The car is quite as fast on the level as any I should wish for. I have no financial interest in the trade, and the Rover Company do not know I am writing this letter.—Yours truly,

CECIL JACKSON.

A FIRST EXPERIENCE OF MOTORING IN INDIA.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Whilst stopping at Pondicherry, my friend A . . . proposed one morning to take me out in his car to Cuddalore, some eighteen miles, and on to Porto Novo, another sixteen miles. We started away about 10 o'clock, and, as the car could do its twenty-five miles per hour on a good road, we expected to be back for tea. For the first seven miles we went well, although the roads were rather bad, until our native chauffeur informed us in a happy tone of voice "Puncture, Hogaya Sab," and we found one of our back tyres down. A half-hour was lost in replacing the inner tube by a spare one—we carried three—and we got into Cuddalore about 11.45. Making a stoppage of half an hour there, we proceeded on our journey some six miles along a charmingly pretty road, when we again heard "Puncture, Hogaya Sab," and the same tyre was found flat. Half an hour saw us again started, only to find out this other inner tube leaking, and the tyre not holding up. At this stopping place we were close to a native village, and we were soon surrounded by a large crowd of admiring natives of all ages, who were deeply interested in our operations.

Being now very hungry, both of us not having had anything since early morning, we badly wanted our tiffin, it being nearly 2 p.m.; but, not feeling inclined to eat it under the eyes of such a public, we went on for a mile or so with our slack tyre, and, having got clear of the village, sat down on the roadside and ate it, whilst the man did the patching of two of the tubes. Unfortunately the solution he had was old, and the patching did not hold under the heated tyres, for one gave out after a run of four miles, the other, however, held and took us into Porto Novo at about 5 p.m. We left on our homeward journey at 6.40, surrounded by a yelling crowd of natives, some of whom narrowly escaped sudden death as they ran alongside the car whilst it threaded its way through the narrow streets. Once out in the open we ran at full speed, and we were confidently hoping to get into Pondicherry for dinner, when the well-known "Puncture, Hogaya Sab," came from the back of the car, and we stopped again some half-way to Cuddalore with no more solution and nothing to repair the tyres. Our chauffeur rose to the situation, and he found his way to the nearest farm and bought a lot of hay, and proceeded to fill up the outer tube with this twisted and packed in as tight as possible. This of course reduced the speed, the car refusing the fourth speed, so it had to be driven on the third, using much more petrol. Every few miles we had to stop and repack owing to the hay getting crushed to powder, and we reached Cuddalore railway station about 10 p.m. This was too late for dinner, so we had to content ourselves with biscuits and a drink. After stuffing in more hay into our poor old tyre and filling up with water, &c., we resumed our journey about 10.30 p.m. to do the last eighteen miles. The acetylene lamps had by this time exhausted themselves, and we only had the oil lamps to steer by, and had one or two narrow shaves of getting into nullabs and ditches. Things progressed slowly, the hay gave out and more had to be procured, and about 2.30 a.m. the car came to a standstill about six miles from home for want of petrol. After some trouble we managed to get hold of a single bullock cart, and we two basely deserted the car, leaving it on the roadside with the chauffeur in charge,

and arrived at my friend's house at 5.15 a.m. utterly worn out and glad to get to sleep and dream of punctures. We sent back petrol and a new inner tube, which brought the car in at 11.30 a.m.

My advice to those who go motoring in India is, be sure and have on board plenty of petrol, several good inner tubes, good solution, and a good stock of provisions.—Yours truly,

TRAVELLER.

A MAGNETO TROUBLE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have an old Albion car, with low tension magneto, which at times refuses to start. I have traced the cause to the magneto ignition apparatus. I have cleaned it thoroughly well with but little better results, although at times it will start a little easier than others. It works all right after the engine is started. Will the magneto require re-magnetising? If so, how can I do it, or where would I get it done?—Yours truly,

WARLEY.

[The probable cause of the difficulty that "Warley" is experiencing is due to the magnets having become so weak as not to give sufficient induction through the armature to obtain a good starting spark. As it is inadvisable for him to attempt to re-magnetise them himself, we recommend that he should dismantle the magnets and send them to the Albion Motor Co., who will promptly put his magnets into good order again. It is at the same time possible that the trouble may be due to the insulation of the live spindles of the plugs having become defective through incrustation with soot between the layers of the mica. These plugs could also be done up by the above-mentioned firm. He should also see that the wires leading from the armature to the plugs are all in thorough order and that they are not being short-circuited against any portion of the mechanism.]

THE HORSE-POWER OF MOTOR-CABS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Some discussion appears to be taking place in France as to the most suitable size of engine for use in motor-cabs. The majority of the vehicles in use are of the Renault 8-9-h.p. twin-cylinder type, but many of the others, especially the later ones, are fitted with four-cylinder engines of greater power. It is being urged against these that they are much more costly, not only as regards fuel but also from the point of view of tyres and mechanical upkeep, and it is being urged that a cab

Mr. F. H. Sanderson amidst the Derbyshire Hills on the "Sheffield Simplex" Six-cylinder Car of which he has just taken possession.

with a single-cylinder engine of 8-h.p. is sufficient to meet all the requirements of the public and at the same time to allow of the service being worked on a remunerative basis.—Yours truly,

R. B. N.

MESSRS. MARKHAM AND PRANCE, of 143, Strand, London, W.C., send a leaflet showing the great scope of their work in advising and supplying pleasure cars, motor-boats and commercial vehicles. They undertake to overhaul and tune up any of these automobiles and also to conduct test and trial runs.

RACING AT BROOKLANDS.

EXPERIENCE has taught the Brooklands management many things, and the Whitsuntide meeting has seen the addition of several improvements that will tend towards popularising the track. A new stand in the members' enclosure; the adaptation of the aeroplane shed to the purpose of refreshment; the improvement of the mileage boards and a general smartness in keeping to the published times of the races helped to give a swing to Saturday's proceedings which was lacking at earlier meetings. In the paddock there was a bustle and a brightness that, fortunately, was not dissipated by the weather, and it needed but a larger crowd in the space devoted to the general public to cheer the hearts of the management.

One pleasing innovation was a fulfilment of an interesting anticipatory hope expressed in these columns a few weeks ago, and the starting of races in full view on the finishing line added to the zest with which the races were followed. Several Napiers appeared with their new designations, the Meteor being in the 90 h.p. class, the Firefly in the 26-h.p. category and others included the St. George, Viceroy and Medusa. These were the only cars on the track which had followed the suggestion made by Mr. Colin Defries, whose named Porthos was not, however, a starter on this occasion.

The first race started on the finishing line, and was over a course of $5\frac{1}{4}$ miles. This was the second All Comers' Handicap Sweepstakes of 2 sovs. each, the handicapping being on time instead of distance—a method which increased the interest, as all cars had to travel the same distance. This resulted as follows:—1, P. D. Stirling's 35.7-h.p. Berliet (start 1 min. 10 sec.); 2, E. de Wilton's 76-h.p. Mercedes (12 sec.);

Napier Firefly; the latter drove the 25.6-h.p. Metallurgique. Newton was first away and gradually increased his lead at every lap during the 13 $\frac{1}{2}$ miles until he won by considerably more than the length of the finishing straight. The magneto on the Metallurgique was burnt out early in the race. The average speed of the winner was 76 $\frac{1}{2}$ m.p.h.

There was a thrilling moment at the start of the race between the Napier and the Metallurgique in the 40-h.p. standard class, Copper getting away from Draper on the St. George in fine style, and leading for a mile, when the latter strode into first place and increased his advantage every time of passing the fork, until at the fourth turn Copper ran down the straight. Thus Draper finished alone, his speed being 85 miles per hour over the distance of 16 $\frac{1}{2}$ miles.

For the 90-h.p. stakes over a five mile course there were three contestants in one of the best races of the day, resulting as follows:—1, F. Newton on Napier Meteor; 2, D. Resta on F. R. Fry's Mercedes, and C. Lane on W. J. Wright's Darracq. Resta was first away, but Newton caught him in the first mile, and eventually won by 250 yards at a speed of 91 miles per hour, a fine performance seeing that it was from a standing start.

The second of the Whitsuntide meetings, which was held on Monday, was attended by the largest crowd that has so far been seen at Brooklands, the great race between the Napier and Fiat giants being undoubtedly the attraction. The programme opened with the first heat of the $5\frac{1}{4}$ mile handicap for private competitors for a cup presented by the Earl of Lonsdale, the president of the B.A.R.C. Ten cars faced the starter, in full view of the spectators. The pace was not so fast as the second heat, a speed of only 59 miles per hour being attained. Mr. G. Bliss, 41-h.p. Vinot, was first; Sir Duncan Hay, 41.9-h.p. Daimler, second; Mr. T.

Racing at Brooklands.—The Start of the Second All-comers' Handicap Sweepstakes.

3, H. G. Nalder's 37.7-h.p. Berliet (1 min. 20 sec.). The winner's speed was 71 $\frac{1}{2}$ miles per hour, he being 200 yards in front of the second. The latter beat the Berliet at the post. The order of finishing of the other competitors was G. C. G. Moss's 27.2-h.p. Arrol-Johnston; S. F. Edge's Napier Medusa; D. Pigot's 35.7-h.p. Berliet; G. Russell Miller's 22.4-h.p. De la Buire; S. F. Edge's Napier Viceroy; J. W. Stook's 25.6-h.p. De Dion; J. L. Bromfield's 62.5-h.p. Weir and F. R. Fry's 76-h.p. Mercedes, driven by Resta. One of the inlet valve stems of the latter car, which started at scratch, seized up during the race.

The Second Limit Stakes of 10 sovs. each produced a novelty as the average speed of the cars had to be less than 50 m.p.h., thus opening up possibility of objection on account of exceeding the regulation limit. In the first heat J. W. Stocks, E. de Wilton, and W. Oates, the latter on a 22.4-h.p. Clement, were first, second, and third respectively, but were disqualified for exceeding the limit, and the first three placed were Sir G. Abercromby (58.1-h.p. Fiat), who travelled at 49 $\frac{1}{2}$ m.p.h., H. G. Nalder (35.7-h.p. Berliet), and C. Hobson (27.9-h.p. Nagant-Hobson). In this heat C. Bianchi also drove a 8.9-h.p. Sizaire. Again in the second heat the first two—G. C. G. Moss (27.2-h.p. Arrol-Johnston) and D. Pigot (35.7-h.p. Berliet) exceeded the limit, so that the placed cars were J. Keale (41-h.p. Weigel) at 49 $\frac{1}{2}$ m.p.h., Sir D. Hay (41.9-h.p. Daimler), and G. Wright (53.6-h.p. Darracq). There also ran E. Ashley (22.5-h.p. Buick), J. E. Hutton (25.6-h.p. Hutton, this being a new four-cylinder live axle car made at the Napier works for Messrs. J. E. Hutton), and B. S. Millard (8.9-h.p. Sizaire).

In the final heat C. Hobson and H. G. Nalder, who actually came in second and third, were disqualified, and the result was—1, Sir G. Abercromby at 50 m.p.h.; 2, J. Keale; 3, Sir D. Hay.

Great interest was evoked in the match for £500 between Mr. S. F. Edge as challenger and Mr. O. Copper as acceptor in the 26-h.p. Standard class. The former was represented by F. Newton on the

Fankner, 24.8-h.p. Mercedes, third; Mr. G. C. G. Moss, 27.2-h.p. Arrol-Johnston, fourth; and Mr. C. Russell-Miller, 22.4-h.p. La Buire, fifth. The second heat brought out a field of nine competitors, and a hotly-contested race ensued, as may be judged from the fact that the winner's speed was 71 miles per hour. The result was: Mr. O. S. Thompson, 36.1-h.p. Austin, first; Mr. A. G. Walker, 35.7-h.p. Berliet, second; Mr. G. Duveen, 34.5-h.p. Mercedes, third, and Mr. C. Hobson's 27.9-h.p. Nagant-Hobson, which he has named "Not so Dusty," fourth. All the foregoing took part in the final, which was run off as the fourth event. Mr. H. G. Nalder, 35.7-h.p. Berliet, with 25 sec. start, proved the winner, at 73 miles per hour; Mr. G. Bliss, 41-h.p. Vinot, 1 min. 9 sec. start, second; and Mr. G. C. G. Moss, 27.2-h.p. Arrol-Johnston, 1 min. 20 sec. start, third.

There was quite a flutter of excitement as the two racing monsters, the 90-h.p. green painted Napier, Samson, with F. Newton at the wheel, and the fiery-red coloured 89-h.p. Fiat, with Nazzaro on the driving seat, were slowly pushed on the track for the great event of the year, the £500 match between Mr. S. F. Edge and Mr. D'Arcy Baker. After a slow run along the level in front of the paddock as a sort of parade for the benefit of the spectators, the two cars took their place on the starting line, which was located near the junction of the banking and finishing straight, ready for the 27 $\frac{1}{4}$ mile struggle. Newton was the first away, and at the end of the initial lap had secured a good lead. Nazzaro, who took the banking very high up, however, quickly began to improve his running and on the railway side commenced to appreciably overhaul his rival, this continuing until, when the fork has been passed three times, he actually forged ahead of Newton. When the latter came in sight from behind the banking, to the consternation of those who had looked upon England as being the victor, it was seen that he was pulling up. There was a hasty rush to meet him, as by the aid of a dozen attendants he and his

car were pushed back into the enclosure. On being questioned as to the cause of his retiring, Newton merely pointed to the bonnet, which gave an indication that it was due to trouble with the engine, from the base chamber of which oil was leaking. It was later officially stated that the stoppage was caused by one of the engine bearings firing. In the meantime Nazzaro continued to reel off lap after lap at a terrible pace, one lap, indeed, being covered at the enormous speed of 111½ miles per hour, while his average for the whole run was 94½ miles. Although the race was robbed of much of its interest owing to the Napier retiring, never has there been such excitement at Brooklands as ruled when Nazzaro, cool as the proverbial cucumber, dismounted from the victorious Fiat, after setting up a new record for the track.

The fifth 26-h.p. race over a distance of 16½ miles, for cars of a cylinder dimension of 64 or under, brought out a field of five cars. Mr. J. W. Stocks, 25.6-h.p. De Dion; Mr. J. E. Hutton, 25.6 h.p. Hutton; Mr. O. Cüpper, 25.6-h.p. Metallurgique; and the two Napiers, Firefly and Medusa, driven respectively by F. Newton and J. Blackburn. The contest quickly resolved itself into a keen struggle between Newton and Cüpper, the latter's Metallurgique being in excellent running order, and striving hard to have its revenge on its victor of the previous Saturday. At one time Cüpper led, but only for a moment or so. The excitement was intense as Newton (Napier) crossed the finishing line barely a length

THE STORAGE OF PETROL.

A CASE of importance to the motor-car trade has been heard at Brighton, when the British Petroleum Company were summoned by the Brighton Corporation for keeping 1,654 gallons of petroleum at the Dog Kennels, Hollingdean Road, on April 21st, when they were licensed for only 500 gallons. Mr. C. N. T. Jeffreys (Deputy Town Clerk) prosecuted for the Corporation. He stated that the company, a short time ago, made application to increase the storage from 500 gallons to 1,000 gallons. This was refused. The company then wrote to the Town Clerk asking for a temporary licence for 2,000 gallons to take them over Easter. This application was also refused. Easter then intervened when the offences for which these summonses were taken out were committed. He might say that since Easter the company had applied for permission to store 750 gallons of petrol—250 more than they were licensed for—and that that application was now under the consideration of the Watch Committee. On April 18th the Chief Inspector under the Petroleum Act visited the premises and saw the representative of the company. Upon making an inspection he found 966 gallons of petrol—466 in excess of the amount for which they were licensed. On the 21st he again visited the premises and found 1,654 gallons of petrol. It was only fair to state that later in the day on April 2nd the local manager called upon the

The Purrey Single-Deck Steam 'Bus, of which several are now in service in various parts of France.

La France Automobile.

in front of Cüpper (Metallurgique). Hutton was third, Stocks fourth, and Blackburn fifth. The speed attained was 75½ miles per hour.

There were five starters in the 5½ mile handicap for the Household Brigade cup, which was won by Mr. G. C. G. Moss, 27.2-h.p. Arrol-Johnston, 1 min. 6 sec. start, Mr. J. Bullough 44.5-h.p. Junior (2 sec.) being second, and Mr. T. R. Clutterbuck, 35.7-h.p. Fiat (42 sec.) third.

The last event of the day was the training plate event for six-cylinder Austin cars built for the forthcoming A.C.F. Grand Prix. The start was on the finishing line and the course over two inner laps, two complete tyres having to be changed on each car at the end of the first lap. Only three cars turned out driven respectively by Mes-srs. J. T. C. Moore-Brabazon, D. Resta and Warwick J. Wright. Resta was first away, and the smart manner in which he and his assistant changed the two tyres—in 2 min. 17 sec.—made him an easy winner, Warwick Wright being second and Moore-Brabazon third.

MR. J. LYONS SAMPSON, M.I.M.E., who has been identified with automobile competitions in this country from the pioneer days, is now undertaking consulting work. He has established himself at 274, Oxford Street, London, W.

THE new price list of the Calmon Abestos Rubber Works, Ltd., 1, 2, and 3, Trinity Place, Tower Hill, London, E.C., comes to hand, showing the various motor tyres made by this firm. These are guaranteed for 3,500 miles. Material reductions have been made in price, despite which the quality is well maintained.

inspector and said that at least 900 gallons of petrol had been ordered by customers and would be taken away during the day.

Mr. Gates, on behalf of the company, said he pleaded guilty, but he had arrived at that decision only with difficulty. In the first place every possible precaution was taken to avoid danger, and the other conditions of the licence had all been faithfully adhered to. None of this trouble would have arisen except for the difficulty of the Easter season. An enormous number of motors came to Brighton, and the Shell spirit in which the company dealt much demanded by motorists. So that the spirit should not be kept upon the premises longer than necessary the company put on motor lorries and kept them going day and night to keep the spirit in circulation. The petrol was properly kept and remained in the store only a few hours. The Clerk said that according to the Act there must be a forfeiture of the petroleum if the case were proved.

Mr. Gates said that it was stated in the Act that there must be a forfeiture, and that as a penalty was additional to the forfeiture, no penalty could be imposed if there was no forfeiture. And as the petrol had been all consumed, there could be no forfeiture. He thought that the prosecution might agree to a withdrawal of the case upon payment of the costs. The magistrates decided that there must be a conviction; and the Chairman said that so far as there could be a forfeiture there must be a forfeiture. The company would, in addition, be fined £5 in respect of each day, with costs.

The fine and costs amounted altogether to £10 17s.

CLUBS AND ASSOCIATIONS.

ROYAL.

ON Wednesday, the 3rd inst., H.S.H. Prince Francis of Teck occupied the chair for the first time, and the new members elected brought the total membership up to 3,556. The clubs and associations now included in the scheme of the club's operations number ninety, with 14,149 members.

At the monthly meeting of the General Committee on the 4th inst. it was reported that Professor Hubert von Herkomer, R.A., had promised to model a design and make the dies for the new medal for award by the committee in connection with the events organised by local clubs. It was decided to enrol individual associates after July 1st at the half subscription of half a guinea to cover association to the end of the year.

Examinations have just been held at the Naval Motor School, Portsmouth, and at the Royal Marine Artillery Depot at Eastney.

Earl Russell, at the last meeting of the R.A.C. committee, tendered his resignation, which was accepted with great regret by his colleagues, whose feelings were voiced by the Hon. A. Stanley.

MOTOR UNION.

MOTOR UNION road signs have recently been supplied to the Romsey Corporation, the clerk to the justices at Longton (Staffordshire), and also the Rural Council of Farnham. An application for a sign indicating a dangerous corner has also been received from the Welsh A.C. at the request of a meeting of residents of Lalleston, where the road is only 16 ft. wide in places and there is no side walk.

THE AUTOMOBILE ASSOCIATION.

AT last week's executive committee meeting 374 new members were elected, amongst the most prominent being:—The Bishop of London, Viscount Villiers, Earl of Crewe, the Maharajah of Kooch Behar, Lord Revelstoke, Lord Hothfield, H.H. Abdulla Khan, General Sir Henry Rundle, Count Gleichen, Mr. A. G. Vanderbilt, Sir George Bullough, Sir Ralph Neville, and the Hon. Evelyn Hibbard.

Progress was reported upon the work of the Committee of Public Safety, which in the short space of time it has been established has dealt with several matters vitally affecting this important question. The work of training a special corps is proceeding with all speed, and their appearance on a few of the most important main roads may be looked for at an early date.

The latest development of the A.A. is in connection with the leading hotels in towns and villages throughout the kingdom. In the entrance hall of each hotel on the list will shortly be seen a board by means of which information concerning the roads will be communicated to members. A locked door in the centre of the board will protect the reports from interference by unauthorised persons. Ten thousand keys are being made and numbered, and they will be issued to members in the same way as car badges but without charge. The A.A. agents will assist in the new scheme and the patrol organisation will also play an important part. Road reports, messages to members, notices of belongings lost or found, and much other useful information will by means of these bulletin boards be at the disposal of members.

In order to ensure the efficient working of the scheme, honorary district inspectors are being appointed in all parts of the country, each member supervising the A.A. agents and hotels within the radius of twenty to thirty miles, and reporting at intervals to the A.A. headquarters, Princes Buildings, Coventry Street, London, W.

NORTH-EASTERN AUTOMOBILE ASSOCIATION.

THE membership of this comprehensive northern organisation was 617 at the close of the last financial year, the total assets amounting to £388. The annual report which was presented at the meeting held on Thursday of last week showed that financial assistance had been given in several legal cases and that the question of the protection of members from interference on open stretches of roads is again having the attention of the committee for the present season. The business office of the association is at Sun Buildings, Collingwood Street, Newcastle, and the committee mentioned their contributions towards the re-building of the Whalton and Belsay Bridges as a new departure.

At the annual meeting held at the County Hotel, Newcastle-on-Tyne, on the 4th inst., the following gentlemen were re-elected as officials for the current year:—President, Sir Lindsay Wood, Bart. Vice-presidents, Marquess of Londonderry, Earl of Durham, Viscount Ridley, Lord Barnard, Lord Allendale, and Sir A. Noble, Bart. Chairman, Major H. Streatfeild, J.P., Tyhone Hall, Sunderland. Hon. sec. and treasurer, Mr. J. E. Hodgkin, Shelley, Darlington. Hon. solicitor, Mr. J. A. Williamson, Prudential Buildings, Newcastle. Hon. auditor, Mr. F. C. Sqaunce.

The proposals of the committee that the rules should be altered to allow of better representation of affiliated clubs were adopted, the result being that in future the general committee will consist of the following:—1. The elected officials as above. 2. President or chairman and secretary of each affiliated club. 3. One representative for each twenty-five members of each affiliated club, two for fifty, and so on. 4. One representative for each twenty-five individual members of the

association who are direct members of the association and not affiliated through clubs.

The question of affiliation was discussed and the recommendations of the committee adopted. These include the linking of the association to the R.A.C., and the affiliation to the M.U. of the whole of the car-owning members of the N.E.A.A. and the direct association to the A.C.U. of all motor-cyclist members.

BROOKLANDS.

IN consequence of recent litigation, the secretary is instructed by the committee to inform members: (1) That the entrance to the motor course hitherto used will be closed to motor-cars and motor-cycles on and after Tuesday last. The entrance for motor-cars and motor-cycles will, in future, be from the Byfleet road, about a quarter of a mile nearer to Weybridge than the present entrance to the members' car enclosure. This new entrance will be in use on all days other than race-days. (2) Until further notice, the motor course will be closed on Sundays, both for motor-cars and foot passengers. (3) Foot passengers approaching the motor course, both on race days and non-race days, will continue to use the present approaches. (4) For the purpose of carrying out the necessary alterations as regards access, the motor course has been closed during the last few days.

MOTOR CYCLING CLUB.

THERE were no fewer than 134 entries and 128 starters in the London to Edinburgh run of the Motor Cycling Club. They started from the Old Gate House Hotel at Highgate after 10 p.m. on the night of Friday, the 5th inst., Mr. F. T. Bidlake sending them forth. They were preceded by Messrs. R. H. Head and Arthur Chandler, on a 40-h.p.

Mr. G. A. Phillips driving the 10-12-h.p. Coventry Humber Car which won the Gold Medal in Class C in the Irish Reliability Trials.

Mr. Phillips is the son of Mr. Walter Phillips, the well-known Coventry manager of Humber, Ltd., and this is the first occasion on which he has driven a car in a trial.

Crosseley, who verified the watches at the various controls during the night.

All who reached Edinburgh within 22 hours were entitled to a gold medal. The return journey in connection with the Schulte Cup resulted in the following riders completing the trip of 800 miles:—Messrs. S. G. Frost, E. Gwynne, C. H. Crole-Rees, A. S. Phillips, O. L. Summers, R. O. Clark, H. P. Brasley, J. Winslow, O. C. Godfrey, E. V. Fielder, C. W. Brown, J. Platt-Betts, and Miss A. E. Wood.

The records had not been fully checked at the time of going to press, but meanwhile the Motor Cycling Club can be congratulated on its very successful event.

HERTFORDSHIRE.

INSTEAD of the meet of the Hertfordshire C.A.C. to-day (Saturday), taking place at Medmenham, it will be held at The "Compleat Angler" Hotel, Marlow, where tea will be taken on the riverside lawn, 4.30 to 6 p.m.

The run is 24 miles from Watford to Marlow, by way of Rickmansworth, Denham, Gerrard's Cross, Beaconsfield, Woburn Green, and Bourne End (level crossing).

COVENTRY.

THE awards in connection with the Coventry Motor Club's twelve hours' run to Holyhead were made known at a meeting held last week at the residence of the hon. treasurer, Mr. E. J. Hardy, 18, St. Nicholas Street, Coventry.

In addition to certificates, which will be presented to those who completed the ride in thirteen hours, a medal and two prizes will be presented at the annual dinner to the following competitors who adhered closest to a mean average speed of nineteen miles an hour:—S. F.

Riley, 12-h.p. Riley—bad marks, 17; J. K. Starley, 20-h.p. Rover—bad marks, 17, dead heat; W. Williamson, 13-16-h.p. Remo—bad marks, 17½.

Of the motor-cyclists A. B. Jepson (3½-h.p. Triumph) was first, and J. V. Pugh (3½-h.p. Lloyd) second, with 18½ and 19½ marks respectively.

WELSH.

THE trial held on Thursday of last week by the Welsh A.C. at Philadelphia Hill, in Carmarthenshire, was a great success. There were fourteen starters, the timekeeping being in the hands of Mr. Webber,

6 The Marquis de Villamarta on his recently acquired 42-h.p. Daimler Car at the fair of Jerez de la Frontera, a small town about eight miles from Cadiz, Spain.

Mr. James Livingston, J.P., was the judge, and Mr. T. H. Jones, the starter. Each car was allowed three attempts on the hill, the distance being about 1,300 yards with a varying gradient. The positions of the cars on each run were as follows, the times being those beyond that of the fastest car:—

| | 1st Round. | 2nd Round. | 3rd Round. |
|---|------------|------------|------------|
| | fastest | fastest | fastest |
| | m. sec. | m. sec. | m. sec. |
| 1. Capt. Hughes-Morgan's 48-h.p. Daimler... | 0 19 4.5 | 0 19 | 0 22 3.5 |
| 2. Capt. Hughes-Morgan's Weigel | 0 23 4.5 | 0 17 | 0 21 3.5 |
| 3. T. J. Williams's Daimler | 0 41 3.5 | 0 41 4.5 | 0 38 1.5 |
| 4. E. Leeder's Simms Welbeck | | | |
| 5. B. W. Valentin's Beeston-Humber | 0 53 4.5 | 0 52 2.5 | 0 50 3.5 |

CYCLE AND MOTOR TRADES BENEVOLENT FUND.

At the June meeting of the Executive Committee Mr. F. Lanchester was in the chair. A balance of £439 was reported to the credit of the current account at the bank.

Seven relief cases were dealt with, cheques being drawn in three of the cases, and one being left to the Emergency Committee to give pecuniary relief after making a few further enquiries. It was reported that a special general meeting will be called for the dissolution of the Midland centre as such, and for the formation of a Birmingham centre. It was suggested that for the present, at any rate, it would be well that Wolverhampton be incorporated with Birmingham. With reference to the third annual banquet it was mentioned that Mr. Albert Eadie had consented to take the chair.

LADIES'.

THE members of the Ladies' A.C. have been invited again this year by the committee of the Grosvenor Club to become honorary members of that club for the Royal Henley and Olympic Regattas, and as such to visit the Grosvenor River Club's enclosure on the 1st, 2nd and 3rd July for the Royal Regatta, and on the 28th of that month and following days for the Olympic Regatta.

For the convenience of members of this club who may motor to Henley, the committee of the Grosvenor Club have arranged for a man to be in charge of the car enclosure. Each member will be given a ticket when her car enters, and this ticket will have to be produced when the car is required.

BRITISH MOTOR-BOAT CLUB.

THE annual Thames and up river meet of this club will be held on Tuesday next, and in connection with the event there will be a motor-car run to Kingston from the headquarters in Coventry Street, London, starting at 2 p.m.

The B.M.B.C. London to Cowes race is fixed for the 20th inst., and in addition to the entries from club members several boats from the Essex Motor Boat Club are expected.

ABERDEENSHIRE.

A MEETING of motorists was held at Echt the other evening for the purpose of forming a motor-car club for Aberdeenshire. Mr. McRae, Dun Echt, was called to the chair, and moved that an auto-motor club be formed for Aberdeenshire, to be called the Aberdeenshire Auto-motor Club. This was unanimously agreed to.

Mr. Milne, Comers, Midmar, was elected hon. president of the club, and Mr. McRae president. Mr. Donald, Post Office, Sauchen, was elected secretary and treasurer. The following committee was also elected:—Messrs. McRae, Springfield, Dun Echt; Grassick, Craigievar; J. G. Gray, Echt; W. Cooper and J. Shewan, East Culfossie, Echt; J. McCaulay, Cluny; J. Gordon, Greentree, Echt; J. Craig, Kintore; J. Milne, jun., Comers; G. Sangster, Skene; J. Hunter, Echt; and R. Donald, Sauchen. Mr. J. Milne, Comers, Midmar; Rev. J. D. Sinclair, East U.F. Church Manse, Sauchen; Dr. Lawson, Dun Echt; and Mr. J. Grant, Schoolhouse, Midmar, were elected honorary members.

Over twenty gentlemen have already joined the club. At the close of the meeting a hearty vote of thanks was awarded Mr. McRae for presiding.

ON the 27th inst. the Essex Motor Club will have a motor-car outing for crippled children in Epping Forest.

THE committee of the Hertfordshire A.C. suggests that the club badge should be worn at all future club events.

A LARGE number of motorists were at Lowestoft during Whitsun for the race meeting of the British Motor Boat Club.

THE Yorkshire Speed Trials will this year take place on the 27th inst., the headquarters being at Alexandra Hotel, Saltburn. There will be six events, arranged under the R.A.C. h.p. rating.

THE Lincolnshire A.C. will, by permission of Lieut.-Col. J. S. Ruston, J.P., hold a gymkhana in the grounds of Monk's Manor, Lincoln, on July 1st, in aid of the funds of the Lincoln County Hospital.

THERE were seven entrants for the hill climb of the Cambridge University Motor Cycle Club. With this contest was combined a reliability and petrol consumption test, the winner proving to be Mr. E. D. Dickson on his 5-h.p. Vindec machine.

The Dennis 35-h.p. Landulet which has just been supplied to the Grand Duke Michael of Russia.

This is the third repeat order Messrs. Dennis have received from His Imperial Highness, who, during the run he took on it last week, expressed his delight at the extreme quietness and flexibility of the new model.

THE Daimler Company have just delivered a 42-h.p. car to Sir Samuel Scott, Bart., M.P., of Westbury Manor, Brackley, Northants. The vehicle is of the "Frome" limousine type, painted black with fine white lines and upholstered in drab cloth.

MR. F. SOUTAR, of Annfield, Carnoustie, N.B., who has had a 15-h.p. Coventry Humber in regular use since February of last year, reports that he has never had to stop on account of any mechanical troubles, and gets twenty miles to the gallon. "The commutator is as good as when new, and the carburettor has but once been opened, only to find it quite clean and not requiring anything done to it. The gear wheels and back axle bearings show no signs of wear. The engine valves have never been re-ground and the compression is still good."

CASES UNDER THE MOTOR CAR ACT.

A LADY'S AGE AND A DRIVER'S LICENCE.

A singular prosecution under the Motor Car Act has been heard at Penrith, when Miss Marjorie Cowper, of Penrith, was charged with applying for a motor-car licence while she was under seventeen years of age, and accordingly disqualified.

Mr. C. W. Allan Hodgson, The Courts, Carlisle, who laid the information, said Miss Cowper was charged under Section 3 of the Motor Car Act. She sent in an application form, which he received at Carlisle on May 11th. Question 3 on the form asked if the applicant was under seventeen years of age, and the reply was "No." He had doubts as to the age of the applicant, and he obtained a birth certificate, which showed her to be four or five months under the required age.

The Bench inflicted a fine of 10s. and costs.

AN APPEAL PREVENTED.

Mr. Horlick, who was fined 20s., with 13s. costs, at Oxford, for driving a motor-car to the common danger, and whose application that the fine should be increased to 21s., so that he could appeal, was refused by the magistrates, applied to a King's Bench Divisional Court, London, for a rule for a *certiorari* for the purpose of quashing the conviction.

Mr. Marshall Hall, K.C., his counsel, said the application was made on the ground that the magistrates' clerk and deputy-clerk not only examined the witnesses from carefully prepared proofs, but cross-examined the defendant's witnesses in a hostile manner.

Mr. Justice Bigham said the Court had agreed to refuse the rule. It appeared to him that the questions put were those which the magistrates might have put themselves both in chief and in cross-examination, and he could not help thinking that they had authorised the clerk to put those questions. As to the refusal to increase the fine, he was told it was the practice of magistrates to allow fines to be increased for the purposes of appeal. That might be so, but it struck him as very odd, because it was a practice which had the effect of defeating the Act of Parliament. Mr. Justice Phillimore agreed, and the rule was accordingly refused.

ALLEGED DANGEROUS DRIVING.

At the Reading Police Court, Mr. Joseph Jacques, of The Firs, Bassett, Hants., has been charged with driving his car in a dangerous manner on the night of April 14th. The proceedings were taken in regard to a collision between a motor-car and a cyclist, which resulted in the death of the latter. The coroner's jury returned a verdict of "Accidental death," but expressed an opinion that the speed of the motorist was too fast. Several witnesses were called, who stated that defendant was proceeding at about thirteen miles an hour. The Rev. A. Gunn, who was in the car at the time, said Mr. Jacques was a very careful driver, that he was not proceeding beyond twelve miles an hour, and that the accident was unavoidable. The chairman said defendant had made an admission that he was driving at the speed of twelve miles an hour, which at ten o'clock at night they considered dangerous, and a fine of £20, including costs, was imposed.

EXCEEDING SPEED LIMIT.

A batch of eleven motorists have appeared before the Hailsham magistrates for exceeding the speed limit over a distance of ten miles between Uckfield and Horsebridge during the Easter holidays. All cars which had made an average of twenty-five miles per hour were noted and the drivers summoned, fines of £5 and upwards being inflicted in all cases. Mr. Rowland Harker, who defended some of the defendants, pointed out that in the long distance "Controls" the motorists were not stopped and did not hear of the intended prosecutions until some time later, a fact which placed them at a great disadvantage in securing evidence. In one case the defendant's barrister cross-examined the police as to the driver, and the four officers concerned admitted that they could not identify the defendant.

ROAD REPORTS.

SCOTLAND.—Timing operations have been reported from Helensburgh, Pitlochry to Killiecrankie, Stirling, Dunblane, Blairgowrie, Arbroath, and Crieff.

SCARBOROUGH.—Caution is necessary in the neighbourhood of Peasholme Hill, near Scarborough, where police vigilance has lately been conspicuous.

MELKSHAM.—Police watchfulness has been persistent on the road to Bath, and also to Devizes from this Wiltshire town.

BERKSHIRE.—In the county of Berkshire the following police traps have been brought to our notice during the last few days:—1, Walgrave Road, Twyford; 2, near the Hare Hatch, Bath Road, Twyford; 3, Prospect Park, Bath Road, Reading; 4, through Twyford; and 5, Wokingham.

THE police have a trap working at Hungerford on the Bath road, and several motorists were caught on Saturday.

KINGSTON.—An important step in the agitation for the widening of Kingston Bridge has just been taken by the Joint Committee representing the County Councils of Middlesex and Surrey, who have resolved to recommend their respective councils to promote a bill in Parliament empowering them to reconstruct the bridge or widen it to 55 ft. between

the parapets, provided that the scheme is supported by the authorities interested.

DENBIGH.—On Monday the regulations with regard to the imposition of a ten mile limit in various parts of the Urban district of Llanrwst came into operation.

COLCHESTER.—Motorists going from Witham into Colchester should beware of a police trap at Lexden.

JEDBURGH.—At a Jedburgh District Committee, a communication from the County Road Board stated that they had refused to agree to the desire of Hawick and Kelso districts to limit the speed of motor-cars to ten miles in certain villages, but resolved to put up signals in villages and near schools in the county.

DUBLIN.—By instructions of the Commissioner of Public Works the superintendent of the Phoenix Park has provided two of his employees with stop-watches, and placed them at the extreme ends of a measured distance for the purpose of timing motor-cars in the park.

OTLEY.—The police of Otley (Yorkshire) are now indulging in police traps. They caught five motorists therein the other day.

AUTOMOBILE ACCIDENTS.

WHILE motoring from London to Ipswich on Saturday, Mr. Heaton Armstrong, M.P., Mrs. Heaton Armstrong, and several members of the family had an alarming experience, the car in which they were travelling catching fire and being very extensively damaged. The rear part of the car burst into flames when the party were about twenty miles from Ipswich. Mr. Armstrong was driving at the time, and when he stopped the engine the flames shot up through the flooring, which had evidently been burning for some time. The rear part of the car was

The Irish Reliability Trials.—The 15-h.p. Talbot which won the 200-guinea Dunlop Cup.

occupied by the ladies, and the woodwork which surrounded their seats quickly burnt through. Fortunately, the ladies sprang out before their clothing caught fire. Although the prompt assistance rendered by villagers saved the car from total destruction, it was considerably damaged. Mr. Armstrong's chauffeur was rather severely burnt on the hands, but largely by his energy more serious damage was prevented.

A MOTOR-CAR travelling from the direction of St. Albans towards Dunstable collided at a bend in the road near Redbourn with a lacourer, of Redbourn, who was cycling. Struck full in the face by the body of the car, he was killed on the spot. Swerving violently in an attempt to avoid the collision, the car knocked down a second cyclist, a man named Jabez Frost, who was conveyed to St. Albans Hospital suffering from shock and bruises. The chauffeur of the car, which was upon a trial run, was detained by the police.

OWING to the rapid growth of their business, Ariel Motors, Ltd., have taken further premises at 322A, Camberwell New Road, London, S.E., where repairs, adjustments, &c., to all makes of vehicles can be promptly attended to by skilled mechanics. The establishment has been specially built to suit the requirements of motor-car manufacturers, and is complete in every detail for the prompt repair and garaging of cars. There is accommodation for 100 vehicles; the flooring, which is concreted, comprises 11,000 square feet. The section for private cars is fitted with lock-up doors for the safe storage of vehicles. The cleaning facilities are exceptionally good, and in this connection we may mention that the main drain is fitted with a petrol separator which prevents the spirit running into the drains, and thus avoids all risk of fire. Another point is that cars can be driven in at the main entrance and out at the rear, which will obviate trouble in manoeuvring cars.

FORTHCOMING EVENTS.

JUNE.

- 13th (Sat.).—Hill climb of the Notts A.C. at Oakamoor.
Speed Trials of the Lines. A.C. at Grimsthorpe.
N. Middlesex A.C. speed judging competition for the Gamage Cup.
Essex C.A.C. hill climb at Bottledown Hill, Billericay.
- 14th (Sun.).—Lincolnshire M.C.C. attends morning service at Gayton.
Lunch at Mablethorpe.
- 15th-19th.—Scottish Reliability Trial.
- 17th.—Close of Prince Henry Touring Competition in Germany.
- 18th (Th.).—Meet of the Cambridge A.C. at Hatley Park by invitation of Sir C. Hamilton.
- 20th (Sat.).—Meet of the Hull Auto Cycle Club and the Lincolnshire Motor Cycle Club at Brigg.
Annual Hill Climb of the Bristol and Gloucestershire A.C.
Lunch of the Kent A.C. at Dover.
Herts C.A.C.'s climb for cars at Aston Hill.
- 26th (F.).—Welsh A.C. reliability trial for motor-cycles.
- 27th (Sat.).—Saltburn beach races.
Baxton meet of the Manchester, Sheffield, and Lincolnshire clubs.
Members of the Cheshire A.C. will participate in the Gymkhana of the Manchester A.C.
Visit of the Essex C.A.C. to Audley End.
Meet of the Kent A.C. at Holwood by permission of the Earl of Derby.
- 28th (Sun.).—Southend M.C. run to Grand Hotel, Clacton.

JULY.

- The Land's End to John o' Groat's Trial of the Auto C.C. will be held.
- 4th (Sat.).—Derby A.C. challenge cup competition.
Meet of the Kent A.C. at Gravesend.
Brooklands A.R.C. meet.
Cheshire A.C. gymkhana.
- 6th (M.).—Grand Prix A.C.F. (Voiturette section).
- 7th (Tu.).—Grand Prix A.C.F. on the Dieppe Circuit.
- 8th (W.).—Meet of the Cambridge A.C. at Waresley Park by invitation of Col. Duncumbe.
- 9th (Th.).—Meet of the Ladies' A.C. at Hanworth Park, Middlesex.
- 10th (F.).—Start of tour of motor factories in the Midland by the I.I.A.E.
Welsh A.C. motor-car reliability trials.
- 11th (S.).—Provincial meet of the R.A.C. at Hereford.
Essex C.A.C. gymkhana at Brentwood.
Essex M.C. gymkhana at High Beech.
Leicester A.C. hill climb at Kettleby.
- 16th (Th.).—Club meet of the Notts A.C. at the Hop Pole, Ollerton.
- 18th (Sat.).—Annual Gymkhana of the Herts C.A.C. at The Grove, Watford, by permission of the president, the Earl of Clarendon.
Gymkhana of the Kent A.C. at Maidstone.
Meet of the Liverpool and Cheshire A.C.'s at Delamere.
New Forest and Dorset A.C.'s joint hill climb.
Hill Climb of the Essex C.A.C.
- 20th (M.).—Entries close for the O'Gorman trophy.
- 23rd (Th.).—Gymkhana of the Cambridge A.C. at Chippenham Park.
Hill climbing competition of the Hull and East Riding A.C.C.
- 25th (Sat.).—Petrol Consumption Tests of the Motor Cycling Club.
Annual Open Hill Climb of the Midland A.C. at Shelsley Walsh.
Committee meeting of the Kent A.C. at Herne Bay.
Motor Union Provincial meet.
Cheshire A.C. hill climb.
Leicester A.C. gymkhana.
Lancashire A.C. open hill climb.
- 26th (Sun.).—Southend M.C. run to Coach and Horses, Quendon.

AUGUST.

- 1st (Sat.).—Brooklands A.R.C. meeting.
- 2nd-3rd.—Newcastle and District M.C.C. reliability.
- 3rd (M.).—Brooklands A.R.C. meet.
- 8th (Sat.).—Visit of the Kent A.C. to Brasted Chart.
- 12th (W.).—A.C. of Belgium—Circuit des Ardennes and the Liedekerke Cup race.
- 22nd (Sat.).—Annual race meeting of the W.A.C.
Invitation of Sir D. Salomons to the Kent A.C. to visit Tunbridge Wells.
- 23rd (Sun.).—A. C. du Rhone Mont Pilat trial.
- 29th (Sat.).—Meet of the Lincolnshire Motor Club at Lincoln.
Mont Ventoux hill climb of the A.C. Vauclousien.
- 30th (Sun.).—Southend M.C. run to Great White Horse Hotel, Ipswich.

COMPANY NEWS.

AUSTIN'S COUNTY MOTOR WORKS.—£5,000. Agreement with J. W. Austin. None. County Motor Works, New London Road, Chelmsford.

HUMPHRIS PATENT GEAR AND ENGINEERING COMPANY.—£100,000. Agreement with Humphris Engineering Synlicate, Ltd., for the acquisition of certain patents and rights. 4, Albany Courtyard, Piccadilly, W.

LONDON AND PARIS EXCHANGE MOTOR AGENCY.—£50,000. No initial public issue.

ROWLAND HILL AND SONS.—This company has been registered, with a capital of £15,000, to acquire the business of engineer, iron, brass, and aluminium founder carried on by Rowland Hill at King Street, Coventry, and to carry on the same.

SWIFTSURE MOTORS, LTD.—£500. To carry on at Clacton-on-Sea or elsewhere the business of omnibus, cab, van, motor-car, and motor-boat proprietors. Registered office, 52, Station Road, Clacton-on-Sea.

BUSINESS NEWS.

THE Beeston Humber car which ran with a non-stop record throughout the Irish Reliability Trial was fitted with the Eisemann magneto, for which the United Motor Industries, Ltd., are the sole British agents.

GRE-SOLVENT is a standard emollient to remove grease and stains from the hands of motorists. It is supplied by Messrs. Beanland, Perkins and Co., of Leeds.

AT the commencement of the Irish Reliability Trial seventeen cars were supplied with Shell motor spirit, but there were twenty-three finishers on it, owing to it having replaced other motor spirits during the progress of the event.

THE motor lamps of the Attwood Manufacturing Company, of Amesbury Moss, U.S.A., are being introduced to British motorists by Mr. A. MacPhail, 33, Rosslyn Hill, Hampstead, N.W.

THE Governor of Jamaica has, we learn, just bought a Humber car.

FROM the Kempshall Tyre Company of Europe, Ltd., comes a copy of an attractive show-card dealing with the Kempshall non-skid motor tyres, which they have just issued. One of the show-cards will be sent by the firm to any motor-car agent undertaking to exhibit the same.

THROUGHOUT the whole Irish trial the 48-h.p. Daimler only lost three marks, scoring 997 out of a possible 1,000, and winning two gold medals.

IN consequence of the regretted death of Mr. C. I. Steiner, of Houndsditch, London, E.C., the business will be carried on under the management of his two sons, Mr. Oscar Steiner and Mr. Erwin Steiner, both of whom have had many years' experience in the motor trade. In order to meet the requirements of the growing business, they have taken new premises at 58, Great Eastern Street, E.C.

FIREPROOF motor houses are being built of rusticated concrete blocks by Messrs. Hodkin and Jones, Ltd., of Queen's Road, Sheffield.

THE COVENTRY CHAIN COMPANY, LTD., have an exhibit in the Machinery Building of the Franco-British Exhibition, similar to that which obtained a gold medal for excellence of workmanship at the recent International Exhibition in Milan.

ON Wednesday the London and Paris Exchange, Ltd., Motor Agency held an auction sale of motor-cars, tyres and accessories. They have lately opened an accessories department at their show-rooms at 55, Shaftesbury Avenue, London, W.C.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

To insure insertion communications and contributions must be in the Editor's hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case, otherwise no liability will be accepted.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment for same is directly specified in forwarding, and the terms arranged before publication.

COMMENTS.

AT the meeting of the Brooklands A.R.C. on July 4th the programme will include 26-h.p., 40-h.p., 60-h.p., and 90-h.p. races; an all-comers' handicap, the Grand Handicap Sweepstakes for cars belonging to the 60-h.p. and 90-h.p. classes; the July trophy for private competitors, the Small car stakes for cars with a cylinder dimension of 24 or under, and the Ladies' Bracelet Handicap. This latter is an innovation, as hitherto no lady has been allowed to participate in an event on the Track. Now the fair motorists are to have a handicap all to themselves over a distance of three miles. The entries of cars exceeding 21-h.p. by R.A.C. rating may be refused at the direction of the executive club. Should there be sufficient entries to warrant the race being held, it should give new interest to the next meet at Brooklands.

A Proposed New Speed Limit.

THOSE owners of horse-drawn vehicles, users of tramcars, and other persons who have been complaining of the speed of motor vehicles, will read with interest the provisions of the Bill which Mr. B. S. Straus introduced into the House of Commons on Monday, the draft of which we are able to publish on another page, and which will be before Parliament again next week. Mr. Straus represents the constituency of Mile End, where stones and other missiles have lately been hurled at the heads of the drivers of motor-buses, so that probably he has heard local views—conveyed, we hope, in less forcible manner—on the subject of vehicular traffic. Anyhow his measure, which has received the “backing” of several Metropolitan M.P.’s, as well as a few from the country, has no special animus against those who motor. It would restrain the speed of all forms of quick travel, and its object is “to secure the safety of pedestrians and other persons lawfully using the highways.” Under this heading the motorist who journeys carefully along the road may claim protection from the Mile End coster, whose use of the road is not confined to his own side, and the Essex carter, who sleepily allows his horse to find his way to market in the early hours of the morning. Even the poor motor-bus driver will have legislative, if not physical, protection from the onslaughts of the infuriated constituents of Mr. Straus.

Is the Open Country Exempt?

THERE are some good definitions in a measure which bears evidence of hurried preparation. A “populous place” is one where there are continuous human habitations on either or both sides of a thoroughfare for not less than a quarter of a mile, and “dangerous crossings” are to be suitably indicated on both sides of the road. We agree that in crowded places like Ludgate Circus or some of the streets in the vicinity of the Bank of England, a speed of 10 m.p.h. should not be exceeded, and that at such a crossing as the notorious Theobalds Road corner no vehicle should, or does, travel at more than six miles an hour. Apparently the idea of Mr. Straus is to abolish the speed limit in the open country 440 yards beyond a row of houses, and there allow the pedestrian, baker’s boy, or motor-car

driver to test his speed without legal hindrance, for while speed is restricted in the two conditions mentioned, nothing is said about those long stretches of road where the police now hide to catch the speedy motorist. Apparently all such roads are exempted from the operation of the Bill of Mr. Straus.

Careless Pedestrians.

WITH regard to the checking of the speed of vehicles at dangerous corners, which Mr. Straus suggests should be plainly indicated, there is much to be said, especially in streets so congested with traffic and used by pedestrians as are those of the Metropolis. Mr. D. J. Morgan, who is a City man and a motorist, has rightly told an interviewer this week that pedestrians generally are careless in crossing busy streets. Many step off the kerb without a glance from side to side. They seem to think that traffic should avoid them, and not they traffic. Hansom-cabs and horsed omnibuses pull up in time to save nonchalant wayfarers, but the motor-car or omnibus, even with its efficient brakes, is often travelling too fast to do so. The foot-passenger must, for his own safety, learn to keep his wits about him when essaying a difficult crossing. No restrictions can safeguard those who wander into the road blind to dangers or preoccupied. It must be admitted, adds this keen and sensible critic, in fairness to the motor drivers, that many accidents are caused by want of care in crossing roads or alighting from moving vehicles.

The Earl of Derby.

THE late Earl of Derby, whose death took place on Sunday last, was a great friend of motoring, and on several occasions entertained great parties of motorists at Knowsley, while as president of the Self-Propelled Traffic Association he did much to foster the movement in its early days. The Hon. Arthur Stanley, M.P., who was the predecessor of Mr. C. D. Rose as the chairman of the R.A.C., is his son, and to him the whole motoring community will tender sincere condolence on the loss his family have sustained. The death of the late earl will cause the succession of Mr. Stanley to the Upper House, where motorists are well represented by several gentlemen who have taken great interest in the movement.

Main Roads in North Wales.

WITH a view to helping those who are more or less unacquainted with North Wales, and who propose touring in the district, it will perhaps be of service to take a general survey and specify the main roads along which it is advisable to travel in order to avoid severely graded and bad-surfaced roads. According to Mr. T. Throup, whose “Guide” gives him authority in the matter, it is first of all important to understand that practically the whole of the coast road between Chester and Aberystwyth, as far as Pwllheli, is distinctly good for both grade and surface. To complete the circle it is only necessary to add that there is also a capital road between Chester, Welshpool, Newtown and Aberystwyth. The one good road which passes through this circle is that from Shrewsbury and Llangollen to Bangor and Holyhead. Entering North Wales from the

extreme south-east the only practicable road follows the windings of the upper reaches of the Wye until, at Llangurig, it strikes into the equally good and equally interesting road from Welshpool, Llangollen, and Shrewsbury, which here trends towards Plynlimmon and the sea. Between Llangurig and Aberystwyth there are long stretches of rising and falling ground, but the gradients never get below 1 in 16, and the surface has recently been greatly improved. Between Aberystwyth and Llanidloes there is no commendable road to the north-west, but those shown on the map from Newtown and Welshpool to Dinas Mawddwy and Machynlleth are quite satisfactory. It should be remembered, however, that the gradients between Dinas Mawddwy and Dolgelly are very severe. Proceeding northwards with our survey, all the inland routes between Dolgelly and the Holyhead Road present steep gradients and rough surfaces until the Penrhynduedraeth and Portmadoc district is reached, from whence fairly good and direct roads, but with a number of rather stiff hills, lead *via* Beddgelert to Carnarvon on the west, and Bettws-y-Coed and Llangollen to the north. To complete the survey, a fairly good road links Rhyl and Llangollen by way of Denbigh, Ruthin, and Corwen. There are several good roads between Chester and Rhyl.

Touring in Kent.—Ancient Houses at Lenham, an old-world village on the Folkestone road.

Cars v. Railway.

DOUBTLESS the advance of the motor-car has had some influence in bringing together some of the railway companies into working arrangements. Not only has it been a factor against the companies in long distance journeys, but it will tend to restrain the growth of the holiday traffic, many people who were wont to go to the country by train for their vacation now journeying thither by automobile. There is something delightfully free in being independent of the railway time table, and able to tour around without having to suit one's convenience to the perverse punctuality of the train. The railway companies will have to face the situation, and doubtless their associative working is a first step towards effecting economies which will enable them to retain a hold of the greater portion of their ordinary traffic.

A Prohibition Point.

IN the issue of their Orders prohibiting motor-cars from passing along certain roads, the Local Government Boards of England, Scotland and Ireland must allow some latitude, if they do not wish to do injustice to some residents who are already motorists. A curious case has arisen in the Emerald Isle, which Sir Horace Plunkett and his associates should keep to the fore. The coast road between Malahide and Portmarnock has been closed to motor-cars by order of the L.G.B.—a circumstance that is extremely unfortunate for those residents thereon who own motor-cars, and who are now debarred from

driving straight up to their homes on their cars. Representations are being made by the Irish Automobile Club on the subject urging that they should be exempt from the Order. This is an extremely reasonable suggestion to make, and we trust it will appeal to the official mind. Happily, there have been few places from which automobiles are prohibited, but where such action has been taken—in the interests of the safety of motoring strangers as well as of the public—those acquainted with the district and who live along the roads might well be excepted.

The Unauthorised Use of Cars.

THOSE who own motor-cars should guard against their unauthorised use, for, as a general rule, the accidents that are attended with serious consequences generally occur when the chauffeur is delighting his own friends with the luxury of his employer's car. This is a circumstance that has often been noted, and yet it continues. We would urge upon owners the necessity of seeing that their automobiles are not taken out without permission. The case at the Brentford Police Court, when the chauffeur of the Hon. Ivor Guest, M.P., was fined £35 and prohibited from driving a car for three years, should be a warning to others who are in the habit of giving rides to their companions. Practices such as that must be put down with a firm hand.

Inquiry at Crawley.

THOSE familiar with the West Sussex area will be interested in a Local Government Board inquiry which took place on Friday of last week at Crawley into an application by the local authorities for the limitation of motor-car speed to ten miles an hour within certain portions of the road in the parishes of Ifield and Crawley. Mr. Rees Jeffreys appeared for the Motor Union, the R.A.C. and the Sussex County Automobile Club, the chairman of which, Mr. A. Scrase-Dickins, was with him during the inquiry. At the commencement of the sitting Mr. Jeffreys said that on behalf of those he represented he was prepared to withdraw his opposition to an Order, but was not able to agree to a ten miles limit from the level crossing to the top of Goff's Hill. Thus he conceded five-sixths of what was being asked by the local authorities, and the representative of the County Council called local councillors to give their views on the suggestion. Apparently the way in which motorists thus officially met the proposal for the limit favourably impressed those present, and the county councillor for the division admitted that he had always considered it rather unnecessary to have the limit as proposed on Goff's Hill. Mr. Scrase-Dickins suggested that if a notice board were put up at the level crossing directing to London along the Springfield road, motorists would thus escape the traffic, and not have to cross the line and go through the main road to Crawley. The Local Government Board inspector, Mr. Willis, then made an official tour of the roads in question, and he will report in due course.

Fine or Prison.

WHEN a London magistrate is of the opinion that a fine of five guineas in lieu of the maximum penalty is all that is necessary in fining a motorist for alleged dangerous driving, we do not quite understand Mr. Chiozza-Money's request that legislation should be introduced to secure that such offences should be punished by imprisonment without the option of a fine. Yet such was the object of the question he, as M.P. for North Paddington, put to Mr. Burns in the House of Commons a day or two ago. In reply, the President of the Local Government Board said, whether any alteration should be made in the law as regards penalties for the offence of driving a motor-car in a manner dangerous to the public is a matter which would receive consideration, but he did not think that he could promise to introduce legislation to the effect suggested. It did not seem to him that it would be reasonable to inflict the penalty of imprisonment without the option of a fine in all cases of that

kind, and Mr. Burns pointed out that in the particular case referred to the magistrate did not think it right even to impose the maximum fine allowed by the Motor Car Act. Hence the suggestion that M.P.'s might well leave such subjects alone.

Historical Motor-Cars.

FREQUENTLY have we urged the importance of securing, ere it is too late, an adequate representation of the early types of motor vehicles for exhibition in a national institution. In a very few years such a collection will have considerable interest for the general public as well as for those engaged in the industry. Apparently the idea is commending itself to manufacturers as well as to those responsible for some of the prominent provincial institutions, and we learn that the first chassis which the Albion Motor Company built has found a resting place in the Kelvingrove Art Galleries of Glasgow. This vehicle is of the 8-h.p. type, and was built in 1900 at the Albion Works, which were then at Finnieston Street. It was used for giving demonstration runs to clients, and after it had got past that stage it was fitted with a small van body, and utilised for the transit of goods in connection with the works. It has run in all fully 40,000 miles.

For South Africa it is now generally understood that larger wheels are necessary, to allow the vehicle to more readily pass over the rough roads. The article above referred to sets forth very clearly the points which need attention as regards motor vehicles intended for service in Australia. Our Colonial trade is rapidly assuming important dimensions, and it is to be trusted that the suggestions which are advanced will not go unheeded.

Water for Motor Cars.

THE engineer to the Metropolitan Water Board has completed his designs for the proposed water posts for the supply of water to motor vehicles, and the matter will have the consideration of the responsible authorities at the earliest possible opportunity. We understand that the Commercial Motor Users' Association has suggested that the Board should place one of these posts in a prominent position in London, such as at Hyde Park Corner, in which case the Association would be prepared to bear the cost of the water used for at least one year. This is a matter which has been brought prominently before the various local authorities by the "Industrial Motor Review," which in the last and also the current issue devotes considerable space to urging upon the Metropolitan Water Board the neces-

MOTORING IN CEYLON.

Garages near Railway Stations.

Now that many residents of the suburbs of the great towns and cities are becoming motorists there should be a good opening for firms owning garages in the vicinity of railway stations. Then these enthusiastic motorists could drive themselves down to the station, leave their cars in charge of some reliable person, and return to their homes by automobile at night. Those residents of the purlieus of the towns who drive themselves would certainly welcome such provision, which could be arranged on terms of monthly or longer contracts. There are many such openings all over the country, and those who cater with some enterprise should reap a good reward.

Motor-cars for Australia.

ELSEWHERE in the present issue we give a condensation of a lengthy article which appeared in the "Sydney Morning Herald," which should be carefully perused by all British motor-car manufacturers and agents. Attention has frequently been drawn to the fact that the conditions under which motor vehicles are operated differ in different countries, and that cars which are suitable for and give unbounded satisfaction in Great Britain may prove not merely unsuitable abroad, but give such poor results as to endanger the reputation of the maker.

sity of making ample provision for the supply of water to automobiles when on the road.

Roads in Essex.

AMONG county surveyors Mr. P. J. Sheldon, who is responsible for about 800 miles of roads in Essex, is well known as one of the first of the local government officials to use a motor-car in the course of his work. He has just reported that ordinary automobiles do no damage to the road, but that the armoured tyres on large cars are by no means so innocuous, the expenditure on road repairs having risen some £4,000, partially from the latter cause. He has put up nearly 700 warning posts at a cost of about £1 each, whilst the average receipts for motor-car registration are about £100 a year. Up to Lady Day 1,282 motor-cars and 1,687 motor-cycles had been registered and 10,799 driving licences issued. With regard to dangerous hills, there are only two in the county—namely, Market Hill at Maldon and another at Leigh-on-Sea.

ON Wednesday, in the 2,000-miles Trial, there will be a run of 162 miles to bring the cars to Church Stretton. On the Thursday the journey will be made to Brooklands by way of Worcester, Oxford, Henley (tea at the Red Lion Hotel), Maidenhead, and Windsor, and on Friday and Saturday there will be speed trials on the track.

REMINISCENCES OF A TRIP FROM CAPE TOWN TO JOHANNESBURG.

(Concluded from page 334.)

AFTER wishing him a hearty good night, we proceeded to plough our way through very heavy sand for several miles; the car seemed to know what was expected of it and forged its way at a good speed. Then we came to fork roads, and, after a little consultation, took the right hand one, and after travelling about six miles discovered it only led up to a large block-house and burnt-out farm, so had to retrace our steps and take the other road. Without further incidents we

A River Stoppage near Villersdorp.

arrived at Victoria West at 1.30 in the morning, the distance covered being about 100 miles.

We had mapped out our road from Victoria West to Kimberley via Bristown and Hopetown, but we were advised to follow the transport road along by the railway to Deaar and Kimberley, but, as this route had fallen out of use a great deal, we found it very bad travelling, and so turned off to the left at Deaar and went by Bristown and Hopetown. We left Victoria West on a Sunday morning and arrived just before mid-day at Richmond Road Station. Here we had a river to cross, and on reaching the middle stuck fast in the mud, so our tackle was once more called into requisition. After about an hour's delay we made another start, and had not proceeded far when one of the wheels in the gear-box split in half. I had had this happen previously, so carried a spare one for emergencies. Down came the bottom half of the gear-box, and the broken wheel was replaced without much trouble, although it caused a delay of two and a half hours. We then proceeded with the hope that that would be the last trouble for the day. As far as mechanical troubles were concerned it was so, but after dark we had difficulty in following the route, and at last had to engage a Kaffir to act as guide. It was well we did so, as we would never have been able to follow the right track, and our guide was completely lost at one spot and had to call in the services of another Kaffir at a farm close by. At last we saw the reflection of Deaar, and our guide told us we had a good road all the way now, so we dispensed with his services, not at all envying him his walk of eight miles back to his hut. With rejoicing feelings we entered Deaar at 9.30, having covered about 100 miles during the day.

Next morning we decided to give up following the railway, and struck across country to Bristown. Petrol was not to be had at Deaar, and, as our supply was running short, we telegraphed to Kimberley to have some sent on to Orange River Station. On reaching Bristown, however, we discovered that the local cycle agent had a store of it, so, after taking in a fresh supply and enjoying a good lunch, we felt much relieved and re-started on our journey with renewed hope. For the rest of the day we had

good travelling, and in parts we were doing our forty-five miles an hour over hard backed sand that was like a billiard table, but had to keep a sharp look-out for dry water sluits which were hardly discernible in the sand. At one time we pulled up at a Boer farm to inquire if we were on the right road, and the distance to the next town. You generally get the reply to the distance by so many hours' travelling, they can very rarely give it in miles. They informed us that we had a river to cross a few miles further on, and they were of opinion that it would be too deep for us to ford, and offered to accompany us to give any assistance required. We accepted their offer, and, after waiting whilst they harnessed up their mules, we made a start for the river. The first sight we got of it gave us the impression that our tackle would once more be required for service. We put in our first speed and gently entered the water, which gradually crept higher and higher, till it was only a few inches from the footboards. We were just wondering if it was going to get much deeper when we noticed the water receding, and presently were climbing the steep sandy bank of the river and waving a farewell to the Boer farmer. Eventually we reached a place called Strydenberg, where we decided to stop the night, the journey for the day being about eighty miles.

We started at 6.30 the next morning with intentions of putting in a good day's run, but took six miles of wrong road for a start and arrived back at Strydenberg with a broken front spring. After having it patched up we got safely away and reached Hopetown about 1.30, after encountering a great deal of heavy sand. While we were at lunch the car was left in the hands of the local blacksmith to do the best he could in the short time to strengthen the broken spring. We left about a couple of hours later, and had good travelling, passing by Belmont, Gras Pan and Honeynest Kloof to Modder River, which was to be the destination for that day. We intended to cross the river the next morning, as it was then dark, but to our dismay we discovered that the only hotel was on the opposite side, so we chanced it, and, with local advice as to the shallowest course to take, we got through without any trouble. We covered that day about 125 miles.

Kimberley was only twenty-two miles off, and we ran there the next morning, passing by that disastrous battlefield, Magersfontein. We were not far from the Transvaal, and our hopes were running high with the expectation of reaching Johannesburg. We started away from Kimberley after lunch, and had just passed Barkly, a distance of about twenty-eight miles, when, travelling

Entraining the Car at Johannesburg for the return to Cape Town.

over a piece of rough road, crack went one of the back springs, very nearly every leaf of which had broken in half at the centre. The local blacksmith could not do anything for us, so we had to slowly return to Kimberley, where they worked all night and made us a new spring. Ten o'clock next morning we made another

start, and made fairly good running to Forteen Streams, just after leaving which a peculiar noise struck my ears. I listened intently to the engine to learn if that was the cause, when we suddenly discovered it was proceeding from a herd of oxen, which were charging down on us. I immediately opened the throttle wide, and, being on a fairly good piece of road, soon got away from them; they were evidently offended at the sight of a bright red automobile.

We reached Christiana without further incident, having arrived ninety miles nearer our goal.

We were on the road again by seven o'clock next morning and had rather had travelling to Blomhof. The road improved somewhat after that, and we made good time through Wolmaran Stad and on to Klerksdorp. At one time after dark we missed the track, and while we were hunting for it with one of the side lamps a number of Kaffir girls came running up from some kraals we had just passed, and in their excited curiosity started a sort of dance round the car, which appeared very weird in the reflection of a grass fire, a little way off on the other side of the railway. We succeeded in getting hold of one and tried to make her understand we had lost the track; she suddenly started gesticulating and pointing off to the right, so we took the hint and very soon struck the lost trail. We had arrived within a

SOME CURRENT TOPICS.

Carrying Spare Covers.

In modern side-entrance cars no difficulty is experienced in carrying one or more spare outer covers, for even if sufficient drawer space is not available they can readily be carried either at the side or rear of the vehicle. In the case of old rear-entrance cars, however, the problem is not of such easy solution, and in many cases the spares have to be carried in the tonneau, to the discomfort of the passengers. Owners of live-axle cars will be interested in the somewhat novel method of carrying a spare tyre that I came across the other day. It was well wrapped in canvas and laid horizontally on the back axle casing, the forward end being supported on the rear portion of the cardan shaft sleeve. The cover, which was securely attached at three points, was in this way not only carried without taking up any useful space, but its presence was hardly discernible.

A Motor-car Chassis as a Power Plant.

Pictures have frequently appeared in some of the American motor-car papers depicting motor-cars being used to furnish the power for small saw-mills, water-raising pumps, &c. It was not

A Public Service in Austria.

The above illustrations are reproduced from snapshots taken on the route of the public service which has recently been inaugurated between Kloostenberg and Weidling, a distance of about three miles. The electrical vehicles, which were built by the Austrian-Daimler Company, take their current from an overhead conductor similarly to electric tramcars. (Allgemeine Automobil Zeitung.)

few miles of Potchefstroom, and were travelling over a rocky piece of ground, dodging the large ones, when suddenly one appeared right in front of us; there was not time to stop or dodge, so we held our breath and let it slide under us. There was a sharp shock and sparks flew from under the car—we had struck it. The engine still kept running, and, as we had only a few miles to reach Potchefstroom, we did not stop to investigate then, and arrived without any trouble.

The next morning I found the only damage done was a scored flywheel and slightly bent crankshaft, which did not cause any trouble on the finishing day's run, a distance of ninety miles, which was covered without hitch. We had taken 10½ days to reach Johannesburg, and had covered about 1,100 miles. Our greatest trouble was broken springs, which caused us to lose quite three days during the run.

I should recommend anyone contemplating a trip of this sort to do so with a light but powerful car, and built fairly high from the ground. The car on which I accomplished this run was a 24-28-h.p. Pope Toledo.

F. C.

MR. L. H. HOUNSFIELD is the examiner for 1908-9 in connection with the City and Guilds of London examinations in motor-car engineering. Messrs. P. M. Baker (Wolverhampton), C. B. Mercer (Liverpool), J. L. Milligan (Luton), C. E. Simms (Birmingham), W. Hemingway, C. E. Larard, A. Marsden, D. G. Snodgrass, and H. J. Spooner (London), have been registered as qualified teachers in motor-car technology.

until the other day, however, that I had an opportunity of witnessing such an installation—temporary, of course—in this country. It will be remembered that Weigel Motors, Ltd., lately removed their works from Goswell Road, London, E.C., to Olaf Street, Shepherd's Bush, and, in order that manufacturing operations should not be hampered by waiting for the erection of the works' engine, a 40-h.p. Weigel chassis was called into requisition. This was fixed in a suitable position on the machine shop floor below one of the lines of shafting. The cardan shaft was disconnected, and in place of the brake drum at the rear of the gear-box a belt pulley was fixed. The only other alteration made was the fixing of a long pipe to the silencer, so that the exhaust gases can be emitted directly into the open air. When I visited the works recently the novel power plant was working quite smoothly, as it has done, so Mr. Weigel informed me, for over a month.

Water Splashes.

The Motor Union has, I am glad to notice, adopted the suggestion recently made in this column with regard to the erection of warning signs on the approach to water splashes across the road, for, at the last meeting, it was resolved that one should be put up near a water splash between North Elmham and East Dereham, Norfolk. Now that a commencement has been made, I hope that the Union will see its way to similarly deal with the water splashes previously pointed out, and with one in the Milton country, near Chalfont St. Giles, to which a correspondent has since drawn my attention.

ARCANUM.

B

GOSSIP FROM PARIS.

— —

I DO not know what the foreign drivers in the Grand Prix will say to it, but even their French competitors are far from being pleased with the decision not to reopen the Dieppe circuit as usual for preliminary trials before the great race. Most of the French drivers had tried the course before it was closed against the racing cars, but very few of them had in their hands the new machines they will pilot on July 7th. Not more than half-a-dozen of the twenty-five foreign drivers had an opportunity of trying the circuit, and will now have to content themselves with examining the road in an ordinary touring vehicle, which is a very different thing to speeding over it in a racing car. It was, it seems, the departmental and local authorities, who met under the presidency of the Prefect, that proposed the prohibition, which was, however, agreed to by M. de Vogue in the name of the Sporting Committee of French Automobile Club. The chief reason invoked for refusing to allow the racing cars on the circuit before the contest was not convincing. It consisted in the declaration that the main reason for permitting the preliminary trials last year having been to ascertain how much *essence* would be required by the racing cars having disappeared with the suppression of the consumption regulation, it was unnecessary to reopen the circuit.

ALL sorts of stories of the fabulous speed attained by the new French racing cars continue to be circulated in the auto-

Touring in France.—A General View of Rouen.

mobile sporting world. If one-tenth of them were really true the spectators on the Dieppe grand stands having good touring cars at their disposal might expect to get back to Paris in time for five o'clock tea. One of the best of the stories I have heard is that of a driver who wanted to ascertain exactly at what speed he could go. Being a prudent man, he took with him three friends. When he reached the long-deserted level stretch of road he had selected for his trial, he invited his companions to get out of the car and posted them at a kilometre's distance from one another. They were to take his time, and, with the object of avoiding any possible accident, it was agreed they would display a pocket-handkerchief on a stick to warn him of any vehicle on the road. After taking these precautions the prudent driver started at full speed. He covered the stretch two or three times with vertiginous speed, but suddenly became conscious of the disappearance of his friends. What had become of them? He stopped and shouted. Soon the three men emerged, still trembling, each from behind a big tree. They one after another confessed they had been so terrified at the approach of the "cannon ball," as they called the car, that every time it passed they had taken refuge behind the nearest tree! Though the driver failed to get the exact time he had taken to cover the kilometre, he came back to Paris quite satisfied, and now tells his intimate friends to bet on him as the winner of the great race.

^{misses} BRITISH motorists touring in France, who, like Frenchmen, are responsible for the material damage done by their chauffeurs, will learn with pleasure that the Court of Cassation has definitely established the jurisprudence on the matter. Until now, under whatever circumstances an accident happened, the owner of the car causing it was invariably condemned to pay for the damage done, even if he had not been aware that the vehicle had left the garage. According to the definitive ruling of the Supreme Court the owner of a motor-car, of course, remains responsible for all accidents caused by it if he is driving the vehicle, and also if any one in his employ (his chauffeur) should be at the steering wheel executing instructions received from his master. However, if, as is too often the case, a gentleman's chauffeur takes the car out unknown to his master, or in violation of the instructions received from him, and causes an accident, the owner of the automobile is relieved from all responsibility. Moreover, in the case of the owner of a car being supplied temporarily with a chauffeur from a garage, he is not responsible for the accidents which may be caused by his vehicle. The Court of Cassation ruled that, as the chauffeur remains the servant of the garage-keeper, it is he who is responsible for the acts of his servant and not the owner of the automobile he may happen to be driving.

THOUGH the flight on his monoplane was not officially controlled, there is no doubt that M. Robert Esnault Pelterie has broken the French records for height and speed. He rose on his machine, flying at the speed of about 80 kilometres (50 miles) an hour, to the altitude of at least 30 metres, or 98½ feet. Having overshot the boundary of his experimenting field, he brought his aeroplane to the ground more quickly than prudently and damaged it considerably. The aviator fortunately escaped without serious injury. The other French aviators are wondering whether he flew up so high on purpose. Most of the men who know anything about such matters are inclined to think he did not. M. Robert Esnault Pelterie is silent on the point. In spite of that his monoplane, which will be repaired in a few days, is regarded as a serious competitor to the Wright Brothers' aeroplane, as well as to the machines of M. Delagrangé and Mr. Henry Farman. Everyone is talking about the Wrights and their promised aerial performances, and technical men are once more inquiring how it is possible that the Wright Brothers' machine, which admittedly has not a larger bearing surface than that of M. Delagrangé, can, with a less powerful motor, carry two men and remain in the air so long a time. However that may be, their experiments are looked forward to with intense interest. In the meantime Mr. Henry Farman has decided to abandon the Issy les Moulineaux parade ground, which is too small for his experiments, and to instal himself at Paris Plage (Le Touquet), where he has obtained permission to utilise the beach at low water for his flights. MARNEY.

MR. WYNNE BAXTER, the coroner for the East End of London, believes in the erection of street bridges at convenient intervals along the busiest arteries of traffic. Would they be better patronised than are the subways that are so little used in the vicinity of the Mansion House and the Bank of England?

THE other day we had an opportunity of inspecting a new puncture proof band for motor tyres, which is being introduced by the Gossamer Puncture Proof Band Company, of 235, High Holborn, London, W.C. It consists of a casing intended to be solutioned to the inside of the cover, and within which is enclosed a quantity of fine vegetable fibre. Interposed as it consequently is between the cover and the inner tube, it is claimed that it not only prevents the latter being punctured, but also from being nipped when the car is travelling over rough roads. We have not yet been able to try the band in actual practice on the road, but the one we tested successfully resisted all attempts to force a sharp pointed instrument through it. Those motorists who have experienced tyre troubles will do well to enquire into the Gossamer band; it adds but little weight to and does not slow the tyres, and is being put on the market at a reasonable price; the makers are supplying them separately or will undertake to solution them inside the covers of customers.

The 2,000-miles Trial.

INCLUDING THE SCOTTISH RELIABILITY TRIAL.

CONTINUING our record of the International Touring Car Trial begun last week with the announcement that there would be forty-six starters out of fifty-one entries, it may be well to point out some essential features with regard to the computation of marks—both in the long jaunt of 2,000 miles and the portion of the event known as the Scottish Reliability Trial, on which eighty-three cars started from Glasgow on Monday. In the former a unique system of marking has been adopted on a basis of time lost under eight headings, as follows:—(1) Excess of maximum running time. (2) Advance of minimum running time. (3) Adjustments, replacements, involuntary stops, replenishments, &c. (4) Excess of three minutes for petrol cars and ten minutes for steam cars allowed for starting up each morning. (5) Excess of one minute starting allowance after compulsory stops on the road. (6) In filling with petrol, each

Pomfret Arms Hotel at Towcester for lunch, the new 52-59-h.p. Lorraine Dietrich, driven by C. Bianchi, being the first to put in an appearance and retaining its premier position all the subsequent way to Nottingham. After the rest the route was resumed to Costock, a delightful village 17 miles beyond Leicester, for tea, where we learned that one of the Zedel cars, which had been observed *en panne* on the way, had sheared a key in its differential gear. At Nottingham—the day's objective—the cars arrived well to time, being met by Mr. Warren-Smith, who had travelled on his 14-16-h.p. Argyll by another route, and several local motorists. The general public, however, seemed to have been previously unaware of the automobile invasion. Messrs. Atkey and Co. had made the garage arrangements, and the cars were quickly housed, the drivers and observers promptly making their way to the Victoria Hotel, in connection with the Great

The 2,000 Miles Trial.—Luncheon time at Wetherby.

gallon placed in the tank being reckoned as one minute lost. (7) Climbing the timed hills. (8) Covering the required distance on the Brooklands track. As before, the Scottish Trial is based on the idea of reliability, marks being allotted for low fuel consumption, non-stop runs and other factors that constitute the ideal touring vehicle.

The first stage of the 2,000 miles Trial occupied Thursday, Friday, and Saturday of last week, the daily runs being London to Nottingham (129 miles) with a stop at Towcester for lunch; Nottingham to Newcastle (161 miles) with a mid-day halt at Wetherby; and the Tyne to Glasgow (151½ miles), lunching at Peebles, this making a total of 441½ miles. There were sounds of busy activity in the White depot at Camden Town on Thursday morning when Mr. J. W. Orde and his assistants were eagerly admonishing those in charge of the forty-six vehicles to get ready for emerging into Carlow Street, from whence to begin their long pilgrimage. They issued forth, in competitive array. At 9 a.m. the first car started for Towcester, fifty-nine miles away. Three-quarters of an hour later not a car remained, and the first was not far from St. Albans. Dusty were the roads, and bright was the sun as the procession arrived at the

Central Railway, where a dinner was given by the Nottinghamshire A.C. to the judges and officials.

There was no dust in Nottingham when the cars, with the Armstrong-Whitworth leading, set sail—not a wholly inappropriate expression in view of the rain that fell—for the second stage of the journey. But the weather improved beyond Welbeck, and by the time we stopped for luncheon at Wetherby there was the promise of dust. This was fulfilled in the afternoon, when the only excitement vouchsafed the travellers happened to the Straker-Squire, which shed a detachable wheel, causing it a loss of 13 min. At Newcastle considerable interest was taken in the arrival of the cars, as they were housed on the Town Moor.

On Saturday the way was from Newcastle to Glasgow by Otterburn into Scotland, where mists were quickly encountered and where the landmark between the two countries set up by the Scottish A.C. was seen. At Peebles there was the luncheon halt and then through Lanark and Hamilton the cars went to Eglington Toll, at Glasgow, to be ready for the Scottish Trial. Despite the wretched weather and the various classes of roads over which the journey was made, it is very satisfactory to notice how

well the tyres are behaving, a tribute to their excellences as well as the reliability of the competing machines.

Thus far the cars had generally done extremely well, the marks recorded against the vehicles during the three days being as follows, the large total to the debit account of the second Zedel in Class D being due to the mishap near Costock on the first day.

The 2,000 Miles Trial.—The 15-h.p. Coventry Humber Car.

| Car. | Driver. | Minutes lost. |
|---|----------------------|---------------|
| CLASS A. (Cars up to 6.4-h.p.). | | |
| 6.2-h.p. De Dion | W. V. Jolley | 20 |
| CLASS B. (6.4-h.p. to 9.4-h.p.). | | |
| 8.9-h.p. Adler | Fincke | 27 |
| CLASS C. (9.4-h.p. to 13-h.p.). | | |
| 10-h.p. Cadillac | F. S. Bennett | 17 |

CLASS E. (16-h.p. to 20.8-h.p.).

| | | |
|-----------------------------------|-----------------------|----|
| 20.5-h.p. Vauxhall | P. C. Kidner | 20 |

|----------------------------------|--------------------|----|
| 23.8-h.p. Coventry Humber | W. G. Tuck | 34 |
| 25.6-h.p. Star | G. F. Prew | 34 |
| 24.79-h.p. Panhard | Patault | 40 |
| 24.79-h.p. Brown | B. R. Banks | 42 |

CLASS G. (25.6-h.p. to 32.4-h.p.).

| | | |
|------------------------|-------------------|----|
| 31.1-h.p. Ariel | P. R. Lamb | 32 |
| 30-h.p. Adler | Wilhelm | 32 |
| 27.3-h.p. Deasy | F. Berry | 33 |

| | | |
|------------------------------|---------------------|----|
| 27-8-h.p. Nagant-Hobson ... | A. E. Robson ... | 36 |
| 32-4-h.p. Belsize ... | R. Crossley ... | 36 |
| 32-4-h.p. Beeston Humber ... | T. C. Pullinger ... | 38 |
| 28-h.p. White (steam) ... | B. C. Rhodes ... | 45 |

CLASS H. (32-4-h.p. to 40-h.p.)

| | | |
|---------------------------------|---------------------|----|
| 38-1-h.p. Daimler ... | G. H. Street ... | 29 |
| 40-h.p. Armstrong-Whitworth ... | G. H. T. Slaney ... | 36 |
| 38-1-h.p. Daimler ... | G. H. Ison ... | 48 |
| 37-h.p. White ... | G. H. Holloway ... | 50 |
| 40-h.p. Hillman-Coatalen ... | H. N. Smith ... | 66 |

CLASS J (40-h.p. to 46-4-h.p.)

| | | |
|---------------------|----------------|----|
| 45-8-h.p. Ariel ... | H. Cordery ... | 59 |
|---------------------|----------------|----|

One of the Panhard 15-20-h.p. Live Axle Cars taking part in the 2,000 Miles and Scottish Reliability Trials.

CLASS K (46-4 to 52-8-h.p.)

| | | |
|---------------------------------|-----------------|----|
| 48-6-h.p. Rolls-Royce ... | E. Platford ... | 30 |
| 48-4-h.p. Deasy ... | P. Graham ... | 32 |
| 48-6-h.p. Rolls-Royce ... | C. Johnson ... | 37 |
| 52-4-h.p. Lorraine Dietrich ... | C. Bianchi ... | 49 |

CLASS L (52-3-h.p. to 60-h.p.)

| | | |
|---------------------|--------------|----|
| 59-5-h.p. Ariel ... | P. Lewis ... | 59 |
|---------------------|--------------|----|

It will be seen that the 20-5-h.p. Vauxhall and 20-06-h.p. De Luca Daimler in Class E are bracketed as equal, as are also the 25-6-h.p. Beeston Humber and the 25-6-h.p. Thornycroft in Class F., in which also the 23-8-h.p. Coventry Humber and the 25-6-h.p. Star are together; the 31-1-h.p. Ariel and the 30-h.p. Adler, as well as the 27-8-h.p. Nagant-Hobson and 32-4-h.p. Belsize in Class G.

THE SCOTTISH TRIAL.

On Monday morning the forty-six cars which had come up from London set forth on a very arduous day's travel, accompanied by thirty-seven other cars which had been entered for the Scottish Trial only, making a total of eighty-three cars on the road, thirty-two of which are engaged in the double event.

This run was northward to Aberdeen, a distance of 172½ miles, and including not only the timed hill climb, but also many other ascents and gradients that brought some of the drivers in the small car classes down to the lowest gear. We lunched at Perth, where the 16-h.p. Belsize was withdrawn, and then ran into one of the worst downpours that has been experienced on any of the three preceding Scottish trials. A score of miles beyond Blairgowrie the famous Spittal of Glenshee was reached, and then came the climb up Cairnwell Hill, with its average gradient of 1 in 11, and the horrible Devil's Elbow with 1 in 6½. Unhappily the rain had transformed the surface into a kind of quagmire, such as was experienced on the hill near the Bridge of Brown last year, and even the larger cars required very careful handling to avoid being stuck—as were some of the vehicles—while eight had to shed their passengers. The 20-h.p. Coltman driven by Mr. W. Wilson, its designer, was making a first public appearance in the trial, and after a good run to Glasgow had an unfortunate mishap just beyond the Spittal of Glenshee. The differential broke, and after a delay of five hours the journey to Aberdeen was finished by driving with one rear wheel only.

From Cairnwell it was a bleak, desolate run, rendered cheerless by the pitiless rain, and all were glad of the tea-stop at Braemar. The rain had caused many delays, and four cars had not reached the Royal town long after the big contingent were drying their clothes in Aberdeen. As a team the Argylls made

a uniformly consistent performance, securing non-stop runs, as did also the 18-h.p. Benz, the 10-12-h.p., and the 18-24-h.p. Swifts, the 10-h.p. Adams, the 15-h.p. Mass, the 20-h.p. Bell, the 20-h.p. De Luca-Daimler, the 40-h.p. Armstrong-Whitworth, while tyre trouble only caused the delay of the 45-h.p. Sheffield-Simplex, which ran well throughout the day.

The run from Aberdeen on Tuesday was begun in sunshine, and it was a delightful trip to Clatterin' Brig, at the foot of the Cairn o' Mount. This is a severe test, the timed portion being over a distance of two miles thirty-five yards, with gradients ranging from 1 in 5-4 to 1 in 30. It was fortunate that the day was dry—with the result that the small cars, which had been the first to leave the Granite City, mostly strode up the first part of the hill in good style. Towards the end of the long distance, however, there was an accumulation of panting vehicles, which caused much murmuring among the drivers of the sturdier cars. Conspicuous among the best climbers in their respective classes were the 15-h.p. Coventry-Humber, the Metallurgique, the 18-h.p. Benz, the Daimlers, the Vinot, the Argylls, Humber, the White, and the Nagant-Hobson. Yesterday's experience led the 20-h.p. Coltman to be withdrawn, as was also the 25-h.p. Werbell, while the tale of trouble has been further increased by the withdrawal of the 24-h.p. Porthos, the 8-h.p. Clyde, and the 12-h.p. Riley; the two latter having had differential and gear difficulties. A backfire from the Belsize has so affected the arm of the driver, Mr. R. Crossley, that he retired from the contest.

After Cairn o' Mount, the journey was continued down into Aboyne for luncheon, and then the route was made to Duftown through Tomintoul—that cold and bleak mountain village—down to the bridge leading into Grantown-on-Spey for tea. Two hours later we were nearing Inverness, where news of the day's doings was anxiously discussed.

The two trials running simultaneously, each with its special system of marking, renders the publication of the daily performances somewhat confusing, but it is satisfactory to learn that only ten drivers who started from Glasgow on Monday had

The 2,000 Miles Trial.—The 20-h.p. Beeston Humber Car.

failed to report themselves at Inverness when this report left the northern town of Flora Macdonald.

When we went to press on Wednesday, the cars were journeying South to Pitlochry; Thursday's run was to Oban, and the Scottish section of the Trial comes to an end at Glasgow on the night of the 19th.

The week-end, so far as the cars in the 2,000-mile Trial are concerned, will be spent in the Lake District, the journey being made from Glasgow on Saturday morning, and Windermere being reached in the evening. On Monday there will be a tour of the district, with hill climbs at Dunmail Raise Pass and Kirkstone Pass, and then to Brooklands.

THE COTTIN-DESGOUTTES SELF-ADJUSTING CLUTCH.

A LITTLE-KNOWN car in this country, but one which has an excellent reputation in France, is the Cottin-Desgouttes, made by the firm of that name at Lyons. The vehicles, while following what may be termed the usual lines of modern automobile construction, comprise in the details a number of special features, among which is the self-adjusting clutch described below.

In many cars the power of the engine is still transmitted

Fig. 1.—The Cottin-Desgouttes Improved Clutch.
The view shows the complete clutch withdrawn from the flywheel.

from the clutch to the gear-box by a rigid shaft, which calls for perfect alignment between the two parts—a condition which, however, owing to the temporary distortion of the frame, due to road shocks and other causes, is not attainable, the result being that the gear-box, clutch, or engine are subjected to undue strains and consequent wear. With the view of overcoming this great drawback, it has become the practice in modern automobile

Figs. 2 and 3.—Sectional Views of Cottin-Desgouttes Improved Clutch.
D. Tenons in flywheel. E. Drum of male portion of clutch. H. Flywheel.
R. Drum of female portion of clutch.

engineering to introduce a flexible joint in the clutch shaft, and, although this has to a large extent remedied the trouble, Messrs. Cottin and Desgouttes have attacked the problem in another and, they claim, a better way, in so far as the strains are taken up at

the point where their maximum effect is felt—in the clutch itself.

In Figs. 2 and 3 sectional views are given of the firm's novel clutch; it should be mentioned, however, that although the new feature is shown incorporated in a clutch of the multiple disc type, it can be adapted to other forms. Briefly put, the improvement consists of building the female portion of the clutch not as an integral part of the flywheel, but in such a way that, while it is bound to rotate therewith, it has a certain amount of room in which it can adjust itself to allow for any temporary lack of alignment. Referring to the drawings, it will be seen that the female part of the clutch consists of a specially-shaped drum R, the circumferential surface of which is so curved that it only touches the inside of the flywheel at one point on the line A B. Fixed in the flywheel at equidistant points are four tenons D, the upper ends of which pass into corresponding slots formed in the outer portion of the female part of the clutch. It is by means of the tenons that the power of the engine is transmitted to the clutch, which, as will be seen, is free to oscillate on its centre O, and yet drive without loss of power.

Apart from its advantage in rendering the usual flexible joint on the clutch-shaft unnecessary, the makers claim that it renders the work of dismantling the whole clutch an extremely easy matter, and enables it to be given that occasional attention in the way of thorough cleaning which a clutch, like other parts of the car, requires; the shaft is connected with the primary one and the gear-box by a screwed sleeve held in place by a spring pin. The latter can be removed by means of a blacklead pencil, and then the sleeve can be drawn back, and after loosening the two bolts by means of which the clutch-operating mechanism is attached, the whole of the clutch and its shaft can be dropped out of the chassis. We understand that Messrs. Cottin and Desgouttes, whose works are at Monplaisir, Lyons, have subjected the new clutch to exhaustive trials, and that they are open to negotiate with motor manufacturers who desire to incorporate the arrangement in their cars.

TRIAL NOTES.

CHEVALIER DE KNYFF, of the Panhard and Levassor firm, was among the group of distinguished motorists who witnessed the start of the 2,000 mile trial.

TWENTY-NINE of the cars in the trial are fitted with Dunlop tyres. Five have Palmer, four Continental and one Jenatzy tyres.

THE nationalities of the cars that started were as follows:—Belgium, 3; France, 8; Germany, 3; Great Britain, 26; Italy, 3; United States of America, 3.

THE "Thames" Car, No. 84 H, did not start in the Scottish Trial owing to the late delivery of the chassis from the works not allowing sufficient time, after completion of the coachbuilders' work, to prepare for the event.

THE six-cylinder 45-h.p. Sheffield Simplex was withdrawn from the International Touring Car Trial, firstly, owing to the great demand at the works for cars for demonstration runs, and secondly, "as efficiency and reliability are the chief qualities upon which the results of the trials are based, without consideration of the other very necessary requirements demanded by private users in a car, such as simplicity of construction, silence, and niceness of running etc., it is evident that a specially-prepared car in which efficiency has been chiefly studied, to the detriment of the other qualities mentioned, would be favoured in the awards, though it would not be a car that would be in accordance with the requirements of the majority of private users, and we prefer (say the makers) to demonstrate to the public with a car of exactly the same type and quality that we would supply to them as a standard article." This was one of the five entries to which we referred last week.

CONTINENTAL NOTES.

The Prince Henry of Prussia Touring Competition.

As was mentioned in the last issue of the *M.C.J.*, no less than 130 competitors in this event left Berlin on Tuesday of last week on the first stage of the trial—viz., to Stettin, a distance of 193 miles. Of the competing cars one hundred are German, Belgium is represented by ten vehicles, France by nine, Italy by five, Austria four, and Switzerland and England by one each. A striking feature of the trial is the fantastic design of bodies which have been evolved by manufacturers to meet the regulations. So unlike are these to the accepted type of touring car, that it is reported Prince Henry of Prussia is already contemplating an alteration of the rules, which shall next year make the contest what it was originally intended to be—namely, one for amateur drivers in genuine touring cars, and in order to prevent the entry of specially-constructed vehicles, which nominally satisfy the conditions of the trial, and which are driven by professionals. Another point of note is in regard to the engines of the cars, many of which have an unusually long stroke in relation to the cylinder bore. Thus

4 min. 24 4-5 sec. (81 miles an hour); and De Lengerke, on a Benz, third in 4 min. 35 sec. (77½ miles an hour). F. Rendel (Mercedes) did 4 min. 54 4-5 sec.; Miss Levitt (Napier), 5 min. 37 2-5 sec.; and E. A. Philippi, Winchester (Lorraine Dietrich), 6 min. 31 1-5 sec. Four cars failed to reach Hamburg, reducing the number of competitors to 122. On Saturday the cars were on exhibition in the Velodrome, Hamburg, the start for Hanover (194 miles) being made on Sunday morning. The route was a very difficult one, but 120 are recorded as having safely arrived. Monday's run was to Cologne, 206 miles. The route was again very difficult, and several cars fell out, only 112 reaching the cathedral city. On Tuesday the journey was continued to Treves, and on Wednesday the event was brought to a conclusion at Frankfort am-Main, the result not being available at the time of going to press.

An Industrial Vehicle Trial in Italy.

On the occasion of the opening of a new bridge over the river Po, an international competition of motor-omnibuses and other commercial vehicles will take place at Piacenza, Italy, during the second half of September. In connection with the

The Prince Henry of Prussia Touring Competition.—Herr von Lengerke on the 40-h.p. Benz Car. The body of the vehicle is typical of many of those taking part in the Contest.

the Mercedes are 130 mm. bore by 172 mm. stroke, the Benz 115 mm. by 160 mm., one indeed being 115 mm. by 180 mm., and the Suddutsche 85 mm. by 130 mm. In addition to Miss Dorothy Levitt, who is at the wheel of the Napier, the only British car entered, there are two other English drivers taking part in the event, Mr. F. Rendel, of London, with a Mercedes, and Mr. E. A. Philippi, with a Lorraine Dietrich. Although many minor breakdowns were reported, all but one of the 130 starters safely reached Stettin, the absentee being M. Hamoir, of Brussels, whose Protos collided with a tree at a nasty turn, damaging the front axle. Miss Levitt arrived sixth. The journey on Wednesday, the 10th inst., was the longest of the tour. The start was from Stettin, and the route lay through Goldberg, Schwerin and Lubeck to Kiel, a distance of 243 miles. The first car was dispatched at five a.m., and the others left at short intervals. Altogether 126 safely reached the German port, the Napier arriving fourth. There was no run on Thursday, the 11th inst., the day being devoted to sight-seeing in the neighbourhood. Hamburg (209 miles) was the destination on Friday, a speed trial on a 9½-kilometre level course being held *en route*. The highest speed was attained by Erle, on a Benz, his time being 4 min. 22 4-5 sec., equal to 86 miles an hour. W. Poge, on a Mercedes, was second in

event three special competitions are being organised:—(1) For agricultural motors, instituted by the Italian Ministry of Agricultural Industry and Commerce; (2) for motor-omnibuses and lorries, according to the specification of the Italian Minister of War, to be adopted by the Army; (3) vehicles with elastic wheels. In the general competition motor-vehicles and road trains of any system will be admitted. After the trials there will be a compulsory exhibition of the competing vehicles, which will last about ten days. The competitors will be divided into two classes:—(1) Petrol, paraffin, steam, and petrol-electric machines; and (2) those propelled by electricity. Each class will be sub-divided into the following categories: (1) Vehicles carrying net loads up to 900 kilos.; (2) ditto from 901 to 1,500 kilos.; (3) ditto from 1,501 to 2,000 kilos.; (4) ditto from 2,001 to 3,000 kilos.; (5) ditto over 3,000 kilos.; (6) motor-buses to carry from six to ten passengers; (7) ditto over ten passengers; and (8) road trains. Entries must be sent to the Executive Committee of the Exhibitions and Competitions (Sport and Motor-cars Commission), care of the Chamber of Commerce of Piacenza, not later than July 10th. For Classes 1 and 2 the entry fee is £16 per vehicle; Classes 3, 4, and 5, £24; and Classes 6, 7, and 8, £28. To the manufacturer who enters two vehicles, even if in a different class, a reduction of 10 per cent. will be made on

the fees, and 15 per cent. if more than two are entered. For entries to the special competitions there is a further charge of 10 per cent. on the entry fee on the relative category for the agricultural motor trial; 20 per cent. for the Minister of War event; and 10 per cent. for the elastic wheel section. The vehicles will be subjected to several practical trials of reliability and efficiency on the road, over a distance of about 600 kil. The Piacenza-Bobbio Passo del Penice-Voghera-Piacenza circuit (162 kil.) will be covered twice on two different days, once in one direction, and another time in the opposite direction. A further run of about 120 kil. will be made over a flat country. A test will take place for the fuel, water and electric energy consumption for maximum speed on a level road. No speed over 25 kil. per hour will be allowed, while the minimum speed required for Classes 1, 2, 6, and 7 is 12 kil. per hour; for Classes 3 and 4, 10 kil.; and for Classes 5 and 8, 8 kil. Full particulars of the various competitions can be obtained from Mr. A. G. Graziani, 22, Billiter Street, London, E.C., who has been appointed delegate of the Executive Committee in the United Kingdom.

Club are again engaged with the question of the establishment of a permanent racing circuit. Several members of the committee are this week inspecting a proposed course in the Auvergne, while the Automobile Club du Nord de la France is setting forth the advantages of one it has projected in the Northern district of France. It is urged that the latter would be within easy reach of British and Belgian as well as French motorists. The estimated cost is £200,000.

Motor-Cars in Turkey.

Arrangements have now been made whereby motor-cars introduced into Turkey and taken out of the country within six months are regarded as cars in transit. An import duty of 11 per cent. *ad valorem* has, however, to be paid; this is calculated on the invoice price, but if the invoice is not available the duty is based on a sum approximately between £200 and £400. An identification label is given with the receipt for attachment to the car, and on this being produced at the Customs House when the vehicle leaves the country, ten-elevenths of the duty will be refunded.

Some of the Competitors in the Prince Henry of Prussia Touring Competition.

Duke Ludwig of Bavaria on his Metallurgique Car.
Oberleutnant v. Bismarck on a Daimler Six-Cylinder Car.

Herr Fritz Opel on his Opel Car.
Herr Willy Pöge at the wheel of his Mercedes.
[Allgemeine Automobil Zeitung, Berlin.]

German Motor-Car Imports and Exports.

An extremely quiet state of affairs is prevailing as regards the exports and imports of motor-cars by Germany. The imports of pleasure and industrial motor vehicles and chassis into the country during the four months ending with April last only attained a value of £203,577, as compared with £347,500 in 1907. During the same periods the value of the similar exports from Germany declined from £263,880 to £170,080.

British Motorists in France.

Recent motoring visitors to France include Mr. and Mrs. Martin, London (40-h.p. Dietrich); Mr. H. Cox, London (24-h.p. Napier); Mr. and Mrs. Doillet (16-h.p. Dietrich); Captain Horn and Captain Alderborn (Sizaire-Naudin); Mr. James Austen Cartmell, London (30-40-h.p. Fiat); Sir William and Lady Holland, London (40-h.p. Itala); and Mr. and Mrs. Vaughan, Dover (20-h.p. Brasier).

A Permanent Racing Circuit in France.

The Competitions Committee of the French Automobile

Miscellaneous Items.

A public motor-car service operated by the Bavarian Government has just been established between Bad Tölz and Mittenwald.—The French War Authorities are sending out to Morocco a 40-h.p. Clement-Bayard car in the rear portion of which is fitted a quick-firing gun.—Motorists who intend taking a tour as far as the Alps will be interested to learn that the Arlberg and Stelvio Passes are now free from snow and are open to traffic.—A number of taximeter motor-cabs have just made their appearance in Havre.—The Mid-German Automobile Club is organising an International Touring Competition, to be held in Thuringia, on September 3rd, 4th, and 5th next.—Arrangements are in hand for the starting of a public motor-car service between Innsbruck and Kufstein in the Tyrol.—A petrol motor ambulance has lately been added to the equipment of the Volunteer Ambulance Society in Munich. The body is mounted on a Horch 22-h.p. chassis.—The Belgian Automobile Club announces that no practising with racing cars on the Ardennes circuit will be allowed.—The Automobile Club of Antwerp has just celebrated its tenth anniversary.

AFTER an experiment lasting over three years the motor-buses of the Nottingham City Council have been taken from public service.

ONE of the conveniences promised at the Grand Hotel, Worthing—to erect which a new company has just been formed—is a well-equipped motor garage adjoining the building.

ON Saturday, the 27th inst., the Manchester, Lancashire, Yorkshire, Sheffield and other automobile clubs will hold an inter-club meet at Buxton, the headquarters being the Empire Hotel.

A MOTOR CAR in which the Duchess of Wellington was travelling collided with a tramcar at Brentford the other day, both vehicles being damaged. Fortunately no personal injuries were inflicted.

THE Reading Motor Company, Ltd., of Castle Street, Reading, have a well-appointed garage on the main London road at its junction with the turning which crosses the Hunt Cup Course at Ascot, where a record number of cars has been seen this week.

ANY motorist whose car may have sustained damage at Towcester on Sunday, the 31st ult., owing to the presence of a quantity of liquid tar on the road through that town, is invited to communicate with the Automobile Association, Prince's Buildings, Coventry Street, London, W.

AT one of the opening meetings in connection with the Pan-Anglican Congress in London, Mrs. Carus Wilson said that the craze for motoring had a distinctly bad effect with regard to the training of the young, as it led to a diminished reverence for home life. What do the bishops—particularly those who motor—have to say on the point?

HIS name having been attached to the requisition to the Lord Mayor for a meeting against motor-buses in the City of London under a misapprehension, Mr. W. Joynson Hicks, M.P.—the death of whose father-in-law last week we regret to hear—has asked that his name be withdrawn from the petition. Mr. Joynson-Hicks is solicitor to the London General Omnibus Company, Ltd.

MESSRS. ARTHUR STODDART AND CO. have erected a commodious and up-to-date motor garage at the east end of Gullane, one of the chief golfing centres of Scotland. It is capable of standing from forty to fifty cars, and power machinery has been put in which will enable the firm to undertake any class of motor repairs. A large stock of petrol, oils, tyres, and spare parts is also kept.

AT the request of a number of our readers we have reprinted the table giving the details of the setting of valves of petrol motors, published in the *M.C.J.* of the 6th inst. Being mounted on stiff card it should prove a handy means of reference in motor repairing establishments, and we shall be glad to send a copy gratis to any motor-car agent and repairer making application for the same.

THE Senate of Rhode Island, U.S.A., has adopted a new Bill relating to the taxation of motor-cars. The chief departure is the adoption of a horse-power tax on the basis of £1 per annum up to and including cars of 20-h.p.; £2 for 20 to 30 h.p.; £3 for 30 to 40 h.p.; and £5 for cars of over 40-h.p. Dealers' licences will cost £10, and drivers' licences 4s. 2d. in the case of a car, and 2s. for motor-cycles.

UNDER the guidance of Mr. Frank Morriss, the manager, we had an opportunity the other day of going over the premises of the London and Paris Exchange Motor Agency at 55 to 59, Shaftesbury Avenue, W.C., and of inspecting the large stock of second-hand cars that is on hand, ranging from small single-cylinder vehicles to town carriages and high-power touring vehicles. Mr. Morriss, who, by the way, has entirely severed his connection with his old firm at King's Lynn, informs us that, owing to the increasing business in second-hand cars, the London and Paris Exchange have found it necessary to take additional premises for the storage of vehicles in Marshall Street, Golden Square, W., where plant is also being put down to enable any small repairs to be carried out. We understand, too, that the Agency are about to put on the market a new light car at a popular price, in which some novel features will be introduced.

HERE AND THERE.

THE Corporation of Dover have granted licences for six motor-omnibuses to ply between that town and Folkestone.

THE imports of foreign motor-cars and parts into the United States during April last

only attained a value of £37,593 as compared with £58,801 in the similar month of last year.

THE Dumfries Motor Company, Ltd., have installed an efficient accumulator charging plant in their garage, which will be at the service of motorists calling in the town.

MR. A. T. HOULDCROFT, the Superintendent of the Carriage and Wagon Department in Lahore of the North-Western of India Railway, has lately acquired a 14-16-h.p. Argyll car.

AMONGST recent purchasers of Daimler cars are the Rt. Hon. Earl Harrowby, who has acquired a 42-h.p. "Aston" landaulet, Sir John Jackson a 42-h.p. chassis with a Hooper landaulet body, and Count Gurowski, of Weild Manor, Alresford, Hants, a 42-h.p. "Daventry" detachable limousine.

THE value of the motor-cars and parts exported from the United States during April last only reached a total of £103,891, as contrasted with £137,228 in the corresponding month of 1907. The United Kingdom heads the list with £37,503, France being second with £18,723, and Italy third with £15,644.

A SOMEWHAT novel spanner known as the Rex T-Socket Auto Wrench has lately been put on the market by the Rex Wrench Company, of 184, Summer Street, Boston, Mass., U.S.A.

The outfit consists of a handle C and a set of six interchangeable sockets, as A, for one-quarter inch to five-eighth inch nuts and bolt heads. In addition, a screwdriver and open wrench for 1 inch nuts are fitted for use upon the handle. The handle C has a cylindrical portion at its upper end, pierced with a hole for the reception of a crosspiece, which may be locked in place by a screw D. The socket A has a claw shaped upper portion E, which is fitted over a circular pin in the lower portion B of the handle. A spring plunger in B snaps into the pits or wells shown in E and retains the socket at an angle to the handle as

desired. The sockets are readily removable, but must be turned to the position shown in the full lines to be removed. It will be seen that no bolts or screws are used to retain the sockets upon the handle. As a number of angles of the socket can be obtained on this wrench, it is well adapted for use in positions inaccessible to the ordinary socket or open-type wrench.

THE drop in the price of raw rubber to 2s. 6d. per lb. some few months ago has been since succeeded by a considerable and steady rise, and the figure is now reported at 3s. 8½d. The hopes of a permanent reduction in consequence of the enormous planting of rubber trees cannot possibly be fulfilled for at least another three or four years, as the demand, now that the American market has again reached its normal proportions, is rapidly depleting the stocks on hand, and the position generally shows that the price of tyres must inevitably increase. The progress of the motor industry has been hardly more rapid than the advance of the rubber industry, and factories which a few years ago were merely little shanties to-day cover many acres of ground. The Russian Prowodnik factory at Riga is mentioned by the Motor House as a case in point. Twelve years ago this factory employed a very few hands, but to-day the number of employees exceeds 12,000, while the works cover an enormous area. At the present time the tyres produced by the Prowodnik factory are said to be made of "floating" rubber quality, the weight per cubic foot being 52.8 lb. only. This may explain the very excellent results achieved with these tyres. A stock of Prowodnik tyres to the value of over £15,000 has just been acquired by the Motor House, of Euston Road, London, N.W., and they propose to sell these on terms which should prove attractive to motorists generally.

LORD MIDLETON has written in favour of the suggested speed limit for motor-cars over Hindhead.

MR. GEORGE PENMAN'S garage at Moffat is well known to motorists in Dumfriesshire and the district round about.

MESSRS. CASTLEHOUSE BROS., who have a garage at 124A, Victoria Road, Scarborough, have been appointed official repairers to the R.A.C.

THE Newhaven Rural District Council have adopted a resolution calling the attention of the Prime Minister to the need of legislation to minimise the alleged evils caused by heavy motor road traffic in rural districts.

FROM the report of the Comptroller-General of Patents, Designs, and Trade Marks of last year we learn that, owing to the success attained by certain flying-machines, inventions relating to aeronautics were more than twice as many as in 1906, and nearly five times as many as in 1905.

A SHEFFIELD journal advocates the motor hearse, as it "saves the somewhat distressing necessity of removing the body to the railway station, placing it in a train, and then removing it once more when the destination is reached. The motor hearse runs to the door of the house from where the dead one is to be removed, and can go to the door of the home."

A Section of the Flag Signallers employed by the Dunlop Company to indicate the way through the towns along the route of the 2,000 Miles Trial.

THE Whitney Manufacturing Company, of Hartford, Conn., U.S.A., has brought out a new chain belt for driving radiator fans or mechanical lubricators. Each pair of side links of the steel chain is closely wrapped in a leather cover; the latter is held firmly in place by steel locking plates that have teeth on the sides embedded in the leather, while the plates are secured in place on the links by projections on the side links which pass through the locking plates and are riveted to them. Only the leather covers come into contact with the grooved pulleys, and the drive is therefore noiseless. It is claimed that all stretching is obviated, although the chain is perfectly flexible.

Now that the season for hiring motor-cars is progressing so favourably the point occurs as to the necessity of supplying only satisfactory vehicles for that purpose. It is by the adoption of such a policy that the Park Motor Company, of 216, Tottenham Court Road, London, W., have developed their extensive business in hiring vehicles. They only send out high grade cars in charge of really practical drivers, who, in addition to knowing their vehicles, are also acquainted with the country in which they are told to drive. This fact has resulted in the Park Motor Company establishing a motor hiring business in London, which is not only proving satisfactory to patrons but gratifying to themselves.

A SERVICE of motor-buses is now running from Dunoon to the outlying districts on the Firth of Clyde.

THE Weiss Aeroplane and Launcher Syndicate, Ltd., is one of the latest registrations at Somerset House.

ONE of the latest purchasers of an 18-h.p. Reo car is Mr. D. F. Cronin Coltsman, D.L., Glenflesk Castle, Killarney.

THE DAIMLER COMPANY have just delivered a 58-h.p. car with Hooper limousine body to the Grand Duke Michael of Russia, Keele Hall, Newcastle, Staffs.

THE Broadway Garage has been opened on the Sevenoaks Road, Bromley, Kent, by Mr. Allen. He is undertaking the maintenance as well as the storage of cars.

AT Johnstone, N.B., a new garage has been erected in Rankine Street, by Messrs. Love's Motor Car and Garage Company. Tyres, spare parts, oils, &c., are being stocked, and there is also a well-equipped repair shop in connection with the establishment.

MESSRS. MARTEN AND JELLCOE, LTD., of the Ferry Works, Thames Ditton, send us a photo of a 20-cwt. van they have lately completed for Messrs. H. A. and F. Nelson, wholesale tobacconists, East Ham. The order for the vehicle was booked in March last at the Cordingley Show, in regard to which the firm write that, "We are fully satisfied with the results."

MOTORISTS entering the town of Nottingham from the South know the tram-lined Arkwright Street, which constitutes the way to the famous market-place. On the right hand side is the motor-car depot of Messrs. R. A. Cripps and Co., Ltd., who were among the pioneers of automobilism in the county of Robin Hood. Here are stocked spare parts, tyres, oil, petrol, and everything that the traveller by car requires, while in a street nearly opposite is the firm's capacious and commodious garage. Originally the building was devoted to the housing of tram-cars and the horses which drew them; now it is wholly given up to the storing of motor-cars, and those drivers who have occasion to visit the city can easily leave their cars with Messrs. Cripps and Company and go up to the further corner of the town by tram—a convenience that even motorists do not always spurn.

AN interesting demonstration of fire extinction took place on Tuesday last before representatives of various municipal authorities and other experts to test the qualities of the new fire extinguisher known as "The Diamond Powder." A structure 18 ft. high and 2 ft. wide was set well alight and the fire put out by a few "throws" of powder. Again, a large iron pail was taken and a two-gallon tin of petrol emptied into it. This was set ablaze, and, for experiment, water and sand were poured upon it to show how ineffective they were to smother the fire. A very small quantity of the Diamond powder was then thrown in, and the flame disappeared instantaneously. Petrol was also poured on the ground, which, when lit, produced a blaze of several yards. This also was extinguished with perfect ease by merely sprinkling the powder over it. Everything pointed to the fact that the Diamond Powder was an effective and instantaneous medium for fighting fire, and we can congratulate Mr. Whaley on the success of his invention.

IN connection with the Napier-Fiat match on the Brooklands track on Whit Monday, Mr. D'Arcy Baker, of the Fiat Company, has received a letter from Mr. Ed. Rodakowski, the clerk of the course, in regard to the speeds attained. He states:—"The official times automatically recorded on the Brooklands Automobile Club's automatic electric chronograph for the first two laps (the laps in which both cars were running) of the Napier-Fiat match in the 90-h.p. Standard Class, on Whit Monday, correspond to the speeds given hereunder. It must be noted that automatic timing commenced while the cars were passing at speed over the contact strip, some 490 yards after a standing start. Napier, first lap was traversed at an average speed of 96.15 miles per hour. Fiat, first lap was traversed at an average speed of 105.24 miles per hour. Napier, second lap was traversed at an average speed of 113.01 miles per hour. Fiat, second lap was traversed at an average speed of 121.64 miles per hour. The official length of each lap slightly exceeds 2.765 miles."

Correspondence.

[Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.]

DOCTORS AND THE TRADE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—While one is glad to recognise the enthusiasm with which medical men have taken to motoring, there is an aspect of their advocacy to which attention may usefully be drawn. From the nature of their profession they have splendid opportunities of gaining access to the country and country people who are likely to adopt cars; they have their confidence in a great degree; and they can secure their car without difficulty.

These advantages would be of material assistance to motor-car agents anxious to sell cars. I have just heard that in one important district some of the local doctors are doing, unconsciously, of course, a great injustice to those who are locally engaged in the automobile business by giving glowing accounts of the performances of their cars, extolling their tyres, and generally exalting particular goods and parts. More than that, they may sometimes suggest various traders with whom to deal.

I know the matter is a difficult one and not likely to be appreciated in those places of large extent, but the motor firm in a small town

The clean condition of the working surfaces is easily accounted for, as the light oil would exert a flushing or cleansing action on the residue of the heavier oils. The subject is surely of importance, so I hope that other motor enthusiasts will investigate the question and let the readers of the *M.C.J.* have their results.—Yours truly,

C. T. W. H.

MOTOR-BUS MATTERS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Those responsible for the management of the various motor-bus services in London are as fully aware as are the public of the necessity for continuing experimental work with a view to obtaining a more perfect vehicle than is now seen in the streets of the capital. On this point Mr. F. Searle, engineer to the London General Omnibus Company, is of opinion that the successful motor-bus of the future will weigh about 3½ tons, be noiseless, having greater acceleration in starting than is now the case, and also be perfectly clean—the latter a quality which does not now characterise many of the vehicles in service. His belief is

The Entrance to the Automobile Association's Garage at the Franco-British Exhibition.

which has equipped itself for business purposes will not like to feel that there is another Roland in the field, who has the advantage of getting so well forward to the inner room of the great mansion. Perhaps medical men will, on reflection, see the unfair competition they engender by sending their patients to firms in London and the great cities instead of allowing the local trader a chance.—Yours truly,

B. SUMMERS.

SOME FACTS IN THE SELECTION OF MOTOR OILS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have been delayed by other work or I should have replied to "Veritas Prevalebit" before. I certainly do take his remarks in good part, and I am really interested in his experiences. The only conclusion I can come to is that he is the fortunate possessor of cars provided with most perfectly cooled engine cylinders. Such an approach to the ideal almost makes one inclined to become poetic over his Utopia. I will certainly, for a few days, try a cycle oil, only it seems to me that an oil that yields on fractionation over 50 per cent. distillate at 160 F. must be accompanied by two drawbacks: Firstly, at a relatively early stage so much of the oil would be volatilised as to seriously affect the composition of the gases, and consequently their proper combustion. Secondly, less than half the lubricant would be left available for oiling, so that at least double the usual quantity of oil would be required, and that is why I question the economy and efficiency.

that there will be a reversion to steam in connection with motor-bus work, although he is fully satisfied that the petrol motor-bus can be made a sound financial undertaking.

This opinion may receive useful publicity in your columns in view of the forthcoming meeting against the motor-bus at the Mansion House.—Yours truly,

A. B. T.

ATTEMPTED ILLICIT DEALING.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—To-day a chauffeur invited us to supply six gallons of petrol, to give him a receipt for double the quantity, and to hand him the cash value of the excess. Prompt refusal called forth the rejoinder "I shall never come to your garage again unless you do."

As the owner of the car was unknown to us, the man was followed. By the time the name and address were found, the owner had left for London, so our Mr. Henry Moore is making a special journey there, to interview, and put the facts before him.

Many cars are put up at our garage, and our experience proves that the very large majority of chauffeurs are honest and trustworthy men, but the above incident is not an isolated case, and proves, not only that some are thieves and swindlers, but also proves at one and the same time that some garage owners are equally dishonest, indeed, more so, for no chauffeur would make such proposals unless he met with some measure of success. The action we are taking is costing time and money

but we feel it a public duty, and that prompt action must be taken to expunge the degradation of being asked to be a party to such a swindle.—Yours truly,

MOORE OF BRIGHTON, LTD.

STARTING ON THE SWITCH AND A DANGER TO BE AVOIDED.

TO THE EDITOR OF *The Motor-Car Journal*

SIR,—An excellent feature of modern petrol cars, where fitted with coil and accumulator ignition, is the ability which they possess of frequently starting "on the switch," without any turning of the starting handle being required. I am reminded, however, that even in this way of putting an engine in operation, just as in the usual method, care must be taken in first seeing that the change-speed gear is in the neutral position, by the receipt of a letter from an American friend in which he mentions a rather serious accident which recently occurred in a garage in Chicago owing

of cars to lend their vehicles for the day. They should be available at 10.30 in the morning, and will return to town before dark. Every possible care will be taken of the cars, and the club will take every precaution that no damage is done to them. Will those who are willing to help in this matter please communicate with me at "Wivenhoe," Wynndale Road, South Woodford, Essex, as soon as possible?—Yours truly,

HAROLD FULLER,

Hon. Sec. Essex Motor Club.

THE HORSE POWER OF MOTOR CABS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—A question is raised by your correspondent "R. B. N." in the last issue of the *M.C.J.* with regard to the horse power of motor cabs. It may interest him to learn that the winner of the recent motor-cab reliability competition in France was a single-cylinder vehicle. Competing with a number of two and four cylinder-cabs, it not only

Touring in France.—The Harbour, Marseilles.

to the fact that an owner had stopped his car with the gears in mesh. When he came to take the car out again he started the motor on the switch before taking his seat, and the big 40-h.p. vehicle at once bounded forward at considerable speed, broke through the garage doors and finished against a brick wall on the opposite side of the road. The incident may serve as a reminder to motorists to always see that the gear is in neutral when they put their cars away.—Yours truly,

R. S. W.

CRIPPLES' OUTING.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—On Saturday, the 27th inst., the Essex Motor Club has arranged an outing for crippled children, of whom it is surprising what a number are to be found in London. It is proposed to fetch the children from one of the day schools in the East End of London, and drive them out into Epping Forest, where they will be amused and looked after for the day.

The club have already been promised the active support of Alderman Billings (the Mayor of Hackney), Sir John Kirk, the Ragged School Union, and the Fresh Air Fund, and an appeal is made to owners

went through the 4,000 kilometre run without trouble, but in the fuel consumption test came out with a noteworthy high mileage to the gallon of spirit.—Yours truly,

SINGLE CYLINDER.

We shall be glad to receive the address of Mr. Hewer, of Worthing, who has sent us a photograph of his Jackson car.

The address of the makers of the H. D. W. petrol gauge for which a correspondent asks is Messrs. H. D. Woolley and Co., 25-29, Coleman Street, London, E.C.

A HUB-CAP from a Humber car has been picked up in the neighbourhood of Harlesden, and the owner can have same on application to 32, St. Mary's Road, Harlesden, N.W.

A CORRESPONDENT asks for advice as to the engine power most suitable for a motor repair shop, the style and size of lathe most generally useful, and size of dynamo required for charging accumulators.

MR. A. A. HANDS, Brookville, Elm Grove Road, Barnes, S.W., shed a Palmer tyre and tube (810 by 90 mm.) on the London side of Reading, on the main Bath road, recently, and will be glad to hear if it should be found.

MOTOR-CARS FOR AUSTRALIA.

SOME NEEDED MODIFICATIONS TO MEET ANTIPODEAN CONDITIONS.

THE rapid advance made by motor-cars in popular favour in Australia, and the many and various avenues of useful employment that are open to this type of road vehicle, prompt some inquiry as to the experiences of motor users on Antipodean roads. It is something of a test of delicate machinery to subject it to rough and ready trials on the primitive roads of a new country under conditions of which its designers and manufacturers 10,000 miles away know absolutely nothing. It is the fashion to speak of Australia as a new country, and though the colony of New South Wales was founded just after the American war of independence was ended, and the Georges had many merry years to run on the throne of England, our roads are still those of a brand new settlement. The good roads of Australia reckoned in anything like decent stretches, as the motor requires, could easily be counted on the fingers of one hand, while the name of the bad roads is legion. Even the good roads have grave faults, such as the dreaded open water channel or V-shaped gutters.

Pertinent inquiry may, therefore, be made as to the effect which rapid passage over these roads has upon the speedy cars now turned out of British and Continental motor factories. Although the want of enterprise, foresight, and even of forbearance on the part of the British authorities kept the motor industry back for years in England, and helped to give France a commanding lead in the trade, it is a source of great gratification to Australians that the old mother land has since come to the front, and overhauled her brilliant and versatile neighbour across the Channel, and that Britain now produces cars which are capable of taking their place in the very front rank of those of all the world. Are any modifications in the design and manufacture of these cars required to suit Australian conditions. A few weeks ago the writer sat in a car in Melbourne which, as it rolled majestically along, exuding an impression of an irresistible reserve power delicately controlled in the simplest way by the frankest-looking throttle handle, completely filled his eye and charmed his senses. Instinctively he felt that this was a car par excellence; that the designer and maker had produced a masterpiece. "How many of those have you got? the owner—a car importer—was asked. "Only this," was the unexpected reply. "Immediately I got hold of the steering wheel and gave her a run I cabled for a dozen. It is a dear car, too, worth a thousand pounds. I got a reply next day; "Cannot deliver any this year; can book three for you next year." It will be readily understood that while the trade is in this state manufacturers are not likely to bother their heads very much as to whether the conditions of roads situate at the other side of the globe necessitate any structural alterations in the cars. It may be well to consider, however, in what form would representations made to the manufacturers, supposing that they were willing to make some alterations to suit our special conditions? Are the experiences of motor drivers on Australian roads such as to justify them in a demand for a remodelling, or, at any rate, a modification in parts of the design? What is the tale told by the repair shops? Some inquiry specially directed to this aspect of the question shows that the modern motor-car has achieved such a stage of perfection that radical troubles are few. But there are some, and undoubtedly some of them are due to the rough Australian roads.

It may briefly be accepted that the engine of a first-class car of British or European build will give practically no trouble with proper care; although even here one finds a point in which Australian conditions demand a modification. Owing to the long patches of bad surface met with the slow speeds are more often called in requisition than where for hundreds of miles billiard-table tracks stretch like white ribbons through verdant fields. Consequently more radiation is needed, more water, and larger circulation pipes required. The fastening flanges on the circulation pipes also give considerable trouble, snapping off owing to the incessant vibration. They should be strengthened in some way. This is perhaps the only alteration that could be considered essential on the engine side, although Australian conditions in respect of sparsity of population, and, therefore, of repair shops in the country districts, make it extremely advisable that in addition to the magneto there should be an alternative and an entirely independent ignition. The ignition is responsible for considerably more than 60 per cent. of engine stops. In the recent trials in Australia over long distances and through rough conditions, the breaking down of coils has given considerable trouble. In several instances this has occurred in absolutely new cars. High-tension switches have also caused trouble by short-circuiting. An improvement which might very well be effected is the better insulation of coils from heat. With a temperature ranging to over 160 deg. in the sun, the wax filling is liable to melt, and this has serious results. Coils would be better suited to hot climates if boxes were lined with asbestos sheeting.

Tyres may be excluded from any consideration of this sort. This sort of trouble we ever have with us, and tyres are always anathema. Something might be said, perhaps, on the score of heat in Australia affecting tyre conditions, but the Dunlop Company is experimenting with motor tyres here now, and as their capable experts closely watch all developments they can be safely trusted to properly meet the requirements of the situation. Upon the subject of tyres, however, it may be said that bigger tyres would certainly be an advantage

in Australia. The comparatively small size of the tyres is perhaps the biggest defect in cars imported into this country. No car of 10-h.p. or over should be fitted with tyres less than 120 millimetres.

The transmission gear in many cases gives serious trouble, and here the bumping and vibration on rough and uneven roads is distinctly to blame. Makers could advantageously devote attention to strengthening this important portion of the running mechanism for Australia. It is simply a question of strength, though doubtless allied to the problems of distributing and taking up shock generally. Occurrences of trouble in transmission gears through no "stop" being provided to prevent the spinning of the male portion of the clutch whilst changing speed are by no means infrequent, and a considerable number of the ruined pinions seen in the garages are traceable to this defect. This certainly is a point in which makers can assist Australian drivers materially. The clutch stop or brake should be made universal, and if the gear were generally strengthened, and particularly the bevel pinions, by more metal being used in the wheels, a great deal less would be heard of troubles in the transmission gear.

Engine, gear, and tyres passed, we come to frame and springs, and here undoubtedly the Australian must speak as an Australian and demand, if not preferential, at least differential, treatment. We need not look for really good roads for many years to come. The route that links the two chief capital cities of the continent is over one of the worst tracks that could possibly lay any claim to be regarded as a main road. The recent drive of Messrs. C. B. Kellow and H. B. James from Sydney to Melbourne over this execrable piece of road is one of which Australian motorists might well be proud, and the fact that they drove almost 600 miles in a little over twenty-five hours without taking a spanner out of the tool-box might be regarded as proof positive that there is not much the matter with the car as sold to-day for Australia. But it

The Renard Road Train which is now employed in transporting visitors at the Franco-British Exhibition.

This is the first train manufactured at Coventry by the Daimler Company, the sole manufacturing contractors for the system. The motor, it may be added, is of 100-h.p.

should not be forgotten that this car was piloted by two of the most skilful drivers south of the line, if not in the world, and what must be considered is the effect of average and sometimes decidedly unskilful driving. And reckoning generally, skilful, average, and unskilful drivers being considered in the mass, the most persistent breakages, excluding tyre troubles, are undoubtedly the snapping of springs. In every contest so far run, where the breakages take place on the stage, so to speak, in full view, spring troubles have been existent. Here more strength in the way of extra leaves is undoubtedly needed. Numerous preventives have been tried, but there seems to be only one effective remedy for our roads, and that is the general adoption of some mechanical shock absorber after the Truffault principle. With some good device of this sort in use practically all trouble will be eliminated, and even the dreaded Melbourne-Sydney road can be followed with perfect safety.

Frames, generally speaking, seem strong enough, and when one considers the work they successfully go through it must be admitted that at this point the motor manufacturer has achieved a masterpiece of design and construction. But even here our roads have asked some cars—and first-class cars, too—a question to which they could not satisfactorily reply. In a long-distance trial a couple of years ago the frames of three 15-h.p. cars cracked. The weakness occurred on the bend of the narrowed section of the chassis. Bent front axles are to be found on fully twenty per cent. of our touring cars, and this is caused in most cases through the chassis "getting down" on to the front axle when bumping across "V's" or the open water channels previously mentioned. The remedy for this is more clearance between the frame and the axle, and the use of shock absorbers.

Finally, the question of ground clearance may be referred to briefly. Many cars are built dangerously close to the ground, in some

instances not more than seven inches clearance being left. A number of vehicles have had their bottom practically ripped off from this cause. There are many routes in Australia where short stumps have been left in the road, and where high ridges run between ruts high enough to make themselves unpleasant. One of the best Australian drivers remarked only recently that in driving a car with a 9 in. clearance he has often had his heart in his mouth in the fear that boulders, stumps, or high ridges would crash into the under-gear. Cars for this country should have not less than 10 or 12 in. clearance. Only one more remark need be made, and that is that, taken all round, a general strengthening up is required. For instance, there are few motorists here who have not found that they would like stiffer supports to their mudguards. In the body also the constant vibration works havoc, and extra strength is needed. After three or four months foreign bodies will be found in the workshop being generally supported and stiffened, and British bodies find their way there also after a slightly longer use.

THE SPEED OF VEHICULAR TRAFFIC IN POPULOUS PLACES.

THE following is the text of the bill to secure the regulation of speed of vehicular traffic in public thoroughfares in populous places, which passed its first reading in the House of Commons on Monday, and is set down again for the 22nd inst.

Whereas it is expedient to secure better protection to persons lawfully using highways and other public thoroughfares, and especially of children in public thoroughfares in populous places: Be it therefore enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in

The 18-22-h.p. Eight-seated Fire Service Wagon, built by the Sud-deutsche Automobil Fabrik, of Gaggenau, Germany, for the Fire Brigade of Moscow, Russia.

this present Parliament assembled, and by the authority of the same, as follows:—

1. In this Act, unless the context otherwise requires:—(a) By "thoroughfare" is meant any public highway, street, or other way used for the purposes of foot and of vehicular traffic. (b) By "populous places" is meant any place where there are continuous human habitations on either or both sides of a thoroughfare for not less than a quarter of a mile. (c) "Dangerous crossings" are where two or more roads meet, intersect or cross each other, at any point to be determined by the police as dangerous, and which shall have suitable indicators to that purpose on both sides of the road. (d) By "vehicle" is meant any kind of carriage, conveyance or machine which is propelled by any kind of motive power, whether conveying passengers or otherwise.

2. No person shall drive or cause to be driven any vehicle in any populous place at a speed exceeding ten miles an hour.

3. No person shall drive or cause to be driven any vehicle at or past any dangerous crossing at a speed exceeding six miles an hour.

4. This Act shall not apply to police, military, or firemen on duty.

5. Every person, whether principal or agent, who is guilty of any offence under this Act shall for each offence be liable, on summary conviction, to a fine of not less than twenty shillings, and not exceeding five pounds, and in the case of a second or subsequent offence to a fine of not less than forty shillings and not exceeding ten pounds, together with the costs of the prosecution, or in the discretion of the court imprisonment for a period not exceeding one month for the first offence, and for any subsequent offence to a period not exceeding two months.

6. Proceedings under this Act may be taken in any court of summary jurisdiction on information or complaint made by a police constable or by any other person, but such proceedings must be commenced within fourteen days of the commission of the alleged offence.

7. This Act shall come into operation immediately on its receiving the Royal Assent.

8. This Act may be cited as the Vehicular Traffic Regulation of Speed Bill.

The Bill is introduced by Mr. B. S. Straus, supported by Sir J. W. Collins, Sir Andrew Torrance, Sir John Brunner, Messrs. W. N. Dickinson, W. C. Steadman, Dr. Cooper, W. Crooks, Ernest Gardner, Abel H. Smith, G. A. Hardy, and William Pearce.

ROAD REPORTS.

DALKEITH.—The Secretary for Scotland has acceded to the request of the Dalkeith Town Council for the restriction of the speed of motor-cars to ten miles per hour in certain portions of the borough. Even now the anti-motorists are not satisfied and are expressing surprise that their request for the inclusion of the Eskbank Road in the restrictive zone has not been acceded to.

EAST SUSSEX.—The recent hill climbing competition for motor-cycles at Clayton Hill has been the subject of discussion at the Parish Council meeting, when it was resolved to ask the Chief Constable to prevent a recurrence of such events. The attention of the East Sussex County Council is also to be called to the necessity of a warning notice being placed at the bottom of Clayton Hill.

SCOTLAND.—Among police traps lately noticed in Scotland, Dumfriesshire has obtained an unenviable notoriety, and there are also controls on most of the main roads in the county of Forfar.

LANCASTER.—The police are reported to have been exceedingly watchful of late on the roads to Preston and also to Milnethorpe.

WEYBRIDGE.—At the Weybridge Urban Council meeting, the Highways and Lighting Committee reported that they instructed the clerk to inquire why the Council's application for a ten-mile motor speed limit had not been acceded to, and to request that the County Council should include Weybridge in their next application to the Local Government Board.

HENDON.—Acting on a memorial from the inhabitants of Great Stanmore, Middlesex, the Hendon Rural District Council have resolved to apply to the Local Government Board to restrict motor-cars to a ten-mile speed limit along the main street.

SHOREHAM.—Along the Steyning road at Old Shoreham the police have measured a quarter of a mile along which motorists are being timed daily.

NANTWICH.—At a meeting at Nantwich on Saturday, Mr. S. Gleave, a member of the Cheshire County Council, mentioned that in consequence of the motor traffic on the main roads in the rural districts, the county surveyor had had to provide for their upkeep by increasing the expenditure per mile from £80 to £100.

AN ACCIDENT AVERTED.

THE Grand Duke Michael of Russia and his wife, Countess Torby, were in a motor accident a few miles from Crewe on Saturday evening. His Imperial Highness had purchased a new motor brougham, and this arrived at Keele Hall on Saturday. Accompanied by the Countess and two chauffeurs, the car was being taken for a trial trip, and, in the evening was returning along the Newcastle Road, when a child attempted to cross the road. The car was going at a moderate speed, and, in order to save running down the child, the chauffeur turned the car into the hedge and collided violently with a huge oak tree. One of the chauffeurs was pitched into a field and his leg injured.

The Grand Duke and the Countess happily retained their seats, but the violent impact gave them a severe shock, and they were lifted out of the tilted car and conveyed to a farm close by. Later the Grand Duke and the Countess returned to the scene of the accident and congratulated the chauffeur on his prompt action.

IN view of the great punctuality in starting which was a feature of the Whitsuntide racing at Brooklands, it is interesting to note that the B.A.R.C. authorities have added to the duties of Mr. H. Waymouth Prance, A.I.E.E., A.M.I.A.E., the marshalling of the cars preparatory to the start of each event.

MESSRS. MUTEL AND CO., of 124, Rue St. Charles, Paris, direct attention to the fact that the Mutel motor fitted to the successful motor boat Lolotte at the recent meeting at Monaco was a standard four-cylinder engine, as supplied to their clients for various purposes, and not a machine made specially for the races. The firm are making a speciality of petrol motors not only for pleasure cars but also for industrial vehicles and flying machines.

THE question of the actual cost of running a high-powered car is a frequent topic of discussion, and the item for repairs has usually to be taken closely into consideration. Mr. T. Burnside, of Thorndale, Delgany, county Wicklow, writes that his Beeston-Humber has given him complete satisfaction. "I have travelled nearly 3,000 miles on bad roads all through the winter and the repairs have only been a few shillings. Although the car is 30-h.p. I have only had one puncture."

THE United Motor Industries, Ltd., inform us that the German Government have adopted the Eisemann low tension magneto for use on their special vehicles, this having been found to be most effective in resisting the action of sea water and damp.

CLUBS AND ASSOCIATIONS.

ROYAL.

THE R.A.C. has issued 1,500 of its car badges, 85 of which were supplied during June, and 1,100 drivers' badges.

MOTOR UNION.

LAST month 207 Motor Union badges were issued, making the total number 3,600. 160 hotel signs have been supplied to recommended hotel proprietors, and 112 repairs' signs have also been issued.

THE AUTOMOBILE ASSOCIATION.

LAMPS are now, by the arrangements of the A.A., being kept alight between the lighting up time and sunrise on the premises of the following agents, the figures shown being the distance to London from the nearest town:—F. Hygate, High Street, Handcross, Sussex, 33½ miles; Messrs. Fry and Compton, Motor Factors, Bagshot, 26 miles; J. Moggeridge, Orme Motor Works, Potters Bar, Barnet, 14 miles; W. Collyer, High Street, Redbourn, Herts, 24½ miles; H. Mitchell, Winchester Street, Overton, Hants; C. A. Roberts, Chandlers Ford, Hants, 72 miles; E. J. McLennan, 18, London Street, Basingstoke, 48 miles; J. E. Glover,

Shaw, Messrs. F. W. Lanchester, D. J. Smith, Max R. Lawrence Douglas Leechman, F. L. Martineau, L. A. Legros, T. C. Pullinger, T. B. Browne, and Rees Jeffreys.

An article on the "Setting of Valves" in the *M.C.J.* was considered. It was decided to postpone taking any action in the matter until next session, when a sub-committee would be formed to consider and report on the subject. Mr. Max R. Lawrence promised to draw up a preliminary report in the meantime.

LINCOLNSHIRE.

MEMBERS of the Lincolnshire A.C. assembled from all parts of the county in Lord Ancaster's picturesque park at Grimsthorpe, on Saturday, to witness a series of speed trials for touring cars. The private road in the park, having recently been steam rolled, was in splendid condition and some excellent trials were witnessed. The length of the course was about a mile, and it took in the stiff ascent in the Red Deer Park. There were three events, for small, medium and high-powered cars respectively, and a really capital entry was secured; most of the entrants turned up and took part in the racing. The handicapping formula was that adopted by the R.A.C., and the times were

The Manchester Motor Club's Reliability Trials.—Some of the Competitors at Stratford-on-Avon.

Witham, Essex, 39 miles; E. H. Hides, Cobham Motor Works, Cobham, 20 miles; Wadham Bros., Horndean, Hants, 62 miles.

THE AUTO-CYCLE UNION.

It has just been decided that the Land's End to John o' Groat's event will take place from July 13th to 18th. Fifteen entries have been received up to the present.

The International Auto-Cycle Tourist Trophy Race will be held about the end of September instead of October as was originally proposed. This year the fuel allowances will be one gallon per 100 miles for single-cylinder motor-cycles, and one gallon per eighty miles for multi-cylinder machines.

THE INCORPORATED INSTITUTION OF AUTOMOBILE ENGINEERS.

A MEETING of the Council of the Incorporated Institution of Automobile Engineers was held on the 10th inst. There were present:—Mr. Dugald Clerk (in the chair), Col. R. E. Crompton, Dr. H. S. Hele-

taken from a flying start. In addition to two prizes offered by the club in each event, open to amateur members only, the competition decided the winner of the Newsum Challenge, a trophy given by Capt. H. E. Newsum. A special prize was also offered for the car making the fastest time over the course, and for this there was fine racing between Mr. R. M. Wright's 38-h.p. Napier and Capt. H. E. Newsum's 55-h.p. Daimler. The first named had the better time, viz., 61 3-5 sec., while Capt. Newsum's time was 66 sec. The results in the other classes were announced as follows:—

CLASS A.—For cars not exceeding 14-h.p.: 1, Dr. E. H. Cragg, Baby Peugeot; 2, Dr. Sharp, Brant Broughton, Richardson. Also competed: Mr. J. Tomlinson, Baby Peugeot; Mr. H. Willis White, Rover; Dr. W. F. Müller, Peugeot; Mr. J. G. Constable, Darracq.

CLASS B.—For cars not exceeding 25-h.p.: 1, Mr. W. Niasler, Talbot; 2, Dr. F. Husband, Spyker. Also competed, Mr. T. M. Winch, Gladiator; Mr. G. Linnell, Argyll; Mr. T. W. Mays, De Dion; Mr. W. J. Newsum, Panhard; Mr. W. A. Tomlinson, Hamber; Mr. G. H. Nalder, Germain.

CLASS C.—For cars exceeding 25-h.p.: 1st, Dr. R. G. Hogarth, Clement-Talbot; 2nd, Major R. H. Fowler, Siddley. Also competed:—Mr. C. H. Gilbert, Siddley; Sir Hickman Bacon, Wolseley; Major

J. A. Cole, Humber; Mr. H. G. Nalder, Berliet; Mr. A. H. Moreing, Daimler; Mr. T. W. Mays, Napier; Mr. F. Richardson, Daimler; Capt. H. E. Newsum, Daimler; Mr. R. M. Wright, Napier, competed for the special prize only.

The Newsum Challenge Cup was taken by Mr. T. W. Mays, of Bourne, on his Napier.

The admirable manner in which the arrangements were made for the gathering was freely commented upon, and the responsible officials were as follows:—Clerks of course, Sir H. Bacon, Col. J. S. Ruston, Major J. A. Cole, Capt. H. E. Newsum, Mr. C. W. Pennell, Mr. C. Hardy, Mr. A. A. Padley; marshal, Dr. W. J. Gilpin; assistant-marshals, Dr. Husband, Major R. H. Fowler, Dr. E. H. Cragg, Mr. T. Ives; starter, Mr. W. R. Pennell; timekeepers, Mr. T. E. Foster and Mr. W. Mansell; hon. secretary, Dr. Godfrey Lowe.

ESSEX COUNTY.

THE Essex County Automobile Club held their first hill-climbing competition at Bottledown Eill, near Billericay, on Saturday last.

A "picnic" luncheon in an enclosure adjoining the hill, by permission of Mr. C. Gibson, preceded the competition, which was held under the following conditions, viz.:—The cars ascended the hill in a preliminary test and were clocked, after which they were drawn in pairs and handicapped on the result of their preliminary performance, and run up together in heats, any competitor improving his time by as much as 10 per cent. in any of the heats being disqualified.

The winner proved to be Mr. W. Guppy, of Buckhurst Hill, on a 20-h.p. Humber, Mr. F. Lindus Forge on a 12-16-h.p. Vauxhall, and Mr. J. Gurney Fowler, on a 35-h.p. Renault, tying for the second place.

After the competition the members and their friends proceeded to Hope Lodge, Little Burstard, where they were entertained to tea by Mr. and Mrs. R. B. Johnson.

The Double-deck 'Bus employed by the London and North-Western Railway Co. between Watford and Bushey.

MANCHESTER.

THE Manchester Motor Club has held a three days' reliability trial. At the start from Hereford on the last day the weather was unpropitious. The route lay from Hereford to Abergavenny, Rye, Monmouth, Speechhouse, for the hill climb, Gloucester, Cheltenham, Chipping Norton, Tredington, and Stratford-on-Avon. The rain ceased soon after the start, the roads improved, and there was sunshine the remainder of the day. The total distance was 122 miles, the first half being a severe test. The following made non-stop runs: N. Crossland, 16-20-h.p. Calthorpe; V. New, 14-h.p. Siddeley; A. Albert, 12-h.p. Riley; J. Aiken, 12-h.p. Gladiator; R. Carlisle, 14-h.p. Argyll; H. Cranham, 22-h.p. S.C.A.T.; C. Antill, 14-h.p. Argyll; H. Hollingdrake, 35-h.p. De La Buire; J. Chambers, 20-h.p. Bell; F. Hunt, 15-h.p. Humber; Hunt, 20-h.p. Humber; H. Brady, 8-h.p. De Dion. The result of the hill climb, time test only, was that H. Hollingdrake was first on his 35-h.p. De La Buire, J. Higginson, 80-h.p. De La Buire, was second, and F. Hunt, 20-h.p. Humber, was third.

NORTH MIDDLESEX AND SOUTHERN.

THANKS to the hospitality of Mr. A. W. Gamage, who invited the members of the North Middlesex Motor Club and of the Southern Motor Club to a garden party at his residence at the Manor House, North Finchley, a very enjoyable afternoon was spent on Saturday.

The competition for the Gamage challenge cup in the inter-club speed judging contest was first held over a course from Hadley Common to Bell Bar and back, a distance of about ten miles. The team of members from each club had to drive at a speed which was set them without

the use of speedometers, so that it became a matter of judgment solely. In the end the North Middlesex A.C. retained the cup, which it has held during the past year, by a narrow margin of total difference of errors in the two teams of 17 miles per hour.

Following the names of the teams we give two sets of figures, the first indicating the speed set, the second the actual speed made:—North Middlesex team:—C. W. Smith, 12-h.p. Darracq, 19 m.p.h., 17.25 m.p.h.; T. Clements, 12-h.p. Humber, 15 m.p.h., 15.7 m.p.h.; C. Cutler, 15-h.p. White steamer, 17 m.p.h., 18.1 m.p.h.; T. Robertson, 8-h.p. Rover, 16 m.p.h., 15.2 m.p.h.; Max Graddon, 16-24-h.p. Fiat, 14 m.p.h., 14.4 m.p.h.—total of errors, 4.99 m.p.h. Southern M.C. Team:—Malcolm Brooke, 24-h.p. Malcolm, 17 m.p.h., 15.6 m.p.h.; H. Gutteridge, 8-11-h.p. Peugeot, 14 m.p.h., 15 m.p.h.; W. J. Jones, 12-14-h.p. Clement, 13 m.p.h., 13.4 m.p.h.; J. Pattison, 8-11-h.p. Panhard, 15 m.p.h., 13.8 m.p.h.; T. Carpmal, 12-18-h.p. Riley, 19 m.p.h., 18.8 m.p.h.—total errors, 5.16 m.p.h.

The competition over, the competitors and their friends adjourned to the Manor House, where the cars were accommodated in the buildings and grounds adjoining Mr. Gamage's charming place. After tea an inspection of the gardens was made and an entertainment followed during the evening. At the conclusion of the programme a hearty vote of thanks to Mr. Gamage for his hospitality was enthusiastically given, on the proposition of Mr. F. T. Barber, the hon. secretary of the Middlesex A.C., seconded by Mr. C. Lorkin, the hon. secretary of the Southern M.C. In reply Mr. Gamage, who is a vice-president of the former club said he hoped this annual reunion would do something to promote good feeling between the sportsmen of the two London clubs.

SHEFFIELD.

THE Sheffield and District A.C. has removed its offices to 7, Pri-deaux Chambers, Change Alley, Sheffield, opposite its head-quarters.

The committee have placed a red triangular notice near the dangerous cross road into Whiston, on the Bawtrey road, and are endeavouring to get the city authorities to erect similar signs at Millhouses tram terminus.

HERTFORDSHIRE COUNTY.

FOR the members' meet at Great Marlow on Saturday last the weather was not at its very best, but, notwithstanding lowering clouds and a keen wind, a very fair number put in an appearance and took tea on the riverside lawn of the Compleat Angler.

Mr. Arthur J. Salmon, the hon. press secretary, had on his car the proposed new car badge which it is suggested shall be adopted by members as a distinguishing mark, and it attracted a great deal of attention.

A meeting of the sub-committee dealing with the club fixtures was held on Friday, the 12th inst., when good progress was made with the preliminary details of the annual gymkhana. This event, which will be held on July 18th, as previously announced, is always a feature of the club's year, and it is hoped this year to make it an even greater success than in preceding years.

BRITISH MOTOR-BOAT CLUB.

THE London-to-Cowes race of the British Motor-Boat Club starts from Gravesend to-day (Saturday) at 4.30 p.m. and a gold medal is offered for the boat using heavy oil exclusively completing the course within thirty hours.

Entries for the International Cross Channel races from Dover to Ostend in July, organised by the Belgian Motor Yacht Club and the B.M.B.C., should be sent to the secretary of the latter in Coventry Street, London, W., on or before the 6th prox.

WELSH.

THE following is the official result of the working out of the handicap of the hill-climbing competition of the Welsh A.C., reported in our last issue:—1, Mr. E. H. Leeder's 20-25-h.p. Simms-Welbeck; 2, Mr. H. S. Thomas's 10-12-h.p. Argyll; 3, Mr. H. G. Davies's 12-14-h.p. De Dion-Bouton; 4, Mr. T. J. Williams's 12-14-h.p. De Dion-Bouton; 5, Captain Hughes Morgan's 40-h.p. Weigel; 6, Captain Hughes Morgan's 45-h.p. Daimler; 7, Mr. T. D. W. Drummond's 14-h.p. Belsize; 8, Mr. W. Morris's 16-18-h.p. Darracq; 9, Mr. A. A. Jones's 14-16-h.p. Argyll; 10, Mr. A. J. Barn's 6-h.p. Siddeley; 11, Colonel Williams's 15-h.p. Humber; 12, Mr. T. J. Williams's 28-h.p. Daimler; 13, Mr. E. F. Sutton's 16-18-h.p. Darracq; 14, Mr. B. W. Valentine's 30-h.p. Beeston Humber. Mr. Leeder thus holds the silver challenge cup for one year and permanently possesses a miniature replica.

SCOTTISH MOTOR TRADE ASSOCIATION, LTD.

AT the last meeting of the Council of this Association at the Station Hotel, Perth, Mr. Thomas Shaw (Dundee) presided and several new members were elected.

Nearly thirty new members have been elected to the Scottish Motor Trade Alliance centres, one of which has now been formed for Aberdeen and Dundee.

IRISH.

WHILE the Irish A.C. has no objection to the closing of the coast road between Malahide and Portmarnock, the General Committee have

written to the Local Government Board of Ireland suggesting that those who live alongside the road should be exempt from the Order.

New members of the Club include the Marchioness of Conyngham, Capt. the Hon. C. Palk, his Honour Judge Wakely, Messrs. H. Malcolmson, A. B. Cairnes, W. C. Roche, J. G. Wilson, J. J. Smith, E. Fitzgerald, and R. Luker.

A REPORT of the petrol consumption trial of the Bury and West Suffolk A.C. reached us at the moment of going to press, and will be published in our next issue.

Mr. J. A. T. GOOD is the Club solicitor to the S.E. Auto-Cycle Association, particulars of the membership of which can be obtained from Mr. H. B. Renner, 31, Kidbrook Park Road, Blackheath, S.E.

CASES UNDER THE MOTOR CAR ACT.

EXCEEDING THE LEGAL LIMIT.

Five cases of exceeding the speed limit on the Alton road have been heard at the Farnham Petty Sessions, fines of £2 being imposed in each instance. Seven motorists have been fined sums of £2 each at the Chertsey Petty Sessions for excessive speed on the Bagshot road. A number of motorists have been charged with exceeding the ten mile speed limit on Bury Road, Newmarket. Fines of £3 were inflicted. Four motorists have been fined an aggregate sum of £9 for motoring too rapidly in the neighbourhood of Colchester. Fourteen motorists were mulcted in fines to the amount of £70 at the Kingston Police Court, on the 11th, for exceeding the speed limit on the Portsmouth road and in Richmond Park. At the Guildford County Petty Sessions, on Saturday, thirty-two summonses under the Motor Car Act were heard, and the fines amounted to £107 3s. The defence raised by Franklyn Ceallar, of West Kensington, who was summoned for having exceeded the speed limit, was that he was not driving the car at the time. The car was going on its own momentum with the clutch out. The chairman (Sir William Chance).—Were you steering? The defendant.—Yes. A fine of £3 and costs was thereupon inflicted. During the last few months the recognised fine at Lancaster on motorists exceeding a speed of thirty miles per hour has been £7 10s. plus the costs. On Saturday, however, a reduction took place, three drivers who had been alleged to have travelled thirty-one miles an hour through Garstang road trap south of Lancaster being each fined only £5 and costs.

A TRIPLE OFFENCE.

At the Brentford Police Court, Henry Markham, of Edgeware Road, Paddington, has been summoned for having driven a motor-car to the common danger in Bath Road, Hounslow, for not stopping after an accident, and for not having a licence. Mr. Barker prosecuted for the police, and said that the defendant was lately in the employ of Mr. Ivor Guest, M.P. Without permission he took a party of friends for a drive in the car. Returning at night, when near Cranford, he collided with a pony and cart, killed the pony, severely injured the occupants, left his car by the roadside, and ran away. The Chairman said the Court considered the case one of the worst that had ever come before them. The defendant would be fined £35 and prohibited from holding a licence for three years. In default of payment three months' imprisonment would be imposed.

DANGEROUS SPEED.

At the Nottingham Summons Court, on the day the cars in the reliability trial reached the town, a motor-cyclist was fined £5 for having, as was alleged, driven his machine at a dangerous pace on St. Ann's Well Road. He was riding in the direction of the police station when stopped by the officers.

DISMISSAL.

At Reigate Police Court, on Saturday, Arthur Cooper, chauffeur to Mr. H. C. Dean, of Worcester Park, a member of the Automobile Association, was accused of driving at a speed of thirty miles an hour along the Reigate road. Mr. W. Taylor-Parkes (Amery-Parkes, Macklin and Company) appeared to defend. The defendant had a speedometer fitted to the car with a maximum hand which at the time he was stopped showed twenty-four miles, but it was proved that this speed was attained before the measured distance was reached, the speedometer showing under twenty miles over the 220 yards. The method of signalling and timing was severely criticised, and after proof had been given that the speedometer was accurate, the chairman of the bench, in dismissing the case, remarked that it was not without its doubts.

A BAD BLUNDER.—REGISTRATION BUNGLE.

At Bromley (Kent) Police Court, on Monday, the chauffeur to Mr. J. W. Orde, secretary to the Royal A.C., was summoned for driving an unregistered car, and Mr. Orde was summoned for aiding and abetting him. The summonses were taken out at the instance of Mr. R. Davis, of Orpington. Mr. J. B. Matthews appeared to prosecute, and Earl Russell defended.

Mr. Matthews now asked the permission of the Bench to withdraw the two summonses under circumstances which he said were of great public interest and importance. When Mr. Davis sent the identification number to the London County Council it was found that the car registered under the number did not agree in its description with the one concerned in the complaint, the County Council's particulars referring to a 6-h.p. car, while Mr. Orde's was 30-h.p. to 40-h.p. After the summons was taken out on the supposition that the registration number had been illegally transferred, a communication came from the

L.C.C. explaining that the registration had been properly transferred, and Mr. Davis could only express his regret that the summons had been taken out. It appeared that the County Council had divided the registration department, so that its left hand did not know what its right hand was doing. Mr. Davis regretted that he had charged Mr. Orde with the offence.

Earl Russell asked the Bench to dismiss the summonses, and not simply to allow their withdrawal. Mr. Orde was at present away in connection with the reliability trials, but he had been open to access, and Mr. Davis could have ascertained what was necessary.

The Bench decided to dismiss the summonses, allowing £7 expenses between the two.

COMMON DANGER.

At Haywards Heath Petty Sessions, on Monday, a chauffeur was summoned for driving to the common danger at Cuckfield on April 6th. Superintendent Brooman asked for an adjournment, the chief constable being of opinion that the owner of the car should also be summoned. The case was thereupon adjourned for a fortnight, the defendant being allowed the costs of the day.

DANGEROUS DRIVING.

At the Steyning Petty Sessions, on Monday, two motorists were charged for driving motor-cars at dangerous speeds in the High Street, one being fined £10 and costs and the other £5 and costs. Notice of appeal was given in the first case.

On Saturday, at the Hereford County Police Court, Andrew Hamilton was summoned by direction of the Public Prosecutor in connection with a motor-car accident already referred to in our columns. Mr. J. S. Blankenssee, of London, was for the defence, and after the prosecution had been opened made a point that the brake was on for some distance prior to the mishap. On the question of alleged negligence he referred to a rule

The Two-ton Van recently supplied to the Derby Co-operative Provident Society by Messrs. Dennis Bros. through their agents, Messrs. Stareys and Woolleys, Ltd., Lower Parliament Street, Nottingham.

laid down by Mr. Justice Blackburn that the amount of negligence which occurred was something that could not be defined. It must be a great failure of duty to make him criminally responsible. In this case the defendant said he had done certain things which were precautionary things and he urged that the case of criminal negligence had not been made out. In the end the Bench sent the defendant for trial, the defence being reserved.

NOTIFYING CHANGE OF OWNERSHIP.

Messrs. J. E. Hutton, Ltd., were summoned before Mr. Marsham, at Bow Street (London) Police Court, on Tuesday, for failing to notify to the L.C.C. the change of ownership of a motor-car sold by them. Mr. Muskett, who supported the summons on behalf of the Commissioner of Police, said that the proceedings were taken under Article IV. of the Motor Car Order of 1903. According to that order the person who sold a motor-car, or the person who purchased it, should notify the change of ownership to the Council with whom it was registered, or cancel the existing registration. On the evening of April 16th P.s. Davis was on the Bath road, at Longford, Middlesex, when he saw a motor-car approaching him. He signalled to the driver to stop, but he went on without taking any notice. The sergeant saw that the number on the back plate of the car was L.N. 2311. Sub-Divisional Inspector Smith went to the offices of the L.C.C. and found that the defendants were the registered owners of the car bearing that number. He afterwards called at the defendants' establishment, and was informed that the car in question was sold by them in July, 1907, to Mr. Kilner. Inquiries were made at that address, and it was found that Mr. Kilner left there a long time ago. Mr. Muskett contended that the vendor of the car should see that it was no longer registered in his name. Mr. Marsham said he quite agreed, although, of course, the vendor would be free from responsibility if he ascertained that the purchaser had promptly altered the registration. He ordered the defendants to pay a fine of £5 and £3 3s. costs.

FORTHCOMING EVENTS.

JUNE.

- 20th (Sat.).—Meet of the Hull Auto Cycle Club and the Lincolnshire Motor Cycle Club at Brigg.
Annual Hill Climb of the Bristol and Gloucestershire A.C.
Lunch of the Kent A.C. at Dover.
Herts C.A.C.'s climb for cars at Aston Hill.
- 26th (F.).—Welsh A.C. reliability trial for motor-cycles.
- 27th (Sat.).—Saltburn beach races.
Buxton meet of the Manchester, Sheffield, and Lincolnshire clubs.
Members of the Cheshire A.C. will participate in the Gymkhana of the Manchester A.C.
Visit of the Essex C.A.C. to Audley End.
Meet of the Kent A.C. at Holwood by permission of the Earl of Derby.
- 28th (Sun.).—Southend M.C. run to Grand Hotel, Clacton.

JULY.

- The Land's End to John o' Groat's Trial of the Auto C.C. will be held.
- 4th (Sat.).—Derby A.C. challenge cup competition.
Meet of the Kent A.C. at Gravesend.
Brooklands A.R.C. meet.
Cheshire A.C. gymkhana.
- 6th (M.).—Grand Prix A.C.F. (Voiturette section).
- 7th (Tu.).—Grand Prix A.C.F. on the Dieppe Circuit.
- 8th (W.).—Meet of the Cambridge A.C. at Waresley Park by invitation of Col. Duncombe.
- 9th (Th.).—Meet of the Ladies' A.C. at Hanworth Park, Middlesex.
- 10th (F.).—Start of tour of motor factories in the Midland by the I.I.A.E.
Welsh A.C. motor-car reliability trials.
- 11th (S.).—Provincial meet of the R.A.C. at Hereford. Lunch at the Green Dragon Hotel; visit to Ledbury Park, and dinner at the Assembly Rooms.
Essex C.A.C. gymkhana at Brentwood.
Aston Hill climb of the Hertfordshire C.A.C.
Essex M.C. gymkhana at High Beech.
Leicester A.C. hill climb at Kettleby.
- 16th (Th.).—Club meet of the Notts A.C. at the Hop Pole, Ollerton.
- 18th (Sat.).—Annual Gymkhana of the Herts C.A.C. at The Grove, Watford, by permission of the president, the Earl of Clarendon.
Gymkhana of the Kent A.C. at Maidstone.
Meet of the Liverpool and Cheshire A.C.'s at Delamere.
New Forest and Dorset A.C.'s joint hill climb.
Hill Climb of the Essex C.A.C.
- 20th (M.).—Entries close for the O'Gorman trophy.
- 20th and 21st.—The R.A.C. dust trial.
- 23rd (Th.).—Gymkhana of the Cambridge A.C. at Chippenham Park.
Hill climbing competition of the Hull and East Riding A.C.C.
- 25th (Sat.).—Petrol Consumption Tests of the Motor Cycling Club.
Annual Open Hill Climb of the Midland A.C. at Shelsley Walsh.
Committee meeting of the Kent A.C. at Herne Bay.
Motor Union Provincial meet.
Cheshire A.C. hill climb.
Leicester A.C. gymkhana.
Lancashire A.C. open hill climb.
- 26th (Sun.).—Southend M.C. run to Coach and Horses, Quendon.

AUGUST.

- 1st (Sat.).—Brooklands A.R.C. meeting.
- 2nd-3rd.—Newcastle and District M.C.C. reliability.
- 3rd (M.).—Brooklands A.R.C. meet.
- 8th (Sat.).—Visit of the Kent A.C. to Brasted Chart.
- 12th (W.).—A.C. of Belgium—Circuit des Ardennes and the Liedekerke Cup race.
- 22nd (Sat.).—Annual race meeting of the W.A.C.
Invitation of Sir D. Salomons to the Kent A.C. to visit Tunbridge Wells.
- 23rd (Sun.).—A. C. du Rhone Mont Pilat trial.
- 29th (Sat.).—Meet of the Lincolnshire Motor Club at Lincoln.
Mont Ventoux hill climb of the A.C. Vauclusien.
- 30th (Sun.).—Southend M.C. run to Great White Horse Hotel, Ipswich.

SEPTEMBER.

- 4th and 5th.—Reliability Consumption Trial of the Essex C.A.C. at Norwich in connection with the R.A.C. provincial meet.
- 5th (Sat.).—Aston Hill climb of the Herts C.A.C.
Provincial meet of the R.A.C. at Norwich.

LIGHTING-UP TIMES—LONDON.

| | | | | | | |
|----------------|----|-----------|----|-----------|----|-----------|
| June 20th—9.18 | .. | 22nd—9.18 | .. | 24th—9.19 | .. | 26th—9.19 |
| " 21st—9.18 | .. | 23rd—9.18 | .. | 25th—9.19 | .. | 27th—9.19 |

To find the approximate lighting-up time in June for Birmingham 13 minutes should be added to the above times, 17 for York, 21 for Manchester, and 43 for Glasgow.

COMPANY NEWS.

SOCIÉTÉ DES AUTOMOBILES "BELLONE" LTD.—Capital, £16,000. To take over the business of manufacturers of automobiles carried on by M. Louis Bouillant at 137, Boulevard Ney, Paris. No initial public issue. Registered office, 56, Cannon Street, E.C.

CHARGE DISMISSED.

THE coroner's jury having exonerated Albert Spilling, a chauffeur, who was mentioned in connection with the Redbourn motor fatality. The police offered no evidence on Saturday when he attended the St. Albans Divisional Sessions. He was therefore discharged.

As a sequel to a recent motor-car fatality at Barston, George Reid, a chauffeur employed by Mr. Joseph Horton, of Birmingham, was charged at Solihull on Tuesday with driving his car at a dangerous speed at a cross-road. The car ran into a cyclist, who sustained injuries from which he died. Reid called witnesses to prove that he was not travelling at more than ten miles an hour and the magistrates dismissed the case.

AUTOMOBILE ACCIDENT.

AN inquest was held at Chiswick on Tuesday, on the body of Beath Redford, aged nine and a half years, who was knocked down and killed in the High Road, Chiswick, on Sunday by a motor-car owned and driven by the Hon. Cecil Bingham. It was shown in evidence that the little girl slipped owing to the greasy state of the road and fell in front of the motor-car, so close to it that it was impossible for Colonel Bingham to pull up, although at the time he was only travelling at about five miles an hour. Mr. J. S. Blanckensee represented the Colonel and the jury returned a verdict of "Accidental death," exonerating Colonel Bingham from blame.

BUSINESS NEWS.

THE Daimler Company will shortly occupy as additional London showrooms two of the shops on the Piccadilly side of the new Piccadilly Hotel, W.

LONDON users of the Stepney wheel will be glad to hear that the showrooms of the Stepney Wheel Company, situated at 168, Great Portland Street, W., are now open, so that in future motorists in the metropolitan area will be able to procure spare wheels without delay. In view of the increasing number of orders received by the company from the Colonies and abroad, they are compiling a private code specially suitable for their requirements, which will be ready in the course of a few days, and which will be sent to all clients outside England.

THE victory achieved by Nazzari on the 90-h.p. Fiat at Brooklands on Whit Monday, in which he touched the record speed of 120 miles per hour, was achieved on Pratt's motor spirit.

IN connection with the Argyll cabs supplied by the Meter Cab Company for the suite of M. Fallieres during the recent visit of the French President to London, Commander Howard Kelly has written from the Admiralty as follows:—"I am much obliged for all the trouble you have taken, and the whole of your contract has been most satisfactorily carried out. I cannot speak too highly of the ability and behaviour of the three drivers who have been mostly specially attached to us, and the appearance and turn out of all the cars we have used have been the admiration of every one."

AT the Whitsuntide Race Meeting at Brooklands, the winners of seven races out of nine used the Shell motor spirit of the British Petroleum Company, Ltd.

REPLYING to J. H., the Velure paint referred to in the last issue can be obtained from Messrs. C. Chancellor and Co., 13, Clerkenwell Road, London, E.C.

THE KEMPSTALL TYRE COMPANY OF EUROPE, LTD., have just issued a new price list which gives full particulars of the Kempshall non-skid tyres, the cost of retreading, the inflation pressure recommended, &c.

NOW that motorists are conversant with the economy of having renovated tyres that formerly were ineffectually scrapped, it has become impossible for the Dunlop Company's Birmingham Works to handle all the repairs of the concern's clients, and the establishment of a fully equipped repairing branch in London should be welcomed by Metropolitan motorists, if only for the saving of the time heretofore absorbed by the passage to and from the Midlands of damaged tyres. The new Dunlop works, which will be opened shortly, are at Acton Vale, W., within fifteen minutes' drive of the centre of town, and are competent to deal with the smallest or largest repairs with the utmost dispatch.

THE Nottingham and District Motor Cycling Club held its first meet on Saturday, taking a run to Newark.

ON Saturday last the members of the Kent Automobile Club were entertained by Mr. and Mrs. T. L. Boyd at their residence, North Frith, Tonbridge.

COMMENTS.

WHEN the Incorporated Association of Municipal and County Engineers visited Leicester in 1901 Mr. E. G. Mawbey, who has done much for the Leicestershire A.C., was president of that useful organisation. The Leicestershire automobilists then organised a motor-car run in the county for the entertainment of the Engineers, and the

Nottinghamshire and Midland Clubs sent no fewer than 40 cars for that purpose. Now that the Incorporated Association is meeting at Nottingham this week-end the Leicestershire and other clubs are reciprocating the attention of seven years ago, and responding to the request of the Nottinghamshire Club to render assistance in organising a similar run. To-day (Saturday) the Association will visit Welbeck Abbey by motor-cars, and there will be a picnic lunch in the Russian log hut at the Dukeries, to the success of which the splendid way in which motorists are lending their cars will materially contribute.

Names for Racers.

ALTHOUGH there has been no great rush of motorists to register names for their cars when racing on the Brooklands track, it is generally thought that the practice will steadily be followed. Being of such opinion, the committee of the Brooklands Club has issued a new regulation with regard to the matter, providing for a ten shilling registration fee and for the entry of approved names on the supply of the following particulars with regard to the cars, viz., the cylinder bore, the cylinder stroke, the number of cylinders, the engine number, and the chassis number of the car, and also an undertaking that the owner will not change the cylinders of the car nor alter their size without giving notice to the Clerk of the Course of his intention of so doing. Upon such change being made, the Clerk of the Course shall cancel the registered name. When entered for races, cars with registered names will be given in the race-card by the name of their maker, without mention of horse-power, with the registered name in inverted commas following the maker's name.

Change of Ownership.

LAST week we reported a case in which a motor-car agent was summoned for failing to notify to the London County Council the change of ownership of a motor-car sold by him. After hearing counsel for the police and also the defendant, the Bow Street magistrate inflicted a fine of £5, regarding the case as a very important one. Apparently Mr. Marsham accepts the view of the Commissioner of Police that "the man who sold a car should see that it was no longer registered in his name," although this seems hardly the right interpretation to be placed on Article IV. of the L.G.B. Order issued in pursuance of the Motor Car Act of 1903. While this distinctly states that notice of a change of ownership shall be given "either by the new or the old owner to the

Council with whom the motor-car is registered," there is no suggestion as to which of the parties is to hold responsible for the notification; hence the defendant in the recent action naturally felt aggrieved, and we would emphasise the point as one which the Motor Union and other organisations should bear in mind when watching the progress of future automobile legislation. In the counties the surveyors have occasionally issued official advertisements directing those who purchase motor-cars to see that the change of ownership is properly communicated to the authorities, but they have not taken the course that now seems to be the policy of the Commissioner of Police for the Metropolis, viz., to summon, and with success, those firms who have sold cars to new owners, both parties omitting—inadvertently in ninety-nine cases out of a hundred—to make the change known to the registering authority.

Watford's Proposed Speed Limit.

INQUIRY has taken place into the application of the Hertfordshire County Council for a ten-mile speed limit to be imposed on motor-cars on a large number of roads in the urban district of Watford. Several gentlemen who confessed that they had never had experience of practical motoring supported the application, and Mr. Rees Jeffreys, on behalf of the R.A.C. and the M.U., gave uncompromising opposition to the application in its present form. Mr. C. McWhirter, of the Hertfordshire A.C., who had gone over the whole of the scheduled roads, had come to the conclusion that if an order was granted for Watford similar steps would be justifiable for all towns and villages throughout the country. The Vicar of Leavesden declares that the ten mile limit might lead to accidents rather than obviate them by preventing motorists spurting to get out of difficulties. Several doctors also gave evidence, and subsequently an inspection of the roads was made by the Local Government Board Inspector, accompanied by various representatives of both sides of the question, and it is thought that the result will probably be an imposition of a limit of about one-seventh of the total length of streets included in the original application.

Motor-'Bus Traffic.

THE meeting of City men held on Monday to direct public attention "to the excessive danger, noise and inconvenience to which all who use the streets of the City are now subjected from motor-'bus traffic" brought together a goodly number of prominent citizens, who, having adopted a resolution expressing "the appreciation of the benefits that have accrued from the introduction of motor traction in the traffic of London," went on to deplore the noise, speed and fumes which characterise "a large proportion of the motor-buses, traction engines, and other power-drawn vehicles." They called upon the Government to provide the police authorities with new powers to deal with a condition of things that was unknown in the days of their grandfathers. The protest was not allowed to be made without the voice of the motor trade being heard, and Mr. Sydney Morse, on behalf of the Society of Motor Manufacturers and Traders, pleaded for toleration and fair play on the part of objectors, undertaking to say that the evil features complained of would gradually disappear. So far as the powers

of the police are concerned, he was able to show that with regard to the motor-buses they have already imposed restrictions which have had a very adverse effect on the prosperity of some of those concerned in the industry. Doubtless those who had convened the meeting feel very keenly on the subject of noise, and especially in the narrow streets of the "one square mile," but patience and time will do much to stay their objections. Those responsible for motor-buses recognise that the evils are attributable to defects in construction as well as in operation. It would be well if engineers would give attention to the matter of lubrication, about which hang many of the malodorous fumes that offend the public sense of smell. The daily use of the motor-bus has shown us how these vehicles vary with regard to this important matter. Some require little attention from the driver in the matter of lubrication, and when the passengers alight they do not experience a shock to the olfactory nerves. But in many cases the drivers are to blame, using oil in excess to save other troubles when indulging in high speeds or whenever anything disturbs the even tenour of their way. Then the noxious exhaust occurs, to the disgust of the passenger in the motor-car as well as the man in the street. Greater experience in driving as well as further experiments with regard to the design of parts, so as to avoid the dropping of oil that now takes place, will mitigate the terrors of the motor-bus of to-day.

The Kaiser starting for a spin on a Horch Car.

A Scale for Fines.

COL. W. H. CAMPION, C.B., having served his country with distinction in the Crimea and Indian Mutiny with the Highlanders, is now dispensing justice as chairman of the Haywards Heath Petty Sessions. This is no mere caprice, but the matter has been reduced to one of rule-o'-thumb, and the other day, when the Bench had a special sitting to deal with nearly fifty motorists, the scale of fines was gravely announced by the gallant colonel as follows:—Just exceeding twenty-five miles, £3; from that speed up to twenty-eight miles, £5; and from that up to thirty miles, £7 10s. Whether the rate is 25s. per mile above that speed was not explained, but that the new tariff is profitable may be judged from the fact that over £300 was received in fines on the day it was publicly announced.

A Tollgate Trouble.

THE Lancashire A.C. and the Motor Union have been jointly endeavouring to secure that the local authority should take over the direct road from Preston to Lytham across Freckleton Marsh, but the graziers who receive the tolls out of which the road is supposed to be kept have so far made successful opposition. One result is that the automobile organizations

are now recommending their members to avoid the tollgate by using the alternative road through Kirkham when journeying from Preston. In accordance with this policy the Lancashire Automobile Club, which has usually held the opening run of the summer season to Lytham, has just taken its first annual run to Southport. Should such a policy be generally adopted the people of the former place will probably join with the motorists in helping to secure the freeing of the tollgate.

Scotch Justice.

WHAT is said to be the first case of the kind heard in Scotland was reported in a recent issue. The driver of a car was summoned for failing to give audible and sufficient warning of its approach by a bell or other instrument required for the purpose. The judgment of the Sheriff was interesting, and, for the occasion, justice came into line with common sense. The section with which he was concerned was Article 4, Sub-section 5, of the Motor Cars Order of 1904. This pointed out that, "whenever necessary," the driver should blow his horn. He (the Sheriff) had to deal with the legal construction of that clause, and to attach a meaning to the words "whenever necessary." The Legislature, in his view, had purposely avoided any hard and fast rule, and had introduced words which were undoubtedly vague. In the special circumstances of the particular case there had been no necessity for the chauffeur to sound his horn, there being no pedestrians about. The wise rendering of the Scottish Sheriff suggests a combination of common sense with legal acumen that should lead to respect for the law in that part of the world.

'Ware of Windermere.

INDIVIDUAL threatenings against the prosperity of towns and resorts are of little concern, but collective withdrawal of custom are a serious menace, which should be avoided as far as possible. That probably will be the view of the hotel proprietors and others in the Lake District, when they realise that the absence of forty motor-cars with their full complements of passengers on a recent week-end was really intended as a protest against the attitude of the county magistrates and police of Lancaster towards motorists. This action has meant a financial loss of between £300 and £400 to the district, and is best explained in the intimation issued to the members of the Manchester A.C. by Mr. J. B. Thistlethwaite, the secretary, as follows:—The committee regret that they have thought it advisable to cancel the arrangements for this run. The complaints of members as to the action of the police and magistrates in some of the districts to be traversed make the committee think it inadvisable to hold any function in the direction of Windermere at present.

A Census of Calamities.

At the present time the Home Office is engaged in collecting information with regard to the number of accidents caused by motor vehicles throughout the country. They are also impressing upon the police in every district the necessity of securing a strict observance of the existing law with regard to the speed of motor vehicles. In the House of Commons Mr. Herbert Gladstone has several times recently emphasised his intention of securing a thorough census of motor accidents. Not only would we suggest that motorists should continue to be careful, but also that they should point out to local M.P.'s that any returns should be of the comparative order, showing not only the number of accidents in which automobiles are involved, but also those due to the vagaries of horses and those generally associated with animal-drawn vehicles. In each case, too, particulars of the actual number of vehicles on the road should be given, if the numbers are to have any real value in estimating as to the respective dangers associated with the two classes of traction now engaged on the highway.

The 2,000' Mile Trial.

THE long pilgrimage is practically over, and the tired drivers, mechanics, observers and others accompanying the cars are heartily glad that its termination is not far off. It has been a wearisome business, and the daily records have presented no features of interest; in fact, they have sometimes proved misleading. Motorists will, however, watch the conclusion with greater keenness, and the results will be awaited with interest. In our next issue these will be fully detailed, and the scene at Brooklands described and illustrated, with a view to assisting our readers to obtain a fair estimate of the performances of the various cars engaged in the event.

A Charming Day on the River.

A CHARMING day was spent on the occasion of the annual Thames meeting of the British Motor Boat Club on Tuesday of last week. About fourteen boats took part in the procession from Kingston, the admiral, Admiral Sir Wm. Kennedy, and Col. W. J. Bosworth leading on the "Ravissante."

The British Motor Boat Club's Annual Thames Meeting.—Mr. Charles Cordingley and party on his boat "Ayasha." Colonel Bosworth is seen standing by the vessel.

They cruised down the river as far as Teddington, and on the return tea was enjoyed at the residence, at Hampton Wick, of the vice-commodore, Mr. L. M. Waterhouse, who, with his charming wife, gave most cordial welcome. The craft then got under way again and paid a visit to the beautiful houseboat the "Santa Maura," in the Ditton Reach, where the host and hostess received the guests most hospitably and in a manner that contributed greatly to the pleasure of the afternoon. Later the boats returned to the landing-stage at Nuthalls, Kingston, and a large number of members and friends dined together at the conclusion of a most enjoyable day.

Suggested Impounding of Cars.

HARDLY a day passes without questions relating to automobilism being put to Government Departments in the House of Commons, and it is a curious coincidence that at the present time the Minister whose duty would be to answer most of them is laid aside through his effort to rescue a policeman from being entrapped between two automobiles. In

the absence of Mr. John Burns, therefore, his Under Secretary, Mr. C. F. G. Masterman, had to deal with a suggestion made by Mr. G. Hardy on Tuesday as to the desirability of "impounding cars abusing the unwritten law and violating the provisions of the statute law." Such idea is no more likely to commend itself to a Government Department than to any unprejudiced observer of affairs, and Mr. Masterman pointed out that the innovation could not be made without legislation. And even if an Act to that effect was adopted, the difficulties in the way of its execution would be great indeed—greater probably than the Local Government Board would be prepared to undertake.

Dust

THE Dust Trials which the R.A.C. are to hold on the Brooklands Track on July 20th and 21st—providing, of course, that the weather is favourable—have already been referred to in our columns. It has now been decided to use a fine limestone dust and possibly dry leaves on the track; while another decision will be of particular interest to those interested in steam cars. Last year the White and Stanley vehicles showed

such good results as regards dustlessness that it has now been decided to limit the 1908 trials to petrol cars only. In order, however, that steam cars should obtain full public credit for their merits in this respect they will be allowed to run, and will be bracketed with the actual competitors. Last year's winners are being asked to run their cars as trial vehicles in Classes 1 and 2, the makers and inter-club competitions respectively, and they have, we understand, consented to the arrangement by which they will not be eligible for the awards this year.

ON Tuesday the magistrates at Harrogate decided that, in the absence of special regulations with regard to motor-cabs, they must be dealt with under the ordinary bye-laws.

AT Shoeburyness, beyond Southend-on-Sea, Mr. Wilkinson has opened a motor garage, which is already proving useful to the officers attached to the gunnery school in the locality.

THE Paignton District Council has resolved to adopt certain sections of the Public Health Acts Amendment Act, which will give them power to deal with the motor-cars that persist in travelling along the sea-front during the season.

THE BUICK 15-20-H.P. CAR.

THE other day we had a short trial run on one of the latest Buick-15-20-h.p. cars, of which an illustration is given in Fig. 1. The vehicle, which is now being handled in this country by a new concern known as Buick Motors, at 45, Great Marlborough Street, London, W., of which Mr. F. Eason is the manager, is only being made in one pattern. As will be seen from the illustration, this takes the form of a light two-seated touring car, with a removable emergency seat at the rear.

Fig. 1.—The Buick 15-20-h.p. Car.

The motive power is supplied by a four-cylinder vertical engine (Fig. 2); the cylinders, which are cast in pairs, are $3\frac{1}{2}$ in. bore by $3\frac{1}{2}$ in. stroke. The valves are situated in the cylinder heads, and are operated by overhead tappets and rods worked off a single cam shaft. The ignition is by trembler coil and accumulators, the current being passed to the different cylinders by means of a high-tension distributor. A force-feed lubricator supplies oil to all the main bearings and to the engine crank case. The crank shaft is supported in the upper half of the aluminium base

Fig. 2.—View of Forward Portion of Chassis of the Buick 15-20-h.p. Car.

chamber, enabling the lower portion to be readily removed when necessary.

The change-speed gear is of the planetary or epicyclic type, giving two speeds forward and a reverse. The slow speed and reverse motion are obtained by pedal, while the top speed, which gives a direct drive, is engaged by a lever at the right of the driver's seat. The gear is mounted on an extension of the engine shaft, the final transmission being by a universally-jointed shaft, and bevel gear to a well-designed live axle. The engine and gear

are supported on a sub-frame carried by the main one, which is of pressed steel; the suspension is by means of semi-elliptic at the front and double elliptic springs at the rear. Both hand and foot operated brakes are provided, while the ignition and throttle levers are mounted above the steering wheel in the approved way. The wheel base of the car is 7 ft. 4 in., and the track 4 ft. 8 in., the 30 in. road wheels being shod with 3 in. tyres.

During the course of the trial run, to which reference has already been made, we had ample evidence not only of the quiet running and speedy qualities of the new vehicle, but also of its hill-climbing capabilities. As a matter of fact the lowest speed is only required at starting, the car being able not only to attain a notable turn of speed on the top gear on open country roads, but of negotiating the crowded traffic of London thoroughfares without it being necessary to change gear. Turned out with lamps, horn, and tools, ready for the road, at an extremely moderate price, the new vehicle is one which should meet the requirements of a large section of the motoring public and should quickly become a popular type.

SOCIETY AND THE CAR.

A BRILLIANT week-end has again demonstrated the favour with which Royalty and Society regard the motor-car, and to the Garden Party at Windsor on Saturday, and along all the fashionable resorts of the Thames Valley, hundreds of automobiles conveyed "fair ladies and brave men." Never before has the famous Long Walk at Windsor been given up to the motor-car as was the case on Saturday. The first of the King's guests reached the royal borough by taxi-cab, and then came a long stream of motorists, headed by Lady Cunard, Mrs. George Cavendish Bentinck, and Lord Iveagh—all of whom drove down from town. The Rev. R. J. Campbell motored from Enfield—or, rather, his car was driven therefrom by a lady whose skilful negotiation of the throng of traffic leading to the Castle was much remarked upon. Having set down the pastor of the City Temple she turned—with the crowd of other drivers of cars—into the Royal Mews, on into Park Street, and into the Long Walk, where the automobiles were parked by permission of His Majesty. The Marquis and Marchioness of Cholmondeley motored over from Datchet, where they are spending the summer. Another arrival by motor-car was Lord Roberts, who, in addition to being a Field Marshal of the Empire, is president of the Berkshire Automobile Club. His car stopped on the hill in Windsor leading to the Castle, and the gallant soldier finished his journey on foot. Probably a thousand of the nine thousand guests of His Majesty arrived by automobiles—demonstrating to the Indian potentates among the guests the favour with which British Royalty and Society regard the car. The Garden Party over, some time elapsed before the motorists were driven away, and the Windsor sight-seers held a review of automobilism in the streets of the town. One or two of the cars were found *en panne* on the road to London, notably that of the Princess Henry of Battenburg, which broke down at Twickenham in the evening. The Princess accepted the situation with an air of gracious philosophy, and remained seated until another was obtained to convey Her Royal Highness to her destination.

On Sunday the King and Queen, with the Prince and Princess of Wales and the children of the latter, spent the afternoon at Virginia Water, whither they had motored. Seven motor-cars were engaged in the conveyance of the Royal party.

Never before had so many motor-cars been seen at Ascot as were present this year, and on one day among those who journeyed down on their Daimler cars were the German Ambassador, his Excellency Count Paul Wolff Metternich, Sir Frank Swettenham, Lady Kirkpatrick, Colonel Adamson, and Sir W. Gilbey.

Motor-cars were much *en evidence* on the occasion of the wedding of Miss Reid and the Hon. J. Ward in London on Tuesday. Among the presents to the bride was a Renault motor-car, the gift of Mr. and Mrs. Whitelaw Reid.

GOSSIP FROM PARIS.

"THOUGH I don't expect to win the race, I will bet you two to one I beat Nazzaro's time last year." Those were the parting words of a driver who will figure in the Grand Prix race on July 7th. He had taken me out on his racing machine, which is certainly very fast. I had tried five or six times to take the speed of the car for a kilometre when we were going at full speed, but I fear I was not a sufficiently experienced hand at the work, for while once I calculated we were going at 150 kilometres an hour, a few minutes later, when we seemed to be going just as quick, my calculation worked out at no more than 99 kilometres. It is really very difficult to say what will be the average speed of the winner of the race, and it is just for that reason everyone is racking his brains with abstruse calculations which, after all, are based on conjecture. The matter, as I have said before, has been occupying the minds of motorists for a long time past, and in proportion as the date for the race approaches it is becoming the all-absorbing subject of conversation among those who take any interest in the great annual international contest. Very many bets have been made on it, and, if the majority of the drivers are to be believed, the speed will be higher than at any previous international race. Nevertheless it must not be forgotten that the bore of the four-cylinders is limited to 155 mm., and that the minimum weight is fixed at 1,100 kilogs., while formerly the bore of the cylinders was unlimited, and the maximum weight of the car was not allowed to surpass 1,000 kilogs. All the cars will therefore this year be heavier than last, and the bore of the cylinders will be much smaller than that of many of the racing motors of 1907. Consequently, if Nazzaro's time is beaten by several or even a few of the competitors, it will demonstrate a very considerable progress in the make of the motors and general machinery of the cars.

THE aeronautic world is on the tip-toe of expectation, so many things have been announced to come off within the next few weeks, but whether they will really materialise is quite another question. M. Delagrangé may realise his boast that he will, before he leaves Milan, remain on his aeroplane in the air half an hour at least, and Mr. Henry Farman may fly up in the air to the height of 30 or 40 metres (131 or 164 ft.), thus beating the unintentionally high flight effected a fortnight ago by M. Robert Esnault-Pelterie. Then there are at least half a dozen other ambitious aviators whose machines are now ready for trial, and who are all the more convinced they will achieve wonders because they have never yet left the ground. But the greatest of all the sensational events which are looked forward to with such keen interest is the promised flight of Mr. Wilbur Wright. That, indeed, will be an event which will count in the annals of aviation, whether he succeeds or whether he fails. Mr. Wright has to fly at least thirty-one miles in an hour twice in the same day. When he has done that M. Lazare Weiller will pull out his pocket-book and hand him the coveted cheque of £20,000. The American aviator seems to be confident of success, but in his conversation with Mr. Henry Farman and other experts he has not divulged the secret which he thinks will enable him to perform the wonderful feat and pocket the money.

HOWEVER that may be, everybody acquainted with the capacities of the French aeroplanes is astonished Mr. Wilbur Wright should have accepted so circumscribed a space as the Le Mans race-field for his performances. If his experiments are successful, it will be clear that he really does possess a secret unknown to the rest of the world. He promises to fly during an hour on an aeroplane with no larger bearing surface than that of the Delagrangé or Farman machines, and it is to be propelled by a motor having no more than half the horse-power of those employed by the French aviators. Then the Le Mans race-field is only about 2,700 feet long by 1,000 feet broad at most. It is encumbered with trees and railings, and, so far as I know, those obstacles are not to be removed. Therefore, to fly as he says Mr. Wilbur Wright will have to ascend at once to a considerable

height and then remain circling overhead above the trees, and perhaps over the neighbouring fields, for sixty minutes at least, and to repeat that feat the same day. If it is accomplished, the spectacle will be worth not simply a couple of hours' journey in the train from Paris but a voyage round the world.

A YET greater marvel than even the promised flights to be made by Mr. Wilbur Wright, in France, and by his brother in America, is said on good authority to be feasible. And it certainly is not the "premier venu," as the French say, who declares he has accomplished it. No, it is no less a personage than M. Marcel Deprez, Member of the Academy, who affirms he has realised the stationary suspension in the air of a "body" heavier than the air without that body being attached to anything. The announcement of this discovery or invention, whichever it should be called, was contained in a note signed by M. Deprez himself and read to the Academy of Sciences at its last

MOTORING IN BOSNIA.

[Allgemeine Automobil Zeitung.]

sitting by M. Darboux, the permanent secretary. No particulars of the "body" were given, but if the application of the principle of its suspension is easy, the prize of £400 quite recently offered by M. René Quinton for the first aviator who shall remain in the air on a flying machine, without the use of any motive power and without descending more than 50 metres, may soon be won.

MARNEY.

FREQUENTERS to the Hut, at Wisley, Surrey—and they are many—will hear with much regret of the death of Mrs. Pullum, the wife of the manager of the hotel. Her end was peaceful, and the deceased lady passed away with her sorrowing family around her. In his affliction the popular manager has some consolation in having a winsome daughter, who has for some time past borne the burdens of management.

B

A NOVEL INDICATOR.

An ingenious arrangement, by means of which the driver of a motor-car can give some indication to following vehicles of his intention to stop or to turn, is described in a recent issue of the "Omnia," of Paris. As will be seen from the general view (Fig. 1) it is fitted in conjunction with the rear number plate;

Fig. 1.

as a matter of fact the latter is of special design, having at the rear a box in which is contained a simple mechanism and a four-sided indicator, any one face of which can be brought into line with a corresponding slot in the number plate. The indications given are (1) Attention, (2) J'arrête (I am stopping), (3) Je tourne à droite (I am turning to the right, and (4) Je tourne à gauche (I am turning to the left). Fig 2 shows how the device is operated from the steering wheel by the lever A acting through Bowden wire connected to the lever C, which in turn is attached to the sector E; the latter engaged with a pinion F on one end of the indicator I, 1, 2, 3, 4. By moving the lever into one or other of the four notches provided on the quadrant any desired indication can be given through the slot in the plate H. In view of the great increase in the use of motor vehicles as town carriages, the idea, which has been introduced by the Box

Fig. 2.

Garage, 157, Boulevard Murat, Paris, is one which could usefully be adopted, especially in the crowded thoroughfares of the West End of London.

THE Victoria Trading Company, of 47, Lamb's Conduit Street, London, W.C., are introducing a new car known as the "Piccolo," for which they have been appointed sole concessionaires in this country. The vehicles, which are of German manufacture, are made in two sizes, 6-8-h.p. two-cylinder, and 12-16-h.p. four-cylinder, the engines being of the air-cooled type; the transmission is by cardan shaft and bevel gear to a live axle. The smaller car can be supplied with either a two-seated, enclosed landaulet, or light delivery van body, while the larger model can be provided with any pattern of open or closed side-entrance body.

MOTORING NOTES FROM BRIGHTON.

THOSE who motored to Brighton last Sunday found the "Queen of the South" in her most radiant mood, with Italian shades of blue alike in the sun-swept sky and the lazily tranquil sea, from whence—I mean the seashore, of course—the percussive rattle of several smart little motor craft echoed faintly all day long. Mr. Davenport-Powell came down from London in his 120-h.p. Mercedes to join the luncheon party at the Royal York, and the Rev. W. Owen, a Welsh clergyman who is an enthusiastic motorist, was another Mercedes-borne visitor—with a compatriot, presumably, in Mr. Owen-Owen, who drove a Delaunay-Belleville. Mr. Fassonbridge came in from Uxbridge on a Napier. Mr. Paton, a Scottish tourist, and Mr. Lowe with Argyll cars, and Mr. Hoskin, with a Jackson, were "stabling" at the big Brighton and Sussex garage, just behind the Grand Hotel, where I also found Mr. Wormald, a frequent visitor to Brighton, having both rear wheels of his big Daimler "re-shod" with Palmer tyres. There was good reason for it! He had been a sorry victim of tyre troubles on the road that morning. Both back tubes went wrong, in quick succession, near Crawley, and after a hopeless burst had succeeded an ineffectual attempt to put things right, he continued and completed his journey on the rims, with both tyres flat!

AT the same garage they had in three Lanchesters and a Daimler of the Jam Sahib of Nawagar, better known in this country as "Ranji," last week, and it was a picturesque sight to see him and his dusky, turbaned, grave-featured retainers driving off to the cricket ground every morning. His chauffeurs are, of course, Englishmen. Sir Arthur Conan Doyle was another celebrity driving round about Brighton all the week in his Dennis car. Week-enders at the Metropole were fairly numerous, among the car-owners there for luncheon on Sunday being Mr. Errington and Mr. Bethel with Daimlers, Mr. Fletcher (Franklin), Mr. Elsey (Mercedes), Mr. Rucker and Mr. Hansard (Panhard), and Mr. Adams (Renault).

NEXT Sunday there will be no lack of visitors, for the "Water Rats"—a famous coterie including all the music-hall celebrities of the day—are making an excursion from town in full force. Something approaching a hundred cars are expected to pour into Brighton in quick succession, with these lively professional rodents on board, and their arrival at the Royal York, where they will take lunch, will be a sight well worth seeing. I hear they all intend to try the novel experiment of keeping strictly within the legal limit.

FOR those unable to indulge outright in the luxury of a car of their own, the Brighton week-end is being popularised by the Daimler Company, who are running Sunday excursions from London to the seaside during the summer season. They have instituted a special 42-h.p. type of car, with comfortably cushioned omnibus seats, for the purpose, and the fare is only 15s. for the return journey. Starting from the Waldorf at 10 a.m., the car, after calling at a number of hotels in the metropolis, arrives at its destination for lunch. The return journey begins at 5 p.m., and the passengers are able to descend at their respective hostleries with time to make an expeditious toilette ere the hotel gongs sound the fashionable dinner-hour. This novel enterprise of the Daimler Company seems to be well patronised so far, and to visitors to London at present makes a pleasant break in the fatiguing round of sight-seeing.

AND with its great Exhibition as a "star" attraction, London is booming at Brighton's expense. The latter, and, indeed, all the south coast resorts, have never been so bereft of holiday makers in June as is the case this year. Even the taxicabs are idling most of their time away—and they came in with such a rush three months ago! There are now between fifty-five and sixty of these up-to-date vehicles plying in Brighton—actually more than half the total number (102, I understand) licensed so far in England out of London. SAXONIAN.

CONTINENTAL NOTES.

The Prince Henry of Prussia Touring Competition.

Of the 130 cars which left Berlin on the 9th inst. 114 succeeded in reaching Frankfort on the 17th inst. after covering seven daily stages ranging from 253 to 392 kilometres. The principal feature of the last day's run was a six-kilometre timed hill climb over a very hilly course at Bacharach. The contest aroused enormous interest and drew many thousands of spectators. The best time was made by Erle on the Benz, his figures being 4 min. 27 1-5 sec., Pöge being second with 5 min. 15 3-5 sec. The official awards were as follows:—

1. Herr Erle (Benz), 7·96 points: The Prince Henry Trophy and the first prize of the German Imperial Club.
2. Herr Pöge (Mercedes), 7·91 points: The City of Frankfort prize.
3. Herr Geller (Adler), 7·28 points: The Lübeck prize.
4. Herr Zimmer (Benz), 6·76 points: The City of Cologne prize.
5. Herr Lühr (Adler), 6·51 points: The Frankfort Automobile Club prize.
6. Herr Ladenburg (Benz), 6·38 points: The Kiel prize.

bore; two cylinders, 78 mm.; and four cylinders, 62 mm.; they must also not weigh less, in running order, than 600 kilos.

More Speed Trials in France.

The Automobile Club de la Sarthe, in conjunction with the Syndicat d'Initiative des Alpes Mancelles et de la Ville de Fresnay-sur-Sarthe, is organising a series of flying kilometre speed trials for the 28th inst. The event, which will be held on the La Hutte-Fresnay road, will be open for motor-cycles, tri-cars, voiturettes, and heavy cars, the latter being divided into classes on a cylinder bore basis.

Aeroplane Trials in Italy.

At Milan, on Monday, M. Delagrangé made a flight with his aeroplane which beats all previous records. In the presence of numerous members of the Aeronautical Association and the official timekeeper of the Italian Automobile Club, he went nine times round the Piazza d'Armi, which has a circumference of 1,700 metres, in 16 min. 30 sec. Afterwards he travelled diagonally across the Piazza, passing over the heads of the

The Prince Henry of Prussia Touring Competition.—A View of the Cars lined up ready for the Bacharach Hill Climb.

7. Herr A. Horch (Horch), 5·83 points: The Hamburg prize.
8. Dr. Stöck (Horch), 5·68 points: The Hanover prize.
9. Herr Jochems (Mercedes), 5·53 points: The Bremen prize.
10. Herr Flinsch (Mercedes), 5·53 points: The Stettin prize.

Herr Erle also secured the first prizes offered for the speed trials on the level and on the Bacharach Hill, Herr Pöge the second and Geller the third. The event was brought to a conclusion by a banquet at the Frankfurter-Hof, Frankfort-am-Main, on the 18th inst., when the prizes were presented to the successful competitors.

A Belgian Race for Light Cars.

The Belgian Automobile Club is organising, in addition to the Circuit des Ardennes and Liedekerke Cup contests, an international race for light cars, to be held on the Ardennes circuit. The exact date for the event, which will be over a distance of 350 to 500 kilometres, has not yet been fixed, but entries will be received until July 15th at a fee of £10 per vehicle. The competing vehicles must be fitted with engines having the following cylinder dimensions as a maximum:—Single cylinders, 100 mm.

spectators, and taking his aeroplane back to its shed. During the flight the elevation of the aeroplane above the ground varied between ten and twenty-one feet.

British Motorists in France.

Recent motoring visitors to France include Mr. W. Selvo (60-h.p. Opel); Sir Edward Green and Major Frank Green, London (60-h.p. Napier); Lord Ingestre (35-h.p. Clement-Talbot); Mr. and Mrs. Stokes (32-h.p. Panhard); Mr. and Mrs. Wythes, London (30-h.p. Hotchkiss); Mr. L. Thomas, Mr. Robert Jones, and Dr. William Dawson, Edinburgh (24–32-h.p. Daimler), and Sir Mark Collet (50-h.p. Siddeley).

A Reliability Trial in Denmark.

A three-days' reliability trial, organised by the Danish Automobile Club, commenced on Sunday last. Only eighteen entries were received, and of these but fourteen started. The first day's run was from Frederica to Viborg, over a route which brought the distance to 275 kilometres. Aalborg, 276 kilo-

metres, was the destination on Monday, and Aarhus, 210 kilometres, on Tuesday.

Speed Trials at Marseilles.

On Sunday last the Automobile Club du Rhone held a series of flying kilometre speed trials at Anse, near Marseilles. The best time of the day (22 1-5 sec.) was made by Venus on a Clement-Bayard, his speed being equal to 104 miles an hour. In three of the racing car categories, viz., under 100 mm. bore, 110-120 mm. bore, and 120-130 mm. bore respectively, the honours of the day fell to Cottin Desgouttes vehicles.

The Ostend Automobile Week.

The programme of the automobile meeting which is to be held from the 13th to the 17th July at Ostend, under the auspices of the Automobile Club d'Ostende et du Littoral, has just been issued. On the first day (July 13th) there will be a series of five kilometre speed trials for both racing and touring vehicles on the Route Royale; July 14th will be devoted to an excursion to Nieuport; on the 15th the Circuit Touriste du Littoral will be held, consisting of six laps of a course taking in Ostend, Blankenberghe, Bruges, Roxem, and Ghistelles, the total distance being about 250 miles. On the last day (July 16th) the scene of operations will again be on the Route Royale, on which speed trials over the flying kilometre and standing mile will take place. The event will be open to both racers and touring cars, which will have to make two runs, one in each direction. Entries will be received up to July 4th, by M. T. Ratinecx, 40, Grand Place, Antwerp, from whom the full programme can be obtained.

The International Road Congress and Exhibition.

An exhibition is being organised in connection with the International Congress which is to be held in Paris from the 11th to the 18th of October next, with the object of studying the construction and treatment of roads in view of their adaptation to the modern methods of locomotion. The scope of the display is extensive, as it will include everything pertaining to the road, such as maps and plans, cost of upkeep, metallising material, tar, stone and wood pavement, asphalt, rollers, tar-spraying, tools, appliances, &c. One of the sections deals with disc wheels, elastic wheels, wheels for heavy cars, tyres, anti-skid devices, springs, axles, &c.

Belgian Motor-Car Imports and Exports.

The value of the foreign motor-cars and parts imported into Belgium during the five months ending with May last amounted to only £61,631, as compared with £63,239 in the corresponding period of last year. On the other hand, there has been an increase in the exports of Belgian motor-cars and parts—from £162,901 in the first five months of 1907 to £190,544 in the similar period of the current year.

Miscellaneous Items.

The annual Belgian Motor-Car Exhibition is to be held in Brussels from January 16th to 25th next.—The Mont Cenis hill-climbing competition, which was to have been held on the 21st inst., has been postponed until August 9th.—The French Post and Telegraph authorities are about to invite tenders for the transport of the mails by motor-cars between Ghisonaccia and Sartene, Corsica.—It is reported that the Benz Company is about to establish a branch factory in Budapest, Hungary.—The Austrian Automobile Club is, it is announced, organising a trial of industrial motor-vehicles.—A party of members of the Automobile Club du Périgord has just returned from a visit to London and the southern counties.—The A.C.F. draws attention to the fact that any excessive speed on the Dieppe Circuit is being closely watched, and that offenders will be rigorously punished. The maximum rate allowed is 15 kilometres (9½ miles) per hour.—The Geneva section of the Swiss Automobile Club is holding a speed trial on the Cote de la Faucille, between Gex and La Faucille, on Sunday next.—A series of flying kilometre speed trials was held at Le Mans, by the Automobile Club de la Sarthe, on Sunday last, when the best time of the day (38 4-5 sec.) was made by M. Lhonore on a Peugeot, M. Leon Bollee on a six-cylinder car of his own construction being second, in 42 1-5 sec.

THE TRAFFIC OF CITIES.

PROPOSED PROHIBITION OF HORSE-DRAWN VEHICLES

THE problem of keeping clean the streets of the great towns and cities has always been one of the greatest perplexity to the responsible authorities. It is a department in which expenditure has steadily grown and no great hope of substantial diminution has hitherto been entertained. The coming of the automobile, however, has revived the spirit of optimism in the minds of many of the experts who are responsible for the maintenance of the roadways in a proper condition.

Especially is this the case in such a city as Westminster where the favour with which the motor vehicle is being regarded by all sections of the community is so conspicuously evidenced. It is probably a fact that there are more motor-buses running through Westminster than through any other city in the world. There, too, the presence of motor-cabs has become almost a commonplace. Then, too, from all parts of outer as well as from inner London come the heavy vehicles used by contracting and delivery firms, while the pleasure cars of Society are met with in greater numbers than elsewhere in its parks and fashionable streets. It is not generally known that there are over 100 miles of roadways in the city of Westminster, the boundaries of which stretch from the Rolls Office, in Chancery Lane, to beyond the Round Pond in Kensington Gardens. Some idea of the value of the assets of the city of Westminster may be gleaned from the statement that a penny rate produces no less than £25,000. The rateable value of the borough is beyond six millions sterling, although the area is only 2,502 acres.

The annual cost of keeping clean the streets of this important municipality is no less than £100,000, equivalent to practically a 4d. rate; hence the importance of the subject to the Highways Committee, of which Mr. H. Thomson Lyon is the chairman. To effect the ordinary cleansing of the streets a staff of 138 sweepers, forty orderly boys, and nine motor drivers is required. In maintaining the proper condition of the streets and clearing the mud and dust therefrom a great deal of ballast finds its way into the sewers, this being the reason why the department responsible for cleansing the roads is also entrusted with the duty of securing the cleansing of the sewers.

Recently we had a chat with Mr. Lyon at the Westminster City Hall, opposite the offices of the M.C.J., and learned that he is one of the far-sighted municipal experts who recognises that the advance of the motor-car means the total supersession of the horse from the streets of great towns and cities. He would like to see powers granted to borough authorities to close certain streets and thoroughfares to horse traffic—on the ground that such traffic is so dirty that it is economically unsuitable for the present age. In many of the squares of Westminster it would be possible to keep, as a step towards the ultimate goal, viz., the total prohibition of horse traffic, one or two sides solely for mechanical traction, leaving the others for horsed vehicles. Such a course would at once provide an ocular demonstration of the undoubted cleanliness of the motor vehicle as compared with horses. At first, in order to facilitate matters and prevent too great a dislocation of our present antiquated methods, the municipalities might be empowered to provide tractors, &c., for the carriage of such heavy goods as coal, &c., by motor power to places in areas from which horses were prohibited. This could easily be done, in the view of Mr. Thomson Lyon, with corresponding advantage to all concerned. The idea is certainly a striking one, and should provoke considerable discussion, for, although it has the merit of novelty, it is probably only anticipatory of the future, where the burdens now borne by the horse will be carried by mechanically-propelled vehicles.

AFTER several years of laborious research, Professor Charles L. Norton, of the Massachusetts Institute of Technology, has succeeded in producing an asbestos wood which, while being fire-proof, is claimed to be harder than ordinary wood, and takes a higher polish. The new material is expected to find many uses in the construction of motor garages, fire-proof doors, &c.

The 2,000-miles Trial.

INCLUDING THE SCOTTISH RELIABILITY TRIAL.

LAST week we chronicled the early stages of the Scottish A.C., which concluded on Friday of last week, and—so quickly do things move in the motor world—have almost become forgotten. But the results, so far as they can be obtained until completed by the final returns made by the Club officials, are of interest. The routes of the Trials were over familiar ground until Pitlochry was left on the morning of the 18th. Then came the run from Pitlochry, that delightful Highland centre near the Pass of Killiecrankie, to Oban. A portion of the route had been included in earlier itineraries, and most of us were familiar with Aberfeldy and the region round about. Difficulties began to present themselves after reaching Amulree. The route-book said, "Take two sharp elbow turns carefully." To do otherwise would have brought disaster. Several cars had to shed their passengers and break all chance of securing a non-stop record. These two "turns" were really a kind of "twin

thence was a run of 41½ miles to Oban *via* Cladich, Loch Awe, the Pass of Brander, and Connel Ferry—a lovely trip, including the Falls of Cruachan and some of the most delightful scenery of the whole course. Non-stops for such a day assure credit both to driver and car, and publicity is well deserved. They were as follows:—

- Class A.—10-12-h.p. Swift, 10-12-h.p. Chambers, 10-h.p. Adams.
- Class C.—14-16-h.p. Argyll, 15-h.p. Mass, 16-h.p. Bell, 14-16-h.p. Darracq.
- Class D.—20-h.p. Beeston-Humber, 18-24-h.p. Swift, 12-16-h.p. Vauxhall, 14-16-h.p. Argyll, 20-h.p. Bell, 20-h.p. De Luca-Daimler, 20-24-h.p. Junior.
- Class E.—30-h.p. Beeston-Humber, 20-h.p. Sunbeam, 15-h.p. Panhard, 20-h.p. De Luca-Daimler, 25-35-h.p. Darracq, 26-h.p. Metallurgique.
- Class F.—24-h.p. Albion, 35-50-h.p. Vinot, 18-24-h.p. Piccard-Pictet, 25-30-h.p. Maudslay, 18-h.p. Panhard, 50-h.p. Darracq and 18-h.p. Benz.

The 2,000 Miles and Scottish Reliability Trials.—The Scene at Amulree Hill.

devil's elbows," and constituted the "tit-bit" of the Trial. Every year such an exploit is given by the Scottish A.C., but this time the organisers exceeded previous efforts in this direction. The 14-h.p. Argyll, the Vinot driven by Mr. H. Ramoisy—an old favourite in these Trials—the 15-h.p. Humber, and a few others went up in good style; but few of the drivers would care to repeat the performance on a dark night. Even then the hardships of the day were not over, and there was a treacherous fearful descent into Kenmore to be taken "dead slow, with your car thoroughly in hand." Everyone was thankful to get on the road along Loch Tay for Kellin, one of the "show" villages of Perthshire, and have a glimpse of the famous Falls of Dochart before getting on to the route of last year's event to Tarbet, where we have previously run through, but where on the present occasion we halted for lunch. The next stage was to the Glencroe hill climb, and there on the "Rest and Be Thankful" ascent was the timed distance of the day, the fastest cars in each class being duly chronicled in the table on another page. The hill climb over, the way was familiar enough to Inverary by the shores of Loch Fyne. From

- Class G.—40-50-h.p. Ariel, 40-h.p. Whitworth Armstrong, and 25-30-h.p. Maudslay.

The last day of the Scottish Trial was on Friday, the 19th, and well will all who took part therein remember the occasion. Not only had rain fallen all night while the drivers slept in Oban, but it fell all the day as we almost waded to Glasgow. Of course there was a hill climb—at Fintry, over a distance of 1 mile 694 yards, with an average gradient of one in fifteen that did not cause trouble. But everyone was heartily glad to see the grey walls of Glasgow again.

So severe was the test of the Scottish Trial that only about a dozen automobiles were declared to have made absolute non-stop runs, viz:—

- Class A.—10-h.p. Swift, 10-12-h.p. Chambers.
- Class C.—14-16-h.p. Argyll.
- Class D.—20-h.p. Beeston Humber, 18-24-h.p. Swift, 14-16-h.p. Argyll, 20-h.p. De Luca-Daimler.
- Class E.—30-h.p. Beeston Humber.
- Class F.—24-h.p. Albion, 23-30-h.p. Maudslay, 50-h.p. Darracq, 18-h.p. Benz, 18-24-h.p. Piccard-Pictet (under consideration).
- Class G.—40-h.p. Armstrong-Whitworth.

The list of the withdrawals from the Scottish Trial during the progress of the event may now be set down. There were three on the first day:—The 14-16-h.p. Belsize had water in the cylinder; the 16-h.p. Sunbeam had a leaky radiator, and the 20-h.p. White steam was in difficulties with the back axle. Seven cars withdrew on the second day—the 20-h.p. Coltman from a stripped differential, the 25-h.p. Werbell from a burnt clutch, the differential key of the 8-h.p. Clyde sheared, the 12-18-h.p. Riley stripped its gear at Dufftown, and the driver of the 28-h.p. Belsize was unfortunate enough to injure his arm in a backfire. These, with the withdrawal of the 24-32-h.p. Porthos at Cairn o' Mount, complete the casualty list for the day. On the third day the 45-h.p. Sheffield-Simplex was withdrawn owing to a damaged wheel, and the 25-30-h.p. Ariel and the 12-15-h.p. Hillman Coatelen did not continue, while on the fourth day a broken ball race compelled the withdrawal of the 30-h.p. S.P.A., and the 16-h.p. Star was also *hors de combat*.

During the Scottish Trial no fewer than 119 daily non-stop runs were made by cars fitted with Dunlop tyres. Nine cars made complete non-stop runs on all the five days on these tyres. On the hill climbs, too, the Dunlop tyres had a good record, thirty of the thirty-five first places in the seven classes being secured by cars thus fitted.

The Scottish Trial over, on Saturday the cars left Glasgow for Windermere, when wonderful regularity characterised the running of the thirty-seven competitors who will continue the trial through England. The order of merit officially given to

the end of Saturday's run in the R.A.C. 2,000-mile Trial was as follows:—

| CLASS A. | | | | Time Lost. |
|---------------------------------------|-----|-----|-----|---------------------|
| | | | | min. sec. |
| 6-2-h.p. De Dion | ... | ... | ... | 191 |
| CLASS B. | | | | |
| 8-9-h.p. Adler | ... | ... | ... | 150 35.4 |

| CLASS H. | | | |
| 40-h.p. Armstrong-Whitworth | ... | ... | 101 50·4 |
| 38·1-h.p. Daimler (Street's) | ... | ... | 103 37·2 |

The 25-h.p. Metallurgique which took part in the Scottish Trials. The chassis only arrived in London on the evening of the 10th inst., and the car was completed and on its way to Scotland on Friday night, the 12th—a smart piece of work, upon which Messrs. Warwick Wright, Ltd., the British agents, are to be congratulated.

| 38·1-h.p. Daimler (Ison's) | ... | ... | 105 11·4 |
|----------------------------|-----|-----|----------|
| 37-h.p. White Steam | ... | ... | 197 49·8 |
| 40-h.p. Hillman-Coatalen | ... | ... | 285 12·8 |
| CLASS J. | | | |
| 45·8-h.p. Ariel | ... | ... | 241 |
| CLASS K. | | | |
| 48·6-h.p. Rolls-Royce | ... | ... | 83 6 |

of 1 mile 740 yards, the gradient varying from 1 in 12 to 1 in 209. In the A, B, J and L classes the only competitors were the 6·2-h.p. De Dion, 8·9-h.p. Adler, 45·8-h.p. Ariel, and 59·5-h.p. Ariel respectively, so that they were the victors in their classes. In the others the best times up the hills were as follows:—

Class C.—12-h.p. Zedel, zero; 10-h.p. Cadillac, 4 min. 13·2·5 sec.
Class D.—15-h.p. Singer, zero; 15-h.p. Zedel, 2 min. 33·3·5 sec.; 15-h.p. Shamrock, 2 min. 46·4·5 sec.

The Dunlop Tyre Company provided the three vehicles shown in the above illustration for service during the Scottish and 2,000 Miles Trials.

One vehicle preceded the competing cars, the other two bringing up the rear. Over and over again they proved of signal service in affording lifts to belated parties interested in the proceedings, while they were most useful in conveying luggage, spares, &c.

Class E.—20-h.p. Talbot, zero; 17-h.p. Benz, 5 3·5 sec.; 20-h.p. Vauxhall, 23 1·5 sec.; Allen's 20-h.p. De Luca Daimler, 2 min. 42 3·5 sec.; 20-h.p. Panhard, with live axle, 2 min. 46 3·5 sec.; Griffiths' 20-h.p. De Luca Daimler, 2 min. 56 1·5 sec.; 19-h.p. Coventry-Humber, 3 min. 19 sec.

The 2,000 Miles and Scottish Reliability Trials.—The Cars Leaving Oban.

| 48·4-h.p. Deasy | ... | ... | 103 1·8 |
|-----------------------------|-----|-----|----------|
| 52·5-h.p. Lorraine-Dietrich | ... | ... | 384 56·2 |
| CLASS L. | | | |
| 59·5-h.p. Ariel | ... | ... | 194 |

On Monday motorists at Windermere were up in the morning early for a run in the Lake District, and an ascent of Dunmail Raise by Grasmere. The cars were timed over a course

Class F.—25-h.p. Minerva, zero; 25-h.p. Beeston-Humber, 57 3·5 sec.; 23-h.p. Coventry-Humber, 1 min. 8 sec.; 24-h.p. Panhard, 1 min. 43 3·5 sec.; 25-h.p. Talbot, 2 min. 31 4·5 sec.; 24-h.p. Brown, 3 min. 48 2·5 sec.; 24-h.p. Junior, 3 min. 51 sec.
Class G.—30-h.p. Adler, zero; 27-h.p. Nagant-Hobson, 1 min. 52 3·5 sec.; 32-h.p. Beeston-Humber, 1 min. 56 4·5 sec.; 27-h.p. Deasy, 4 min. 8 2·5 sec.
Class H.—Street's 38-h.p. Daimler, zero; 40-h.p. Armstrong-Whitworth, 44 sec.; Ison's 38-h.p. Daimler, 50 3·5 sec.; 37-h.p. White

TRIAL NOTES.

steam, 1 min. 13 1-5 sec.; 0-h.p. Hillman-Coatalen, 3 min. 52 3-5 sec.
 Class K.—48-h.p. Rolls-Royce, zero; 48-h.p. Deasy, 1 min. 11 1-5 sec.; 52-h.p. Lorraine-Dietrich, 1 min. 40 3-5 sec.

Later in the day another hill climb took place on Kirkstone Pass, when the fastest cars in their respective classes were: D, 15.8-h.p. Singer; E, 20.1-h.p. Talbot; F, 25.6-h.p. Minerva; G, 30-h.p. Adler; H, 38.1-h.p. Daimler; K, 48.6-h.p. Rolls-Royce. The 15.9-h.p. Zedel, 17.9-h.p. Benz and the Humbers were also conspicuous for speed on the climbs.

A mishap occurred on Kirkstone Hill as Mr. Tom Thornycroft was making the ascent on his car of similar name, a tyre bursting, causing the car to swing violently into a wall, throwing the mechanic out, and causing some severe scalp wounds. Mr. Thornycroft was only shaken, and soon set to work on repairs to the car and 572 minutes were lost, many being owing to the straightening of the front axle at the blacksmith's forge five miles away.

Monday's results left the order in classes A, B, C, D, G, J, K and L as on Saturday. In Class E the 17.9-h.p. Benz and 20.1-h.p. De Luca Daimler changed places; in F, the mishap

ONE of the pleasantries of the 2,000 miles trial has been the compliment paid to the competitors at the meeting of the Windermere District Council on Monday evening, when one of the members said that that authority should accord a word of praise to the motorists at Windermere, who had shown that they could drive carefully, considerably, and with due regard to the safety of the public.

WITH reference to the speed races on Brooklands Track on Friday and Saturday, the 26th and 27th, the tenancy by the R.A.C. will secure free admission to its members over the various enclosures, whilst the Brooklands A.R.C. is throwing open the lawn and hill hitherto reserved for its members to those of the R.A.C. who will be its guests. The general public will be admitted to the course on the usual terms, and we understand that a large attendance of persons representing industries akin to the automobile movement is anticipated.

The 2,000 Miles Trial.—Luncheon Time at Kirkby Stephen.

to the Thornycroft removed it from the premier position, into which the 25.5-h.p. Talbot moved; and in G the 37-h.p. White divided the two Daimlers.

On Tuesday there was another journey in the Lake District over a course of 137½ miles to complete 1,629½ miles in eleven running days. There were two hill climbs—one over Shap and a long climb of five miles over Alston Hill, the fastest in each class being:—

| Shap. | Alston. |
|---------------------------|------------------------|
| C, 12.8-h.p. Zedel. | 12.8-h.p. Zedel. |
| D, 15.8-h.p. Zedel. | 15.8-h.p. Singer. |
| E, 20.08-h.p. Talbot. | 20.5-h.p. Vauxhall. |
| F, 25.5-h.p. Talbot. | 25.5-h.p. Talbot. |
| G, 30-h.p. Adler. | 30-h.p. Adler. |
| H, 38.1-h.p. Daimler. | 38.1-h.p. Daimler. |
| K, 48.6-h.p. Rolls-Royce. | 48.6-h.p. Rolls-Royce. |

The runners-up deserve credit for good performances in most cases, notably the 52.49-h.p. Lorraine Dietrich.

On Wednesday the cars left Windermere for Church Stretton, and by the time these lines appear in print the cars will be pacing round the track to decide the premier position in each class.

ONE of our correspondents in the Highlands says that about 1,400 gallons of petrol were supplied in Aberdeen to the cars for their 180 miles run to Inverness. There was a great crowd in the Granite City when the first car got away at 8 a.m. At Dufftown the 10-h.p. Swift was the first arrival, being followed by an Argyll, the Chambers, and a Coventry Humber. As has been the case every year at Grantown-on-Spey, the cars were heartily welcomed. The Swift was still in front. Shortly after 5 p.m. it was at the excellent garage of Messrs. Macrae and Dick, in the Academy Street, Inverness.

ONE of the longest stages in the Scottish section of the Trial was that of ninety-six miles, from Inverness to Kingussie, along one of the finest routes in all Scotland. Ben Nevis was wreathed in snow, and the ascents and descents along Loch Ness and Loch Oich revealed the beauty of the Highlands.

As a misapprehension has arisen in regard to the cause of the withdrawal of the 25-30-h.p. Ariel from the 2,000 miles trial, Mr. C. Sangster informed us on Tuesday that the trouble was caused by a cracked sleeve carrying the ball race.

At the Gloucester Historical Pageant, at Cheltenham, early in July, a decorated motor-car parade will be included among the attractions.

With the help of motoring friends Miss Margaret Bevan, of Liverpool, recently took forty afflicted children from the Dingle Mount School of that city for a motor drive in the country.

MOTOR char-a-bancs are now running to Studley Rcyal from Harrogate, the regular service proving of popular interest.

A RELIABILITY test has, we learn, just been carried out on the Brooklands track with a "Standard" 20-h.p. six-cylinder car fitted with a new tyre, the invention of Mr. A. C. Gubbins.

At the Woodford Meet on Saturday last the Walthamstow Motor Club was strongly represented, and the first prize for decorated automobiles was won by the president of the club, Dr. Stanley Owen.

A NOVELTY has been provided for the members of the Automobile Club of St. Paul, U.S.A., the house committee of that organisation having established a "chop-suey house," which is "in charge of a high-class Chinese chef."

In the House of Commons the Home Secretary has mentioned the action taken by the City authorities with regard to the speed and noise of motor-omnibuses, and added that he did not see why the London County Council did not take somewhat similar steps.

THE Parish Council of Lindfield and a contractor who had placed a solution of calcium chloride on the highway to mitigate the dust nuisance have come to an arrangement with regard to the damage alleged to have been done by the solution to the boots of the workmen of the latter.

THE Index to Vol. XI. of the *M.C.J.* is available for those of our Subscribers and Readers who bind their copies. It will be sent to those who make application during the present month. The offer is also extended to the various institutions connected with the motor and engineering industries, public libraries, &c.

At Cannon Hill, on the Kenilworth road out of Coventry, the motor mail van which runs nightly from Warwick to Birmingham caught fire the other evening, and was totally destroyed. Fortunately the driver was able to throw the mail bags on to the roadside, and a passing motorist carried a number of them into Coventry for him.

LORD MONTAGU issued an appeal to motorists who might be leaving London for the week-end not to forget the Metropolitan Hospital Sunday Fund on the 21st inst. This has seriously suffered of late from the custom of motorists going out of town; hence the suggestion, which can still be carried out—though a few days late.

MESSRS. CARLESS, CAPEL AND LEONARD, of the Hope Chemical Works, Hackney Wick, N.E., have, we learn, now arranged to send out their Standard petrol and Movril motor spirit, either in the well-known round two gallon cans or in two gallon square tins similar to those generally used. They have decided on this step because they are often told that the square tins are more convenient to carry in a car than the round ones and that they also occupy less storage room. Unless specially asked for, however, they will continue to use the round cans, because, they believe, in many respects they are the most suitable package for the purpose; they are more strongly made and will stand more knocking about than the square ones; they are also safer for handling an inflammable spirit like petrol because they are less likely to leak. The firm have also issued a circular drawing attention to the quality of their Standard petrol. Quotations are given from the paper on "Petrol and Petrol Tests," recently read by Mr. G. H. Baillie at the R.A.C. It may be remembered that Mr. Baillie has devised an apparatus, which has since been adopted by the R.A.C., for testing the efficiency of motor spirit. By means of curves he gave the results of his examination of all the best known brands of essence now on the market. Messrs. Carless, Capel and Leonard's Standard petrol had an extremely good curve and compared very favourably with any of the ordinary brands of motor spirit.

HERE AND THERE.

At Shortlands, on the Bromley and Beckenham high road, a new garage and repair works have been opened by Messrs. Cox and Pearson.

At that end of the High Road at Leyton nearest Epping Forest the Home Counties Garage Company, Ltd., have adapted a whilom stabling establishment to the purpose of the accommodation of motor-cars.

WE give herewith a view of the new showrooms at 5 and 7, Regent Place, London, S.W., which have lately been opened by the Lorraine-Dietrich Company. As is well known, Messrs. Jarrott and Letts have had the exclusive agency for the De Dietrich cars ever since they were first imported into this country, but some time ago the French company, which now has works at Luneville, Argenteuil, Milan and Birmingham, approached them to see whether it would be possible to arrange for a showroom where nothing but De Dietrich cars would be shown. After some negotiation a perfectly fair arrangement was arrived at between the two companies, with the result that the De Dietrich depot is now at 5-7, Regent Street, while at the same time Messrs. Jarrott and Letts will also be showing them at their premises in Great Marlborough Street, W. By this means it is

hoped to be able to give old clients, and also the public generally, a better selection of these cars in England than has been possible hitherto, it being intended to have on hand examples of every chassis manufactured by the De Dietrich firm, fitted with carriage bodies, at either one or other of the depots, as well as trial cars of every description. Those motorists who have for so many years done business with Mr. Jarrott or Mr. Letts will be able to find them at either establishment, as they still continue as the representatives of the De Dietrich Company, and will look after clients' interests as hitherto. In fact, the new arrangement does not in any way interfere with the business, and it is immaterial whether customers order their cars through Messrs. Jarrott and Letts or the London branch of the De Dietrich Company.

THE latest additions to the excellent series of road maps issued by the Touring Club Italiano, of Milan, are those dealing with the Pisa, Leghorn, Brescia and Bologna-Florence districts. To motorists contemplating a tour in Italy the maps should prove indispensable companions.

A NOVEL event in the form of a regatta for model motor-boats is being organised under the auspices of "The Model Engineer," and will take place on the lake at Wembley Park on the afternoon of Saturday, July 25th. Races for model steam, petrol, and electric boats will be arranged, and as some of the latest of these small craft are capable of speeds exceeding ten miles per hour, some highly exciting performances are expected.

A MOTOR grass cutter is now employed on the Sandycote (Yorkshire) golf links.

THE Baroness Von Zwiedinek and Miss M. Bailey have passed the R.A.C. examination for driving certificates.

A SPECIAL summer course of lectures and practical work for motor-car drivers and attendants will commence on the 20th prox. at the Battersea Polytechnic, London, S.W.

GENERAL BOOTH's fifth motor-car tour commenced at Dundee on Monday and will be concluded on July 25th, when he is expected to arrive at the Crystal Palace.

ACCORDING to the "Standard," a car on the way to the Royal Garden Party on Saturday stopped "and was tackled by a burly constable, who wound up the machinery and set the car going."

On Saturday the Chief Petty Officers' Mess of the Royal Naval Barracks at Portsmouth had their annual outing, a party of 75 journeying by motor chais-a-banc from Portsmouth to Midhurst, via Petersfield.

AMERICAN motorists may now take their cars across the border into Canada duty free for three months, provided an invoice giving the value of the car is shown at the custom house at the point of entry, a cash deposit of £5 made, and a bond for double the amount of the duty signed.

A NUMBER of taximeter motor-cabs are being introduced into Mexico.

MR. T. GILLET has opened a motor repair works at Little Bookham, in Surrey.

To their body building works in the High Road, Tottenham, Messrs. J. Moulding and Co. have added a motor garage.

THE first formal entry of a foreign car for the Vanderbilt Cup race has been made; it is a 90-h.p. Mercedes belonging to Mr. Robert Graves, of Mineola, Long Island.

THE Shoreham Urban Council has approved a recommendation of its Works Committee for a temporary building in the High Street, stated to be for the purpose of motor works.

A 16-h.p. motor vehicle has lately been travelling throughout Scotland with a view to inducing Scotchmen to spend their holidays in the summer resorts on the Highland Railway. Hundreds of guide books, &c., have been distributed through its agency.

ABOUT a month ago Mr. William Dyer, fitter at a works at Tondur, was soldering the petrol tank of a motor-car when an explosion occurred in the tank. He was terribly burned and died last week. The petrol had been removed from the tank but it is supposed that the explosion must have been caused by an accumulation of fumes.

Mr. E. Lisle, Jun., at the wheel of the 10-h.p. Royal Starling Car which made a non-stop run in the recent Irish Reliability Trials.

A CORONER's jury has called the attention of the St. Pancras Borough Council to the fact that the fire station in the middle of the Tottenham Court Road, London, W.C., obscures the view of the traffic to drivers in that thoroughfare.

ENTRIES for the trial of Light Army Tractors proposed by the Army Council are to be made on or before August 31st next. Full particulars can be obtained from the secretary, Mechanical Transport Committee, War Office, Whitehall, London, S.W.

THE spanner which has lately been introduced by the United Motor Industries, Ltd., for use in connection with Eisemann high-tension magnetos, has attached by a single pivot pin respectively a screw-driver blade and an adjustment gauge. The latter is exactly $\frac{1}{4}$ mm. thick, and it is intended for determining the exact distance between the broken platinum points of the make-and-break when the cam separates them. It is, of course, important that this distance should be correctly gauged, as upon it depends, to a great extent, the rapidity of the make-and-break effect. Another tool, which is being sent out with all 1908 Eisemann magnetos to facilitate the adjustment of the make-and-break, is a brass plug, the purpose of which is to enable the rocking member of the make-and-break to be adjusted relative to the lift effected by the cam on the end of the armature spindle.

At the annual meeting of the Commons and Footpaths Preservation Society Lord Eversley said that the advent of motor-cars had made the preservation of the paths more urgent than ever.

MR. A. E. QUICK has converted what was formerly a brewery in Queen Street, Horsham, into a depot where motor spirit, spare parts, and other requirements of those who travel by modern means can be obtained.

MESSRS. DENNIS BROS., of Guildford, have sent us a photo of a 30 cwt. and 15 cwt. van they have just supplied to Messrs. Gurney and Co., family grocers and wine merchants, Hereford, and a 15 cwt. van for their agent, Mr. H. Bracewell, Llaskett, Llandinabo, Hereford.

ONE of the motor-cab companies in New York now compels the driver to pay for all accidents due to carelessness. If he loses a part of his equipment, damages a wheel or mudguard, it is deducted from his commission at the end of the week. At first the company tried the experiment of offering a cash prize to the driver who could show the best record in a month. This, however, only interested a few, the rest seeming indifferent. The effect of the new rule, however, is said to be most gratifying, the repairs falling off 50 per cent.

MOTORING ACCESSORIES.

The "Fors" Accumulator.

ONE of the pioneer workers in the automobile movement was Mr. H. F. Joel, whose new "Fors" accumulator is being put upon the market by Messrs. Richard Pape, Ltd., of 59-61, New Oxford Street, London, W.C. The claims which are made for this well-constructed accumulator are of importance to motorists, who will do well to test the declared advantages for themselves. The reduction of weight for the increased output is said to be fully 50 per cent. as compared with many other types on the market. Short circuiting is prevented by the positive plate being separated by the porous pot from the negative plate, with consequent little liability of local action, so that the accumulator has the capacity of retaining its charge for an unusual length of time. The plates will not buckle nor can sulphating take place, and altogether it will be seen that great

Fig. 1.

things are expected of the Fors accumulator. The cell follows the form of a positive electrode in the shape of a fluted cylinder placed within a porous pot which is closely surrounded by the negative electrode. The porous separator ensures freedom from short circuiting due to the accumulation of sediment at the bottom of the cell. The space usually left on this account is not required and the volume of the cell can therefore be diminished. As the electrodes are circular and the container square in plan, there is sufficient space for a store of electrolyte in the corner spaces left otherwise unoccupied. The ample support given to the electrodes enables very light supports to be used for the active material and buckling is impossible. It is claimed that the cell can be charged and discharged at high rates without injury—an important point in such a cell. Practical tests have demonstrated its efficiency and also its capacity for withstanding rough usage. We illustrate the type 4/1404 of 40 amp. hour capacity at 4 volts, which is specially designed for cars with one or two cylinder engines. It weighs 5½ lbs. and the size is 6 in. by 2½ in. by 4½ in. That for four-cylinder engines is the 100 amp. hour 4 volt type weighing 10½ lbs. and being of the following dimensions, 6½ in. by 4½ in. by 4½ in. In addition to ignition purposes it can also be employed for the interior lighting of cars, &c. The "Fors" accumulators are supplied in celluloid cases, and for carriage lighting batteries Messrs. Richard Pape, Ltd., have an excellent type complete in stout teak cases with outside terminals. All the connections are lead lined, leaving no metal subject to corrosion. Motorists will be well advised in becoming acquainted with the merits of these excellent specialities.

The "Signet" Luggage Carrier.

Those motorists who are now planning a tour on their car, and are somewhat puzzled as to how to carry all the necessary luggage, will be interested in the "Signet" collapsible and telescopic luggage carrier illustrated in Fig. 2, which has just been put on the market by Messrs. Brown Bros., Ltd. The device, which is easily fixed to the chassis, or fitted in boot of car as shown, can be supplied in any size to suit particular vehicles, the stock sizes, however, being 2 ft. 4½ in. by 1 ft. 6 in. and 2 ft. 7½ in. by 1 ft. 9½ in. It carries a lamp and number plate according to regulations, and folds into a space of 2 inches when not in use.

Fig. 2.

The carrier is made of steel throughout, but can be furnished in delta or aluminium alloys at an extra cost. Messrs. Brown Bros. have also sent us a sample of a new lining for the brakes of motor-cars they are introducing. The material, which is known as "Raybestos," is composed principally of asbestos woven with brass wire. While it will not burn out nor carbonise in any heat, it is claimed to produce more friction than metal against metal. It will rarely show signs of wear after many thousands of miles—in fact, cars have been driven 20,000 miles without wearing it out. The material has, we are informed, been subjected

to every known test, and has been used on the heaviest cars; it has also been soaked in petrol, paraffin, lubricating oil and water, without being affected. "Raybestos," which is extremely durable, is supplied in two thicknesses, $\frac{1}{8}$ in. and $\frac{1}{4}$ in., the thinner variety being usually sufficient.

Acetyloid Motor Lamps.

No fewer than one hundred and thirty motor lamps and generators are described and illustrated in the new catalogue for the season brought out by Messrs. Worsnop and Co., of the Carlton Lamp Works, Halifax. They are making a special feature of their acetyloid motor lamps, in which the light can be turned out and then lighted again safely when required without waste or smell occurring at either operation. The acetyloid can always be kept under control, and will not decompose in the ordinary atmosphere. It is claimed that the lamp remains uniformly steady, and that the rapid or slow movement of the car makes no difference to the size of the flame. The light given is very penetrating, and both economy and efficiency are secured. For use in connection with this system the Worsnop duplex gas lamp has been introduced. In this the lens and reflector are arranged to give a perfect illumination. The lamp is provided with a regulating valve for each carbide container, so that the light can be increased or decreased as required. It is also arranged so that one container can be refilled while the lamp is burning—an unique advantage that should assist its introduction to motorists.

The above illustration shows part of one day's output of "Stepneys," representing 250 Spare Wheels. When it is remembered that the Stepney Company turns out a similar number of wheels daily the huge number of the same in use will be apparent.

The "Rivett" Screen.

Now that the dusty season is with us, and motorists, as well as pedestrians and other users of the highway, are suffering the inconvenience of travelling over loosely constructed road surfaces, the attention of those who would associate motoring with comfort may usefully be drawn to the "Rivett" screen brought out by Mr. Alfred Rivett, of 236, High Road, Leytonstone, Essex, whose practical acquaintance with the motor business has been of long standing. This wind screen not only acts as a protection against rain and wind, but also effectually secures the user against the dust of preceding cars. It can be instantly raised or lowered to any desired angle while the car is in motion, being operated from the driver's seat. The shield is attached to the dashboard rigidly, being secured by brass rods screwed to the mudguard, and reaching to the top of the device. Should the dash be curved, brass sheeting is filled in to secure a straight line, upon which the shield is fixed, and the device is raised or lowered by the hand, a slotted quadrant being provided, so that the shield can be made firm at any angle, according to the circumstances required. It is made in two sizes, so that allowance may be made for the height of the driver's seat, and Mr. Rivett, who has depots at Ilford and East Ham, as well as motor works in the Steele Road, Leytonstone, can fit his excellent invention to any car. Those who have not yet studied or adopted a wind shield will do well to become acquainted with the simple and efficient features of this effective screen.

Correspondence.

[Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.]

A PROPOSED NEW SPEED LIMIT.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have read through the draft of the new Bill introduced by Mr. Straus, M.P., in which he proposes to reduce the speed of all vehicles in populous places to ten miles per hour, and can hardly imagine that the House of Commons will take it seriously. For years past there has in the Metropolis been a steady increase in the pace of all classes of traffic, and there are, I imagine, few who desire a return to the crawling speeds of the last century. If the proposals are accepted, it means that practically for a radius of a dozen miles round Charing Cross trams, buses, cabs and other vehicles, including automobiles, will be restricted to such a slow rate that a big outcry will be raised by the public owing to the difficulty of crossing the road on account of the never-ending funeral procession.—Yours truly,

TWENTIETH CENTURY.

THE EMISSION OF SMOKE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I was coming from Streatham towards London on Friday, last week, when a gentleman in a car registered in Surrey—I could not catch the number—protested very strongly against the smoke coming from the engine of the car I was driving. I fancy he took my number, but he did not stop for an explanation. I am very sorry to have been

Mr. Thomas Henshaw at the wheel of the 48-h.p. Daimler which secured the Gold Medal in Class G in the recent Irish Reliability Trials.

an annoyance to other users of the roads, and beg to apologise, but at the same time it was quite accidental. The cause of the trouble was a ball valve in the force pump which had gone wrong, the suction of the engine drawing the oil into the crank case wholesale. As soon as I was warned of the smoke coming from the exhaust I stopped and ran the surplus oil off.

I trust you can find space in your next issue for this letter, and hope it will catch the eye of the gentleman in question. I have been driving in London about three years, and this is the first complaint I have had. Thanking you in anticipation.—Yours truly,

A. H. REID, JUN.

SOME FACTS IN THE SELECTION OF MOTOR OILS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I fear that I am somewhat late in taking notice of "Veritas Prevalabit" letter in your issue of June 6th, with reference to the selection of motor oil, but I feel compelled to venture to say that in my mind it is one of the most sensible letters we have had on this subject, although I would criticise it in certain directions. He is quite right in saying that 2s. ought to be an outside price for motor lubricating oils, and I feel convinced that the very fictitious and exaggerated prices which are being charged will, in the near future, reach a more reasonable mark.

"V. P." was very fortunate in coming across a cycle oil which would suit his motor, because, of course, these cycle oils are not specially prepared to maintain their viscosity at high temperatures, or to necessarily give a low percentage of carbonisation, and in nine cases out of ten, speaking

from my experience of cycle oils, unsatisfactory results would be obtained. I have always very strongly preached the gospel of thin oils, but unfortunately it is frequently necessary to supply an article which is more or less "fool proof." To use a light oil, the driver has to be a very careful man, always keeping his engine in good condition, and his joints absolutely tight. Further, he must not use too much of it, because with a light oil one is apt to get a much larger amount through the cylinders than with a heavy oil, as it is so much more copiously splashed on to the piston, and can find its way more easily past the rings. In selecting an oil for a motor, the motorist often thinks that he is securing a better value and greater saving by using a heavy oil, and he may be correct in the latter supposition if his car does not receive proper attention, but I would like to point out that my firm are lubricating gas engine cylinders up to 500-h.p. with an oil with as little viscosity as our lightest motor oil. When you come to the question of the use of fatty oils, although the presence of a small percentage of this is of advantage in a steam engine cylinder, where water is present, on account of its property of making the mineral oil mix with the water, yet in the case of highly superheated steam, or in an internal combustion engine, its presence always means an increase in carbonaceous deposit, because these fatty oils cannot distil without decomposition, and that is indeed why in the past they have been known in text books as "fixed oils."

The reason why "V. P." got no sooting of cylinders with his very light oil is that, although the oil had sufficiently high tests to resist the temperature on the ring, yet as soon as it reached the hotter combustion area it immediately distilled away, whereas if he had used an oil of the same chemical nature but greater viscosity, he would have found a larger amount of deposit, because the heavier oil, having higher tests, cannot distil away so rapidly from the superheated surfaces, and so is "cracked" or decomposed, forming lighter hydro-carbons and carbon.

I also agree with "V. P.'s" last paragraph, and, in confutation of the opinion held by the man in the street, I would say that you can always "quench" a red hot poker in a bucket of ordinary paraffin lamp oil without fear of fire, although of course if you happen to hold a lighted match near the point of contact between the poker and the oil, the vapour would fire at once.

I shall be greatly obliged if "V. P." would let me have a sample of the oil he mentions, as it would interest me to determine the carbonisation values on my standard apparatus.—Yours truly,

A. DUCKHAM.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I beg to thank "C. T. W. H." for his reply, and especially for his impartial interest in the subject under discussion. My single-cylinder car has a very well cooled engine cylinder. I have never known the water to boil, even after climbing long hills on low gear; on the other hand, my four-cylinder car is a nuisance, in boiling the water off during a long climb. I find, however, that this does not practically affect the oil question. It must be remembered that, so long as there is water in the cylinder jacket, the temperature, at atmospheric pressure of the cylinder walls, cannot go much over 212 deg. F. The formation of steam soon lets the driver know that he must stop for cooling or change the water, unless he wishes to court trouble.

I feel somewhat in difficulty to reply to "R. F. H." (your issue of 13th inst.) The manufacturers of the oil which I use send out enormous quantities of it in small tins, for which the cycle shops ask from 4½d. to sixpence. I suppose that a cyclist would run for months on a tin, so that 4½d. to 6d. for a nice little tin of oil is trifling in cost. After measuring the contents of several brands of cycle oil in these small tins, the cost per gallon is anywhere between 7s. 6d. and 13s. As these oils can be bought in quantity from one to two shillings per gallon, I hesitate in giving the manufacturers' names without their permission. This I will ask for and if permission be granted by them and our editor, I will give the name. Many people would think cycle oil a swindle, forgetting that the cycle shop-keepers must live and that it is not worth while to stock small retailing quantities without a good margin for profit, to say nothing of the cost of the neat little tins. I can assure your readers that there is nothing in the particular brand. The only points to practically consider are: first, that the oil is mineral oil only, I cannot speak about mixtures with certainty; second, that the oil should be of about the consistency or viscosity of ordinary cycle oil. These are the two main points. As I have moved to another house, I have not yet come across the analysis I had made of the oil, my papers and books not yet being in order, but I will give this to your readers as soon as possible.

Permit me to refer to my previous letter. I said that all the bearings of my single-cylinder car engine had white metal. I should have said, all the bearings excepting the gudgeon pin bearing were of white metal. Next, I believe that in regard to the oil losing more than half its weight on heating, this was when exposed in an open vessel and in fractional distillation. However, the analysis shall be given. I regret I cannot refer to it at present. So far, the thin oil is in use

successfully, on my recommendation, on seven cars—three single-cylinder cars of 10-h.p., one single-cylinder 8-h.p., one 18-h.p. four-cylinder (R.A.C. rating), one two-cylinder and one three-cylinder, the last two being the 7-h.p. and 8-11-h.p. Panhards. The owners say that they will never go back to heavy oils again. I gave thin oil a long trial before daring to advise my friends. Two of the above-mentioned cars are at present using mixtures of one part ordinary motor oil to three parts thin—their owners admit greater power, as far as they can judge, with all thin oil, but their bearings are such that the thin oil scatters and makes a mess. To those who are interested, I would say, use caution, believe no one, but do try. I cannot advise with absolute certainty for unknown conditions. All that I can say is that the cylinders of petrol engines require a light oil. Good carburation is of course inferred. Many engines are lubricated with a paste of soot.

Regarding the quantity of oil used, it is smaller than with heavy oil. I made an actual trial. I filled up my lubricator, which holds less than one quart. I was away on a little tour for a week, in which I ran more than 500 miles. I did not use a quart of oil, which lubricated the piston and cylinder gudgeon, big end, two side bearings, and the half-speed shaft. The cost of oil on this journey was about 3d. The car was a single single-cylinder 10-h.p.

A short time ago Mr. S. F. Edge gave the result of some interesting experiments with regard to temperature of cooling water in relation to h.p. efficiency. To me this is largely a question of lubrication—a heavy oil becomes thinner with heat. The amount of air and petrol that can enter a cylinder, all other things being equal, is inversely proportional to the absolute temperature of the air and petrol. As usual, a compromise has to be made to suit the conditions. When we consider that on an average 25 per cent. of the indicated power of an internal combustion engine at full load is absorbed in merely running the engine, we have room for improvement. I repeat that a water-cooled engine is comparatively a cold engine.—Yours truly,

VERITAS PREVALEBIT.

MOTOR RIDES FOR MANCHESTER CRIPPLED CHILDREN.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—We again bring before your notice the annual motor ride for the unfortunate children of Manchester and Salford, which has now reached the fourth year of its inception. The splendid efforts put forward last year in response to our appeal resulted in about 140 cars being generously lent for the occasion, and over 500 children (with their lady officials and medical staff) given the opportunity of an afternoon's run into the country. As this, however, represents less than half the number of the poor afflicted children in the district and on the books of the Crippled Children's Help Society, we hope the response to this present appeal will eclipse even that of last year, so that more may be included. By the kind permission of the Watch Committee, we shall have the assistance of the Chief Constable, Mr. R. Peacock, and his officers. The cars will arrive in Albert Square about 2 o'clock on Saturday, July 4th, and arrangements will be made with the local authorities on the route to have the roads watered as far as possible.

Some of the cars were decorated by their owners last year. This proved such a great delight to the children that we should appreciate the smallest effort in this direction, although it is hoped that no spirit of competition will enter into such a pleasing action. Saturday afternoon, July 4th, is the date fixed upon, and the distance out about eighteen miles to some rural and suitable place, to be selected.

If any of your readers can see their way to assist in giving the children this great looked-for pleasure, we shall be glad if they will send offers of cars to Mr. Wm. Hyde, J.P., Fernwood, Whalley Grange; Mr. C. B. Holmes, 28, Queen Street, Manchester; or to me at 50, Moseley Street, Manchester.—Yours truly,

W. COTSWORTH.

WHAT DOES A CHASSIS INCLUDE?

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—It would, I think, be useful if some definite pronouncement could be made as to what the term "chassis" does and does not include. Roughly speaking, I have always taken it to comprise everything but the body, but I find that in practice there is considerable variation in ideas as to what really comes within the term. For instance, some firms include the iron supports for the steps, the mudguards and their stays, lamp brackets, &c., while others do not furnish these as part of a chassis.—Yours truly,

COUNTRY AGENT.

PROPOSED TRIAL IN INDIA.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—In connection with the Central Provinces and Berar Exhibition to take place at Nagpur (India) during November and December next, motor trials are being proposed. It is suggested that on the first day a speed test should take place over a measured mile, the classification being according to the R.A.C. rating. On the following day a thirty mile race over a triangular course is proposed, on the third day a gymkhana, and then at the end of the week a tour over a distance of about 320 miles via Senai and Jubbulpore. The country through which

the latter route is proposed is of a delightful character, and although the road would be too long to picket, arrangements could be made to warn cartmen and herdsmen to give cars a wide berth. I understand that the committee of the exhibition are consulting leading manufacturers and owners of cars to ascertain the amount of support that might be obtainable, and am sending news of these to the *M.C.J.*, knowing its circulation to include many owners who might be inclined to visit India in order to participate in what is likely to be a very successful motor trial.—Yours truly,

A. D. F.
(Nagpur).

A STRANGE VIEW OF JUSTICE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Recently I was summoned for having, as alleged, exceeded the legal limit on the high road at Ilford on a certain day in May; but owing to my illness the case was adjourned till a date in June, when again I could not appear. I sent a medical certificate to testify that I was not in a fit state of health to attend the court and asked for a further adjournment. The case was, however, concluded in my absence, the Bench fining me £2 and costs. There was no one in court to defend my case, so that the police had it all their own way.

Subsequently I employed a solicitor to apply for a re-hearing, but his application was refused. It was alleged by the police that I had been travelling over fifteen miles an hour, despite the fact that there was a great deal of traffic in the road at the time. At the same court another driver said to have been going at a speed of 17½ miles per hour was

One of Messrs. Barford and Perkins' Motor Road Rollers at work at the Franco-British Exhibition.

fined 20s. and costs, although that was his second offence. For my offence of fifteen miles per hour, although it was the first time I had been summoned, the fine was double that imposed upon him. I think you and your readers will recognise that some injustice has been done.—Yours truly,

E. J. PRATT.

SOME POINTS ABOUT DESIGN.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—It is really most interesting to compare the hundred and one different designs of engines now on the market. They nearly all have their little points, and also, although not mentioned in the catalogue, their drawbacks! It is obviously impossible here to go minutely into the various makes of engines, but perhaps a few general remarks may not be out of place. A type of motor that was very popular about two years ago, and which now has many supporters, is the multi-cylinder-engine with cylinders cast separately. It certainly does possess merit—it enables the manufacturer to put a bearing between each crank, as his engine had to be a long one in any case; there was no doubt about the cooling—every cylinder was, to all intents and purposes, cooled separately; it was sometimes much lighter, owing to the fact that lighter type castings could be used for the cylinders; one could lift one cylinder without of necessity lifting another, &c. But what about the drawbacks? How is it that most manufacturers are using cylinders cast in pairs? Well, the drawbacks were not apparent to the average owner until he had had the car a month or so, when the time came round for adjustments, replacements, &c. Now four separate cylinders have two water connections to each—eight in all—and usually the piping

became complicated and reaching any valve except the two end ones (and not always those) become a puzzle. Then there were the other connections, and if one wanted to lift one cylinder one might as well have lifted the lot, owing to time expended on the different connections. In the writer's opinion lack of accessibility and increase of complications are responsible for the decline of this type of engine.

Valve gearing and valve positions seem to have settled down to a definite routine. The overhead type of inlet valve is nearly dead, owing probably to the extra levers, &c., in the tappet gear required to work it, as well as one or two other minor objections. Valves are now placed all on one side or on opposite sides. There is some doubt about cam shafts—the majority are made with the cams out of the solid, but there are several manufacturers who cling to the old practice of keying and pinning the cams on the shaft; there is a great deal to be said for this method, as the difficulties of hardening the cams (when solid with the shaft) without the shaft warping are extreme. Timing wheels are now very generally enclosed, and this is undoubtedly correct practice. Exposed timing wheels collect dirt, dust, &c., and wear, and become very noisy and they are a trap for anything that may drop between them, e.g., a fan or lubricating belt—result, bent cam shaft. Circulation pumps are much improved. They are sensibly constructed and always direct driven. There seems, however, a growing tendency to discard the pump and cool by convection. The modern motor-car engine may be generally described as a high speed one. These motors are built as lightly as possible, particularly as regards their reciprocating parts. This, with a little attention to ratio of bore and stroke, and a little care given to size and setting of the valves and pipes, will produce a high-speed engine, and, providing the carburettor is correct, a flexible one. Just think what we used to have—3½ in. bore, 5½ in. stroke—and then we thought they were "getting round"! "Tempora mutantur, nos et mutamur in illo."—Yours truly,

ENGINEER.

The 20-cwt. Van lately completed by Messrs. Marten and Jellicoe, Ltd., of Thames Ditton, for Messrs. H. A. and F. Nelson, Wholesale Tobacconists, East Ham.

THE PRICE OF PETROL.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I venture to suggest that it would be a good plan for the various petrol-supplying concerns to mention the current rate for their special brand of spirit in their advertisements in the *M.C.J.* and other motor papers. At present one is quite in the dark as to what is the fair price to pay, as only recently, at different depots, all within six miles of Charing Cross, I have been asked 1s., 1s. 1d., and 1s. 2d. per gallon.—Yours truly,

W. J.

THE COST OF KEEPING A CAR.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—It seems strange that the automobile industry should have reached its present stage of growth without there having been collated a much greater mass of definite and authentic data with regard to the cost of running motor-cars than is at present available. There are, it is true, a great number of variable quantities to be taken into account, not the least of which is personal equation of the driver, which combine in a variety of ways to form such widely differing results that it is very difficult to establish an equable basis of comparison. There is no longer any doubt that a reputable motor vehicle, granted fair treatment, will do all that is to be expected of it. The utility of the car has been proved beyond a doubt, its adaptability beyond question, and its reliability is continually increasing. There are many would-be motorists,

however, who would make the plunge if they could have some figures placed before them of the actual cost of running a car say of 10, 15 or 20-h.p., and I am sure it would prove interesting and useful if many of those owners who have kept a record would send you particulars of the same for publication.—Yours truly,

W. J. EMERTON.

A "KNOCKING" QUERY.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—There is a pronounced knock in the engine of my 10-12-h.p. double-cylinder car when the number of revolutions exceeds a certain point. There is very little play in the connecting rod bearings—insufficient, I think, to be the cause. The makers advise me the bearings are good for at least another two or three thousand miles. If you can help me in any way I shall be obliged.—Yours truly,

W. CHORLTON.

[The knock in the engine may be the result of premature ignition, caused by the cylinder head being covered with a deposit of carbon which becomes incandescent after the engine has run for a short time, causing the charge in the cylinder to ignite early.]

A CORRESPONDENT is anxious to know the address of Mr. Cavill, manufacturer of leather polishes.

WILL the firm, one of whose cars is registered under the trade identification mark of 197E8, communicate in confidence to the Secretary, Automobile Association, Princes Buildings, Coventry Street, W.?

CARS OUT WITHOUT AUTHORISATION.

ROBERT NORTON, chauffeur, was sent to prison for two months without the option of a fine, at Hull, for being drunk when in charge of a motor-car and driving to the public danger. Defendant took the car out without the sanction of his employer, and drove three friends into the country.

The case of a chauffeur taking out his employer's motor-car without permission has had its sequel in the Westminster County Court. Mrs. Grosvenor, the wife of the driver in question, sued Mr. Lazarus for £300 compensation under the Workmen's Compensation Act for the death of her husband. During the absence abroad of his employer, Grosvenor took some friends out in the motor-car and was killed in a collision with a water cart. The wife's application for compensation was based on the assertion that the car was being tested. Judge Woodfall dismissed the action with costs.

THE "FOUR-INCH" RACE FOR THE TOURIST TROPHY.

THE following are the entries up to date:—

| R.A.C. Rating. | Entrant. |
|--------------------------|----------------------|
| 25-6-h.p. Rover | Mr. J. K. Starley. |
| 25-6-h.p. Hutton | Mr. S. F. Edge. |
| 25-6-h.p. Arrol-Johnston | Mr. E. A. Rosenheim. |
| 25-6-h.p. Arrol-Johnston | Mr. E. A. Rosenheim. |
| 25-6-h.p. Rover | Mr. Harry Smith. |
| 25-6-h.p. De Dion-Bouton | Mr. J. W. Stooks. |
| 25-6-h.p. Hutton | Mr. J. E. Hutton. |

AUTOMOBILE ACCIDENTS.

ON Saturday a motor-car containing Sir Charles and Lady Layard collided with a passing cyclist near the Upper Common at Tunbridge Wells. The latter was much hurt.

ON Monday evening two motorists, Major R. Williams and Mr. G. R. Saunders, of London, were touring in the Eastbourne district. They had supper at the Beachy Head Hotel and left there at 10.45 p.m., travelling in their car in the direction of Birling Gap. About two miles from Beachy Head they lost their way. The car ran off the road on to the grass and perilously near the edge of the cliff. The engines stopped and the occupants alighted. Major Williams turned the handle to restart the engine, when, it is reported, the car ran backwards to the cliffs edge. The rear wheels shot over, but the footboards at the side catching in the earth, the progress of the car was arrested. Tilted at a dangerous angle, the rear lights set fire to the petrol. The flames spread rapidly, ignited the footboards holding the car in position, and, with these destroyed, the burning mass toppled over the cliff to the sands below, a distance of 300 to 350 feet.

WITH reference to the Kenley motor case, which was before the public in January the Treasury intends to offer no evidence against Mr. B. E. Brown, who is due to appear at the next Guildford assizes. The verdict of the coroner's jury has already exonerated him in the matter, and accepted his denial that he was driving the car which caused the injuries to the man who subsequently died.

FROM Buick Motors, 45, Great Marlboro' Street, London, W., comes a copy of the latest catalogue of Buick cars, in which six models, ranging from 15-20-h.p. to 40-h.p., are fully illustrated and described. Users of Buick cars will be interested to learn that a stock of spare parts for the various types are being kept at the above-mentioned address.

CLUBS AND ASSOCIATIONS.

ROYAL.

New individual associates of the R.A.C. include the Earl of Cranbrook, the Bishop of Winchester, Sir W. H. Holland, Bart., M.P., Sir Christopher Furness, M.P., Lt.-Col. Walter Campbell, Miss Bertha Capron, Miss Florence Hammond, Mrs. Astley Jephson and Miss Jameson.

New members of the R.A.C. include Sir F. Cawley, M.P., Sir J. Mackay, G.C.M.G., Sir Murland Evans, Bart., Sir Harry Samuel, and Mr. Fred. Terry.

MOTOR UNION.

THE Motor Union has recently issued the following signs and notices:—Special caution boards at each end of Stony Stratford, four special school signs at Pembroke for the Pembroke County Council, two for school plates at Neascliffe, on the Holyhead road, at the instance of Mr. J. R. Grestorex and the Salop County Council.

Mr. C. H. Dodd, vice-chairman, and Mr. Rees Jeffreys, secretary of the Motor Union, left London on Saturday last to attend the annual Congress of the Ligue Internationale des Associations Touristes, to be held at Stockholm from June 24th to the 28th.

The following solicitors have been appointed in the districts mentioned:—Messrs. Baron and Smith, Darlington; Mr. J. Downes Powell, Wrexham.

The Union medal has been awarded for competition to the Kensington A.C., Cheshire A.C. and the Welsh A.C.

The Hon. Mr. Simon Fraser with his 40-h.p. Six-Cylinder Napier Car on a typical Australian mountain road, about twenty-five miles from Melbourne.

This road is very rough and rises twenty miles, having a gradient in many places of more than one in ten. Mr. Fraser, who is one of the most prominent motorists in Australia, and who has had his car over two years, writes that it is running as well now as when he first had it.

MOTOR CLUB.

THE Motor Club recently played a cricket match with the Savage Club on the London County Ground. A good game ended in a win for the motorists.

On the 15th inst. several members motored down to Kingston for the Thames Motor Boat meeting. In the evening over sixty sat down to a cheery little dinner at Nuthalls, Col. W. J. Bosworth and Admiral Sir William Kennedy, K.C.B., being amongst those present.

With reference to the Grand Prix at Dieppe, arrangements have been made for the fullest details to be continually wired over. These will be posted in the club on a plan specially drawn up for the purpose.

On Wednesday, July 15th, the club is holding a gymkhana at Hastings, and the meeting is entirely open so far as competitors are concerned, and there is reason to hope that several lady drivers will take part. Application forms for entry can be obtained from the secretary, Motor Club, Coventry Street, London, W.

MANCHESTER MOTOR.

THE Trials Committee of the Manchester Motor Club have declared the result of the three days' trials which were reported in our columns last week. Mr. H. Hollingdrake takes the first prize for the trade section and Mr. J. Higginson the prize for non-trade members. Special prizes for non-stop runs were awarded the following:—Messrs. E. J.

Chambers, F. C. Hunt, C. J. Antill, R. H. Carlisle, V. G. New, J. N. Aiken, and P. H. T. Butler.

Mr. E. J. Chambers consumed 13½ gallons of petrol in the full distance (396½ miles), his averages being 41.78 ton miles per gallon and 28.948 car miles per gallon. Eighteen cars started and finished in the trials. Appended are the details:—

| Owner and car. | Reliability. | Points for petrol consumption. | Points for hill test. |
|---|--------------|--------------------------------|-----------------------|
| H. Hollingdrake, 35-40-h.p. De la Buire ... | 500 | 95.66 | 100 |
| E. J. Chambers, 16-h.p. Bell ... | 500 | 100 | 77.97 |
| F. C. Hunt, 15-h.p. Humber ... | 500 | 90.99 | 75.2 |
| F. C. Hunt, 20-h.p. Humber ... | 500 | 71.62 | 88.86 |
| R. H. Carlisle, 14-16-h.p. Argyll ... | 500 | 79.12 | 79.61 |
| V. G. New, 14-20-h.p. Siddley ... | 500 | 88.36 | 69.51 |
| H. W. Cranham, 20-h.p. Scat ... | 500 | 66.76 | 87.82 |
| J. Higginson, 80-100-h.p. De la Buire ... | 499 | 84.11 | 69.17 |
| J. N. Aiken, 12-14-h.p. Gladiator ... | 500 | 81.77 | 69 |
| C. J. Antill, 14-16-h.p. Argyll ... | 500 | 71.8 | 78.17 |
| H. Brady, 8-h.p. De Dion ... | 495 | 66.19 | 80.8 |
| J. T. Ward, 8-h.p. Rover ... | 498 | 80.73 | 61.2 |
| P. H. T. Butler, 20-h.p. Bell ... | 500 | 74.46 | 54.53 |
| N. Crossland, 16-20-h.p. Calthorpe ... | 494 | 55 | 66.7 |
| A. B. Albert, 12-16-h.p. Riley ... | 454 | 58.9 | 45.35 |
| T. G. Whitaker, 10-12-h.p. Humber ... | 361 | 67.36 | 42.54 |
| E. H. Bennett, 12-16-h.p. Horbick ... | 339 | 72.48 | 29.27 |
| L. Swain, 10-h.p. Adams-Hewitt ... | 388 | 46.6 | — |

BURY AND WEST SUFFOLK.

ON Saturday, the 13th inst., the Bury and West Suffolk A.C. held a petrol consumption and speed-judging contest. Eight cars entered, and the speed-judging competition was over a course of 43 miles, the competitors having to average a certain pace throughout the run. The following table gives the number of miles per gallon, the figure of merit for petrol consumption, and the points lost for misjudgment of speed upon which the total figure of merit was based. The formula adopted in the petrol consumption test was as follows:—

The total weight of car including passengers in lbs. \div Numbers of points of petrol consumption. = Figure of merit.

The Hon. Sec., Mr. Kenneth Greene, had his time so fully occupied with weighing the cars before starting and measuring the petrol on their return, that he was unable to compete. Mr. Thurlow Champness acted as timekeeper. The following table shows the gross and detail results:—

| Owner. | Car. | Petrol consumption in consumption. | Figure of merit for petrol consumption. | Points lost for misjudgment of speed. | Total figure of merit. |
|----------------------|--------------------|------------------------------------|---|---------------------------------------|------------------------|
| Mr. J. R. Hargreaves | 22-28-h.p. Daimler | 11 | 269.8 | 1.2 | 267.4 |
| Dr. J. S. Kilner | 12-14-h.p. Argyll | 9½ | 255.6 | 2 | 253.4 |
| Mr. L. J. Hunter | 6-h.p. Rover | 6 | 252.0 | 3 | 249.0 |
| Mr. H. P. Collis | 12-14-h.p. De Dion | 11 | 239.2 | 14 | 225.2 |
| Dr. O. R. M. Wood | 12-14-h.p. De Dion | 11 | 247.0 | 26 | 221.0 |
| Rev. E. M. Bartlett | 6-h.p. Rover | 6½ | 237.0 | *18 | 219.0 |
| Rev. O. B. Packard | 10-12-h.p. Argyll | 15 | 183.0 | 22 | 161.0 |

* Mistook the route and went three miles out of his way.

BROOKLANDS.

BOTH the long and short records in the 26-h.p. standard class were broken on the 17th inst. by Mr. J. E. Hutton with a 25.6-h.p. Hutton. The previous records in this class were 71.605 miles per hour for the long distance (about 27 miles), by J. W. Stocks, on a De Dion, and the short (half-mile), one of 77.92 miles an hour, by F. Newton, on a Napier. Mr. Hutton beat them both. For the long record his speed rate was 76.59 miles an hour, while the short record was accomplished at 78.9 miles an hour. The rate of speed for the fastest lap (2 11-16 miles) was 79½ miles an hour.

THE MOTOR-CYCLING CLUB.

THE following names have been passed by the committee for awards in the recent competitions:—

London to Edinburgh.—Gold Medals: Capt. Sir R. K. Arbuthnot, Bart., R.N., D. S. Baddeley, L. A. Baddeley, J. L. Barratt, H. M. Bentley, R. G. Booth, Dr. E. W. Brewerton, A. T. Browett, A. J. Brown, J. F. Buckingham, P. C. Camparole, M. Campbell, W. Chater Lea, H. Childs, S. H. Clay, H. Collins, C. C. Cooke, H. Cowlin, T. F. Cox, F. Cozens, B. Cumberland, F. C. Dee, E. B. Dickson, J. O. M. Dixon, A. D. Draper, G. L. Fletcher, A. H. Forbes, H. S. Freeman, S. H. Fry, G. Gibson, W. Gunn, S. B. Hart Davies, J. S. Harwood, F. T. Heighton, Miss Muriel Hind, J. Van Hooydonk, A. de S. Hutton, W. A. Jacobs, W. G. James, P. Janson, C. F. Lacey, Lieut. Gerald Lane, R.N., W. H. Lane, J. P. Le Grand, H. P. Mays, A. B. McDonald, Dr. C. B. Moss-Blundell, C. G. Myer, H. S. Myer, — Mundy, A. D. Nicholson, V. Olsson, E. S. Parris, T. Pears, P. E. Quick, G. W. Raper, G. E.

Roberts, G. Rowden, W. A. Sale, H. C. Sayer, C. J. Seed, F. G. Smith, A. J. Sproston, A. M. Tatham, A. Walton, Stanley Webb, W. H. Wells, F. White, J. Winslow. Silver Medals: W. H. Bishop, H. Williamson.

Double Journey.—Gold Medals; H. P. Beasley, C. W. Brown, R. O. Clark, C. H. Crole-Rees, E. V. Fielder, S. G. Frost, E. Gwynne, O. C. Godfrey, F. J. Jenkins, A. S. Phillips, J. Platt Betts, A. G. Reynolds, O. L. Summers, Miss A. E. Wood. A few names have been held over for further consideration by the committee at the next meeting.

Mr. J. Platt Betts is the winner of the Schulte Cup on an 8-h.p. Rover car, and as he has now won the cup two years in succession it becomes his own property; Mr. S. G. Frost is second, only 1 mark behind, and Mr. A. G. Reynolds third. Mr. S. G. Frost is the holder of the M.C.C. Challenge Cup for the year.

Details are now being arranged for the Chas. Jarrott Cup London to Land's End and back competition. The competition is open only to members of the club, so that all motor-bicyclists who wish to take part in this event, and are not already members of the club, should at once apply to the hon. secretary, Mr. A. Candler, 1, Lime Grove, Shepherd's Bush, W., for forms of membership. The competition for the M.C.C. trophy for cars has been postponed from July 11th to July 25th, and the petrol consumption test will be held on September 12th.

THE MANCHESTER AND DISTRICT MOTOR AND CYCLE TRADES ASSOCIATION, LTD.

At an extraordinary meeting of the shareholders of the above association, held at the Palatine Hotel, Manchester, on Friday, the 19th inst., the resolution passed at a previous meeting, viz., "That the name of the company be changed from 'The Manchester and District Motor and Cycles Trades Association, Ltd.' to the 'Manchester and District Motor Trades Association, Ltd.'," was duly confirmed. At a meeting of the directors which followed, Mr. Charles Davies (of Messrs. Foden's, Ltd., Sandbach), was unanimously appointed president, and Mr. Frank Bullock vice-president, for the ensuing twelve months. The other directors are Messrs. H. Spurrier, jun. (Leyland Motors, Ltd.), Thos. Webb, Frank Smith (Empress Motor Co., Ltd.), E. Dook (Dook-Swain Tyre and Rubber Co., Ltd.), J. G. Looker, J. H. Wightman (J. S. Taylor and Co.), and Herbert Brady. Mr. W. H. Wheeler is the secretary.

THE ROADS IMPROVEMENT ASSOCIATION.

The Roads Improvement Association (Incorporated) is prepared to carry out official tests of any methods, apparatus or material that may be submitted to it connected with the repair and maintenance of roads, and especially for the prevention of surface dust, provided that the Council of the Association is satisfied that the results of such tests are likely to be of public service.

The general regulations and other particulars can be obtained on application to the hon. secretary, at 1, Albemarle Street, Piccadilly, London, W.

KENT.

On Saturday the Kent Automobile Club held a luncheon at the Burlington Hotel, Dover. Mr. Walter Emden, the Mayor of the town, presided, being supported by the Deputy-Mayor, Sir William Crundall, Sir Alfred Watkin, and others associated with the prosperity of the town. The club was welcomed by the Mayor, and in reply Dr. Charles Firth, the vice-chairman, said that the object of the association was to get together all motorists in the county with a view to securing the consideration to other users of the road and their own free use of the same. Mr. G. M. Kenyon proposed the health of the visitors, Sir William Crundall making response.

Following the lunch, a committee meeting was held, at which Mr. Walter Emden, J.P., Sir William Crundall, of Dover, Capt. E. S. Oliver, of Shorncliffe, Mr. G. H. MacGeagh, of Hadlow, and Mr. W. Woodward, of Bromley, were elected to the membership of the club.

LEICESTERSHIRE.

On Saturday, for the fourth successive year, a number of crippled children assembled at Bishop Street School, Leicester, for the outing given by the members of the Leicestershire A.C. The cars, twenty-nine in number, were ranged along the street, and their freight numbered almost a hundred. Mr. McAlpin, the hon. secretary of the club, had charge of the arrangements, and cars were sent by Miss Lane, Captain Byron, Messrs. T. C. Clarke, H. Burgess, Kennell, H. Marsden, T. C. King, J. A. Corah, H. J. Grace, Hull, J. Morton, the Rev. F. Jones, C. H. Preston, E. Healey, J. A. Doran, G. H. West, P. L. Baker, P. L. Baker, jun., J. A. Harper, F. Herbert, A. B. Partridge, J. Pennett, Dr. Phillips, Dr. Scott, K. Walker, Councillor Russell Frears, C. W. Warner, and Messrs. Richardson.

SHEFFIELD.

The Sheffield and District A.C.'s pace-judging run from the Maynard Arms, at Grindleford, on Saturday, evoked considerable interest. The course was from the Maynard by Fox House and Froggat Edge nearly to Calver and back by Stoke Hall to the starting point. Ten competitors drew speeds varying from fourteen to twenty miles an hour, and the competition showed how nearly the motorist is able to estimate

his pace without the aid of a watch or speedometer. Five out of the ten travelled over the course within a fraction of one mile per hour of the pace set for them by their cards, the winner just being 1-100th of a mile per hour short of the speed he drew. Results:—Mr. E. W. Hatfield, slow, 0.01 miles per hour; Mr. Percy Richardson, fast, 0.22; Mr. G. D. Flather, slow, 0.23; Mr. J. T. Stevenson, slow, 0.67; Mr. H. Beasley, fast, 0.93; Mr. A. Worrall, fast, 2.08; Mr. Harvey Foster, fast, 2.31; Mr. P. J. Benson, slow, 2.66; Mr. H. Adams, fast, 3.25; Mr. W. J. Slack, fast, 3.88.

KENSINGTON A.C.

On Saturday this club held its second gymkhana in the grounds of Chiswick House, when 100 members and their friends enjoyed the hospitality of the president, Mr. C. Moleworth Tuke.

The results were:—Bending Race.—Cars 9 ft. wheelbase and over, Miss M. Thompson; cars under 9 ft., 1, Dr. Harvey Hilliard; 2, J. H. Reeves.

Heads and Rings.—1, Dr. L. C. Dobson; 2, R. E. Haywood.

Costume Race.—1, A. Garcia; 2, Prof. V. Spiera.

Members' Paid Drivers.—1, Dr. E. Snape; 2, Mr. W. Curtis Thom; 3, Dr. L. C. Dobson.

Crawling Race.—1, Mrs. Dobson; 2, Dr. L. C. Dobson.

Potato Race.—1, Miss M. Thompson; 2, Mrs. Montgomery Smith; 3, Mrs. Cox.

Musical Chairs.—1, Miss M. Thompson; 2, Dr. J. Atkins; 3, Miss W. Tuke.

The winner of the Motor Union medal and holder of the challenge cup was Miss M. Thompson.

At the recent hill climb the winners were:—1, G. L. Eastes, 10-14-h.p. Star; 2, Dr. L. C. Dobson, 10-12-h.p. Humber; 3, E. Davidson, 24-h.p. Minerva.

Comparative Diagrams of the Motor-Buses in use in four Capitals.

HULL AND LINCOLNSHIRE.

VERS SCRAWBY GULL PONDS, near Brigg, Lincolnshire, have for 300 years been reserved for the sea-gulls for breeding purposes, and here many thousands of gulls are to be seen just now on this breeding ground. Motorists have come very long distances to witness the unique spectacle, and on Saturday there was a large attendance of the members of the Hull Auto-Cycle Club and of the Lincolnshire Motor-Cycle Club on the occasion of the second annual inter-club meet. The members of the two clubs spent much time in examining the haunts of these handsome birds, and then adjourned to the Angel Hotel, Brigg, for tea and chat.

SOMERSET.

The Somerset A.C. has held its first meet of the season at Cheddar, when about sixty members and friends spent a very enjoyable afternoon visiting the gorge and caves.

Subsequently the committee meeting was held at the Cliff Hotel, when it was decided to place three "drive with care" boards at dangerous places in the vicinity of Cheddar.

BRITISH MOTOR-BOAT CLUB.

For the British Motor Boat Club's annual race from Gravesend to Cowes, on Saturday, four vessels came to the starting line. The starters were Mr. S. F. Edge's Napier Major, Mr. Eric H. Cliff's Joan, Mr. T. D. Sanders's K.L., and Mr. Ernest H. White's Lethe. The start was from off the New Thames Yacht Club at Gravesend, and the finish a line between the flagstaff of the Royal London Yacht Club, at Cowes, and No. 3 Fairway Gas Buoy. The course was inside the Goodwins, and the calculated length of it was 175 sea miles. Under M.M.A. rating on this distance K.L. allowed Lethe 1 h. 12 min. 55 sec., Joan 2 h. 52 min. 5 sec., and Napier Major 6 h. 42 min. 47 sec. The race from London to

Cowes was won by Napier Major, which arrived on Sunday afternoon, completing the course in 23 h. 6 min. 37 sec., giving an average speed of $7\frac{1}{2}$ knots per hour.

MIDLAND.

By the kindness of Mr. Thomas Clayton, a member of the committee of the Midland A.C., the crippled children belonging to the Birmingham Crippled Children's Union have been taken for a drive through Packington Park (by permission of Lord Aylesford) and afterwards entertained to tea by Mr. and Mrs. Clayton at their residence, The Cedars, Castle Bromwich. About thirty members placed their cars at Mr. Clayton's disposal, and by means of these and a large motor-omnibus about 200 children were able to enjoy the drive.

Amongst the members of the Midland A.C. who were present were Messrs. W. Ballin Hinde, Clive Blewitt, E. L. Jacobs, C. P. Type, and G. H. Lancaster.

Mr. F. H. Carrillo having accepted an appointment on the Continent, has been obliged to relinquish the position of hon. secretary to the club. The committee have pleasure in stating that they have secured the services of Mr. Litchfield Meek, a member of the club, as the hon. secretary in his place.

INTER CLUB MEET.

An inter-club meet and gymkhana will be held in the Football Grounds, Buxton, to-day (Saturday) under the auspices of the Manchester Automobile Club, when the following automobile clubs will be repre-

The Coventry Humber Double Purpose Vehicle, with detachable bodies.

sented:—Barnsley, Blackpool, Cheshire, Derby and District, Halifax, Harrogate, Huddersfield, Hull, Liverpool, Lancashire, Midland, Mid. Stafford, North Eastern, North Wales, North Yorkshire, Nottingham, Sheffield, Shropshire, Wolverhampton, and Yorkshire.

The proceedings will include a gymkhana and dinner at the Empire Hotel.

THE Reliability Trial for the "Frederic Coleman Trophy," organised by the North Middlesex A.C., is fixed for Saturday, July 4th, starting from Barnet at 9.30 a.m.

Of the thirty competitors in the annual reliability run from Leeds to Edinburgh and back, promoted by the Leeds and Bradford motor clubs, eight completed the trip within the specified time.

ON the 13th inst. the Blackheath A.C. held a hill-climbing competition on a suitable hill about twenty miles from London. Six cars competed for the Challenge Cup presented by Mr. Alexander Duckham, the winner being Mr. W. F. Bitcher on his 12-16-h.p. Clement-Talbot. Prof. or Carlton Lambert and Mr. Hugh Beale acted as timekeepers.

THE Accrington and District Motor Cycle Club has been formed at a meeting held in the Town-Hall, at which eighteen motor-cyclists were

present. Mr. A. Bond, of Blackburn Road, Accrington, was elected secretary *pro tem.*, with Mr. Grainger, of Union Road, Oswaldtwistle, as treasurer.

ON Saturday last fifty members and friends of the Blackheath A.C. visited Cobham Hall, the seat of Lord Darnley, by whose permission they were enabled to look over the various reception rooms and picture gallery with its valuable and interesting collection. A picnic tea was afterwards held in the park.

CASES UNDER THE MOTOR CAR ACT.

EXCEEDING LEGAL LIMIT.

On the 18th inst. there were fifteen summonses for exceeding the speed limit heard at the Midhurst Petty Sessions, the fines ranging from £3 to £6. On the same day Miss Dorothy Levitt was fined £10 for a similar offence at Farnham. A special sitting of the Haywards Heath Petty Sessions has been held to deal with forty-seven cases against motorists, fines aggregating more than £300 being inflicted. One of the most interesting of the cases was that in which Mr. H. Woollen was summoned. He was defended by Mr. Rowland Harker, who submitted the evidence of the speedometer, which was accepted by the magistrates, who, however, inflicted the fine of £10 and costs. Notice of appeal was promptly given. The stipendiary magistrate at Dublin has intimated that he will fine no one less than £10 for exceeding the speed limit in the Phoenix Park, Dublin. A police trap has been established near the Phoenix Column, and the Marquis of Headfort has been caught therein, being fined £10. On Saturday four motorists who were alleged to have travelled over various traps in the vicinity at a rate ranging between twenty-five to twenty-nine miles per hour were fined £5 and costs at the Lancaster Police Court. Another who reached thirty miles an hour was fined £7 10s. and costs.

DANGEROUS SPEED.

At Marylebone on Tuesday a motorist whose car had driven into a Royal carriage smashing its panels was summoned for driving at a speed dangerous to the public and fined £5 and costs. A similar fine was inflicted on Lord Compton at the same court for driving a motor-car beyond the speed limit of ten miles an hour in Regent's Park.

A case against a motorist summoned for dangerous driving at Littlehampton was dismissed at the local petty sessions on Monday. Ten other motorists summoned at Arundel on the same day were less fortunate.

ROAD REPORTS.

PORTSMOUTH.—The police of Portsmouth have been given instructions to deal more vigilantly with motor-car, and particularly motor-'bus' traffic in the town.

LANARKSHIRE.—The Chief Constable of Lanarkshire has communicated with the Motor Union to the effect that he will be compelled to place "controls" on the road if motorists from England do not desist their alleged reckless driving.

CLITHEROE.—A circular issued by the Lancashire Automobile Club states that two police-traps have been commenced in the Clitheroe district. One is on the Chatburn road and the other on the road leading to Low Moor and further on to Whitewell and Lancaster, *via* the Trough of Bowland.

MACCLESFIELD.—The Chester road is under repair from Prestbury Road to Broken Cross. Motorists are advised by Mr. C. W. Stubbs, the Borough Surveyor, to turn to the north at Fallibroome Road and then proceed to Macclesfield *via* Victoria Road and Prestbury Road. Cars should be driven with care at Broken Cross, where the Fallibroome Road meets Chester Road.

BEDFORD.—At Clapham, on the way from Bedford to Rushden, the road has been macadamised and tarred, to the obvious lessening of the dust caused by motor-cars.

LUTON.—Attention has lately been drawn to some dangerous cross-roads in the county of Bedfordshire, notably in the district of Luton. One is in the centre of the borough, where a considerable amount of traffic is usually round. Care should also be exercised on the Midland and Old Bedford Roads as well as where Cottle and Windsor Streets cross, the ordinary dangers of both places having been increased by the inauguration of the tramway system.

MESSRS. MANN AND OVERTONS, LTD., have lately supplied a Unic motor-van to Messrs. E. and R. Garrould, Edgware Road, London, N.W.

MESSRS. LOADDER, of 30, Kennington Park Road, London, S.E., are making a speciality of supplying duplicates of broken parts. They are well-equipped for carrying out all kinds of motor repairs.

RENOID motor chains were fitted to the vehicles which were classed first, third and fifth in the recent Industrial Vehicle Trials in France. Of the twenty-four vehicles to which awards were made, twenty had chain transmission, thirteen of which, or 65 per cent., had Renoid's.

MR. H. C. BELL, of Finchley, has written to United Motor Industries, Ltd., stating that he has used the "D" oil sold by this firm for the last five years with the greatest satisfaction. "One of the principal features of the oil is its lasting qualities, hence it is very economical in use."

FORTHCOMING EVENTS.

JUNE.

- 27th (Sat.).—Saltburn beach races.
Buxton meet of the Manchester, Sheffield, and Lincolnshire clubs.
Members of the Cheshire A.C. will participate in the Gymkhana of the Manchester A.C.
Visit of the Essex C.A.C. to Audley End.
Meet of the Kent A.C. at Holwood by permission of the Earl of Derby.
- 28th (Sun.).—Southend M.C. run to Grand Hotel, Clacton.

JULY.

- The Land's End to John o' Groat's Trial of the Auto C.C. will be held.
- 4th (Sat.).—Derby A.C. challenge cup competition.
Meet of the Kent A.C. at Gravesend.
Brooklands A.R.C. meet.
Cheshire A.C. gymkhana.
- 6th (M.).—Grand Prix A.C.F. (Voiturette section).
- 7th (Tu.).—Grand Prix A.C.F. on the Dieppe Circuit.
- 8th (W.).—Meet of the Cambridge A.C. at Wareley Park by invitation of Col. Duncombe.
- 9th (Th.).—Meet of the Ladies' A.C. at Hanworth Park, Middlesex.
- 10th (F.).—Start of tour of motor factories in the Midland by the I.I.A.E.
Welsh A.C. motor-car reliability trials.
- 11th (S.).—Provincial meet of the R.A.C. at Hereford. Lunch at the Green Dragon Hotel; visit to Ledbury Park, and dinner at the Assembly Rooms.
Essex C.A.C. gymkhana at Brentwood.
Aston Hill climb of the Hertfordshire C.A.C.
Essex M.C. gymkhana at High Beech.
Leicester A.C. hill climb at Kettleby.
- 16th (Th.).—Club meet of the Netts A.C. at the Hop Pole, Ollerton.
- 18th (Sat.).—Annual Gymkhana of the Herts C.A.C. at The Grove, Watford, by permission of the president, the Earl of Clarendon.
Gymkhana of the Kent A.C. at Maidstone.
Meet of the Liverpool and Cheshire A.C.'s at Delamere.
New Forest and Dorset A.C.'s joint hill climb.
Hill Climb of the Essex C.A.C.
- 20th (M.).—Entries close for the O'Gorman trophy.
- 20th and 21st.—The R.A.C. dust trials.
- 23rd (Th.).—Gymkhana of the Cambridge A.C. at Chippenham Park.
Hill climbing competition of the Hull and East Riding A.C.C.
- 25th (Sat.).—Petrol Consumption Tests of the Motor Cycling Club.
Annual Open Hill Climb of the Midland A.C. at Shalsley Walsh.
Committee meeting of the Kent A.C. at Herne Bay.
Motor Union Provincial meet.
Cheshire A.C. hill climb.
Leicester A.C. gymkhana.
Lancashire A.C. open hill climb.
- 26th (Sun.).—Southend M.C. run to Coach and Horses, Quendon.

AUGUST.

- 1st (Sat.).—Brooklands A.R.C. meeting.
- 2nd-3rd.—Newcastle and District M.C.C. reliability.
- 3rd (M.).—Brooklands A.R.C. meet.
- 8th (Sat.).—Visit of the Kent A.C. to Brasted Chart.
- 12th (W.).—A.C. of Belgium—Circuit des Ardennes and the Liedekerke Cup race.
- 22nd (Sat.).—Annual race meeting of the W.A.C.
Invitation of Sir D. Salomons to the Kent A.C. to visit Tunbridge Wells.
- 23rd (Sun.).—A. C. du Rhone Mont Pilat trial.
- 29th (Sat.).—Meet of the Lincolnshire Motor Club at Lincoln.
Mont Ventoux hill climb of the A.C. Vaclusien.
- 30th (Sun.).—Southend M.C. run to Great White Horse Hotel, Ipswich.

SEPTEMBER.

- 4th and 5th.—Reliability Consumption Trial of the Essex C.A.C. at Norwich in connection with the R.A.C. provincial meet.
- 5th (Sat.).—Aston Hill climb of the Herts C.A.C.
Provincial meet of the R.A.C. at Norwich.
- 12th (Sat.).—Brooklands A.R.C. meet.
- 17th (Th.).—Touring car competition of the A.C. of Holland through that country.

Manchester A.C. reliability run for small cars.

LIGHTING-UP TIMES—LONDON.

| | | | | | | |
|----------------|-----|-----------|---|---------------|-----|----------|
| June 27th—9.19 | — | 29th—9.19 | — | July 1st—9.19 | ... | 3rd—9.18 |
| " 28th—9.19 | ... | 30th—9.19 | — | " 2nd—9.19 | ... | 4th—9.18 |

To find the approximate lighting-up time in June for Birmingham 13 minutes should be added to the above times, 17 for York, 21 for Manchester, and 43 for Glasgow.

COMPANY NEWS.

"SHELL" TRANSPORT AND TRADING.—The report for 1907 states that, including the balance brought forward, but after deduction of the cost of issuing the additional capital, management, legal, and other expenses, there is a credit to profit and loss account of £713,817. The directors recommend a final dividend for the year of 5 per cent. (making 15 per cent. for the year), leaving £63,817 to be carried forward to the current year. Up to date this year's trading has been satisfactory, and an interim dividend of 5 per cent. (i.e., at the rate of 10 per cent. per annum) will be paid on July 1st.

SMEDDLE AND KENNEDY, LTD., has been registered with a capital of £3,000 to take over the business of motor-car proprietors carried on by Messrs. Smeddle and W. J. Kennedy at St. James' Street, Newcastle-on-Tyne, as Smeddle-Kennedy Motors. There will be no initial public issue.

UNIVERSAL MOTOR CAB COMPANY.—£50,000. Agreement with A. Clarke, and to carry on the business of proprietors and manufacturers of and dealers in motor-cabs, &c. Whitehall House, Charing Cross, S.W.

BUSINESS NEWS.

FROM the United Motor Industries, Ltd., Poland Street, W., comes a copy of a show-card they have just issued of the Simplex speedometers, for which they are sole wholesale distributors. The show-cards are issued in a variety of colours, and the firm will be pleased to send a supply to any members of the trade on application.

MR. I. J. HOBDEN, of Salisbury, writes that he has had an E.I.C. sparking plug in use since 1902. He first had it on a motor-bicycle, then on a 4½-h.p. car for nearly three years, and afterwards on an 8-h.p. vehicle.

THE COVENTRY CHAIN COMPANY, LTD., inform us that Nazzaro used "Coventry" chains on his car when he made his wonderful record on Brooklands track.

HIS ROYAL HIGHNESS THE DUKE OF CONNAUGHT has purchased from the Daimler Company two 42-h.p. chassis. An order has also been received from Lady Mollrath, through Messrs. F. W. Heilgers and Co., 22, Great St. Helen's Place, London, E.C., for a 42-h.p. landaulet.

As a sign of the increasing popularity of the new 12-h.p. Sizaire-Naudin car, Messrs. Jarrott and Letts send us a long list of names of motorists who have placed orders for the new model. Among them we note Lady Campbell, Lord Camoys, Major Jervis, Captain James-Trevor, and Captain Creyke.

THE PENDLETON RADIATOR COMPANY have removed their works from Brunswick Street to larger premises at Claremont, Bolton Road, Pendleton, Manchester.

MR. A. J. DEW, late of the New Speedwell Motor Company, Ltd., has started business on his own account as a manufacturers' agent at 8, Hart Street, High Holborn, London, W.C., where, under the style of Messrs. A. J. Dew and Co., he is dealing in all classes of motor-cars and accessories. In addition, he is keeping a stock of spare parts for Speedwell and Serpollet cars.

COMPLAINT is being made by the local authorities of the motor char-a-bancs running from Worthing.

MR. J. E. LAWES has a fine garage in a central position in Aldershot, where he has put down plant for vulcanising tyres, recharging accumulators and generally assisting motorists on tour.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

To insure insertion communications and contributions must be in the Editor's hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case, otherwise no liability will be accepted.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment for same is directly specified in forwarding, and the terms arranged before publication.

[No. 487.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

THE official report, in which is embodied the performances of the various cars entered in the Irish A.C.'s Reliability Trial in May last, comes to hand as we go to press. We gave the results of this competition in our issue of the 6th ult., and it only remains to be said that the very complete way in which the officials of that event have done their work will be appreciated by motorists on this side of St. George's Channel. With the conclusion of the trials in Scotland and Ireland of adequate duration, and in England of unreasonable length, the trade may now settle down to its business of selling cars, while the prospective motorist need no longer wait until he becomes confused by the different results of the many trials and tests that have been carried out this year.

Cleansing the Streets.

SUPPLEMENTING the information recently given in our columns with regard to the difficulties attendant on cleansing the streets of great cities such as Westminster, the speech of Mr. J. Stopher, the late chairman of the Streets Committee of the Corporation of the City of London, at the annual conference of the Institute of Cleansing Superintendents, on Tuesday, was full of interesting facts. Last year 83,054 van loads of refuse were removed from the streets, and 77,424,000 gallons of water were used in washing streets apart from the watering of the same. In this connection the experience of those authorities who have employed motor-wagons is of general concern, and Councillor Thomson Lyon, of Westminster, was able to assure the Conference that his City Council had employed motor wagons for eight years with unqualified success. On the other hand, Alderman Roberts gave figures showing the cost of collecting at Liverpool to be 2s. 6d. per ton with the self-propelled vehicles, as against 1s. 8d. per ton with the horsed vehicle. Mr. W. J. Heavey, the superintendent for the City of London, gave it as his opinion that the motor could not yet rival the horse for the economical carting and collection of refuse. Evidently some of the authorities that have adopted mechanical traction in this connection have much to learn from the modern methods of the ancient city of Westminster.

The Motor-'Bus Again.

NATURALLY such a gathering could not take place without reference to the motor-'bus, and it seemed to be generally agreed that since the advent of the motor-omnibus considerable additional work had been entailed in keeping the streets in a proper state of cleanliness, owing to the large quantity of oil deposited upon the surface of the carriage ways. The evil was originally due to the want of trays on the omnibuses to intercept the oil, but the nuisance still existed, owing to neglect to empty the trays now provided. The Corporation have recently summoned several drivers of motor-omnibuses who had been convicted in each case, but it would be necessary to take some more effectual proceedings against the companies, in order to abate this dangerous nuisance. The asphalt companies, too, were all agreed that the deposit of oil on the pavements was most

detrimental to the life of the material. Owners of cars as well as members of the general public are agreed as to the necessity of improvement with regard to motor-buses, and the neglect with regard to the emptying of trays at regular intervals on the main routes is one of simple remedy that should be among the first cares of the newly amalgamated motor-'bus companies of the Metropolis.

After the Trials.

How languid was the interest taken in the 2,000 Mile Trial was clearly demonstrated on the Brooklands track last week. From the day that the cars set out towards Nottingham for the initial stage of their long jaunt the public concern had been dropping, and the results of the expenditure of money, loss of time, worry of business, and general associations of the long-drawn-out event will not find compensation in the publicity and prestige gained—even by the cars that have come out with almost unblemished escutcheons. Before the Trial began we expressed the view that it was too long and tiresome for the trade, coming at a time when its members should be acting as salesmen instead of car pilots over a prescribed route. The confusion of a double event in the northern part of the kingdom emphasized our view, and the tame proceedings with which the Trial came to an end proved its correctness. The run round Brooklands was to be a kind of spectacular glory from which the victors were to emerge with such prestige and distinction that the whole automobile world would be at their feet. Instead of which it has produced a series of articles in the daily Press in which the writers give their impressions of its monotony, and the sun seems to have been the only bright spot observable in the proceedings. Rumours of yet another Trial next year are already in the air, and given with such show of substantiality that we would seriously ask the trade to consider its attitude ere it is too late to draw back. Several firms are now congratulating themselves that they did not enter for the event just concluded; many more will probably hold aloof from promise of participation in that yet to come.

The Imports of Petrol.

At the annual meeting of the Shell Transport and Trading Company, Ltd., held in London on Tuesday, Sir Marcus Samuel, the chairman, made reference to the imports of petrol into the United Kingdom. For the year ending June 15th no less than 10,400,000 gallons came from the East Indies as against 1,600,000 gallons from the United States. He went on to say that although starting long after the Continent, Great Britain was at the present time the largest consumer of petrol in Europe. In 1904 the consumption for the United Kingdom was 30,000 tons, in 1905 56,000 tons, in 1906 85,000 tons, and in 1907 100,000 tons, while in the present year it is expected to reach 120,000 tons. In France the consumption has remained practically stationary. Sir Marcus went on to observe that motorists need be in no apprehensive mood whatever with regard to the future, as good supplies were forthcoming to meet any demand that might arise. In the discussion which followed the chairman's speech, Sir Fortescue Flannery remarked that the petrol from the Borneo fields was proving its value for motor purposes, both for pleasure and commercial vehicles, and he hoped

that motorists would become interested in the company which was supplying "Shell" motor spirit, a petrol which has won distinction in the recent trials. In the Scotch contests, for instance, the Albion car that won the silver cup for the least petrol consumption and also three winners of gold medals used this motor spirit. The record attained on Saturday at Saltburn was also on "Shell" spirit, while in the R.A.C. trials the first in no fewer than seven classes were also users of the same brand of petrol.

The Clashing of Events.

APPARENTLY motor racing on the sands is more popular than speedy travelling on the track, and the annual race meetings of the northern clubs are always attractive to the sporting instincts of Yorkshiremen. Those who went to Saltburn on Saturday saw the Hon. Lee Guinness accomplish a run of 120.26 miles per hour over a 1,100 yards course—thus equalling the world's flying kilometre record established by Marriott in the United States. Away in Derbyshire many of the northern clubs were also represented at the gymkhana at Buxton—an annual event of such interest that its promoters and those responsible for the Saltburn races should have tried to avoid a clashing of dates that was probably as unavoidable, this year, as regrettable. We publish in our Forthcoming Events an early anticipation of the leading fixtures, and secretaries who keep us informed of their arrangements as soon as made will be able to let others know of fixtures likely to clash with their own.

A Story Without Words.

From a Sketch]

[in La Locomotion Automobile.

Tests for Paraffin Carburettors.

APPARENTLY the Motor Union is about to extend its scope of activities to include the organisation of tests of mechanical apparatus in connection with automobilism. It probably arises from the interest which it has shown in connection with the fuel question, for we learn that invitations are to be extended to the leading makers of industrial motor vehicles as well as to the general firms employing such machines in their business to take part in tests of paraffin carburettors under the auspices of the Motor Union. This decision was come to at the last meeting, when it was also announced that the total number of individual members of the Union now exceeded the total for the whole of last year.

A Prohibition Withdrawn.

AFTER being in operation for some months, the prohibition on motor-car traffic over some of the most frequented roads in the county of Argyll, which was instituted by the Secretary for Scotland at the instigation of the County Council, has been withdrawn. The Council which obtained the prohibition has seen the folly of its ways and has itself sought the removal of the ban on motor-cars. True, it has compounded the "prohibition" for a ten m.p.h. speed limit from the Stronhan Bridge to (1) Salen cross roads, and (2) Arundel Wood Gate; from Salen to the junction with the Kilchoan road, and from Shiel Bridge to Ardtoe Pier; but the point remains that, after being in operation for some time, those who wished for the Pro-

hibition Order have desired its withdrawal. This action suggests that where, in the future, prohibition Orders are allowed, they should be granted only on the understanding of a possible revision by the central authorities after the lapse of a year or two. Already some of the authorities in England that have secured such Orders would probably be glad to secure their withdrawal—if such could be obtained without loss of supposed official dignity.

Aiding and Abetting.

MONDAY was another big day for motorists at the Sussex Courts. At the Steyning Petty Sessions three motorists were fined £68, at Arundel and elsewhere heavy impositions were the rule. One of the most interesting cases was at Haywards Heath, a place that is not beloved of motorists, for over the Courthouse they would write "All hope abandon ye who enter here." A chauffeur was summoned for driving to the danger of the public at Slaugham, the owner of the car sitting by his side on the occasion in question. He pleaded guilty, the solicitor representing his employer, Mr. J. N. Dracopolis, and himself adding that the defendant had to do as he was told. The owner was then summoned for aiding and abetting the driver of a motor-car to the danger of the public. For the police Mr. Lawson Lewis said there might have been a difficulty in the case, but if he established that the owner of the car sat by the side of the driver, and permitted the driver to commit the offence and did not interfere, he was guilty of aiding and abetting in the commission of the offence. The Chairman said the magistrates considered it a very bad case of dangerous driving, and they were sorry they could not imprison the owner of the car. They had decided to inflict a fine of £20 in the case of the chauffeur, and costs £1 11s. 6d., or in default three months' imprisonment, the licence to be suspended until the close of its term. The owner of the car would be fined £20, and costs £3 14s. 6d., or in default three months' imprisonment. His licence would be suspended to the end of its term, and defendant would be disqualified from obtaining another licence for two years after the termination of the present licence. The Chairman added the magistrates thought it was a case in which the owner should pay the fine for the chauffeur.

A Legal Opinion Wanted.

WITHOUT attempting to justify or extenuate the offence complained of in the foregoing, instance, we would direct attention to the conviction of two persons for what was obviously one offence. Granted that the Report of the Royal Commission on Motor-Cars expressed the view that "when an owner or hirer or any person in a car can be shown to have been abetting the driver in offences under Section 1 of the Motor-Car Act of 1903, he should be equally liable to fine or imprisonment, to withdrawal of licence and to suspension of registration of his car," this, however, does not constitute a legal decision, and the R.A.C. or M.U. should certainly look into the matter and ascertain exactly the present legal position of the owner who is on the car at a time when his chauffeur commits an alleged offence.

To-day at Brooklands.

THE Grand Prix has cast its shadow before, and the result is a lessened entry for the Brooklands meet to-day (Saturday). We understand that half-a-dozen of the original events have been cancelled owing to lack of entries, but the Ladies' Bracelet Handicap, the third All-Comers' Handicap Sweepstakes and the July Trophy Handicap should provide an interesting programme. The fashion of naming cars is growing steadily, "Little Dorrit," "The Gollywog," "Pobble" and "Bambo" being among the entrants. There are eight competitors in the ladies' race, fifteen in the July handicap and twenty-six in the All-Comers' sweepstakes, notable cars engaged being the 48.6-h.p. De Dietrich of the Hon. Lyndhurst Bruce; Mr. A. Gaal's 35.7-h.p. Westinghouse;

Mr. R. Reynold Jackson's 62-h.p. Jackson; Sir Duncan Hay's 41.9-h.p. Daimler; Mr. C. Copper's Metallurgique; Mr. J. Keele's 19.6-h.p. Belsize; Mr. H. Taylor's 20.1-h.p. Clement-Talbot; Mr. G. Bullough's 44.6-h.p. Junior; Mr. R. Creyke's 8.9-h.p. Sizaire; Mr. Clement Hobson's 48.6-h.p. Brasier; and Mr. G. Russell Miller's De la Buire.

The Scottish Trial.

| Class. | | | | | Gold Medallist. |
|--------|-----|-----|-----|-----|------------------------------|
| A. | ... | ... | ... | ... | 10-12-h.p. Swift. |
| B. | ... | ... | ... | ... | 12-14-h.p. Argyll. |
| C. | ... | ... | ... | ... | 16-h.p. Bell. |
| D. | ... | ... | ... | ... | 12-16-h.p. Vauxhall. |
| E. | ... | ... | ... | ... | 25-35-h.p. Darracq. |
| F. | ... | ... | ... | ... | 35-h.p. Deasy. |
| G. | ... | ... | ... | ... | 40 h.p. Armstrong-Whitworth. |

WITH characteristic promptitude the awards in the Scottish Reliability Trial concluded a few days ago have just been made known, the gold medals being awarded as follows:—

and Southend Railway Company, the owners of the ferry, and in addition to the proposals made from an engineering stand-point it is suggested that a revision of the present charges of 4s. per car (5s. return), plus 2d. per passenger, can profitably be adopted. The scheme is one of importance to the general trade of the district, for the ferry is used by carts as well as by cars, and if the proposed improvements are carried out the ferry will probably be utilised extensively by all traffic between the Eastern Counties and Kent.

A Compromise.

THAT motorists are not the unreasoning persons some of their opponents would seek to represent them was shown at the Hertford inquiry into the desire of the County Council for a ten-mile speed limit in the town and some neighbouring urban districts. At the outset of the proceedings the counsel for the application announced that it had been agreed with the representatives of the R.A.C., the M.U., and the North Herts A.C.

Photo by]

Motoring in Ceylon.—A View near Gampola.

[Mr. C. Frieswell.

For the lowest petrol consumption in the Trial a silver medal has been awarded to the 24-h.p. Albion car. A detailed report is in course of compilation and will shortly be issued. Meanwhile the participants will be interested in this declaration of the results and also in the official *communiqué* from Mr. R. J. Smith, which we publish in our Club Intelligence this week.

Difficulties at Ferries.

EVIDENTLY the Motor Union is taking up the question of the facilities provided at ferries for motor-cars with commendable energy, and we trust their efforts will be uniformly successful. Since the February meeting of the General Committee, a sub-committee, consisting of Col. Holden, Mr. R. W. A. Brewer and Mr. P. A. Sharman, has prepared a scheme for improving the facilities for motor-cars at the Tilbury-Gravesend ferry and its approaches, concerning which numerous complaints have been made by motorists. Plans and a report have been submitted by the Union to the engineer of the London, Tilbury

that the County Council should abandon certain portions of the original areas which were asked for, and the opposing parties had agreed to an Order being made for restricting the speed in the various other parts mentioned in the application.

A SMART piece of work in connection with the Trials has been achieved by Mr. R. T. Lang on behalf of the Humber cars—both Coventry and Beeston—in the publication of an illustrated souvenir of the Trial, giving an illustrated account of the daily runs of the four Humber cars engaged in the event. The success of the Humber quartette was certainly noteworthy.

MOTORISTS generally will join with us in wishing happiness to Mr. E. M. C. Instone and his bride, Miss Florence Greaves, of Market Harborough, who, married on Thursday of last week, are now touring in France. Mr. Instone is known throughout the country in connection with the Daimler Motor Co., and St. George's, Hanover Square, had quite a motorists' congregation on the occasion of the wedding. Mr. Charles Hardy acted as best man.

THE eyes of the motoring world are now centred on France, where on Monday and Tuesday next the two great international races organised by the Automobile Club of France will be held. The Seine-Inférieure circuit has again been adopted as the scene of operations, but the starting point has been altered and is this year located on the other side of, and about half a mile from the fork near Dieppe, on the way to Envermeu and Londinière. The grand stand and car enclosures, at the starting point, show considerable alteration from last year. The "re-victualling" stations of each of the competitors are directly in front of the grand stand, but located in a long pit in such a way that their sloping roof is only slightly

road is narrow, being at some points less than fifteen feet in width. From Envermeu to Londinières the road runs alongside a light railway, there being no fence between it and the road. The railway is crossed at a right angle just before reaching Londinière, after which there is a sharp winding ascent for two kilometres, from which point, until the little town of Eu is reached, is the fastest part of the course, it being a switchback and practically a straight road. At Eu the competitors will pass through the principal square of the town, and, turning sharply to the left, enter upon the last angle of the course. From Eu to Criel good running may be expected, and thence to Tocqueville the cars will pass along a fine stretch, the road being wide and

The A.C.F. Grand Prix Race.—The Grand Stand near Dieppe.

above the track, the latter forming, as it were, a shelf on to which the attendants may place any tyres or other articles required by drivers. In front of the grand stand there are practically two tracks side by side and separated by a railing. If a competitor does not need to stop when completing a circuit he will travel straight along. If he has to halt for any supplies he will run into the re-victualling track. In this way the spectators will have an excellent opportunity of watching every phase of the great race.

As will be seen from the accompanying sketch map, the course, which measures 76·988 kilometres, is triangular in shape, having as points the three towns of Dieppe, Londinières and Eu. The starting point, where quite a little town, comprising a grand stand, cafés, buffets, garages, &c., has sprung up, is located about a mile and a half from Dieppe. Thence the course runs in a south-easterly direction through Envermeu to Londinières, when it turns sharply to the north, passing Sept Meules, to the little town of Eu, and thence, *via* Criel-sur-Mer, following the coast line back to Dieppe. While the circuit has some fine stretches of level open road where fast running may be attained, there are one or two portions between Dieppe and Londinières where the

straight, and affording opportunities for excellent racing. Altogether the circuit is considered an unique one from the point of view of absence of natural difficulties, and the passage of the cars in front of the grand stands about every half-hour will afford an element of excitement from a spectacular standpoint. A good deal of money has been spent in getting the course in good condition and in rendering it free from dust. Foot-bridges have been constructed across the track at different places for the convenience of the public, for the protection of whom it is estimated that 8,000 soldiers and police will be employed. An innovation is the erection of streamers across the course giving the drivers warning of approaching dangerous turns and level crossings. The warnings take the form of signals very similar to those employed in connection with the recent Briarcliff Trophy contest in the United States, and of which illustrations were given in the *M.C.J.* of June 6th last.

Le Grand Prix des Voiturettes.

Le Grand Prix des Voiturettes, which takes place on Monday, will be over a distance of 462 kilometres, or about 288 miles, and will consist of six laps. The event is confined to cars

with engines of a maximum cylinder dimension as follows:—Single-cylinders up to 100 mm. bore, two-cylinders up to 78 mm., three-cylinders up to 68 mm., and four-cylinders up to 62 mm. The cars must weigh, in running order, but not including water, spirit, tools, or spare parts, a minimum of 600 kilog., and must carry not more than two persons side by side. Neither the use of detachable rims nor wheels will be allowed. Although a brilliant race is expected, there is not much international interest, for out of the sixty-four entries which have been received, no less than fifty seven are French vehicles, three being Swiss, three Italian, and only one British, a Certus friction-driven car entered by the Certus Company, Ltd., London.

According to the information at present available, the Isotta Fraschini, Ampere and Rolland-Pilain will be the only three vehicles fitted with four-cylinder engines with the limited bore of 62 mm. There will be no three-cylinder motors and probably not more than 25 per cent. of the entrants will have two-cylinder engines; the great majority will be single-cylinder cars with the maximum bore of 100 mm. The favourites for the race are the three Sizaire-Naudin vehicles; they are fitted with single-cylinder engines with the maximum bore allowed and a stroke of 6.2 in. Gregoire, one of the two-cylinder champions, has three cars of this type, each one with a bore of 3.07 in. and stroke of 5.9 in. Only one make of vehicle in the race is fitted with side

Map of the Seine Inferieure Course on which the A.C.F. Grand Prix Races are to be held.

chains, this exception being the Lion-Peugeot. The starting order for the sixty-four vehicles is as follows:—

| Order of Starting Nos. | Car. | Order of Starting Nos. | Car. |
|------------------------|-----------------|------------------------|-------------------|
| 1, 29, 49 ... | Delage. | 15 ... | Stabilia. |
| 2, 30, 50 ... | Martini. | 16 ... | Passe-Partout. |
| 3 ... | Foullarion. | 17, 40, 58 ... | Werner. |
| 4, 31, 51 ... | Gregoire. | 18, 41, 59 ... | Isotta Fraschini. |
| 5, 32, 52 ... | Alcyon. | 19, 42, 60 ... | Rolland-Pilain. |
| 6, 33, 53 ... | Le Metais. | 20, 43, 61 ... | Buston. |
| 7, 34, 54 ... | Demeester. | 21 ... | Certus. |
| 8 ... | Vulpes. | 22, 44 ... | Taine. |
| 9, 35 ... | Thieulin. | 23 ... | Truffault. |
| 10, 36, 55 ... | Lion-Peugeot. | 24, 45, 62 ... | GuilleminleGui. |
| 11, 37, 56 ... | Ampere. | 25, 46, 63 ... | Sizaire-Naudin. |
| 12, 38 ... | Bailleau. | 26 ... | Arrian. |
| 13 ... | De la Rouliere. | 27, 47, 64 ... | Corre. |
| 14, 39, 57 ... | Aries. | 28, 48 ... | Monnier. |

The Grand Prix.

It is on Tuesday the race—that in which the big cars will compete—will be decided. The contest is this year being run on new lines—a restriction in cylinder dimensions as against the fuel allowance basis, 30 litres per 100 kilometres equal to 9.47 miles to the gallon, of last year. The race will consist of ten circuits, equal to a distance of from 770 kilometres or approximately 480 miles. All motors taking part in the race are to be of a bore of 155 mm. for four cylinders, or the equivalent in the case of

one, two, three, six or eight cylinder cars. The competing machines must be of a minimum weight, in running order, of 1,100 kilog. The employment of oxygen, &c., in connection with the carburettor is forbidden. All vehicles must have a reverse motion and be fitted with silencers having a horizontal outlet. All repairs are to be made by the driver or *mécanicien*; detachable rims may be used, but the changing of wheels is prohibited. It will be permitted for the *mécanicien* to change place with the driver at the end of any lap, but only on the circuit in case of urgent necessity.

Forty-nine entries have been received, France being represented by twenty-four cars, Great Britain by six (three Austins and three Weigels), Germany by nine, Belgium by three, Italy by six, and the United States by one.

The appended table gives the leading particulars of the different vehicles:—

DETAILS OF COMPETING VEHICLES.

| Car. | Bore and Stroke. | b.p. | Ignition. | No. of speeds. | Trans- mission. |
|-----------------------|------------------|------|-----------------|----------------|-------------------|
| Austin* ... | 127 by 127 mm. | 100 | h.t.m. | 4 | chain and cardan. |
| Mercedes ... | 155 by 170 mm. | 120 | h.t.m. | 4 | chain. |

* Six-cylinder engines; all others are four-cylinder.

The starting order for the forty-nine competitors is as follows:—

| Order of starting Nos. | Car. | Drivers. |
|------------------------|------------|---|
| 1, 18, 34 ... | Austin | D. Resta, Warwick Wright, Moore-Brabazon. |
| 2, 19, 35 ... | Mercedes | Poëge, Salzer, Lautenschlager. |
| 3, 20, 36 ... | Motobloc | Courtade, Pierron, Garcet. |
| 4, 21, 37 ... | Renault | Sisz, Caillols, Dimitri. |
| 5, 22, 38 ... | Dietrich | Duray, Rougier, Minoia. |
| 6, 23, 39 ... | Benz | Hémery, Hanriot, Erle. |
| 7, 24, 40 ... | Fiat | Lancia, Nazzaro, Wagner. |
| 8, 25, 41 ... | Brasier | Théry, Baras, Bablot. |
| 9, 26, 42 ... | Porthos | Stricker, Gaubert, Simon. |
| 10, 27, 43 ... | Opel | Opel, Jorns, Michel. |
| 11, 28, 44 ... | Clement-B. | Rigal, Gabriel, Hautvast. |
| 12, 29, 45 ... | Itala | Cagno, Fournier, Piacenza. |
| 13, 30, 46 ... | Weigel | Laxen, Harrison, Weigel. |
| 14, 31, 47 ... | Mors | Jenatzy, Jarrott, Lanson. |
| 15 ... | Thomas | Strang. |
| 16, 32, 48 ... | Panhard | Heath, M. Farman, Cissac. |
| 17, 33, 49 ... | Germain | Degrais, Roch-Brault, jun., Perpère. |

The weighing-in operations are taking place on Friday and Saturday of the present week, at the official shed near the starting point; the cars will be placed over a bed of sawdust and the engine run at full speed for a few minutes in order to verify the exhaust. If the sawdust is disturbed the exhaust pipe will have to be altered, until no disturbance is created, or if that is impossible the car will be disqualified. Where the maximum weight of 1,100 kilos is not obtained by the vehicle with its lightest set of tyres, without water, oil, petrol or spare parts, the amount must be made up by the addition of a bag of ballast attached to the car by a lead seal. At the end of the race the cylinder dimensions of the first four cars will be verified and their carburettor and inlet pipe examined to ascertain that no "doping" has taken place.

The races will commence at 6 a.m., the course being closed to traffic an hour before that time. It is expected that the lap record, 38 m. 16 sec. made by Nazzaro last year, will be lowered on Tuesday.

THE A.C.F. GRAND PRIX RACE.

Sis at the Wheel of his Renault.

Rigal and his Clement-Bayard.

Rosta on his Austin.

THE TREK OF THE "WATER RATS."

THE dust rose high on the Brighton road last Sunday, for the Water Rats had swarmed *en masse* from their metropolitan lair, and were migrating—just for the day—to the seaside, as though drawn unquestioningly thither by some new Pied Piper of Hamelin. The Water Rats, be it known, are members of a social fraternity of music-hall celebrities, who delight in doing all they can for their own professional charities. This latter principle was the inspiration of Sunday's "day out," when from 150 to 200 of them rallied for a big motor excursion, that seems to have been as barren of incident as it was fruitful of pleasant experience. True, one car upset a cyclist on the way down, with consequences said to be rather grave to the victim. And Marie Lloyd and her husband, Alec Hurley, of coarser comedian fame, got hung up with tyre trouble a few miles from their destination, and narrowly escaped

Ryland and party were the first arrivals, at 2.20 p.m. The rest whirled in in twos and threes during the next hour and a half. Mr. A. M. Hobson, in a fine Decauville, brought Pat Doherty, Jack Collinson, Madame Dixon and others, and Joe O'Gorman and Bert Nolan came in a Standard, lent and driven by Mr. Guy Lewin.

Three charming girls in big lawn sun-bonnets, whose youthful "Panhard" driver tried to take them right over the pavement into the Royal York vestibule, were the Misses Annie and Maudie Lloyd and Miss Marie Gros—and then there was "little Marie," as everyone called her, otherwise Mrs. Ayling, Marie Lloyd's daughter. The famous Marie herself, who had Mr. Dick Burge as well as her husband with her in a fine Panhard driven by her brother, Sidney Wood, got in safe and sound eventually—quite ready for luncheon. Mr. Crossman, at the wheel of a 75-h.p. flier, brought in Mr. J. W. Wilson, Miss Nellie Waring, Mrs. Julian Rose, and Mrs. Wm. Lee, while

The Start of the Run of the "Water Rats" to Brighton.

being late for lunch. Another car, too, with Will Oliver and some ladies aboard, broke down so completely that its occupants gladly availed themselves of one of the relief cars.

A start was made soon after eleven o'clock from the headquarters of the Vaudeville Club, and one condition of the run was that the legal limit should be zealously respected. A general halt was called half-way at Crawley, which those near the tail-end of the long procession multiplied freely later on, for the sun was a regular "scorcher," and the Brighton road—never good at the best of times, and bereft of rain for three weeks and more—flung dense clouds of dust, part of which had to be swallowed.

Some of the Rats had their own cars, others had friends to drive them, several hired equipages for the occasion, and about a dozen "taxis" were chartered. Altogether the procession of cars (each with a cardboard rodent slung in front of the bonnet) was over sixty strong, led off by the "King Rat," Mr. W. H. Clemart, in a six-cylinder car. No attempt was made to stick to any order of going, and Julian Rose, the new Hebrew comedian, and his brother, Wm. Lee, in a Mass car, and Cliff

Dave O'Toole and Dave Carter, in a "taxi," are reported to have fixed up a match *en route* for settling, once and for all, the vexed question as to which of them can sing the toppest top note. Harry Tate came with Mr. Sidney Girling, a well-known racing motorist and a Gordon Bennett racer, in a six-cylinder Darracq, and though Eugene Stratton and Walter Kelly had to be expelled ignominiously from fifteen or sixteen cars in succession, before the start, because they would not take the trouble to find the one partly reserved for them, they managed to get to Brighton some time during the afternoon. Mr. Hurst drove Tom Wootwell in a six-cylinder "Hurst," and Mr. W. H. McCarthy, the "Scribe Rat," and Mr. T. Case, the secretary of the Vaudeville Club, were two of a "Renault" party. Miss Victoria Monks, dashing as ever, helped to adorn a handsome "Mercedes," and Rosie Hamilton, Claire Romaine, and Fred Larola were others of a gay and festive party. Of course, they all grouped themselves before the camera after luncheon, and returned home more or less independently to escape the dust during the cool of the evening.

SAXONIAN.

The 2,000-miles Trial.

AS a popular spectacle the last stages of the Reliability Trial of 1908 were not great; in fact, they proved monotonous to the enthusiasts, and those who do not become excited over motor racing left them alone. Apart from the attendance of those interested in the firms engaged in the event, the Pressmen whom duty called, some ladies who enjoyed the bright weather, and the officials, only a few hundreds were present during the two days at Brooklands. Still the hours spent on the track were not without their pleasant moments for those who had been round the Trials, and the comparison of incidents and chat of struggles o'er again whiled away time that might otherwise have hung somewhat heavily.

Following our previous chronicles, we have to report that thirty-four cars reached Brooklands on the Thursday and that

extent of 33 min. 28 1-5 sec. in connection with the road trials, and many anticipated its ability to make them up on the track. Unfortunately a blockage in the petrol pipe when the Zedel was on the course meant a delay of four minutes, with the result that she lost to the 10-h.p. Cadillac by 1 min. 14 sec., the latter's time being 4 h. 49 min. 38½ sec. At the outset of the race the Zedel was a minute a lap quicker than its opponent, and when only five laps from the finish the Cadillac had but three-quarters of a lap to spare.

Class D provided a study for the curious rather than a spectacle for the motorist to enjoy. A trio of cars had survived the ordeal—the 15·8-h.p. Singer, the 15·8-h.p. Zedel, and the 15·4-h.p. Shamrock—the two latter of which had lost several hours. Accordingly the Singer was sent off on its journey of

The 2,000 Miles Trial.—Some of the Spectators at Brooklands.

drivers and officials were up early on the morning of the 26th ult. to prepare for the race upon the track—a form of motoring with which all the drivers were not perfectly familiar.

In order to secure the finish of the Trial within reasonable time it was decided by the judges to reduce the 200 miles of running on the track in the case of the smaller cars, so that Class A was let off with 80 miles, Class B with 100 miles, and Classes C and D with 150 miles.

The little De Dion accomplished its 80 miles in 2 h. 48 min. 12 3-5 sec., or at the rate of 26 m.p.h., and, being the only competitor, was acclaimed the victor; then, in the B class the 8·9-h.p. Adler—a car whose merits were introduced to the public at last year's Cordingley Show, when we were able to pronounce a favourable verdict upon its running—travelled its 100 miles in 2 h. 49 min. 38 2-5 sec., at the rate of 34·98 m.p.h. The agents for this car, Messrs. Morgan and Co., of London and Leighton Buzzard, are to be congratulated upon its performance, both on the road and on the track. Had there been other competitors in its class the result would most probably have been the same.

The third event produced something like tension and threatened to provoke an excitement which had been lacking during the morning. In Class C there were two competitors over the 150 miles. The 12·8-h.p. Zedel had been penalised to the

150 miles, which it accomplished in 4 h. 47 min. 55 sec. The result was it had concluded its trial ere the others were due to begin. Only a breakdown on the part of the Singer could have given either of the other entrants a chance, and, as that did not occur, they had no need to start on the track.

Then followed the race in Class E, of which the 20·5-h.p. Vauxhall was leader, and started first, maintaining its lead throughout the race. The most interesting feature of this contest was the close running of the two De Luca Daimlers, which ran well together and well deserved the second place obtained by one of them, the very fast speed of the Talbot running it into third position, followed by the chain-driven Panhard.

On Saturday the races for Classes F, G, H, J, K and L took place, those of J and L being, however, walks-over for the 45·8-h.p. Ariel and the 59-h.p. Ariel respectively.

Commencing with Class F, the Talbot car showed a similar speediness to that of its smaller "stable" companion in Class E, and quickly overhauled the start it had to allow its competitors. The first on the track was the 25·6-h.p. Beeston Humber, which was sent off at 7 a.m. As soon as the handicaps had been timed out, the others were started in the following order:—25·6-h.p. Talbot, the 23·8-h.p. Coventry Humber, the 24·79-h.p. Panhard, the 24·79-h.p. Junior, the 25·6-h.p. Minerva and the 24·79-h.p.

Brown. At the end of the first hundred miles the Beeston Humber was leading by three laps and travelling about 48 m.p.h. The Talbot and the Coventry Humber were second and third respectively. In the end the former ran into first place and won by 3 min. 24 1-5 sec. from the 25-6-h.p. Beeston Humber, which was second, and the Coventry Humber, the smallest in the class, being third, with the 24-8-h.p. Panhard only 3 min. 17 1-5 sec. behind.

In Class G an interesting contest took place, the 31-h.p. Adler travelling at about 62-77 m.p.h., quickly getting beyond the leader, and winning in good style no fewer than eleven laps ahead of the second car. In fact, it made the fastest time of the day in all classes, despite the fact that a rim and tyre was changed on the track. Its time was 3 h. 10 min. 29 4-5 sec. The 27-8-h.p. Nagant-Hobson was second, the 27-3-h.p. Deasy was third with 196 miles completed at the expiration of the maximum racing handicap allowance, the 32-4-h.p. Beeston Humber being unfortunate enough to have several tyre troubles, including a couple of punctures on the track.

Class H was productive of several mishaps, and, as will be seen from the table, in which we set forth the winners in clear fashion, showing the order of running on the road—here indicated by taking the cars with the fewest negative marks as zero and adding to the others in minutes proportionately—only one car of the five that started actually completed its 200 miles. The previous travel on the road had placed the Daimler, driven by Ison, in the premier place, but, as it took more petrol than the Armstrong-Whitworth, the latter was given the lead on the track by less than two minutes. The Daimler, however, soon got going and led the way for nearly a hundred miles. At the end of the forty-first lap the universal joint of the propeller shaft seized, rendering all hope of success futile and allowing the White steam car to get into the second place. The driver of the latter, assuring himself of the position, did not trouble to make the pace, merely contenting himself with taking no risks as to the place he ultimately won.

Classes J, K, and L presented no outstanding features, and it remains but to be chronicled that during the afternoon the four cars that had got so far behind as to be unable to start before the first in their classes had finished were allowed to run three laps in proof of their ability to perform the task. It was evident, although the officials pointlessly omitted to give the times, that the speeds of these, the 52-h.p. Lorraine Dietrich, the 25-6-h.p. Thornycroft, the 15-8-h.p. Zedel and the 15-4-h.p. Shamrock, were extremely good, those of the Lorraine Dietrich being noticeably fast.

The prizes, which had been on view in the paddock, were distributed to the winners at the conclusion of the races by Mrs. Locke-King on behalf of the R.A.C., and a vote of thanks to the lady brought the event of 1908 to an end.

TWENTY-THREE cars—exactly one half of the starters—completed the distance on the Brooklands Track within the maximum time limit allowed, those attaining a speed of more than fifty miles an hour being:—

| | | | | | |
|---|-----------------------------|-----|-----|-------|--------|
| 1 | 30-h.p. Adler... | (G) | ... | 62-99 | m.p.h. |
| 2 | 40-h.p. Armstrong-Whitworth | (H) | ... | 55-98 | " |
| 3 | 48-h.p. Deasy | (K) | ... | 55-57 | " |
| 4 | 27-8-h.p. Nagant-Hobson | (G) | ... | 55-58 | " |
| 5 | 48-6-h.p. Rolls Royce | ... | ... | 53-59 | " |
| 6 | 20-8-h.p. Talbot | (E) | ... | 53-22 | " |
| 7 | 25-6-h.p. Minerva | (F) | ... | 51-31 | " |
| 8 | 25-5-h.p. Talbot | (E) | ... | 51-8 | " |
| 9 | 59-5-h.p. Ariel | (L) | ... | 50-89 | " |

The average weights of the cars in the various classes in the trials were as follows:—

| | | ... | ... | ... | cwt. | qr. | lb. |
|---|----------------|-----|-----|-----|------|-----|-----|
| A | up to 6-4-h.p. | ... | ... | ... | 13 | 1 | 10 |
| B | " 9-4-h.p. | ... | ... | ... | 15 | 2 | 15 |
| C | " 13-h.p. | ... | ... | ... | 14 | 15 | 3 |
| D | " 16-h.p. | ... | ... | ... | 19 | 3 | 18 |
| E | " 20-8-h.p. | ... | ... | ... | 23 | 3 | 3 |
| F | " 25-6-h.p. | ... | ... | ... | 27 | 1 | 0 |
| G | " 32-4-h.p. | ... | ... | ... | 30 | 0 | 10 |
| H | " 40-h.p. | ... | ... | ... | 30 | 3 | 24 |
| J | " 46-4-h.p. | ... | ... | ... | 36 | 1 | 19 |
| K | " 52-8-h.p. | ... | ... | ... | 36 | 22 | 0 |
| L | " 60-h.p. | ... | ... | ... | 37 | 3 | 12 |

The results of the Trial are given in the following table, the figures under the class being the maximum h.p. by the R.A.C. rating allowed in that category.

| Class. | Final Position in Class. | H.p. Car. | Handicap on Track based on R.A.C. Performance. | Time actually on Track. | Time behind Winner. | Speed of cars completing the official distance. |
|----------------|--------------------------|---------------------------|--|-------------------------|---------------------|---|
| | | | H. m. s. | h. m. s. | H. m. s. | M.p.h. |

At one time on Saturday morning no fewer than fourteen motor-cars were running on the track.

In the Scottish and Royal A.C. Trial the Dunlop tyres were again remarkably conspicuous, receiving first places in no less than sixteen classes.

MOTERING NOTES FROM TUNBRIDGE WELLS.

THE determination of motorists to avoid the "trap"-ridden roads leading to many resorts on the South Coast has been all for the good of Tunbridge Wells, which is now enjoying an excellent season from a motoring point of view. A method of reaching Brighton and other resorts on the coast which finds great favour among car owners is to travel from town through some of the exquisite Kentish scenery found between the fringe of the Metropolis and Tunbridge Wells, and then continue the journey over the Sussex Downs to Brighton, Hastings, Eastbourne, or wherever else is the destination. That this is a route now almost as popular as the more direct roads may be gathered from the fact that what is practically a procession of cars passes through the town in each direction during the week end, while on ordinary days the numbers are distinctly larger than in any previous summer.

A MAGNIFICENT piece of road has been tar-paved from one end of the town to the other. It leads over the highest part of the borough, overlooking the Common on one side, and passing the principal hotels on the other. The temptation to stop and spend a few hours in such delightful surroundings is irresistible, while as a week-end centre Tunbridge Wells now commands a great amount of attention. The fact that several of the principal seaside towns on the South Coast are within thirty miles has not been lost sight of by many motorists, the numbers putting up over Sunday being of an increasing character. A factor, too, which adds to the popularity of the town is the reasonable attitude assumed by the police, both in Tunbridge Wells and the district about. Traps are rarely heard of, and the long-distance variety has certainly not made its appearance at present.

THERE is a distinct feeling of friendliness towards the motor industry in Tunbridge Wells, where the number of privately owned cars is remarkable. It is computed, indeed, that in proportion to the population the number is as high as that in any town in England. Moreover, Tunbridge Wells takes a special pride in the knowledge that it was within her borders the first show of horseless carriages was held, through the instrumentality of Sir David Salomons, who arranged this remarkable attraction at the local agricultural show. To those who witnessed the modest procession of cars on that occasion the growth of the motor industry is nothing short of astounding.

It is rumoured that at the Spa Hotel the company contemplates building a very fine up-to-date garage. Among the visitors last week were Mr. and Mrs. Pearson, Mr. Powell and party, Capt. Hindes Howell with an Iris car, Mr. Scrase Dickens on a Germain, Sir Charles Wyndham on an Argyll, and Mr. John Gilmore on an Iris. Other hotels report an increasing clientèle among motoring tourists.

RECULVERS.

THE 400 Mile International Road Race for the grand prize of the Automobile Club of America will be held at Savannah, Georgia, on November 26th. American and foreign cars are eligible to compete, but not more than three vehicles of any one make can be entered. The foreign entries should be made through the recognised automobile club in the country in which the car is manufactured. The entry fees are £150 for one car; £260 for two of the same make, and £350 for three. The list will close on October 1st, but additional entries will be accepted up to November 1st upon payment of an extra fee of £50 per car. All vehicles taking part in the contest must have a motor comprising four cylinders, with a bore of 155 millimeters maximum, or in the case of engines with six or eight cylinders the equivalent in effective surface. Cars in running order, but without water, petrol, tools or spare parts, must weigh at least 1,100 kilos.

THE COVENTRY-SIMPLEX CARBURETTOR.

WE give herewith two sectional views of the new carburettor which has lately been put on the market by the Coventry-Simplex Engine^{rs}, Ltd., of East Street Works, Coventry, and for which special claims are made in the way of simplicity and accessibility. Petrol, passing through a filter, enters at A through the ball valve B, which, depressed by the weight of the float C on the spindle allows the requisite quantity of spirit to enter. The outlet from the float chamber to the jet D is drilled above the level of the bottom of the same, so that even if any foreign matter escapes the filter it will be precipitated and not carried to the jet. The latter can be removed without disturbing any other part, enabling any change in the size of the same to be readily made. The throttle is opened and closed by means of the lever E, which rotates the sleeve F. As the throttle is opened the increased suction from the engine draws down the extra air device, consisting of two pistons, the lower perforated one serving to uncover the air ports, while the upper one acts as a dash-pot, steadying the action of the extra air valve.

The adjustment of the carburettor is particularly simple and is entirely effected from the outside. The tension of the spring J to the extra air is adjusted with the engine in operation so that it will just hold the valve up when the motor is

running at its slowed speed. The jet supplied with the carburettor is, if anything, made slightly smaller than is necessary, this being done so that it can, if found desirable, be broached out.

The makers inform us that the new carburettor has proved itself very efficient in practice, giving twenty-five to thirty miles per gallon with a 20-h.p. engine. By depressing the air valve it can always be easily seen whether the mixture is right.

MOTORISTS in the Crystal Palace district will find a well-equipped establishment at the Lansdowne motor garage, Lansdowne Place, Belvedere Road, Upper Norwood, S.E. The business is now entirely controlled by Messrs. Lefeaver, who, in addition to keeping a large stock of petrol, oil, &c., are able to carry out repairs of all kinds. The firm have issued a handy vest-pocket list of routes with mileage to all the most important places in the country, a copy of which they will be glad to send to any motorist on application.

THE Anglo-American Oil Company, Ltd., with the view of preventing any water getting in the tins of Pratt's Motor Spirit, have fitted up an apparatus at their filling station for cleaning the inside of the cans under pressure; in addition, every can is very carefully inspected with an electric torch before it is re-filled. Although the company recommend, as a precaution, that a gauze funnel should be used in emptying spirit into the tank, motorists may be assured that cans containing Pratt's are free from impurities when they leave the works.

GOSSIP FROM PARIS.

AFTER having their cars overhauled for the last time, most of the French drivers who will figure in the Grand Prix utilised the few days left them before going to Dieppe in "exercising" their machines. They are all satisfied with them, and even the outsiders are full of hope. One of them, who will pilot a racing car which is not exactly a favourite with the betting community, told me, with a significant smile, that I must be prepared for a big surprise. So far as that is concerned it seems to me that it will be a surprise whoever wins. In any case, the contest will be hot, and if only the weather keeps fine the crowds that are preparing to flock to Dieppe to witness it will be larger than last year. The race will be more thoroughly international than on any previous occasion. Twenty-four French cars will be matched against twenty-five foreign racers of the highest renown. The French naturally hope to win the great race, but it must be admitted they have competitors worthy of their metal, such as Fiat, Mercedes, Itala, Thomas, Weigel, Austin, Benz, Germain, &c., any one of whom may capture the coveted trophy wrested from the hands of the French by Nazzaro on his Fiat in 1907.

AMONG the well-known drivers taking part in the event is Jenatzy, who led the Mercedes car to victory in the fourth

The Members of the Baden Parliament recently made an excursion by motor-bus in the South of the Black Forest. The above illustration shows the party at St. Blasien.

Gordon Bennett race, run in Ireland, and who this time will pilot one of the Mors cars. They, who on a Brasier car brought back to France the Gordon Bennett cup which he wrested from the hands of the Germans in 1904, and who kept it in France by his victory in the Auvergne the following year, will again figure in the race on a Brasier racer. Fournier, the victor in the Paris-Berlin contest, will take the steering-wheel of one of the Itala cars. Sis, who in 1906 gained the first Grand Prix for the Renault firm, will again pilot one of their cars, while Nazzaro, faithful to the Fiat he steered to victory in last year's Grand Prix, will take part in the contest. Maurice Farman, who has gained many a victory, and who would have come in second in the Paris-Berlin race had it not been for a collision when he was entering the German capital, will again steer a Panhard car. Then there are Baras, Gabriel, Heath, Cissac, Lancia, Hemery, Weigel, Duray, and Rigal, who will no doubt repeat the remarkable performances which already stand to their credit. The other drivers in the Grand Prix, though less universally known, are all men capable of carrying off the prize—that is to say, they belong to the elite of their fraternity.

If "a cat has nine lives," an aviator must have at least a

dozen. Delagrange had come to the ground, breaking his machine a good many times, before he started on his tour in Italy, and at both Rome and Milan he was thrown with such force that every one who witnessed the accident expected to have to pick him up with at least a broken arm or leg if not a broken head. Yet on each occasion he got up without a scratch and went with a smile on his face to meet those who were running to assist him. A couple of weeks ago Esnault-Pelterie fell with his aeroplane from a height of some 150 feet without sustaining any injury. It would be useless to try to remember all the accidents which have happened to Bleriot. Almost every time he has mounted his aeroplane he has come to grief in such a manner that it is little less than a miracle he has not been already killed a dozen times, if it were possible. Even Henry Farman, who is perhaps more prudent than most of his confreres in aviation, was caught by a gust of wind and thrown so heavily to the ground that he was for a moment stunned. But, though his machine was completely wrecked, he suffered so little injury that the very next day he went to the theatre. Santos Dumont has also come to grief many a time, but, if his machine was on each occasion demolished completely or disabled, he has come off scot free. Even the Wright Brothers, with their system for insuring the constant equilibrium and stability of their aeroplane, had an accident in America not long ago. Wilbur Wright's nose was severely scratched, leaving a mark which was still visible when he arrived in Paris some three weeks later, but that was all. He was safe and sound though his machine was disabled.

It is to be hoped that this series of good fortune in bad will not be interrupted, or rather that Wilbur Wright will be able to demonstrate to the world by his experiments at Le Mans that he and his brother have really solved the problem of maintaining the equilibrium and stability of aeroplanes even in a strong wind. If he does, he will be carried in triumph by the French aviators, who will be glad enough to pay him or his company for the right to employ his patented system, which will insure their safety and give such an impetus to the science of aviation. Since Wilbur Wright brought his machine to France and commenced putting it together, the scepticism of those who still refused to believe has been considerably shaken, and the failure of Wilbur Wright to keep his oft-repeated promises will cause great disappointment. It is consequently with the deepest interest that everybody is looking forward to the experiments which are announced for the second fortnight in July at the latest.

FOREIGNERS touring in France have a just grievance against the authorities. They must either violate the law and expose themselves to all sorts of penalties, including imprisonment, or submit to vexatious delays which are often long. No one, be he a Frenchman or a foreigner who almost always possesses a driver's licence issued by the authorities of his own country, can on the territory of the French Republic legally take the steering wheel of an automobile without having a French driver's licence in his pocket. All sorts of steps have been taken to induce M. Barthou, the Minister of Public Works, to facilitate the driving of cars in France by motoring visitors, either by recognising the validity of the licences issued in foreign countries, or by the prompt delivery of the French driving licence. But till now the Minister has been obdurate; like most Frenchmen he was always very polite to the personages who approached him on the matter, and made all sorts of promises which were never kept. At last, however, there seems some chance of a satisfactory solution being arrived at. The new régime cannot, however, be established before the end of the present motoring season. Having, as he told a friend of his who repeated it to me, been "bothered out of his life about those foreign motorists," M. Barthou has, by the intermediary of M. Pichon, the Foreign Minister, proposed that an international conference should assemble in Paris "to regulate and facilitate automobile traffic from one country to another." It is proposed that this conference should be held in October simultaneously with the International Road Congress.

MARNEY.

DURING the next five years the New Zealand Government propose to spend a million pounds on the improvement of the roads of the Colony.

SIR REGINALD OAK has recently taken delivery from Messrs. Warwick Wright, Ltd., of a 26-h.p. Metallurgique limousine, intended for use in Egypt; the Earl of Carnarvon has also recently purchased a 32-h.p. Metallurgique car.

New works in the Copland Road, Ibrox, Glasgow, have just been erected for Messrs. Terrac and Co., who have designed several good types of motor houses.

THE Chairman of the Education Committee of the L.C.C., Mr. Cyril Jackson, is endeavouring to arrange for the teachers of London elementary schools to warn children of the risks they run in crossing busy thoroughfares.

THE Coventry Motor Fittings Company, Coventry are, in addition to their ordinary trade, making a special feature of repairs to any make of radiator—especially the honeycomb type—a special department having been established to deal with the same.

AT a meeting of traders held in Putney, a general consensus of opinion has been expressed that the agitation recently conducted by many of the local public men against the alleged excessive speed of motor-buses in the district has had a good effect in lessening the same.

A MOTORIST at Aix-la-Chapelle has devised and patented a new steering wheel, the rim of which consists of a hollow elastic ring arranged between rigid rings in such a manner that when these are pressed together the air pressure thereby created may be utilized for operating an acoustic signal or other warning apparatus.

As mentioned in a recent issue, we have reprinted the table giving the details of the setting of valves of petrol motors, published in the *M.C.J.* of the 6th ult. Being mounted on stiff card it should prove a handy means of reference in motor repairing establishments, and we shall be glad to send a copy gratis to any motor-car agent and repairer making application for the same.

Two motor-bicycles are now employed in the borough of Queens, New York, U.S.A., by the Milk Inspection Bureau. The inspectors are obliged to go about in the early morning hours, watching for dealers who sell adulterated milk, and confiscating any found to be below standard. The use of the motor-cycles will enable them to cover a much greater area than before in the same length of time.

AT the south-eastern end of East Croydon station, and only about 100 yards from the booking office, there is a garage for about a score of cars. This is under the proprietorship of Mr. G. Vedast, who also lets motor-cars out on hire, and who will be glad to be of service to motorists in the locality driving to the station in their cars and wishing to have them looked after until their return from town in the evening.

MR. A. RIVETT, whose motor works at 236, High Road, Leytonstone, and the Steele Road, in the vicinity, are well known to the motorists of the eastern suburbs, is charging accumulators by yearly contract, repairing tyres according to a settled scale of charges, supplying petrol, oils and spare parts to many of the car owners in the district, and generally interesting himself in the development of automobilism. In addition to the repair works at Leytonstone, Mr. Rivett has depots at 147, High Street, East Ham, and at 212, High Road, Ilford.

MESSRS. S. F. EDGE, LTD., have sent us a photograph of the silver plaque given to Miss Dorothy Levitt by the Kaiserlicher Automobile Club for her performance on a 45-h.p. six-cylinder Napier in the Prince Henry of Prussia touring car competition. For the second year in succession in the big German contest she has made an absolutely non-stop run from start to finish, and in the general classification beating over 100 competitors. Her speeds on a genuine touring car, with luggage and full equipment of passengers, were slightly over 60 kilometres per hour for the hill climb, and nearly 100 kilometres for the speed trial.

THE motor-car that is being utilised by one of the Methodist bodies in connection with a centenary touring celebration is now in Scotland.

BETWEEN Brighton and the picturesque village of Rottingdean, with its associations of Burne-Jones, William Black, and Mr. Rudyard Kipling, a motor-bus service is now running.

MOTOR-CARS have made their advent into the ore mining districts of Northern Wisconsin, Minnesota and Upper Michigan, U.S.A., they being employed between the various range cities in transporting miners, supplies, and even ore.

THE new garage facing the Windsor Castle Hotel, at Carshalton, has been established by Mr. W. Cheesman, who has installed the necessary machinery for effecting repairs to motor-vehicles.

A CASE illustrating the jealousy with which motor trade secrets are guarded was heard at the Old Bailey on Saturday, when Frederick Holt, lately assistant draughtsman employed by Napier and Son, Ltd., was found "not guilty" of inciting to steal. It was alleged that he promised to make it "worth the while" of a certain man, who had special inside knowledge of the firm's work, to disclose information about a new motor-car. Defendant denied the allegations, and was discharged.

A 45-h.p. Six-Cylinder Sheffield-Simplex Car recently delivered to the order of the Russell Engineering Company, Manchester, for Mr. Watkinson.

The car, which is equipped with Rudge-Whitworth detachable wheels, is interesting as being of the now popular high-powered "runabout" type, and being finished in a flat French grey without varnish presents a very smart and racy appearance. The vehicle was sold under a guarantee, as regards petrol consumption, of fifteen miles to the gallon, and passed a satisfactory test before delivery over an extended route along the Great North Road with three passengers up, when the desired mileage was easily attained without any special adjustment of the standard carburettor. In view of the dimensions of the six-cylinder engine— $4\frac{1}{2}$ in. bore by $4\frac{1}{2}$ in. stroke—such a low petrol consumption is extremely satisfactory.

A FEW days ago a fleet of motor-cars conveyed the members of the committee of a political association at Stroud for a trip of 100 miles into the Wye Valley. The journey was planned by the Rev. T. A. Ward, who as chairman of the Bristol and Gloucester A.C. has done much to promote the motoring movement in the West of England, and who, according to one account, "is as much at home in his car as he is in the pulpit." Those who lent cars for the enjoyable trip were Messrs. A. W. Clifford, H. Workman, M. Grist and H. E. Steel, as well as the Rev. T. A. Ward.

A NEW device known as the Auto-Syphon, for readily transferring petrol from the tins to the car tank, has lately been put on the market by Mr. W. De la Williamson, of Spring Road, Orrell, Wigan. As the title implies, it consists of a syphoning arrangement. To empty a tin of petrol it is only necessary to attach the apparatus by means of the screw cap, which is of a convenient shape for tightening by hand, and then press in the sides of the tin. A very slight pressure only is required to start the syphoning, after which the tin is emptied automatically. It is impossible to lose any petrol by splashing or otherwise where the Auto-Syphon is employed, and all particles of dust, &c., which may be in the spirit are effectually prevented from entering the tank by means of a filter. A set of adapters is being made to enable the fitting to be used in connection with the tins of the various petrol-supplying firms.

CONTINENTAL NOTES.

Some Motoring Proverbs.

"Le Gaulois" in a recent issue published some "new style" proverbs for motorists by M. Michel Zamoccois, from which we take the following:—

Dis-moi le prix de ton auto, je te dirai qui tu es.
L'automobilisme:

Qui que tu sois, voici ton maître,
Il l'est, le fut, ou le doit être.

Partir est bien, revenir est mieux.

Le pneu est l'ennemi du bien.

Bien qu'il n'aime pas le panache, l'automobiliste ne voyage qu'avec pompe.

L'homme propose . . . un itinéraire, et le moteur dispose.

French Motor-car Imports and Exports.

Returns just issued show that the value of the foreign motor-cars and parts imported into France during the five months ending with April last amounted to £142,400, as compared with £131,640 in the corresponding period of last year. On the other hand the exportation of French motor-cars and parts continues to exhibit a serious shrinkage. The aggregate exports during the five months lately ended only totalled £2,147,640, as contrasted with £2,665,000 in the similar period of 1907.

the familiar locale, the Grand Palais. The first show, which will extend from November 28th to December 13th, will be devoted to touring and pleasure cars, cycles and motor-cycles, accessories and components; as soon as the huge building has been emptied of these, the exhibits of industrial motor vehicles, motor-boats and allied industries will be substituted, this display being open to the public from December 22nd to the 29th.

The Reliability Trials in Denmark.

The three days' reliability trial organised by the Danish Automobile Club was brought to a successful conclusion on the 23rd ult. The first place was taken by H. Frins on a 10-14-h.p. Adler, C. Christiansen being second on a 22-h.p. Delaunay-Belleville and Ehrlich third on a 35-40-h.p. Hexe.

The Mont Ventoux Hill Climb.

The Automobile Club Vauclusien has decided to hold the annual hill climbing competition up Mont Ventoux on the 29th and 30th August next, the first five classes being run on the first day and the remaining six on the second. The course, which measures twenty-one kilometres in length, has an average gradient of from one in eight to one in ten, with one or two stretches as stiff as one in six.

MOTURING IN SINGAPORE.

The above illustration depicts a group of Star Cars in Singapore. Reading from left to right they include:—A 30-h.p. six-cylinder limousine, an old pattern 7-h.p. two-cylinder four-seater, a 12-h.p. four-cylinder car and a 9-h.p. two-cylinder three-seater.

With the exception of Russia, Turkey, and Algeria, there has been a falling off in the shipments to practically all the leading markets, the decline in the case of England being from £1,117,960 to £985,320.

British Motorists in France.

Recent British motoring visitors to France include Mr. and Mrs. Kendrick, of Birmingham; Mr. and Mrs. Ared, of London (40-h.p. Daimler); Lady Talbot (75-h.p. Itala); Mr. and Mrs. E. M. Griffith, of London (30-h.p. Austin); Mrs. N. H. Vickery, (40-h.p. Daimler); Mr. H. S. Cook, of London; and Miss Little, of London (40-h.p. Delaunay-Belleville).

The Paris Salon.

Some important changes in the arrangements with regard to the Paris Salon have just been decided upon. For several years past the industrial vehicle section has been held in an annexe, at first in the horticultural buildings on the banks of the Seine and later in extensive temporary premises erected on the Place des Invalides. This arrangement has, however, not altogether proved satisfactory, and at the same time it necessitated considerable expense. Consequently it has been resolved to this year hold two separate exhibitions, both taking place in

Hill Climbing Competitions in France.

Several hill-climbing competitions were held in France on Sunday last. The most important was that organised by the "Provence Sportive" of Marseilles; the event took place on the Platrières Hill, over a distance of 500 metres. The best time of the day (39½ sec.) was made by Rossyno on a Berliet. Much interest was centred in the motor-bicycle event, in which a little boy of six took part. In the Val Suzon hill-climb, organised by the Automobile Club Bourguignon, the honours of the day fell to the Rossel car driven by Vitalis, his time being 3 min. 1½ sec.

Miscellaneous Items.

Two eighteen-seated "sight-seeing" cars are about to be put in service in Munich.—The Crown Prince of Germany has ordered a Protos 36-50-h.p. six-cylinder car.—La Société des Motor-Cabs Franco-Scandinave is the name of a company which has just been formed in Paris, with a capital of £48,000, to introduce motor-cabs into Scandinavia.—The Austrian Automobile Club has just held a three days' light car reliability trial, during which a distance of 715 kilometres was covered. In the single and double-cylinder category the first place was taken by Siercke on a Puch car, and in the four-cylinder section by Furst on a F.N. vehicle.

Correspondence.

[Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.]

THE PRINCE HENRY OF PRUSSIA TOURING COMPETITION.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I enclose herewith copy of a letter which I am forwarding to the secretary of the Royal Automobile Club. This letter explains itself. Briefly put, the rules of the Prince Henry Cup race laid it down that only touring bodies were to be used on competitors' cars. Owing to the extreme latitude allowed to certain competitors in interpreting these rules, entrants who acted in accordance with the spirit of the same found themselves at a serious disadvantage. I have, therefore, in the interests of all future competitors, lodged the enclosed protest with the Royal Automobile Club.—Yours truly,

S. F. EDGE.

COPY.

The Secretary, The Royal Automobile Club, 119, Piccadilly, W.
23rd June, 1908.

Dear Sir,—With reference to the Prince Henry competition in Germany, I wish your committee would very seriously consider the great scandal arising out of the manner in which the rules of this trial have been allowed to be interpreted by some of the competitors without the committee of this competition raising any objections. It was set out clearly beforehand that these trials were touring car trials pure and simple, and it was said that the organisers of the same would be very particular in ensuring that only touring cars should compete, and, in view of the failure of the Herkomer regulation on this point, it was stated that Prince Henry himself would see to it that the rules should be very much stricter in this competition, whereas in fact (as shown by attached illustrations) far from the regulations in any way compelling competitors to use ordinary touring cars, racing cars were admitted so long as they had racing bodies with seating accommodation for three or four people.

I sent over a genuine six-cylinder Napier touring car, and I think it exceedingly unfair that my car should have to compete with cars which were nothing less than racing machines. If I had not been led to believe that racing cars were barred in this competition, I would have sent over a racing Napier.

I consider that the R.A.C. should lodge a strong protest with the Kaiserlicher Automobile Club on behalf of British competitors, as the latter were undoubtedly misled as to the character of the competition. The point is that either the terms of the competition were misleading or the rules of the competition were indifferently interpreted.

Of course a very simple remedy for individual British competitors is to refuse to enter in these international competitions, but I consider that the interests of sport would be better served by the R.A.C. if the latter were to take up a firm stand and enter a strong protest against the manner in which this competition was conducted.—Yours truly,

S. F. EDGE.

P.S.—I believe if someone in authority were to bring the matter before Prince Henry himself, it would have a beneficial effect upon subsequent competitions.

THE END OF THE TRIAL.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—If the R.A.C. really intended the conclusion of their much-boomed trial to have an educational value, why did they not provide against the ignorance of the spectators on Friday and Saturday last? There was no chance of knowing how matters were proceeding, and the issue of a slip giving the names of the cars and drivers, and the system of handicapping, &c., would have been welcome. But apparently the omission was in keeping with many other happenings. They manage these things better in Scotland.—Yours truly,

A SPECTATOR.

THE NAPIER-FIAT MATCH.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—There is surely something very much wrong with the Brooklands electrical timing apparatus as demonstrated by the official timing published in relation to the above. To every one present at Brooklands on Whit-Monday the following very rough calculation will be obvious. Brooklands track is approximately 5,000 yards to the lap. The "official" times showed the Fiat to be approximately at least 7 per cent. faster than the Napier. Granting the above, then the Fiat should have gained 350 yards in each lap, or 700 yards in the first two laps. I believe that every eye-witness of the above race will agree with me when I say that the Napier was at least 100 yards in front of the Fiat at the end of the second lap. If, however, the official timing is correct, the Fiat should have led the Napier at the end of the second lap by at least 700 yards, less whatever lead (if any) it may be admitted the Napier gained in the first few hundred yards before the official timing commenced. I understand it is officially stated that the electrical timing commenced 400 yards from the

start. If, therefore, the Napier gained 250 yards (that is travelling twice as fast as the Fiat) over this first untimed distance, it should have been 450 yards behind the Fiat at the conclusion of the second lap, instead of which it was leading.—Yours truly,

PERPLEXED.

THE UNJUST STEWARD.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—With regard to the letter in the *M.C.J.* complaining that a driver had asked for a supply of petrol, together with a receipt for double the quantity and cash, I should like to point out that to offer or to give, to ask for or to receive, a secret commission is a criminal offence. It is equally criminal to give to a driver, or for a driver knowingly to use with intent to deceive his principal, any receipt, account or other document false or defective in any material particular. I shall be glad if any of your readers who are anxious to prevent corruption will supply me, at 3, Oxford Court, Cannon Street, E.C., with any facts relating to breaches of the Prevention of Corruption Act, with a view to a prosecution being instituted.—Yours truly,

THE SECRETARY.

Secret Commissions and Bribery Prevention League, Incorporated.

The 10-cwt. Motor Van just supplied by Messrs. Dennis Bros., Ltd., to Messrs. Woolland Bros., of Knightsbridge, S.W.

A MOTOR TOUR ON THE CONTINENT.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have recently returned from a most enjoyable motor tour on the Continent, and for the benefit of fellow motorists I send you the following brief outline of the route followed, which combines perhaps as many and as varied attractions as it is practicable to devise in a tour of its length—the level and beautiful reaches of the chateau district, the magnificently scenic course of the Savoy Alps, the smiling plains of Piedmont and Lombardy, and a glimpse of the lovely Italian lakes.

Taking Paris as the starting point, the first day's run is to Orleans, a distance of 100 miles. The route lies through Fontainebleau, with its famous castle and forest. Orleans itself is an interesting town, made famous by its associations with Joan of Arc, and has a choice of two or three good hotels. Blois, forty miles below Orleans, may be regarded as the gateway of the chateau region, of which Tours, another forty miles, is the centre. Several days may be profitably spent at Tours, each with its interesting motor excursion. Touring now in a south-west direction, one travels in easy stages extending over two days by Bourges and Moulins to Vichy—a lively little resort, and a good place for another brief stay. Then comes Lyons, a hundred miles farther; and, following that, Grenoble, seventy-five miles, where the level part of the tour ends for a time. The town of Grenoble is superbly situated, and in its vicinity are some extremely fine hill courses winding into the heart of Alpine scenery. Close by, too, is the venerable monastery of the Grande Chartreuse.

From Grenoble, a spin of another seventy-five miles takes one to Briançon, and sixty more to Turin. This is a route of fine views, some of the most striking peaks of the Italian Alps being continually in sight. The hundred-mile ride to Milan, along the flat, fertile plains, may prove rather warm, but the city itself will offer ample compensation in its numerous sights, its cool cathedral, and its airy and gay galleries.

From Milan a delightful day's trip should be made to the Certosa di Pavia.

The route now leads northward to Como, perhaps the most captivating of Italian lakes. Next should come Lake Maggiore, reached on its western side at Pallanza, by way of another pleasing spot, Varese. Pallanza is a hundred miles from Milan. The great diligence highway of the Simplon, now just superseded by the new railway, runs from Pallanza to Domo d'Ossola, whence the road to be followed turns southwest, by way of Biella, to Aosta, a hundred and sixty miles. Now begin some more fine hill climbs, as the car pushes on to Pré St. Didier, and then to one of the finest view resorts in the Southern Alps, Courmayeur. This mountain village, a favourite spot with Italians, but little visited by British travellers, lies almost at the foot of the southern precipices of Mont Blanc, whose huge bulk, towering above the Allée Blanche between, is far more impressive as seen from this side than from Chamonix. Finally, the route leads out of Italy, high over the pass of the Little St. Bernard, and down through the French military post of Bourg St. Maurice, to Aix-les-Bains, a hundred and fifty miles from Aosta. Some of the hills, especially those on the latter part of this attractive itinerary, are somewhat steep, and the car must be fitted with powerful brakes. On the mountain routes, high speeds should not be indulged in, especially at places where the prospect ahead is interrupted by sudden turns in the road. Carts and other slow-moving vehicles are constantly met, plodding slowly along, and one never knows what may be suddenly encountered.—Yours truly,

TRAVELLER.

LICENCES FOR ALL DRIVERS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I am a motorist, and have travelled some thousands of miles. I am therefore well aware of the troubles and dangers incurred on the roads owing to carelessness, and even wanton ill-behaviour, of many drivers of horse vehicles, both in town and country.

A New Public Service in Austria.

The above illustrations are reproduced from snapshots taken on the route of the public service which has lately been inaugurated between Klosterneuburg and Weidling, a distance of about three miles. The electrical vehicles employed, which were built by the Austrian Daimler Company, take their current from an overhead conductor, similarly to electric trams.

(Allgemeine Automobil Zeitung.)

These men drive on the wrong side of the road, stubbornly hold the centre of a somewhat narrow way, risk "narrow shaves" in passing, or suddenly "pull up" without warning, utterly indifferent to what may be following on the road.

In such cases all the trouble and risk of avoiding accidents are thrust upon motorists. These habits seem to be practised by carters with impunity.

I suggest that drivers of horse vehicles should be licensed in the same way as motorists, and that the vigilant eyes of the police should be as watchful of one as the other. Licences costing a trifling sum per annum (say 2s. 6d.) would meet the case, and while these would yield an additional income towards repair of the roads, the fact of drivers holding them would impress them with responsibility.—Yours truly,

W. VERNON.

THE NAPIER-FIAT MATCH.—Mr. S. F. Edge has sent us a copy of a long letter he has addressed to the secretary of the R.A.C. with regard to the speeds attained in the recent race between a Fiat and a Napier car on the Brooklands Track. In it he remarks that "It must be apparent to everyone that some considerable error has been made in the timing."

CLEANING OUT SILENCERS.—The Rover Company, Ltd., write:—"We have noticed that on several cars returned to us for overhauling the silencers have been badly choked up, causing loss of power and overheating. This is principally caused by over-lubrication or the use of inferior oil. To obtain the highest efficiency it is very necessary that occasionally the silencer should be taken down and cleaned. The cleaning process is most easily accomplished; on the Rover car the removal and replacement of the silencer is a very simple operation consisting of the manipulation of a few nuts only."

CLUBS AND ASSOCIATIONS.

ROYAL.

FOR the makers' class in the Dust Trials of the R.A.C. the following entries have been received:—Mr. A. Gaal's 25.6-h.p. Westinghouse, Mr. W. T. Clifford-Earp's 48.6-h.p. Thames, Mr. Colin Defries' 30-h.p. Porthos and 20.1-h.p. Porthos, Mr. A. Gaal's 25.6-h.p. Renault, Mr. Frank Lanchester's 25.6-h.p. Lanchester, Mr. L. Carle's 45-h.p. Mors and 30-h.p. Mors, and Mr. R. W. A. Brewer's 20-h.p. Decauville.

MOTOR UNION.

A GENERAL meeting of the Motor Union was held at the Hotel Cecil, London, with Mr. W. Joynson Hicks, M.P., in the chair. It was proposed to contribute towards the cost incurred by Dr. McKay in meeting the unsuccessful effort of the Corporation of Harrogate to reverse the decision of the Knaresborough magistrates to the effect that the authorities are not entitled to ask an extra charge for the water used in the washing of motor-cars belonging to doctors. A report was made that certain financial matters between the R.A.C. and the M.U. had been adjusted.

SHEFFIELD AND DISTRICT.

ARRANGEMENTS have been made to take 120 crippled children to day (Saturday) for an outing to Haddon Hall, where tea will be provided by the club. The cars will meet at Leopold Street, Sheffield, at 2.30 p.m. and start about 3 o'clock for Haddon Hall, via Baslow and Bakewell.

The hill climb for members of the club will be held under the closed competition rules of the R.A.C. on Saturday, the 18th inst. The competi-

tion will be divided into three classes, viz.:—Class 1.—Single-cylinder car competition for challenge cup, presented by Mr. Harvey Foster, open to all members who own one-cylinder cars. Class 2.—Competition open only to members not connected with the trade. Prizes given by Mr. E. F. Coupe and Mr. A. Davidson. Class 3.—Annual competition for challenge cup presented by Mr. Harvey Foster.

WEST SURREY.

MEMBERS and friends to the number of over eighty met at St. Mary's, Godalming, on the 27th ult., by invitation of Mr. and Mrs. R. W. Buttemer. Much amusement was caused during the afternoon by an "Odorographic Competition," in which it was clearly evidenced that motoring has no tendency to blunt the olfactory perceptions. The successful competitors, Mrs. Pullman and Mr. R. Crothers, made sixteen successes out of a possible twenty, the test objects including such substances as asafetida, carbon disulphide, and amyl alcohol as well as more agreeable scents.

Members are reminded that the club gymkhana will take place at Compton, Godalming, on Saturday, July 25th, and are requested to send in their entries as soon as possible.

NEW FOREST.

ON Saturday the New Forest A.C. and Hampshire Motor Union held its hill-climbing competition at Beaulieu, when an interesting afternoon was spent. Mr. C. J. Haddon, of Westover Chambers, Bournemouth, was the hon. secretary of the meet, and Lord Montagu acted as judge. Messrs. F. Straight and J. H. Burley were time-keepers and starters. Class 1, for cars up to 10-h.p., was won by Mr. J. W. Davis on his 6-h.p. Jackson car, Mr. C. H. Braun on a 9-h.p.

Sizaire being second. In Class 2, Mrs. M. Ellis had entered a 13.7-h.p. Peugeot, which was second to the 11.2-h.p. Gladiator of Mr. Ironside-Bax. In the class for cars between 20 and 30-h.p. two Clement-Talbot vehicles were first and second respectively, these being entered by Messrs. H. Scorer and W. Mackintosh. Class 4, for cars of 30-h.p. and over, was won by Mr. C. J. Haydon on his 38.4-h.p. Napier, Mr. H. E. Acklom's 30.1-h.p. De la Buire being second. There were twenty-two entries in the class for cars up to 25 6-h.p. R.A.C. rating, and the results of Class 1 were repeated, the 6-h.p. Jackson and 8-h.p. Sizaire being first and second respectively, followed by the 8-h.p. Rover of Mr. H. Simmons and the two Clement-Talbot cars which were successful in Class 2.

MOTOR CYCLING CLUBS' RUN.

THE annual inter-team trial held under the auspices of the Motor Cycling Club took place on Saturday, over a twenty-five miles out and home course, which had to be covered four times—a total distance of 100 miles. The route was from Daventry, twelve and half miles along the road to Banbury, and was completed by twenty-nine competitors, made up as follows:—Coventry, 5; Manchester, 4; Yarmouth, 4; Sheffield, 4; Bocardo, 3; Birmingham, 3; M.C.C., 3; Southern, 2; North West London, 1. The Coventry Motor Club won the trial with a mileage of 536.

SCOTTISH.

THE Trials Committee of the Scottish A.C. desire to express their acknowledgments to the numerous firms and individuals who have rendered them service in the conduct of the trial. In particular, they wish to thank the Kennedy Motor Company, Ltd., Claud Hamilton (Aberdeen), Ltd., Messrs. McCrae and Dick, Inverness, and The Glasgow Corporation Tramways Department, who placed their premises gratuitously at the disposal of the Club for the storage of the cars; to the Caledonian Railway Company, Oban, and to Dr. Anderson, of Pitlochry, for the free use of ground for the erection of storage marquees; to Argyll Motors, Ltd., Albion Motor-car Company, Ltd., Sunbeam Motor-car Company, Ltd., Deasy Motor-car Manufacturing Company, Ltd., New Arrol-Johnston Car Company, Ltd., A. Darracq and Co., Ltd., Humber, Ltd., and Magnetic Clutches, Ltd., and members of the Club and other gentlemen, for placing cars at the disposal of the committee for the use of the officials and the Press; to the county and burgh police throughout the route, who rendered valuable assistance in controlling the traffic and directing the drivers; to the road surveyors throughout the route for carrying out various road improvements, and for ensuring that no loose metal or road-rolling operations were present during the progress of the trial; and to the many gentlemen who acted as marshals and honorary observers.

THE Northamptonshire A.C. has resolved not to compete in the forthcoming dust trials of the R.A.C.

THE Automobile Club of North Wales has held a most successful meet at the Bethesda Quarries, by permission of Lord Penrhyn.

PERMISSION has been granted by the local council to the South Wales A.C. to hold a hill-climbing competition on the Buttrill road at Barry.

THE Leicestershire Automobile Club's gymkhana, which was to have been held on the 25th inst., has been postponed until August 20th.

MR. M. A. BOND has been elected secretary of the newly-formed Accrington Motor Club, an organisation intended to be of service to the eighty local motor-cyclists.

MR. A. BRAMPTON has been re-elected chairman of the Tyre and Accessories Committee of the Society of Motor Manufacturers and Traders.

THE Automobile Club of South Africa has just held its first hill-climb on the Groot Schuur Estate, owing to the good offices of Dr. Jameson, who is the vice-president of the club.

ON Saturday the annual hill-climb of the Derby and District A.C. took place at Ambergate, when Mr. M. Ross Browne, driving his 15-h.p. Mass car, took the silver medal. As he was adjudged not strictly an amateur driver, the challenge cup goes to Dr. R. F. Hogarth, who drove his 25-h.p. Clement-Talbot.

THE Leicestershire A.C. has issued its rules, list of members, officers, &c., in a neat form for the waistcoat pocket. The provincial programme of events is also included, as well as marks of identification, a speed table, lighting up times, and a warning to members to drive slowly through villages and towns.

THE Birmingham Motor-cycle Club have had a hill climb at Farlow Hill, about 12 miles from Bewdley. This is stated to have a gradient of one in four-and-a-half, and few of the competitors reached the summit. Mr. E. C. Evans on his 5-h.p. Rex was a most successful entrant.

THE competition for the De Pre Challenge Cup will take place at Kettleby Hill, near Melfn Mowbray, on the 11th inst. and will be confined to the members of the automobile clubs of Leicester, Nottingham, and Derby. Kettleby Hill is on the main road from Nottingham to Malton Mowbray, and the starting point is just beyond the fourteenth milestone from the former town.

THE whole of the Works and Staff of the Stepney Wheel Company, Manely, visited London on the 20th ult. for their annual outing, and a most enjoyable day was spent.

MOTOR GYMKHANA AT BUXTON.

It is not often that Buxton is inundated with motorists to the extent it was on Saturday, on the occasion of the Manchester Automobile Club's Inter-Club meet and Gymkhana, on the Silverlands, the playing ground of the Buxton Football Club. The ways to the Silverlands are numerous, and it required a special contingent of police to act as "guides, philosophers and friends" to automobilists unacquainted with the locality. This assistance was rendered the more necessary as the route specified in the programme issued by the organisers of the fete was out of the "beaten track," its selection being evidently influenced by a desire to reduce to a minimum the risk of collision with horse-drawn vehicles, but, with all the precautions, there were one or two slight mishaps, none of which, however, involved serious injury to person or property. Many cars arrived overnight, with the result that every garage in the town was filled to its utmost capacity. From about one o'clock there was an almost continuous procession of cars of well-nigh every make on to the ground, and the officials had an arduous task, especially with the later arrivals, in allocating positions. The ladies were well to the fore amongst the spectators, and most of them had exchanged the not too picturesque costume of lady automobilists on the road for more attractive attire. Amongst others present to witness the gymkhana were Mr. Slimmond (a New Zealand gentleman, who is touring the "Old Country" on a "Swift" for a holiday), Mr. J. H. Davies, Cheadle (Delaunay Belleville), Mrs. Parry, Didsbury (Reynolds), Mr. L. D. Broadbent, Stalybridge (Daimler), Mrs. Briggs, Wilmslow, Mr. Croesley, Ripley (Allday), Mr. Fred Smith, Bowden, Mr. Morris, Bowden (Belsize), Mr. Noel Smith, Manchester (Belsize), Mr. W. E. Moss, Liverpool (Mercedes), Mr. W. K. Poulson, Liverpool (Darracq), Mr. J. Deakin, Sheffield (Minerva), Mr. Cawood, Sheffield (Wolsley), Mr. Cope, Sheffield (Panhard), Mr. J. Barber, Sheffield (Belsize), Mr. Harvey Foster, Sheffield (Wolsley), Mr. C. Dixon, Sheffield (Napier), &c. There were, of course, other makes of cars represented, the Humber and the Argyl predominating.

The Inter-Club Meet at Buxton.—A View of the Enclosure.

As to the contests, they were simply an exhibition of skill in the three "S's," namely, starting, steering and stopping, in all of which both car and driver were put to very severe tests. It is unnecessary to describe the various competitions, which were of the usual kind to be seen at any ordinary motor gymkhana. One novelty, so far as Buxton is concerned, was introduced in the shape of a blindfold race, won by Mrs. E. A. Riley, of Accrington, and which caused no small amount of amusement to the spectators.

The clubs invited included Barnsley, Blackpool, Bradford, Cheshire, Derby and District, Halifax, Harrogate, Huddersfield, Hull, Lancashire, Lincolnshire, Liverpool, Midland, Mid-Staffordshire, North-Eastern, North Wales, North Yorkshire, Nottingham, Rotherham, Sheffield Shropshire, Wolverhampton and Yorkshire.

Amongst the most successful of the competitors was Mr. A. E. Crowdy, manager of the Wolsley Co.'s Manchester depot, who, as a gentleman remarked to our representative, is "an old hand at the game," and took advantage of the opportunity of showing his skill in handling a 40-h.p. car made by his own firm.

All praise is due to Mr. J. B. Thistlethwaite, the courteous and obliging secretary of the Manchester Automobile Club, for the clever manner in which he engineered the meeting, the success of which was, to a large extent, due to his untiring and energetic efforts. Results:—

Obstacle Race: A. E. Crowdy, Manchester (61 1.5 sec.) 1; T. Hooydonk, Manchester (63 4.5 sec.) 2; Mrs. E. A. Riley, Accrington (71 sec.), 3.

Starting and Stopping Race: F. C. Hudson, Manchester, 1; A. E. Crowdy, 2.

Ladies' Passengers Race: A. E. Crowdy, 1; E. A. Gadd, Manchester, 2.

Bomb Race: J. L. Tattersall, Manchester, 1; F. C. Hudson, 2; A. E. Crowdy, 3.

Musical Chairs: Mrs. E. A. Riley, Accrington, 1; Mr. C. F. Bell, Manchester, 2.

Manchester Stakes: F. C. Hudson. The other competitors were disqualified for having more than two wheels across the line.

Mr. Hudson won the silver medal for the best aggregate performance. During the afternoon the Buxton town band submitted a choice programme compiled from the works of the most popular composers.

In the evening, after dinner at the Empire Hotel, Mrs. A. E. Jones, wife of the president of the Manchester Automobile Club, presented the prizes to the successful competitors.

Such gatherings are useful in affording opportunities to the officials of the various clubs to meet and compare notes—occasions which too seldom present themselves.

RACING AT SALTBURN.

ON Saturday the third annual speed trials of the Yorkshire A.C. were held on the sands at Saltburn. There was a slight breeze, and spectators and competitors alike found the weather in ideal condition. A course of a kilometre in length was marked out on a two mile stretch between Agar's Gap and Marske, and a start was made at the early hour of 8.30 a.m.

Mr. C. P. Wilson was the hon. secretary of the meeting, other officials being:—Judges, Messrs. A. H. Briggs, J. Constantine, G. Scoby-Smith, W. Penrose-Green, E. Gordon-Learoyd, and A. Fowler; marshal-in-chief, E. H. Hepper; timekeepers, A. Fattorini, J. A. Walker, J. E. Rhodes, and J. B. Hyland; starter, T. E. Booker.

(— The 2,000 Miles Trials.—The 15-h.p. Coventry Humber which secured third place in Class F.

Photo by]

[A. J. Campbell.

The results were as follows, the names of drivers being given in brackets where the owners did not drive their cars:—

CLOSED COMPETITIONS.

Single-cylinder touring cars (max. bore 115, max. rating 8.2):—1, T. H. S. Atkinson, 6-h.p. De Dion (C. P. Wilson); 2, Guy Barrett, 6-h.p. De Dion.

Two, three, and four-cylinder touring cars (max. bore 111, 91 and 81 and max. rating 15.3, 15.3 and 16.2):—1, J. E. Hutton, 14-h.p. Berliet; 2, H. E. Catton, 12-14-h.p. De Dion.

Two, three, and four-cylinder touring cars (max. bore 131, 106 and 91, and max. rating 21.2, 20.8 and 20.5):—1, T. H. Woollen, 18-h.p. Talbot (T. H. S. Atkinson); 2, T. H. Woollen, 15-h.p. Talbot (J. Mortimer).

Two, three and four-cylinder touring cars (max. bore 142, 117, and 102, and max. rating 24, 25.4, and 25.7):—1, J. E. Hutton, 23-h.p. Hutton; 2, T. H. Woollen, 20-h.p. Talbot.

Touring cars, divided into two classes, for cars whose rating does not exceed 21, and cars whose rating exceeds 21 but not 42. In the first class Mr. T. H. Woollen's 15-h.p. Talbot (T. H. S. Atkinson) beat Mr. Woollen's 15-h.p. Talbot (J. Mortimer). In the second class Mr. H. R. Kirk's 40-h.p. Metallurgique (G. R. Smith) beat Mr. A. Farnell's 30-h.p. Daimler. In the final (on handicap terms) Mr. Woollen's car beat Mr. Kirk's.

Touring cars, four and six cylinders, max. bore 160 and 130, max. rating 63.2 and 62.8:—1, G. S. Barwick, 58-h.p. Daimler; 2, Cecil Edge, 60-h.p. Napier (F. G. Cundy).

Touring cars, the chassis price of which does not exceed £200:—1, H. R. Kirk, 15-h.p. Ford (G. R. Smith); 2, R. Winn, 15-h.p. Ford.

Touring cars, the chassis price of which does not exceed £300:—1, A. Masser, 15-h.p. Mass; 2, C. H. Holgate, 16-20-h.p. Calthorpe (R. F. Fletcher).

Touring cars, the chassis price of which does not exceed £400:—1, W. J. Masser-Horniman, 20-h.p. Mass; 2, C. McAdams, 25.6-h.p. Humber (G. Brown).

Touring cars, the chassis price of which does not exceed £600:—1, J. E. Hutton, 26-h.p. Hutton; 2, H. Pickles, 40-h.p. Austin (L. Hands).

Touringsteam cars, the price of complete car not to exceed £700:—1, H. Galloway, 20-h.p. Stanley; 2, T. N. Muller, 20-h.p. Stanley (Mr. E. R. Pearson).

OPEN COMPETITIONS.

Touring cars, the chassis price of which does not exceed £800:—1, G. S. Barwick, 58-h.p. Daimler; 2, H. R. Kirk, 40-h.p. Metallurgique (G. R. Smith).

Racing cars not exceeding in weight 1,000 kilos—A. Lee-Guinness, 200-h.p. Darracq, 121.06 miles per hour.

Racing cars of any weight—S. F. Edge, 90-h.p. Napier (Mr. F. Newton), 102.61 miles per hour.

Racing cars of any weight—1, A. Lee-Guinness, 200-h.p. Darracq; 2, S. F. Edge, 60-h.p. Napier (F. Newton).

Naturally the open competition, in which the Hon. A. Lee-Guinness was attempting record-breaking, aroused considerable interest. Last year he had attained a speed of 111.84 miles per hour. This time he made three successful attempts to beat this on his 200-h.p. Darracq, the fastest being at the rate of 121.06 miles per hour, the others at 120.26 and 117.03 miles per hour, respectively.

ROAD REPORTS.

ALDERSHOT.—Motor-cars are now forbidden to travel over the Government roads at Aldershot at a pace exceeding ten miles per hour. The main roads in the neighbourhood are being treated with tar spraying, for obvious reasons.

FARNHAM.—For the present year the estimated cost of maintaining the main and the district roads about Farnham (Surrey) is £3,537 and £7,870 as compared with £843 and £2,686 respectively in 1896. The mileage of the main roads has remained the same, and of the others only about one mile increase has been recorded in the period.

NEWHAVEN.—Application has been made to the L.G.B. by the East Sussex County Council for an Order reducing the speed of motor-cars to eight miles per hour upon that part of the main road from Brighton to Eastbourne which lies within the borough of Newhaven.

LEEDS.—A police "control" is often in operation across Woodhouse Moor.

SURREY.—As is usual on race days, the police were busy with their notebooks on the roads about Kingston, Esher and Hersham on Friday of last week. But caution seemed to have come over the motorists, and catches were few.

LLANDRINDOD.—Police traps are now a frequent feature of the landscape in the district of Llandrindod.

MORPETH.—There is a police control 700 yards in length at Morpeth. It is in fairly frequent operation.

DERBYSHIRE.—The Derbyshire County Council, which has not been so ready to erect warning signs as the contour of its district demands, may be interested in the erection of four signs on a dangerous bit of road between Stony Middleton and Baslow by the Sheffield A.C.

COWDENBEATH.—Inquiry was held at Cowdenbeath on Saturday into an application by the Cowdenbeath Town Council for an Order for the restriction of speed in certain streets of the borough to ten miles an hour.

CARLISLE.—At Kingston, on the main road north from Carlisle, a measured distance has been marked out for the purpose of timing motorists.

COVENTRY.—A trap worked by the police on the Kenilworth road, at Coventry, has lately proved so remunerative that its more frequent operation may now be anticipated.

SALTASH.—Police traps are now reported from Saltash (Cornwall).

GRANTOWN.—Signs limiting the speed of motor-cars to ten miles per hour in the burgh of Grantown-on-Spey—that delightful little town visited during the Scottish Trial—have now been fixed near the entrances to the place and also on the cross roads therein.

MESSRS. H. J. CHAPMAN AND COMPANY, LTD., 104, Park Street, Regent's Park, N.W., have been appointed official repairers to the R.A.C. for the year 1908.

MR. J. E. YOUNG, whose 10-12-h.p. Argyll won the Hertfordshire County A.C.'s Consumption Trial, used the Shell motor spirit of the British Petroleum Company, Ltd., on that occasion.

MR. F. F. WELLINGTON, who for many years was manager to the British Automobile Syndicate, has now taken up the position as sales manager to the Sueddeutsche Automobilfabrik, of Gaggenau, Baden, Germany, who are opening a London branch at 14, Baker Street, W. A range of "Gaggenau" motor-cars, vans and lorries will be on view at the new depot, and a large stock of spare parts kept on hand; a repair department is also being established.

CASES AGAINST MOTORISTS.

SEQUEL TO A COLLISION.

After a protracted enquiry a coroner's jury at Nottingham has returned a verdict of manslaughter against Edward Dould, in connection with the death of Harold Stone, who was fatally injured in a motor-car collision at Adam Hill, near Nottingham, early on the morning of May 10th.

THE NECESSITY OF ENDORSEMENT.

At the Woking County Bench, Lieut.-Col. Mark Mayhew was fined £5 for exceeding the legal limit. On being asked to produce his licence for endorsement, Colonel Mayhew said he wished to take legal opinion as to whether this would be necessary, in view of the fact that the Act was originally passed for three years, and that the two previous convictions occurred during that period. Defendant was allowed a week in which to obtain advice.

EXCEEDING THE SPEED LIMIT.

A number of motorists were fined one day recently for exceeding the speed limit in Arundel. At Leeds, four motorists have been fined £3 for driving beyond the legal maximum of speed. Eight motorists have been fined sums ranging from £3 to £5 and costs at the Epsom Petty Sessions for exceeding a speed of thirty miles an hour in the London Road, Cheam.

The magistrate at the Woking County Bench has fined Mr. S. F. Edge £5 for exceeding the speed limit. Mr. Edge wrote that at first he was under the impression that the police had made a serious mistake, as his speedometer showed a maximum speed of twenty miles, but on examining it subsequently he found it had jammed.

Fines of £2 and costs have been inflicted on sixteen motorists at the Morpeth Petty Sessions.

Large numbers of motorists have lately been fined for exceeding the speed limit at Coventry, Cambridge and Corwen.

At the Guildford County Petty Sessions, on Saturday, Lord Russell was fined £10 and costs. Several other motorists were summoned at the same court on the same day, the total fines amounting to nearly £72. Ten motorists have been fined £50 at Woking in one day. At Kingston a day's haul of motorists has resulted in seven motorists being fined £5 and costs each.

FINDING A DRIVER.

At Lancaster, on Saturday, Herbert Gordon, of the Junior Carlton Club, Pall Mall, and 41, Wimpole Street, S.W., was charged with driving a motor-car at Galgate at a dangerous speed on May 7th, and also with failing to give such information as it was within his power to give for the identification and apprehension of the driver.

Evidence was called proving that the car was driven at an excessive speed through the village just after noon, when the school children were on their way home. The number of the car was taken by a roadman because of the speed at which it travelled. All applications by the police for information had been unanswered, and no reply was received to the summons. The police subpoenaed the secretary of the club and hall porter to prove the receipt of the notice, and it was stated that until this was done no information of a satisfactory nature could be obtained. The secretary admitted that the defendant was a member of the club and that any communication sent to the club for him would be forwarded to him at an address in Cornwall, but he had not been there since March. Having heard the evidence, the Bench adjourned the case for a fortnight, and intimated that they would ask the clerk to send a registered notice to all the defendant's addresses with an intimation that if he did not appear a warrant would be issued against him.

IS LUBRICATING OIL "FILTH."

At the Mansion House (London) on Tuesday, the General Motor Cab Company, Ltd., were summoned before Alderman Sir James Ritchie by the Corporation of London for an infringement of a bye-law, under the Public Health (London) Act, 1891, in causing to be cast certain "filth," in the form of thick black oil, on a public roadway. Mr. Marshall-Hall, K.C., and Mr. Gilbert Beyfus appeared for the company and pleaded not guilty.

Mr. Vickery (Assistant City Solicitor) stated that recently proceedings had been taken against a number of drivers of motor vehicles for dropping oil on the roadway to the discomfort and danger of pedestrians and others, and the magistrates expressed an opinion that, in the future, owners, as well as drivers, should be proceeded against. A constable proved that he saw oil dripping from a motor-cab belonging to the company, but Sir James Ritchie thought there was no case against the owners.

A summons against Patrick Ryan, the driver, for a similar offence was next called. He admitted an accidental leakage.

Sir James Ritchie said he had grave doubts whether this oil came under the term "filth." If the charge was gone on with, he should dismiss it on the facts, but would state a case for the decision of the High Court if the Corporation desired. He thought "filth" meant something detrimental to the public health—something noxious.

Mr. Vickery read a dictionary definition of filth as "foul matter, anything which soils or defiles, dirt, nastiness," but Sir James Ritchie did not think lubricating oil came under any of these definitions. Mr. Vickery said, having regard to that expression of opinion—with which he entirely disagreed—and to the fact that the driver had given evidence in the case, he should withdraw the summons against him.

THE BEESTON HUMBER ANNUAL OUTING.

LAST week end the extensive works of the Humber Company, at Beeston, presented anything but its ordinary appearance, for in place of the usual scene of bustle and activity all was quiet. This was due to the holding of the annual outing of the employees, who, to the number of about 400, were conveyed in two special corridor trains from Nottingham early on the morning of Saturday, the 27th ult., to Yarmouth. During the day excursions were made to the places of interest in the neighbourhood, most complete arrangements having been made in order that the visitors should thoroughly enjoy themselves. Mr. Edward Powell, the chairman of Humber, Ltd., presided at the staff dinner, which took place in the evening at the Norfolk Artillery Mess House, when about 100 were present. Mr. T. C. Pullinger, the popular manager of the Beeston works, was unfortunately unable to be present, he being detained in London in connection with the completion of the 2,000 miles trials. The musical programme which followed the dinner was interspersed with a number of toasts which were duly honoured. The Chairman, in a brief but interesting speech, replied for "The Firm," proposed by Mr. M. Rallinshaw, and in doing so referred with pleasure to the fact that the two Beeston Humbermen went through the Scottish and 2,000 Miles Trials without a stop. He also announced that he had received a telegram from Mr. Pullinger that the 25.6-h.p. car had secured second place in Class F., but that the 35.4-h.p. vehicle in Class C., on which they had placed great hopes, seeing that on arriving at Brooklands it held the first place by a good lead, had experienced a most remarkable run of bad luck in the way of tyre troubles, which prevented it finishing the distance in the allotted time. The return journey was commenced shortly before midnight, Nottingham being safely reached about 4 o'clock on Sunday morning. The arrangements were of the most complete character.

The Beeston-Humber Outing to Yarmouth.—The Scene at the Staff Dinner. (Tallop.)

acter, and reflected much credit on the organising secretary, Mr. H. Gray, to whom a special vote of thanks was accorded at the staff dinner. We may add that the Midland Railway undertook the task of conveying the large party to and from Yarmouth, carrying it through with a degree of promptness and comfort which was greatly appreciated.

COMPANY NEWS.

PERRINS' PATENT DETACHABLE MOTOR WHEEL SYNDICATE, LTD.—Capital £10,000. Objects: To adopt an agreement with H. Perrins, to acquire the rights in the patent detachable motor wheel referred to therein and to carry on the business of manufacturers of motor and other wheels, motor-cars and other vehicles, parts and accessories, &c. Registered office, 55, Newhall Street, Birmingham.

ETABLISSEMENTS SELBACH, LTD.—Capital £12,500. To carry on the business of contractors, designers, mechanical and electrical engineers, builders and proprietors of motor-cars, motor-boats, engines, carriages and launches, &c., and to adopt an agreement with P. Piellat and O. C. Selbach. Registered office, 77, Camomile Street Chambers, E.C.

FROM the Société des Automobiles Sinpar, of Courbevois, Paris, comes a copy of their new catalogue of the Sinpar voiturette, a neat little vehicle, fitted with a De Dion 4½-h.p. single-cylinder engine.

We learn from the "Tormo" Manufacturing Company, 67-68, Bunhill Row, London, E.C., that the winning car in the Prince Henry of Prussia touring competition was fitted with the "F. and S." ball bearings.

FORTHCOMING EVENTS.

JULY.

- 4th (Sat.).—Derby A.C. challenge cup competition.
Meet of the Kent A.C. at Gravesend.
Brooklands A.R.C. meet.
Cheshire A.C. gymkhana.
Herts C.A.C. meet at Berkhamsted.
Hull and East Riding A.C.C. hill climb.
Manchester A.C. gymkhana.
N. Middlesex A.C. reliability trial for the Frederic Coleman trophy.
Sheffield A.C. crippled children's run.
- 6th (M.).—Grand Prix A.C.F. (Voiturette section).
7th (Tu.).—Grand Prix A.C.F. on the Dieppe Circuit.
8th (W.).—Meet of the Cambridge A.C. at Waresley Park by invitation of Col. Duncombe.
9th (Th.).—Meet of the Ladies' A.C. at Hanworth Park, Middlesex.
10th (F.).—Start of tour of motor factories in the Midland by the I.L.A.E.
Welsh A.C. motor-car reliability trials.
11th (S.).—Provincial meet of the R.A.C. at Hereford. Lunch at the Green Dragon Hotel; visit to Ledbury Park, and dinner at the Assembly Rooms.
Essex C.A.C. gymkhana at Brentwood.
Aston Hill climb of the Hertfordshire C.A.C.
Essex M.C. gymkhana at High Beech.
Leicester A.C. hill climb at Kettleby.
- 15th (W.).—Hastings Automobile Meeting organised by the Motor Club.
Motor parade at 11 a.m.; gymkhana at 2.30 p.m.
16th (Th.).—Club meet of the Netts A.C. at the Hop Pole, Ollerton.
18th (Sat.).—Annual gymkhana of the Herts C.A.C. at The Grove, Watford, by permission of the president, the Earl of Clarendon.
Gymkhana of the Kent A.C. at Maidstone.
Meet of the Liverpool and Cheshire A.C.'s at Delamere.
New Forest and Dorset A.C.'s joint hill climb.
Hill Climb of the Essex C.A.C.
- 20th (M.).—Entries close for the O'Gorman trophy.
20th and 21st.—The R.A.C. dust trials.
23rd (Th.).—Gymkhana of the Cambridge A.C. at Chippenham Park.
Hill climbing competition of the Hull and East Riding A.C.C.
- 25th (Sat.).—Petrol Consumption Tests of the Motor Cycling Club.
Annual Open Hill Climb of the Midland A.C. at Shelsley Walsh.
Committee meeting of the Kent A.C. at Herne Bay.
Motor Union Provincial meet.
Cheshire A.C. hill climb.
Lancashire A.C. open hill climb.
- 26th (Sun.).—Southend M.C. run to Coach and Horses, Quendon.

AUGUST.

- 1st (Sat.).—Brooklands A.R.C. meeting.
2nd-3rd.—Newcastle and District M.C.C. reliability.
3rd (M.).—Brooklands A.R.C. meet.
8th (Sat.).—Visit of the Kent A.C. to Brasted Chart.
12th (W.).—A.C. of Belgium—Circuit des Ardennes and the Liedekerke Cup race.
22nd (Sat.).—Annual race meeting of the A.C.U. at Shepherd's Bush.
Invitation of Sir D. Salomons to the Kent A.C. to visit Tunbridge Wells.
23rd (Sun.).—A.C. du Rhone Mont Pilat trial.
29th (Sat.).—Meet of the Lincolnshire Motor Club at Lincoln.
Mont Ventoux hill climb of the A.C. Vauclusien.
Leicester A.C. gymkhana.
- 30th (Sun.).—Southend M.C. run to Great White Horse Hotel, Ipswich.

SEPTEMBER.

- 4th and 5th.—Reliability Consumption Trial of the Essex C.A.C. at Norwich in connection with the R.A.C. provincial meet.
5th (Sat.).—Aston Hill climb of the Herts C.A.C.
Provincial meet of the R.A.C. at Norwich.
12th (Sat.).—Brooklands A.R.C. meet.
17th (Th.).—Touring car competition of the A.C. of Holland through that country.
19th (Sat.).—Provincial meet of the Motor Union.
North Middlesex A.C. 100 miles reliability run.
Manchester A.C. reliability run for small cars.
- 20th (Sat.).—Meet of the Hull Auto Cycle Club and the Lincolnshire Motor Cycle Club at Brigg.
Annual Hill Climb of the Bristol and Gloucestershire A.C.
Lunch of the Kent A.C. at Dover.
Herts C.A.C.'s climb for cars at Aston Hill.

LIGHTING-UP TIMES—LONDON.

- July 4th—9.17 6th—9.16 8th—9.15 10th—9.13
" 5th—9.16 7th—9.15 9th—9.14 11th—9.13

To find the approximate lighting-up time in July for Birmingham 13 minutes should be added to the above times, 18 for York, 22 for Manchester, and 45 for Glasgow.

IMPORTS OF MOTOR-CARS AND PARTS.

In the monthly return issued by the Board of Trade only the totals of the imports of foreign motor-cars and parts into this country are given, no indication being afforded as to the quantities received from the different countries. We are this week able to publish a table giving this detailed information.

Imports of motor-cars into the United Kingdom.

| From. | 1907. | 1908. |
|--------------------------------|-----------|-----------|
| | £ | £ |
| Germany | 48,005 | 152,950 |
| Holland | 51,629 | 51,552 |
| Belgium | 181,549 | 319,816 |
| France | 1,614,995 | 1,764,809 |
| United States | 176,527 | 192,715 |
| Other foreign countries | 3,850 | 3,155 |
| British Possessions | 3,711 | 1,340 |

£2,080,266 £2,486,337

Imports of parts.

| | | |
|------------------------|-----------|-----------|
| Germany | 451,393 | 250,593 |
| Holland | 13,214 | 17,995 |
| Belgium | 484,541 | 276,498 |
| France | 1,490,795 | 1,322,673 |
| United States | 27,082 | 16,586 |
| Other countries | 5,495 | 978 |

£2,472,520 £1,885,323

Total of cars and parts ... £4,552,786 £4,371,660

BUSINESS NEWS.

THE Kempshall Tyre Company of Europe, Ltd., have an interesting display of their tyres at the Franco-British Exhibition. Included in it are two tyres which have both been running on the driving wheels of a taxi-cab. One is a "Kempshall" with a mileage of 4,370 to its credit, while the other is a steel-studded tyre of a well-known make, having run only 2,700 miles. Compared with the latter the excellent condition of the Kempshall is noteworthy, and it would appear that it is still capable of a further two or three thousand miles.

MOTORISTS are often considerably surprised, on opening the Bowden petrol strainer for cleaning purposes, to find what a considerable quantity of dirt has been arrested on its way to the carburettor. The accumulation is sometimes so great that were it allowed to lodge on the straining gauzes it would soon completely choke them. In the Bowden device this is avoided by causing the petrol to flow upwards, so that the dirt, being arrested by the under surface of the gauze, drops off into the well provided, where it is harmless.

THE amalgamation of the General Motor Cab Company and the United Motor Cab Company has been announced.

AN exciting experience to a motor-cyclist whilst riding from Alton to Farnham is reported. The rider discovered his clothes to be ablaze, and, hurriedly dismounting, rolled himself on the road, over which a water cart had passed a few minutes previously. In that way he prevented himself from being seriously burned. The fire was due to a box of matches getting alight.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

To insure insertion communications and contributions must be in the Editor's hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case, otherwise no liability will be accepted.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment for same is directly specified in forwarding, and the terms arranged before publication.

THE Motor-Car Journal.

VOL. X.]

LONDON, SATURDAY, JULY 11, 1908.

[No. 488.

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

SOME idea of the comparative number of horse and motor vehicles plying for hire in the streets of the Metropolis is furnished by the Home Secretary in a statement supplied to Mr. Henniker Heaton, M.P., who is watching the noisy motor-bus with a keenness almost equalling that with which he was wont to regard high rates of postage. In London there are now 13,932 licensed vehicles. It appears that there are still 2,281 horse drawn omnibuses in actual service as compared with 1,046 motor-buses. Hansoms number 5,329 and four-wheeled cabs also drawn by horses total 3,768, whilst 1,508 is the official number of motor-cabs on the streets. Of course in the West End the latter number seems hardly in accordance with actualities; but it must be remembered that in the City and in the outer regions the horse still ambles along in his old-fashioned way. Applications for the registration of 1,162 motor-cars, 48 heavy cars, and 367 motor-cycles were dealt with by the London County Council from March 1st to April 30th. The total number of such registrations in London is now 20,114 cars, 1,870 heavy cars, and 8,508 motor-cycles. Changes of ownership in 563 cases were dealt with, the aggregate of such changes since the commencement of the Council's administration being 5,242 cars and 3,539 cycles. The number of licences to drive motor-cars and motor-cycles issued from March 1st to April 30th was 5,290, making 77,233 in all.

Reliability Assured.

WHEN we gave the results of the Irish A.C. trials remark was made that they had demonstrated anew the reliability of the modern motor-car; this view was again forced to the front by the running of the cars in the 2,000-mile Trial; it is emphasised again by the detailed marking in connection with the Scottish Trial, which we publish on another page of the present issue. The fact that so many cars made non-stop runs, and that an even larger number failed in that particular owing to some trivial cause, establishes the point we have frequently made in these columns, viz., that the reliability trial *per se* has become old-fashioned, and will soon be declared obsolete. So much for the running on the road; it is equally true of the ability to start and stop. On the last day of the Trial all the vehicles were stopped at a line on a gradient of one in ten, were required to run back several yards to another line and again stop, and from the moment of their wheels being at rest were allowed thirty seconds in which to resume running. All the vehicles passed the test satisfactorily; and their performances generally should convince the organisers of the Trials that the need for similar tests on identical lines is no longer present.

Road-making.

In his inaugural address at the meeting of the Incorporated Association of Municipal and County Engineers of Nottingham, Mr. E. Purnell Hooley, the president, had some frank and timely criticism of the attitude of the general public towards motorists and the roads on which they travel. There is a great deal of grumbling with regard to the former,

and much tarring is being done to the latter, but until the county authorities recognise that the modern traffic requires a new class of roadway satisfaction is not likely to ensue to either party. As Mr. Hooley pointed out, large sums are being spent in vain attempts to remedy the dust nuisance that arises from other traffic as well as from automobiles, and yet the roads continue to be made in the old way, apparently encouraging the perpetuation of the nuisance. If Mr. Hooley and his colleagues among the engineers would agree as to the proper system of road making as distinct from maintenance, it would prove an important factor in effecting a settlement of the matter; and we would appeal to road authorities to encourage practical experiments by the experts with a view to getting down to the basis of the trouble.

Taxing Motor Drivers.

RURAL councillors suggest heavy additional taxes on motor-cars; county surveyors like Mr. E. P. Hooley would impose a revised scale of charges upon the drivers. Recognising that some people use the road more than do others, and that there must be some sort of discrimination in the matter, he would divide drivers into three categories, and tax them the amounts that are set forth in the following classification:—

- (1) The drivers of vehicles used *locally* for commercial and public purposes, £1 5s.
- (2) Drivers using cars partly for pleasure and partly for business within their own county or area, £5 5s.
- (3) Drivers who use their cars for touring purposes generally, £10 5s.

Mr. Hooley estimates that such an imposition would yield a return of nearly one and a half million pounds—a sum that would go far in solving many of the present difficulties. Apparently the scheme is based on the idea that the motorist must pay—at any cost.

A Chief Constable's Warning.

THE Chief Constable of Lanarkshire is sending out a circular letter to every schoolmaster in the county, asking him to warn children as to the folly and danger of throwing stones at motorists as they pass them on the road. It would be well if all having association with education could impress upon the teachers the necessity of discouraging this abominable practice, which is far too frequent, especially in some of the urban districts. Unfortunately the younger generation is a long time realising that motorists are not merely targets for their well-aimed shots, and, even at the expense of apparent reiteration, we would express the hope that every Chief Constable will follow the admirable example of the chief of police in this Scottish county.

Danish Visitors in Scotland.

RECENTLY a deputation of Danish farmers has been visiting Scotland with the view of investigating the conditions of agriculture north of the Tweed. In order to facilitate their journey the Scottish Motor Trade Association, Ltd., arranged to convey the officials of the Scottish Chamber of Agriculture and their Danish guests on a motor tour through East Lothian. Ten cars were available, each of a different type; and on Thursday

morning of last week the procession left the Royal Hotel, Edinburgh, proceeding to Dalkeith Palace and grounds. From thence way was made to Gosford House, and subsequently the party proceeded to North Berwick and Dunkar, arriving at Barley Hill Farm for luncheon. Other farms were visited, and on returning to Edinburgh the whole party dined together, when thanks were tendered to the Edinburgh members of the Scottish Motor Trade for their contribution towards the pleasure of the visit.

Ladies at Brooklands.

Place aux Dames. The way in which the ladies handled their cars on Saturday at Brooklands elicited tributes of admiration from critical observers. Although they are not allowed to enter into competition with men on the Track they are evidently to be allowed the excitement of racing with each other. On some of the road trials Mrs. Gerald Loder, Mrs. Manville, Mrs. E. A. Riley and Miss Dorothy Levitt have won distinction, and now Mrs. Locke-King, Miss Muriel Thompson, Miss Christabel Ellis and Miss Ridge-Jones have shown the capacity of ladies to drive with unerring nerve on the track at Brooklands.

Mr. H. B. Kirk's 40-h.p. Metallurgique Car, which secured two gold medals at the Saltburn Speed Trials.

The vehicle made the fastest time for the standing start kilometre open to touring cars. Mr. Kirk, the owner, is seated at the side of the driver.

Speedometers on Public Vehicles.

IN the House of Commons a member has asked the Home Secretary whether he would consider the advisability of making a regulation to the effect that mechanically-driven vehicles, such as motor-cars, motor-omnibuses, and the like, should carry speedometers; a proposal which has previously been made by metropolitan magistrates, who have rightly pointed out that such a provision would save many endorsements of licences, and consequent trouble to men who otherwise have no opportunity of gauging the actual speed at which they drive their vehicles. Mr. Gladstone, however, has consulted the Commissioner of Police, Sir Edward Henry, on the subject, and has come to the conclusion that it is not desirable to make the use of speedometers one of the conditions of granting a public carriage licence. This is apparently an endorsement of the view of the Royal Commission on Motor Cars, who would not recommend making the use of such appliances compulsory by law. Evidently the Home Secretary is of opinion that the provision of a speedometer would be an encouragement to the drivers to attain maximum speed as nearly and as often as possible, whilst the present uncertainty may cause them to exercise a wise caution in the matter.

A Tyre Destroyer.

A CORRESPONDENT in the Potteries District sends us a peculiarly-shaped object with four sharp corners, constituting a dangerous element to be found on the road. His letter, which is published on another page, is none too strong, having in view the character of the destructor he forwards, and we hope that publication of his communication may lead to a watchful eye being kept for the detection of the person or persons whose antipathy to motorists leads him or them to such wanton ways. Those who drive cars already incur sufficient risks without having to travel over barbed surfaces.

General Booth, Motorist.

THE Bishop of Hereford is a vice-president of the M.U., the Rev. R. J. Campbell an Associate of the R.A.C., and now General Booth should join the A.A. He is one of the most persistent travellers by motor-car in the country, and his several organised tours have given him a real insight into the difficulties of the position. After motoring many hundreds of miles he has come to the conclusion that police traps on the clear highways are a ridiculous device of the official mind for the undoing of unwary men and women. The public are, to use the General's own phrase, "very sheepish and need educating by repeated announcements." Unfortunately some may get hurt before the warning has reached their ears a sufficient number of times to take effect. Once a week the children in the schools should be taught how to cross roads, and the police, too, should be instructed in regarding the motor-car as inevitable despite their machinations. Certain street corners and central positions should be declared dangerous and the police force increased at such points with a view to preventing accidents. That would be better than allowing them to play at hide and seek in the hedge-rows.

Lord Rosebery on Police Traps.

LORD ROSEBERY has, in a speech to a City Company, given his reason for liking police traps. He is a Surrey ratepayer, and "cared but little what inconvenience and what sense of injustice might be caused to them, for every £5 note they paid to Surrey was by so much reducing his rates." He went on to say that "they had seen the police not grouped as they ought to have been at dangerous corners, but in ambush along their longest, straightest and safest roads, provided with the best stop-watches the government of Surrey could provide. These officers were ready at a moment's notice to swoop out on the harmless traveller and collect £5 notes from him, not in the manner of the highwaymen that used to beset their heaths, but in the name of law and order, in which so many odd things had been done." Surely, when he is in a less facetious mood, Lord Rosebery recognises the injustice of many of their proceedings.

The L.G.B. and Armoured Tyres.

THE suggestion that the use of armoured tyres on motor-cars should be prohibited upon roads has reached the ear of the Local Government Board, with the result that that authority has communicated with some of the automobile associations, pointing out that it has been represented to them that much damage is done to the roads by the use of such tyres on motor vehicles, and asking for suggestions or information bearing on the point. This communication was considered at the last meeting of the Motor Union and it was referred to the Executive Committee to draft a reply. The Royal A.C. has also referred the matter to its Technical Committee. Apparently the county surveyors in different parts of the country are urging upon those responsible for local government the damage which they allege such non-skids inflict upon the road surface. Probably, however, motorists themselves will be able to give to the various motoring organisations their own experience with a view of

showing that whilst they are anxious to assist in securing an efficient and economical system of road maintenance they do not desire to restrict the area of experiment so as to discourage those who are now at work in seeking to promote the welfare of an industry that means much for the future prosperity of the country.

Duplicate Numbers.

BEFORE the Justices of the Kingston Petty Sessional Division a statement has been made that many motor-cars are being driven about the country bearing duplicate numbers. A motorist appealed against a conviction, and not only denied that he was near the spot where the alleged offence was committed on the day in question, but his counsel stated that a car with his registered number had been seen in the West End of London a few days before. Recently our attention has been called to two or three similar instances where motorists have actually been supplied with a summons by the police, which has been withdrawn

late Motor Volunteer Corps, and that the suggestions of the Federal Government of Australia are undoubtedly based upon the conditions of service with the motor corps in this country, which was founded owing to the energy and initiative of Lt.-Colonel Mark Mayhew.

A Magnum Opus.

OUR old friend the Highways Protection League has now a collaborator in the Road Union, and these two associations have produced a *magnum opus*, which extends to thirty-six pages—including three blanks—and costs sixpence. The secretary of the Road Union has been good enough to favour us with a copy gratis, so that the information we have gained from the pamphlet has cost nothing, and motorists who want to reassure their friends with regard to the position of motoring should take advantage of the offer of the R.U. to supply copies for distribution on reduced terms, i.e., less than the sixpence. First the "social revolution" effected by the motor-car, and which

The A.C.F. Grand Prix Races.—The Scene at the Weighing in.

on the discovery of the mistake. Such suggestions are extremely disconcerting to motorists, for they add considerably to the uncertainty which already prevails when they go out driving, and we trust the case mentioned at the Kingston Court is practically an isolated one.

Motor Volunteers.

INSPIRED by the announcement that Australia is about to institute a motor volunteer corps, a writer in the London "Daily Chronicle" asks, "Has Mr. Halldane thought of such a motor corps for this country?" and then proceeds to detail the lines upon which the Australian force is to be formed, every member being an officer from lieutenant to major and also the owner of a serviceable car. Reference is also made to the recompense for personal expenses, cost of petrol, &c., with a view, apparently, of informing the British War Minister. It may be news in Fleet Street to know that the Army Motor Reserve of officers was created in August two years ago, replacing the

was first pointed out by the late Lord St. Heliers—earlier known as Sir Francis Jeune—is acknowledged. Then we are told that the "motor-car is a powerful and ubiquitous engine," and wonder if the word "has" should be substituted for "is." Testimony is borne to the fact that the motor-car industry is a great one and that the automobile renders some services to the country and will render more in course of time. Then follow some official figures with regard to accidents, a re-hash of some of the evidence before the Royal Commission, and some choice flowers of rhetoric which we will publish at a later date. Matters of greater importance render it impossible to attend to them just now.

A CONFERENCE of representatives of the various national automobile clubs was held at Dieppe on Monday, when the most important matter brought forward was a proposal by Italy to formulate a standard for touring car contests. It was decided to take a vote on the subject at the next meeting, to be held in Paris in October next.

THE A.C.F. GRAND PRIX RACE.

Lautenschlager, the winner of the race, on his Mercedes.

M. Farman and his Panhard.

Jenatzky at the Wheel of his Mors.

DIEPPE has for the past week or so been practically *en fete*. On Thursday and Friday, the 2nd and 3rd inst., cars were arriving at every minute ready for the weighing-in operations, which took place on Saturday and Sunday. Unfortunately the meeting was attended by a fatal accident to a British motorist, Mr. Ernest R. B. Hall Watt, of Bishop Burton, near Hull, Deputy-Lieutenant and magistrate of the East Riding. The deceased, in company with Mr. Kennedy, the works manager of the Weigel Company, was driving one of last year's Renault racing cars on the road between Dieppe and Rouen, when, in order to avoid a collision, the brakes had to be suddenly applied, and a tyre burst, causing the vehicle to capsize, throwing out the occupants. They were conveyed to hospital, where it was discovered that Mr. Watt had fractured his skull, death ensuing during the night without his having recovered consciousness. An accident also occurred on the 1st inst. to Mr. Dario Resta whilst driving his Austin racer. He was going round a bend when he met two carts right in the middle of the road, and to avoid a collision turned his vehicle into the bank at the side, with the result that it was completely overturned. Fortunately, Resta and his mechanic were thrown out into the road, without serious injury. By a stroke of bad luck Resta when driving a sister vehicle on the following day again met with an accident, this time with such serious results that it was at first thought he would not be able to take part in the race. The vehicle, too, was badly damaged, but by working night and day the Austin staff at Eu were able to practically construct a new racer out of the two damaged vehicles.

THE GRAND PRIX DES VOITURETTES.

The Grand Prix des Voiturettes contest was run off on Monday. As stated in our last issue, this was confined to cars with engines of a maximum cylinder dimension as follows:—Single-cylinders up to 100 mm. bore, two cylinders up to 78 mm., three-cylinders up to 68 mm., and four-cylinders up to 62 mm. The cars had to weigh, in running order, but not including water, spirit, tools, or spare parts, a minimum of 600 kilog. Out of the sixty-four entries, forty-eight were weighed in on Saturday and duly faced the starter on Monday morning. The absentees included fifteen French vehicles (a Fouillaron, a Vulpes, three Ampere, a Stabilia, a Passe Partout, three Bustoms, a La Joyeuse, three Corres, and an Arrian), and the Certus friction-driven vehicle, the only English entry, which had met with trouble during the preliminary trials. The start took place at 6 a.m., the following vehicles being sent off on their 288 mile journey (six laps) at minute intervals.

| Nos. | Car. | Nos. | Car. |
|------------|---------------------|------------|-----------------------|
| 1, 29, 49 | ... Delage. | 14, 39, 57 | ... Aries. |
| 2, 30, 50 | ... Martini. | 17, 40, 58 | ... Werner. |
| 4, 31, 51 | ... Gregoire. | 18, 41, 59 | ... Isotta Fraschini. |
| 5, 32, 52 | ... Alcyon. | 19, 42, 60 | ... Rolland-Pilain. |
| 6, 33, 53 | ... Le Metais. | 22 | ... La Joyeuse. |
| 7, 34, 54 | ... Demeester. | 23 | ... Truffault. |
| 9, 35 | ... Thieulin. | 24, 45, 62 | ... Guillemin le Gui. |
| 10, 36, 55 | ... Lion-Peugeot. | 25, 46, 63 | ... Sizaire-Naudin. |
| 12, 38 | ... Bailleau. | 28, 48 | ... Monnier. |
| 13 | ... De la Rouliere. | | |

Guyot (Delage), who was the first away, was also the first to complete the initial round, his time being 56 min. 59 sec., equal to just over 50 miles per hour. Second fastest was Naudin, on a Sizaire-Naudin (59 min. 4 sec.); Sizaire, on a similar car, being third (59 min. 30 sec.). The premier round was disastrous for many of the competitors. Martin, on a Demeester, ran into the railway bridge at Eu and injured himself and his car too seriously to continue; Charles, on a Truffault, took the turn under the railway bridge at Ancourt too fast. Beck on his Martini broke a wheel, and Sauvico, on the third vehicle of the same make, collided with the railway bridge at Eu and had to be carried to the hospital. The La Joyeuse, driven by Menard, broke down at Sept-Meules, while Farcy (Bailleau) ran into a bank. Naudin was leading at the end of two rounds (1 hour 56 min. 16 sec.), Guyot being second, one minute behind, and Sizaire third.

At the half-distance the first four were:—Naudin (Sizaire-Naudin), 2 h. 46 min. 58 sec.; Guyot (Delage), 2 h. 52 min. 12 sec.; Goux (Lion-Peugeot), 2 h. 55 min. 23 sec.; and Boillot (Lion-Peugeot), 3 h. 0 min. 18 sec. Meaux and Perret, both on Aries cars, retired owing to damaged wheels, while one of the Guillemin le Gui cars overturned. The end of the fourth lap saw Guyot leading in 3 h. 49 min. 22 sec., Naudin having fallen to third place, Goux being second, and Boillot, on the Lion-Peugeot, fourth. The struggle was very keen between these four competitors; Guyot, however, held his lead, and finished in 5 h. 45 min. 30 sec. at an average speed of fifty miles per hour, a wonderful performance for so small a vehicle.

Appended are the times for the 32 cars which finished:—

| Order. | Driver. | Car. | Time. |

THE GRAND PRIX.

It was on Tuesday that the big car race was decided. The contest this year was run on new lines—a restriction in cylinder dimensions as against the fuel allowance basis, 30 litres per 100 kilometres, equal to 9.47 miles to the gallon, of last year. The race consisted of ten circuits, equal to a distance of 770 kilometres or approximately 480 miles. All motors taking part in the race had to be of a bore of 155 mm. for four cylinders, or the equivalent in the case of one, two, three, six or eight cylinder cars.

Forty-nine entries had been received, France being represented by twenty-four cars, Great Britain by six (three Austins and three Weigels), Germany by nine, Belgium by three, Italy by six, and the United States by one. Of these all but one duly put in an appearance. The absentee was the Mors car, which was to have been driven by Jarrott, but whose place was taken last week by Robin. The latter in practising met with an accident at St. Valéry-en-Caux, his vehicle overturning, and being too damaged to be repaired in time. Five substitute cars were also weighed in—two Mercedes, an Opel, a Clement-

even to a large open-air garage, in which were collected more cars than we have ever before seen together. Just before six the work of clearing the course was commenced by the soldiers and the police, and the boom of a cannon announced that the long anticipated hour had arrived.

Of the forty-nine entries as given in the last issue of the *M.C.J.*, forty-eight duly faced the starter, the only absentee being one of the Mors vehicles. The start took place at 6.1 a.m., Resta being despatched amidst the cheers of the British spectators, the others following at minute intervals in the following order:—

Order of starting.

| Nos. | Car. | Drivers. |
|---------------|--------------|---------------------------------------|
| 1, 18, 34 ... | Austin ... | Resta, Moore-Brabazon, Warwick Wright |
| 2, 19, 35 ... | Mercedes ... | Pöge, Salzer, Lautenschlager. |
| 3, 20, 36 ... | Motobloc ... | Pierron, Garoet, Courtade. |
| 4, 21, 37 ... | Renault ... | Sisz, Cailliois, Dimitri. |
| 5, 22, 38 ... | Dietrich ... | Duray, Rougier, Minoia. |
| 6, 23, 39 ... | Benz ... | Hemery, Hanriot, Erle. |
| 7, 24, 40 ... | Fiat ... | Lancia, Nazzaro, Wagner. |
| 8, 25, 41 ... | Brasier ... | Théry, Baras, Bablot. |
| 9, 26, 42 ... | Porthos ... | Stricker, Simon, Gaubert. |

The A.C.F. Voiturette Race.—The Scene at the Start.

Bayard, and an Itala. The colours fixed for the various nations were as follow:—Germany, white; America, white and red; England, green; Belgium, yellow; France, blue; and Italy, red. New-comers in the contest included the Mors, Opel, Benz, Austin and Thomas firms; while those who abstained this year comprised Corre, Dufaux, Christie, Gobron, Aquila and Darracq, the last named being the most notable. Quite a number of new drivers were seen at the wheels of cars in the contest, while many of the old brigade were found driving under fresh colours. Thus Thery made his re appearance on a Brasier, while Jenatzy was no longer included in the Mercedes team, but was driving a Mors. The Clement-Bayard trio was made up of Rigal, Gabriel, who has hitherto been with the De Dietrich Company, and Hautvast, the old Pipe driver. At the last moment Shannon took the place of Weigel on the third Weigel car.

The scene on the way to the Tribunes in the early hours of Tuesday was a memorable one—a long continuous stream of vehicles of every kind, from a rambling horse-drawn wagon conveying people at 5 francs a head to the powerful racing motor-car—while at the grand stand itself the crush of traffic was so great that it seemed an almost impossible task to evolve any order out of the chaos. The starting point was about a mile and a-half from Dieppe, and here quite a little town had sprung up, every convenience having been provided for the spectators,

| | | |
|----------------|----------------|--------------------------------------|
| 10, 27, 43 ... | Opel ... | Opel, Jorns, Michel. |
| 11, 28, 44 ... | Clement-B. ... | Rigal, Gabriel, Hautvast. |
| 12, 29, 45 ... | Itala ... | Cagno, Fournier, Piacenza. |
| 13, 30, 46 ... | Weigel ... | Harrison, Laxen, Shannon. |
| 14, 31 ... | Mors ... | Jenatzy, Landon. |
| 15 ... | Thomas ... | Strang. |
| 16, 32, 48 ... | Panhard ... | Heath, M. Farman, Cissac. |
| 17, 33, 49 ... | Germain ... | Degrais, Rosh-Brault, jun., Perpère. |

There were still about a dozen cars to be despatched when the appearance of a vehicle after completing its first circuit was heralded. This proved to be Pöge (Mercedes), who had started second. The fastest time in the initial lap was, however, made by Salzer (Mercedes), 36 m. 31 sec.—the fastest of the day—Bablot (Brasier) being second in 36 m. 40 sec., Thery (Brasier) and Sisz (Renault) tying for third place in 37 m. 6 sec. Gaubert (Porthos) was the only one who failed to complete the round, he being held up by a broken wheel. Nazzaro (Fiat) made a fast circuit, bringing him into first place at the end of the second lap, his time being 1 h. 15 m. 55 sec., Lautenschlager following in 1 h. 16 m. 55 sec., and Thery (Brasier) third in 1 h. 17 m. 17 sec. Laxen (Weigel) had a nasty skid at Eu, but continued, although his front axle and radiator were somewhat damaged. Four cars fell out of the running in the second circuit, viz., Lancia (Fiat), Rougier (Lorraine-Dietrich), Minoia (Lorraine-Dietrich), Piacenza (Itala). The first-named is said to have broken a piston, while

Rougier is credited with clutch troubles. No explanation was forthcoming as to the reason of the withdrawal of the other two.

The completion of the third lap saw Wagner (Fiat) leading, his time being 1 h. 56 m. 25 sec., two minutes ahead of Hemery (Benz), Lautenschlager being third in 1 h. 58 m. 20 sec. Siz

Lautenschlager was second, Hanriot third and Thery fourth. Those who failed to finish this circuit included Pierron (Moto-bloc), who ran into a tree, and Wagner (Fiat), who is reported to have suffered from engine troubles.

It was on the fifth circuit that Lautenschlager, who eventually

The A.C.F. Voiturette Race.—Perrot at the wheel of the Aries Car.

retired in this round owing to his left rear rim coming off, due to sudden application of the brakes rendered necessary by the driver finding an overturned car in front of him. Duray (Lorraine-Dietrich) withdrew with a seized bearing, while others who fell out of the running included Salzer (Mercedes), Baras (Brasier), Simon (Porthos) and Shannon (Weigel). Hemery ran into the first place in the fourth round with 2 h. 39 m. 58 sec. to his

proved the winner, secured the leading position, he covering the half distance in 3 h. 22 m. 16 sec., Hemery being second in 3 h. 24 m. 29 sec. and Hanriot third in 3 h. 26 m. 35 sec. There was considerable excitement when it was found that Nazzaro, the last year's winner, had retired—the cause not being stated. Thus the hope of the Italians was being diminished all the three Fiats being now out of the contest.

The A.C.F. Voiturette Race.—Guyet, the winner, at the wheel of his Delage Car.

credit; he, however, met with an accident to his eyes owing to a stone being cast up from the ground smashing the glass of his goggles. The fragments so injured one of his eyes that he temporarily, at all events, lost the sight of it, and although he had the use of only one eye, and was suffering great pain, he continued to drive at a speed of about 69 miles an hour.

The completion of the sixth lap saw the order of the first three unchanged, while the position was the same at the end of the seventh circuit. Hemery had, however, gained several minutes on Lautenschlager, who was only about a minute in front. Laxen and Pryce Harrison, both on Weigels, met with accidents on this round, the latter car overturning at Eu, necessitating the driver's

removal to hospital. Warwick Wright (Austin) also retired, owing to lubrication troubles. Lautenschlager made another fast lap—the eighth—which brought him four minutes in front of Hemery, Hanriot still being third and Thery fourth. Hautvast (Clement-Bayard) gave up, his car having sustained damage to one of the rims. In the penultimate round the order was unchanged, but Lautenschlager, whose Mercedes was going grandly, increased his lead to nearly ten minutes. This lap was unfortunately marred by an accident to the third Panhard, which resulted in the death of the driver, Cissac, and the *mechanicien*, Schaubé. The car was travelling down the hill at Sept Meules, between Londinieres and Eu, when the front tyre burst. The car, which got out of hand, knocked down two trees by the side of the road, turned a somersault and was completely wrecked. Cissac was found underneath the machine terribly crushed. The mechanic was hurled through the air and fell on his head. Cissac, who was making his debut as a motor-car racer, was well known in the motor-cycling world,

| 6 Joerns (Opel) | 7 | 39 | 40 |
| 7 Erle (Benz) | 7 | 43 | 21 |
| 8 Dimitri (Renault) | 7 | 54 | 12 |
| 9 Heath (Panhard) | 7 | 55 | 36 |
| 10 Perpère (Germain) | 7 | 59 | 7 |
| 11 Cagno (Itala) | 8 | 7 | 56 |
| 12 Gabriel (Clement-B.) | 8 | 11 | 44 |
| 13 Courtade (Motobloc) | 8 | 12 | 43 |
| 14 Garcet (Motobloc) | 8 | 19 | 56 |
| 15 Caillois (Renault) | 8 | 19 | 56 |
| 16 Jenatzy (Mors) | 8 | 24 | 44 |
| 17 Landon (Mors) | 8 | 39 | 20 |
| 18 Moore-Brabazon (Austin) | 8 | 42 | 50 |
| 19 Resta (Austin) | 8 | 46 | 50 |
| 20 Fournier (Itala) | 8 | 47 | 20 |
| 21 Opel (Opel) | 9 | 8 | 11 |
| 22 Degrais (Germain) | 9 | 13 | 34 |
| 23 Farman (Panhard) | 9 | 24 | 40 |

Of the twenty-three cars which finished, two were Italian, ten French, seven German, two British and two Belgian.

The A.C.F. Grand Prix.—The Welgel Team: Messrs. Pryce Harrison, D. M. Welgel (replaced at the last moment by Shannon) and Laxon.

and will be remembered as having created records at Brighton and Blackpool. He was only thirty years old. Thery, the old Gordon Bennett champion, gave up in this circuit owing to the rims of one of his wheels coming off. This brought Rigal (Clement-Bayard) into the fourth place, this order being maintained through the final circuit.

A scene of great excitement prevailed when Lautenschlager crossed the line the winner by about nine minutes. The race was not quite so fast as last year, when it was won by Nazzaro on a Fiat in 6 hrs. 46 min. 33 sec., equal to just over 70 miles per hour. Lautenschlager's average speed works out at about 69 miles. The honours of the race this year fall to Germany. The Mercedes, one of the earliest greyhounds of the motor world, has again shown its prowess, while the Benz firm, in securing second and third places, thus well follows up its victory in the Prince Henry of Prussia touring competition. It is worthy of more than passing notice that the works which are so intimately connected with the first petrol cars should have produced the speediest vehicles of 1908. Altogether twenty-three cars out of the forty eight which started completed the whole race, the order of merit at the conclusion being as follows:—

| Name. | H. | M. | S. |
|------------------------------------|----|----|----|
| 1 Lautenschlager (Mercedes) | 6 | 55 | 43 |
| 2 Hemery (Benz) | 7 | 4 | 24 |
| 3 Hanriot (Benz) | 7 | 5 | 13 |
| 4 Rigal (Clement-Bayard) | 7 | 30 | 36 |
| 5 Poge (Mercedes) | 7 | 32 | 31 |

The only concerns whose complete teams finished the great international contest were the Benz (three) and Mors (two).

THE Rev. Dr. Percival, Bishop of Hereford, has been elected a Vice-President of the M.U.

EFFORTS are being made to form the Airway Motor Club, which will devote itself to the encouragement and development of air-ships of the heavier-than-air type. Mr. F. H. Grix, of 83, Mortimer Street, London, W., is interesting himself in the scheme.

AT the 10 m.p.h. speed limit inquiry held at Watford the opposing parties agreed that the application so far as the portion from the Plough along Ware Road and round by Railway Place to the Great Eastern Railway station should be abandoned, and therefore the limit will commence a few yards on the east side of the Plough. In West Street it has been agreed to cut out the whole of that street excepting a few yards before the corner of Castle Street is reached, the limit commencing at the brewery. In Peg's Lane the limit has been placed a little way above the cottages; and in Queen's Road only sufficient distance to clear the corner was required, so that the limit has been placed at Bayley Hall. Counsel has agreed to abandon a great deal of the road in North Crescent, and to fix the limit just before reaching the Cold Bath Inn. In Hertingfordbury Road the limit is to commence at Cross Road; in Port Vale just beyond the railway bridge; and on Port Hill at the Warren Lodge, the whole of Bengoe Street is being abandoned.

CONTINENTAL NOTES.

Motor Vehicles in the French Military Manœuvres.

It is reported that the French War authorities intend to make some further trials with the use of motor vehicles in connection with the commissariat department during the forthcoming military manœuvres, and that manufacturers are again to be asked to lend vehicles for the purpose. In this connection it is rumoured that some dissatisfaction amongst makers exists; each year they are asked to furnish motor lorries in the anticipation of orders being placed, but which have so far not materialised. The question is consequently being asked whether the time has not arrived when, before lending their machines, some definite agreement should not be arrived at as to the purchase of those which fully meet the military requirements.

Italian Motor-Car Imports and Exports.

A decline took place during the first two months of the current year in the importation of motor-cars and lorries into Italy, the returns showing a total of only £33,110 as contrasted with £54,504 in the corresponding two months of last year. On the other hand, the exports from Italy during the same period increased from £60,520 to £85,496.

Industrial Vehicle Trials in Italy.

Great interest is being taken in the industrial vehicle trials which will take place at Piacenza next September. The Italian War Office will buy at once several of the vehicles competing in the trials, and a good number will, we understand, be ordered afterwards. Many English builders have lately been trying to secure orders from the Italian military authorities, but the contracts to be given out will depend on the results of the Piacenza trials, and if manufacturers do not wish to be left outside the business, they should participate in the competition. Several British firms have, we are informed, already entered.

A Motor Meet at Boulogne.

The Boulogne and Calais section of the Automobile Club du Nord de la France is organising a two days' motor meet at Boulogne for the 17th and 18th inst., which promises to be an interesting gathering. The first day will be devoted to a series of seven kilometre speed trials with flying start on the Coquelles-St. Inglevert road, for the Franchomme challenge cup. Classes for all types of touring cars are available, a certain speed being fixed for each category. Those which attain this will be given 100 marks, 10 points per kilometre being added or deducted for any speed in excess or below the standard. Saturday, the 18th, will be a busy day. At 8.30 a.m. there will be a 3-kilometre touring car speed trial (standing start) for the Caraman-Chimay Cup, on the Colombert-La Capelle road; at 10.30 a.m. a hill-climbing competition on a mile course at Bainethun, and at 4 p.m. a 300-metre hill climb in the Rue Porte Gayole at Breguereque. Entries should be sent before the 14th inst. to the secretary of the Boulogne section of the A.C.N., 18, Rue Thiers, Boulogne-sur-Mer.

Renard Road Trains in Russia.

The Renard road train which was sent to Moscow in May last has been purchased for the Imperial garage by order of the Czar. The train was employed in the transport of the baggage of the Imperial Court to Peterhof, and from Peterhof to the departure station for Reval, during the visit of the Czar to King Edward VII. Negotiations are proceeding for an additional Renard train, which is likewise intended for the service of the Russian Court.

German Motor-car Imports and Exports.

An extremely quiet state of affairs continues to prevail as regards the exports and imports of motor-cars by Germany. The imports of pleasure and industrial motor vehicles and chassis into the country during the five months ending with May last only attained a value of £275,599, as compared with £448,577 in the corresponding five months of 1907. During the same periods the value of the similar exports from Germany declined from £318,280 to £285,285.

Aeroplane Trials in France.

M. Bleriot and Mr. H. Farman competed at Issy-les-Moulineaux, on Monday, under the auspices of the Aero Club, for the prize of £400 offered by M. Armengaud to the first aeroplane to remain in the air for a quarter of an hour. M. Bleriot succeeded in effecting a flight of 10 min. 23 sec. without touching ground. Mr. Farman made a flight which lasted 20 min. 20 sec., according to the official timing, and thus won the prize. During the time he covered about 18 kilometres. It is announced that Mr. Farman will shortly sail for America, taking his aeroplane with him. He is to make a three months' tour, giving demonstrations in the principal cities in the United States. M. René Gaanier is putting the finishing touches to a new flying machine at Bouchemaine, near Angers. The apparatus is said to be entirely different from those at present before the public; it is V-shaped, over 24 ft. in length, and is worked by a 50-h.p. motor.

Motoring on Sandy Deserts.

A French motorist, M. G. Liegeard, who has lately been motoring in Southern Algeria and Tunis, devised the somewhat novel method shown in the accompanying illustration of travelling across the sandy desert. The car—a 28-h.p. Peugeot—with its full outfit weighed about two tons, and to prevent the wheels sinking in the sand he rigged up a sort of travelling track made

of cocoanut fibre about 19 in. wide. In this way not only was M. Liegeard able to keep up a fair speed, but, during a journey of over 600 kilometres, no tyre troubles were encountered.

British Motorists in France.

Recent British motoring visitors to France include Mr. and Mrs. Watson, of London (50-h.p. Mercedes); Mr. Saunders (60-h.p. Fiat); Mr. Brereton (40-h.p. Humber); Mr. Keyser (45-h.p. Daimler); Sir Edward Green (85-h.p. Napier); Mrs. Rudd, of London; Mr. Phillips (35-h.p. Panhard); and Mr. Turnwell (20-h.p. Renault).

Miscellaneous Items.

Messrs. Laurin and Klement, of Jungbunzlau, Bohemia, are building ten more motor-tricycles for the Mexican postal authorities.—A Renard road train service has been established between Lamballe and Le Val-Andre and between St. Brieux and Pleneuf, Brittany.—The Austrian Government is organising a public motor-car service between Troppau and Beneschau and has ordered five 24-30-h.p. vehicles for the same.—A company has just been formed in Berlin to be known as the Berliner Elektromobilfabrik Gesellschaft, to manufacture and operate electric motor vehicles in the German capital.—The Mid-German Automobile Club, of Eisenach, is organising a three-day international reliability trial of touring cars to be held in Thuringia from September 3rd to 6th next.—To mark the completion of the 60th year of his reign the Austrian Automobile Club has offered two military motor vehicles to the Austrian Emperor, who has graciously accepted the same.

The Scottish Reliability Trial.

Below we give the markings awarded in connection with the Scottish Reliability Trial supplementary to the awards published in our last issue and indicated in the following table. The highest number of marks possible was 1,000:—800 for Reliability, 100 for Fuel Consumption, and 100 for Hill Climbs.

SUMMARY OF RESULTS—IN ORDER OF TOTAL MARKS GAINED.

| Official No. | Description of Car. | Car miles per Gallon. | Marks for Reliability. | Marks gained for Fuel Consumption. | Marks gained for Hill Climbs. | Total Marks Gained. | Official No. | Description of Car. | Car Miles per Gallon. | Marks for Reliability. | Marks gained for Fuel Consumption. | Marks gained for Hill Climbs. | Total Marks gained. |

G.M.—Gold Medal.

S.C.—Scottish Cup.

All vehicles receiving full marks for Reliability and printed in block type have qualified for Non-Stop Certificates.

SIR EDWARD GREEN has just returned to London from a motor tour through Switzerland.

AT the Aston Lower Grounds, Birmingham, on Saturday, C. R. Collier secured the five mile motor-cycle record in 6 min. 31½ sec.

THE chairman of the Blairgowrie District Committee of the County Council objects to the money received from the fining of motorists going to the Exchequer, and would prefer it should be given to the local authorities, as is the case south of the Tweed.

WE learn that the Brasier Company, of Paris, have been experimenting for the last six months with a cab chassis which, besides meeting all the requirements of Scotland Yard, and being as nearly fool-proof as possible, will be of thoroughly sound material and construction. The vehicle is fitted with a two-cylinder engine, giving 15-h.p. on the brake. Messrs. Mann and Overtons, Ltd., who hold the sole concession for the Brasier cabs, and who intend to place them on the market at a moderate price, expect to have the first one over in about a week's time.

THE Turkish Government has decreed that motor-cars shall not be allowed to pass through the public thoroughfares of Constantinople and the suburban districts.

THE Hon. J. W. Blair, Attorney-General of Queensland, has recently accomplished a record trip on his Panhard car in Central and North Queensland. The run, which was over very rough and sandy country, including water courses not previously traversed by motor, extended to about 3,000 miles.

THE exterior of the motor garage of Messrs. Boon and Porter, Ltd., in Castlenau, Barnes, S.W., is familiar to all motorists who have driven over Hammersmith Bridge. The firm have a long association with the industry, and their experience in repair work and the estimation of cars gives a welcome confidence to clients. They are also greatly interested in the tyre branch of the business and carry a large stock of tyres of every description. At the present time Messrs. Boon and Porter, Ltd., have a good assortment of motor covers which should prove of interest and profit to traders in the provinces.

GOSSIP FROM PARIS.

THE reason why there are so many people in France interested in the automobile industry who affirm that the organization of great international speed races is no longer of any use is, as the French say, the "secret de Polichinelle." The races were, they admit, perhaps useful in the infancy of the new means of locomotion, but now they are not needed to draw attention to the advantages of horseless vehicles. At least that is what a French motor-car builder told me the other day when I met him at Dieppe just before the Grand Prix. He had come to the circuit because he had cars engaged in the international contest, but if he had spent a lot of money in building three new racers it was not that he liked it, but simply because he feared being left out in the cold. He affirmed the race cost too much and could be of no real use to the automobile industry. The divulgement of the "secret de Polichinelle" then came out naturally. "No, no. What have we French manufacturers to gain by the race? If one of our cars wins it only confirms the already well-established superiority of our industry. And if by chance we are beaten by a foreign car, the uninitiated are led to believe that the foreign-made vehicles are just as good if not better than ours."

to the mechanism. Fortunately, Bleriot had a charmed life, and always escaped without serious injury. It can easily be imagined that he is greatly elated at his final victory, and that his joy is shared by the other numerous French "monoplanists," who see in his performances a great encouragement for them to persevere in the construction of their machines. There are some half-dozen monoplanes which, according to their inventors, will be ready for trial within ten days or a fortnight. And then we are promised the battle of the monoplanes against the biplanes or cellular aeroplanes! "Those cellular machines will be nowhere by the end of the year" was the prediction made to me by a more enthusiastic than prudent "monoplanist," who is making a machine which "cannot turn over." It is to be hoped it will not, but neither did his old machine turn over; it, however, refused to leave the ground.

AMBITIOUS gendarmes always look forward with hope to the touring season in France. It furnishes them with an excellent opportunity of making a great show of zeal without either much trouble or danger, and of obtaining promotion at the expense of motorists. They lie in ambush in some secluded and convenient spot, and when by chance an innocent automobilist, seeing the road clear before him, puts down the accelerator and goes at full

Maderno.

Malcesine.

TOURING IN ITALY.—TWO VIEWS ON LAKE GARDA..

WHAT an enormity! A foreign car as good as a French automobile. Of course the fact of the racing car of any particular manufacturer, be he French or foreign, winning the Grand Prix does not necessarily prove that the same maker can turn out good touring or town cars. However, though my friend tried to speak as if he believed the superiority of the French-made automobiles was still recognised all over the world, it was very evident his hostility to great international races was based on the desire to avoid drawing attention to cars of foreign make which he knows as well, and perhaps better than most people, are very often just as reliable and cheaper than those he offers to the public.

BLERIOT's success with his monoplane has created immense sensation among the French aviators. The persevering inventor, who had previously been so unfortunate, has at every lull in the strong wind which has been blowing steadily for so many days been flying about over the Issy les Moulineaux parade ground with remarkable steadiness. Each of his numerous former machines had been wrecked in its first flight. They were all so greatly wanting in stability that they either capsized or turned a somersault in the air, with disastrous consequences

speed, he suddenly perceives the threatening form of a gendarme spring into the middle of the highway summoning him to stop. It is useless to try to convince the obdurate official that there was no harm in going at full speed on a deserted road. A "procès verbal" is soon drawn up and the unfortunate driver is in a few days condemned to pay a fine. He may appeal if he likes, but that entails trouble. In some parts of the country this practice has become so common that the police magistrates can scarcely find time to do anything else but fine motorists. Last week no fewer than two hundred were condemned at the Boissy-Saint-Leger police court in one day. They were all accused of violating the speed regulation on the road close to Montgeron, in the Seine et Oise, where a couple of gendarmes had simply taken down the numbers of their cars as they passed without the occupants having any idea they were to be prosecuted. The question arises whether the ambitious gendarmes who thus succeed in obtaining 200 condemnations in one day, should receive their coveted promotion or a severe reprimand.

MARNEY.

PRINCE PARAMGIT SINGH has been successful in the R.A.C. examination for driving certificate.

SOME USEFUL NOTES.

ALWAYS be sure that the hole in the filter cap of the petrol tank is clear, otherwise a mysterious stop may be experienced owing to the petrol not reaching the carburettor.

JOINTS which have copper asbestos washers should be put down with a paste of black lead and boiled oil. Care must be taken not to get this paste in a screw thread, as the utmost difficulty will be experienced in shifting it after it has set.

To tackle a valve replacement single-handed when you have not a valve-lifting device is not very easy until one knows how! There is, however, a simple way of doing it. Simply interpose a piece of packing (almost anything will do) between the valve cap and valve head; refix the valve cap and then the packing will prevent the valve rising. It is then comparatively easy to lift the spring and take out the cotter, etc.

It is wonderful the difference a good wash-out will make to an engine. This should be done about once every two months in the case of a car that is run a fair distance daily. The dirty oil should be drained off, and the crank chamber plugs replaced, then plenty of paraffin should be poured in the engine, which

A Reminiscence of the Scottish Trials.—The 38-h.p. Daimler making the fastest ascent of Trinafour Hill.

should be started up and run for one minute. The paraffin should then be drained off and fresh oil put in the base chamber.

THE slipping out of gears of the gate-change type is usually due to loss of tension on the locking springs. In nearly all these types of gears the locking device consists of either a V or a ball piece dropping into a groove in the draw-bar under pressure of a spring. If the slipping out is not due to the loss of tension of the springs, it may be due to wear of either the notch in the draw-bar or of the V piece. Of course, very bad wear on the teeth will also cause a gear to slip out.

THE bending of exhaust valves is a trouble which occasionally occurs, and is rather mystifying. The symptoms are not necessarily loss of compression, because although the valves may be bent, there may be places where they seat completely, but, when running, they may turn a little and not seat properly, and consequently cause loss of power. Bent valves may usually be ascribed to—(i.) Weak valves coupled with overheating of the engine; (ii.) the guide valves not being central with the seating; (iii.) the valve guides being too short. Practically, all these causes are faults in design, and can only be permanently remedied by a practical engineer.

NOTES FROM BOURNEMOUTH.

MOTORISTS travelling south to Bournemouth have been experiencing of late more than their usual share of discomfort and inconvenience through the dust-laden roads. Those who have journeyed over the large section of road which has been experimented upon with tarred and gravel surface, through Christchurch, can testify to the advantages of the treatment, which has been found to be not only a blessing and a boon to automobilists, but tradesmen, residents, and pedestrians have also realised that the dust nuisance has at last been reduced to an appreciable minimum. The treatment has been carried out under the personal supervision of the Christchurch borough surveyor (Mr. C. Farmer), and he is certainly deserving of the thanks of the general public.

ONE cannot help being struck with the large number of motor vehicles which are now being used by business firms in Bournemouth for the transit of goods, and also with the luxurious and handsomely fitted motor-omnibuses for the conveyance of visitors to and from the stations by the large hotels and boarding-houses. These are significant indications that Bournemouth desires to keep abreast of the times. Yet the taxi-cab has not so far made its appearance as a licensed vehicle on the ranks. The motor-cab has, however, made its acquaintance with the town, but not for the purposes of public hire. At present there is a disinclination on the part of the licensing authority to interfere with the arrangements in regard to horsed vehicles. They, however, recognise that taxicabs will have to come, and have intimated their willingness to consider applications when any of the existing licences for horse-drawn vehicles fail to get renewed. This system of introducing motor-driven cabs has been adopted in other towns. The Bournemouth cabmen—or at all events a good number of them—are said to be preparing themselves for the new order of things by making themselves acquainted with motor driving, so that, should necessity suddenly arise, they will experience no difficulty in passing an official examination to qualify for a licence.

THE past few weeks have been marked by a singular dearth of motoring visitors to Bournemouth, and the principal garages have exhibited much bare space, a fact leading to no little lament. The truth is that all roads lead to London just now, and Bournemouth in this neglect is but sharing the common misfortune of the watering-places. Probably ample amends will be made when the interest in the Franco-British Exhibition begins to diminish. *Apropos* of visitors, it is interesting to note the growing use of mascots by owners of motor-cars. The figure of St. Christopher is commonly seen on cars, and the manager of Mr. Morant's garage at Bournemouth assured me that fully half of the cars that come under his notice bear mascots. One hopes that the charm is fruitful of safety.

WESSEX.

TOWARDS the end of last summer the Avon India Rubber Company, Ltd., of Melksham, Wilts., submitted to us for trial a pair of their Avon motor tyres, which we fitted to the rear wheels of a small car, and which have since given great satisfaction. We have not kept an exact record of the mileage that has been made on the covers, but it must be fully 2,500 miles, and it is a pleasure to be able to record that not only have we been entirely free from puncture troubles, but that the tyres are remarkably clear of cuts or other signs of wear, notwithstanding that the car is of a relatively old type and consequently somewhat heavier than modern vehicles of equal power. The covers in question are of the plain round tread variety, but the firm also make tyres with square treads, as well as studded non-skid covers. Although not so well known as some other makes, the Avon tyres are enjoying a steadily-increasing popularity amongst motorists, the special points in their favour being the great durability and relatively low price, a combination of advantages which naturally tends to economy in the tyre portion of the cost of running a car.

A GARAGE is being provided for the service of motorists attending the Water Tableaux at Guisborough Abbey, on August 3rd and 4th.

THE Licensing Committee of the Town Council of Bradford have granted a number of applications to motor-cab drivers for licences to p'y for hire in that town.

THE examination for the scholarships offered by the Irish A.C. amongst the scholars of the Pembroke (Dublin) Technical Schools for Automobile Knowledge was held on the 3rd inst.

ACCORDING to Mr. John Burns there were 1,133 prosecutions of motorists in the Metropolitan area in the first three months of the present year, as compared with 418 in the corresponding period of 1907.

THE deputation from the City of London to various Government Departments in connection with motor-buses will include the Lord Mayor, Alderman Sir T. W. Ellis, Sir Theodore Martin, K.C.B., Messrs. D. J. Morgan, J.P., and B. S. Straus, M.P.

AN outbreak of fire occurred at 62, Fleet Street, Bury, late on Saturday night. The shop is occupied by Mr. Arthur Holder, and it is reported that that gentleman was filling the tank of his motor-bicycle with petrol when an explosion occurred and set fire to the shop.

THE Duke and Duchess of Manchester, motoring from Badminton to Fishguard, Pembrokeshire, on Sunday, had a breakdown on the road at Christchurch, near Newport, Mon., the differential shaft breaking. The car was towed into Newport, and after a four hours' wait for repairs the Duke and Duchess continued their journey to Fishguard.

THE entries for the "four inch" Speed Race in the Isle of Man include the following types of cars, viz.:—Rover (two), Hutton (two), Arrol Johnston (two), De Dion Bouton, Darracq (three), Hillman-Coatalen, Seat, Vulcan, Coventry Humber, Beeston Humber (two), Métallurgique (three), and Berliet (two). All these cars are 25.6 h.p. (R.A.C. rating), except the two Berliets, which are 24.8 h.p.

FROM Messrs. Thomas Boornn and Co., 35, Elliott Road, North Brixton, S.W., comes a sample of the special packing for the glands of water-circulating pumps which they have lately introduced. The feature of the material, which is made of hemp, is a lead wire core, which is claimed to add strength and also to act as an extra lubricant. The packing, which is being used by a number of leading motor-car manufacturers, is made in various sizes from $\frac{1}{8}$ in. to $2\frac{1}{2}$ in in diameter.

IN connection with the forthcoming Dust Trials, it has been decided that as many different cars as possible be obtained fitted with Messrs. Wayman and Matthews' device; that cars provided with Cape hoods be tested; that a car with a free curtain at the back be tried; that steam cars be run again on the second day; and that the devices on the experimental cars be made removable, in order that the vehicles may be tried without them.

MOTORISTS are naturally interested in "overalls," whether as engineers or drivers, and more especially in the former connection. The "Wescot" overalls of the Engineers' Universal Supply Stores deserve a passing thought. These are made by the firm at their factory at 27, Sumner Street, Southwark, S.E., and there is ample evidence of the fact that only the best materials and most improved methods are employed. Now that the dust season is with us motorists and all who frequent garages will have need of such excellent overalls as the Wescot.

WE had a visit the other day from Mr. C. G. F. Loder, the husband of the lady who took part in the 1905 and 1906 Scottish reliability trials, and who is now a partner in the firm of Messrs. Loder and Jarlet, motor-car and accessory agents, Melbourne. Among the agencies they hold are those for the Cottin-Desgouttes and Delage cars, the Auto-roche lamps, S.M.A. horns, &c. Mr. Loder reports a growing interest in automobiles in Australia, but states that the business has to be carried on under quite different conditions to those which obtain in this country, it not being unusual to take a car 800 miles to give a prospective customer a trial run.

HERE AND THERE.

THE Frome's Hill Climb has been abandoned, as the entries sent in do not justify the expenses which would be incurred by the event.

At Fulford Barracks, York, several soldiers who have been trained as motor-car drivers have been examined by the R.A.C. Driving Certificate Department.

THE proposed parade of commercial motor vehicles at Manchester has been postponed till the autumn.

ON the 1st inst. the old four-horse mail-coach from Chatham to London was replaced by a motor service.

MOTOR-CARS are now prohibited from that part of the road leading by the coast from Malahide to the Velvet Strand; this is the first prohibition that has been notified in Ireland.

A SERVICE of motor-cars has been established between Ilkley, Bolton Abbey, Harrogate and York, and a forty-mile tour over the Yorkshire moors is now being organised on three days of every week.

THE Sheffield-Simplex Motor Works, Ltd., have received an order from the Earl of Mar and Kellie, of Alloa House, Alloa, N.B., for a Sheffield-Simplex 45-h.p. six-cylinder car with limousine-landaulet body by Hamshaw. Mr. R. Stafford Charles, of Stanmore, one of the oldest motorists in England, has also placed an order for a 45-h.p. limousine.

The Graft and Stiff Four-Cylinder Motor Lorry recently supplied to the Austrian Military Authorities.

The vehicle, which has a capacity of from 30 cwt. to 2 tons, is fitted with a body which can readily be transformed into an ambulance vehicle. Attention may be drawn to the large diameter road wheels and to the fitting of a winding drum to the outer sides of the driving wheels to enable the vehicle to extricate itself from difficult positions when travelling over bad roads or soft land.

THE many foreign users of the H.F. vulcanizing appliances are appreciating the convenience of being able to read in their own tongue the instructions for using these excellent appliances. Messrs. Harvey Frost and Company, Ltd., 39, Great Eastern Street, London, E.C., the manufacturers and patentees, have issued their various books of instructions in French, German, Italian, Spanish, Danish, and practically every language that is freely spoken.

A PLEASURABLE day was spent by the members of the Accrington "Observer and Times" staff the other day, when they were invited to a motoring picnic by Mr. R. S. Crossley, jun., in celebration of his recent marriage. The party was conveyed in a Critchley-Norris motor char-a-banc, supplied by Messrs. Groome, Ltd., of Whalley, and quick progress was made through Whalley, to Worston, Chatburn and Sawley, with the formidable Sawley Brow, for a delightful afternoon in the country.

THE Bishop of Winchester (Dr. Ryle) has been presented with a cheque for £710 7s. 3d., contributed from all parts of the diocese, for the purpose of providing him with a motor-car as a personal convenience and a help to him in his work. Dr. Ryle is ordering a motor-car that is "entirely of British construction, and that may be especially trustworthy in hill-climbing, and silent, without being conspicuously swift in movement." Apparently the Bishop does not want to be "conspicuously swift," so that he may avoid a summons to a secular court in his diocese.

Correspondence.

[Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.]

DANGEROUS DOGS ON THE ROAD.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—On Sunday last I had a curious experience. I was taking a short motor ride with a few friends, and on returning from Shoreham to Worthing, via Lower Lancing, a dog chased my car, and I had the greatest difficulty to avoid running over him. I considered the dog a perfect nuisance, and as there was a policeman on point duty at hand, I reported the matter to him. While doing so the next car that came along ran over and killed the dog. Needless to say I returned to the spot, also the policeman. I spoke to the owner of the car and informed him that I had just reported the dog as a nuisance, and he said that they could not avoid running over the animal, as it kept on running in front of the car. I am writing this as I think it the duty of motorists to report such matters to the police, as it saves others from blame.—Yours truly,
W. A. HEWER.

THE SCOTTISH TRIALS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Various reports have been published as to the reasons of the withdrawal of the Sheffield-Simplex car from the Scottish Reliability Trials, one in particular being that it was owing to the heat generated by one of the rear wheel brakes being so great as to set the spokes of the wooden wheel on fire. As this is not at all correct, and as the entrant

Mr. W. A. Hewer, of Worthing, at the wheel of his 10-12-h.p. Jackson Car.

and driver of this car, I should like to correct same. The true reason was that, owing to the spokes in one wheel being made of unseasoned wood, they shrank to such an extent as to get dangerously loose, and in consequence I thought it would be better and safer to withdraw and prevent the risk of what might be a nasty accident, than to continue.

Unfortunately, as it happened, the wheels of this car were re-built at the last moment, and altered from the standard, so as to have detachable rims fitted. I may say that the spokes showed signs of becoming loose right at the commencement of the trials, but it was then too late to do anything to remedy the matter, so I decided to drive the car carefully and endeavour to get it through, but, unfortunately, it continued to get worse, which necessitated the withdrawal. This, I may say, explains to a very great extent the comparatively slow times the Sheffield-Simplex made in the hill-climbs, as in not one single instance did I care to risk opening out the engine for fear of tearing out the loose spokes of the wheel. I do not wish this letter to be looked upon as an excuse. I merely state facts, and can only take it as a misfortune of war, but in driving my car several thousands of miles I have found that the arrangement of the brakes is excellent; in fact, in the long hills of Scotland they have, in ordinary driving, not shown the slightest tendency to overheat. I have several times felt them with my hands after a particularly long and arduous descent in which the brakes have had to be freely used, and they have not been more than warm.—Yours truly,
W. E. TOWNSEND.

TAR AND THE CAR.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Recently I was motorizing to Tunbridge Wells, and on passing Green Street Green I found the road, for about two miles, covered with fresh tar. No gravel or sand had been put on, and as there was not

sufficient space on either side of the road free from tar, two wheels were always running on the latter, which resulted in the panels and the under-part of the car being covered with this substance. On passing through Sevenoaks we came across about another half-mile of road having the tar freshly laid on.

For the benefit of your readers, I would like to suggest that a very good thing to prevent the tar sticking, and for removing it before it has dried, is to put some grease on the more exposed parts, when it will be found that at the end of a run the tar can be easily removed by rubbing off—after washing off the grit—with a cloth. Unfortunately, in this instance I was myself without any grease, which accounts for the state of the car after the journey.—Yours truly,

ALFRED L. BOWER.

THE EMISSION OF SMOKE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—In replying to Mr. Reid's letter in your issue of the 27th ult. I thank him for the courteous spirit in which he received and acted upon my protest, the strength of which did not exceed that of the effluvia which the occupants of my car had been the recipients of for some time. Of course accidents will happen, and I accept the explanation your correspondent gives.

At the same time may I be allowed to say that as it is impossible for motor-cars to be other than obnoxious in a certain degree on account of dust when on dry roads, and the slight smell from the exhaust, the oil and smoke nuisance can and should be prevented. The streets of London are getting a disgrace in this respect on account of the motor-buses, and private cars are also very often at fault.—Yours truly,
P. 19.

A REMINDER.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I lent a gentleman a motor-tyre recently in order to help him on his way. The number of his car was known, and as he did not return the cover I tried to get his name and address from the L.C.C. registry, but they say they cannot help me.

In future I shall not lend anything to a motorist without deposit, as the number is apparently of little service. I write to you, as your paper has such a large circulation, in the hope you may be able to assist me in finding the gentleman who has not returned the cover.—Yours truly,
T. BUTLER.

[We trust, if this should meet the eye of the motorist referred to, he will communicate with our correspondent, at Green Street Green, near Orpington.]

THE QUESTION OF GEARS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—It is not an easy matter to strike upon a car which is geared correctly for everything; in fact, it is most difficult to do so. Motorists who live in a general sort of district, where the steepest gradient is 1 in 9, or perhaps 1 in 8, and who do not go very far afield, will find no hill-climbing difficulty with the average modern car. It is when we come to hills of extreme steepness that the difficulty is apparent. The reason is simple. A large number, in fact we may say the average modern cars are too highly geared on the bottom speed, and consequently such hills as Porlock, or the one between Lynmouth and Lynton, prove a severe stumbling block. Nothing could have been more clearly illustrated than this in the recent trials in Scotland, where several cars came to grief on a particularly steep ascent. Now this is where the designer is at fault, as a bottom speed of a modern car should be for starting purposes and emergencies only; the second speed should be the ordinary steep hill-climbing gear. Such hills as Porlock may be fairly accurately described as "emergencies," and surely we do not mind dropping on to a very low gear to surmount a gradient of 1 in 6 or 1 in 5, so long as we get up easily and without shedding passengers?

I am not dealing with either competitions or the individuals who wish to simply annihilate distance in the shortest possible time. I am dealing with the rational people who wish to have a modern car which they can always depend upon to carry them and their full load up any hill, not excluding the "emergency" ones. It is a fact, though many may not credit it, but there are very few standard cars in the 12-h.p. to 20-h.p. class—value, say, £250 to £450—that will take their load up the hill between Lynton and Lynmouth. The manufacturer's answer to this deficiency is what might be expected, seeing that his patterns are made and alterations are costly. He says, "If you are going about precipitous parts of the country, you must have your car geared two teeth lower on the driving bevel." And this means that the car is ridiculously undergeared for everywhere except the precipitous parts. It may be mentioned, *en passant*, that the much-abused chain drive distinctly scores here, because it is a reasonably simple matter to change the

sprockets when necessary; and really, while admitting the drawbacks to the chain drive, such as noise, wear and tear, &c., on chains, for all-round touring the chain drive wants a lot of beating.

Three speeds, with direct drive on the top speed, with a flexible engine, should be quite enough for anyone, though a four-speed box with a direct drive on the third speed is very nice, as it gets over that occasional drawback to the three speeds, viz., the hill which is just too much for the top gear, but much too little for the second. I should be glad to hear the views of other motorists on this subject.—Yours truly,

BRIXHAM.

HEDGE CUTTING.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—It is very necessary in the interests of the safety of the public that hedges, at corners and cross-roads, should be cut or trimmed so as to give drivers and others a view of the approaching traffic.

The Motor Union appeals, therefore, to local authorities to exercise their powers under Section 65 of the Highway Act, 1835, to cause any tree or hedge that obstructs the view at cross and side roads to be cut or pruned. Members of the public are requested to draw the attention of occupiers and the local authorities to cases where such action is necessary.—Yours truly,

W. REES-JEFFREYS.

A TYRE DESTROYER.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I enclose some invention of the Evil One. Hundreds of these vile tyre destructors are strewn on the Wolverhampton road, about a mile from Stafford, also on the main road going out to Stone and the Potteries.

It is obvious that these articles have been manufactured solely for the purpose of tyre destruction, and I trust that you will publish this as a warning to the many motorists who travel this way.

I should rejoice to hear of the capture of the unscrupulous cad who is responsible for the dastardly trick.—Yours truly,

JOHN HOLDING.

DETACHABLE RIMS v. DETACHABLE WHEELS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Among the useful information I gather from your most valuable journal, I read in a recent issue a statement signed by R. Flint, "That a detachable rim, known as the F.P., was being patented; that it took only one minute to take off the tyre, or to take out the tube and put in a new one of any make, to take off the rim and fix it again in three minutes, making a complete change in four minutes." I should like to know if such a rim is on the market. If this should catch the eye of R. Flint, perhaps he will be able to inform us, as it seems to me that a rim of that sort would be highly appreciated; provided it made the tyre perfectly secure, it should also make it more durable.—Yours truly,

ANXIOUS.

THE PIONEERS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—It would be interesting to have the experiences of some of the early pioneers of motoring—particularly of those owners of cars who have kept to their original possessions and have watched the steady development of the automobile movement all these years.

During the recent 2,000 miles Trial there was a gentleman at Kendal who was said to have owned the first automobile in the county of Westmorland. He marvelled at the way in which the vehicles on the trial behaved in Lakeland and talked with delight at the improvement. He remembered how the first year he had his car "My life was a misery. Every horse upon sight of my car in the Lake District bolted, and the wonder of it all is that one-half of the local population was not killed off." Now all is changed. The horse that will not behave in the presence of a motor-car is an exception, and people generally recognise the value of the car.

Ere it is too late, it would be interesting if some of those motorists who, in small towns and quiet neighbourhoods, adopted the motor-car and so pioneered the way for progress, were to place on record their impressions of those days of trial.—Yours truly,

A. A. A.

THE HIRE OF CARS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Recently I was in one of the Eastern suburbs of London and came across a progressive motor-car agent who is doing much to further the progress of motorism in his part of the world. A circular he has just issued in connection with his motor-car hiring business is interesting. A day's hire of a car seating four persons in addition to the driver is three guineas for the racecourses at Windsor or Lingfield;

three sovereigns for Epsom, Brooklands, Kempton or Hurst Park, and £3 10s. for Ascot; Henley can be reached for four guineas, a rate also quoted for Goodwood, Newbury, Newmarket, Brighton and Eastbourne.

But, apart from this interesting tariff, the comparison of cost by the usual methods in going to Newmarket races with that of the motor-car is equally interesting, and works out as follows, the motor-car charge being obtainable from the foregoing list:—

| | £ | s. | d. |
|---|-----|----|----|
| Expenses to London terminus | — | 0 | 4 |
| Four 1st class fares (about) | ... | 4 | 0 |
| Cab to racecourse (usual charge) 5s. per head ... | ... | 1 | 0 |
| Cab back to station | ... | 1 | 0 |
| | £6 | 4 | 0 |

Thus there is a distinct gain in going by motor-car, (while the further advantages are set out by Mr. A. Rivett—the enterprising motorist in question—as follows:—No train to miss; no crushing or crowding—a most enjoyable drive instead; you can take your own hamper and picnic quietly by the way; no cab fares to and from racecourse at an extortionate price; you drive all the way to and from your own door; you have a day's outing that does you good.

Probably other motorists who travel about may pick up similarly interesting items of news; for a general publicity on such matters will be to the common advantage.—Yours truly,

T. WALKER.

The above illustration depicts the 20-28-h.p. Daimler Shooting Brake which has lately come into the possession of Messrs. H. J. Chapman & Co., Ltd., Regent's Park, N.W. As may be observed by the crest on the side, the vehicle was originally the property of His Majesty the King. Mr. Reed, the secretary of the Company, is at the wheel, and Mr. Chapman by his side.

THE UNAUTHORISED USE OF CARS BY DRIVERS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—The number of serious accidents that occur to cars taken out by chauffeurs without the knowledge or consent of the owners has increased to such an extent that in my opinion it is quite time something drastic should be done to put a stop to the practice. The use of an employer's car by a paid driver for his own pleasure and against the wishes of the owner must be stopped; honest chauffeurs are as much interested in legislation to this end as are the owners employing hired drivers.—Yours truly,

R. T. S.

A PROPOSAL to establish a motor camp on the south coast comes from a well-known motorist, to whom we shall be pleased to send any communications from interested readers.

BRIGHTENING ALUMINIUM.—"R. T." writes:—"While aluminium does not become dirty or tarnished in the same sense that other metals do, after a certain time it takes on a dull appearance. I should be glad if any reader of the *M.C.J.* could tell me a method of restoring the bright appearance of aluminium."

RACING AT BROOKLANDS.

SEVERAL elements conspired against public interest being greatly aroused by the proceedings on the Brooklands Track on Saturday. After a spell of stability the weather gave way on Friday night and Saturday morning, damping the spirits of motorists and allaying the dust in corresponding great degree. The imminence of the Grand Prix races robbed the meeting of many notable competitors, so that there was some uncertainty with regard to the programme. The result was a greatly lessened attendance compared with recent meets, and the Ladies' Race was undoubtedly responsible for the presence of many who might otherwise have been far from Brooklands.

The programme commenced with the Third All-comers' Handicap Sweepstakes over a 5½ mile course. This produced twenty-six entrants, who were divided into two heats. In the first there were eleven starters, and a good race resulted in the following six qualifying for the final, the times following the names of the cars being the handicap allowances:—Sir George Abercromby's 58.1-h.p. Fiat, 1 m. 22 s.; T. Faulkner's 24.8-h.p. Mercedes, 2 m. 18 s.; A. F. King's 30-h.p. Mass, 1 m. 10 s.; O. S. Thompson's Austin "Pobble," 1 m. 28 s.; G. C. G. Moss's Arrol Johnston, "Guarded Flame," 1 m. 46 s.; O. Cupper's Metallurgique "Gollywog," 18½ s. Sir George Abercromby won by 200 yards, half a mile dividing second and third.

The second heat brought out another field of eleven, and a good race gave Mr. J. Keele the first position by about a quarter of a mile, Sir Duncan Hay being only a few yards behind Mr. H. S. Nalder, the

Interest quickened as the lady drivers began to parade their cars in the paddock. The fair motorists were identified by differently coloured scarves, most of which fluttered in the breeze as they reached the track. One, Miss Christabel Ellis, had, however, carefully guarded against the wind resistance of such a decorative piece of finery by securing its ends from any wayward tendencies. She drove the "Guarded Flame" of Mr. C. G. Moss, who accompanied her as mechanic. The vehicle was stripped for racing and was thus distinguished from the bodies of the other cars. "Pobble," "Bambo," "Sunbeam" and an unchristened vehicle also got well into the stride as they were driven up the straight to the starting point. The race was a Bracelet Handicap over a three mile run, ending along the straight, and the field was as follows, the competitors finishing in the order given:—

| | Start. |
|---|-------------|
| Mr. O. S. Thompson's Austin "Pobble," Miss Muriel Thompson | m. s. 0 3 1 |
| Lord Montagu's Itala "Bambo," Mrs. Locke-King | scratch 2 |
| Mr. G. C. G. Moss's Arrol-Johnston "Guarded Flame," Miss Christabel Ellis | 0 12 3 |
| Mr. A. Ridge-Jones's 17.5-h.p. Sunbeam, Miss N. Ridge-Jones | 0 37 4 |
| Mr. A. R. Peat's 6.3-h.p. De Dion, Mrs. J. Roland Hewitt | 1 45 5 |

Lady Muriel Gore-Browne, with Colonel H. Gore-Browne's 22.5-h.p. Humber, and Mrs. Ada Billing, with Mr. C. L. Woodward's 22.4-h.p. Mass, did not start.

Racing at Brooklands.—The Finish of the Ladies' Race.

six to qualify being as follows:—J. Keele's 41.9-h.p. Weigel, 1 m. 23 s.; H. G. Nalder's Berliet Grayling, 0 m. 46 s.; Sir Duncan Hay's 41.9-h.p. Daimler, 1 m. 32 s.; D. Pigot's 35.7-h.p. Berliet, 58 s.; J. Keele's 19.6-h.p. Belsize, 2 m. 22 s.; G. P. Bliss's 41-h.p. Vinot, 1 m. 22 s.

There were a dozen starters in the final for this Handicap Sweepstakes, and a capital race gave the victory to Sir George Abercromby, who, on his 58.1-h.p. Fiat, came along the finishing straight ten lengths ahead of Mr. J. Keele's Weigel, which reached home but a few feet in front of Mr. T. Faulkner's 24.8-h.p. Mercedes. Mr. O. Cupper on the Metallurgique "Gollywog" travelled well from the back-mark, but was unable to make up all the leeway necessary to get into premier position.

The July Trophy, over a five-mile course, was a handicap for private competitors, and attracted thirteen entrants, who were divided into two heats, which resulted as follows:—First heat, F. Ballough's 44.5-h.p. Junior, 11 sec.; Sir Geo. Abercromby's 58.1-h.p. Fiat, 23 sec.; Sir Duncan Hay's 41.9-h.p. Daimler, 42 sec.; C. Hobson's 48.6-h.p. Brasier, scratch. Second heat, T. Faulkner's 24-h.p. Mercedes, 1 min. 22 sec.; O. S. Thompson's Austin "Pobble," 38 sec.; H. G. Nalder's Berliet "Grayling," 2 sec.; G. C. G. Moss's Arrol-Johnston "Guarded Flame," 54 sec.

The final was regarded with more than average interest, as the 58.1-h.p. Fiat, by winning the Third All Comers' Sweepstakes earlier in the afternoon, had incurred a 10 sec. penalty. Eventually it resulted as follows:—Mr. Faulkner's Mercedes, 1; Mr. Thompson's Austin "Pobble" 2; Sir Geo. Abercromby's Fiat, 3. The race was won by eighty yards, a hundred yards separating second and third.

Mrs. Hewitt got away first, followed by the Sunbeam, and then Miss Ellis changing gear too soon, stopped her engine just beyond the starting line. Mr. Moss jumped out and restarted, when the "Guarded Flame" shot ahead, leaving the mechanic behind. She raced after "Pobble" and "Bambo," who were trying hard, but was unable to get nearer than 400 yards, while Miss Thompson won a splendid race by a couple of lengths, providing one of the most interesting moments of the day.

The final event was a private match of 50 sov. between Mr. S. F. Edge's Napier Firefly and Mr. J. W. Stocks' 25.6-h.p. De Dion over a distance of ten and a half miles. A capital race—one of the type that would do much to popularise Brooklands—was begun as Mr. Edge led the way from the start until he was a good distance ahead. Then his rival went to the front in the second lap, the Napier forged along on the third, the two cars, however, entering the homeward path together, and the De Dion winning by about a length at an average speed of seventy-one miles an hour.

The Small Car race was cut out of the programme owing to the number of entries not being sufficient, although eight owners of Sizaire-Naudin cars entered for the event.

For the August meeting several interesting events are promised, including the Brooklands Grand Prix, a match between Messrs. S. F. Edge and C. Jarrott, and a Journalists' Handicap.

THE Ross brand of Motor Spirit was used in the Scottish Trial by Mr. H. Keenely, who drove a 50-h.p. Darracq car.

CLUBS AND ASSOCIATIONS.

ROYAL.

At the meeting of the members of R.A.C. on Wednesday next the chairman, H.S.H. Prince Francis of Teck, will make a statement with regard to the scheme for the erection of a club house on the site of the War Office now demolished in Pall Mall, S.W. Plans of the new building will also be available for inspection.

The sub-committee responsible for the acceleration tests is now engaged in preparing the regulations, and it is understood that the trials will be carried out on the Brooklands track some time next month.

MOTOR UNION.

DURING the month of June 341 individual members were enrolled, an increase of over 42 per cent. as compared with June, 1907. The number of individual members who have paid the subscription for 1908 is 4,936, as against 3,793 for the corresponding period last year, an increase of over 30 per cent. Including affiliated members the total membership is about 15,500.

It has been decided not to proceed further with the proposed tour in the Loire Valley.

AUTOMOBILE ASSOCIATION.

THE handbook of the A.A. for 1908 has just been issued, and in its convenient size for the pocket will be a useful touring companion. In addition to setting forth the objects of the Association and explaining the merits of the patrol system on roads, there is a useful list of agents in the various towns and villages, with particulars as to their capacity for repair work, supply of tyres, &c., as well as other practical points upon which the motorist in distress will be glad of definite knowledge. Members of the A.A. will welcome the publication of the handbook; those not already within the ranks, catching a glimpse of this capital compilation, will have a desire to join forthwith.

MOTOR.

MEMBERS of the Motor Club found the visitors' enclosure at Phyllis Court, Henley, a great convenience during the regatta.

The gymkhana which is being organised for Wednesday next at Hastings promises well. Mr. R. E. Edmondson, the secretary, will be pleased to send particulars to motorists visiting that south coast resort.

LINCOLNSHIRE.

ON Wednesday of last week a motor gymkhana, promoted by the Lincolnshire A.C., was held in Lincoln, the proceeds being devoted to the County Hospital. The results were:—Starting and stopping race: C. H. Gilbert (Lincoln), on an 18-h.p. Siddeley, was the only competitor who stopped within the specified lines. Musical chairs: 1, Miss Wright (Lincoln); 2, Miss Chapman. Tying the knot race: 1, Mr. C. H. and Miss J. Gilbert (Lincoln); 2, Mr. R. M. and Miss Wright. Ball race: 1, Mr. W. R. and Miss Chapman (Horncastle); 2, Mr. R. M. and Miss Wright. Whistling competition: 1, Mr. and Mrs. C. H. Gilbert; 2, Mr. and Miss G. E. Sanders (Scampton). Heads and Posts: 1, Mr. T. W. Mays (Bourne); 2, Mr. G. E. Sanders (Scampton). Motor Union gold medal for best performance: 1, Mr. T. W. Mays.

BRITISH MOTOR-BOAT CLUB.

THE Ramsgate regatta of the British Motor Boat Club was held on Friday and Saturday. In the contest for boats exceeding ten knots, Brooke II., the scratch boat, covered the fifteen miles at an average speed of 22½ knots, but lost on time to Defender, which beat Fleurette by 1 min. 54 sec. for first prize. Hole I. was third.

In the cabin cruiser race, over a twelve miles course, Napier Major had to allow Lethe 10½ min., and the latter won by more than 7 min.

In the handicap for boats exceeding fifteen knots, for the British Motor Boat Club's silver cup, Brooke II. had to give long starts to Scarlet Runner, Fleurette II., Hole I., and Defender, but early in the race the Brooke, Fleurette, and Scarlet Runner gave up, and Defender won easily from Hole I. by nearly 13 min.

In the handicap for boats not exceeding fifteen knots, Napier Major and Lethe had a close race between themselves, but the prizes went to long start boats in Dorette and Dorothy.

MOTOR CYCLING.

THE following additional names have been passed for awards in the recent London-Edinburgh twenty-four hours' run. Gold medals:—W. Adam, H. G. Bell, A. Carpmuel, jun., H. C. Hanrott, W. Pratt, P. H. Trotman. Silver medals:—H. G. Cove, F. Mussell, J. H. H. Robinson, C. Truscott.

WELSH.

THE Welsh A.C. is holding a 266 mile penalty run for motor-cars under the competition rules of the Motor Union on July 10th and 11th. There are sixteen entries, as follows:—Captain D. Hughes-Morgan (40-h.p. Weigel), Messrs. B. W. Valentin (30-h.p. Beeston Humber),

T. J. Williams (23-h.p. Daimler and 12-14-h.p. De Dion), H. G. Davies (12-h.p. De Dion), A. A. Jones (14-h.p. Argyll), W. T. Farr (30-h.p. Beeston Humber), T. D. W. Drummond (14-h.p. Belsize), M. Whittington (28-32-h.p. Mercedes), G. Ace (39-h.p. Coventry Humber), E. H. Leader (29-25-h.p. Simms-Welbeck), F. E. Jacob (30-h.p. Daimler), E. F. Sutton (16-18-h.p. Darracq), G. A. Taylor (15-h.p. Coventry Humber), and W. Morris (16-18-h.p. Darracq).

SOUTH WALES.

THE annual hill-climbing competition of the South Wales and Monmouthshire Automobile Club took place at the Buttrills Hill, Barry. Major J. J. Galloway, R.E., officiated as judge; Principal E. H. Griffiths, as referee; Messrs. T. Butt Ekins, N. Evans, and W. Eastabrook, clerks of the course; Mr. Farrant Good, marshal; Mr. J. Sloggett, clerk of scales; Mr. F. J. Lidger, timekeeper; Mr. J. Thompson Willows, secretary; and Mr. J. MacTaggart had charge of the telephonic timing arrangements.

In the class open to gentlemen driving their own cars, a time record over this course was created by Mr. W. Graham with his 35-h.p. Daimler, the distance being covered in 45 2-5 sec.

Mr. William Graham received a gold medal. The other results were:—

Amateur members' cars, driven by owners or members of their families: gold medal, Mr. H. West (8-h.p. De Dion); silver medal, Mr. Leigh Jones (8-h.p. De Dion); bronze medal, Mr. J. G. Morel (12-14-h.p. De Dion.)

Amateurs members' cars, driven by their own paid drivers: gold medal, Mr. H. West (8-h.p. De Dion); silver medal, Mr. William Graham (35-h.p. Daimler); bronze medal, Mr. R. E. Morel (35-45-h.p. Gladiator).

The Manchester Cripple Children's Outing.—Some of the Children on Mr. C. E. Holme's Car.

Amateur members' cars, driven by ladies: gold medal, Miss May Morel (8-h.p. De Dion); silver medal, Mrs. C. H. Bailey (28-36-h.p. Daimler); bronze medal, Mrs. R. W. Hunter (12-14 h.p. Daimler).

Any car or cars nominated by professional members: 1st (silver cup), Mr. J. Ayliffe (12-14-h.p. De Dion); 2nd, Mr. W. Parker Thomas (14-h.p. Argyll); 3rd, Mr. James Thomas (20-h.p. Humber.)

SCOTTISH.

THE Chief Constable of Lanarkshire has given the Scottish A.C. a list of all the "controls" established by him in the county, and also the times of seventy-six cars which passed through these on a certain specified day. These have been fully considered by the Club Committee, with the result that they are satisfied that many of the cases justified the official view that disregard for the comfort and convenience of residents on the highway has been shown in many instances. Warning letters to the offenders who are residents in Scotland have been sent by the Club, and this friendly interchange of views between the police and automobilists should do much to secure a mutual good feeling north of the Tweed.

SCOTTISH MOTOR TRADE ASSOCIATION.

THE following is a list of the fleet of motor-cars which were supplied, free of charge, by Edinburgh members of the Scottish Motor Trade Association, Ltd., to convey the officials of the Scottish Chamber of Agriculture and their guests on the motor tour through East Lothian referred to in our Comments:—40-h.p. Napier, driven by Mr. W. L. Sleight (R.o.s.

teigh, Ltd., Edinburgh); 45-h.p. Sheffield Simplex, driven by Mr. W. E. Townsend (Middleton and Townsend, 50, Belford Bridge, Edinburgh); 30-h.p. White steam car, driven by Mr. Reginald R. Smith (The White Company, 7, Devon Place, Edinburgh); 30-h.p. Beeston Humber, driven by Mr. K. Henderson (the Scottish Automobile Company, Ltd., Edinburgh); 18-24-h.p. Austin, driven by Mr. Roy Chalmers (A. Donaldson and Co., Ltd., Westfield Avenue, Edinburgh); 18-h.p. Adams, driven by Mr. A. Ogilvie (King and Co., Leith Electric Works, Leith); 16-h.p. Albion, driven by Mr. W. G. Maxwell (A. Donaldson and Co., Ltd., Westfield Avenue, Edinburgh); 14-20-h.p. Renault, driven by Mr. H. Clelland (H. and D. Clelland, Belford Bridge, Edinburgh); 14-16-h.p. Argyll, driven by Mr. Baxter (Argylls (Edinburgh), Ltd., 16, Shandwick Place, Edinburgh); 10-12-h.p. Coventry Humber, driven by Mr. David A. Fairley, C.A., secretary to the Scottish Motor Trade Association, Ltd.

IRISH.

THE Irish Automobile Club having found that its existing garage in Dawson Street, Dublin, is too small to accommodate the constantly growing number of cars taken to it, has decided upon a new garage in Lower Belford Street, Dublin. The premises also have openings at Ely Place and Winlor Place, and are within a stone's throw of the famous Shelbourne Hotel on St. Stephen's Green. The new establishment covers not less than 2,000 square feet, and at first only a portion will be utilised, the other being, however, intended to be used as soon as the membership of the club requires the additional accommodation.

DUBLIN AND DISTRICT MOTOR-CYCLE CLUB.

ON Saturday the Dublin and District Motor-cycle Club held a reliability trial from Dublin to Maryborough and back, a distance of about 100 miles. Seven competitors faced the starter, Mr. Chambers, the hon. secretary of the club, starting at 2 o'clock, and the others at intervals of two minutes each, as under:—D. J. Quirke (24-h.p. Ariel), T. A. Batey (24-h.p. F.N.), W. Reilly (2-h.p. F.N.), F. J. Walker (5-h.p. twin-cylinder Rex), J. Br. wne (34-h.p. Triumph), R. H. Taaffe (34-h.p. Triumph). The first arrival at the finishing point was T. W. Batey, who completed the course without loss of marks within 2 min. of the expiration of the minimum time, fixed at twenty miles per hour. He was the only competitor who qualified for a silver medal. H. Taaffe had a two minutes' stop, caused by a short circuit in the thunderstorm, while F. J. Walker had two stops to pump up his tyres.

MR. E. T. HOOLEY has been elected to membership of the Nottinghamshire A.C.

THE Society of Engineers, 17, Victoria Street, Westminster, S.W., is being amalgamated with the Civil and Mechanical Engineers' Society.

ON Saturday last the members of the Kent A.C. were hospitably entertained by Dr. Firth (vice-president of the club) and Mrs. Firth at their residence, Cromer House, Gravesend.

TWO 12-h.p. Stars secured the second and third places in the hill-climbing contest lately held by the Transvaal Automobile Club, a gold medal being awarded for best general results.

IN the 150 mile reliability trial of the North Middlesex A.C., on Saturday, Messrs. C. Smith on his 12 h.p. Darracq, and C. T. Cutler on his 15-h.p. White steam car, were bracketed together for first place.

ROAD REPORTS.

CO. WICKLOW.—An inquiry has been held in Co. Wicklow concerning an application for a speed limit of 10 m.p.h. on about ten miles of the roads of the county.

LISKEARD.—The police have established a trap near the school at West Tap House.

RICHMOND PARK.—The Richmond Park authorities are trapping the roads through there for any motorists who may be exceeding the ten miles per hour limit. We are informed that the keepers place themselves behind the trees, and in one case were on a down gradient.

SUSSEX.—We are informed that Sergeant Waghorn is stationed on John's Cross Hill, three miles north of Battle. Cars are being stopped and the licences of drivers examined. Cars going to Hastings are also being timed and drivers travelling in the vicinity of Battle are urged to be careful, especially on Saturday and Sunday afternoons, when police are about.

HEREFORD.—Those who attend the Hereford meet of the R.A.C. should beware of the dangerous hill known as "Chance's Pitch." It lies between the British Camp (top of the Malverns) and Ledbury. There is a sudden drop and a sharp turn at the bottom, faced by a stone wall. A warning triangle exists, but is reported to be too near to the danger spot to allow time for any driver unacquainted with the road to take full advantage of it.

ON one day in last week a silver bowl, a silver cup, two gold medals, two silver medals and a bronze medal were won by the Daimler motor-cars at various club meets.

OWING to increasing business the British Motobloc Syndicate, Ltd., have removed to more commodious premises, comprising offices and showrooms at 85, Shaftesbury Avenue, London, W., where the latest types of Motobloc cars will be displayed.

CASES AGAINST MOTORISTS.

EXCEEDING LEGAL LIMIT.

Several batches of motorists have been fined for exceeding the speed limit within the last few days at Beverley, Sleaford, Southam, Selby, Coventry, Kingston, Penkridge, Spittlegate (Grantham), Colchester, Belfast, Godalming, and Saltash.

A man who went for a ride on another person's motor-cycle near Chesterfield has been fined 2s. 6d. for not having a licence and 10s. for furious driving, as well as costs in both cases.

Nineteen summonses against motorists, fifteen of which were for exceeding the speed limit, were down for hearing at the Chichester County Bench on Saturday. Fines ranging from £2 to £10 were imposed. At Hoveham on the same day ten cases were heard, fines being inflicted in every instance.

NOT PROVEN.

In the Stirling Sheriff Court three cases of too fast motor-car driving have been heard. In one the chauffeur of the deputy chairman of the Highland Railway Company was charged with having driven a car at 22½ m.p.h. over the police trap at Drymen. The case resolved itself into a comparison of a stopwatch possessed by a policeman and a chronometer owned by the driver. In the end the Sheriff found the case not proven.

DISMISSAL.

At the Barmouth (Merioneth) Petty Sessions, W. R. K. Mainwaring, of Mold, was summoned by Inspector Owen (Barmouth) for contravening Section 9 of the Motor Car Act, 1903, by driving a motor-car at a speed exceeding twenty miles per hour. Mr. D. Guthrie Jones (Dolgelly) appeared for the police, and Mr. T. M. Keene (Keene and Kelly, Mold) was instructed for the defence. According to the information the offence was alleged to have been committed on June 6th, 1908, at the parish of Llanaelidwyn. At the outset it was contended for the defence that the case for the informant must fail. It was a condition precedent to a prosecution for an offence against Section 9 (1) of the Motor Act, 1903, that warning of the intended prosecution should be given at the time the said offence was committed, or written notice subsequently sent to the defendant in compliance with Section 9 (2) of the Act. The objection was not a mere technicality, for the omission to comply with the sub-section had inflicted a hardship on the defendant. For the informant it was urged that necessary notice had been given, but the Bench upheld the objection and dismissed the case.

At the Beaconsfield Police Court, on Monday, a charge against a motorist was dismissed and the defendant awarded five guineas costs against the police. The accused, Mr. Edward Gillett, of Gillett's Motor Works (Ltd.), Inverness Road, Hounslow, was charged with failing to comply with a summons to produce his licence for endorsement after a third conviction for exceeding the speed limit, and he was defended by Mr. Wilfrid Firth. The police stated that on May 3rd last Mr. Gillett was fined £25 and costs for driving at a speed of fifty-two miles an hour. He was ordered to produce his licence for endorsement, but failed to do so, and a summons was issued which was also ignored. Mr. Wilfrid Firth, on behalf of the defendant, said that immediately his client received the summons he wired to the Bench saying his licence had already been endorsed, but this was followed by the issuing of a warrant for his arrest. Mr. Firth said his client was brought on a warrant for not forwarding a licence to be endorsed when that licence had already been endorsed by the clerk. The Bench dismissed the case, and awarded five guineas costs against the police.

At the High Wycombe Borough Sessions, Clive Bowring, of Saxonbury, Ditton Hill, was summoned at the instance of Head Constable Sparling for driving a motor-car beyond the legal limit in the borough, on June 21st. Mr. Gilbert Beyfus appeared for defendant, and pointed out that defendant had been summoned in the name of "Bowring Clive," but he would not raise any objection to that, agreeing to the summons being amended. Mr. Beyfus then proceeded to raise a point of law, contending that defendant had not received proper notice. The notice which defendant received from the police was: "Motor-car P. 1,091. Dear Sir,—On Sunday, June 21st, the above car was driven over a measured distance of two miles: 733 yards in this borough at a rate of speed found to be twenty-five miles 350 yards per hour." As defendant was not stopped, he had not a clear idea of the offence with which he was charged. The Mayor: Have you any evidence of identification?—Head Constable Sparling: No, sir. Mr. Deacon: You admit the car was there? Mr. Beyfus: Yes. Mr. Deacon: The car was there if defendant was not. Mr. Beyfus: But he cannot be held responsible for what his car does. The magistrates dismissed the case.

The case against the chauffeur of Mr. J. W. Orde, summoned at the Bromley Petty Sessions for driving to the danger of the public, has been dismissed.

Dr. Ethel Williams, of Newcastle, was summoned on Tuesday at Hexham Petty Sessions for having driven a motor-car at a speed dangerous to the public at Horsley village on June 27th. Mr. Clark said that Miss Williams did not deny that she was going seventeen miles an hour, but she was driving carefully. She apologised for having transgressed the law, and as she was the first lady who had come before them asked that they should dismiss the case on payment of costs. The chairman said the majority of the Bench had agreed to the suggestion, and defendant would be dismissed on payment of costs.

AN ACQUITTAL.

At Notts Assizes, on Tuesday, Edward Dould was indicted for the manslaughter of Harold Stone. While the accused was driving the deceased and another workman named Peters in a motor-car late on the night of May 9th, the car came into collision with a cab. The occupants of the motor-car were thrown into the road, and Stone was so seriously injured that he died shortly after admission to hospital. For the defence it was urged that the speed had been exaggerated, and that the cab was on the wrong side of the road. The accused was acquitted.

THE LIABILITY OF CAR OWNERS.

In the City of London Court, George Mower sued Major Arthur Pirie for £23 15s. for damage done to his car in Oxford, on August 4th, when the defendant's car collided with it. It seemed that the major's car was being driven by the chauffeur without his master's knowledge. Owing to the collision the car could not be returned until two days later. Mr. Hogg contended that as the chauffeur was out on a jaunt of his own the defendant was not responsible for the man's negligence. The chauffeur said that the carburettor had been altered, and the car had to be tested. That was why he took the car out.

Mr. Glasgow, for the plaintiff, argued that the chauffeur had an implied authority to test the car, and therefore he was mainly on his master's business. He could consequently have taken the housemaid and the cook too without freeing the master from responsibility. The jury found for the defendant, and his costs were allowed.

AN EARLY MORNING DRIVE.

A motorist summoned for driving a car in New Street, Birmingham, at 1.30 in the morning recently, has had his case dismissed at the Birmingham Police Court, his solicitor pointing out that the thoroughfare was quite devoid of traffic at the time mentioned and that there were excellent lights on his car.

DAINGEROUS DRIVING.

Mrs. Hallworth, of Mansfield, has been charged with driving a motor-car in Bridge Place, Worksop, in a manner dangerous to the public. The solicitor for the police said that not only had they taken stringent measures, but they also had civilians on the watch in order to stop reckless driving. The Bench said this was defendant's first offence, but it occurred in the most dangerous part of Worksop, and they could not impose a fine of less than £5.

At Abervele, on Saturday, a charge of reckless motor-car driving at Llanddulas was dealt with. The defendant, who did not appear, was described as Harold D. Balfour, motor-car driver, London. Constable R. Wlands, of Llanddulas, stated that on May 24th, near a dangerous curve below the village, he saw a car coming down the hill from the direction of Colwyn Bay. It was travelling at such a rate that he jumped to one side and held up his hand for it to stop. The driver reduced the speed a little, but then went on again as fast as before. The carriage and pair of the Bishop of St. Asaph then came by, and the Bishop complained to the witness of the reckless manner in which the car had passed him. The Bench imposed a fine of £15 and costs.

WITHDRAWAL OF A SUMMONS.

With reference to the case at Lancaster, when Mr. Herbert Gordon, of the Junior Carlton Club, Pall Mall, S.W., was mentioned as defendant, we understand that the police have withdrawn the summons. On the same day he was alleged to have been in Lancaster he sold his car in London, and had, as a matter of fact, never been in the northern town in his life. This disposes of the matter, and should suggest to the police generally the necessity of avoiding such mistakes, which are displeasing to the motorists concerned and unsatisfactory all round.

THE FOUR-INCH RACE.

THE undermentioned cars have been entered at the ordinary fee, the powers being according to the R.A.C. rating:—25·6-h.p. Rover (two), J. K. Stanley; 25·6-h.p. Hutton (three), S. F. Edge; 25·6-h.p. Arrol-Johnston (three), Ernest A. Rosenheim; 25·6-h.p. De Dion-Bouton, J. W. Stocks; 25·6-h.p. Darracq (three), A. Rawlinson; 25·6 Hillman-Coatalen (two), L. Coatalen; 25·6-h.p. Scat, J. Newton; 25·6-h.p. Vulcan, Thomas Hampson; 25·6-h.p. Coventry-Humber, Walter Phillips; 25·6-h.p. Beeston-Humber (two), T. C. Pullinger; 25·6-h.p. Metallurgique (three), Warwick Wright; 24·8-h.p. Berliet (two), J. E. Hutton; 25·6-h.p. Thornycroft (three), Tom Thornycroft; 25·6-h.p. Vinot (two), Gordon Usmar; 25·6-h.p. Calthorpe (two), G. W. Hands; 25·6-h.p. Deasy (two), Philip Graham; 25·6-h.p. Westinghouse (two), A. Gaal.

The entry list finally closes on August 1st, at 12 noon. Of the entries already received twenty-one are of British origin and fourteen of foreign origin. The race will probably be held on Thursday, September 24th.

FROM the Mansfield Motor Body Company, Ltd., of Victoria Works, Mansfield, comes a copy of their new catalogue of motor body designs. The firm are well laid out for this class of work and are able to turn out bodies to suit any particular chassis.

MR. F. GRAHAM FAIRBANK has written to the United Motor Industries, Ltd., stating that the "Bousfield" Silencer recently fixed to his 10-12-h.p. two-cylinder car has considerably reduced the noise of the exhaust, the vibration or thud of the engine being also markedly lower, without in any way increasing the back pressure.

COVENTRY HUMBER ANNUAL OUTING.

IF any sign were wanting of the prosperity of the motor trade in Coventry it was amply afforded in so far as the Humber Company was concerned when on Saturday morning last some 1,500 of their employees took train, under the happiest conditions, for Llandudno. The weather was perfect throughout the day, with a calm sea for the trip to Bangor, Beaumaris, and Menai Bridge in the afternoon. Mr. Walter Phillips, the works manager, with his able lieutenant, Mr. Napier, accompanied the party, and under the management of the joint organising secretaries, Mr. T. Harrison and Mr. C. Willson, the entire day's proceedings passed off without a single hitch. A pleasant little ceremony took place on board the "Marguerite" when Mr. J. R. Dixon, the hon. treasurer of the outing, in the name of the staff and a few friends, presented their chief with a handsome ring. In the evening the executive staff and guests were entertained by Mr. Phillips at the Grosvenor Hotel. At the conclusion of the dinner, and after the loyal toasts had been honoured, Mr. C. J. Band proposed the Humber Company, and, dilating upon the boundless energy of their president, Mr. Phillips, said their works were now capable of executing orders to any extent the trade could provide. Mr. Phillips, who on rising was received by a demonstration of the greatest enthusiasm, thanked the members of his staff for the friendship they expressed towards him, and gave evidence of the perfect understanding existing between them.

Thus terminated a most successful and enjoyable outing, and it was a merry and contented party that found its way, at 10 p.m., to the station for the return journey to Coventry.

Some of the employees at the Coventry Works of Messrs. Humber, Ltd.

The photo from which the accompanying illustration was reproduced was taken at 6 a.m. on a recent Tuesday morning, and shows the workmen passing through one of the main avenues, which is about one-third of a mile in length. Mr. W. Phillips, the manager, is seen standing in the front row, fourth from the left.

COMPANY NEWS.

ARGYLL MOTORS, LTD.—A circular has been issued to the shareholders of the Argyll Motors, Ltd., summoning an extraordinary general meeting at Glasgow on Tuesday next to consider the advisability of securing a voluntary winding up of the company. A circular to agents adds that the directors do not anticipate any stoppage in the business, and express the hope that a suitable scheme for reconstruction may soon be evolved. Meanwhile agents are asked not to relax their efforts to effect sales. The company was registered March 11th, 1905, to take over as a going concern the Hoxier Engineering Company (Limited), which was registered March 31st, 1900. The authorised capital is £650,000.

DELAHAYE AND CO., LTD.—On Tuesday the second ordinary general meeting of Delahaye and Co., Ltd., was held at the Great Eastern Hotel, London, E.C., when the chairman, Mr. A. A. Campbell Swinton, reported that the gross profits had increased to £29,035, and the net profits amounted to £21,604, as against £15,283 for the previous year. The capital of £165,000 is now all fully paid, and the stock in hand £70,768. £5,000 is carried to general reserve, and after payment of dividends on the preferred ordinary shares a return of 6½ per cent. on the ordinary shares has been approved, with £3,674 to be carried forward. The turnover for the past year amounted to £210,840, and for the first five months of 1908 a progress of 13 per cent. over the business for 1907 was made. Agencies have been established with Messrs. Holmes, 37, Margaret Street, Cavendish Square, London, W., and of Derby, and also with Messrs. Hobson, Ltd.

FORTHCOMING EVENTS.

JULY.

- 11th (S.).—Provincial meet of the R.A.C. at Hereford. Lunch at the Green Dragon Hotel; visit to Ledbury Park, and dinner at the Assembly Rooms.
Essex C.A.C. gymkhana at Brentwood.
Aston Hill climb of the Hertfordshire C.A.C.
Essex M.C. gymkhana at High Beech.
Leicester A.C. hill climb at Kettleby.
Berks A.C. meet at Ascot.
Bristol and Glos. A.C. dinner at Cheltenham.
Derby and District A.C. compete for the Du Pré Cup.
Hull and East Riding A.C. reliability trial to Scarborough.
Leicestershire A.C. Kettleby hill climb.
Lincolnshire A.C. meet at Crowland.
Wolverhampton A.C. hill climb at Coalport Hill.
13th (M.).—Entries close for R.A.C. dust trials.
13th-13th.—A.C.U. Land's End to John o' Groat's Trial.
15th (W.).—Hastings Automobile Meeting organised by the Motor Club.
Motor parade at 11 a.m.; gymkhana at 2:30 p.m.
16th (Th.).—Club meet of the Netts A.C. at the Hop Pole, Ollerton.
18th (Sat.).—Annual gymkhana of the Herts C.A.C. at The Grove, Watford, by permission of the president, the Earl of Clarendon.
Gymkhana of the Kent A.C. at Maidstone.
Meet of the Liverpool and Cheshire A.C.'s at Delamere.
New Forest and Dorset A.C.'s joint hill climb.
Hill Climb of the Essex C.A.C.
Derby A.C. Uttoxeter Challenge Cup Competition.
Lincolnshire A.C. meet at Grimsby and drive to Cleethorpes.
Manchester A.C. hill climb.
20th (M.).—Entries close for the O'Gorman trophy.
20th and 21st.—The R.A.C. dust trials at Brooklands.
23rd (Th.).—Gymkhana of the Cambridge A.C. at Chippenhams Park.
Hill climbing competition of the Hull and East Riding A.C.C.
25th (Sat.).—Petrol Consumption Tests of the Motor Cycling Club.
Annual Open Hill Climb of the Midland A.C. at Shalsley Walsh.
Committee meeting of the Kent A.C. at Harne Bay.
Motor Union Provincial meet at Harrogate.
Cheshire A.C. hill climb.
Lancashire A.C. open hill climb.
North Yorkshire A.C. gymkhana at York.
West Surrey A.C. gymkhana at Godalming.
26th (Sun.).—Southend M.C. run to Coach and Horses, Quendon.
29th (W.).—Lincolnshire A.C. at Skegness.

LIGHTING-UP TIMES—LONDON.

July 11th—9.13 13th—9.11 15th—9.10 17th—9.8
 " 12th—9.12 " 14th—9.11 " 16th—9.9 " 18th—9.7

To find the approximate lighting-up time in July for Birmingham 13 minutes should be added to the above times, 18 for York, 22 for Manchester, and 45 for Glasgow.

AUTOMOBILE ACCIDENTS.

A TAXI-CAB and a cyclist collided in Manchester, and as a result the steering gear of the cab became locked. The driver lost control of the cab, and it ran on to the footpath and knocked down a woman, who was taken to St. Mary's Hospital, where she was detained.

A SERIOUS motor-car mishap, which resulted in two persons sustaining serious injuries, has occurred near Nantwich. The occupants of the car were Mr. Harry Creighton, of the firm of Moore and Creighton, motor-car agents, Nantwich, Mr. Horace Woodrow, of Nantwich, and a local postman, who was picked up on the road. The car was being run on a trial trip, and when approaching Hamor Green, going towards Nantwich, the tyre of the back driving-wheel burst. The wheel collapsed, and the occupants were shot out on the road. Mr. Creighton's leg was severely gashed and he is suffering from concussion and internal contusions.

AN inquest was held at Dorking on Saturday on the body of Miss Bertha Hayler, who died from injuries received in a collision with a motor-car from Streatham. Evidence was given to the effect that Miss Hayler, during a run with her club, was turning a corner into the main road, and was unable to avoid the car, which was travelling at a speed of from ten to twelve miles an hour. She was thrown on to the bonnet of the car, and fell beneath the wheels. The jury returned a verdict of "Accidental death," and exonerated all parties from blame. They expressed the opinion that the under-carriage of motors generally was too close to the ground, and recommended that a danger signal should be erected near the corner where the accident occurred.

MR. CHRISTIAN C. JACOBSON, a member of the Suffolk County Council, had just started for home on Tue-day, after attending a Council committee meeting in Ipswich, when his motor-car collided with a cyclist, who fell on to his head. Mr. Jacobson got out to render the injured man assistance. As soon as he resumed his seat in the motor-car he appeared to faint, and expired. Death is attributed to heart failure as the result of shock from witnessing the accident.

EXPORTS OF BRITISH MOTOR-CARS AND PARTS.

IN our issue of January 18th last we published some figures showing the total shipments of motor-cars and parts from the United Kingdom during the past two years. We are now able to give a table indicating the various countries to which the shipments were made:—

EXPORTS OF BRITISH MOTOR-CARS.

| To | 1907. | 1908. |
|----------------------------------|---------|--------|
| | £ | £ |
| Holland | 14,397 | 9,994 |
| Belgium | 9,209 | 3,420 |
| France | 18,314 | 15,081 |
| Italy | 44,162 | 20,686 |
| Egypt | 7,847 | 8,433 |
| United States | 29,370 | 36,507 |
| Argentina | 13,225 | 22,534 |
| Other foreign countries | 100,285 | 45,400 |
| Cape of Good Hope | 24,021 | 17,310 |
| Natal | 16,381 | 14,183 |
| Bombay | 107,410 | 59,693 |
| Madras | 16,029 | 7,198 |
| Bengal | 51,237 | 30,653 |
| East Bengal and Assam | 935 | 379 |
| Burmah | 8,607 | 8,273 |
| Australia | 168,706 | 89,281 |
| New Zealand | 123,428 | 62,453 |
| Other British Possessions | 104,084 | 43,931 |

£857,647 £495,399

EXPORTS OF MOTOR-CAR PARTS.

| To | 1907. | 1908. |
|----------------------------------|---------|---------|
| | £ | £ |
| Germany | 12,612 | 3,711 |

£467,311 £313,395

Total of Cars and Parts. £1,324,958 £818,794

BUSINESS NEWS.

SIR LINDSAY LINDSAY HOGG has purchased a Daimler 42-h.p. limousine.

DURING the progress of the hill climbs in connection with the recent trials the manner in which Dunlop grooved tyres enabled competitors to get away, owing to the superior grip they afforded as compared with plain rubber tyres, was the subject of common comment.

THE Coventry Chain Company, Ltd., are now devoting attention to the production of spur-wheels and pinions for the motor trade. The illustration they have sent us to indicate their capabilities in this department shows gears ranging from a few inches in diameter up to nearly six feet the latter having 137 teeth.

ANOTHER instance of the continuous reliability of Humber cars has been provided by Mr. W. Marshall, of Stanford Cottage, Bowden, Cheshire, who has been running a 15-h.p. Coventry Humber landaulet since August, 1906. During this time it has covered over 40,000 miles, and has never been laid up for repairs.

ON Wednesday the London and Paris Exchange Motor Agency, Ltd., held an auction sale of cars, tyres, &c., at 55-59, Shaftesbury Avenue, W.C.

THE Kempshall Tyre Co. of Europe, Ltd., have evidently found the advertisement which they obtained by sending their sandwichmen by coach to the Derby to be of the right type, as we noticed they were in evidence at Henley, appearing alternately in the town and along the towing path to the Reach, each with his tyre as usual.

AN exceptionally good opportunity to secure a genuine second-hand car is offered by the Ariel Motor Company, Ltd., 101, New Bond Street, W., who take any make of vehicle in part payment of Ariels. They have at the show-rooms some forty modern cars of various makes, which they are offering at low prices.

IN the provisional results in the Scottish Trial, Mr. Warwick Wright's 26-h.p. Metallurgique car, No. 57 in Class E, was not given a non-stop run on the second day, but he has now received a letter from the secretary, Mr. R. J. Smith, to the effect that that run of the Metallurgique is also to be allowed as a non-stop. This will now make a complete non-stop for the Metallurgique throughout the Scottish Trials, and, taken in conjunction with the fact that the car obtained the "fastest time" four days out of five in the hill-climbs, and was second on the second day, constitutes a good record.

THE Motor-Car Journal.

VOL. X.]

LONDON, SATURDAY, JULY 18, 1908.

[No. 489.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

THE Ferries Committee of the Birkenhead Corporation has decided to run a Sunday service of luggage boats from the Prince's Landing Stage, Liverpool, to Woodside, Birkenhead. The boats will run hourly from 10 a.m. to 10 p.m. and double the ordinary tolls will be charged on these steamers. While the luggage vessels are running motor-cars will not be conveyed in the passenger steamers. The ordinary rates for the ferriage of motor-cars by luggage steamers are 8d. for cars not exceeding 11 ft. in length; 1s. for a maximum of 14 ft., 1s. 6d. for those not more than 17 ft., and 2s. for the cars beyond that measurement. For motor-buses and charr-a-banc the charge is 3s. On passenger steamers the rates for motor-cars are from 2s. to 3s. 6d. and the vehicles must not exceed 6 ft. 3 in. in height and 6 ft. 5 in. in breadth over all. We understand that this improvement in the arrangements for motor-cars crossing the Mersey is due to the well directed efforts of the Liverpool A.C. and Self Propelled Traffic Association.

Motor Traffic in London.

MUCH has been said and written in advance of the deputation to the Home Secretary from the City of London. This was received on Tuesday, and, as became its representative character, was most respectfully welcomed by Mr. Gladstone. The Lord Mayor took the right line in disclaiming any feeling of hostility to the motor industry, but was none the less emphatic in asking for protection from the noise caused by the growing motor traffic. On this point we would refer the local authorities to an article in the current issue of the "Industrial Motor Review," in which the writer shows that this particular nuisance of noise is greatest in the narrow streets, and that when Fleet Street was recently closed to such traffic motor-buses were sent along the Embankment with a lessened noise that gave rise to no complaints. This matter has evidently been considered by the Home Office, but Mr. Gladstone is averse to the police incurring all the odium of diverting motor-bus traffic from one street to another. One interesting fact disclosed by Mr. Gladstone was that motor-buses are now carrying passengers at the rate of 200,000,000 a year, and that people who used them daily had gained half an hour or an hour of additional home-life by means of the rapid transit which they provided. The total number of motor-buses running on April 13th, 1908, was 1,137. During the year the police reported 2,105 for dropping oil, 188 for emitting smoke, 936 for defective brakes, 362 for defective steering apparatus, and 4,862 were reported as being unfit for traffic on account of noise. The police reported a total number during 1907 of 8,507. That, of course, did not represent so many separate buses, as the same vehicle might be reported several times, but the figures showed the energetic way in which the police had been dealing with

defective vehicles. During the present year 1,876 had been reported on account of noise. The outcome of the deputation seems to have been a suggestion from Mr. Gladstone that the L.C.C. and the Corporation of the City of London should act in unison in putting Section 10—relating to the restriction of speed or prohibition from particular highways—of the Motor-Car Act into operation.

Fines at Haywards Heath.

FINES have ruled high at Haywards Heath Police Court this week, and on Monday the magistrates managed to clear off most of the Easter and Whitsuntide cases—many of which were caught in the long distance trap of which much has lately been heard. P.-s. Waghorn has now been joined by P.-s. Huntley and P.-s. Bugden, and the trio had as area of observation the road from Patcham to Slaugham at Easter, and from Newtimber to Bolney and Pitshead Crossways, Cuckfield, at Whitsuntide. Despite one motorist's protestations of sorrow he was fined £15 and costs—a sum which, as he feelingly told the Bench, adds materially to the upkeep of a small car. Fines ranged from £5 to £15—substantial enough to worry the motorist of moderate means, who takes his trips without any desire to inconvenience other people and would wish to be allowed to go his way unmolested by a system of police espionage that is neither desirable nor useful.

Common sense and the Bench.

NOT often do magistrates discriminate between the cases where speed is urgent and those where it is indulged in merely in wantonness and thoughtlessness. At Greenwich, however, a doctor, who was summoned recently for exceeding the legal limit at Catford, raised the defence that he had been called to a patient who was very ill. This, the magistrate agreed, was one of these occasions when discretion might be exercised; in fact, he could not take upon himself the responsibility of fining the defendant. The doctor was therefore released from the case on payment of the costs of the summons.

Motor-car Imports and Exports.

A RENEWAL of activity in the imports of foreign motor-cars and parts into this country has to be recorded for the past month, the returns for June showing an increase as compared with the corresponding month of 1907 of £25,166. Of complete cars only 372 were imported during the month, of the value of £133,999. The number of chassis imported was 309, valued at £113,157, while parts were responsible for £180,022, giving a combined total for June of £427,178, as against £402,012 in the corresponding month of last year. The gross imports of cars (2,303 in number), chassis (1,576), and parts during the first six months of the current year amounted to only £2,187,098, as contrasted with £2,488,902 in the corresponding period a year ago. Turning now to the section relating to the exports of British automobile productions, these show a slight decrease—from, in the aggregate, £84,040 in 1907, to £83,993 last month. Altogether 138 complete cars (£48,567) and 7 chassis (£3,697) were despatched from this country in June, as well as parts to the extent of £31,729. The gross ship-

ments during the six months ending with June are returned at £580,019, which contrasts with £583,706 in the similar half of last year.

No Favour for Doctors.

HITHERTO the medical profession of New York have been favoured with regard to the speed of their motor-cars whenever they have been carrying a red cross sign provided by the police authorities. This has secured them a passage in crowded traffic when engaged professionally, and has enabled them to have a privilege which has been partially suggested by some metropolitan magistrates for doctors in the City of London. Now, however, no further signs are to be issued, and the police department of New York intends to disregard any that may be used when carrying out traffic regulations, so that the only vehicles able to claim right of way during processions, &c., will be those of the police, fire department and postal service. Apparently no reason has been given for the change in policy, and we should be pleased to hear from some of our readers in the States as to whether the authorities have attempted to justify their action—a new policy which hardly seems in accord with the enlightened plan that has hitherto prevailed.

Taking the Orphans at Hartford Conn., U.S.A., for a motor excursion.

The Speed Limit.

AN avalanche of questions with regard to the motor traffic in the country was asked of the Local Government Board in the House of Commons by several M.P.'s, on Monday, prominent among whom were Messrs. Straus, Cathcart Wason, and Harold Cox. A suggestion was made as to whether the Motor Car Act, 1903, should not be excluded from the Expiring Laws Continuance Act this year, and although the Speaker disallowed the question without notice, we understand it is likely to be raised again by the member for the Orkney and Shetland Isles. Mr. Cox was concerned as to the mechanical limitation of the speed of motor vehicles, and also as to the distance of the under-carriages of motor-cars from the ground. On both these points Mr. Burns was obdurate; with regard to the former he was able to call the Royal Commission for Motor Cars to witness in his favour, and declared that he could not see his way to adopt any such proposal. Neither is he sanguine with regard to the probability of the latter suggestion. The result of the catechism was an important declaration when the president of the Local Government Board declared against any maximum speed limit being imposed, his view being, that the enforcement of Clause 1 of the present Act was sufficient to meet the case.

Further he professes that he is rather afraid to approach the Motor Car Act on that account, as the speed limit would probably be "knocked out altogether," a course that would probably arouse the ire of many of the present supporters of the right honourable gentleman. Replying to another question with regard to the increased costs of the maintenance of main roads, he intimated that no promise could be given to introduce legislation relating to motor traffic during the present session of Parliament.

Motorists to Pay for the Roads.

AT the last meeting of the Brompton (Cumberland) Rural District Council a resolution was received from a similar body at Dalton-in-Furness asking for support to a resolution in favour of an adequate re-imbursing tax on motor-driven vehicles, the proceeds of such to be employed in the maintenance of the highways. When it was first suggested that motorists should express agreement with the idea of increased taxation with a view to the addition being applied to the maintenance of the roads, we expressed a view that ere long some local Council would go even further and suggest that motorists should be taxed so as to pay for the difference between the cost of up-keep at the time when only horse-drawn vehicles were on the road, and now when the automobile is playing a growing part in the locomotion of the country. The Dalton Council is evidently anxious that this should be done, and the fact that the authorities of Brompton have endorsed their opinion shows how attractive the idea will be to those who have to collect the rates of the country. At the same time we would emphasise the fact that this is a disastrous policy and one that is not likely to be tolerated by Parliament; in fact, the time is coming when motor traffic will be in the ascendant, and it will be futile for local councils to suggest the imposition of such a tax, which could only have the effect of retarding the progress of a really great national industry.

Signposts at Hythe.

WE do not understand the attitude of the Town Council of Hythe with regard to making the way through the town plain to strangers visiting this country. For some time a reciprocal movement has been considered for placing signposts on the road from Boulogne to Paris and also from Folkestone to London for the convenience of motorists. The matter has gone well forward and has just come up at the Hythe Town Council, when application was made for permission for the signposts to be erected in Hythe. The Borough Surveyor suggested that the presence of such signs would tend to accelerate the speed of cars through the town, and various councillors speaking to the same effect, the proposal was negatived. But surely such discourtesy to French visitors is not likely to be appreciated in the town; all that was wanted was that they should be guided on their way without the uncertainty that often is associated with journeying in a strange place. Evidently the Council has felt somewhat ashamed of its attitude, for, on the suggestion of the Mayor, it has been decided to give permission for three small posts to be erected in and near the town.

The A.A. in Scotland.

RADIATING from the south, the Automobile Association has made its way to the north; from Manchester it has served a large portion of the country, and now the development of interest in its work has carried it beyond the Tweed. The arrangements were made with the usual A.A. celerity—once the policy had been decided. On Thursday of last week Mr. Stenson Cooke went to Manchester for a northern conference, meeting at the headquarters in Lancashire. At 9 a.m. on the following morning he met Col. W. J. Bosworth, the chairman of the Association, at Glasgow. Together they inspected 120 miles of Scottish roads, attended a meeting of the Scottish Patrol Com-

mittee, engaged and fitted up offices in Glasgow for the Scottish branch of the A.A., and had an important interview with a neighbouring Chief Constable on the behaviour of motorists in his county—all in one day's work.

The Dust Trials.

It is officially intimated that the statement which has been published by the R.A.C. that the manufacturers of steam cars consent to their cars running *hors concours* for the Dust Trials, and therefore to their not being allowed to compete for the prizes, was made under a misapprehension. The Dust Committee of the Club, however, in order to encourage improvements in the petrol car as regards dustlessness, has decided to adhere to the original Regulations for the 1908 Dust Trials. That relating to this matter is as follows:—In 1907 the steam cars showed as a class such good results for dustlessness

defines very rudimentary matters. The little book is divided into five parts, dealing with the petrol engine, the transmission and the chassis, tyres, the duties of a driver, and the laws and regulations to be observed if acquaintance with the police court is to be avoided. As an introductory guide to the subject Mr. Knight's catechism is to be welcomed.

Traps in Scotland.

AN esteemed correspondent in Scotland, who is both a motorist and a J.P., writes to inform us that the Kirkcudbrightshire police are now busy having distances measured and watching motorists and stopping them to examine drivers' licences. Our correspondent was stopped recently and his driver's licence was examined, while other motorists were also stopped in a similarly harassing fashion. There is a police trap on the Dumfries-Castle Douglas road between Crocketford and

The A.C.F. Grand Prix Race.—The Scene on the arrival of Hemery, who was the first to complete the full distance.

that the Committee decided that this year the Competition should be limited to petrol cars only. In order, however, that steam cars should obtain full public credit for their dustlessness, it was decided that they should run *hors concours*, and be bracketed with the actual competitors. Forty-one entries have been received for the trials, which will take place at Brooklands on Monday and Tuesday of next week.

A Catechism.

A WELL-KNOWN contributor to the M.C.J., Mr. John Henry Knight, of Farnham, is responsible for a new "Catechism of the Motor Car" just published by Messrs. Crosby Lockwood and Co. Within nearly a hundred pages about 320 questions and answers are given in explanation of the construction and working of a modern motor-car—in a form useful alike for owners, drivers and students. It does not aim at learned disquisition, but is couched in simple language and

Dumfries. Another on the Castle Douglas-Kirkcudbright road after crossing the river Dee at Threave Bridge, about two and a half miles from Castle Douglas, and towards Kirkcudbright, a trap is also on the Dumfries-Castle-Douglas road, at the ten-mile limit warning post into the town of Castle Douglas. Traps on the Dalbeattie-Corsock road between Bridge of Ure Post Office and towards Corsock, close to the Bridge of Ure Post Office, will be worked on Wednesdays—being the Dumfries market days.

A HOLIDAY camp for motorists is being organised by a well-known East Anglian motorist at Heacham near Sandringham Norfolk. It opens to-day (Saturday).

ON Wednesday the motor gymkhana and carnival organised by the Motor Club in conjunction with the Local Entertainments Committee took place at Hastings before a good assembly of visitors. Many well-known motorists competed in the several events, a large party having left London on Tuesday, travelling by road from the Motor Club.

THE R.A.C. AT HEREFORD.

MANY times during recent years motor-cars have enlivened the streets of the ordinarily quiet city of Hereford. In connection with the famous Light Car Trials and also the Frome's Hill climb—the latter abandoned for the present year—the automobile has visited the ancient place in numbers. Civic welcomes have been cordial, the police have been friendly, the road surveyors have been considerate. Such a triple combination of good qualities led the Royal A.C. to willingly visit Hereford on the occasion of their second provincial meet for the present year. Unfortunately the good weather which made the Nottinghamshire gathering such a success had forsaken the cider county on Saturday. The unfriendly rain kept many away from the event—to which the recent accession of the Bishop of Hereford to the list of vice-presidents of the Motor Union added a snip of piquancy.

The proceedings followed orthodox lines. A mayoral welcome spoken by Mr. James Mitchell opened the proceedings, and then followed the business meeting, over which Mr. Robert Todd presided in the absence of H.S.H. Prince Francis of Teck,

where Dr. Sinclair gave an organ recital. Then in the afternoon there was an excursion to Ledbury, where the motorists were most hospitably entertained by Lord Biddulph. The weather was somewhat dull and showery, and instead of proceeding thither by a route including Monmouth and Ross, the motorists went directly to Ledbury, where about forty cars were present. The visit to the pretty border town was regarded with much interest, and the arrival of the cars was watched by a large number of the inhabitants. A short time was very pleasantly spent in strolling about the demesne, and in watching the deer disporting on the rising ground of the spacious park. In addition to the members of the club and their friends, there were a number of visitors from Hereford and other parts, including the Mayoress of Hereford (Miss Mitchell).

In the evening the dinner took place in the Hereford Town Hall. Mr. Robert Todd presided, and gave the toast of "Lord Biddulph and the officers and members of the Herefordshire A.C." Just at the time when the railways came in, he said, the roads were being improved and strengthened; then nothing was done for about fifty years, when the cyclists demanded something better, and then the more influential body of motorists came

[Tulley and Son.

the chairman of the R.A.C. Reports of the Organising and Legal Committees were presented. These dealt with several important matters. The principal subject was that of inconsiderate driving, which, it was stated, was receiving serious attention. The General Committee and the Organising Committee had received authority to confer and take suitable action to endeavour to suppress the evil, because it was one which had caused considerable ill-feeling against motor-cars and done great harm to the movement. The Legal Committee referred to specific complaints that had been made and the actions that had been taken against individuals. It was stated that 100 candidates had been elected to individual associateship, and the North-Eastern Automobile Club had been accepted for association in the new scheme with the Royal Automobile Club. The total number of individuals included in the arrangement was reported to be 14,700. An application from the Motor Union of Western India for assistance in dealing with two grievances to motorists and the motoring industry in India was considered and dealt with.

An inspection was made of the Town Hall and the Cathedral,

along. Wise county surveyors and County Councils at once recognised the position and set about improving the roads. At one time much prejudice existed against motorists, but that was rapidly dying out, and five years hence very little would be heard against them, the public realising that motoring was an excellent means of travelling and that the wants of motorists would have to be provided for.

Lord Biddulph, responding, said it had given him great pleasure to see the members of the R.A.C. at Ledbury Park, and when they next came that way he should again have much pleasure in entertaining them.

Other toasts followed, and the President, acknowledging the cordial welcome which had been given the R.A.C., hoped it would not be the last time they would come to Hereford.

In deciding a case against the driver of a motor-cab at Nottingham the other day Mr. T. S. Birkin, the chairman of the bench, said that as a motorist he desired to say that the police in Nottinghamshire were most considerate.

"THE SCARLET RUNNER."

MR. and Mrs. C. N. and A. M. Williamson are novelists and motorists. Recalling some of their most popular volumes, we remember the "Car of Destiny," with the automobile adventures of its Spanish hero; the "Botor Chaperon" and its romance of the Dutch waterways; the "Princess Passes," with its combination of pedestrianism and motoring in the regions of the Alps; the "Lightning Conductor,"

"An Amazing Vehicle."

with speedy travel in France and Italy; "My Friend the Chauffeur," who enjoyed himself at Monte Carlo and by the Italian lakes; and now comes another, the "Scarlet Runner"—obviously, despite the prejudiced protestations of our market gardener, a motor-car romance. The chapters have chronological significance, commencing with "January: the Car and His Majesty," and ending with "December: Christopher and the Chauffeuse."

Many things happen in the intervening months. Christopher Race has a motor-car, and, in order to demonstrate to a rich and imperious uncle his capacity for earning a livelihood, he plies for hire. Of course, his first "fare" is an important Imperial personage, who is attracted by his demeanour no less than by "the glittering bonnet, which had no fewer than six cylinders of latest pattern." From mystery we get to excitement in Chapter II., and a girl in a train is chased by a man in a car. How this proceeds is thus described:—

Scarlet Runner had sped under the shadow of a ruined castle, and was nearing Ardwanage, when a train which had not yet gathered full speed after leaving the station ran towards them along the line, that here lay parallel with the road. Race had slowed down for a frightened horse, and he was in the act of putting on speed again when Western sprang up in the seat beside him. "Turn—as quick as you can," he stammered. "Catch that train. She's in it!" The smoke of the locomotive trailed its dark flag along the sky, and Scarlet Runner hurled herself in pursuit. The heavy engine drawing its huge load could do forty miles an hour on an even track; the light car, clean and springy as a trained athlete, could sprint at least twenty miles faster on the road, but that road must be clear, and there came in the skill of the driver. Christopher Race was a driver born, not made. His eye saw and understood with the quickness of light. His hand and foot moved with automatic precision; his nerve was unshaken. Western admired him, and for the moment compared the sport of ballooning unfavourably with that of motoring.

But, despite the speed and the nerve, when the race was over—spoiled by a misplaced level crossing—"they had lost." It was fortunate for the novel, though desperately irritating to the hero. Misfortune followed, and again the motor-car is requisitioned and Christopher is sent "hurrying off on his quest of life and death." This time we have a graphic account of a run on the Bath Road, enlivened by wrong scents at cross-roads, and the dilatory replies of villagers who seemed singularly unobservant. But the density of bucolic humanity was not the only disturbing element on the journey. A storm came on:—

Through rain and darkness he spied at a distance, across wide lawns,

a long low house, whose irregular shape was cut, sharp and black, out of the sombre fabric of the sky. Christopher saw no lights, but intervening shrubberies might hide some windows of the lower floors; and the agent had said with certainty that people were living in the house. Race had slowed down, for the white glare of his lamps on pale mud and wet grass was bewildering, but he was proceeding gently when, with a sudden bump, Scarlet Runner's front tyres struck some tenre yet curiously yielding obstacle. Surprised, Christopher stopped the car so abruptly that inadvertently he stopped the engine as well. Instantly he jumped down to see what was amiss, and even the famishing chauffeur forgot his anguish in this new excitement. The obstruction, whatever it might be, was mysteriously invisible, but in a moment Christopher had stumbled over a thick wire tightly stretched across the drive at a height of twelve to fifteen inches above the ground. Had Scarlet Runner been going at an ordinary pace, there would certainly have been an ugly accident. As Christopher pitched forward, and righted himself hurriedly, the chauffeur cried out, and would have broken into excited questioning, but Race silenced him with a raised finger of warning. The chauffeur kept his place, and Christopher took the electric torch from under the front seat. Armed with this he stepped over the wire, and discovered in the fresh mud clear traces of a motor-car's pneumatics. They passed beyond the obstacle and disappeared behind a curtain of darkness, making it evident that the wire had been stretched since the Collingwoods had gone by—either driving to the house or leaving it.

Of course after that we are not surprised to read of a burglary in a mansion in propinquity, and a whole train of circumstances of so startling a character that some of the leading actors later go to Italy for change of scene, considerations of health and other substantial reasons. Back again in England—in July—we are introduced to a new automobile invention which is to be tried on a stretch of hard sand on the East coast. It was early when Race drove thither, performing law-breaking feats of speed on the way. The invention was the design of a young motor enthusiast.

It was a very clear invention, for at a stroke it revolutionised all existing systems of transmission, and did away with gear-box, pinions, and clutch. The engine worked a pump, whose business was to compress oil and force it under high pressure to two turbines on the back axle. The turbines turned the wheels, "and there you are," as the inventor explained, exulting over his model. The system was capable of infinite gradations of speed, by guiding this stream of oil towards the

"Christopher was obliged to ask questions in the village."

centre or towards the periphery of the turbines. Owing to the beneficent nature of the transmitting force the mechanism was smooth and silent as the motor of a dream, and a great proportion of the engine power was able to act directly on the wheels. The idea had instantly caught Race's fancy. He loved his car as most men love their sweet-hearts, and could not bear to let Scarlet Runner lack anything which might bring her to perfection. Her transmission gear was already of the newest pattern, with direct drive on the top speed; still, Christopher had to admit to the inventor that much engine power was lost in getting to the wheels, and in the hour he decided upon adopting the proposed plan. Scarlet Runner, thus regenerated, had come out of a London

workshop only two days ago, her owner proud that she should be the first car in England to inaugurate a new era in automobilism. Such tests as could be had in London streets had been triumphant; and now here was Christopher with his scarlet darling heart and engine both beating in the hope of a long, satisfactory trial, with the sea and the rising sun as sole witnesses.

Getting near the seashore, and within thirty yards of a group of men in the water, Race then slackened speed, and would have turned, had not one of the men seen him and begun to shout and beckon. At the same moment several others broke away from the group to hurry across the sand towards the approaching motor-car; and Christopher saw, to his extreme surprise, that the thing they had surrounded was a half-submerged automobile. In a second all desire to depart was burnt up by a fire of curiosity. Instead of retreating, he drove nearer; so near that, faint as was still the light, he could see the make and colour of the drowning car.

She was, to the eye of an expert in such matters, unmistakably a Hansard, of a pattern now superseded. Of fifteen to twenty horsepower, perhaps, she had an old-fashioned back entrance tonneau; but she had doubtless been a fine car in her day, her motor might be as good as ever, and apparently she was still valued by someone, since her dark blue paint was fresh, and the leather cushions, of a colour to match, quite new—facts emphasised rather than concealed by her soaked condition.

Here was a mystery indeed—thickened to a considerable degree when the fact that the number of the motor had been chiselled off proved that its abandonment had been an act of deliberation. There was a great hue and cry, the "Daily Recorder" specialising on the subject and raising quite an agitation, which promptly fell when it was shown later that "there never was any mystery except what the 'Daily Recorder' made." It would probably be unfair to the authors to tell of the eventful months of August, September, October, and November. December becomes quite motorious—almost imaginatively so, for we find the Royal Automobile Club organising a race and taking temporarily a new garage to house the competitors in. Everyone was interested, for not only was a well-known millionaire offering a £10,000 prize and several cups for the encouragement of originality among inventors, but most of the motor-cars themselves were worth seeing. Everyone was there, including "Sir John Maverick, ardent motorist, millionaire proprietor of the 'Man on the Car,' and the organiser of the freak race," which was intended, he said, to assist poor inventors in the way of finance. Despite that it was December in England, ladies "trailed their graceful frocks out of the restaurant" to see the great event; so that, apparently, the weather was better behaved than quite recently.

The great freak race was to start from Regent's Park and finish, after a roundabout thousand-mile run, at Edinburgh. It was not to be a speed test, nevertheless elaborate preparations had been taken to protect the public, and there was a tacit understanding that for this occasion there were to be no police traps. Scouts told off by the Automobile Club and other organisations were to be stationed at all dangerous spots to warn cars to go slowly, and any chauffeur driving to the public danger would be at once struck off the list of competitors. Early on the morning fixed for the start automobiles began to move out of the big garage and take up their allotted places. Never before had been seen such a collection of fearful and wonderful cars. It reminded many of that famous foggy November day in 1896 when motors were first allowed to run on English roads, and twenty or thirty coughing, barking, shaking machines started on the historic run to Brighton. Everyone felt that this occasion was historic. Accustomed for so long a time to the conventional design of motor-cars, people could not restrain their laughter at some of the extraordinary-looking creatures that came to the starting point. Inventors seemed to have taken full advantage of the licence allowed by the conditions of the race, and it would be difficult to imagine an odder collection of self-propelled vehicles. Race himself stared round him, bewildered, as he took the place that had fallen to him by lot, and wondered if he had not stepped by accident into pantomime land. Scarlet Runner looked strictly conventional among all her queerly-shaped rivals, as all arrangements for the oil drive were, of course, under her body, and to the ordinary eye Christopher Race's car proclaimed no special feature entitling her to rank among the freaks.

But there were freaks, and among the dozen or so of excellent illustrations in the volume is one of the car and the chauffeuse whom Christopher subsequently married—the old-fashioned conventional ending that comes with something of the charm of freshness in these days when novels have turgid endings

and indefinite finals. "Scarlet Runner" is one of those novels where the interest receives acceleration with every chapter until the end; and we place the book on our shelves as one worthy of re-reading when the evenings lengthen again. But the "freak" that carried the "fair" must be described, and therewith end our quotations.

An amazing vehicle—if vehicle it could be called—was gliding, silent and snake-like, towards the empty place in front of Scarlet Runner. In shape it suggested a gigantic cigar; in colour it was black, and its jointless metal casing glittered in the wintry sunlight. Half way down its length the great cigar was cut out into a nick, and in the nick sat, very upright and alert, the slender figure of a woman. She wore a leather jacket; her hair was covered by a kind of curtain descending from her leather cap, and fastening under her chin; and her eyes looked through goggles in an elfin mask, which protected and concealed the whole upper part of the face—a face beautiful and charming when unmasked.

COMMERCIAL TRAVELLERS' CARS.

IN all parts of the country commercial travellers' cars may be seen outside business houses waiting whilst their owners are securing business which less up-to-date men will miss. No district, however, shows so many smart motor-cars used by commercial travellers as London. The narrow thoroughfares of Watling Street, Wood Street, and Fore Street, E.C., in the early morning especially, are almost congested by these vehicles, which have replaced the old closed broughams. The mere fact that a traveller uses a motor-car to carry him about the city or country proves him to be thoroughly alive. And what better recommendation can a traveller have? The ability to carry his samples along with him, to be independent of the harassing baggage man who in the old days used to hand-truck the baskets of samples from door to door, is of greater advantage to travellers than is apparent at first thought. The traveller with a motor-car has not to worry over the vagaries of hotel porters receiving from or putting on rail the baskets, neither has he to keep an eye on them whilst travelling. As soon as he has done business at one place he motors off to another and secures a good order, whilst the hand-truck man would be pushing his heavy load through the streets.

The relief from care over samples, the importance of nightly making up a timetable by rail, from the necessity of hurrying a slow customer in order to adhere to the daily timetable, enables a commercial traveller to keep a clear head for business throughout the day, and enjoy a little recreation in the evening with the consciousness of a batch of good orders in the post to his principals.

Commercial travellers with motor-cars can work in a short week rounds which formerly occupied a month. In addition, there is always time to make detours in order to secure likely new customers. The responsibility of running a motor sample carrier is not very great, a motor-car being one of the easiest things in the world to learn to operate. An intelligent man, and every commercial traveller should be that, can learn to drive well in less than a week. He can get a contract from the maker of the car to keep it in running order, excepting accidents, for less than £25 per annum, including tyres. The cost of petrol and lubricating oil, and the few necessary sundries, will run to another £5 for thirty miles daily, but not more. The total cost will be about 35s. per week. Add this to 5 per cent. on the capital outlay, say, £200, and the resultant sum is less than a week's railway fares.

If he so desires, the traveller can hire a car at the rate of £250 a year, including driver and all found, the average mileage being sixty miles per day. As this includes thirty miles daily more than that previously estimated for and the wages of a driver, it is a good bargain if a chauffeur is needed with the car.

SIR JOSEPH WARD, Premier of the Dominion, has just made a successful trip from end to end of New Zealand in a 28-h.p. Daimler, owned by Mr. George Henning, of Auckland. Although during the trip some of the roughest parts of the country were covered, the vehicle went through without a hitch.

GOSSIP FROM PARIS.

"QUELLE PILE" (What a hiding) was the thought, if not the openly expressed appreciation, of all the big French automobile manufacturers when the result of the Grand Prix was known! Yes, indeed, it was a defeat such as France had never experienced before. Last year they lost the first place, but they secured the second and the third. This time in the seven first there was only one French car—a Bayard-Clement—which occupied the fourth place. With that single exception the race was a veritable massacre of the cars of the big French firms. Of the twenty-three which started the race only ten finished. French makers tried to put a good face on it, but their crushing defeat was all the more painful because it was a double German victory, as the Benz cars coming in second, third, and seventh won the Coupe de Regularité. Then there was the deplorable fatal accident to Cissac and his mechanic. For the French everything tended to throw a gloom over the end of the day, which had begun in brilliant sunshine and closed with tearing wind and clouds of dust.

AND if the French manufacturers were "blue" with disappointment the enormous crowd of spectators who had been promised every convenience were "blue" with discontent at the faulty organisation which had caused them so much annoyance and discomfort. To get from Dieppe to the Grand Stand even in a motor-car, which should have taken ten minutes at most, occupied at least an hour and a half. And then, though the race commenced at 6 a.m. and finished only a little before 5 p.m., the arrangements for *déjeuner* were so bad that a very great many people had to go without it. No, after all the boasting of the French drivers about the fantastical speed they were sure to make in the race, and the assurances of the Sporting Committee about the faultlessness of the organisation, the Grand Prix was as complete a fiasco as could be well imagined except in the unprecedented number of the spectators, most of whom, however, went away almost as discontented as the French motor-car builders.

WHAT is to be done next year? Everyone knows the Marquis de Dion, the Vice-President of the A.C.F., and many other people consider road-racing futile and dangerous. It is dangerous not only in itself but because every race entails long practice on the public road before the contest. Then after it is over the machines are sold to young men, who, using them as touring cars, spread terror on all the main roads of the land. Since the Grand Prix many people have expressed such sentiments, but, after the thrashing they received, the French can scarcely abandon the annual competition which was instituted to replace the Gordon Bennett Cup. If only the future Grand Prix could be disputed on the track of an autodrome it would be an appreciable advantage. Of course the French want to find an excuse, if not a plausible explanation, for their defeat. They will not admit it was the fault of their cars, though so many of them broke down, and they try to throw the blame on the tyres. However, the winning German cars were furnished with the same detachable rims as the French. "Oh, yes," said one manufacturer, "that is true, but we are accustomed to inflate our tyres to the pressure of 5 kilogrammes, whereas the Germans inflated theirs to the pressure of 8 kilogrammes. Consequently, the tyres adhered to the rims better on the German cars than they did on ours." There may be some truth in that, but the point should have been found out before the race.

THE dinner given by Monsieur and Madame Armengaud in their villa at Saint Cloud, to celebrate the winning of the Armengaud prize of £400 for a quarter of an hour in the air on an aeroplane, was a memorable event. One of the chief reasons of the success of the entertainment was the amiability of Madame Armengaud, who is one of the most charming women of Parisian society, and a lady who has won the hearts of all the aeronauts and aviators of the French capital. Mr. Farman was, of course, the hero of the fete, because he had made a flight lasting 20 min. 19.3-5 sec. When, at dessert, the cheque of £400 was handed to Mr.

Farman by Madame Armengaud in the name of her husband, the guests' enthusiasm was manifested by hearty applause, which was all the louder because the prize was not the consecration of the victory of one man over another but of the progress made in aviation within the last few months. The witty speech in which M. Armengaud congratulated Mr. Farman brought Commandant Renard to his feet. The latter said he had always had such a horror of the sea that when quite a youth he made a vow never to cross the Channel in a boat. He had kept his word and would do so in the future, but he did not despair of soon being able to reach England by the aerial route. Thereupon M. Deutsch jumped up declaring he would give a prize of £1,000 to the person who should enable Commandant Renard to satisfy his ambition of visiting the British Isles. Thundering applause greeted the announcement, and after explanations it was stipulated that to gain the prize the steerable balloon which might convey Commandant Renard across the Channel must land him at Aldershot, whereas in the case of the aerial vessel being an aeroplane, it would suffice to leave the French coast and deposit the Commandant on the English shore. Commandant Renard is a big fellow weighing at least 15 stone, and the question is whether he will care to trust himself to an aeroplane. If he

M. L. Bleriot, who in addition to being the designer of the well-known Bleriot lamps, has for a long time been experimenting with aeroplanes. He succeeded last week in making a flight lasting 10 min. 23 sec. without touching ground.

refuses to do so, it is proposed that he should be represented on the machine by a sand-bag of his weight.

MARNEY.

SOME of the nurses of the Edinburgh Royal Infirmary have had a motor-car run to Roslin, and other parties are to be taken on similar trips by the kindness of local motorists, weekly, to the month of September.

A CONCISE handbook for English and American motorists in France has been edited by Major Stevens and published in London by Messrs. Ballantyne and Co., Ltd. This shows at a glance the best routes to the French capital, and the principal tourist and health resorts, as well as to the leading places on the French frontiers. There is also some useful information with regard to the Customs in Continental countries generally, as well as driving permits. The routes are clearly sketched and the criticisms of the various roads will be very helpful.

FROM Messrs. S. F. Edge, Ltd., comes a copy of the second edition of the Napier Instruction Book, which should prove indispensable to all owners and drivers of Napier cars. The practice of issuing a hand-book containing hints with regard to the keeping of cars *au point* is one that we have always recommended, as it is of material help in securing good running and in ensuring that vehicles shall give satisfaction. The work under notice describes the function of practically every part of Napier cars, and states the attention each requires in the way of adjustment and lubrication. The printed instructions are supplemented by lettered drawings, so that even amateurs should have no difficulty in following them.

MILITARY MOTOR WAGON TRIALS IN AUSTRIA.

The Austrian Military Authorities lately carried out a series of trials of motor vehicles suitable for Army purposes. The two illustrations on the left show respectively the W. H. and E., and Bock and Hollepper's lorries, and those on the right the Laurin-Klenz and German Daimler vehicles.

(Allgemeine Automobil Zeitung.)

CONTINENTAL NOTES.

British Motorists in France.

Recent British motoring visitors to France include Mr. Granville, of Stafford (32-h.p. Wolseley); Mr. Ripley (50-h.p. Napier); Mr. and Mrs. Allard (40-h.p. Daimler); Mr. Pulley and family (60-h.p. Napier); Mr. Johnson and family, of London (35-h.p. Renault); Sir Henry and Lady Settle (40-h.p. Panhard); Lord and Lady Wemyss (50-h.p. Mercedes); Sir Henry Lucas (35-h.p. Mors); and Mr. and Mrs. Noyes (24-h.p. Panhard).

Notes on the Grand Prix Race.

M. Paul Meyan is very outspoken on the result of the race in the last issue of his paper, "La France Automobile." Under the heading "Après l'Échec," he remarks that "the struggle was certainly keen and sportsmen have no cause to grumble. The first places were hotly contested by foreigners. The speed of the Mercedes and Benz was distinctly superior to ours. Briefly, we did not exist! Time was when France won all races. . . . Now we go abroad to get beaten and even the

burg, the third to Amal, the fourth to Filipstadt, the fifth to Falun and the sixth to Elfkarlo, about 100 miles from Stockholm. The Napier is reported to have retired on the fifth day owing to radiator troubles; all the other four finished, the first prize being awarded to Herr Thisel's Horch, the second to Herr Nystrom's Durkopp, and the third to Herr Olsson's Peugeot.

Motor-Buses in Paris.

The Paris Omnibus Company is testing a new type of motor-omnibus on the Clichy-Odeon line. The vehicle is much smaller than the somewhat cumbersome and noisy buses at present in use. There is no *imperiale* or upper-deck; instead the bus is divided into two compartments, the forward one, provided with cushioned seats, being given up to first-class passengers. No seats are provided in the rear portion, so that the passengers have to stand huddled together.

Miscellaneous Items.

The French Ministry of War has asked the French Chambre

Motoring in Bosnia.—A Street Scene in Sarajevo.

foreigner comes and beats us at home." M. Meyan then goes on to ask whether the time has not come when an end should be put to such races as the Grand Prix, in which France has, he considers, nothing to gain and everything to lose. Most of the drivers suffered from eye troubles, due, it is considered, to the tarred roads. So bad was Heath that he had to allow his mechanic, Arland, to drive his Panhard for the last lap, while Bablot (Brasier) was compelled to retire from the same cause seven miles from the finish.

The Ardennes Circuit.

It has been decided by the Belgian Automobile Club to postpone the Ardennes Circuit contest from the 12th prox. until the last week of August, the exact date not yet being fixed. Two Lorraine-Dietrichs, two Weigels and three Opels have already been entered for the event.

A Swedish Reliability Trial.

Only five cars took part in the reliability trial held by the Swedish Automobile Club from the 18th to the 22nd ult., one each Napier, Horch, Durkopp, Peugeot and Scania. The first day's run was from Malmo to Halmstad, the second to Gothen-

Syndicale de l'Automobile to arrange for the loan of eighty motor-lorries for use in connection with the Commissariat. Department during the forthcoming military manoeuvres in the Blois, Tours and Bourges districts.—An electrical motor-ambulance has lately been put in service by the municipal authorities of Amsterdam.—The Aero Club de la Sarthe has just been formed at Le Mans, with M. Leon Bollée as President.—A motor-boat race meeting is to be held at San Sebastian, Spain, from August 31st to September 3rd next.—The latest addition to the motor-car stud of the Kaiser is a 70-h.p. Adler vehicle.—Forty-five entries have been received for the run of military motorists from Vienna to Berlin, which is being organised by the Austrian and German Motor Volunteer Corps for the 27th, 28th and 29th inst.—La Compagnie Française de Vans Automobiles is the name of a company which has just been formed in Paris.—The Automobile Club de Belfort is organising a hill climbing competition for the Paul Lederlin Cup; the event will be held on the 26th inst., on the hill known as the Ballon d'Alsace, over a 14-kilometre course.—The Ostend automobile meeting commenced on Monday with a series of five kilometre speed trials. A Napier car is competing in the racing section.

THE BOSWELL ENGINE STARTING DEVICE.

THERE have been many attempts to introduce a means of starting the engines of petrol cars from the seat, and of doing away with the necessity of the usual starting handle at the front. The efforts of inventors have been mainly divided into two sections, one towards the production of an

Fig. 1.—Details of the Boswell Engine Starting Device.

arrangement which, by the pressing of a button or the movement of a lever, automatically puts the motor into operation through the medium of stored up charges and special valves, and the second in which the same end is obtained through a ratchet device worked either by hand or foot levers. In this class falls

Fig. 2.—A View of the Starter as fitted to a Humber Car.

the Renault plan, which was fully illustrated and described in the *M.C.J.* of February 22nd last, and in the same category is the Boswell method, which has lately been attracting attention in motoring circles in the eastern counties, and of which we are this week able to give some particulars. Like the Renault, the new device is mounted on the clutch shaft, but, instead of being

operated by a press forward pedal, it is actuated by one having an up and down motion.

Referring to the illustrations, Fig. 1 shows the arrangement diagrammatically, while Fig. 2 depicts it installed on a Humber car. It will be seen that the starting mechanism comprises a ratchet brace B mounted on the clutch shaft A. All the working parts are attached to the plate K; the pawl I is held in position by a spiral spring G placed over a rod M, which slides through an eye O. The rod C, to which the pedal H is attached, is held in a neutral position by a plate D fixed in the floorboard of the car. As shown in plan in the upper part of Fig. 1, the plate is provided with a slot P and two recesses, L N; to hold the rod out of operation it is pushed over to the former, while to bring the apparatus into position for starting the engine it is moved to N, when by the action of the spiral spring F it immediately rises to its full height, lifting with it the plate K and the parts attached to it. The clutch being engaged in the usual way and the change-speed lever placed in the neutral notch, one or two sharp pushes on the pedal H are sufficient to put the engine in motion, as the end of the plate K being forced down, the ratchet brace by the action of the pawl I is rotated and the clutch shaft, and through it the engine shaft, turned. When the rod is pushed down to the full extent the tongue E, by coming into contact with a projection M, at once disengages the pawl from the ratchet, thereby allowing the shaft to run free.

Mr. S. H. Boswell, of 48, London Street, Norwich, the patentee of the arrangement, informs us that it can be adapted to any make of car, and that the up and down movement of the rod C and pedal H from the floor board is generally from six to eight inches. The starter has already been fitted to a number of vehicles, ranging in power up to 25-h.p., one owner of a 10-12-h.p. Humber having found it so satisfactory in practice that he has had the old starting handle removed from his car.

THE MORSE ROCKER-JOINT CHAIN.

THE Westinghouse Brake Company, Ltd., of York Road, King's Cross, N., whose Morse rocker-joint chain is now in use on a large number of motor-buses in London, have recently effected several improvements in the same, and have produced one specially designed for use on pleasure and touring cars. In the earlier form, described in the *M.C.J.* of October 21st, 1905, the chain was constructed primarily for driving in one direction only. The latest pattern has double-ended links, and it can, therefore, be operated equally well forwards or backwards. The principal feature of the chain remains unaltered, this being the rocker joint, which is claimed to eliminate sliding friction and to reduce wear to a minimum. The joint consists of a pair of specially shaped pins, known respectively as the "seat pin" and the "rocker pin," one of which has an approximately semi-circular section, while the other is a sector having a smaller angle. The links have specially shaped holes to receive these pins. The action of the joint is as follows: as the chain passes over the chain wheels and becomes bent, the rocker pin rolls over the surface of the seat pin, the motion being purely a rocking one. On the straight portion of the chain the pressure is taken solely by the broad bearing surface, it being only when the joints are passing on or off the wheels that any pressure comes on the apex of the rocker pin. The chain is retained in place upon the chain wheels by means of a special central link which engages with a circumferential groove in the chain wheel. We had an opportunity the other day of making a short trial run on a 12-h.p. Star car fitted with the new chain, and were much impressed with the quietness of operation, the vehicle being to all intents and purposes as quiet as one of the live axle type. This feature, combined with the high efficiency, should do much to popularise the use of the Morse rocker-joint chain, which is made in a variety of pitches and widths, the $1\frac{1}{2}$ in. pitch being the size recommended for pleasure cars. The drive can be readily adapted to vehicles fitted with roller chains, the only alteration necessary being the fitting of new sprockets.

SOME EMERGENCY REPAIRS.

THE steam engine was described by George Stephenson as having in its composition a counterpart for each separate part of the human body. If such is the case, the same theory may well be applied to the internal combustion engine. Unless the valve of the heart in the former opens and closes correctly (everything else being so dependent upon its proper timing) things soon go wrong. Fortunately there is a great difference between the two kinds; the one can be taken out and put in order, the other must always remain hidden from view. Needless to say the two instances having reference to valves and forming part of this article apply to the material and not the human. As the *M.C.J.* circulates amongst users of both the motor-car and motor-cycle, no apology is needed for mentioning in the same plane the somewhat humble bike with the lordly car.

It was in a lonely part of Ireland, when touring towards dear "old dirty Dublin"—to perpetuate a saying often used by those whose privilege it has not been to see the fair city on the banks of the Liffey—and, after ascending one of the steep

length, and the trouble became accentuated. In many cases the tappet rod is adjustable, but the cause and effect are the same.

Another valve incident, but with a motor-cycle, and of quite a different character. In this case the valve stem broke off just under the head, and, as usual in a country place, where repairs were not as easy as in a cycle manufacturer's shop. The writer was not the victim, but happened to be near at hand. The cycle was taken into a private workshop, where the use of a few tools and a vice were possible. We removed the head and drove the piece out of the centre, finding a big French wire nail, filed it down so that it was a good hard driving fit into the old hole, and cut it off the right length; the valve was then put in again, and ran the rider home twenty miles without trouble. The first thought of many will be that the number of vibrations would soon dub up the nail end. This was not the case, for many of them are almost glass hard; this particular one was quite hard enough for a partly worn file.

We will now move on to the heart of a motor-car engine, viz., the cylinder and its contents. It was a foreign make of car, and duplicate parts are oftentimes long in coming, hence the reason for the emergency repair described below. The car was,

The Steam Motor Fire Engine recently supplied to the Fire Brigade of Milan, Italy, by the Waggon und Maschinenfabrik Gesellschaft (Busch), of Bautzen, Germany.

gradients in a western county, that it was noticed the engine was not pulling with its usual force, and on an Irish road, where so many of the surveyors adopt the "darning system," it does not take long for any defect to assert itself in no half-hearted way. The loss of compression increased, and, after a general survey, we tested each cylinder separately and located the trouble in No. 2 cylinder. On careful examination it was discovered that it lay with the exhaust valve not quite closing down. The owner of the car, who is not an engineer, was quite sure that the trouble must be elsewhere, as just prior to starting the valves had been ground in. I at once thought—Ah! that accounts for the fly in the ointment. These valves had been ground in more than once, and it was the last straw, as with the camel, that caused the trouble. The more at each grinding that came off the valve the farther the stem came through the valve chamber, and so could not regain its seating. The stem was reduced in length a trifle with a file, just sufficient for it to reseal itself, and we proceeded all right. Some readers may wonder why this did not happen immediately on starting off (it was not far as it was). This is accounted for by the fact that the hotter the valve and stem became so the latter increased in

wanting in power and there was considerable noise in one of the cylinders. After locating the culprit, viz., cylinder No. 3, we removed the piston, and found two of the three rings broken, one in two places. The car was wanted for use, and this in a country place; as the Irish say, a thought struck me, which is really only the mind going back to past memories. I obtained some asbestos tape and twisted this round and round the piston in the ring groove. Not liking to trust to two in one cylinder, a ring was received from No. 1 cylinder and some tape inserted in its place, so that two asbestos ring substitutes were in cylinders 1 and 3. The tape was well supplied with graphite, and a trial run made with perfect success. The car was used regularly and some long journeys made for fourteen days until the new rings arrived, and even then there was no absolute need for their insertion.

In looking for valve troubles, it should be remembered that not only the stems and tappet-rods wear, but the cams do likewise.

E. T. H.

A LARGE and well-designed garage has been opened at Kidderminster by the Castle Motor Company, Ltd. Accommodation is provided for no fewer than eighty automobiles.

SOME USEFUL NOTES.

A TIGHT sprocket wheel which fits on a taper and is keyed should never be "brutally" removed. A proper "extractor" should be gently used, occasional taps being given behind the sprocket.

A FREQUENT cause of overheating in modern cars, particularly on those where no pump is employed, is slipping of the fan belt. It is most necessary that a fan should always be doing its work thoroughly.

SHOULD a carburettor catch fire through a back shot, the fire may occasionally be extinguished by turning off the petrol and racing the engine. The engine will soon suck it out, and there is very little danger.

A NEW engine, no matter how well made, will usually be found to be slightly stiff, and should be given plenty of lubrication. However carefully fitted the bearings of the crank shaft and of the connecting rods upon the crank pins may be, there are usually imperfections in the surfaces of the shaft and

A British Car in America.—The 60-h.p. Six-Cylinder Napier Car belonging to Mr. A. L. Spitzer, of Toledo, O.

its bushes which have to be worn down before the metallic contact becomes compressed and "laid down" into that glassy, smooth condition which conduces to perfect running. Well ground crank shafts and carefully scraped bushings require but very little use before the bearing surfaces become excellent.

AN air lock in the water circulation is a troublesome matter, and one which will probably puzzle the amateur motorist more than anything else in connection with water cooling. There are several ways in which air locks or air pockets may be formed. By air lock it is understood that air has been drawn into the water pipes, and forms a complete cushion between two bodies of water, which effectually prevents its flowing. One of the most frequent causes of forming an air lock is putting a fresh supply of water into the tank when there is a small amount of water running in the pipes, which are below the level of the tank. The water rushing into these pipes prevents the air escaping, and thus the air lock is formed. To prevent this, if there is a small amount of water left in the radiator and connecting pipes, it is, I find, best to drain it completely away, put in fresh water, allowing the drain tap to remain open until this flows through. By this procedure the air will, of course, be driven out of the pipes, being forced through the drain tap by the water behind it.

SOME CURRENT TOPICS.

Chain Drive v. Live Axle.

The A.C.F. Grand Prix race once again revives the old question of transmission—chain v. the cardan shaft and live axle, for the result was an undoubted victory for the former, the three leading cars all having side chain drive. In fact, out of the first dozen to finish the contest only four had live axles. Taking the whole forty-eight racing machines, I find that twenty-nine were chain driven and nineteen had cardan shafts and bevel gear. This preference for chains on the part of builders was borne out by the results, no less than 15, or 51 per cent., of the twenty-three cars which completed the race, being of this type, while only eight (42 per cent.) live axle machines covered the ten circuits.

A Tip re Smoky Paraffin Lamps.

I came across a useful tip the other day with regard to paraffin motor lamps, the credit for which is due to the Bleriot Company. It is a common experience to find shortly after one has made himself comfortable in the driving seat after lighting up, that the lamps are smoking so badly that the interior is blackened, and that the glass is also in a state rendering it more useful for looking at the sun on the occasion of an eclipse than that of allowing the light to be reflected through it. According to the firm named the trouble is simply due to regulating the wick at a suitable height when the lamp is cold. As soon as it becomes heated, the paraffin becomes more volatile and more easily fed to the wick and flame, the result being the same as if the wick were turned up too high to begin with. The remedy is, of course, not to turn it up quite so high at the beginning, or at least to allow the lamp to burn for a few minutes so that it can be regulated after becoming heated, before re-starting on one's journey.

Some Useful Examples from Yorkshire.

The motoring associations in Yorkshire are to be congratulated on the practical ideas they are introducing in connection with the view of mutually assisting members. The Harrogate Automobile Association, for example, has adopted a plan whereby those present at the meetings commit to paper some query that may have arisen in connection with their cars. The papers are then mixed up and drawn, and each member in turn is expected to answer the question which has fallen to his lot, or, if he feels incapable of the task, to select a subject from a number specially put in. It will readily be seen that, even if a correct solution of the trouble is not arrived at, a suggestion may be thrown out which will direct the thoughts of the puzzled one into new channels, and so achieve the desired result. Furthermore, the publicity given to the various difficulties that may be encountered by different motorists, and the best means of overcoming the same, brings forth a valuable amount of useful information that must be of general benefit. The same idea of increasing the practical knowledge of motorists has been developed in a somewhat different manner by the Scarborough and District Motor Club, which recently held a competition consisting of locating faults in the electrical ignition parts of motor vehicles purposely made by the judges. Such a contest offers considerable scope for testing the ability of motorists to cope with troubles of this kind; and it says much for the *savoir faire* of the winner that he was able to locate the cause of the engine refusing to work and have it running again in four minutes. The examples thus set by these Yorkshire clubs could, I am sure, be usefully followed by other bodies of motorists in many parts of the country, that of the Harrogate Association being particularly suited to form the programme at one or more winter meetings when club activities are usually not so great as in the summer season.

ARCANUM.

THE Anglo American Oil Company have been granted a Royal Warrant as purveyors of motor spirit to King Edward VII.—a distinction of importance, more especially in view of His Majesty's keen interest in all that appertains to motoring.

IN King Street, Perth, Mr. James Macfarlane has a capital garage, with repair department and stocks of accessories, spare parts, &c.

THE Motor Van Service is the name of a new concern which has been established at 52, North End, Croydon, for the purpose of hiring out all kinds of light motor delivery vans.

AMONG the applications for motor driving licences recently made to the Secretary of State of California are a considerable number from Japanese residing in San Francisco.

MARY, DUCHESS OF HAMILTON has purchased a Sheffield-Simplex car. An order for a six-cylinder 45-h.p. limousine has also been placed with the Sheffield-Simplex Motor Works by Mr. E. J. Avory, of Cobham.

MESSRS. WARWICK WRIGHT, LTD., have recently delivered Metallurgique 26-h.p. cars to the Maharaja Kumar of Kooch Behar, Sir Robert Lucas-Tooth, and Colonel Buchanan, and 40-h.p. vehicles to Dr. Cuthbertson and Mr. J. G. R. Raphael.

AMONGST recent purchasers of Daimler cars are the Rt. Hon. the Earl of Maclesfield, of Shirburn Castle, Wallingford, who has purchased a 42-h.p. "Hazlewood" phaeton car; Captain Arthur Philpots, Chelston Cross, Torquay, a 30-h.p. "Blackdown" landaulet; and Madame Melba, a 42-h.p. chassis. The company have also just completed a 42-h.p. shooting brake to the order of His Highness Maharaja Ranjitsinhji, Jam Sahib Nawanagar. The vehicle, which is painted green with light blue and salmon lines, is intended for use in India, and is fitted with a double roof to withstand the heat.

AT the annual conference of the Urban District Councils of England and Wales, held at New Brighton on Saturday, a resolution was submitted urging the Association to continue their efforts to induce the Government to increase the taxation of all motor-cars and motor vehicles, the proceeds to be devoted to road maintenance.

THE Chambre Syndicale des Carrossiers having invited the Institute of British Carriage Manufacturers to Paris in September, a programme of entertainment has been arranged for the 7th, 8th, and 9th of that month. Visits will be paid to Messrs. Kellner's carriage works at Boulogne, to Messrs. Rothschild's works, and to those of Messrs. Panhard and Levassor.

MESSRS. R. REYNOLD JACKSON AND CO. have sent us a photograph showing an 8-h.p. Jackson car towing a heavy motor-bus up High Street, Notting Hill Gate. The vehicle had broken down near their show rooms, and the police and a gang of men were trying unsuccessfully to move it out of the way of the congested traffic. The Jackson car, with a single-cylinder engine, was eventually attached to the bus, and towed it some 250 yards, without any other assistance, at a speed of six miles per hour.

THE Bridlington Motor Engineering Works have established a new garage in the Springfield Avenue, near the railway station, where they can store about thirty cars. They have repair works well equipped with modern machinery, and can also undertake the vulcanizing of tyres and charging of accumulators. Conveniently situated, this well-organised garage should prove popular with motorists in that part of Yorkshire as well as with those travelling through the district.

ACCORDING to Dr. Longford, the Medical Officer of Health to the Stoke Union, the dust-raised by motor-cars in the district is responsible for an epidemic of inflammation of the eyes which has broken out among the children in the workhouse infirmary.

A DEVICE that should prove a convenience to those motorists who are now and then obliged to get at some part underneath their car, but have no pit available, has lately been put on the market by the Brown Company, of 523, East Water Street, Syracuse, N.Y., U.S.A. It consists of a light wooden truck mounted on castors, with a cushion at one end, on which the person who is to do the repair can rest his head, and a chain by which the truck can be drawn into place and out from under the vehicle by a second person.

HERE AND THERE.

MR. J. CHAMBERLAIN has left Aix-les-Bains and travelled in a motor-car to Lausanne, where he will remain for some days.

THE Prime Minister, the Rt. Hon. H. H. Asquith, has purchased a 45-h.p. six-cylinder Napier; the vehicle is fitted with a double landaulet body to seat five inside.

AT Oban, Messrs. MacDougall have a new extensive garage with a motor repair workshop and two vulcanising plants for dealing with motor tyres.

Mr. BUCHANAN SHIELL, of Perth, has a large garage and repair establishment in Murray Street in that northern city. His plant is both modern and extensive.

FOR the "Model Engineer" Model Boat Regatta, at Wembley Park, on the 25th inst., there will be three events, including an open race for model steam, petrol, and electric boats over four feet in length, and a similar event for boats of four feet or more in length.

A CONSIDERABLE development is taking place in the Sheffield steel trade by the manufacture on a large scale of nickel steel motor axles. It is found that nickel steel, that is steel with a mixture of 3 per cent. of nickel, is a very satisfactory material for these axles.

THE accompanying illustration shows the up-to-date methods of Components, Ltd., cycle manufacturers, Bournbrook, Bir-

mingham, for delivering their goods in the vicinity of the Midland city. Anyone who is acquainted with Birmingham knows that it has some very stiff gradients, but the Ariel motor-lorry used by the company, with its engine of 30-40-h.p., is able to cope with a full load on the steepest of the hills. Careful comparison of the lorry with horse traction shows that the work done by the motor is more than can be done by three vans of similar carrying capacity, with two horses drawing each van.

THE Victrix Motor-Car Works, Kendal, have lately introduced a new universal joint for use on the cardan shafts of live axle cars, which appears to possess several features of merit, notably as regards the accuracy of manufacture and the provision for lubrication.

SALES of motor-cars at regular intervals are being organised at Birmingham by Messrs. Thomas Clayton and Sons, Ltd., of 125 and 126, New Street, Birmingham. The first is announced for Thursday next, and particulars of the same can be obtained from the auctioneer, Mr. F. W. Goodeve, 28, Cannon Street, Birmingham.

ON Tuesday a Renard road train, consisting of an 80-h.p. Daimler tractor with passenger carriage and three goods trucks, was run in the grounds of the Crystal Palace prior to being shipped for India. Subsequently Mr. H. S. Foster said the train had averaged 11½ miles an hour in journeying up to London from the Coventry works, and that a Renard train is now in service in Russia taking the Imperial luggage to and from the different residences of the Czar.

MOTORING ACCESSORIES.

The Sisco Tyre Inflator and Tester.

An accessory which is steadily gaining in popularity amongst motorists is the "Sisco" Tyre Inflator and Tester, made by the Scotch and Irish Oxygen Company, of Polmadie, Glasgow. By means of the arrangement the labour associated with hand-operated tyre pumps is obviated, the motorist being able to get any desired pressure up to 90 lb. in about one minute by simply turning a small wheel. The device also acts as a tyre tester, the exact pressure being shown on the gauge; a valuable feature, as there is thus no need to carry a separate testing apparatus.

The outfit is supplied in wooden boxes or leather cases, while refills are supplied at a cheap rate, not only by the makers, but by a large number of agents throughout the country. An interesting and illustrated pamphlet giving full particulars of the speciality has just been issued.

Spare Parts.

The motorist whose car is in frequent service will appreciate the well-arranged catalogue of spare parts and accessories which has just been issued by Messrs. G. T. Riches and Co., of 19, Store Street, Tottenham Court Road, London, W.C. The firm have a complete selection of goods for motorists, and during a recent call at their establishment we had ample evidence of their ability to supply goods directly from stock—an important consideration when spare parts are wanted in a hurry. The new price list is larger than any previous publication of Messrs. Riches and Co., and in its 200 pages are about a thousand illustrations. An excellent system of classification has been followed, and the well-devised index facilitates easy reference, so that particulars of any tools or appliances, accessories, or spare parts can be readily found. Prices are based upon the principle of retaining customers once secured, and the firm's practical experience of the motor trade is always at the disposal of those with whom they do business. Tyre pumps, pressure gauges, vulcanising equipment, and everything in connection with tyre work is listed by Messrs. Riches and Co., whose electrical accessories are of very wide range. We notice a comprehensive selection of drivers' indicators, spare parts for all makes of magnetos, motor hoods and similar fittings, lamps, horns and tools—in fact, the range is fully exhaustive.

The "Multum" Accumulator Lamp.

Fig. 1 depicts one of the many novelties lately put on the market by Messrs. Ward and Goldstone, of Sampson Works, Salford, Manchester. The "Multum" pocket lamp, as it is known, consists of a dry accumulator, which can be charged innumerable times at a small cost, and will give ten to twelve hours' light at a charge. The accumulator case is of ebonite composition, being moulded in one piece, and does not soften and deteriorate. The bulb is of the metal filament type, and

Fig. 1.

gives a white light; it is fitted with a special prismatic lens which intensifies and distributes the light. The case of the lamp is finished in nickel plating and leatherette, with side switch. The dimensions are 4 in. by 2½ in. by 1 in., so that it can be readily carried in the pocket.

A New Hand Cleaning Liquid.

We have received a sample tin of "Shofa," a new cleansing liquid or composition which has been brought out by the well-known firm of Messrs. William Cooper and Nephews, Berkhamsted, who have arranged with the United Motor Industries, of 45, Poland Street, W., to act as their sole distributors in the United Kingdom and the colonies. Before taking up the preparation the United Motor Industries subjected it to searching tests, and found that the claims of the makers are fully

justified in practice—namely, that a very small quantity will not only thoroughly cleanse the hands, however much they may be stained with motor oil, grease, &c., but will further leave them in a smooth and soft, pleasing condition, instead of that roughness and disagreeable feeling that one has hitherto associated with many of these cleansers. The United Motor Industries, Ltd., have also just issued a useful list of "Castle" accessories specially designed for motor-cyclists' use; these, include motor horns, belting, and belt fasteners, gas lamps, magnetos, accumulators, lubricating oils, &c.

A Megaphone Reed.

Messrs. Alfred Dunhill, Limited, of Euston Road, London, N.W., have brought out a simple attachment for the ordinary motor horn which secures an effective far-reaching sound which does not suffer the disadvantage of being unpleasant. Having once been adjusted, this new Megaphone Reed can be relied upon to respond immediately at all times when required. Its use will make the horn as efficient as the siren, without, however, the particular type of note that is associated with the

Fig. 2.

latter. The reed is made of a new material which produces treble the sound of any ordinary reed, and, there being nothing to get out of order, there should be a large demand for Messrs. Dunhill's latest addition to the motorist's accessory list.

The Barnes' Petrol Deodorizer.

Motorists generally, as well as those who are more closely associated with the organisation of motor-bus services, will be interested in a device and preparation which is being introduced by Messrs. Barnes and Pocock, Ltd., of 11, Queen Victoria Street, London, E. As to the malodorous character of the evil against which the Barnes' deodorizer is directed there is no doubt. It is painfully apparent to all who journey along the narrow streets of the City, and already the device has proved its value in this connection. The apparatus consists of an outer and an inner cylinder placed inside an outer vessel. The two former are perforated and lined with fine gauze on the outside so far as the inner cylinder is concerned, and on the inside in the case of the outer cylinder. Through the gauze the spirit only can pass, and between the two layers of closely-meshed metal the special preparation is placed, being covered by a lid. Located within the outer casing and fitted tightly at top and bottom, the Deodorizer may be trusted not to allow any of the special preparation getting into the pipes leading to the carburettor and so choking the same. On the motor car or bus—for the device is made in three sizes for vehicles up to 15-h.p., 0-h.p., and 40-h.p.—the apparatus is placed between the petrol tank and the carburettor with inlet connection at the top and the outlet at the side. The motor spirit then passes into the central cylinder, percolating through the deodorising preparation into the outer space, and thence to the carburettor. The spirit is thus effectually deodorised without in any way affecting its qualities. In the apparatus there is sufficient preparation to effectually subdue the smells of the motor for from 2,000 to 3,000 miles, and refills are made up in a very handy form. On some of the London buses the Barnes deodoriser has already shown its capacity for destroying not only the fumes from petrol, but also those arising from excessive lubrication, and its adoption generally would be welcomed by police and public alike.

Sirens.

Although there has been considerable prejudice against sirens in this country, Messrs. Maestre and Blatge, who from 20, Store Street, Tottenham Court Road, W.C., are supplying the trade with most useful and up-to-date novelties, are convinced of their necessity in connection with the covered car. When a motorist is driving such a vehicle ahead of another it is often impossible for the horn to be heard; there the system has its distinctive utility. In order to obviate the drawbacks connected with the frequent breakage of the cables of the siren, the firm are introducing for the season a "Harmonic" siren, which, it is said, can be heard five miles away. This has a new gear drive and is operated by a pedal. It can be fitted to any make of car, and agents and garage proprietors will be interested in this and many other accessories now being brought forward by the firm.

Correspondence.

[Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.]

INCREASED MILEAGE ON PNEUMATIC TYRES WITH DECREASED PRESSURE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—As you are probably aware, I have made very considerable experiments to find out—firstly, whether reduced pressure decreases the speed of the vehicle fitted with pneumatic tyres or not; secondly, whether decreased pressure decreases or increases the life of the tyre. The first series of tests prove that reduction of pressure in the tyres makes practically no difference in speed. The second series of tests prove that you can use your tyres with less pressure than was commonly thought, and, therefore, the whole car rides more easily and smoothly, and at the same time the tyres actually last longer. The tests have all been carried out on the road on my own six-cylinder Napier. The weight of the car complete, as I generally drive it, was a shade under 35 cwt. The result was that with 60 lb. pressure in the front 880 by 120 tyres they ran 88 per cent. further than when the pressure was kept at 70 lb. to the square inch, and when the pressure of the back tyre (895 by 135) was reduced from 85 lb. to 70 lb. I got an increased mileage of 49.9 per cent. It is, therefore, clearly proved that reduced pressure means greater comfort on a motor-car, and less expense in tyre bills.

I am now carrying out experiments with still lower pressures, but owing to the distance one has to run it takes a considerable time to obtain results.—Yours truly,

S. F. EDGE.

THE FOUR INCH RACE AND MONEY PRIZES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Enclosed I beg to hand you a copy of a letter which I have addressed to the secretary of the Royal Automobile Club. Perhaps you would like to ventilate this question in your next issue, and by so doing get the opinion of the parties interested.—Yours truly,

G. W. HANDS.

The Secretary Royal Automobile Club.

Sir,—As a visitor to the Grand Prix race I was very much struck with the interest taken in motor racing abroad, and, although figures are not available, I think I am right in saying that the attendance of visitors exceeded by far any other racing event held before. The only road race held in Great Britain organised by the R.A.C. has attracted very good entries, but I think the Four Inch race could be made more popular still if the entrants of the winning cars could reap an additional benefit in the shape of a money prize.

The Targa Florio has always attracted a great number of entries by reason of the fact that big money prizes have been offered, and if the Four Inch race would offer some similar inducements I am sure that it would secure a greater number of entries and afford a much greater attraction to the public. May I, therefore, suggest that the R.A.C. should put up three or four prizes of say £1,000 to the winning car, £500 to the second car, and £250 to the third and fourth cars. No doubt your committee can easily find the necessary funds for this purpose. If I may be permitted to express my own opinion, I think that if the manufacturers who have entered cars in the Four Inch race were approached by the committee they might be induced to make up amongst themselves a big purse by contributions of £25 and £50 for each car entered. It is true that an additional expense would be incurred by the makers of non-victorious cars, but, on the other hand, the entrants of the winning cars would reap a benefit which would to a large extent defray the expenses connected with the race. I shall be glad if you will give the matter your consideration, and, if you think it advisable, communicate with the parties interested.—Yours truly,

G. W. HANDS.

THE QUESTION OF GEARS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—In last week's issue your correspondent "Brixham" invites motorists to express their views on gears, after drawing attention to their ratio as generally fitted, and the difficulty on what he terms "emergency" hills with standard gears. I would point out that the best way out of the trouble is to do without the gear, and drive direct on all speeds, which as far as I know is only done on the new Turner-Miesse steamer. It would probably be a revelation to your correspondent to see the way these cars take a hill, however steep, free from noise, shock, or vibration. I carefully examined one of these cars, and tested it on the road a week or two ago, with the result that I ordered one. I have no interest in the makers of any car, but feel sure the Turner-Miesse will go a long way towards popularising the steamer.—Yours truly,

WALTON.

THE A.C.F. GRAND PRIX RACE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—If ever a firm and a man suffered from ill-luck throughout a whole week I certainly think the Weigel Motors, Ltd., and myself have. We have built cars which, if not as good as all, were at least better than most, and to set at rest the question of their speed at once I may say, without hesitation, these cars will shortly prove at Brooklands that they are capable of a speed of upwards of 100 miles an hour. At any rate, in practice, I and Laxen were continually touching ninety-six miles and keeping it going mile after mile. I drove my own car 800 odd miles by the speedometer whilst in France and never touched the engine or any part of the car. Laxen drove his car hard between five and six hundred miles with the same satisfactory result. Harrison, who did not arrive until after us, did not do so much work, but still he had no trouble.

Bad luck attended us before the race, as a gentleman, the brother-in-law of one of us, was unfortunately killed in the presence of myself and Laxen. A finer example of a British sportsman and a greater lover of automobiles than this gentleman was never lived, and in his death our sport has lost a great and true patron, and I have lost one of the greatest friends that a man can ever hope to have. With such a calamity before us all, and myself in particular, we were not in the happiest frame of mind to start, and I had every desire to withdraw all three cars,

A Humber Car in Moscow.

On the right is the wall of the Kremlin, showing the Porte Spasskaya or Holy Gate. In the background is the Cathedral of St. Basil-Bajenny, one of the strangest, yet most picturesque, specimens of architecture anywhere to be met with, having no less than twenty gilded and painted domes and towers, all of different shapes and sizes.

and had it not been that I had to study the interests of my company I should have, without hesitation, withdrawn them.

This year we have made cars which we knew would stand a chance, and, perhaps for the first time in the history of British automobilism, true thorough-bred racing cars had been built to compete against the foreigners, and I know that English hopes in Dieppe ran high. These hopes, however, were doomed to disappointment at the very first lap. Laxen, in taking the corner at Eu, was misled by the bad way in which the hoardings were put up, and took the outside hoardings instead of taking the corner, smashing the front of the chassis, the base of the radiator, twisting the front cross member, and putting his starting handle out of action. Twisting from the forward to a side impact, he smashed against the change-speed lever and gate, and placed his two lower speeds out of action. Very puckily he was able to start again—his engine, suprising to relate, not having stopped—and he came in to the control after having done a lap in the creditable time (considering the circumstances) of 50 min.

When I saw the car I knew it was hopeless, but, not wishing to discourage Laxen, who persisted in wishing to go on, I let him. The hill at Eu, however, was too much for him on top speed. He might have taken it, but another car being in his way caused him to slow down, and he could not get up the hill again on top speed; the result being that he left his car at Eu, pushing it through the hoardings which he had himself knocked down.

Harrison's luck was just as bad. In the first round the sparking plug blew out. In the second he had one burst tyre and one puncture. In the third lap a stone hit his oil tank and made a hole in it, and he spent a considerable time in the control in repairing this and taking the opportunity to fill up. The fourth round he did in good time, and in the fifth actually got into the eighth place, proving beyond doubt that his car was fast. In his next lap, unluckily for him, he mistook the village of Eu for an entirely different part of the course, and, instead of taking the corner, went straight through the village, clean through the palings at a speed of close on eighty miles an hour, turned over twice, and was finally pinned tight under the car. The villagers lifted the car bodily to enable him to get out, and he luckily escaped without any broken bones, but received a severe shaking, the greater part of his body being considerably torn and bruised. That he escaped with his life is good luck, and about the only good luck that attended the Weigel drivers throughout the whole of the day. He was taken to the hospital, which, after a good massage, he was permitted to leave in a Rothschild ambulance, under the kind care of Baron Henri de Rothschild. His mechanic, Coleman, escaped without a single scratch, his clothes only having suffered.

As to the novice who replaced me, his luck was out also. He had never been upon the car until that morning, and he had never been round the course, excepting once on a touring car with me. His first lap in 45 minutes speaks volumes for what he might have done had he had the good fortune to go round once or twice more. But his end came close to Eu, by taking the stump of a tree, which smashed the swivel of the front axle. The first of the French cars to finish were built upon practically identical lines to the Weigel, and, at any rate, I repeat my hope that I shall shortly prove, at the only place open to me to prove it, viz., at Brooklands, that our cars are capable of doing over 100 miles an hour although they are only of 60-h.p.

The 12-h.p. Live Axle Car recently supplied by the Star Engineering Company to Mr. Lewis Waller, the well-known actor.

As for the tyres we used this year, which were Dunlops, I have nothing but good to say of them. In practice, over the distance above mentioned, none of us had cause to change a single tyre, and I did the whole of my 800 odd miles practising with one set. In the race itself there was only one burst tyre, on Harrison's car, and one can hardly expect not to have at least one burst in such a race as this. What can be said of the other tyres? If one were to read the French papers it will be sufficient for the purpose. I am told that the winner changed twenty tyres. At any rate, at every lap one saw cars come in either minus tyres on the wheels or minus spare tyres hung upon the car.

There is very little doubt in my mind that the cars, although much smaller than last year, were much faster, and this is proved by the marvellous performance of Salzer, who did the circuit in 36 min. odd from a standing start, and against 38 min. from a flying start last year. I should certainly like to compliment the Mercedes and Benz companies upon their fine performances, and I have no hesitation in saying that they were the best cars of the day, and that the result was a justifiable one, which is not always the case. The cars of both these firms were fine jobs, and far faster, in my opinion, for all-round work than any others that took part in the race. I have, further, no hesitation in saying that if they could wipe up the whole of the French contingent, they could equally do so to the British, my own firm included. We had bad luck but, at the same time, I always like to acknowledge what is true and right, and in this case I certainly accept that the two best cars took the most prominent places.

Dealing with the course, I have never seen a worse one. I have always maintained it was a dangerous circuit for high speeds, but in the terrible condition in which the roads were for this race the route was deplorably dangerous. It was a mass of loose stones, and was so some days previously, when I went round in a touring car. In fact, I must acknowledge the sportsmanlike conduct of M. De Knyff, who made the excuses of the Automobile Club of France to the drivers be-

fore the race, and admitted the road was bad, and stated that they had spent some thousands of pounds to try and make it good, but had failed, and one can only sympathise with the A.C.F. in its misfortune.

I went round the circuit after the race and found the road torn up as if steam navvies had been upon it, and what was more deplorable still was to see the number of accidents that had occurred. From Londinieres to Eu one did not travel two kilometres without seeing a car in a ditch. I saw two Porthos, Thery's Brasier, Cissac's Panhard, a Motobloc, Salzer's Mercedes, my own three cars and several others. Although two poor men lost their lives in the race, it is surprising to me that there were not a dozen who met the same fate. Although in Weigel Motors, Ltd., we have made a great effort for the Grand Prix and failed, yet at least we have been in good company, for many of the finest French and Italian cars broke down. One must see this race to understand it, and one can then appreciate that a breakdown, break-up, or smash-up would not be either surprising or a disgrace to the firm who had made their effort to win. Whether I shall build further cars for the Grand Prix is a question for consideration. I must confess I am loth not to continue to build them, believing that we in England, and perhaps Weigel Motors, Ltd., in particular, can build something to teach our foreign friends that we are as good as they, and I claim to be too good a sportsman to let my defeats hinder me from attempting to gain for England what she has never previously had, and that is to win the Grand Prix on merit. Perhaps when the feeling of all this bad luck has passed away I shall induce my directors to act in the same public-spirited fashion as they have hitherto done, and that is, uphold the British motor industry by at least making the attempt, even if it be an unfortunate failure like this year. I understand the rules for the next Grand Prix will be out in a month, I will then see whether we shall enter or not. I must confess, however, that the support one gets from Great Britain is small. French amateurs are always to be found who will purchase French cars after the Grand Prix, and so help the manufacturers. In this country the builder is left entirely to himself, and one hardly finds a friend amongst the amateurs to assist even by the purchase of a car.—Yours truly,

D. M. WEIGEL.

LONDON TRAFFIC.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—From the mass of very intelligible—if not always coherent—remonstrance, “letters to *The Times*,” “Mansion House meetings,” and what not, on the subject of the present condition of street traffic in London, little of practical suggestion has emerged.

May I, as a sufferer in common with my fellows, suggest, not indeed a remedy, but what might prove to be an effective palliative of most of these ills of which we justly complain? and that is the encouraging, or even the favouring, by regulation, of electrically-prepared traffic. Our present grievances are noise, smoke, smell, undue speed, and, for the traveller, undue vibration. The electric carriage is guiltless of all these offences.

The obstacle of excessive expense is urged. If it be a good argument, then a discriminating tariff for public vehicles would meet the difficulty. But is it a good argument? Already Berlin, Hamburg, and Cologne, where electricity is dearer than in London, have electric cabs, which pay, and the electrobus is only a matter of to-morrow.

I have run an electric carriage—the same carriage—for four years. It cannot travel faster than regulation speed. It can stop in its own length. It has no noise, smoke, smell, or vibration; and as to the argument of working expenses and tear and wear, it is a better car now than when it started, and it has saved me a considerable sum on my stable account.

Why should not the public—the cab and omnibus and walking public—share in these benefits? Why, in other years, instead of confining themselves to the negative check of taking over-nolay and over-smelly vehicles off the street, should not the authorities have power to favour and encourage the virtuous electric cab and electrobus? A very slight preference would do it. Or must we continue to have free trade in smell, noise, and occasional murder?—Yours truly,

LEWIS McIVER.

THE SALTBRN RACES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—It is with great surprise that I have noted an advertisement appearing in a late issue of your journal, wherein it is stated that at the Saltburn race meeting a standard 40-h.p. Metallurgique car made the fastest time over the standing kilometre of any touring car, and beating, amongst others, a 58-h.p. Daimler and a 60-h.p. Napier. The only 58-h.p. Daimler car competing at this meeting was mine, and in the two events in which I competed I was first, beating in one event both the 60-h.p. Napier and the 40-h.p. Metallurgique, and in the other event beating the same Metallurgique car, the Napier not competing in this latter event.

It is distinctly comical that in the same issue of your journal in which this advertisement appears there are given the results of the races in question, which are in direct negation of the advertisement.—Yours truly,

GEORGE S. BARWICK.

THE SETTING OF VALVES.

THE attention which has recently been devoted in these columns to the question of the setting of the valves of petrol motors has attracted considerable notice, and, in view of the great diversity which exists among engine designers on the point, we are glad to notice that the Institution of Automobile Engineers has decided to go thoroughly into the subject next session. It is not only in this country that the matter of valve setting is coming into prominence; it is the same in France and the United States. In the last named country an automobile engineer has recently carried out a series of experiments with different setting of the valves, the results of which have recently been published in our contemporary, the "Horseless Age," from which we extract the following details.

The stand on which the motor was mounted for the tests and throughout the entire course of the experiments was fitted for the working in and adjusting of engines before placing them in the chassis. The equipment was made up as follows:—A well-designed Prony brake efficiently cooled and lubricated and provided at the outer end of the lever, to which an accurate spring scale was attached, with a dash pot for steadying purposes; a directly driven electric speed indicator, and a 120-gallon tank, from which the cooling water was drawn, and to which it was returned by the water-circulating pump, the latter and the lubricator being fitted to the motor as a part of the power unit. The water circulation arrangement permitted of engine operation at all times with a jacket temperature just below that of the boiling point of water. The engine used had four cylinders, $4\frac{1}{2}$ in. bore by 5 in. stroke, cast in pairs with integral water jackets. The connecting rods were 12 in. in length. The valves, of $1\frac{1}{2}$ in. diameter and $\frac{1}{4}$ in. lift, were located side by side in single combustion chamber pockets, and all operated from a single cam shaft. The cams were individual and pinned in place on the shaft, which construction lent itself particularly well to making changes in the timing.

Although known to give poor results, it was decided to leave the valve lift unaltered, and at the time the engine was set up on the stand the timing stood as shown diagrammatically at A. After thoroughly adjusting and testing the motor with this timing, the cams were changed and the same procedure followed out with the new setting. This was done with nine sets of cams, each giving a different timing, following up the gains made by the preceding one. In Fig. 1 at A, B, C, D, and E are given five of the valve settings tried, and in Fig. 2 are set forth the results in each case, in the form of horse-power speed curves. The curves are interesting in that they show the absolute result of the change in timing in each case.

Particular attention may be called to certain parts of the curves: Beginning with A, it will be noticed that the speed range of the motor with the valve timed as at A, Fig. 1, was very limited, and that above

Fig. 1.—Valve Setting Diagrams.

877 revs. per minute the power dropped off, until at 963 revs. only 16.2 b.h.p. was being developed. The maximum b.h.p. with this timing (19.27) was delivered at 874 revs. per minute.

In curve B the only change in the valve setting from that in A was an increase in the time the exhaust valve was held open. This had the effect of increasing the speed range of the motor somewhat, and at the same time, through relieving the pistons of a part of the back pressure, of increasing the power at all speeds. Between the settings B and C the exhaust cams were again changed to give an earlier and slightly longer period of opening, but with only small gains in either power or speed. In C the exhaust cams were again changed to give a later timing to the closing, although retaining the opening time used in the test (not shown) just preceding. The total angular distance of the inlet valve opening remained the same as in the three preceding tests, but the setting was here shifted, so that the valve opened later and closed after the outer centre had been passed.

As timed at C the power was slightly increased and the speed range very much so. In the test (not shown) preceding C the curve closely followed curve B and indicated a gain of .76 b.h.p. and a barely perceptible increase in the speed range. The tests preceding and following C seem to indicate that the later closing of the inlet valve in C is almost entirely responsible for the gains there shown. The most noticeable feature of curve C is the easy rise and fall to and from the maximum b.h.p., with a corresponding lengthening of the speed range.

Between C and D another setting (not shown) was tried, in which the timing remained the same, with the exception of the inlet valve closing, which was timed to occur at 20 deg. over the outer centre. This resulted in gains greater than any of the previous in both power and speed range, and gave a curve superior to D in every respect. The timing as in D, in which the time of the exhaust opening was again advanced, and the time of the intake opening set to lap the exhaust closing

Fig. 2.—Curves showing Variation in Power due to Different Valve Settings.

by 3 deg., was next tried. This resulted in a drop in power at the lower speeds, with a maximum power inferior to that with the timing just preceding. It thus seemed that the limit of exhaust lead for the development of power at low and medium speeds had been reached. It will be noticed that the maximum power of which the engine was capable had been increased from 19.27-h.p. with the timing as in A, to 29.38-h.p. with the D setting.

Two tests were run between the timings D and E; one in which the intake opening lapped the exhaust closing by 7 deg. with the intake closing at 20 deg. past the centre, and one in which the intake closed at 25 deg. over the centre with the timing of the exhaust opening and closing and the intake opening as in C. In both these tests the curves were inferior to that with the D setting. The curve for the latter of the two showed a dropping off in power at the higher speeds only, which loss was taken to indicate that some of each charge had been pushed out by the pistons on the return strokes because of extremely late inlet closing, due to the timing and the inertia of the valves at high speeds.

The next and last set of cams timed the valves as shown at diagram E. The timings of both inlet and exhaust that had given the best results in the preceding tests were here employed, and gave the best curve of the series in respect of rapid rise of the power at the lower speeds, maximum b.h.p., and speed range with sustained power with an increase in the speed. The curve E shows to what degree a steady rise in the b.h.p. had been attained with an almost corresponding increase in the revolutions per minute. The rapid drop in power at speeds higher than 1,300 revolutions per minute—corresponding in this engine to a piston speed of 1,125 ft. per minute—is due in part to mechanical losses and in part to the originally small size of the valves, and could not have been even slightly overcome by the timing without causing great power losses at moderate speeds. At any rate, a piston speed of 1,125 ft. per minute is excessive for economical operation. It will be noticed that as finally timed the engine developed, at a piston speed of 900 ft. per minute, 29.12 b.h.p., the revs. being 1,080, and that the maximum of 31.18 b.h.p. was delivered at 1,294 revs.

As before mentioned, the valves were only $1\frac{1}{2}$ in. in diameter, and this fact alone is responsible for any weakness remaining in the horse power speed curve after the timing had finally been adjusted to its best. If the valves had been larger the rate of gas flow would have been lower at the higher speeds, with a consequently more sustained power curve, this diameter closely approximating that shown at X, Fig. 2, which was obtained with an engine of the same cylinder dimensions with connecting rods 10 in. in length and valves 2 in. in diameter, lifting $\frac{1}{4}$ in., timed as in E, Fig. 1, except that the exhaust opened at 37 deg. before the outer centre. A slight all-round reduction would have to be made in applying the curve X, as a possibility, to the engine from which the curve E was made, because of the shorter connecting rods employed. As will be seen, the engine X developed a maximum of 33.72 b.h.p. at a speed of 1,365 revs.; and at 904 revs. 30.11 b.h.p. was delivered.

MR. WARWICK WRIGHT, who is taking up motor-boat racing, has just received delivery of his new boat, which is fitted with a 40-h.p. Metallurgique engine.

HILL CLIMBING COMPETITIONS.

ASTON.

On Saturday the Hertfordshire County Automobile Club held its open hill climb at Aston Hill, and a great success was again recorded both from the interest of the competitors and from the attendance of the public. The executive officers are to be congratulated on the admirable arrangements made for the meeting. Mr. S. Saker was the judge; Messrs. C. McWhirter, E. Webster and T. Williams were clerks of the course; Mr. W. Young and Mr. F. W. Shorland marshals in charge; Mr. W. Whittall clerk of the scales; Messrs. F. Straight, A. V. Ebbelwhite and J. H. Barley timekeepers; Mr. A. J. Salmon an obliging press steward and Mr. Sydney J. Ellis the secretary of the meeting.

The following are the results:—

| CLASS I. | | | | | |
|----------|---------------------------|---------------|--------|----------------|-------------------|
| Place. | car. | Driver. | Marks. | Time. m. s. | Final Placing. |
| 1 | 9-h.p. Riley | J. Browning | 756 | X | 1 |
| 2 | 8-h.p. Jackson | J. W. Davis | 763 | + 1 8½ | 7 |
| 3 | 8-h.p. Jackson | E. Jackson | 764 | + 55½ | 5 |
| 4 | 8-h.p. Jackson | R. R. Jackson | 771 | + 49½ | 2 |
| 5 | 10-h.p. De Dion | W. V. Jolley | 775 | + 54½ | 3 |
| 6 | 8-9-h.p. Chenard-Walcker. | H. Pennington | 875 | + 1 6½ | 6 |

CLASS III.—continued.

| 2 | 20-h.p. Talbot | T. H. Woollen | 714 | + 14½ | 3 |
| 3 | 40-h.p. Napier | F. Browning | 720 | X | 1 |

KETTLEBY.

On Saturday the Leicestershire A.C. held a hill-climbing competition at Kettleby Hill, on the main road leading from Melton to Kettleby. There was a large attendance, not only from the county of Leicester, but also from the adjoining ones of Nottingham, Northampton, and Derby. The weather was threatening all day, but fortunately the rain kept off, and the competition was carried out in comfort. The cars were divided into three classes, the first being for vehicles with one or two cylinders, the second for cars not exceeding 20-h.p., and the third for those above that rating, calculated on R.A.C. formula. The Leicestershire Club gave a medal to the car in each event having the fastest time to its credit, and another for that making the best performance on the following formula:—

The formula used in each of the classes was as follows:—

$$\frac{\text{Times in seconds} \times \text{Formula H.P.}}{\text{Total weight in pounds.}}$$

The horse power was decided by the following formula, namely:—

$$\frac{N \times (B + S)^2}{6,500}$$

N—Number of cylinders, B—Bore of cylinders in mm., and S—Stroke of pistons in mm.

A challenge cup was also presented by Mr. J. A. Hartopp, and this was won for the first time by Mr. A. Farnell on his 30-40-h.p. Daimler. The arrangements were admirably carried out by the officials, and the results were as follows:—

| EVENT A. | | | Place on | |
|-----------------------|-------------------|----------------------|-------------|------------|
| Name. | Club. | Maker's Name. | Time, form- | m. s. ula. |
| Stanley Riley ... | Leicester ... | 9-h.p. Riley ... | 2 31½ | 1 |

COALPORT.

On Saturday the Wolverhampton and District A.C. held an open hill-climbing competition at Coalport, near Ironbridge. The climb was one of 1,000 yards with an average gradient of one in ten, with several difficult turns that made the course additionally severe. There were five classes. The results are appended:—

| CLASS I. | | | m. s. | |
|--------------------|--------------------------------|-------|-------|---|
| T. W. Bowen ... | 10-12-h.p. Clement-Talbot ... | 2 39½ | — | — |

| W. H. Cook ... | 20-h.p. Sunbeam ... | 2 14 | m. s. |

CLASS V.

| | | | |
|-------------------|----------------------|-------|-------|
| F. Newton ... | 45-h.p. Napier ... | 1 8½ | m. s. |
| C. Sangster ... | 30-40-h.p. Ariel ... | 1 24 | m. s. |
| J. H. Barnett ... | 40-h.p. Austin ... | 1 41½ | m. s. |
| W. H. Evans ... | 40-h.p. Napier ... | 2 13 | m. s. |

The 10-h.p. Starling, which was driven by Mr. E. Lisle, jun., won the Silver Cup presented by the president of the Wolverhampton and District A.C., as well as the Star Trophy Silver Cup. On handicap the car also made the best performance in the Club event, and the driver was awarded a gold medal. In the Open event the car also did extremely well, and its performance was one of the outstanding features of the meet.

SCOTTISH RELIABILITY TRIAL.

IN view of the discussion with regard to the hill approaching Kenmore from Amulree the committee of the Scottish A.C. have obtained a detailed section of the steepest portion of the hill from a civil engineer. This is measured from a point 185 feet below the lower elbow curve to a point 110 feet above the upper elbow curve, and, consequently, embraces two elbow curves. The gradients, commencing at the lower bend referred to and going upwards, are as follows:—

For 50 ft., 1 in 11-5; 75 ft., 1 in 8-3; 25 ft., 1 in 6-5; 2-5 ft., 1 in 5-7; 15 ft., in the middle of which is the centre of the curve of the lower elbow, 1 in 5-2; 10 ft., in 1-7; 25 ft., 1 in 8-6; 25 ft., 1 in 11-5; 25 ft., 1 in 9-9; 15 ft., to the centre of the curve of the upper elbow, 1 in 6-6; 10 ft., upwards from said centre, 1 in 6-3; 25 ft., 1 in 6-2; 25 ft., 1 in 7-2; 50 ft., 1 in 6-9.

These gradients are all taken in the centre of the road.

LIEUT. J. CARRUTHERS, R.F.A., was the winner of the motor-car event in the annual sports of the R.A. at Aldershot last week.

MESSRS. JARROTT AND LETTS, 45, Great Marlborough Street, London, W., have just issued a new catalogue of the Sizaire-Naudin car for which they are sole concessionaires in this country. The list gives full particulars of the new 12-h.p. model, together with illustrations of the engine-clutch, change-speed gear, &c., as well as of the various types of bodies that can be fitted to the chassis. A copy of the list will be sent by the firm on application.

CLUBS AND ASSOCIATIONS.

ROYAL.

NEW members of the Royal A.C. include the Right Hon. Lord Atkinson, P.C., the Earl of Harrowby, the Hon. Edward Coke, Col. H. R. Cross, Col. H. C. Hansard, and Sir W. J. Lancaster.

AUTOMOBILE ASSOCIATION.

IN addition to the large extensions of the patrol organisation in Ayrshire, Dumbartonshire, Dumfries, Forfarshire, Fifeshire, Perthshire, Stirlingshire, and Lanarkshire, in connection with which a strong local committee have been doing great work during the last few months, offices have now been opened by the A.A. at Gordon Chambers, Mitchell Street, Glasgow.

SOUTHEAST.

THIS club is promoting a gymkhana at Great Stambidge on Wednesday next.

The committee is carefully watching the application of the Southend Town Council to the Local Government Board for a ten mile speed limit in certain streets of the borough.

ROAD.

THE Committee and some members of the Road Club ran down to the Burford Bridge Hotel on Sunday last. The club, which was instituted about two years ago, has been reorganised, and, among other

The Meet of the Road Club at Burford Bridge.

[E. W. Ashworth.

advantages to its members, has now made arrangements with a large number of first-class hotels throughout the kingdom to accept the club scale of charges. Particulars of membership can be obtained of the secretary, at Carlton House, 11, Regent Street, London, S.W.

AUTO-CYCLE UNION.

FIFTY-EIGHT competitors set out from Land's End on Monday in the Auto-Cycle Union's trial from there to John o' Groat's. The distance of the trial is 896 miles, and the first day's stage ended at Taunton, 155½ miles. Only one passenger machine—namely the 10-h.p. Legonda tri-car of M. W. Randle, was among the starters. The weather at the start was fine, but before Launceston was reached several local showers were encountered. These had the effect of making the road rather treacherous in places, but the good condition of the surface lessened the danger considerably. The first six to arrive, in the order named, were:—S. W. Carty, 3½-h.p. N.S.U. two-speed; W. H. Wells, 5-h.p. Vindec special; J. Tassell, 3½-h.p. Matchless; A. D. Nicholson, 3½-h.p. Triumph; M. Greiger, 6-h.p. N.S.U.; P. H. Cockcroft, 3½-h.p. Triumph.

CYCLE AND MOTOR TRADES BENEVOLENT FUND.

AT the July monthly meeting of the Executive Committee of this fund, the treasurer reported the amount of £486 to the credit of the current account at the bank. It was mentioned that employees in the motor trade had been somewhat backward in associating themselves with its benefits, and they are urged not to overlook the advantages it can afford them.

LANCASHIRE.

THE Lancashire Automobile Club have had a reliability contest for members. The course mapped out covered a distance of about 150 miles, commencing at the Yew Tree and terminating at the Kirkstone Inn, the route being Gisburn, Settle, Ingelton, Kirkby Lonsdale, Kendal, and Shap Fell, to Carlisle. From thence the cars returned via Pooley Bridge to Kirkstone Inn, where the run terminated. Of the fourteen entrants, twelve competitors started. The cars started at intervals between 8.45 and 9.30 a.m., and reached Carlisle between 12.30 and 2.30. At Carlisle a stoppage of an hour and a half was allowed for lunch, petrol and oil. All the cars finished at Bowness by six o'clock.

The winners of certificates as accomplishing an absolute non-stop run are as follow:—

| | | | |
|-----------------------------|-----|-----|--------------------|
| A. E. Crowdy, Manchester | ... | ... | 14-h.p. Siddeley |
| J. S. Horsfall, Nelson | ... | ... | 14-16-h.p. Argyll |
| Robert Magnall, Darwen | ... | ... | 40-h.p. Napier |
| L. Rothwell, Bury | ... | ... | 30-h.p. Humber |
| J. E. Stanning, Leyland | ... | ... | 30-h.p. M.P. |
| J. A. Sutcliffe, Manchester | ... | ... | 30-35-h.p. Daimler |

In addition to the above awards, medals have been granted to the following for meritorious performances:—

| | | | |
|----------------------------|-----|-----|--------------------|
| J. W. Ainsworth, Blackburn | ... | ... | 10-h.p. De Dion |
| F. H. Walker, Lytham | ... | ... | 28-36-h.p. Daimler |
| Mrs. T. M. Crook, Hoghton | ... | ... | 35-h.p. Mercedes |

ESSEX COUNTY.

ON Saturday the Essex County A.C. held a successful gymkhana in an enclosure on the Ongar road, at Brentford, kindly lent by the chairman of the club, Mr. Burnett Tabrum, J.P. The "gate" was in aid of the Brentford District Cottage Hospital, and at the conclusion of the interesting afternoon Lady Locock distributed the prizes, and Mr. and Mrs. Tabrum entertained the company to tea. The results of the various competitions were as follows:—

Starting and Stopping Race: 1, Miss Miller, 10-h.p. Panhard; 2, Mr. Temperley, 15-h.p. Humber.

Week End Race: 1, Mr. F. Lindus Forge, 12-16-h.p. Vauxhall; 2, E. J. Boake, 12-16-h.p. Corre.

Victoria Cross Race: 1, Mr. F. Lindus Forge, 12-16-h.p. Vauxhall; 2, Miss Miller, 10-h.p. Panhard.

Ladies Passenger Race: 1, Sir Charles B. Locock, Bart., 16-h.p. Fiat; 2, Mr. F. Lindus Forge, 12-16-h.p. Vauxhall.

Musical Chairs: 1, Mr. Edward Bryant's, passenger, Miss Bryant; 2, Sir Charles Locock's, passenger, Mrs. Young.

Best Appearance Competition: 1, Mr. E. E. Bentall's car with landaulet body.

LADIES'.

THE members and friends of the Ladies' A.C. visited Hanworth Park, Middlesex, on Thursday of last week, at the invitation of Mrs. Ainslie. Several events were decided in a gymkhana held in a meadow adjoining the house. Mrs. Herbert Whiteley won the speed-judging competition, Miss Muriel Thompson the tilting at the ring and ball events, and Mrs. Edmunds the musical chair race. The 2nd Dragoon Guards (Queen's Bays) band attended, and at the close of the gymkhana Lady Edward Spencer Churchill, who was accompanied by Lord Edward Spencer Churchill, distributed the prizes. There were about 250 ladies present.

SCOTTISH.

IN view of the approach of the touring season the executive of the Scottish Automobile Club would direct the attention of motorists generally to the necessity, in driving through Scotland, of observing moderate and considerate speeds in all towns, villages, and populous places, and in particular they would urge that visiting motorists would pay special regard to the warning and caution boards which have been erected by the Club at the entrances to villages and in other parts of the country.

By the invitation of Mr. T. Mitchell, the president, the members of the Bradford Automobile Club recently spent an enjoyable afternoon at his residence, Upwood.

ENTRIES at ordinary fees for the Lancashire A.C.'s hill climb at Rivington Pike, Horwich, on the 30th inst., close on Monday next. The address of the hon. secretary is Kensington Place, Blackburn.

THE fastest time made by any car in the Kettleby hill climb, the first, second and third fastest times up Aston Hill, and the fastest time of the Coalport climb were made by cars fitted with Dunlops.

UNDER the auspices of the Irish Motor Yacht Club, the Irish branch of the British Motor Boat Club, the Enniskillen Yacht Club and the Irish A.C., a motor-boat and automobile meet will be held on Lough Erne from the 25th to 29th inst.

SOME seventy crippled children belonging to the London County Council School at Mansford Street, Bethnal Green, have been taken under the auspices of the Beaumont Cycling Club for the fifth annual outing in motor-cars kindly lent by well-known motorists. The children visited various interesting parts of Epping Forest, being afterwards entertained to dinner and tea at Oak Hill Farm, Theydon Bois.

CASES AGAINST MOTORISTS.

THE ENDORSEMENT OF LICENCES.

Michael Brathwaite, a motor-car driver, of Kensington, was summoned before Mr. Plowden, at Marylebone, at the instance of the Commissioners of Works of Public Buildings, for failing to produce his licence for the purpose of having it endorsed with the third conviction recorded against him for exceeding the ten-mile speed limit in the public parks. Mr. Travers Humphreys, barrister, appeared for the Director of Public Prosecutions, the proceedings being in the nature of a test case. Mr. Staplee Firth, who defended at the instance of the Motor Union, submitted that no matter how often a motor driver was convicted of exceeding the speed limit in the parks, his licence could never be endorsed, inasmuch as the section of the Motor Cars Act requiring the endorsement of licences was not prospective, and did not, therefore, apply to offences under the Parks Regulation Act.

Mr. Plowden found that a case heard in the Divisional Court was conclusive on the subject, and ordered the licence to be endorsed. He also imposed a fine of 20s., with five guineas costs. Notice of appeal was given.

APPEAL DISMISSED.

At the Ketford Quarter Sessions Earl Fitzwilliam's motor appeal case has been heard. The appeal was against the decision of the Ketford magistrates, who fined the earl's chauffeur £2 10s. and costs for exceeding the ten mile limit on the London road on April 3rd. Mr. H. Y. Stanger, K.C., M.P., and Dr. T. Lindley conducted the case for the prosecution, and Mr. Marshall Hall, K.C. (instructed by Mr. Staplee Firth, London), appeared for the appellant. The magistrates confirmed the conviction.

Several batches of motorists have also been fined at Leamington, at Kingston, where £90 was taken in fines in one day, and at Haywards Heath, where £95 was obtained from speedy motorists on Monday of this week.

At Lewes Police Court, on Tuesday, three motorists were fined £13 and costs for exceeding the legal limit on the road between Polegate and Lewes.

On Tuesday another batch of motorists appeared at Haywards Heath Petty Sessions for exceeding the speed limit on the London to Brighton road, the fines and costs inflicted exceeding £100.

A FINE REDUCED.

On June 10 last Mr. J. W. Govan, of Ayr, was convicted at Ayr Sheriff Court of having recklessly and negligently driven a motor-cycle into Racecourse Road, Ayr, whereby it collided with a pair of horses belonging to Mrs. Neilson. A fine of £15 15s., with an alternative of forty days' imprisonment, was imposed, and the accused's motor licence was suspended. One month was allowed for payment of the fine. Mr. Govan's agent submitted the matter to the Secretary for Scotland, stating that in the circumstances of the case it seemed clear that the sentence was out of proportion to the offence committed, and intimation has now been received from the Secretary for Scotland that on full consideration of the circumstances of the case he is prepared to recommend that the fine imposed should be reduced to £5 5s. and the suspension of the licence remitted, and that steps are being taken for the preparation of a warrant for that purpose.

SUCH bad reports are rife concerning the failure of foreign tyres and rims in the Grand Prix that it is satisfactory to know that the Dunlop detachable rims and tyres proved perfectly satisfactory to the

A Reminiscence of the Irish Trials.—The Royal Starling 10-h.p. Two-Cylinder Car driven by Mr. H. S. Huet.

COMMITTED FOR TRIAL.

Claude Levy, aged 31, chauffeur, of Barry Road, East Dulwich, who has already been committed for trial upon the City Coroner's warrant, charged with the manslaughter of William Burr, of Hague Street, Bethnal Green, appeared at the Guildhall on Monday, charged with manslaughter and with reckless driving, and causing bodily injury to Harriett Calcutt.

Mr. T. G. Vickery (from the City Solicitor's office) said the City Solicitor had been asked to render legal aid in this matter on behalf of the police. It was a serious matter for the defendant, for the use of this particular car on the night in question was unauthorised by his employer. The accused repudiated this statement. The magistrate committed Levy for trial on both charges.

LICENCE SUSPENDED.

At the Richmond Borough Police Court, Cecil G. Watts, 27, Lordship Lane, Tottenham, was summoned for running his car at a speed of twenty-seven miles. Four previous convictions for exceeding speed limit were proved, and the Bench fined him £20 and suspended his licence for six months. Inspector Hart applied for police costs, which were granted.

EXCEEDING LEGAL LIMIT.

At Newbury several motorists have been fined sums of £3 and costs; at Kingston, five cases of exceeding the ten mile limit in Richmond Park were heard. A day or two later twenty cases of exceeding the legal limit were dealt with. At Wokingham fines of £5 each have been inflicted on several drivers who exceeded the legal limit at Sonning and Binfield.

users, Messrs. Warwick Wright, Weigel and Resta having all expressed their approval of the same.

MESSRS. JOSEPH OWEN AND SONS, LTD., of Stanley Road, Liverpool, supplied the materials for the wheels for the Austin cars in the A.C.F. Grand Prix race.

MESSRS. DUNHILL'S, of 359-361, Euston Road, London, N.W., have issued a new catalogue of their clothing and raiment for motorists, in which several good types of ladies' coats are illustrated. The selection of new dust coats for gentlemen motorists when on tour is also comprehensive of the latest designs.

IN motor repairs every minute saved is often of great importance, and in the matter of gear replacements time is usually lost in obtaining quotations for special requirements as to diameter, pitch, shape of boss, keyways, &c., of pinions wanted. To save this waste of time Auer, Ltd., of Grosvenor Road, Hanwell, W., have got out a list giving a scale of prices at which they are prepared to promptly supply spur gear wheels in any pitch, and of any shape, complete with holes bored and keyways cut, teeth chamfered, &c. The gears are made from forged blanks of special Sheffield steel, and are carefully case-hardened. A copy of the list will be sent on application.

FROM the Standard Motor Co., Ltd., Albany Street, London, N.W., comes a copy of the new artistic catalogue of "Standard" cars that has just been issued. The list not only gives full particulars of the two models, 20-h.p. and 40-h.p., both fitted with six-cylinder engines, but includes illustrations of the main parts of the chassis and of the factory in which the vehicles are built. A copy of the list will be sent on application to the Standard Company.

FORTHCOMING EVENTS.

JULY.

- 13th (Sat.).—Annual gymkhana of the Herts C.A.C. at The Grove, Watford, by permission of the president, the Earl of Clarendon.
 Gymkhana of the Kent A.C. at Maidstone.
 Meet of the Liverpool and Cheshire A.C.'s at Delamere.
 New Forest and Dorset A.C.'s joint hill climb.
 Hill Climb of the Essex C.A.C.
 Derby A.C. Uttoxeter Challenge Cup Competition.
 Lincolnshire A.C. meet at Grimsby and drive to Cleethorpes.
 Manchester A.C. hill climb.
 20th (M.).—Entries close for the O'Gorman trophy.
 20th and 21st.—The R.A.C. dust trials at Brooklands.
 22nd (W.).—Gymkhana organised by the Southend and District M.C. at the Rectory Ground, Great Stourbridge, near Rochford.
 There are eight car events.
 23rd (Th.).—Gymkhana of the Cambridge A.C. at Chippenham Park.
 Hill climbing competition of the Hull and East Riding A.C.C.
 25th (Sat.).—Petrol Consumption Tests of the Motor Cycling Club.
 Annual Open Hill Climb of the Midland A.C. at Shelsley Walsh.
 Gymkhana of the North Middlesex A.C. at Pyrford Court, near Woking.
 Committee meeting of the Kent A.C. at Herne Bay.
 Motor Union Provincial meet at Harrogate.
 Cheshire A.C. hill climb.
 Lancashire A.C. open hill climb.
 North Yorkshire A.C. gymkhana at York.
 West Surrey A.C. gymkhana at Godalming.
 26th (Sun.).—Southend M.C. run to Coach and Horses, Quendon.
 29th (W.).—Lincolnshire A.C. at Skegness.

LIGHTING-UP TIMES—LONDON.

| | | | |
|---------------|------------|------------|------------|
| July 18th—9.7 | — 20th—9.5 | — 22nd—9.3 | — 24th—9.1 |
| " 19th—9.6 | — 21st—9.4 | — 23rd—9.2 | — 25th—9.0 |

To find the approximate lighting-up time in July for Birmingham 13 minutes should be added to the above times, 18 for York, 22 for Manchester, and 45 for Glasgow.

AUTOMOBILE ACCIDENTS.

A SHOCKING motor fatality occurred at West Croydon on Saturday. Mrs. Ball, aged 79, was crossing Whitehorse Road when she was struck by a motor-car, carried several yards under the car, and so badly injured that she died in less than two hours at Croydon Hospital.

At Wembley the driver of a London motor-cab wished to turn round, but, finding something wrong with the machinery, he made to jump off the vehicle. Before he could do so, however, the cab backed into a fence and descended the steep embankment, turning turtle half way down. The occupants—two ladies and a gentleman—were much bruised and shaken, but escaped serious injury.

A MOTOR-CAR accident near Tadcaster, resulting in two deaths, was reported at Leeds on Sunday night. The victims are Albert Clarke, twenty-one, and a person whose name is unknown. Two motor-cars, it appears, came into collision at the junction of two roads. Clarke, one of the two persons killed, was cycling from Leeds with two companions, and was jammed between the two cars and thrown. A nurse, who was travelling on the other car, was also fatally injured.

Two motor-cars have been in collision near the St. George's Hall, Rotherham. Only slight damage was done. One of the vehicles belonged to the Gas Department of the Rotherham Corporation.

FRIGHTENED by a motor-car, the horses of a coach travelling from Windermere to Keswick upset the vehicle, injuring two American ladies among the passengers.

A MOTOR-CAR collision occurred at Swadlincote, near Burton-on-Trent, on Monday. The car, belonging to the Mid Counties Garage Company, of Leicester and Ashby-de-la-Zouch, was being driven down a hill when it collided with a pony trap, which was knocked through a fence and down an embankment into a field. The car, on the other hand, swerved across the road into a telegraph pole, turned a somersault, and rolled over on two gentlemen and a lady who were inside.

Two rather alarming accidents occurred on Monday at Bognor. A motor-car driven by a young man named Goldsmith had been used to convey a party to the Stamp House, and he was on his way back to Bognor, when, at Big Tree, he had the misfortune to knock down a motorcyclist. The rider was picked up in an unconscious state and was found to have fractured his right arm in two places. He was taken into Bognor in the motor-car. The other accident occurred at the South Bersted Level Crossing. A motor-car driven by a youth named Hayler was making a journey to the Stamp House with a load of trippers. The gates were closed to allow the 3.27 p.m. train from Bognor to Barnham to go out, and the vehicle dashed right through the gates and across the line to the other side. The car was not damaged, but the gates were splintered.

COMPANY NEWS.

ARGYLL, MOTORS, LTD.—On Tuesday an extraordinary general meeting of Argyll Motors, Ltd., was held at Glasgow under the chairmanship of Mr. W. A. Smith, who explained that bad weather and bad trade in May had caused a falling in sales from £49,559 in the same month of the previous year, to £22,525. It became manifest to them that unless sales speedily increased it would be impossible to meet their debenture interest and redemption. The whole circumstances of the case were reviewed at a meeting of the trustees for the debenture stock holders in London, when it was resolved that in the interests of the shareholders and others it would be the best policy to go into voluntary liquidation. He denied the charge which had been made with regard to the disposal of his shares, his holding of which at the present time amounted to £17,216. At the conclusion he moved that the company should go into voluntary liquidation. This was seconded by Mr. A. W. Steven, another of the directors. Mr. Thomas Dence quoted figures showing the total liabilities to be £952,000, and the total assets £761,000. The resolution of voluntary liquidation was unanimously approved, and the directors' recommendation with regard to the liquidators was also adopted.

ROAD REPORTS.

MIDDLESEX.—The Middlesex County Council has declined the requests of the Finchley and Tottenham Urban District Councils for a limitation of the speed of motor-cars to ten miles an hour in the Great North Road, Regent's Park Road, and the main road through Tottenham.

BRIGHTON.—Several of the rural authorities in the Brighton district are complaining of the running of heavy motor-buses and motor-cars along narrow roads, thereby causing danger and inconvenience to the public.

WINDSOR.—Some police officers at Windsor on Sunday adopted a novel plan for reducing the speed of motor-cars using the Bath road. Each constable had an open note-book, and on the approach of a motor-car he was seen to be taking notes. Motorists evidently thought that the officers were timing them over a measured distance, and the result was in each case a prompt and material reduction in speed. As a matter of fact there was no police trap at all; the constables are reported to have merely resorted to a simple ruse for reducing the speed of the cars.

BUSINESS NEWS.

AN extensive series of pictures showing the A.C.F. Grand Prix Race at Dieppe are being shown nightly at the Empire, London.

THE Mercedes car which won the A.C.F. Grand Prix race last week is now to be seen in the showrooms of Messrs. Ducros Mercedes, Ltd., in Long Acre, London, W.C.

CHAIN driving scored heavily in the recent Grand Prix race, as the first three cars used this form of transmission. Renold chains were fitted to the winning Mercedes, and other cars entered which used them were Austin, De Dietrich, Germain and Motobloc.

IN connection with the illustration given in our last issue of a 38-h.p. Daimler car on Trinafour Hill, it should have been stated that the vehicle made the fastest time in Class F of the Scottish Trials. The quickest ascent of this steep gradient was made by the 40-50-h.p. Ariel which competed in class G.

AN attractive circular has been issued by the Dunlop Tyre Company, showing that in the three recent English, Scotch, and Irish Trials cars fitted with their tyres have won twenty-two out of twenty-eight first prizes.

MESSRS. JARROTT AND LETTS, LTD., have had so many requests for trial runs on the Sizaire-Naudin from all parts of the country that they have arranged to have some special representatives on the road, and also for a tour round England on one of these popular voitures. The object of the firm is to enable all those interested to have a trial run on the roads and hills of their own locality on a 12-h.p. Sizaire. The vehicle which is making the tour will be driven by Mr. A. Bray, who will stop at various centres for a week or more to arrange trial trips for any agents or private inquiries he may receive in that particular district. Anyone wishing to make an appointment for a trial run should communicate with Messrs. Jarrott and Letts, Ltd., immediately.

MR. G. BUTLER MORRIS, who from its inception has been identified with the business side of "The Car" as commercial manager, has, we learn, resigned his position and has commenced business as an insurance broker, in association with an established firm of brokers, under the title of Morris, Crawford and Co., at 4, Sackville Street, W., and 78, Poultry, E.C.

IT speaks much for the growing reputation of the Stepney spare-wheel that a letter from Spain addressed "All London taximeter cabs are fitted with Stepney wheels, London"—a phrase copied from a picture-post-card, was delivered to the company at Llanelli without delay by the postal authorities.

ARIEL MOTORS, LTD., have written to the Society of Motor Manufacturers and Traders asking if the society proposes endeavouring to arrange with manufacturers with a view to fixing a standard basis for catalogue definition of horse-power during 1909. They think it quite time that there should be some uniformity in regard to this matter, as at present the manufacturers' catalogue horse-power is no guide whatever to the buying public.

THE Motor-Car Journal.

LONDON, SATURDAY, JULY 25, 1908.

[No. 490.

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

FOLLOWING closely upon the report of the Scottish Trial comes that of the International Touring Trial, which will be read with profit by the entrants—but the interest of which has been greatly discounted by the publication of the details that have previously appeared. In their report the judges point out that the cars were run each day over distances substantially more than would be run in the ordinary use of a touring car. The route was selected to include the severest hills that could be expected to be climbed by a car touring in any part of Great Britain or the Continent. Then it was sought to secure imitation of the long stretches of Continental roads by introducing into the Trial a 200 miles' run on the Brooklands Track. Cars were eliminated from the latter if they had not reached the night's depot by five o'clock on the following morning or if they were pushed up any hill, and of the forty-six starters thirty-six were in a position to compete on the track. The judges record that out of the eleven class winners no fewer than seven were of British manufacture. On another page we give the official record of the time or distance which separated the winners from the other competitors.

The British Association.

At the forthcoming meetings of the British Association which are to be held in Dublin several papers of more than ordinary importance are promised. In the Engineering Section, which will open on September 3rd with an address by Mr. Dugald Clerk, the president of the year, many features of automobile interest loom large upon the programme. Mr. F. W. Lanchester will read a paper on the "Laws of Flight," and this will be followed by one by Mr. F. H. Royce on the "Causes of Wear in Automobile Vehicle Machinery." Mr. Worby Beaumont will read a paper on "A Fundamental Error in the Theory of Power Transmission by Belt," and the work of the Engineering Section will be concluded by a contribution on "Railless Traction" by Mr. F. Douglas Cox. The Irish motoring organisation will give a hearty welcome to those automobilists attending the meeting of the British Association.

The Prospect of Peace.

AN echo of the troublous times which marked the dissolution of the R.A.C. and the M.U. comes in a report which has reached us as to an informal discussion taking place in the North of England among the representatives of several leading provincial clubs with a view of preventing the re-opening of controversy when the time comes for those organisations that are now affiliated with both bodies to reconsider their position. It is understood that the Peace Committee, which was established early in the year, is continuing its negotiations, and that a strong movement is afoot to hold in check any dissension that might otherwise arise. Within the last few days the Devon Auto-

mobile Club has received its "notice to quit" in the shape of the formal notice to terminate the present affiliation agreement between the club and R.A.C. and M.U. It has been resolved that the secretary shall in due course send reply postcards to all members of the club upon which to record their votes as to whether they wish the club to affiliate with the Motor Union or the Royal A.C. next year. A meet of cars will be held at some place of interest in Devon early in September, when a discussion upon the subject will be invited.

Inter Club Meets at Brooklands.

THE first attempt to secure an inter-club competition on the Brooklands Track not having proved sufficiently attractive to induce any club to accept the challenge of the Nottinghamshire A.C. in its entirety, a new challenge is now under consideration by the authorities of the track. It is intended in the revised regulations to allow accepting clubs to enter in one or more of the specified classes according to choice. Owing, however, to the lateness of the season this contest cannot take place until the summer of next year. It is to be hoped that the Brooklands A.R.C. will issue the suggested terms of the competition without delay, so that they may have full consideration at some of the winter gatherings of the interested clubs.

Hill Climbs.

THOSE responsible for the conduct of hill-climbing competitions would do well to consider the point suggested by an incident occurring in the hill climb of the Coventry Motor Club at Newnham on Saturday last. The cars were started at the usual minute interval, but one of the fast vehicles was considerably hampered in passing an earlier competitor when at the steepest part of the hill. Probably the skill of the driver prevented a mishap, but the nearness of the vehicles in inches was too appreciable to be pleasant. It is unfortunate that in such competitions the fastest cars are sent off so quickly after the less speedy ones. The practice is not confined to local clubs, for, both in the Scottish trials and in the longer event of which it formed a section, several runs were spoiled, notably on the Cairn o' Mount and Kirkstone Pass, owing to this cause. If the minute interval is to be maintained, it might be well, as a precaution of safety, to dispatch the speedier vehicles before letting the lesser powered ones make their ascent.

A Club for India.

News of the doings of the various motoring organisations in the Indian Dependency, no less than the statistics as to the number of motor-cars that are sent thither from this country, proves the interest that is taken in automobilism in that distant part of the Empire. Now a scheme is being promulgated for instituting a Motor Club for India, which shall be a central organisation to see to the condition of the Indian roads, to promote touring, and generally have a control over the movement such as is exercised by the R.A.C. in this country. There is a rapidly increasing number of motorists in the Empire, and the absence of such an association is being greatly lamented by many of those who have had experience of the value of similar organisations in this country.

4 times 8 = 25.

AN interesting side-light as to how the speed is judged by the police was given at the Brighton Bench a few days ago, when a fine of 40s. and costs was imposed by the borough magistrates upon the driver of a motor-cab. The police evidence was to the effect that defendant was travelling at the rate of twenty-five miles an hour, and when asked upon what basis he made his estimate the police-constable said he had seen Lerner, the champion walker (originally a Brighton policeman), walking eight miles an hour. The motorist in this case was travelling four times as fast as the pedestrian whom he had seen. Apparently the Bench took no notice of the discrepancy between three and four times eight, and the usual fine was inflicted without much discussion.

A Presidential Candidate.

PROBABLY the motor-car will play a part in the forthcoming presidential election in the United States almost as great as in the parliamentary contests in this country. We reproduce herewith a portrait of Mr. W. H. Taft, one of the American candidates, in the Government 30-h.p. White steam car. Apparently he is opposed to the speed limit, for, after lunching with President Roosevelt at Oyster Bay, he reached Long Island

city, thirty-two miles distant, in one hour and six minutes, or fourteen minutes less than the train schedule. In the photograph Mr. Taft is shown seated in the White steam car with General Luke E. Wright, his successor as Secretary of War for the United States.

American Shrines in England.

THOSE who write books of studies of the picturesque centres of our English landscape would confer a further favour by prefacing the same with some brief guide as to how to reach these literary and historical shrines. Nowadays the visitor is often anxious to know the best routes, either by road or rail, and we would suggest to Mr. A. T. Storey, when a second edition of his "American Shrines in England" is demanded, that a sketch map, together with some short description of the roads to and from the places noted, will add to the practical value of his work. Within the compass of some fourteen chapters he has a great deal to say as to the English homes of the Washingtons, Franklins, Pilgrim Fathers, the founders of Yale and Harvard colleges, as well as some other heroes of American colonisation, and he says it well. Messrs. Methuen and Co. are the publishers of the volume, which is embellished with illustrations in colour as well as in monotype. The historical information has apparently been accurately compiled, and to American motorists visiting this country the only feature which will be found lacking is that of "how to get there,"

which we have suggested. Even without that, however, the volume possesses considerable interest.

Danger Signals.

AFTER two years' negotiation an excellent arrangement has been arrived at between the Devon County Council and the Devon and Cornwall A.C., by which the former will spend £250 in the provision of danger signals provided that the latter will subscribe or obtain £50. This is a step in the right direction, and is on the lines we should like to see local authorities working elsewhere. The Council has asked the club to assist it in deciding upon the most important places where signals should be erected for the protection of the motoring and non-motoring public, and a sub-committee of the club, consisting of the chairman, Mr. W. E. P. Bastard (Yealmpton), Mr. M. Farrant (Exeter), Mr. E. Parsons (Plymouth), and Mr. M. F. Stapylton (Totnes) has been appointed for the purpose of going over the principal main roads of the county and preparing a list of "danger spots" for submission to the Council.

The Midland and Stop Watches.

WITH a view of increasing the efficacy of the police traps which they have established, the police employed by the Standing Joint Committee of the Warwickshire County Council have been supplied with sixteen stop watches, and these will soon be in operation. According to Colonel Woolcombe-Adams, the "controls" hitherto maintained by the police have been of an indifferent character, and the constables placed in charge are now to be specially trained in the use of their new stop watches. The introduction of these will be made at Henley-in-Arden and at Dunchurch, as well as at various cross roads. The Chief Constable and the county authorities are working in union in the matter, and the local motor clubs would do well to impress upon their members the necessity of moderating any enthusiasm for speed which may have developed. Fines amounting to £93 have just been inflicted on eighteen motorists at the Coventry County Petty Sessions by way of example.

Lights on Vehicles.

AT the beginning of the year the Lights on Vehicles Act passed last year came into operation. This was to secure that "no person shall permit his vehicle to be in any street or road during the period between one hour after sunset and one hour before sunrise without providing a light." Under certain circumstances, exemptions were allowed to be made by Borough or County Councils, and in our issue of February 1st last we gave the results of our inquiry into the way in which the new legislation was being endorsed by the various authorities of the country. Now we have obtained from the Home Office a further statement showing the local authorities who have imposed obligations additional to those required by the Act. This, together with a list of the County Councils which have obtained exemption from the operation of the Act during the harvesting operations, is published on another page, and will be of interest to those travelling in the agricultural districts during the coming months.

Making Examples.

AT Sheffield there is a Children's Court, in which are heard cases against juveniles, the young delinquents being kept quite apart from the older offenders. The other day the dangers arising out of the practice of throwing missiles at passing motor-cars was pointed out to three small boys when a solicitor, instructed by Mr. C. D. Leng, prosecuted a trio of lads for throwing clay at Mr. Leng's motor-car whilst it was passing down Division Street. The case was taken into court in the interests of the motorists of the city, a great many offences of this kind having previously occurred. It was not the damage which was done to the car which was complained of, but that the motorists

might be seriously injured, perhaps blinded, and as a result be unable to control their car. The Bench, on the advice of the solicitor, decided to communicate with the education authorities, so that some steps might be taken to warn other schoolboys of the serious results likely to occur from such a dangerous practice. A fine of 2s. 6d. was imposed on each of the three defendants, who may become missionaries of manners among other lads of their age and city.

Speed Limitation Applications.

ON Monday night, in the House of Commons, Mr. Burns mentioned that he had had sixty-nine applications from local authorities for the reduction of the speed limit of motor-cars from the maximum of twenty miles per hour to ten, five, and in one case two miles an hour. In Scotland even more requests for similarly reduced limits have been made, Mr. Sinclair, the Secretary for Scotland, having had eighty-four applications from the local authorities. Of course all have not been granted, but

right that people should know that motorists were not riding at the enormous pace some people imagined; in fact, he believed that the habit of fast travelling was already dying out. This view will accord with the experience of those who have followed the course of the Motor Movement during recent years, and is apparently accepted by the Joint Committee of Cheshire, for they subsequently decided to provide a motor-car for the use of their Chief Constable in order to facilitate police administration, and also to effect an economy which is calculated to amount to between £300 and £400 a year.

"The Law."

IN a case against a motorist heard at the Durham County Police Court one of the magistrates observed that the car, which was alleged to have been travelling at a rate of over thirty miles an hour, should have been stopped by the police and the owner of the car informed that there would be a prosecution. Unfortunately, this is rarely done, with the result

The Grimsby Meeting of the Lincolnshire Automobile Club.—The Mayor of Grimsby leading the way to Cleethorpes.

we refer to these figures as demonstrating to those who are complaining of the speed of motor vehicles that the subject has received careful attention throughout the country, and that there are few Councils where speed limits might be usefully instituted that have not made known their desires to the central authorities at the seat of Government.

A Police Constable's Testimony.

WE remember with what consternation the City Fathers of Belfast regarded their Chief Constable when, in giving evidence in connection with their application for a speed limit in the city, he made confession that such was unnecessary and that the ordinary powers with which he is endowed by law were sufficient to meet the case. Now another Chief Constable has come forward with a kind of semi-official benediction for the automobile. At a meeting of the Cheshire Standing Joint Committee on Saturday Col. Hammersley informed that authority that he had taken steps to test the speed at which motor-cars were travelling through the county roads. He thought it was only

that the unfortunate offender has to prepare his reply to the summons some time after the alleged event, and also at a considerable distance from the place where it has taken place. Under such circumstances it is generally impossible for the motorist to prepare an adequate defence and the police manage to get it all their own way.

The Considerate Driver.

Now that motorists are getting away to the seaside and to the pleasant places of their own, as well as of other countries, several warnings have reached us from local authorities and others urging a moderation of the speed of motor-cars in populous places which are more than ordinarily crowded at the holiday season. At Skegness the matter has been discussed by the local authorities, and the Automobile Association in London has just received a request from the Hunstanton Urban District Council asking them to suggest to motorists the pleasure it will give them if they drive slowly along the main roads of that rising resort. Verily the considerate driver is in great request; he is more frequently met with than is commonly allowed.

HOW TO KEEP DOWN THE EXPENSES OF MOTORING.

By A. E. S. CRAIG.

TO the man who is hovering on the brink of his first investment in a motor-car the great difference of opinion that appears to exist as to the cost of owning and running one must be sorely perplexing. Ranging from the optimistic assurance of would-be vendors, he is confronted with a rising estimate of expenses which he may glean from his friends and acquaintances, or by the perusal of various letters that appear on the subject in the columns of the Press from time to time. It will be my humble endeavour in the following remarks to show that what seem to be contradictory versions are in reality largely due to the idiosyncrasy of the individuals by whom the information is afforded. By this I mean to imply that in the same manner that one man will rub along comfortably through life's thorny path on a small pittance, and by commonsense and economy exude a halo of content, another on ten times the amount of the first will hardly be able to make both ends meet. I will further premise by stating that what advice I have to tender is for people whose means will neither enable them to afford the luxury of a very large car, nor even leave them sufficient margin to squander money recklessly on a small one. That is to say, I will deal with cars of 15-h.p. and under.

The Marquess de Villamarta on his 42-h.p. Daimler Car at the Fair of Jerez, a small town about eight miles from Cadiz Spain.

When a man writes to the papers and pours forth his indignation at finding the upkeep of his car has been abnormal, we see only one side of the picture. The name of the car is for obvious reasons withheld, its state of preservation when he bought it can only, as a rule, be guessed, whilst his own intelligence may usually be arrived at by the schedule of items he submits. The novice who purchases a car at an auction second-hand, or from someone "going abroad," or even "from a friend," without conscientious advice from a person really capable of judging, not only the merits of the vehicle, but its adaptability to the special requirements of the buyer, will probably find himself severely handicapped from the start. There may be nothing particularly wrong with the car, it may possibly be even fair market value for the price paid, but to the purchaser it is, perhaps, dear at any price. I positively affirm that, beyond knowing the limit price he can afford to pay an inexperienced buyer stands but a poor chance of getting satisfaction, unless he deals direct with some firm of high repute in selecting his first venture in automobilism, without unbiassed advice. The first axiom, therefore, must be: Know exactly what you want, and be sure you get it.

It is a great mistake, for instance, to think that because a car with a few surplus horse-power is cheap that it is a bargain for you. It may be for the man to whom the extra power will sometimes be of real service, but assuming you have arrived at the limit power that your circumstances as to load, road, and

speed demand, every bit of extra power is an unnecessary and continual expense. Wherever you go, with every revolution of the engine, that extra power, like the little lamb of Mary, goes too. And it travels at your expense. Equally foolish is the man who buys a car that is in any way too large or heavy for his requirements. Not only in climbing hills, but on the level, starting, and even stopping, the maintenance of that car is burdened with an unremunerative expense. Worst of all is the tyre bill, but fuel and renewals may be counted on to bring up the rear in good style. I have read somewhere that infant mortality is in great measure due to the intense ignorance of young mothers as to the proper manner of rearing their progeny, and it seems to me that an apt comparison can be made with the treatment meted out to automobiles by the crass stupidity of their owners. A rickety state of health and frequent visits to motor doctors is the unhappy lot of cars in the care of inexperienced motor owners. The second maxim may therefore read: Owner, know thy car.

There is no doubt that, whether one employs a chauffeur or not, he who by natural proclivity, or by dint of setting himself seriously to the task, becomes an adept in mechanical knowledge is placed at a very great advantage as regards the cost of maintaining his car in good working order on an economical basis. Without in any way desiring to underrate the value of the services of that *rara avis* a competent mechanic driver, I take it that there are a great number of people whose finances will not allow of the employment of a servant expressly to look after the car. Indeed, the future of motoring would be narrowed too much in its scope if only those to whom the additional cost of a chauffeur is possible should be able to afford to keep a car. A horse fattens under the eye of its master, and a motor-car concerning which the owner has sufficient practical knowledge to distinguish between the necessity for an overhaul and its limitations on the one hand, and an excuse for the driver to have a day or two "off" on the other, will run longer and cost less than one where the master only knows how to swear with vigour at the bills presented, without the most remote idea as to the extent to which he is having to pay for his ignorance.

In certain circumstances I am inclined to the opinion that for those who do not propose to keep a chauffeur, and have no time or desire to do more than the actual driving themselves, a maintenance contract with some reputable garage firm will work out the cheapest in the long run. But to arrange such a contract on a really equitable basis, so as to work without friction between the parties concerned, is by no means an easy matter. For if the maintenance contract is to throw all risks on the firm that undertakes the upkeep, it means that they are entering the field of speculation. They are speculating on the good faith of the makers of the car, and of the one who is going to drive it, and are thus chancing all sorts of possible contingencies, and hence it stands to reason that the rate of upkeep must necessarily be high enough to cover a number of expenses that may never materialise. This is the stumbling block to a really low rate being possible; and yet if, on the other hand, the owner agrees to take all risks, and pays for all repairs in addition to a non-speculative and therefore lower rate, there is no longer the same incentive to the garage people to keep the car on the road with as little repairs as possible, and therefore if the owner has a run of bad luck he is inclined to be suspicious of unfair treatment. I think the matter of maintenance is one that lends itself to discussion, so that by interchange of experiences and ideas the best all-round basis may be arrived at.

(To be concluded).

M. CLAUDE LE LAS, whose brother holds the French record for hydroplanes, having covered on the Seine, on November 8th last, one kilometre with the current and one kilometre against the current in 1 min. 56½ sec., i.e., an average speed of 62 kilometres 68 metres an hour, has come over from France for the purpose of carrying out a series of tests in Southampton Water with a 12-h.p. hydroplane. M. Le Las is staying at Sea View, Bellevue Road, Cowes, and will be pleased to show his craft to any motor-boat men who may like to try it.

GOSSIP FROM PARIS.

AFTER reflection French motor-car builders have found consolation for their crushing defeat in the Grand Prix in the undeniable fact that if they were beaten by Mercedes in Ireland in 1903, by Itala at Brescia in 1905, by Fiat at the Grand Prix in 1907, by Itala and Isotta Fraschini at Brescia in the same year, and by Mercedes at the Grand Prix in 1908, they from 1895 to 1902 scored an almost uninterrupted series of victories. They are quite right not to despair of earning fresh laurels, and they are all the more likely to succeed because the "pile" they received from the Germans on July 7th has, I think, opened their eyes. Till then they imagined that in the automobile field they could always say with Caesar, "Veni, vedi, vincit." Now they know they are not the only people in the world who can make good, reliable, and fast cars; and that to hold their own against the English, Italian, German, and other foreign manufacturers they must not content themselves with their old methods, which have been surpassed by their competitors in more than one country. It would, of course, be rash to predict the result of next year's Grand Prix, but already all the big French automobile firms are determined it shall not be their fault if one of them does not

unsuspecting motorists as possible. But in Switzerland, as in and around Paris, there must be two to check the speed of a car. My friend, who was fortunately acquainted with the ridiculous speed limit, happened one day, when he was going at a fair pace, to notice a gendarme pull his watch out of his fob and make a note. Guessing that another representative of the law was not far off, he stopped his car altogether for five minutes as soon as he got round a corner out of sight of the official. Then he started off again at full speed. In a moment the second gendarme was in the middle of the road making signs for him to stop. Of course he pulled up at once, but to the amazement of the gendarmes it was found on comparing notes that my friend had been travelling at an average speed of no more than three miles an hour! The gendarmes did not like the practical joke, but they let him go with the warning not to try it on again.

MR. HENRY FARMAN has gone to the States to teach our American cousins to fly, because the Wright Brothers are so occupied in preparing their machines to be sold—one to the United States Government and the other to the French syndicate—that they really have no time for anything else. Farman received

Some of the "Sight-Seeing" Motor-Cars used by Messrs. Thomas Cook and Sons in Paris.

carry off the palm. The director of one of the most important of them told me the other day he was sure French makers would neglect nothing to secure victory in 1909. As for his firm, it would set to work as soon as the regulations of the race were fixed, because it was undeniable repeated defeats would in the end prove disastrous for the French automobile industry. He added: "I don't believe the German victory will affect us very much, because our exports to Germany are not very important, and our French customers do not like German goods. But we must not go on getting beaten in the races. We shall have our Grand Prix next year, and we mean to be prepared for it, though, after all, even another defeat would not prove the inferiority of our touring and town cars any more than it would demonstrate the superiority of those built by the foreign firm whose car might win the race."

A FRIEND of mine, who has just returned from a tour in Switzerland, tells me that in certain parts of that country, so frequented as a holiday resort, the speed limit for automobiles is fixed at five miles an hour, and it appears the gendarmes there are just as cunning as in France, and seek to obtain promotion by securing the condemnation of as many innocent and

as guarantee a good lump sum before he left, and is to be paid £50 a day during his three months' stay if he flies or not, and an extra £40 a day every time he flies, with all expenses paid for himself, his two assistants, and a secretary. In the meantime he leaves in France serious competitors, who during his absence may learn to surpass his performances. Bleriot, with his monoplane, seems at last to have made a long step towards solving the problem of the stability of his machine, even in a fairly high wind. The other day he took his apparatus out of its shed at Issy les Moulineaux while the wind was blowing strong. He flew with it twice from one end of the parade ground to the other and veered round with apparent ease and safety. At the end of the last flight he came to the ground rather roughly, but that was not so much due to the wind as to a miscalculation of the aviator, who imagined he was flying higher. His propeller was slightly damaged, but his machine will in a few days be ready for new flights. It is expected that Bleriot will begin by beating Farman's time and distance record and will then try to equal and, if possible, surpass any performance which Wilbur Wright may make at Le Mans. Then there is Delagrangé, who is back from his starring tour in Italy. With the assistance of the Frères Voisin he will certainly seek to astonish the world.

MARNEY.

B

THE DUST TRIALS.

THE Dust Trials for petrol cars organised by the R.A.C. occupied attention on the Brooklands Track on Monday and Tuesday. The Dust Committee of the Club were the judges, Mr. C. W. S. Crawley acting as hon. secretary for the trials, Major F. L. Lloyd and Capt. A. Hume as marshals, Messrs. J. Lyons Sampson and S. F. Beevor as tyre testers, and Mr. J. S. Mallam as the recorder.

Last year's procedure on the track was closely followed, a course along the finishing straight being prepared with fine limestone powder to a depth of two inches. In order that the cars should be uniformly run at the regulation rate of speed an endless cord with ribbons attached thereto at intervals was run at the side of the track at the proper speed for a distance of 500 ft., the last 200 ft. being the dust track. There were twenty-five entrants in Class 1, that for the makers' standard cars, and these were run along the track first at a speed of twenty and then of thirty miles per hour. From the performances, as observed from

pared surface. Very little dust was raised, and for that which ascended the hoofs of the horse were responsible.

It was demonstrated by all the cars that their dust-raising qualities were considerably increased as the speed advanced from twenty to thirty miles per hour. Proof was also given of the point that motorists passing other cars or carriages can reduce the nuisance by reducing their rate of travel. Mr. A. Duckham drove a 38-6-h.p. Napier with its tyres pumped to different pressures, but the results can only be compared in the photographs that were taken. Among the devices tried was a perforated sheet steel screen, more or less inclined to the horizontal, under the body fitted by Mr. Conrad Ingleby to a 21-h.p. car; the well-known disc wheels of Messrs. Wayman and Matthews applied to a 24-8-h.p. Junior car. They had also adopted a full-length undershield, open at the front and rear but closed to the sides of the vehicle. A patent exhaust suction device for collecting the dust from the wheels and depositing it on the road in a granulated form was fitted to a 24-25-h.p. old pattern Orleans car, and its performance was such as to excite considerable interest in the official

The R.A.C. Dust Trials at Brooklands.—The "Standard" Six-Cylinder Car.

the track, it would be difficult to assign the cars in order of precedence, owing to the variable wind which was blowing, and which made comparison very difficult. But the photographs, as well as the cinematographs that were taken, should give opportunity for the judges to have the advantage on a later occasion when considering their report. Among the cars competing in the makers' section were the following:—18-5-h.p. Alldays, 8-9-h.p. Sizaire, 18-5-h.p. Chenard and Walcker, 48-6-h.p. Thames, 30-h.p. Mors, 25-6-h.p. Lanchester, 22-5-h.p. Buick, 25-6-h.p. Westinghouse, 18-h.p. Reo, 24-8-h.p. Gaggenau, 6-h.p. Chenard and Walcker, and 25-6 h.p. Cadillac.

Later in the day the International Club competition for amateurs took place, the same preparations being made. Three clubs were entered for this competition—the Blackheath A.C. (Mr. A. Jackson's 24-8-h.p. Mutel), the West Surrey A.C. (Mr. J. F. Ponsford's 9-h.p. Clement and Mr. R. S. Robertson's 12-8-h.p. Siddeley), and the Kent A.C. (Messrs. F. Aldridge, 29-4-h.p. Standard and G. M. Kenyon, 25-6-h.p. Minerva).

On Tuesday the trials were continued, and novelty imported into the proceedings by running a light dogcart over the pre-

placings. On a 32-4-h.p. Pilgrim Mr. F. L. Martineau had adapted flat tray-like fittings under the wings, as well as another tray under the car. The purpose is to catch the air deflected from the wings, throwing it upwards instead of on the ground. The Dennis car was also the subject of some interesting experiments, showing that it ranks well among the minimum dust-raisers. Considerable interest was taken in the re-appearance of Mr. F. F. Wellington, whose original demonstrations in "dustless" running at Luton will be remembered. He had a 24-8-h.p. Gaggenau with a low body, and specially shaped mudguards, the rear ones being of canvas, to be rolled up in dry weather. The standard car of this type made a creditable run with a minimum of dust, and is evidently well designed from that point of view.

Colonel Crompton and his colleagues are now considering the data obtained in conjunction with the photographs that have been taken.

THE Star Engineering Company have lately completed two 12-h.p. vehicles for the "Sheffield Independent," for the rapid delivery of newspapers in the Sheffield district.

THE SOCIAL WHIRL.

THE King spent the week-end with Lord and Lady Desborough, at Taplow Court, on the Thames. He arrived, attended by Colonel Sir A. Davidson, on Saturday afternoon, from Sandown by motor-car. There was a large house party, including Prince Francis of Teck, Chairman of the R.A.C., who a few days before had conveyed to us the approval by His Majesty of the plans for the new Automobile Club House. On Sunday several motoring expeditions were indulged in from Taplow Court, and the King motored across to Cliveden to take tea with Mr. and Mrs. W. Astor. Subsequently he visited Lord Burnham at Hall Barn, returning to Taplow Court for dinner—a round of social pleasures only possible in such a short space of time in these merry motoring days.

Her Royal Highness the Princess of Wales, accompanied by Prince Alexander of Teck, went by motor-car from Marlborough House to Coombe Warren, Kingston Hill, on Tuesday afternoon, and honoured Earl and Countess De Grey by lunching with them at their residence, Coombe Court. They returned to town later

been present from attending the annual gymkhana of the Kent A.C., where Sir Alfred Watkin, Bart., was one of the judges. Sir Alfred is a keen automobilist, a member of the R.A.C., as well as a vice-president of the Kent A.C., and among the recreations to which he is most devoted are mechanical pursuits, especially the working of locomotive engines.

Mr. P. A. Molteno, M.P., who has joined other M.P.'s—Messrs. Harold Cox, Cathcart Wason, Watt, B. S. Straus and company—in the catechising of the President of the L.G.B., is the son of the first Premier of Cape Colony, and represents one of those Scottish constituencies where heckling with regard to motor matters is becoming a fine art. On Monday he asked Mr. Burns if he was aware that there was a mechanical governor, worked automatically, which reduced the speed of motor-cars to any desired limit, and would he make its adoption compulsory? Mr. Burns replied: "As an engineer I may say that I know how governors can be tampered with"—and the members laughed almost as uproariously as do the barristers when a judicial joke occurs in court.

Lord Breadalbane and his 16-20-h.p. new Arrol-Johnston Car.

in the day. Countess de Grey was one of the pioneer lady motorists.

The Marquis of Breadalbane has had a three weeks' motor tour in Nether Lorn, Argyllshire, and the accompanying photograph of his lordship was taken when leaving Oban at the beginning of the trip. The marquis takes a keen concern in the direction of his wide estates in Scotland, and when engaged on such business does not drive the car himself being generally too much occupied in consultation with estate officials. The roads in Nether Lorn are very narrow and precipitous, and are dangerous for anything in the nature of large touring cars. Some of them have as severe a gradient as 1 in 8, and are unsuited for cars, except those specially designed for such roads, and low-g geared, as is Lord Breadalbane's, to twenty miles per hour. His lordship's demesnes are familiar to those motorists who have followed the Scottish Trials, his seats including Taymouth Castle, Aberfeldy, and Auchmore, Killin—both in the Perthshire Highlands.

The rain of Saturday last spoilt several outdoor functions. At Maidstone it was sufficient to deter many who would have

I learn from Penzance that a good impression was left in the town by those who participated in the start of the reliability trial of the Auto Cycle Union from Land's End. Many Cornish motorists attended to see the passage of the "minor automobiles," and altogether Penzance resounded with the merry music of the motor in quite unaccustomed mood. The weather was splendid—by way of contrast to the rain the riders had left behind them in London and the south-easterly region.

As an indication of the interest shown by motorists in tyre vulcanizing, I may mention that Mrs. Evelyn Roberts, wife of Mr. Henry John Roberts, the famous amateur pigeon shot, has attended a number of times at the Harvey Frost Demonstrating Rooms, below the offices of the M.C.J. in the Charing Cross Road, and has done such excellent repairs that she has passed the tests and gained the first H.F. certificate granted to a lady.

After the house dinner at the Motor Club on Wednesday next a large party will hie themselves to the Palace Theatre to see the Hastings Gymkhana of last week o'er again on the bioscope.

LOLLIUS.

CONTINENTAL NOTES.

The A.C.F. Grand Prix Race.

The first meeting of the Sporting Commission of the A.C.F. since the Grand Prix race was held in Paris on Monday. It was expected that the rules for next year's contest would be considered, but, owing to the absence of one or two important members, the matter was postponed until a later date. Although the accounts were not entirely closed, it was announced that the recent Dieppe meeting would show a satisfactory profit to the French club. A somewhat novel proposal has been made by M. Arnoult, vice-president of the Technical Committee of the A.C.F., with regard to the rules for the 1909 event—and that is to do away with all restrictions in cylinder dimensions, fuel consumption, &c. In his view, these races have largely become a question of tyres, and the old idea that a race in which no limits are fixed will result in the production of monsters with enormous engines is no longer to be feared; manufacturers having learnt the lesson that the likelihood of such vehicles winning is remote, the very high speed they are capable of attaining carrying with it an inevitable tendency to greater tyre troubles. In his view a car weighing about 700 kilograms and fitted with a motor of slightly greater cylinder capacity than was provided for in the Grand Prix des Voiturettes would not only be able to keep up a high average speed, but, being relatively light on tyres, would have a greater chance of winning than heavier cars fitted with very high power engines. On the other hand, a writer in "Les Sports" suggests that it does not come within the province of the A.C.F. Sporting Commission to alter the conditions of the race, but rather in that of the Committee of Delegates of National

The A.C.F. Grand Prix des Voiturettes.—M. Naudin on the Sizaire-Naudin which finished second.

The car made the fastest lap in the race, covering it in 53 min. 42 sec.

Clubs, whose decision at Ostend last year was the basis of the 1908 race. Even if the Sporting Commission could deal with the matter he considers it unwise for France to keep on desiring a change in rules because it cannot win the great international contest. It was France, he points out, that brought about the death of the Gordon Bennett race; a contest with a fuel consumption limit was then tried and Italy won. Another alteration was desirable! And so at the Ostend Conference the French proposals with slight modifications were adopted. In view of this he naturally considers that the best interests of France would be to leave the rules alone and—try to win.

British Motorists in France.

Among the recent British motoring visitors to France are Mr. and Mrs. Benda, of London (24-h.p. Mors), Mr. Stafford (40-h.p. Wolseley), Mr. Sulzbach (24-h.p. Adler), Mr. Lowenfeld, of London (40-h.p. Daimler), and Mr. and Mrs. William Walker (40-h.p. De Dietrich).

Another Light Car Competition.

The "Auto" has just issued the regulations for the annual light car competition, known as the Coupe des Voiturettes, which is to be held in France from the 10th to the 13th September next. Some slight alterations have been made in the rules, notably as regards the cylinder dimensions, which have been fixed as follows:—Up to 100 mm. bore for single-cylinder engines, to 80 mm. for double-cylinders, and 65 mm. for four-cylinders; the minimum weight of the cars for all classes is 600 kilograms. The event will be held on a closed circuit taking in Compiègne, Pierrefonds, and Crepy-en-Valois, and be over a distance of about 500 kilometres. Entries at £8 per car will be received up to August 31st; should over forty be received there will be two eliminating contests over 250 kilometres, the first twelve in each being eligible for the final.

The Ostend Automobile Meeting.

The annual automobile meeting at Ostend was held last week. The proceedings opened on the 13th inst. with a series of ten kilometre speed trials, the best time of the day (4 min. 28 sec.), being made by Hautvast on a Clement-Bayard. On the 14th inst. there was a run to Nieuport, while a 250 kilometre reliability run was held on the 15th, when M. Gehenniaux won the Duke of Orleans cup, he covering the distance on his Berliet in 4 h. 37 min. The programme on the 16th comprised speed trials over the flying kilometre and the standing mile, the competitors having to make runs in each direction. Bourland on a Germain was the winner in the touring car class (engines between 85 and 100 mm. bore) he covering the two kilometres in 1 min. 34 sec., and the two miles in 2 min. 58 sec. In the flying kilometre test for racing cars Hautvast made the double run on his Clement-Bayard in 45 2-5 sec., Rigal and Gabriel on similar vehicles being second and third in respectively 46 4-5 sec. and 49 2-5 sec., Newton (Napier) fourth in 50 4-5 sec. and De la Marra (Fiat) fifth in 55 1-5 sec.

Speed Trials at Boulogne.

The speed trials organised by the Boulogne and Calais sections of the Automobile Club du Nord de la France were held at Boulogne on the 17th and 18th inst. On the first day the contest for the Franchomme Challenge Cup was run off, this consisting of a seven kilometre test with a flying start on the Coquelles-St. Inglevert Road. The event was confined to those who had taken part in the Ostend meeting, the winner being Herr Schmidt on a Benz, who secured 294 points. A better time was made by Jochems on a Mercedes, but the bodywork of his car did not meet the regulations. Saturday was devoted to the Caraman-Chimay Challenge Cup contest for touring cars, this consisting of three kilometres from a standing start on the level, a standing mile hill-climb and a similar test over a distance of 300 metres, the total of the time deciding the winner. Victory went to M. Franchomme, who drove a De Dion. The three Clement-Bayard Grand Prix racers also took part unofficially in the meeting, Hautvast covering the level three kilometres in 1 min. 19 3-5 sec. and the mile and 300 metres hill-climbs in respectively 1 min. 4 4-5 sec. and 16 2-5 sec.

Industrial Vehicles Trial in Austria.

The Austrian Automobile Club is organising a reliability trial of industrial vehicles; the event is to be held from the 23rd to the 31st of October next in North Bohemia and Moravia. The idea of making the daily runs from one centre has been abandoned in favour of a round course which shall take in as many towns as possible and so bring the vehicles under the notice of a maximum number of prospective users. Classes will be provided for: (1)

carrier motor-cycles; (2) vans up to 16 cwt. capacity, minimum speed $11\frac{1}{2}$ miles per hour; (3) vehicles up to 30 cwt. capacity, $9\frac{1}{2}$ miles per hour; (4) lorries up to 2 tons load, $9\frac{1}{2}$ miles per hour in the case of rubber tyres and $7\frac{1}{2}$ miles per hour with iron tyres; (5) ditto up to 3 tons, $7\frac{1}{2}$ and $5\frac{1}{2}$ miles per hour respectively; (6) ditto up to 4 tons, 7 and 5 miles; (7) ditto up to 5 tons, $6\frac{1}{2}$ and $4\frac{1}{2}$ miles; (8) motor-buses; (9) motor-trains, 5 miles per hour. Prizes will be offered by both the Austrian Ministries of War and Commerce, the latter being for the lowest fuel consumption for the load carried.

The Coupe de Normandie.

The regulations with regard to the race for light cars, which is being organised by "L'Etoile Sportive Caennaise" for August 15th, have just been issued. The event is open for (1) cars having single-cylinder engines up to 110 mm. bore; (2) two-cylinder vehicles up to 80 mm., and (3) four-cylinder machines up to 85 mm.; it will be held on a 62-kilometre course, taking in Caen, Bayeux and Tilly-sur-Seuilles, this having to be covered four times. Entries, at the rate of £6 per car, £11 for two, and £16 for three, were received up to the 20th inst., and can be sent up to August 5th at an extra fee of £2 per machine.

The Industrial Vehicle Trials in Italy.

With reference to the Industrial Motor Trials, which are to take place next September at Piacenza, under the auspices of the Italian War Office and Agricultural Department, it is announced that the last day for the receipt of entries has been postponed until the 30th inst. Twenty-eight machines have already been entered, including three by the Suddutsche Automobilfabrik, two by the St. Pancras Ironwork Company, three by the Saurer Company, one by the Yorkshire Wagon Company, four by the Fiat Company, and five by the S.P.A. Company. The Committee have obtained substantial reductions for the vehicles, exhibitors and drivers on the Italian State Railways, and is now endeavouring to secure special reduced tickets from London to Italy.

Belgian Motor-Car Imports and Exports.

The value of the foreign motor-cars and parts imported into Belgium during the six months ending with June last amounted to only £83,024, as compared with £98,716 in the corresponding half of last year. On the other hand, there has been an increase in the exports of Belgian motor-cars and parts—from £220,784 in the first six months of 1907 to £255,536 in the similar period of the current year.

Miscellaneous Items.

The municipal authorities of Amsterdam have lately put in service a Krieger electrical motor ambulance.—An electrical fire service wagon is to be added to the equipment of the fire brigade of Aix-la-Chapelle.—A new State motor-car service has just been inaugurated between Tegernsee and Schliersee, Bavaria.—A start is about to be made in Paris with the work of constructing underground passages under busy thoroughfares for foot passengers. The first to be made is that under the Avenue des Champs Elysees, while one is also to be established at the Gare Saint Lazare. If the experiment is successful in relieving congested traffic and reducing the number of accidents, others will be made at various busy points in the city.—M. Bousson Borgnis is about to experiment at Issy-les-Moulineaux with an aeroplane which aims at being a practical passenger carrier. There are six sets of wings on superposed planes, the upward movement being obtained by two sets placed on a long projecting V-shaped bow. The total weight of the machine is about 4 cwt.—The death is announced, at the age of sixty-seven years, of M. Louis René Panhard, one of the founders of the well-known Panhard-Levassor Company. The deceased, who was decorated with the Legion of Honour, retired from active business a few years ago, and his last appearance in public was at the inauguration of the monument to M. Levassor, his former partner, at the Porte Maillot, Paris.—"Les Sports," of Paris, is organising a series of speed trials on the level and on a hill at Evreux for September 20th.

THE TORKINGTON TYRE.

THE other day we had an opportunity of taking a short trial run on a 30-40-h.p. car fitted with a new solid tyre which is being put on the market by the Torkington Tyres, Ltd. Inventors have for years been at work on the production of a tyre which shall give practically the same easy riding as pneumatics, with none of the drawbacks of the latter in the way of liability to puncture or burst, high cost of upkeep, &c., the need for the same, in view of the increased weight and speed of cars, having become greater than ever. The main drawback to ordinary solid rubber tyres as fitted to pleasure cars has been their tendency to roll at high speeds, and, owing to the centrifugal action, to leave the rim. Both these disadvantages are claimed to have been overcome in the new tyre which has been devised by Mr. A. W. Torkington. It consists of an approximately square section of soft resilient rubber divided longitudinally into two closely-abutting strips, held in a rim of the section in general use for pneumatic covers, but which, to facilitate fitting, is made with a detachable flange. In the centre of the tyre is imbedded an articulated band or chain of metal, free to move downwards with the rubber at any point, but rigid laterally to prevent rolling. This band is bolted through the rubber, and by pressing the lower portion of the tyre firmly into the rim provides for the centrifugal force developed at high speeds. The arrangement is such that the rubber (which is nearly double the depth of the ordinary solid, so that it has a largely increased cushioning action) and metal work harmoniously together. The base of the rubber is honeycombed, so

A Rough Road.

From a sketch in

["La Locomotion Automobile."]

forming air chambers, which provide a place for the displaced rubber to sink into, giving a much greater yield.

Before putting the tyre on the market it has been submitted to very exhaustive experiments on a powerful limousine weighing, loaded, about 44 cwt. Gravitation trials carried out near Elstree have proved it to be equally as fast as pneumatics; its safety at high speeds has been thoroughly demonstrated on the Brooklands track, while the comparative yield and rebound tests show it to be much more efficient in these respects than ordinary solids, in fact, to approximate very closely the pneumatic. In the course of the trial run to which reference has already been made the car ran very smoothly, no perceptible difference being noticeable between it and a vehicle shod with pneumatics. Although the first cost, owing to the large quantity and the high quality of the rubber used in the new tyres, is slightly in excess of pneumatics, the freedom from punctures, bursts, etc., added to their durability, results in a material economy of the tyre bill over a period, in addition to which there is the absence of trouble and worry with regard to spares and inflation. As regards the life of the tyre, we were shown one which after 3,000 miles' use had only lost $\frac{1}{4}$ in. by wear; as there is about $\frac{3}{4}$ in. of rubber available it is estimated that from 16,000 to 18,000 miles can safely be relied upon before renewals become necessary.

MESSRS. M. H. AND M. SPENCER have opened the Carnarvon Arms Garage and Motor Works at Dulverton, Somerset, with a well-equipped repair shop for the speedy execution of motor work.

THE NAPIER GRAND PRIX CARS.

WE herewith reproduce two views of one of the six-cylinder Napier cars which were built for the purpose of taking part in the 1908 A.C.F. Grand Prix Race, but which were not entered owing to the fact that the French Club would not allow the use of detachable wheels. There are several novel features in the design. In the first place it may be mentioned that the engine cylinders, although separate, are very close together, making a very compact motor. The inlet valves are operated from the top by push rods and levers actuated from an enclosed cam shaft. The push rods end in a ball joint where they are attached to the levers, and each valve tappet is kept up to its seat by a flat spring. The throttle is controlled by pedal and also by a hand lever below the steering wheel. The bore of the cylinders is 126 mm., the power developed by the motor in accordance with the R.A.C. rating being just under 60-h.p. Two systems of ignition—accumulators with synchronised distributor, and magneto—are provided. The latter is driven by gearing off the crank shaft, the water circulating pump being actuated in a similar manner. The usual type of water filler is absent on the radiator, a hinged cover with a large opening being used in its place in case water has to be put in hurriedly.

An air pump worked from the cam shaft is employed for maintaining the pressure in the petrol tank.

The gear-box is adapted to give three forward speeds and a reverse, the final transmission being by a cardan shaft and bevel gear to the rear live axle. The propeller shaft is in a line with the crank shaft of the engine. It will, therefore, be understood that the drive from the motor to the rear axle is in a perfectly horizontal direction, the friction of universal joints, arising from an angular position of the cardan shaft, being thus eliminated.

A noticeable and highly original feature of the vehicle is the suspension of the back axle. Instead of the latter being connected to the centre of a semi-elliptical laminated spring, as is the usual practice, two flat laminated springs are attached at their centre to a bracket fixed to the main frame of the car on each side. These springs are arranged one above the other about a foot apart; their rear ends are attached to a bracket bolted to the axle, while at the front they are held in a clip attached to the main frame. The object of this somewhat novel system of springing is to reduce the amount of dead weight on the back axle, and Messrs. S. F. Edge, Ltd., inform us that in tests on the road and at Brooklands it was found that at speeds in the neigh-

bourhood of 100 m.p.h. the vehicle seemed to hold the track better than any system hitherto used in Napier cars.

The car is equipped with detachable and interchangeable wire wheels, road equalisers being fitted to both the back and front axles. The foot brake acts on a drum at the rear of the gear-box; the back wheel brakes operate on drums projecting from the driving hubs. The wheel base of the vehicle is 9 ft. 8 in., the track 4 ft. 8 in., and the weight in Grand Prix order 1,112 kilos. Among the little details of interest is a finely woven copper gauze wind shield provided for the driver, this being adjustable vertically in a frame attached to the dashboard.

Mr. S. F. Edge intends to drive one of these cars in the race against Mr. C. Jarrott at the August meeting at Brooklands, when its performance will be watched with interest; at the present time the vehicle is undergoing a lengthy test in France.

SOME USEFUL NOTES.

THE bearings of the radiator fan require occasional lubrication. If a plain bearing is used a grease cup is generally provided, and if ball bearings are employed, they are either packed in grease or fitted with covered oil holes.

Now that warm weather is again with us, those who have jacketed carburettors will do well to experiment without hot air (or hot water) round the mixing chamber. It is frequently the case that the engine will run infinitely better, as it is quite possible to have the mixing chamber too hot.

If the engine of the car has adjustable valve tappets the valves can always be kept nicely synchronised. Get a chart from the manufacturers and have the flywheel accurately marked so that the different positions in line with the pointer can be readily obtained. Occasionally go over all the valves; it makes a wonderful difference to the even running of an engine.

A PETROL engine will often have good compression when cold and have next to none at all after it has run for some time. When an engine acts in this way the trouble is usually due to leakage past the valves on account of the small amount of clearance between the valve stems and the tappets or push rods. When the stems and valves are cold the latter seat properly, but when the former are heated, and of course expanded, the valves are prevented from seating by the stems resting on the tappets.

WHEN nuts are met with that refuse to start under the persuasion of a spanner of appropriate size and with a reasonable expenditure of force, great care should be used in dealing with them. If too large a wrench is used, or if a piece of pipe is slipped over the spanner handle to increase its leverage, a practice which is frequently resorted to, it is often an easy matter to twist off a bolt or stud without starting the nut. When this occurs the remaining part of the stud has to be drilled out, the hole tapped, and another stud made and put in its place, considerable expense being the result.

BEFORE attempting to dismantle an engine, gear-box, or any other part of a car, it is essential that its construction should be fully known. If one goes at the task blindly by removing all the nuts in sight, without knowing just what effect the freeing of each one of the fastening devices will produce, the chances are that an unnecessary amount of work will be done; parts may be thrown out of relation which need not have been disturbed. If a drawing showing exactly the way in which all the parts are secured together can be secured five minutes' study of this will be worth more than half an hour with the spanner, removing nuts in a half experimental manner. If no such guide to the method of putting together of the mechanism is to be had, it is worth while to study the relation of the actual parts until there is no doubt as to the particular function of each bolt, or other holding device, and as to what will happen when each is removed.

MESSRS. A. J. NEGUS AND COMPANY have a good garage in Stony Stratford, where they are also able to do all classes of motor repair work.

It is reported that on the committee stage of the Finance Bill in the House of Commons an effort will be made to discuss the question of industrial alcohol.

SIR ALFRED HICKMAN, whose name is well known in connection with the iron trade in the Midlands, has just placed an order for a 60-h.p. six-cylinder Napier.

WE illustrate herewith a unique type of motor body which has lately been fitted to a Talbot chassis for the Rt. Hon. the Earl of Shrewsbury by Messrs. J. Rothschild et Fils, Ltd. The general plan follows the outline of a dinghy. The seating consists of two front bucket seats and a central single seat behind, which may be turned upside down when not in use. A special dashboard has been made to accommodate the increased width of the body in front, and the change speed and brake levers, and their quadrant, have been placed inside the chassis side member, in order that the body shall not be unduly wide. The off side of the body has, states the "Automobile and Carriage Builders'

MOTOR-CARS are being hired out by most of the enterprising automobile agents in the Eastbourne district for visitors to the Pevensey pageant.

A FEW days ago the Star Engineering Company, Wolverhampton, delivered four of the eighteen 9-h.p. 12-15 cwt. vans they are building for Messrs. Lever Bros., of Port Sunlight.

RECENT purchasers of Daimler cars include the Hon. Mrs. Bowes-Lyon, who has acquired a 42-h.p. vehicle of the "Aston" landaulet type, and Sir Wm. Cruickshank, who has ordered a 42-h.p. "Stoneleigh" limousine.

A MOVEMENT has been started to construct a 158-mile road for automobilists near Winnipeg, Canada. It will be oval in form, and the expense of construction and maintenance will be met from the tolls collected from those who use it.

FROM the Great Eastern Railway Company comes a copy of their booklet "Holidays on the Continent," giving descriptions and illustrations of some of the less known districts of Holland, North Germany and the smaller valleys of the Rhine, which are suggested as good holiday places for motorists as well as for tourists generally.

The Neval Car built for the Earl of Shrewsbury.

Journal," to whom we are indebted for the illustration, no side doors, and no sham openings or dummy handles have been adopted. One of the finest pieces of work in the body is the formation of the hind portion, where a sheet of metal has been shaped to the broadening keel, forming at the same time a return curve with the back pillar, and spreads itself to the limits of the chassis side and back members. An Auster wind screen is fitted above the special dashboard, and steel wings with side shields, both front and hind, are provided. The body "deck" around the hind seat is finished with a matchboarded effect, a similar treatment having been carried out to the inside surface of the body.

THE Town Clerk of Holborn has been requested by his Council to co-operate with the police in any action they may take with reference to the drivers of L.C.C. trams who disregard the bye-laws for regulating the traffic at the dangerous point in Theobald's Road and Gray's Inn Road, London, W.C.

THERE was a marked decline in the importation of foreign motor-cars and parts into the United States during May last, a value of only £42,540 being recorded as against £81,885 in the corresponding month of 1907. Altogether seventy-one cars were received, of which fifty-two were from France, fifteen from Italy, and two each from the United Kingdom and Germany.

THE exports of motor-cars and parts from the United States during May last only attained a value of £91,811, as compared with £133,090 in the corresponding month of 1907. The United Kingdom occupies the leading place with £26,532, France being second with £20,118, and Canada third with £18,812.

A LIVELY scene was witnessed on the road at Snailwell, near Newmarket, when a trainer recently had several race horses out on the highway. The chauffeur of another trainer was passing on a motor-car, and, not stopping as desired, received several lashes with a whip from the man in charge of the animals. At the Newmarket Petty Sessions, a fine of 30s. and costs has been imposed upon the man who wielded the whip.

At the last meeting of the Hayfield (Derbyshire) Guardians a member moved that the County Council be asked to have a flag or signal instituted at every six miles along their roads, at which motor-cars should be stopped and tolls taken. He urged his proposal with some warmth, suggesting that it would enormously reduce the county rates and draw the money required from a class of people who damaged the roads. The proposal, however, was not seconded. A committee was then constituted to consider, in co-operation with the New Mills District Council, some means of dealing with the damage to roads.

THE Dean of Carlisle has placed an order for a 25-h.p. Weigel chassis.

A PROPOSITION to adopt a ten mile limit for motor-cars has been negatived at Blackpool.

MESSRS. ARGYLL MOTORS, LIMITED, are supplying a motor fire tender to the Dundee Town Council.

THE shipments of British motor-cars to South Africa during the six months ending with June last attained a value of £16,055.

THE Great Eastern Railway Company have established a service of motor-buses in Bury St. Edmunds. They have twenty-one doubled-decked motor-omnibuses in public service, twelve of which were built at the company's works at Stratford in 1905.

MR. ROBERT LUDWIG MOND, the son of Dr. Mond, the well-known scientist, is among the latest to take an interest in the navigation of the air, he being at present engaged on the construction of a new aeroplane.

WE learn that Prince Albert of Belgium has just purchased one of the Germain cars which competed in the A.C.F. Grand Prix. Following the race, His Royal Highness took a trial run on the vehicle, which is to be equipped with a touring body for the present season.

How nearly motor garments now approximate to the ordinary habiliments of mankind is shown by a visit to the show rooms of

Messrs. Alfred Dunhill, Ltd., at 5, Conduit Street, W., where we recently saw H.H. the Maharajah of Cooch Behar, whose portrait, on his 40-h.p. Delaunay-Belleville, appeared in our issue of June 6th. Many leaders of Society frequent that establishment, as well as the depot in Euston Road, N.W., where the latest styles in motor raiment may be seen. We illustrate a typical example of one of the firm's dust coats, which are equally serviceable on the car or afoot. These are made in many materials, ranging from the ordinary holland to alpaca, fawn, twill, crush, Tussore silk, &c. Another good type of garment is the "Dunwear" coat, cut with Raglan shoulders and fitted with deep Prussian collar. This is noticeably easy to slip on, and is equally suitable for wear as a rain coat—during such days as we have recently had—or a dust coat in the days we hope to come.

TWENTY motor-cars were, one day last week, placed at the disposal of Alderman T. E. Higham, the Mayor of Accrington, for the purpose of a

treat to the crippled children of the town. About fifty youngsters enjoyed the outing to St. Anne's-on-Sea.

FIAT MOTORS, LTD., have just issued a book of instructions with regard to the care and maintenance of the Fiat 15-20-h.p. car. Chapters are devoted to the question of lubrication and adjustment, the various parts requiring attention being illustrated by lettered drawings. Some general hints are also given as well as a price list of spare parts. Owners and drivers of these vehicles will find the new instruction book an indispensable companion.

THE Vatican has hitherto always been strongly against the motor-car, the Pope looking upon it as unsuited to the dignity of the Church. For this reason he has always refused permission to the Cardinals to adopt motor-cars in place of the traditional carriage and pair, notwithstanding that many of them have requested his sanction. Consequently, the fact that Cardinal del Val is using a motor-car to convey him between Rome and Vicarello has attracted some attention. Without an automobile, however, the Papal Secretary of State would be unable to take his cure and attend to his Vatican duties, and the Pope has, therefore, reluctantly permitted him to use the new means of locomotion.

DR. D. J. FARNAN, of Dublin, has just acquired a 15-20-h.p. Buick car.

ANOTHER hostile demonstration against the driver of a motor-bus has occurred at Mile End.

AMONG recent purchases of 40-h.p. Benz cars are Mr. F. Williams, of Brasted Hall, Sevenoaks.

THE Duke of Grafton has lately acquired a 35-45-h.p. Maudslay car with double landaulet body by Thorn.

MANY motor vehicles, including cabs, are plying in the Minehead district, taking visitors on trips to the many interesting places in the vicinity.

AT the meeting of the Royal Veterinary College on Tuesday, Sir Nigel Kingscote said that in spite of the introduction of mechanical traction, the services of veterinary surgeons were never in greater demand than to-day.

THE Skegness Urban District Council has sent a memorial to the Prime Minister urging the following five points against motor vehicles:—(1) the danger to life and limb; (2) the nuisance caused by the dust and noise; (3) the enhanced cost of road maintenance, which has to be borne by local taxpayers; (4) the damage to crops; (5) the depreciation of property. Mr. Asquith, being himself a motorist, will know how to deal with the matter.

MR. JOSEPH MARSTON, a very old-established carrier, of Otley, has just placed a steam wagon—a Yorkshire—in service. Mr. Marston and his father have made the daily journey between Otley and Leeds for nearly a hundred years. Their first vehicle was a cart, and as a railway to the rural district of Wharfedale had not then been thought about, there was a good deal of competition. One by one, however, the competitors fell away, until the Marstons were left in undisputed possession with six horses and seven wagons, which in their time had displaced the carts. Naturally, the railway has absorbed a good deal of the traffic, but there still continues a demand for the road carrier, who, with the motor wagon just acquired, will now be able to make double the number of journeys.

THE Bureau of Tours of the Automobile Club of America has sent us a copy of its recently-issued 1908 Year Book. The chief features of the work are the A.C.A. official route cards, prepared with special signs copyrighted by the Club. A full list of the ferries within a circumference of 150 miles from New York is also included, this giving sailing hours and charges for motor-cars; also the steamship connections to all the coast points; a full synopsis of the various State motor laws; a list of hotels, garages, attorneys and physicians in every part of the United States holding the A.C.A. official appointment. Next follows a synopsis of the requirements in foreign countries and the necessary formalities before embarking on a trip abroad. At the end of the book is a resume of road conditions in the various States of the Union, compiled by the U.S. Office of Public Roads especially for the Year Book.

To the rear of the famous and fashionable church of St. George's, Hanover Square, W., and entered from Maddox Street, Regent Street, London, is the establishment of the Maddox Street Motor Company, Ltd., in Masons' Arms Yard. Within a comparatively short time the company has, under the able direction of Mr. Jenkins, made a reputation in connection with the disposal of second-hand cars of high grade, its *clientele* including many well-known people in Society and in public life. The policy of the company has been to thoroughly overhaul every car they purchase, in conjunction with the makers wherever possible, so that reliability is a dependable quality. At the time of our visit to their headquarters several excellent vehicles were ready for prospective purchasers who had entrusted Mr. Jenkins with fulfilling their requirements. Mr. Jenkins has not only a wide knowledge of the automobile business, but he is well acquainted with the roads in different parts of the country, and makes an endeavour to advise so that purchasers secure cars identically suited to their needs. In addition to their place in the West End of London, the Maddox Street Motor Company, Ltd., have a depot in York Street, Belfast, from which a large business in the North of Ireland is conducted.

Correspondence.

[Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.]

THE SCOTTISH RELIABILITY TRIALS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have just received the official report of the Scottish Reliability Trials held in June last. For lucidity and clearness it would be difficult to imagine anything to surpass it, and my representative, Mr. Sydney Smith, tells me that he could not imagine any competition more searchingly carried out or better arranged. There is one point, however, which, for the good of the sport, I would like to see improved, and that is the question of weight. The marks were awarded essentially for reliability, petrol consumption and hill-climbing. Unfortunately the marks for petrol consumption were awarded on a ton-mileage basis, and the marks for hill-climbing on a weight basis. This would be all right if it merely consisted of the weight carried, but it works out in practice that the heavier the car the better the results on the formula will be, so that a car that is well designed and made of high-type steel and very light is heavily handicapped, whereas the heavier car, with possibly crude castings where a high grade steel should be employed, would get through

taining any benefit by having to carry to the end of the car's days approximately half a ton additional weight.

With regard to the petrol results, the 15-20-h.p. car that obtained the most marks on a ton-mileage basis actually did one mile less to the gallon than the Metallurgique; it, however, gave much better results on ton mileage, as the car unladen weighed 5 cwt. more.

I am not writing this in a carping spirit, or merely to bring out the many virtues that we claim for the Metallurgique, but merely from the point of view of future competitions being arranged so that a light strong car may not be penalised for its very virtue. Possibly others may have views on the same subject, and it would be interesting to hear suggestions as to how these difficulties can be avoided in future.—Yours truly,
WARWICK WRIGHT.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—It may be interesting to you to know the reason of my losing an entirely non-stop performance for the 25-30-h.p. Brown car, which I

The Sheffield Hill-Climbing Competition at Grindleford.—The Scene at the Starting Point.

on the reliability by having these made heavy, and actually the car may score over its lighter and stronger competitor. Surely what we ought most to aim at is to produce the lightest possible vehicle that will stand up.

Possibly the Committee of the Scottish Club realize better than anybody the severity of the route they chose, and it would be quite safe to assume the route would be severe enough to break up any car that was unduly light, if made of bad material. After all, the man who owns a motor-car does not wish to pay for ton miles of petrol; it is no comfort to him, if he uses five gallons where he should only use four, if at the same time the maker assures him that he has achieved a great ton-mileage result. The result in miles to the gallon—that is the thing he pays for—is the only thing that interests him.

The same thing surely holds good with regard to hill-climbing. The hill-climbing results are tabulated, first, in order of time occupied on each hill, and secondly the results on formula. The Metallurgique had the distinction of obtaining four fastest times on the various hills, and yet on the formula result it found itself placed second to a car which it beat on the first hill by 20 sec., on the second hill by 1 min. 47 1-5 sec., on the third by 49 sec., on the fourth by 21 3-5 sec., and on the fifth by 33 sec. This car weighed 31 cwt. 3 qrs. 14 lbs. The 26-h.p. Metallurgique weighed 22 cwt., both without passengers. It will be seen therefore, that though the Metallurgique was much faster than its rival, on account of the fact that it did not weigh so much it was beaten on the formula. Now a man buying a motor-car surely would not imagine he was ob-

drove in the Scottish Trials. This arose through my having to reverse more than once on Glen Quaich Hill. It was not owing to any lack of power on the part of the car, as it took all the hills in the whole 2,000-mile trial with the greatest ease.

It must be remembered that this car was absolutely standard, and that during the Scottish Trials I carried nearly 200 lbs. over my passenger weight. The only road adjustment on the 2,000-mile trial was 11 minutes to replace a feather in the fan pulley, and 3 minutes to clean the throttle, which was clogged with dust the last day.

It is interesting to note that I have just received a letter from Australia stating that a similar 25-30-h.p. Brown car has, under ordinary touring conditions, completed 6,000 miles without a single mechanical adjustment.—Yours truly,

BERNARD R. BANKS.

TRIALS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Following what you have written with regard to the organisation of reliability trials, and the insistence with which you have urged that the trade is nearly tired of such expensive lapses from business, I would like to say a word or two; especially as the director of the Society of Motor Manufacturers and Traders are evidently coming to the view that trials are almost unnecessary. Their decision not to take any part in the Dust Trials of the R.A.C. is significant—as it is also the

opinion that the time has come to attend to the construction of the road rather than to the dust on the surface. In this connection the club is certainly on the wrong track, and should deal with cause rather than effect.—Yours truly,

T. H.

THE SETTING OF VALVES, &c.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—The information given by you on page 321 of your issue of June 6th is extremely interesting. You mention that the table re "The Setting of Valves" will be very useful to repairers and to engineers. To repairers, I will admit, its use will be most advantageous, but I consider that from an engineer's or designer's point of view the following information is also required:—1, bore; 2, stroke; 3, are valves on one side or on opposite sides? 4, diameter of valves; 5, lift of valves; 6, normal speed of engine. With this information one can see, probably, why the great difference occurs.

The letter headed "Some Facts in the Selection of Motor Oils," in the same issue, is also interesting; but as, unfortunately, most of us possess cars with gun-metal bearings, our hopes seem dashed to the ground. I wonder if any of the oil manufacturers will notice that letter and supply us with a cheap light mineral oil suitable for gun-metal bearings. I intend personally to try the effect with an oil-testing machine, and will let you know the results later.—Yours truly,

ALFRED E. JOYCE.

Assistant-Engineer, P.W.D.

Nagpur, India.

The 15-20-h.p. Fiat Live Axle Car recently shipped by Fiat Motors, Ltd., to Lagos for the personal use of His Excellency the Governor of Southern Nigeria.

Before being accepted the car was subjected to a series of severe tests by the motor expert of the E.A.C., who was appointed by the Crown Agents for the Colonies, through whom the order was received. The vehicle is painted blue with vertical stripes of light blue, the bodywork being by Brainsey and Sons.

DETACHABLE RIMS v. DETACHABLE WHEELS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to the letter of "Anxious" in your issue of 11th inst., it seems to me that the time required to perform the various operations mentioned depends entirely on the skill and aptitude of the operator, the only uncertain element being the time required to detach the cover from the rim and to re-attach it without damaging the new tube. This being so, I may inform "Anxious" that a "divided rim" has been patented and will very shortly be placed upon the market, by the use of which the "outer detachable" part of the rim may be removed and the cover and tube laid bare in a few seconds and as readily replaced after a new inner tube has been substituted. This "divided rim" consists of two parts only, one of which is fixed to the wheel. No tools of any description are required to remove and re-attach the "outer part," which latter cannot detach itself in case of a puncture. A fairly skilful operator could, with one of these rims, easily replace a damaged tube with a new one and be on the road again in three or four minutes.

It may, however, be interesting to "Anxious" and others to know that by the use of these rims "twin tyres" may be used on each wheel, each tyre being narrower than usual and giving two distinct and separate treads, thus minimising the risk of side-slip or skid. Only in the case of both tyres being punctured on one wheel would repairs be necessary on the road, and these could be effected in the time stated above.—Yours truly,

SIMPLEX.

LONDON TRAFFIC.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Sir Lewis McIver's letter to the *M.C.J.* of July 18th is a valuable expression of opinion which has been too long withheld.

The present noise, smell, and smoke in congested places, such as station yards, and more especially in street blocks in the central parts of London, cannot be permitted to continue.

Everyone will admit the phenomenal success of the petrol car in its own sphere, but for town use there is no self-propelled carriage that can compete in desirability with the electric car. Experience gained by the Electromobile Company in running over 2,000,000 miles has convinced us that cabs propelled by electricity can be profitably run on the existing tariff.—Yours truly,

WESTBURY.

DUST AND SPEED.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—What is the proper thing to do in case a more powerful car comes up behind you on a dusty road and your speedometer tells you that you are at twenty miles an hour or more? Should you turn out and allow them to dust you and incidentally infringe the Act; or should you keep to the middle of the road as long as the legal limit is maintained? I believe that a good deal of excessive speed is due to one car trying to get clear of the dust of another. Do you know what the general feeling among drivers is about it, and do you consider it any discourtesy to refuse to give way?—Yours truly,

W. R. ETCHES.

COURTESY TO STRANGERS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Some time ago you referred to the way in which foreign motorists visiting this country are compelled to pay the Inland Revenue fees just as though they were permanent residents. This is certainly not courteous, and it cannot be called good business. Surely Government might be able to relax their rules in this respect and so show something of a welcome to our guests.

I learn that one of the most influential of the Continental automobile organisations, the German Automobile Manufacturers' Association, has recently induced its Government to reduce the tax from automobiles which are taken into the Fatherland temporarily for touring purposes. It is naturally hoped that this will lead to a considerable increase in the automobile tourist traffic of the country, and the same thing would happen if a similarly friendly policy were adopted here.—Yours truly,

T. LANGEMANN.

[We recently brought the matter to the notice of the Treasury, and are awaiting their reply.]

GRAPHITE AS A LUBRICANT.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—There seems to be a diversity of opinion among motorists as to the advisability of using graphite in the crankcase of petrol engines. Some advise mixing a teaspoonful of flake graphite with every quart of cylinder oil put into the base chamber for the purpose of lubricating the cylinders, saying it will give a fine surface to the inside of the cylinders if so used. Others say it is a very bad practice, as it will cause the pistons to bind. I should be glad to have the opinions of any car owners who have experimented with graphite in this way.—Yours truly,

BRISTOLIAN.

SOME NOTES ON THE SELECTION OF MOTOR OILS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—In one letter, "Veritas Prevalabit" states that in the case of his four-cylinder car he "regretfully" made a compromise. But he omits to explain why "regretfully," and further what steps he took to remove the cause of his regrets, and with what success. An explanation on these points, omitted in his letter on this very interesting subject, would no doubt enlighten many of your readers and certainly interest all.—Yours truly,

TYRO.

AN ENDORSEMENT POINT.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I was recently summoned at Guildford, and fined 10s. together with 8s. 6d. costs, for having a swinging strapped-on number plate in front of my 8-h.p. car. After being fined, the young clerk asked for my licence, which I gave him, thinking he only wished to see all was correct. To my astonishment, however, he stamped the back of it, endorsing same with a conviction under Section 2. Had he any right to do this, as nothing was said by the Bench about any endorsement, as my licence was a clean one before this? I did not knowingly plead guilty to the offence, having had the car in use fourteen months, and buying it second-hand.

from a previous owner with the plates already on. The numbers were transferred to me at the time of purchase. The former owner of my car was a doctor, and he had previously used the car for nearly two years, every day, in his practice. I was stopped last holiday, on my way home from Southsea, at Godalming, by a constable who stated he could not take my number properly.—Yours truly,

OLD SUBSCRIBER.

THE PRUNING OF HEDGES.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—The secretary of the Motor Union has been publishing an appeal to local authorities to cause any tree or hedge which obstructs the view of cross or side roads to be cut or pruned under powers alleged to be contained in Section 65 of the Highway Act, 1835. However desirable it may be that such powers should exist, no such powers are to be found in the section to which he refers. Trees and hedges can only be cut under that section where they exclude the sun and wind from the highway or where they actually and physically obstruct the carriage way. Moreover, if trees which merely obstructed the view could be cut under Section 65, which they cannot, the appeal would be particularly inappropriate at the present time, for it is provided by Section 66 of the same Act that the power to cut and prune hedges shall only be exercised between the last day of September and the last day of March.—Yours truly,

A. H. HASTIE.

DRY BATTERIES v. ACCUMULATORS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Some discussion on this subject appeared in your columns a few weeks ago; may I be allowed to state my own experience with an 8-h.p. De Dion car? On February 8th, 1906, I fitted a new dry battery for the first time, having found accumulators a great worry. This battery ran me 4,000 miles until April 27th, 1907, without any trouble, when I again fitted another battery. This second one ran me 4,300 miles until last Monday week, June 15th, on which date I fitted my present battery (same make). I never carry a spare battery until the one in use drops to five or six amperes, and I am warned by occasional misfires about a week before the battery gives out. The cost for the 8,300 miles is thus under £2, together with the great advantage, compared with an accumulator, that no attention is needed, as I do not test the battery until it has done at least six months' work.—Yours truly,

(REV.) GEORGE ROWLEY.

THE SALTBURN RACES.

THE legal advisers of Messrs. Warwick Wright, Ltd., write, with reference to the letter from Mr. George S. Barwick, which appeared in our issue of the 18th instant under the title "The Saltpurn Races":—"In this letter Mr. Barwick takes exception to the statement contained in our clients' advertisement that at the Saltpurn Speed Trials a 40-h.p. standard Metallurgique car driven by an amateur made the fastest time of all touring cars in the kilometre race from standing start, defeating by more than two miles per hour all competitors"; and Mr. Barwick further does not hesitate to suggest that our clients' statement is without foundation. There is not the slightest foundation for these suggestions; our clients' advertisement is perfectly correct and accurate, not merely in word but in actual fact and spirit. The 40-h.p. Metallurgique car, the property of Mr. H. R. Kirk, the well-known motorist, succeeded in making the fastest time over the course in the standing kilometre race, beating the record for touring cars on that course, and beating also by a comfortable margin the time of Mr. Barwick on his 58-h.p. Daimler. As Mr. Kirk's Metallurgique car was driven by an amateur who was not familiar with the car, not having driven it a great deal, his performances were not entirely uniform, and the car did not run as fast in the final and semi-final as it did in the heat in which the fastest times were done and in which the Metallurgique car did the fastest record for the standing kilometre, not only for the day but also for the course. This fact was brought to light by the secretary at the dinner held after the Saltpurn meeting. We feel sure that, in fairness to our clients, you will give this letter equal publicity to that given to Mr. Barwick's letter."

Mr. H. R. Kirk, of Leeds, the owner of the 40-h.p. Metallurgique car in question, writes on the same subject and is "prepared to prove that my car was faster by two miles per hour than Mr. Barwick's as timed by the official timekeepers of the R.A.C. at Saltpurn." He appends the respective fastest official speeds of the two cars for the standing kilometres as follows:—40-h.p. Metallurgique 52.2 m.p.h.; 58-h.p. Daimler 50.15 m.p.h.

[This correspondence is now closed.]

Two air tubes have been found near Ilkley. The owner can have them on application to Mr. Albert Farnell, of Bradford.

THE United Motor Industries, Ltd., have been appointed sole distributing agents for the home counties, including Essex, Middlesex, Sussex, Surrey and Kent, for the Beresford patent detachable rim. A sample rim is on view at Poland Street, W., and can be seen at any time by anyone interested in this ingenious device.

THE INTERNATIONAL TOURING CAR TRIAL.

BELOW we give an extract from the judges' report in connection with the recent trial officially recording the performances of the winner in each class:—

| Class. | Car. | Driver. | Won by. |
|--------|---------------------------------|---------------------|---------------------|
| A. ... | 6.2-h.p. De Dion-Bouton ... | W. V. Jolley ... | Walk over |
| B. ... | 8.9-h.p. Adler ... | Fincke ... | Walk over |
| C. ... | 10-h.p. Cadillac ... | F. S. Bennett ... | 1 m. 14½ s. |
| D. ... | 15.8-h.p. Singer ... | G. O. Herbert ... | More than six hours |
| E. ... | 20.5-h.p. Vaux all ... | P. C. Kidner ... | 56 m. 41½ s. |
| F. ... | 25.5-h.p. Talbot ... | H. G. Day ... | 3 m. 24½ s. |
| G. ... | 30-h.p. Adler ... | H. Wilhelm ... | 30 m. 19 s. |
| H. ... | 40-h.p. Armstrong-Whitworth ... | G. H. T. Slaney ... | By 145 miles |
| J. ... | 45.86-h.p. Ariel ... | H. Cordery ... | Walk over |
| K. ... | 48.6-h.p. Rolls-Royce ... | E. Platford ... | By 44 miles |
| L. ... | 59.5-h.p. Ariel ... | P. Lewis ... | Walk over |

THE HASTINGS GYMKHANA.

LAST week we were only able to briefly refer to the motor gymkhana taking place at Hastings as we went to press. This was held under the auspices of the Motor Club of London and the Hastings Entertainment Association and attracted much attention locally. Col. W. J. Bosworth was at the head of affairs, assisted by Mr. R. E. Edmondson, of the Motor Club, and Messrs. Harvey du Cros, A. H. Philpot, G. and W. du Cros, Stenson Cook and other well-known motorists. Unfortunately the parade of decorated motor-cars had to be abandoned owing to the scarcity of entries, and when it was superseded by an appearance competition on the gymkhana grounds only one motor-car was entered. This was Mr. A. H. Philpot's, the idea of the decorative scheme being to represent the Entente Cordiale.

The Sheffield-Simplex 45-h.p. Six-Cylinder Car recently completed for Earl Fitzwilliam. The special brougham, which is by Hamshaw, of Leicester, is finished in yellow with black lines, and has an attractive appearance.

In the Appearance Competition for undecorated cars the judging was done by those present, who voted on cards placed in a ballot-box. The result was that the first prize went to Mr. Harvey du Cros with his 60-h.p. Napier and the second to Mr. Arthur du Cros with his 40-h.p. Austin.

In the competition for Cleaving the Turk's Head Mr. Græme Fenton was first, Mr. Harvey du Cros, jun., second, and Mr. George du Cros third. An almost identical result followed in the Bending Race, and in the Musical Chairs the first prize went to Mr. H. A. Moyse, with Miss Phyllis Carlisle as passenger. Again in the Obstacle Race Messrs. Alfred and Harvey du Cros were successful along with Mr. Græme Fenton. In the "Comic" Motor Contest Mr. George du Cros took premier honours, and Mr. F. S. Gibbins was second. The Starting and Stopping Race was last on the programme, and this was won by Mr. Willie du Cros, Mr. H. F. Shaw being second, and Mr. S. H. Fitter third. The presentation of prizes brought the gathering to a conclusion, Mrs. Arthur du Cros gracefully undertaking that pleasant duty.

A NEW and ingenious form of terminal for accumulators is being put on the market by the Non-Corrosive Terminal Company, of 13, Grape Street, New Oxford Street, London, W., the object of the invention being to do away with the defects of corrosion and ensure the maintenance of good electrical conduction at the point where it is most frequently at fault. The terminal consists of a hard lead cup, having an insulated stopper screwing into it. The conductor, with its insulating covering, passes through the stopper and the bare ends of the wires are pressed firmly against the floor of the cup by the non-metallic screw. There is no exposure of the wires, they being brought into communication with the lead of the accumulator plates inside the cup, where they are safely protected, and, if a little oil is put into the cup, all possibility of corrosion is obviated.

CLUBS AND ASSOCIATIONS.

MOTOR UNION.

A DIGEST of motor traction cases compiled under the direction of the Legal Reports Committee of the Motor Union has just been published by Messrs. Butterworth and Co., with a view of assisting local solicitors and others in the interpretation and administration of the Motor Car Act and the regulations relating to the same. The work extends to 64 pages and nearly 200 cases are referred to. Those who have not filed the issues of the *M.C.J.*, with its regular record of motor cases, will find this publication of the Motor Union of considerable advantage.

AUTOMOBILE ASSOCIATION.

THE annual general meeting of the Automobile Association was held on Tuesday, and the members present congratulated the committee on the satisfactory state of the Association and its work. Col. W. J. Bosworth was in the chair, and in the course of his speech mentioned that the organisation had 7,032 members, and that the amount of cash on reserve and on current account was £8,500. New members were joining at the average rate of 100 a week, and the number lost by resignation, death, or other causes since the formation of the Association was only 296.

The Automobile Association is giving special attention to the Dover pageant, and motorists are informed that, from the point of view of comfort and good scenery, the route via Eltham, Farningham, Wrotham, Maidstone, Lenham, Charing and Canterbury is recommended. By this route motorists escape the congestion of traffic and dangerous cross streets in Dartford, Gravesend, Rochester, and Chatham. They also avoid fifteen miles of tram lines in the vicinity of these towns. The surface of the road is tarred practically all the way to Canterbury, and

The Coventry Motor Club's Hill-Climbing Competition at Newnham.—The 15-h.p. Talbot, the winner, on formula, of the handicap in Class 2.

is in good condition, whilst the roads through Stroud, Rainham, &c., are loose and dusty, particularly between Rainham and Canterbury.

Striking evidence of the popularity of the A.A. is afforded by the fact that at the last meeting of the Executive Committee no fewer than 452 new members were elected. This number constitutes a record for any one month since the inception of the Association, and shows an increase of over 100 on the number of members elected during the corresponding period of last year. During the twelve months to April 30th last over 3,000 new members joined the Association. The total membership now numbers over 7,000.

The Motor Club have made similar arrangements with regard to the Phyllis Court enclosure on the Thames during the Olympic Regatta, on the last three days of the present month, as those which were appreciated on the occasion of the Henley Regatta.

COVENTRY MOTOR.

A HILL-CLIMB was carried out very successfully on Saturday last on Newnham Hill, near Daventry. The distance to be covered was about 1,100 yds., with a gradient at the top of the hill of 1 in 6. Last year the cars were timed up to the corner at the top only, but on this occasion the cars in Classes 1 and 2 were driven round that corner. Some of the competitors in Class 3 (for cars over 26-h.p.) objected to race round this point, and in consequence the finishing point for this class was brought further down the hill to last year's finish. There was a good muster of spectators present, although the frequency of motor events in the neighbourhood has ceased to cause a wild delirious rush to the scene on the part of natives. The top part of the corner had been fenced in, but this did not prevent the ingress of spectators with extraordinary "bumps of

curiosity" crowding on the road, and there was some little difficulty in keeping them back, particularly when the fast cars were coming up the hill. The assistance rendered by the Northamptonshire county police was of a friendly and valuable character throughout the arrangements.

The officials were Col. Wyley, V.D., and Mr. V. A. Holroyd, judges; Mr. F. T. Bidlake and Mr. H. J. Swindley, timekeepers; Mr. Eric W. Walford, hon. secretary (to whom great credit is due), and the committee of the Coventry Motor Club. Special mention should be made of the services rendered to Mr. Walford by Mr. Reynolds, of Daventry, while greatly appreciated help was also rendered by the Dunlop corps of flag signallers. The following were the results:—

CLASS I.

- | Placing on Time. | | Placing on Formula. | |
|-----------------------------------|--|----------------------------------|--|
| 1. 9-h.p. Riley, J. Browning. | | 1. 10-h.p. De Dion, G. J. Newey. | |
| 2. 12-h.p. Clyde, C. B. Warner. | | 2. 8-h.p. Clyde, G. H. Wait. | |
| 3. 9-h.p. Riley, S. Riley. | | 3. 9-h.p. Riley, J. Browning. | |
| 4. 9-h.p. Adams, D. G. Gilmour. | | 4. 12-h.p. Clyde, G. B. Warner. | |
| 5. 8-h.p. Clyde, G. H. Wait. | | 5. 9-h.p. Riley, S. Riley. | |
| 6. 6-h.p. Wolseley, G. H. Spicer. | | 6. 9-h.p. Riley, A. Cox. | |

CLASS II.

- | | |
|--------------------------------------|---------------------------------------|
| 1. 26-h.p. Metallurgique, O. Copper. | 1. 15-h.p. Talbot, J. W. Hedge. |
| 2. 25-h.p. Talbot, H. Woollen. | 2. 15-h.p. Vauxhall, P. C. Kidner. |
| 3. 15-h.p. Humber, G. W. Brown. | 3. 12-h.p. Singer, G. O. Herbert. |
| 2. 15-h.p. Talbot, J. W. Hedge. | 4. 26-h.p. Metallurgique, O. Copper. |
| 5. 12-h.p. Vauxhall, P. C. Kidner. | 5. 25-h.p. Talbot, H. Woollen. |
| 6. 12-h.p. Riley, J. F. Buckingham. | 6. 10-12-h.p. Humber, G. A. Phillips. |

CLASS III.

- | | |
|-------------------------------------|-------------------------------------|
| 1. 60-h.p. Napier, W. Tryon. | 1. 38-h.p. Daimler, G. Street. |
| 2. 58-h.p. Daimler, G. S. Barwick. | 2. 60-h.p. Napier, W. Tryon. |
| 3. 35-h.p. Deasy, W. Crouch. | 3. 35-h.p. Deasy, W. Crouch. |
| 4. 38-h.p. Daimler, G. E. Street. | 4. 35-h.p. Deasy, P. Graham. |
| 5. 35-h.p. Deasy, P. Graham. | 5. 38-h.p. Daimler, A. J. Asbury. |
| 6. Six-cylinder Humber, W. G. Tack. | 6. Six-cylinder Humber, W. G. Tuok. |

In addition to winning the handicap in Class II., the 15-h.p. Talbot also won the cup presented by the United Motor Industries, Ltd.

DERBY.

THE Derby and District A.C. were joined in their inter-club contest for the Utttoxeter Silver Challenge Cup on Saturday last by the Mid-Staffordshire A.C. The contest was held on a hill leading from Marchington to Utttoxeter, and the winner proved to be Mr. Herbert Jefferson (Derby and District A.C.), 9-h.p. Riley, whose time was 1 min. 29 sec. He thus becomes the second holder of the Challenge Cup and takes the silver medal, while Dr. R. G. Hogarth (Derby and District A.C.), 8-h.p. Clyde, 1 min. 50 sec., as runner-up, takes the bronze medal. The fastest time medal was again easily secured by Mr. F. A. Bolton, (Derby and District A.C.), 40-50-h.p. Ariel, who on his second run up made the ascent in 46 1-5 sec.

Appended is a complete list of the competitors in the order of merit in which they were placed, with the particulars of their cars and the times made by them in the ascents upon which they were adjudged:—

| No. | Driver. | H.P. and Type. | Times min. sec. |
|-----|------------------------|-------------------------------|--------------------|
| 1. | H. Jefferson ... | 9-h.p. Riley ... | 1 29 |
| 2. | Dr. Hogarth ... | 8-h.p. Clyde ... | 1 50½ |
| 3. | A. R. Flint ... | 8-h.p. Rover ... | 2 32 |
| 4. | B. Sadler ... | 8-h.p. De Dion ... | 3 7½ |
| 5. | J. A. Doran ... | 18-h.p. Minerva ... | 1 8½ |
| 6. | A. G. Harley-Jones ... | 15-20-h.p. Clement-Talbot ... | 0 58 |
| 7. | F. G. Keeling ... | 8-h.p. Rover ... | 2 47½ |
| 8. | M. Ross-Browne ... | 15-h.p. Mass ... | 1 7½ |
| 9. | F. A. Bolton ... | 40-50-h.p. Ariel ... | 0 46½ |
| 10. | C. T. Leech ... | 42-h.p. Daimler ... | 1 8½ |
| 11. | Arthur Ford ... | 30-55-h.p. Daimler ... | 1 0½ |
| 12. | A. E. Chambers ... | 6-h.p. De Dion ... | 2 35 |
| 13. | Joseph Keele ... | 40-h.p. Weigel ... | 0 56½ |
| 14. | S. Downing ... | 14-h.p. Alldays ... | 1 34½ |
| 15. | C. J. Allin ... | 10-12-h.p. Humber ... | 2 1 |
| 16. | Rowland Ford ... | 36-h.p. Daimler ... | 1 4½ |
| 17. | Miss Southam ... | 12-16-h.p. Clement-Talbot ... | 1 38½ |
| 18. | D. C. Bolton ... | 4-h.p. Bolton Voiturette ... | 3 26½ |
| 19. | A. W. Upton ... | 14-16-h.p. Decauville ... | 1 55 |
| 20. | R. E. Meade ... | 12-14-h.p. Clement ... | 1 46½ |
| 21. | F. O. N. Hurdle ... | 18-24-h.p. Austin ... | 1 48½ |
| 22. | F. W. Podmore ... | 12-14-h.p. Clement-Talbot ... | 1 45½ |

The officials of the competition were:—Clerks of the scales, Messrs. Eckersby; starter, C. A. Newton; timekeepers, Chas. J. Allin, Edward H. Fryer, J. Cornes-Nevitt, C. Birumshaw; clerk of the course, A. E. Chambers; marshals, Mr. C. Turner Leech, Dr. W. G. Copestake, Mr. P. E. Joulé.

At the conclusion of the contest a return was made to the Derby Club's headquarters in Utttoxeter, the White Hart Hotel, where tea was taken by the majority of the members, all agreeing this to be by far the most successful competition the Derby Club has yet held.

MANCHESTER M.C.

THE annual reliability trial for motor-cycles, forecars, &c., held under the closed competitions rules of the A.C.U., supplemented by the rules of the Manchester Motor Club, takes place on Saturday and Monday, August 1st and 3rd, starting from the Trafford Arms Hotel at 8 a.m. Saturday, August 1st. The trials will consist of an out and home run to Cheltenham by practically the same route as the motor-car section went during the Whitstable trials, with a hill climb test during part of the trials, all machines being timed from a standing start. The club's hon. sec. (Mr. A. J. Moorhouse) has already been over the course mapped out, and considers this to be one of the most trying but ideal routes for a competition of this class. Last year the trial resulted in a tie between J. E. Tytler and O. Gross, and was eventually run off and won on a hill climb by the latter.

THE INCORPORATED INSTITUTION OF AUTOMOBILE ENGINEERS.

THE summer tour of the graduates' section of the Incorporated Institution of Automobile Engineers commenced on the 10th inst., when a good number of graduates started for the Midlands. The party arrived in Coventry at an early hour, and were received at the works of the Rover Company by Mr. J. K. Starley, by whom they were conducted through the various shops. Their steps were then directed towards the Daimler Company, where, in the absence of Mr. Percy Martin, they were met by Mr. C. Ridley, the chief engineer, and were shown through the extensive shops where the Daimler cars are made. The party took train for Birmingham, and on the Saturday morning visited the works of the Wolseley Tool

Musical Chairs.—First prize Miss Bemrose, driven by Mr. A. Batchelor; second prize, Mrs. Musker, driven by Mr. H. Musker. Mechanics' Event.—Percy Hallard, driver to Mr. C. B. Harris. The chairman's cup for the best kept and turned out car was awarded to Mr. W. Woodward's 60-h.p. Napier, which had been in use for two years. The Royal Automobile Club's medal was awarded to Mr. F. Aldridge.

MANCHESTER A.C.

A CLOSED hill-climbing competition was held by the Manchester A.C. on Saturday afternoon in a secluded valley on the border of Derbyshire and Cheshire. Between 3 and 4 p.m. some twenty entrants and twenty or thirty other cars assembled in this quiet cleft in the hills. The competing cars, divided into three classes according to their horse-power, were sent up the hill one by one.

The following were the entrants (in alphabetical order):—Class 1 (12-8-h.p. R.A.C. rating or under): C. F. Bell (12-h.p. Sizaire), F. W. Hobday (7-h.p. Sizaire), D. A. Parkyn (7-h.p. M.M.C.), T. M. Young (8-h.p. Rover). Class 2 (25-6-h.p. R.A.C. rating or under): J. Arrowsmith (18-24-h.p. Horbick), P. A. G. Bell (16-h.p. Bell), J. A. Bennett (three 22-h.p. S.C.A.T. cars), Mrs. E. A. Riley (14-16-h.p. Belsize), T. Rothwell (20-h.p. Rothwell and 25-h.p. Rothwell), J. L. Tattersall (20-h.p. Belsize). Class 3 (exceeding 25-6-h.p. R.A.C. rating): J. Arrowsmith (20-24-h.p. Horbick), G. J. Crawford (28-h.p. Lanchester), E. A. Gadd (42-h.p. Daimler), H. Hollingdrake (35-50-h.p. La Baire), C. Lings (42-h.p. Daimler), J. Newton (60-h.p. Napier), W. Stones (40-h.p. Napier), C. H. Wallwork (30-40-h.p. Belsize). After climbing the hill the cars proceeded to a neighbouring station on the North Staffordshire Railway,

Motoring in Mexico.—A Snapshot from San Mateo (Xalpa).

[El Automovil en Mexico. -]

and Motor-Car Co., Mr. Clegg, the works manager, receiving the visitors.

At each of the works the graduates were received with great courtesy, and the result is that a branch of the graduates' section is being formed in the Midlands.

KENT.

THE Kent club's annual gymkhana was held on Saturday at the Maidstone Athletic Ground. Fortunately the rain left off about 11 a.m. and the sun coming out soon dried the ground, but, owing to the doubtful morning, many of the competitors did not arrive. Sir Alfred Watkin, Bart., Messrs. T. F. Beavor, W. Willis, Capt. Page, and T. L. Boyd acted as judges. Messrs. W. E. Brewerton, J. E. Austin, T. H. Nash, and R. W. A. Brewer officiated as stewards.

The following were the results of the competitions:—

Crawling Race.—For four and six-cylinder cars, Mr. F. Aldridge, 15-h.p. Standard; ditto, under four, Mr. W. E. Brewerton, 8-h.p. De Dion.

Bending Race.—For cars with wheel base over 7 ft., Mr. H. Musker, 35-h.p. Daimler; ditto, under 7 ft., Mr. A. R. Norman, 10-h.p. Cadillac.

Tilting at the Ring.—Lady tilting.—First prize Miss Dorothy Aldridge, driven by Mr. F. Aldridge; second prize Miss Bilda Bemrose, driven by Mr. A. Batchelor.

Potato Race.—Mrs. Musker, driven by Mr. H. Musker.

Speed Test Race.—First prize, selected speed 20 miles per hour, Mr. A. R. Norman, within 2 per cent.; second prize, selected speed 20 miles per hour, Mr. H. Musker, 7 per cent. too fast.

where they were weighed in order that the merits of their respective performances might be calculated by means of the handicap formula—total weight in pounds divided by time in seconds multiplied by horse-power equals figure of merit. A first prize value £5 and a medal to the second were offered to the competitors in each of the three classes, and special prizes were offered irrespective of class for the best performance on handicap and the "fastest time."

SHEFFIELD.

ON Saturday last the Sheffield A.C. held a hill climb at Padley Hill, near Grindleford. The order of the competitors according to time taken was as follows:—

Class 1.—Single-cylinder cars: The fastest time was made by W. Hunt, 6-h.p. Wolseley, and the other competitors occupied the following times over that of the leader: L. Slater, 8-h.p. Jackson, 12 sec.; W. Watts, 8-h.p. De Dion, 23 3-5 sec.; F. B. Cawood, 6-h.p. Wolseley, 1 min. 7 2-5 sec.; H. Beesley, 6-h.p. Wolseley, 1 min. 11 4-5 sec.; A. W. Blackwell, 8-h.p. Rover, 1 min. 43 3-5 sec.; H. Appleyard, 6-h.p. Rover, 2 min. 2 4-5 sec.; E. W. Hatfield, 3 min. 6 2-5 sec.

Class 2.—For members not connected with the trade.—Fastest time: G. D. Flather, 12-16-h.p. Clement-Talbot; the other competitors' times being over this as follows: E. Wilson, 12-16-h.p. Clement-Talbot, 36 1-5 sec.; T. Nash, 18-28-h.p. Mercedes, 42 sec.; H. P. Orr, 16-20-h.p. Sunbeam, 43 2-5 sec.; H. Adams, 10-h.p. Belsize, 1 min. 56 1-5 sec.; H. Beesley, 6-h.p. Wolseley, 2 min. 16 2-5 sec.; A. Worrall, 10-h.p. Darracq, 3 min. 33 4-5 sec.; H. Naylor, 10-h.p. Swift, 9 min. 10 4-5 sec.

Class 3.—Open, for the Harvey Foster Challenge Cup.—Fastest time was made by A. Farnell, 30-h.p. Daimler; and others occupied the following times longer than the leader: Percy Richardson, 45-h.p. Sheffield-Simplex, 29 3-5 sec.; T. Nash, 18-28-h.p. Mercedes, 1 min. 25 2-5 sec.; H. Bargon, 15-20-h.p. Clement-Talbot, 1 min. 53 sec.; R. Crossley, 20-h.p. Belsize, 1 min. 57 1-5 sec.; E. Wilson, 2 min. 13 2-5 sec.; G. D. Flather, 12-16-h.p. Clement-Talbot, 2 min. 30 sec.; J. A. Craven, 30-h.p. Siddeley, 2 min. 37 4-5 sec.; J. H. Pickford, 20-h.p. Rover, 2 min. 52 4-5 sec.; H. Adams, 10-h.p. Belsize, 4 min. 45 sec.

LINCOLNSHIRE.

IT has become the custom for the Grimsby members of the Lincolnshire A.C. to annually entertain the rest of the members, and the gathering there on Saturday afternoon must be put down as one of the most enjoyable of the year. The Public Park was placed at the disposal of the motorists, and the cars were placed in a long and imposing row. After a visit to the reception tents, where the guests were received by the Mayor and Mayoress, Councillor and Mrs. Tickler, both enthusiastic motorists, a drive to Cleethorpes was taken. On returning to the Park an excellent tea was ready, and before rising thanks for the hospitable manner they had been entertained were expressed by Dr. Mansell Sympson and Mr. C. M. Pennell. On the way to Cleethorpes the Alldays ear belonging to Mr. Faulkner, Louth, in crossing in front of an electric car going the same way, was caught amidship and very badly damaged.

HERTFORDSHIRE.

THE third annual gymkhana of the H.C. A.C. took place on Saturday, when, notwithstanding the uncertain weather, a large number of members and friends were present at The Grove, the residence of the Earl of Clarendon, the president of the club. The first part of the programme took place in lovely weather and brilliant sunshine, but the latter part was marred by heavy showers of rain.

The winners and second prize winners of the various events were as follows:—Bending Race: 1, Mr. H. W. Colliver; 2, Mr. F. J. Jenkins. Turk's Head: 1, Mr. F. J. Jenkins; 2, Mr. S. Spoor. Starting and Stopping Race: 1, Mr. H. W. Colliver; 2, Mr. S. Spoor. Tortoise Race: 1, Mr. F. J. Jenkins; 2, Mrs. McWhirter. Potato Race: 1, Mrs. McWhirter, driving Miss Pryor; 2, Dr. Reid, driving Mrs. Pryor. Musical Chairs: 1, Mr. W. G. James and Miss James; 2, Dr. Reid and Miss Pryor.

Mrs. Saker presented the prizes, including the handsome cups competed for the previous Saturday at Aston Hill. Mr. J. S. Heywood acted as starter, and Messrs. Ernest Webster and W. Whittall as judges.

DORSET.

ON Saturday, the Dorset and the New Forest A.C.'s held a climb on a hill beyond Melbury Abbas, on the main Upper Blandford and Shaftesbury road. The first two in each class were as follows:—

Cars up to 10-h.p.: 1, R. F. Glyn's 9-h.p. Sizaire; 2, J. W. Davis's 6-2-h.p. Jackson.

Cars between 10-h.p. and 20-h.p.: 1, Mrs. Viner Ellis's 18-3-h.p. Peugeot; 2, R. F. Glyn's 17-9-h.p. Peugeot.

Cars between 20-h.p. and 30-h.p.: 1, F. W. Lacey's 20-1-h.p. Clement-Talbot; 2, F. Scorer's 20-h.p. Clement-Talbot.

Cars 30-h.p. and above: 1, G. H. T. Barlow's 41-9-h.p. Daimler; 2, H. Stuart Murray's 53-h.p. Gobron Brillie.

The challenge cup in the team race was won by the New Forest A.C.

SUSSEX MOTOR YACHT.

THE Sussex Motor Yacht Club, at the conclusion of its second annual regatta, held a dinner at the Grand Hotel, Brighton, when Sir Theodore Angier occupied the chair, supported by Lieut. A. Sumner, rear-commodore of the club. Mr. F. P. Armstrong, vice-president of the International Motor Yachting Association, proposed the toast of the club, and Lieut. Sumner, in responding, referred to the necessity of the organisation possessing its own headquarters. Mr. W. G. A. Edwards, in submitting the toast of the Motor Yacht Club, remarked that the committee thought they would have a suitable place at Hobden's Baths. The corporations of Brighton and Hove were toasted with heartiness, and the event marked the conclusion of a very successful meeting.

THE Northamptonshire A.C. has had a successful meet at Fawsley Park, where they were received by Lady Knightley of Fawsley.

THE Dundee and District Motor Cycle Club have had a series of competitions, in which Messrs. J. D. Cruickshank and G. Whitehouse secured distinction.

AMONG the new candidates for enrolment as individual associates of the R.A.C. are Lord Camoys, Sir Stanley Bois, Sir C. R. Williams, Mr. J. Duckworth, M.P., and the Rev. Philip Armitage.

THE Huddersfield branch of the Yorkshire A.C. have received a letter of thanks from the local Infirmary Board for their recent outing of patients and nurses in thirty-nine motor-cars lent by members of the club.

MESSRS. G. DAVENPORT AND Co. have removed from Hatton Garden to 95, Clerkenwell Road, London, E.C., where they have extensive stocks of motor watches, chronographs, &c.

LIGHTS ON VEHICLES ACT, 1907.

THE following is a list of the local authorities who have made by-laws since January 1st imposing obligations, as mentioned below, in addition to those imposed by the above Act:—

Stafford County Council and Stafford Town Council.—Bye-laws requiring that vehicles shall carry an additional lamp on the left side showing a white light to the front.

Glamorgan County Council.—A bye-law requiring (1) that vehicles shall carry an additional lamp on the left side showing a white light to the front, and (2) if the vehicle is a covered van, a lamp showing a red light to the rear.

Newcastle Town Council.—A bye-law requiring (1) that vehicles shall carry an additional lamp on the left side showing a white light to the front, and (2) that all vehicles shall carry a lamp or lamps showing a red light to the rear.

Leeds City Council and Reigate Town Council.—Bye-laws requiring all vehicles to carry a lamp or lamps showing a red light to the rear.

Salford Town Council.—A bye-law requiring that heavy and slow-going vehicles shall carry a lamp or lamps showing a red light to the rear.

Gloucester, Warwick and Worcester County Councils.—Bye-laws requiring that a vehicle or load on wheels drawn by another vehicle shall carry a lamp or lamps showing a red light to the rear.

II.—The following is a list of the County Councils which up to date have made Orders under Section 4 of the Act exempting from the operation of the Act throughout their respective counties vehicles carrying, in the course of harvesting operations, any farm produce to stack or barn during certain months of the year:—

Berkshire from June to October (inclusive).

Cambridgeshire during July, August, September.

Carmarthenshire from June to September (inclusive).

Cheshire during August, September, October.

Cornwall from June to October (inclusive).

Devon from July to October (inclusive).

Dorset from June to September (inclusive).

Durham from September to November (inclusive).

Essex from June to September (inclusive).

Gloucestershire from June to September (inclusive).

Hertfordshire during July, August, September.

Huntingdonshire from July to November (inclusive).

Kesteven (Lines.) from July to November (inclusive).

Lancashire from June to October (inclusive).

Lindsey (Lines.) from July to November (inclusive).

Montgomeryshire from June to October (inclusive).

Monmouthshire from June to September (inclusive).

Norfolk, during July, August, September.

Northamptonshire from June to November (inclusive).

Northumberland during August, September, October.

Nottinghamshire from June to October (inclusive).

Oxfordshire from June to September (inclusive).

Peterborough, Soke of, from July to October (inclusive).

Somersetshire from June to October (inclusive).

Staffordshire from June to September (inclusive).

Suffolk, East, from June to September (inclusive).

Suffolk, West, from June to September (inclusive).

Sussex, West, during July, August, September.

Westmorland during July, August, September and first two weeks in October.

Wiltshire from June to September (inclusive).

Worcestershire from June to September (inclusive).

Yorkshire, East Riding, during August, September, October.

Yorkshire, North Riding, from June 15th to October 15th (inclusive).

The Herefordshire County Council have made a similar order applying from June to September (inclusive) to vehicles actually laden with and carrying to stack or barn in the course of harvesting any farm produce (not being roots or other non-inflammable produce) and proceeding at a walking pace.

III.—The following orders have been made under Section 3 of the Act:—

The Mersey Docks and Harbour Board have made an order exempting from the operation of the Act any vehicles being within the boundaries of the Mersey Dock Estate.

The Liverpool City Council and Bootle Town Council have made orders under Section 3 of the Act exempting from the operation of the Act (a) vehicles carrying cotton, and (b) all vehicles constructed and used for the carriage of goods while in certain parts of the city or borough.

Birkenhead Town Council have also made an order exempting all vehicles constructed and used for the carriage of goods from the operation of the Act while in certain parts of the borough.

DR. L. DOBSON, of 71, Holland Park Avenue, W., who has used a 10-12-h.p. Coventry-Humber over a total distance of 2,560 miles, writes that during that period he has not had a hitch of any sort. Mrs. Dobson has a similar vehicle, which is running satisfactorily. The two cars recently returned from an 800 miles tour in Wales, taking all the principal mountain passes, with seven people and luggage, without a single puncture or engine trouble of any kind.

CASES AGAINST MOTORISTS.

HONOURABLY ACQUITTED.

At Guildford Assizes, before Mr. Justice Jelf, the Kenley motor tragedy, which occupied the Court at the last assizes, was again mentioned. The charge against Duncan Albert Brown, aged 26, chauffeur, in the employ of Mr. A. F. Stewart, of Kenley Court, was that of having feloniously killed Arthur Borer, labourer, on January 12th.

It will be remembered that the suggestion of the prosecution in February was that the prisoner was the driver of a large green car, which late at night knocked down the man and killed him, and that he drove off without stopping. The jury's disagreement followed a three-days' trial. On the 15th inst. Mr. T. Mathew, for the Crown, said that at the previous assizes there was considerable evidence of identification, but they were not able to show that the prisoner was the man who was in charge of that particular car. An effort had been made to obtain additional evidence, but no such evidence had been forthcoming. Under the circumstances he was instructed to say that no evidence would be offered. Mr. Lunge, who appeared for the prisoner, said he would like to remind his lordship that Brown went into the witness-box and swore positively that he was not in charge of the car that killed Borer, and that he was at home at the time of the accident; also, that evidence was given which, if based upon correct recollection, was inconsistent with the guilt of Brown. His Lordship: If he is acquitted he is entitled to say he had succeeded in repelling the charge. A verdict of not guilty was returned, and accused was discharged.

MANSLAUGHTER.

Arthur Metson was indicted at the Guildford Assizes, on the 17th, for the manslaughter of John Bryan, who was picked up in a dying condition on the main road at Ripley on April 25th, having been knocked down by a motor-car. Metson was alleged to have been the driver of the car which knocked Bryan down. Metson went into the witness-box to give evidence on his own behalf. He asserted that the damage to his car was due to a collision with a lamp-post in the Fulham Road, but gave conflicting statements, which caused Mr. Justice Jelf to inquire how he could expect the jury to believe what he was saying. The judge, in summing up, said if the car did not cause the accident a more extraordinary combination of miracles could hardly be imagined. The jury found a verdict of guilty, and sentence of ten months' hard labour was passed.

LICENCES SUSPENDED.

Reginald G. Mundy was summoned at Chester-le-Street, on the 15th inst., on a charge of having ridden a motor-cycle to the danger of the public through the town on June 6th. Inspector Barlow said that on the date named there was a race for motor-cycles from London to Edinburgh. Defendant was one of the competitors, and passed through the town at about 12.50 p.m. at the rate of about twenty-five miles an hour. The street was crowded with people at the time. The Bench suspended his present licence, which does not expire until February next, and also decided that defendant should not hold another licence for twelve months after that date.

EXCEEDING LEGAL LIMIT.

The motorist whose car recently went over the edge of the cliff at Beachy Head on to the rocks beneath has been summoned for previously driving along the Kingston road, Putney, at an excessive rate of speed. The magistrate imposed a penalty of £20 and costs.

At the Petty Sessions at Christchurch, on a recent day, ten motorists were fined and a case was dismissed. In the latter, Francis Copping, the defendant, was represented by Mr. Staples Firth, and the witnesses gave evidence proving the value of the speedometer in rebutting the case for the prosecution.

Despite differences in the times given by two constables at either end of a police trap at Bromley, the magistrates have inflicted a fine on a motorist charged with driving into the police trap at more than twenty-six miles an hour.

A dozen motorists were summoned before the Chichester County Bench on Saturday for exceeding the speed limit at various places—Aldingbourne, Boxgrove, Havant and Westhampnett—and fines of £1 and £2 were levied in the various cases, one of the defendants being the chauffeur to the Bishop of Chichester. At Horsham four motorists were fined and two others at Portsmouth Petty Sessions.

Several motorists have been fined for exceeding the legal limit at the courts at Colwyn, Mold, Milverton and Torpoint.

DAMAGES.

Mr. E. K. Charrington, of Hunsdon (Herts), has obtained over £98 damages in respect to a collision which occurred at Sawbridgeworth when his wagonette was run into by a motor-car. The mishap occurred when approaching a cross road, and it was mentioned that the defendants had no opportunity of knowing that they were nearing such a situation.

ON THE THAMES.

The Vice-Commodore of the British Motor Boat Club has been fined £2 and costs in connection with navigating the motor-boat Rownsante at Teddington while conveying people at a charitable fete for trips up and down the river. It was alleged that the craft had made a great wash, bringing it within the purview of the officers of the Thames Conservancy.

ALLEGED DANGEROUS DRIVING:

At the Hastings Borough Bench Ralph Hessing has been summoned for driving a motor-car in a dangerous manner at St. Leonards. He was defended by Mr. Staples Firth. The police-constable estimated the speed at fifty miles an hour, and other witnesses, who admitted they were no judges of speed, described the rate at which the car was driven as tremendous. The defendant explained that he had had trouble with the exhaust of the car and had had to leave it at Hastings, proceeding to London by train. He estimated the speed at eighteen miles an hour, which was corroborated by his passenger on the car. The majority of the magistrates, coming to the conclusion that defendant did not drive to the danger of the public, dismissed the case.

COMPANY NEWS.

SOUTH BANK TAR-MACADAM COMPANY.—£20,000 (£1). To take over business carried on by Mr. J. Robinson at Northgate, Darlington, South Bank, near Middlesbrough, and at Coatham, near Redcar, Yorkshire, as the South Bank Slag and Tar-Macadam Company. 7, Northgate, Darlington.

G. T. RICHES AND CO.—£10,000. To take over business of motor accessories manufacturers, dealers, and agents, carried on at 19, Store Street, W.C., as G. T. Riches and Co.

MONMOUTHSHIRE MOTOR COMPANY.—£10,000. Agreements (1) with Monmouth Motor and Cycle Company, Ltd., and (2) with G. Webb.

DETACHABLE RIM COMPANY.—£7,500. To acquire two inventions, and to adopt agreement with B. T. Hamilton, L. Stroud, and D. A. Prust. 3, The Mall, Ballard's Lane, Crouch End, N.

The 10-12-h.p. Coventry-Humber which took part in the 2,000 Miles and Scottish Reliability Trials.

CONSOLIDATED MOTOR CAB COMPANY.—£100,000. To adopt an agreement with A. Clarke, and to carry on the business of proprietors of motor-cabs, garage proprietors, &c. First directors: C. Roberts, T. Prior, H. Greig, and J. Stirton. Whitehall House, Charing-cross, S.W.

DURING the Ostend motor week Hautvast, who made all the fastest times, and Gehenniaux, who won the Duke of Orleans' Cup, both used Dunlop tyres.

LIKE many others in the recent A.C.F. Grand Prix race, the two Mors cars, driven by Jenatzy and Landon, experienced considerable trouble with tyres and rims. Landon had no less than twenty-one renewals, in two instances the rims coming entirely off the wheels, damaging the latter so much as to render it very difficult to fit new rims. Messrs. Mors (England), Ltd., are hoping to have one of the cars over for the Brooklands meeting in August, when it will have an opportunity of showing what it can do in the way of speed.

MR. E. J. THOMPSON, a well-known Croydon motorist, has just communicated to the Dunlop Tyre Company his experience with a grooved non-skidding Dunlop tyre which he has had in use on a 15-h.p. Humber car for sixteen months continuously. During this period the tyre has covered 13,125 miles, and in all this distance not only has it not punctured, but it has never been necessary to re-inflate it! A few nails have penetrated the outer surface of the cover, but none of them has ever got through to the tube. We are informed that the Dunlop Company have satisfied themselves of the authenticity of these facts, and we may add that the owner of the car and tyre concerned is in no way interested in the company, except for a natural appreciation of the quality of their tyres.

FORTHCOMING EVENTS.

JULY.

- 25th (Sat.).—Petrol Consumption Tests of the Motor Cycling Club.
Annual Open Hill Climb of the Midland A.C. at Shelsley Walsh.
Gymkhana of the North Middlesex A.C. at Pyrford Court, near Woking.
Committee meeting of the Kent A.C. at Herne Bay.
Motor Union Provincial meet at Harrogate; general committee meet at municipal offices at 10.30 a.m.; inter-club meet at the Kursaal at 3 p.m.; dinner at the Hotel Majestic, with Mr. Joynson-Hicks, M.P., in the chair.
Cheshire A.C. hill climb.
Lancashire A.C. open hill climb.
North Yorkshire A.C. gymkhana at York.
West Surrey A.C. gymkhana at Godalming.
26th (Sun.).—Southend M.C. run to Coach and Horses, Quendon.
29th (W.).—Lincolnshire A.C. at Skegness.

AUGUST.

- 1st (Sat.).—Brooklands A.R.C. meeting.
Entries finally close for the International "four-inch" race for the Tourist Trophy.
2nd-3rd.—Newcastle and District M.C.C. reliability contest.
3rd (M.).—Brooklands A.R.C. meet.
3rd and 4th.—Run of the Motor C.C. from London to Land's End.
8th (Sat.).—Visit of the Kent A.C. to Brasted Chart.
8th (Sat.).—Bristol and Glos. A.C. at Standish House.
12th (W.).—A.C. of Belgium—Circuit des Ardennes and the Liedekerke Cup race.
15th (Th.).—Northants A.C. speed trials at Castle Ashby.
21st (F.).—Ballinaslaught hill climb of the Irish A.C.
22nd (Sat.).—Annual race meeting of the A.C.U. at Shepherd's Bush.
Invitation of Sir D. Salomons to the Kent A.C. to visit Tunbridge Wells.
23rd (Sun.).—A. C. du Rhone Mont Pilat trial.
29th (Sat.).—Meet of the Lincolnshire Motor Club at Lincoln.
Mont Ventoux hill climb of the A.C. Vaclusien.
Leicester A.C. gymkhana.
30th (Sun.).—Southend M.C. run to Great White Horse Hotel, Ipswich.

LIGHTING-UP TIMES—LONDON.

| | | | |
|----------------|-----------|-----------|-----------------|
| July 25th—8.57 | 27th—8.55 | 29th—8.53 | 31st—8.51 |
| 26th—8.56 | 28th—8.54 | 30th—8.52 | August 1st—8.49 |

To find the approximate lighting-up time in July for Birmingham 13 minutes should be added to the above times, 18 for York, 22 for Manchester, and 45 for Glasgow.

ROAD REPORTS.

CHERTSEY.—The Chertsey Urban Council have considered the question of the danger arising from the speed of motor-cars *en route* to Brooklands. It was decided to again approach the County Council with a view to getting them to place the towns of Addlestone and Chertsey in the scheduled list of roads on which cars should go at reduced speed.

RUNCORN.—At a meeting of the Runcorn Rural District Council the surveyors have been instructed to place a salt scale from the salt works on the roads of the Council's district in order to abate the dust nuisance.

LICHFIELD.—There is a police trap between Shenstone and Lichfield. The road is very straight and presents a temptation for a good spin.

LAND'S END.—The road at the worst bends of the narrow and winding road leading from Land's End has been widened.

DEVON.—The police have a trap at Looe Lane, Torpoint (Devon), in which several motorists have recently been timed. The Okehampton-Exeter section has lately been the subject of much adverse criticism from motorists. The road, according to the motor-cyclists in the End to End run, was one long stretch of ruts and pits, due, presumably, to traction-engine traffic. One facetious cyclist suggested a novel way of having the road put in better order. He would like, he said, to drive representatives of the authorities responsible from the moorland town to the city in a springless cart! Could anyone devise a more exquisite form of cruelty?

DERBYSHIRE.—Caution boards have been placed on the dangerous cross roads at Calver (Derbyshire) by the Sheffield A.C.

SELBY.—At Hambleton, on the Leeds and Selby road, the police have a measured quarter of a mile.

NOTTINGHAMSHIRE.—Although the formal trap has not yet been established in the county of Nottinghamshire, Inspector Stapleton told the Nottingham magistrates a day or two ago that he had been observing a motorist over a distance of 350 yards on the Ratcliff road, West Bridgford. The result of this particular case was a fine of £20 and the suspension of the licence for twelve months. It was mentioned that the defendant had previously been convicted seven times for driving to the public danger and twice for exceeding the legal limit.

SUSSEX.—There are several police traps in the county of Sussex, starting from Crawley, on the London and Brighton road, and also in the Midhurst district.

AUTOMOBILE ACCIDENTS.

The inquest on the body of Mrs. Ball, who, as we reported last week, was killed by a motor-car in Croydon, has been concluded. Mr. John Strachan, of Sydenham, the owner, and George Baker, his chauffeur, declared the speed to be at the rate of six or seven miles per hour. The latter stated that he applied the brake directly he saw the woman fall, but admitted travelling about twenty yards before stopping, and that the car could have been pulled up in seven yards. His explanation was to the effect that he was unnerved, and that, being on the wrong side of the road, his first thought was to get on to the proper side before stopping. He did not know the woman was under his car. The jury returned a verdict of "Accidental death," expressing the opinion that Baker committed an error of judgment in not at once pulling up.

At the inquest at Brimfield, Hereford, on a motor-cyclist whose death resulted from a collision with a motor-car, the jury returned a verdict of "Accidental death" and found that the car was on its proper side when the unfortunate accident occurred.

BUSINESS NEWS.

ARRANGEMENTS are now being completed between Messrs. Worsnop and Co., Ltd., motor lamp manufacturers of Halifax, and Messrs. Easton and Melville, of 85, Shaftesbury Avenue, W.C., whereby the latter firm represents them in London. They carry a full stock of these now well-known lamps.

THE Napier car which Miss Levitt drove in the Prince Henry Touring Competition, and with which she accomplished an absolutely non-stop run, was run on Castle coils and accumulators, which gave every satisfaction throughout the contest.

MESSRS. TOZER, KEMSLEY AND FISHER, the well-known Australian shippers, have lately placed an order with Messrs. Warwick Wright, Ltd., for twenty-five Metallurgiques to the account of the Melbourne Motor Garage. The first consignment of these, a 26-h.p., two 18-h.p.'s, and a 12-h.p., has just been despatched.

MESSRS. REAL, MEDLAND AND WILLS, LIMITED, of Bridgwater, Somerset, have been keeping a very careful record of the cost of running motor-cars during the past three years, and have now favoured us with the results of this lengthy experience. In June, 1906, they bought a 10-12-h.p. Coventry Humber, which has been solely engaged in the hire business since that time. The total distance travelled has been 14,580 miles, and during the whole of this period the car has only had three mechanical stops, and these of but a temporary character. The actual cost, including every possible expense, works out at 4½d. per mile. In July of last year they bought a 15-h.p. Coventry Humber, which has now covered 12,000 miles and has never had a single mechanical stop on the road. Most of this vehicle's work has been performed through the hilly districts of Dartmoor and Exmoor, where level roads are the exception. A few weeks ago a thorough overhaul was made and no perceptible wear was manifest in any of the working parts.

MR. E. SMITH, of the Halifax Motor-car Company, who recently took delivery of a Standard six-cylinder car in London, drove the car down by road to Halifax. He has since written to the Standard Motor Company, Ltd., stating that the vehicle made the journey on an average petrol consumption of twenty miles to the gallon and absolutely on top speed, the other gears being only used for starting purposes.

COVENTRY chains were fitted to the Benz cars which finished second, third, and seventh in the A.C.F. Grand Prix race, and Messrs. Benz and Co. have notified the makers that they gave entire satisfaction.

THE Dunlop motor tyre list for 1908 contains the reductions in prices which were notified the trade on April 10th last, and will be a useful addition to the reference files of garage proprietors and others throughout the country.

THE Daimler Company's Spanish business is making rapid developments, amongst recent purchasers of their cars being Sir Don Rafael Sansamarina, Auditor de Guerra, Villagarcia, who has acquired a 36-h.p. phaeton car of the "Canley" type, and Dr. Don Joaquin Martinez Garcia, Villagarcia, who has selected a 42-h.p. "Stoneleigh" limousine.

At their Acton Vale works, Messrs. Panhard and Levassor have recently completed an extension in the form of a department comprising three lofty, well-lighted and dust-tight shops, each devoted to a distinct process of the painting of cars. In the first section, the ground work is prepared and brought to that condition in which it will best receive the later coats of colour. The car next passes into the second shop, where the successive coats are applied, and when they have dried—each drying hard before another is applied, of course—the varnishing begins. Coat after coat of fine varnish is applied and then "rubbed down" until the stage is reached when the final coat is laid on. Right up to the last moment the finisher always has to guard against a speck of dust, this being obtained, in the case of the Panhard and Levassor works, by the use of hermetically sealing doors, dust and air-tight windows, a flooring of specially manufactured material, and the liberal use of a hydraulic system which keeps on walls and floors a thin film of distilled water, tending to arrest any speck of foreign matter which might possibly elude all the other precautions. The commodious and independent arrangement of the works permits the body of a car to be painted while its chassis is being overhauled in the mechanical section. The paint shops are capable of containing from thirty to forty vehicles simultaneously, enabling a car to be mechanically overhauled and repainted in a minimum of time.

THE Motor-Car Journal.

VOL. X.]

[No. 491.

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

SUCH a week as that which we have just enjoyed—with its spell of fine sunny weather—calls the motorist from the office and the town. He goes forth to the seaside and, alas! to the police court. For it is a fact, duly noted by our correspondents at the various courts and Petty Sessions, that a spell of fine weather is always followed by a procession of motoring summonses. The managers of the leading London hotels are also observant of the change in social habits. People do not make the long

stays that once provided a chief source of revenue; now they rush about in motor-cars—lunch here, tea there, and dinner anywhere, with scarcely a settled place for breakfast. Such a wayward tendency often disorganises the staffs of hotels, and the sudden advent of scores of motorists calls forth all the resources of even the most wideawake establishment. It is a factor that proves the transition age in which we live.

Mr. Warne,
Worthing.

IN doing anything at all it is worth while doing it well. All those who know Mr. G. H. Warne, of Worthing, are aware that he cannot do anything other than excellent. The function on Saturday to inaugurate the opening of the new Lounge

of his hotel was one which will linger in the memory of those who participated. All familiar with Worthing appreciate the breezy and pure air of the place, and in conducting his hotel in his own characteristic manner Mr. Warne is adding to the attractions and prosperity of the town. The Worthing road is favourably known, the scenery along the whole route is of the most charming description, with ever-varying foliage and sufficient distinction in its gradients, none of which are steep, to avoid monotony. The road surface will compare with any in Great Britain. We wish Mr. Warne the success he deserves, and we anticipate he will receive it.

International
Courtesy.

IN our last issue a correspondent called attention to the way in which foreign motorists visiting this country merely for a few days have to pay the Inland Revenue fees just as though they were permanent residents in Great Britain.

This letter was apparently based upon previous references in these columns which we have placed before Sir Edward Grey, Mr. Lloyd-George and others concerned with the foreign relations of Great Britain as well as with the financial interests within its borders. As a result of correspondence we have now received a reply from the Lords Commissioners of His Majesty's Treasury to the effect "that the law makes no provision for exempting from licence-duty foreign motorists visiting this country, and that My Lords are consequently precluded from acting on the suggestion made by you." We regret the decision, especially as it might be possible to secure something like reciprocity between the nations in this respect to the mutual advantage of all. Although at present unable to alter the decision, we trust that the Treasury officials will ultimately come to recognise that the pro-

posal to forego the revenue licence need not cause the country much loss, though it may do a great deal to promote that interchange of visits which after all makes for the amity of the world.

The Affiliation
Question Again.

THE eleventh provincial meet of the Motor Union was held at Harrogate on Saturday, when the extraordinary number of events arranged throughout the country militated against the attendance, while the Parliamentary sitting prevented Mr. W. Joynson Hicks, M.P., taking his place as chairman. The gathering of cars which had been arranged for the afternoon was abandoned, owing to the showers, but the motorists found ample compensation in the entertainment provided at the Kursaal. Then in the evening a dinner was held under the presidency of Mr. E. H. Hepper, the chairman of the Yorkshire A.C. An interesting reference to the future relations of provincial clubs to both the R.A.C. and the M.U. was made by Mr. C. P. Wilson, the hon. secretary of the Yorkshire A.C., who commended a suggestion which has been made by the Manchester A.C. to the effect that provincial clubs should affiliate with both bodies on reduced terms. To choose between them will put provincial clubs on the horns of a dilemma, but, as we pointed out last week, it will have to be dealt with ere long.

Brooklands.

THERE are 101 entries for the August meet at Brooklands to-day (Saturday) and Bank Holiday. On the first day the All Comers' Handicap Sweepstakes will be run in three heats and a final; the Merit Trophy, the Journalists' Handicap, and the Montagu Cup will also be run. For the Sweepstakes there are thirty-one entries—a record entry for any one event thus far. On Monday the August Trophy will be run, as well as the O'Gorman Trophy race over a course of 100 miles, and there will also be an interesting match for the pleasure seekers between Miss Muriel Thompson and Miss Christabel Ellis, two of the ladies who ran in the first ladies' race on the track. We give the full list of entries in our club news.

Australian Advance.

AUTOMOBILISM is making slow, but sure, progress in this corner of the world, writes our Melbourne correspondent, but its devotees are having a fairly hard time to break down the usual prejudice which in every country has opposed the advance of the motor. So far, the drivers have not been subject to a Motor Traffic Bill; one was introduced into Parliament a couple of years ago, but was cast out through Labour opposition to some clauses. A new session opened in June, and a Bill has been prepared in response to the complaints of this and that municipality, and, so far as we can learn, many of the provisions are particularly harsh. The Automobile Club at Melbourne, however, intends to fight against those sections which will militate against the pleasure of motoring and the best interests of the trade, and the Committee is promised an early perusal of the measure. Touching on the club, it is well that at this juncture the committee has decided on a forward policy, and during the last five weeks 100 new members have been enrolled.

Another matter that is interesting the members is the formation of an Automobile Corps in connection with the Defence Scheme in the Commonwealth.

The late Mr. Cecil Edge.

THE regret with which we received news of the death of Mr. Cecil Edge from hæmorrhage of the lungs will be shared by all who knew him as a motorist and a sportsman, as well as by his large circle of personal friends. The sad event took place on Monday at Tilford, Fareham, and is rendered all the more sorrowful when we remember that Mr. Cecil Edge—who was a cousin of Mr. S. F. Edge—was only twenty-eight years of age. And yet he was one of the pioneers of automobilism, having been associated with some of the classic races of the sport. He was with Mr. S. F. Edge as mechanic in the Gordon Bennett race of 1901, and again when they won that competition in the following year. He was also prominent in the Irish motor week in 1903. In the following year he drove 1,107 miles without a stop on an 18-h.p. Napier, and in 1905 figured in several important events, driving an 80-h.p. Napier in the eliminating trials held in the

The late Mr. Cecil Edge at the wheel of a 1905 Gordon Bennett Racer.

Isle of Man to select the British team for the Gordon Bennett race, setting up a Yorkshire record of 71.42 miles per hour on Filey Sands, and also driving from London to Edinburgh as well as to Brighton on top gear—feats which were much discussed in those days. In 1906 he took part in all the leading hill climbs in this country, and last year he drove in the Herkomer contest, attended to his cousin during the memorable twenty-four hours' record run, and then on August Bank Holiday—exactly a year ago—he ran his last great race, being second in the Belgian Plate on the Brooklands track. He was not well at the time, and never really recovered his health, and his death at such an early age is deeply regretted. The funeral took place at noon on Thursday at Tilford Church. Mr. Edge was born at Sydney, and his last appearance at Brooklands was on Whit Monday.

Petrol and its Substitutes.

At the annual meeting of the Society of Chemical Industry, held at Newcastle-on-Tyne, Sir Boverton Redwood made reference to the supplies of petrol. He said that the product preferred for this purpose represented only about 5 per cent. of the crude petroleum, and before the recent opening up of the prolific mid-continent fields in the United States there were signs that that country might shortly need for her own use all the motor spirit she could produce. Fortunately in the Dutch East Indies there were very large quantities available, and the market was now to a great extent supplied from this source.

The consumption of motor spirit in Great Britain was, however, growing very fast, the imports having increased from 474,610 barrel units of 41 imperial gallons in 1905 to 809,280 barrel units for 1907. The automobile industry, in which no less than twelve millions sterling had already been invested in this country, was dependent for its existence upon a supply of a suitable combustible liquid, and it would thus be seen that the question of the maintenance of that supply was of great industrial importance. The chief difficulty lay in the fact that in manufacturing motor spirit the other productions, and especially the burning oil or kerosene, must be marketed if the industry was to be carried on without prohibitive cost. Unfortunately the great increase in the consumption of petroleum spirit had not been accompanied by a corresponding increase in that of kerosene, and it was to be hoped that the difficulty might be met by a larger use of kerosene as a source of power, though there were admittedly serious objections to the substitution of kerosene for petrol in motor-vehicles. These remarks naturally led to the consideration of the question of substitutes for petrol, and foremost among those to which public attention had been directed was the coal-tar product benzol, which could be obtained in considerable quantity if the patent coke-ovens in this country were provided with means for its recovery from the waste gases. Shale spirit might also be more largely produced, and lastly they had in alcohol a source of power which might be made available under suitable conditions, for alcohol could be readily and rapidly produced in almost unlimited quantities.

The Manx Race.

PERMISSION has been granted by the Lieut. Governor and the Highway Board of the Isle of Man to hold the "Graphic" Trophy Race on the morning of Wednesday, September 23rd, and the "Henry Edmunds" Hill-climb on the afternoon of the same day. Permission has also been granted for the "Four-inch" Race to be run over a course of about 38 miles in length, with nine circuits, making a distance of about 350 miles, starting from Quarter Bridge to Ballacrine, then via Glen Helen to Kirkmichael, Ballaugh and Ramsey by the mountain road, and over the mountain to Quarter Bridge. This course is about two miles shorter than the course for the Tourist Trophy Race of last year, but it avoids all level crossings, and consequently there will be nothing to impede the race from start to finish. The course has been selected by the Isle of Man authorities on account of the poor condition of the road from Ballacrine to Peel, and also in view of the inconvenience caused to the inhabitants of Peel due to the old Tourist Trophy course passing through a part of the town. Practising for the "Four-inch" race will begin on Monday, September 7th, and continue until Tuesday, September 22nd, both days inclusive, Sundays excepted. The club has been unable to obtain permission for the competitors to practise later than 7.30 a.m., but it is anticipated that there will be sufficient daylight to enable the competitors to accomplish two rounds each morning.

Armoured Tyres.

It is of interest to note the decision arrived at by the M.U. at Harrogate with regard to the letter from the Local Government Board seeking the views of automobile organisations upon the proposal, made to the Whitehall authority by the County Councils, for the prohibition of armoured or steel studded tyres. The Union came to the conclusion that the evidence does not warrant the entire prohibition of this type of tyre. Although of opinion that possibly some regulations might be made limiting the projection of steel studs beyond the rubber surface of the tyre, it considers that before any such order is made experiments should be carried out to ascertain whether such reduction would affect the non-skidding qualities of the tyre, and also to demonstrate the actual damage to a road surface by armoured tyres as compared with plain treads. Recognising the gravity of the road question, the Union is prepared, if such

course will be of assistance to the Local Government Board, to carry out a series of experiments at its own expense and place the results at the disposal of the Board.

'Ware of Traps.

SUCH "big hauls" of motorists were made by the police of the South of England at Easter and again at Whitsuntide, that they may be encouraged to try their "long traps" again during this coming August Bank Holiday.

Therefore we warn our readers not only to exercise care to keep out of their clutches but also to drive with every consideration for another reason. Recent holidays have brought their toll of accidents—cars have collided coming round corners and at cross roads, and there has been such an increase of mishaps that anti-motorists have had an excuse for virulent letters to the papers and for inciting the local authorities to petition Parliament in no

vehicles, or, better still, possess their own to make excursions at appointed times to the outlying villages and suburbs, bringing their customers from a radius which is impossible when only horses are employed and expensive and cumbersome in connection with the railroad.

Praise for Scotland Yard.

THE officials of Scotland Yard must be proud men this week, for they have received a well-expressed and well-deserved word of praise from the chairman of the General Motor Cab Company, with which the United Motor Cab Company has become amalgamated. Mr. Dalziel, in the course of a speech to the shareholders on Monday, said that many regulations had been irksome and at the time difficult of comprehension, but he was bound to admit that in the end they had been proved to be necessary, and even beneficial, to all concerned. He was, for

A New Public Service in Austria.

A public service of electrical motor vehicles has lately been inaugurated between Klosterneuburg and Weidling, a distance of about three miles. The machines, which were built by the Austrian Daimler Company, take their current from an overhead conductor, similarly to electric tramcars.

mild terms. We trust that no such opportunities will be given them after Bank Holiday, and that the universal good demeanour of motorists will give the public a demonstration of the reasonableness of the automobilist and his real regard for the safety of all who use the road.

Motors and Trade.

THE recent experiment of a shopping train introduced by one of the great stores in London is an advance upon the system by which many suburban houses attract customers by the provision of horse-drawn 'buses, and suggests a development for the motor-'bus and char-a-banc in the interests of the traders at various centres of importance. There is a growing tendency on the part of the leading commercial houses in London and of the great provincial cities to seek trade further afield, and there is no reason why they should not charter motor

instance, personally opposed to one of the early police regulations, which required that all motor-cabs must turn in a radius of 25 ft. When he discussed the matter with the manufacturers of the cabs they protested that it was a mechanical impossibility, but in the end a satisfactory model was produced, and, while there was a little delay in consequence, the result is that, even if the police withdrew the regulation now, they should never think of constructing cabs upon any other lines than the ones they had every reason to thank them now for having insisted upon. He mentioned this merely because it gave him an opportunity of paying a tribute to the uniform care, intelligence, and impartiality with which the authorities of Scotland Yard had dealt with this sudden invasion into the already congested domain of London traffic.

DURING the fiscal year 1906-7 the imports of motor-cars into Hawaii attained a value of £32,554.

AUSTRALIA FOR MOTORING TOURISTS.

AUSTRALIA, its climate and roads, its clubs and competitions, the cars used there, and its touring facilities, all form a subject on which little has so far been written. The average motorist and the manufacturer know little or nothing concerning one of the best motoring countries on the face of the globe. The reason Australia has such great possibilities for the motorist and offers such inducements to the motor tourist is, firstly, that the climate is ideal, and, secondly, the roads and scenery are entirely satisfactory.

In England and America there is an off season, when even the most ardent motorist can scarcely persuade himself to venture out, and even if he does do so the ride cannot be called enjoyable. Australia has no such season; motoring is quite enjoyable all the year round. True, snow does fall in the Australian Alps, and several of the inland mountains in the south of the continent, yet there is so little of it, and, as most of this snow disappears as soon as the summer commences, one can say, from a motorist's point of view, Australia is practically snow free.

As to the roads, when one remembers that most of the main roads were built by the convicts in the early days of Australian settlement, and as this convict labour was practically free, it may be said with truthfulness that these main roads were well

particulars may be of interest to any motorist who intends taking a trip to the Antipodes. If it is intended to land at Brisbane and tour south to Sydney, he will have a tough task. The writer has known motorists who have made this trip, and others who have started to do it, and they are unanimous in declaring that, although the scenery is perfect among the coastal rivers, yet the roads are so bad and the crossing of these rivers so difficult, on account of the absence of bridges, that their advice to motorists intending to undertake this trip is—don't.

From Brisbane runs can be taken to Ipswich, Twowoomba, and Warwick, all which towns are within 200 to 300 miles. A beautiful road extends to Sandgate, a short distance up the coast from Brisbane. The best advice is either not to ship the car to Brisbane at all, or else visit the towns named from this city, again shipping and so landing at Sydney.

Sydney, the oldest city in Australia, has a population of about 600,000 and is built on the best harbour in the world, besides possessing an excellent ferry and electric tramcar system, which fact largely kills the use of the business man's motor-car. Nature certainly was in a good mood when she fashioned Sydney; a motorist could spend a full week and not go thirty miles from the city, and even then he would not have seen all the beauty spots—charming river and coast drives, drives through the orange groves of Pennant hills and Penrith. After having seen the city and the beauty spots in the vicinity, the

Mosmans Bay, a pretty spot near Sydney, New South Wales.

made. This was in the days before railways made their appearance, and a good road meant everything to those concerned. At the present time the Government keep all the main roads and also that vast network of roads which connect inland towns or villages with the main road, in good repair. Large ranches are in most cases connected to one another by tracks, which are not specially "built up" as roads are, but consist of a centre track in which the horse trots, and a gutter on either side made by the vehicle wheels. These tracks are laid down anywhere across a field, and are sandy in places.

Generally speaking, New South Wales is more hilly than either Victoria or South Australia, but, as one cannot call Australia a mountainous country, these hills form no obstacle to the present-day motor-car, but rather add zest to the tour, as some of the most beautiful and most unique scenery in the world is found in the Australian mountains and within easy reach of the fortunate owner of a motor-car. Another reason for the good roads in Australia is the scarcity of railways. Victoria is much more fortunate than New South Wales, South Australia and Queensland in this respect. Thus, where a station or ranch owner lives from 40 to 150 miles from the railway, and where stations are perhaps forty miles from one another, the motor-car has a tremendous pull over the horse and buggy.

Australia is ideal as a touring ground, so that the following

motorist starts inland to the Blue mountains—the summer and health resort of Sydney. As far as Penrith, thirty miles, it is fairly flat country; then the road rises sharply into the famous Lapston hill, the steepest gradient being about one in seven. After this the road slowly rises until Katoomba is reached; here may be seen thousands of small cottages, dotted among the hills, showing how extensively the Sydneyite goes to the mountains for summer. The road right up the mountains is good all the year round and the scenery superb. Medlow Baths, a little further on than Katoomba, is the sanatorium of New South Wales; built by Mr. Mark Foy, one of Sydney's importers; it overlooks the famous Kanimbla valley and has every facility for making the tourist comfortable. A garage has been erected in conjunction with the sanatorium, and as a large fleet of motors is kept for daily trips to the world-renowned Jenolan caves, the motorist can get everything he wishes. From here trips can be made to a hundred and one different sights. Leaving Katoomba the motorist passes on to the Mount Victoria hill, where the gradients touch one in six. Lithgow, the great industrial centre of Australia, can be seen, and from here an excellent road and good scenery takes one to Mudgee, about 180 miles from Sydney. Thence to Wellington is a fine ride and on to Dubbo, where the Royal hotel will accommodate the tourists.

The return trip through Wellington, Orange and Bathurst

gives one an extremely good idea of the farming industry. If the motorist wishes to see large stations he must go farther west, where are stations whose wheat crop covers from 15,000 to 20,000 acres and which shear from 130,000 to 200,000 sheep per season. Bathurst, the largest town on the west, is essentially agricultural. From here the motorist takes the Oberon road to the Jenolan caves, which the tourist must see, as no stranger ever leaves Australia without seeing these wonders. Imagine a large modern hotel with its flower gardens, coach drive, &c., situated in a small valley just large enough to hold it, surrounded by mountains towering above all around. One wonders how to get to the hotel until it is discovered that the road travels through a natural tunnel through the very base of the mountain. In this tunnel is the entrance to all the caves, which are perhaps different from anything else in the world, inasmuch as they are mostly long passages travelling for miles through the earth, and all about these passages are millions of clusters of stalactites and stalagmites. The passages are all electrically lighted and branch out in every direction for miles. Needless to say, these Jenolan caves are a regular goal for motorists, and a week can be comfortably spent in seeing them. An excellent road brings one back to Medlow Bath and then on to Sydney. This round trip covers about 600 miles, and a motorist must take it otherwise he misses one-third of the pleasure of the tour.

As to hotels, the following are good:—On the mountains, Medlow Bath; at Lithgow, Hunns; at Dubbo, Royal; at Bathurst, Cockbains. In Sydney there is the Australia, the Metropole, the Wentworth, and many others; the three mentioned can be recommended. There are many garages in Sydney; among them the General Motor Company will provide good stabling for the car and do any repair work.

The next tour is south, along the picturesque cliffs of the coast. A delightful day can be spent between Sydney, Clifton, Bulli, Kiama and Nowra. From the last-named town the tour can be continued down the coast to Eden, 350 miles from Sydney, and return to Nowra, and then inland by way of Kambewarra mountain, Kangaroo valley, Barrengarry mountain and on to Moss Vale, from which point the great southern road can be followed right into Melbourne. The tourist can deviate from this plan in two or three places—he can leave the main road and go to Tumberumba and the Yarrangobilly caves and on to join the main road at Waggawagga, from which point he could strike west to Yass and see some of the famous Riverina grazing and pastoral country. From Albury to Melbourne the tourist will thoroughly enjoy himself, and as there are few hills, almost any speed can be touched. At Melbourne there are many hotels—the Grand and Menzies being satisfactory hostleries.

Melbourne is situated on the Yarra river and is laid out on the American plan, its clean, wide, well-laid-out streets being both a credit to Australia and a paradise to the motorist. Melbourne can rightly be called the home of motoring in Australia. Certainly it has no harbour like Sydney and has not one-quarter the number of beauty spots for the sightseer Sydney has, yet the excellence of its roads and the width of its streets are ideal for motoring. Besides this it is the connecting link on the route between Adelaide and Sydney, and it sends forth a number of excellent flat roads in a dozen different directions into the country; Bendigo and Ballarat, the great mining centres, can be visited, the former being about 170 miles from Melbourne and the latter 130. Certainly the tourist should see Ballarat, a pretty town of some 50,000 population, possessing a beautiful lake in its midst, to say nothing of the gardens, statuary, &c.

The motorist will find that in Victoria he will seldom have to drop from his top speed. The country and roads favour the motor-car. A fine tour can be taken to Geelong and on to Warnambool, on the southern coast, this road, like the others, being all that can be desired. St. Kilda beach and esplanade, near Melbourne, is a great bathing resort, and is also a favourite haunt of motorists on Sundays. From Melbourne also a fast turbine steamer will take the tourist and his car over to Tasmania in twelve hours from heads to heads. The car is slung ashore again at Launceston, where another small world is opened up to the motorist.

THE O.T.A.V. VOITURETTE.

A LITTLE car which should meet the requirements of a large section of the motoring public is the O.T.A.V., one of the latest examples of which we had an opportunity of inspecting a few days ago at the depot of the Junior and O.T.A.V. Cars Company, Ltd., at 117, Long Acre, London, W.C. The vehicle, which is of Italian construction, will in particular appeal to owners of tri-cars, as, while it occupies very little more space than the latter, it provides the stability of a car in addition to carrying its two passengers sociably, side by side; its price, too, brings it within reach of a large circle of prospective automobilists. The car, which weighs about 5 cwt., is fitted with a 5½ h.p. single-cylinder engine of the air-cooled type, and having a bore and stroke of 100 mm. by 110 mm. A novel system of cooling is adopted; a fan chamber is cast on one side of the crank chamber, and above this is a light metal hood which covers fully half the depth of the cylinder. Mounted directly on the crank shaft is a fan which drives air up the passage formed by the hood and round over the cylinder head. The ignition is by coil and accumulator, while the carburettor is of the automatic type, with a foot-controlled piston throttle.

The transmission is also on somewhat novel lines. From the engine the power is conveyed by a chain to a countershaft on which a planetary or epicyclic type of gear is mounted, this be-

ing adapted to give two forward speeds; at the ends of the countershaft are two pulleys connected by V-belts to similar pulleys attached to the cycle-type rear road wheels, the drive being thus by side belts in place of the usual chains. The low gear is practically only used for starting purposes and for climbing steep hills, the bulk of the running being done on the top speed, which, with the engine accelerated, is equal to thirty miles per hour. Both hand and foot operated brakes are fitted, while the road wheels are shod with 650 by 50 mm. tyres.

As indicating that the little vehicle is not a mere toy, it may be mentioned that an O.T.A.V. voiturette has been driven from Milan over the Alps to Paris; while we may add that one has been entered for the August races at Brooklands, when its performance will no doubt be watched with interest.

THE Scotch police evidently mean business, and owing to the recent spell of hot weather, which has made the roads very dusty, the anger of the people has been raised by their being smothered by the dust of passing cars, which are getting daily more numerous as English motorists go north. Many traps have just been started, and are due, we are informed, to the new chief constable of Kirkcudbright. The sooner motorists take warning of these traps the better, as the police evidently intend carrying on a campaign as the result of some English motorists, who drive considerably above the legal limit.

B

HOW TO KEEP DOWN THE EXPENSES OF MOTORING.

BY A. E. S. CRAIG.

(Concluded from page 460.)

I VENTURE to suggest the following conditions as generally fair:—The maintenance to include (1) accommodation for the car in a suitable building, to which the owner can have access at all hours; (2) insurance of the car against fire and all damage that may happen to it whilst in garage; (3) washing and cleaning the car after each journey; (4) filling up with oil, grease, petrol, and water, changing tyres when requested, and keeping same pumped up to a proper pressure; (5) execute minor repairs to be agreed on, such as grinding in valves, adjusting brakes, charging accumulators, &c., as and when required. The maintenance to exclude renewals or repairs to tyres, repairs to engine, gear-box, or rear axle, which involve dismantling these parts; but that a low fixed charge for executing same by competent mechanics be agreed upon at an hourly rate, and a fully detailed statement be rendered to the owner to check, as soon as the repairs are com-

A Reminiscence of the Irish Trials.—Mr. T. Henshaw's 48-h.p. Daimler entering Keomare Tunnel.

pleted. The owner to have the option of supplying new parts from the makers of the car, or elsewhere, at his discretion.

There are, however, a lot of people to whom the idea of maintenance does not appeal, or where such a scheme is impossible, because there is nobody in their vicinity capable of undertaking the same satisfactorily, and in this case they must make up their minds to let the care of their cars be their hobby; nay, more, they must regard the systematic routine of cleaning, adjusting, and overhauling as a duty that, if scamped and neglected, will in the end be both irksome and expensive. For instance, the man who puts his car away dirty, instead of tackling it at once, will find it takes longer the next day, for the mud is dry and in drying sucks the varnish. In the same manner, the timely adjusting of brakes, grinding in of valves, &c., repays over and over again; and as to the tyres, woe to the man who does not send his covers to be retreaded in good time, and who lets cuts gape open in the rubber. The e last should be one of the things than all motorists should learn to repair themselves, both as regards vulcanising on a patch to the inner tube, or to fill up a gash in the cover.

Money spent on equipping the place where the motor is

kept as a workshop is never thrown away; on the contrary, a judicious selection of tools will very probably pay for themselves in less than twelve months. Similarly the car should carry, on all occasions, a kit of tools and spares, each item chosen to be of real service, and not a heterogeneous collection of oddments. There is a good deal of difference in the prices of oils and greases, but it is false economy to buy a cheap unknown brand, except in the remote event of the buyer being able to test the quality. Rather is it best to purchase the highest grade oil obtainable, and take care not to waste it. Insurance also should not be shirked; the wise man will cover all risks possible that are included in the policies now obtainable from companies dealing with this class of business. Difference of opinion with our friends the police is another contingency for which one must prepare to be on the look-out, and therefore avoid, if possible, for the opinion of a policeman with a tin watch may be more costly, if less learned, than that of a K.C.

Assuming that we have purchased a car of, say, 10-12-h.p., new, from a good firm, that we keep it in a shed of our own, that we drive ourselves, and that we employ a youth to do the washing and odd jobs of cleaning, whilst we are ourselves capable of doing simple adjustments and repairs involving no great skill, I think a fair estimate for a yearly upkeep should not exceed as follows:—

| | |
|--|------|
| Petrol | £22 |
| Oils and grease, carbide and paraffin | 5 |
| Tyres and tyre repairs | 27 |
| Repairs and renewals | 15 |
| Insurance, licences | 12 |
| Washing, cleaning, &c. | 20 |
| Interest on capital | 15 |
| Depreciation | 35 |
| Sundry expenses | 4 |
| | £155 |

For the above sum a four-cylinder car, of at least 10-12-h.p., should be able to be kept in good running order, and also in a first-class state of preservation, and should allow a distance of some 7,000 miles to be covered in the course of the year—a further distance would, of course, work out appreciably less *pro rata*. The majority of tables estimating cost of maintaining a car nearly always (conveniently) omit such trifles as interest on capital and depreciation, which, of course, make my figures total somewhat high.

There is no doubt that the principal factor in keeping down the expenses of motoring depends on the man at the wheel, and this is where the owner of a small car who drives himself is at an advantage. He nurses his car, because it is money in his pocket to do so; he has not to pay for the escapades of others, and cannot afford to indulge in any on his own account.

It will be seen that, barring depreciation, the heaviest item scheduled above is for tyres, and unless one has exceptionally bad luck in the way of mechanical troubles, this is sure to be the case. And it is best that it should be so if it represents mileage run, and not rubber torn to waste by bad driving. The burden of my advice, therefore, to keep the maintenance low amounts to this—purchase wisely a car exactly fitted to your requirements; take the advice of unbiassed and competent people to aid you in your choice. Make yourself a master of your car in more ways than one. Remember that there is nothing gained, but a deal lost, by not keeping everything in perfect order. Do not grudge buying the best spares and necessities; you save money. Minimise your risks as much as possible. Do not lose a good opportunity of disposing of the car after you have had it a couple of years, as, if the price offered comes anywhere near the depreciation you have calculated, you will save money by having a new one, apart from the fresh guarantee you get from the makers, and the advantage of two years' further experience in design.

THERE were a large number of motor-cars seen at the Egham Floral and Industrial Society's show at Runnymede Park, Egham. The prizes were distributed by Princess Christian, who motored over from Cumberland Lodge.

CONTINENTAL NOTES.

Public Services in France.

A concession has just been granted for the establishment of a public motor-car service by means of Renard road trains between Laigle and Vieumoutiers (Orne).

The Ventoux Hill Climb.

The Automobile Club Vaclusien of Avignon has issued the regulations of the annual hill-climbing competition up Mont Ventoux, which is to be held on August 29th and 30th. The competing vehicles will be divided into classes on a cylinder bore basis, while a special category is being provided for six-cylinder cars.

The Semmering Hill Climb.

The Austrian Automobile Club has fixed September 20th as the date on which its annual international hill-climbing competition from Schottwein up the Semmering will be held. Classes will be provided for motor-cycles, touring cars (divided into categories on a cylinder bore basis) and racing machines. Entries will be received up to September 9th.

British Motorists in France.

Among the recent British motoring visitors to France are Mrs. Babcock (30-h.p. Fiat), Misses A. Rowe and Van Nostrand, London (50-h.p. Panhard), Mr. C. A. Moreing and family (35-h.p. Wolseley and 25-h.p. Daimler), Mr. S. Murphy and Mr. A. P. Stern, London (60-h.p. Napier), Mr. J. W. Earle, London (30-h.p. Rochet-Schneider), Mr. and Mrs. A. de Bourbet, Mr. Williams and Mr. Sewell (20-h.p. Stella), and Mr. Davenport and family (50-h.p. Mercedes).

French Motor-car Imports and Exports.

Returns just issued show that the value of the foreign motor-cars and parts imported into France during the six months ending with June last amounted to £150,960, as compared with £181,200 in the corresponding period of last year. As regards the exportation of French motor-cars and parts, while June proved rather more active than has prevailed of late, the aggregate shipments during the six months recently ended only totalled £2,673,800, as contrasted with £3,154,560 in the similar period of 1907. With the exception of Russia and Algeria, there has been a falling off in the shipments to practically all the leading markets, the decline in the case of England being from £1,312,800 to £1,242,000.

Touring in Germany.

The German Reichstag has recently passed a bill for facilitating frontier automobile traffic by reducing the taxes on visitors' vehicles. In future a charge of 3s. will be made for a permit to drive a foreign car staying in Germany only one day, 8s. from two to five days, 15s. for from five to fifteen days, 25s. for from fifteen to thirty days, 40s. for from thirty to sixty days, and 50s. for from sixty to ninety days. In addition a control plate has to be taken and given up when leaving the country, the charge for the same being 2s. for one day and 5s. for from two to ninety days. The matter of deposit with the Customs authorities remains unaltered, this being unaffected by the new taxes referred to above.

Further Grand Prix Calculations.

M. Faroux, of the "Auto," has been making some comparisons between the 1907 and 1908 A.C.F. Grand Prix races. The forty-eight drivers who took part in this year's event included only twenty-three who competed last year. Of this number only seven—Caillois, Hémerly, Rigal, Gabriel, Garcet, Courtade and Degrais—completed the full distance in both contests. Of the others, Nazzaro, Szisz, Baras, Bablot and Roch-Brault, who finished in 1907, retired in 1908, while Hanriot, Heath, Jenatzy and Salzer, who failed last year, covered the full ten laps this July. Finally, it may be mentioned that Lancia, Duray, Striker, Pierron, Rougier, Wagner and Perpère had to retire before the end on both occasions.

Another Industrial Vehicle Competition.

The "Auto," of Paris, proposes to hold a reliability trial of carrier motor-cycles, light delivery vans, motor-cabs, and hotel 'buses in the early part of October next. The event will last about a week.

Industrial Motor Vehicles in Antwerp.

A company has just been formed in Antwerp, with a capital of £60,000 and the title La Compagnie Generale Anversoise de Transports, to start a carrying business in that city by means of motor-lorries. The German Daimler Company is stated to be interested in the new undertaking.

More Aeroplane Trials.

M. Bleriot, in the course of a trial with his monoplane, at the parade ground at Issy-les-Moulineaux, on Thursday last week, fell from a height of about 16 ft. The front part of his machine was broken, and will have to be entirely reconstructed. M. Bleriot himself was uninjured. On the same day Captain Ferber carried out various experiments with his double-planed apparatus. He covered about 130 yards in short flights, but in

Touring in Spain.—In the Alhambra, Granada.

returning the machine struck the ground with such force that the propeller and the chassis were broken. The King of Italy having offered a prize of £2,000 to the man who first makes an uninterrupted aeroplane flight for half an hour on Italian soil, M. Delagrange announces that he will return to Italy in August with a new triple aeroplane, which is at present being constructed in Paris for him.

The New York-Paris Race.

The Protos car which, with a number of others, left New York on February 12th last on a race across the United States, Alaska, Siberia, and Europe to Paris, reached the French capital on Sunday last. Nine vehicles set out on the long run, but owing to various causes—dissatisfaction with the rules and organisation as well as difficulties with the cars themselves—six fell out before American territory was left. The Protos being a German-built car, it was not unnatural that it should receive a rousing reception on its arrival in Berlin. Some hours before the car was expected, on Friday last week, the streets in the vicinity of the offices of the "Berliner Zeitung," under whose auspices the vehicle was run, had become so con-

gested that it was necessary to clear them with mounted police. Lieutenant Koeppen, the driver, and the two chauffeurs were received by a deputation from the Imperial and Berlin Automobile Clubs and met with such an ovation that it was only with the utmost difficulty they could pilot the vehicle to its immediate destination. The Thomas (American) car reached Berlin on Monday, while the last news of Signor Scarfoglio on the Brixia-Zust (Italian) is from Omsk, Siberia.

THE LORRAINE-DIETRICH 14-18-H.P. LIVE AXLE CAR.

SOME few details of the new Lorraine-Dietrich live axle car have already appeared in these columns. As the vehicle is, however, an entirely new departure for the Lorraine-Dietrich Company, the following more complete description of the car may be of interest. The frame, which is of pressed steel,

Fig. 1.—Plan of Chassis of Lorraine-Dietrich 14-18-h.p. Live Axle Car.

A. Radiator. C. Carburettor. D. Steering Gear. E. Clutch. F. Foot Brake. G. Gear Box. I. Bevel Gear Case.
J. Rear Wheel Brakes. K. Lubricator.

Miscellaneous Items.

British motorists who intend making a motor tour to Brittany can now obtain all the necessary French licences on arrival at St. Malo.—Prins Hendrik of Holland has lately acquired a 35-45-h.p. Renault limousine.—The postal authorities in Leipzig have recently acquired an Adler 8-14-h.p. motor-van.—The little town of Trappes (Seine-et-Oise) is apparently well-named, as the Touring Committee of the A.C.F. has issued a warning that motorists should reduce their speed when passing through the place.—The Hotchkiss Company are building five armoured motor-cars fitted with quick-firing guns to

can be supplied either curved, as illustrated in Fig. 2, or straight, the former facilitating the fitting of very low carriage bodies with roomy side doors. The engine comprises four cylinders, 90 mm. bore by 120 mm. stroke, cast in pairs, with the interchangeable inlet and exhaust valves set on opposite sides and operated mechanically off separate cam shafts. The ignition is by a high-tension magneto, which runs at the same speed as the engine, while the mixture is furnished by a special automatic carburettor, comprising two air inlets and means of cutting down the petrol supply when the engine is running slowly and the car standing. The lubrication of the engine and clutch is

Fig. 2.—Elevation of Chassis of Lorraine-Dietrich 14-18-h.p. Live Axle Car.

the order of a foreign Government.—On Sunday last the Automobile Club de BelFORT held a hill-climbing competition over a 13 kilometre course on the hill known as the Ballon d'Alsace. The best time of the day, 13 min. 22 sec., was made by M. Kulmann on a Delahaye.—The joint run of the German and Austrian Motor Volunteer Corps from Vienna to Berlin commenced on Monday, when thirty-four cars left the Austrian capital.

effected by the pressure of the exhaust gases, the oil passing from a 4-litre tank through an adjustable sight-feed rack on the dashboard. A special form of centrifugal pump maintains the water circulation, through the cylinder jackets and a radiator of the framed ribbed tube type. The half-time gears, as also those driving the pump and magneto, are entirely enclosed and lubricated by the oil in the engine base chamber. It may be added that the lower half of the latter can be removed without

disturbing the bearings, the latter being supported in the upper half. The speed of the engine is controlled by a lever on the steering wheel and connected up to the ignition, and by a pedal which opens or closes the throttle as desired.

The clutch (Fig. 3) is of the metal disc type and runs in oil; it is connected to the gear-box through a universally-jointed shaft, which allows for any slight distortion of the frame whilst travelling over rough roads, and also permits the clutch to be dismantled without disturbing the engine or gear-box. The change-speed gear is adapted to give four speeds forward and a reverse, with direct drive on the top speed. The control is by means of a single lever working in a "gate," the gears not in operation being securely locked. The drive is transmitted to the live axle (Fig. 5), by means of a cardan shaft, which is supported by a cold-drawn taper steel tube, the latter acting as a torque rod. The rear axle is very strong in design, is oil-retaining, and fitted with ball bearings. The road wheels are mounted on the outer casing, and are driven by dog clutches fitted in the

Fig. 3.—General View of Clutch.

wheel hubs. In this way the actual driving shafts do not have to bear any of the weight of the car. A special feature of the rear axle is that it is of the arched type, enabling the road wheels to be splayed, as in chain-driven cars. This is obtained by introducing a special form of compensating joint in each half of the live axle.

Fig. 4.—The Clutch Dismantled.

Special attention has been devoted to the brakes. The rear road wheels are fitted with large drums (Fig. 6), inside which are expanding segments, operated by means of a "pull-on" hand lever. A compensating device is fitted to equalise the pressure on each wheel, and further provision is made to absorb the shocks which would otherwise be thrown on the brake gear whilst travelling over rough roads with the brakes on. The foot brake, which acts on a drum at the rear of the gear-box, is unusually wide, and is provided with an extremely easy means of adjustment. The steering is by worm and sector, special provision being made to allow any wear to be readily taken up. The frame is supported on semi-elliptic springs at the front of the frame and three-quarter elliptics at the rear. The front axle is of rectangular-section steel. Self-lubricating ball bearings are fitted throughout the chassis, which has a wheel base of 9 ft. 10 in.; the road wheels are shod with 875 by 105 mm. tyres. Needless to say the details throughout are of the highest class, the vehicle being one which should well uphold the Lorraine Dietrich reputation for reliability.

We learn that Prince Eugene, the brother of the King of Sweden, has ordered a 15-20-h.p. Buick car.

SOME USEFUL NOTES.

It is important that all the connections of the mixture inlet pipe of a multi-cylinder engine should be perfectly tight. Slackness at any point permits the entry of a certain quantity of extra air, which renders the operation of starting the engine more difficult and reduces its power. Many cases of poor running, which have been difficult to locate, have been due to this point.

THE fact that the constant vibration of the car will loosen, open, or shake off anything that is capable of being jarred out of place should not be overlooked; in fact, the mischief that can be accomplished in this way is sometimes surprising. Cocks and taps should always be carefully watched, for if they are not tight they will surely jar open. The relief cocks on the cylinders will, of course, give instant warning when they are open by the

Fig. 5.—View of Cardan Shaft Casing and Rear Axle.

hissing of the escaping gas; but drain cocks in oil chambers will quietly allow the last drop of oil to run off, leaving the bearings or gears without lubrication. Drain cocks in the water system will also do their mischief silently, the motorist knowing nothing of what is happening until his engine begins to overheat. Cocks and taps should therefore be adjusted so that they turn stiffly,

Fig. 6.—One of the Rear Wheel Brakes.

and they should be placed where they will be as free as possible from the chance of an accidental knock.

It is a somewhat regrettable fact that the average motorist is not so particular about the appearance of his vehicle as are the owners of horse-drawn carriages. He has, however, several excuses on his side for deficiency in the matter of paint and varnish, one at least being that however spick and span his car may be at starting, his journeys are seldom short enough or over sufficiently clean roads for such a decorative state to persist to their conclusion. Another point, also, which deserves some notice is the want of durability of varnish or paint under the conditions prevailing with a motor-vehicle, which seems to be attributable to the deteriorating effect of road dust at high speeds. The effect of the "sand-blast" on such hard materials as glass and porcelain is familiar, and there can be little doubt that to a similar action is due the want of durability of motor-carriage paint-work. The principal effect will usually be noticed on the paint at the back of the car, where the inrush of dust-laden air is most violent; and it is difficult to see how any painted surface can be made to resist it.

The Motor-Car Journal, Saturday, August 1st, 1908
MILITARY MOTOR WAGONS IN AUSTRIA.

The Austrian Military Authorities recently carried out some trials near Vienna of motor wagons suitable for use in connection with the Army. The above illustrations depict some of the competing vehicles.

[Allgemeine Automobil Zeitung.]

GOSSIP FROM PARIS.

A SIGN of the times! Mr. Friswell, so well known in English motor-trade circles, has just spent a week in Paris. He did not come, as he frequently did formerly, to buy French cars, but to sell English-built automobiles! Nothing could be more significant. Here in France the demand for the high horse-power touring automobile is steadily decreasing. Motor-car touring is, however, not dying, as some people pretend, and I do not believe it ever will die, but the owners of touring cars are not, as they used to be, always on the road. What may be called the touring fever is abating, and it often happens that a person wishing to make a tour, say, in the South of France does not think it necessary to undertake the long journey down in his car, but goes there by train and puts his car on a railway truck. This practice, which is becoming very general, accounts for the comparative scarcity of touring cars on the highroads, and also for the falling off in the demand for them. Young men who are still suffering from the intoxication of speed buy the powerful cars and so do people who, having a large family, want a big vehicle. On the other hand, a very large number of persons who, eighteen months ago, would have bought cars of high horse power for long journeys, now content themselves with much smaller machines, which can be sent by train comparatively cheaply and which are quite sufficient for even long excursions in the region the tourist may wish to explore. Mr. Friswell thinks the Standard car is well suited for such touring purposes as well as for use in towns. It is quite likely he is right; in any case he has made arrangements with an important automobile agent for the sale of his vehicles in France.

THE French Chamber had not time before the recess to vote the proposed new law for the regulation of motor-car traffic. And M. Colin, the President of the Anti-Automobile League, was glad of it. He had been pretty well satisfied with the Bill as it was presented to Parliament by M. Barthou, but he was mortified when he discovered he had not sufficient influence to prevent the Committee, of which he was a member, from modifying it in a liberal spirit. In spite of M. Colin the Committee actually transformed the proposed measure to such an extent that it was made almost acceptable to the motorists! If it is voted and promulgated as it stands, M. Colin's vocation in the Chamber will have disappeared, and he should at once resign his seat. But it is quite certain he will not, and, with persevering energy worthy of a better cause, he recently wrote in his capacity of President of the League to a certain number of Councils-General which had not yet pronounced in favour of encouraging the new means of locomotion. The result of his initiative has not been exactly what he hoped. For instance, the Council-General of the Basses Alpes responded to M. Colin's appeal by actually voting unanimously a resolution urging the Government to extend its proposed new motor-car regulations to all sorts of vehicles and to widen the narrow roads and round off the corners "to facilitate motor-car traffic." Similar resolutions have been adopted by numerous Departmental Councils, and it is to be hoped the example will be followed by many others.

THE order issued on Saturday last by the Minister of War prohibiting further aeroplane experiments on the Issy les Moulineaux parade ground, spread consternation among the aviators in France. For the most part they are not rich men, and if the order is not withdrawn several of them whose flying machines are very interesting will certainly be obliged to abandon their attempt to aid in the conquest of the ethereal realm. One young man whose annual budget is not large, and who during the last three years has foregone every sort of amusement and holiday to spend all his spare money in building aeroplanes, was absolutely in tears. Poor fellow! I was very sorry for him, especially as he had that very day made experiments with his monoplane which promised success. Then, trusting to the promise made by the military authorities, numerous inventors had long ago hired land bordering on the Issy les Moulineaux parade ground and

had spent large sums of money in building aeroplane sheds which will be useless in the future unless some arrangement is come to. As a matter of fact I am convinced that the prohibition, which was issued on account of M. Lepine, the Prefect of Police, having declared that under present circumstances he could not insure the safety of the public, will shortly be withdrawn. On several occasions the aviators have been within an ace of causing a catastrophe by flying into the crowd which always invades the parade ground. Seeing this, M. Lepine several weeks ago sent a large police force to keep the public off the field. But the aviators were informed they would have to pay for it. At a moment when a national subscription is being made in Germany to provide the country with an aerial fleet, it is impossible that the French Ministry should persevere in its *non possumus*, which would deprive so many French aviators of the means of continuing their experiments. It is only a question of police, and the difficulty will surely be surmounted. And what makes a satisfactory arrangement all the more certain is the fact that only a few months ago the War Minister granted the Aero Club of France the concession of a portion of the Issy les Moulineaux parade ground, on which half-a-dozen aeroplane sheds have already been erected.

A Story Without Words.

[La Locomotion Automobile.]

ALL eyes are now turned towards Le Mans. Wilbur Wright has at last completed the delicate work of putting his flying machine together. At least such is the announcement which has been made, but no one has yet seen the aeroplane. The aviator has probably good reasons for not allowing anyone to examine it before the public experiments, but the French are not accustomed to such secrecy. They will, however, forgive Wilbur Wright for keeping them out of his shed if he accomplishes only half he has promised. The old sleepy country town he has selected as the scene of his future triumph will ring with the cheers of thousands of people come from far and near, and especially from Paris, on the day he is seen leaving the racecourse on his machine and flying boldly over the neighbouring fields. As for Henry Farman's new challenge, the Wright Brothers are doubtlessly right in refusing it. The business they are engaged in, the one in America and the other in France, is evidently much more important than the 10,000 dollars they would get by winning the proposed match. I have seen several persons who within the last week went to Le Mans on purpose to have a chat with Wilbur Wright. They were all, with one exception, sceptical before they left Paris, but on their return I found they had materially altered their opinion. None of them saw the machine or knew any more about it than they did before they started, but they were one and all impressed by the confidence of the aviator in his ability to make long flights. Wilbur Wright says to everybody "What I have done before I can do again." And he says it in such a quiet, confident tone that his words carry conviction with them.

MARNEY.

THAMES VALLEY trips by motor-car and motor-boat are being organised by the Motor Boat Cruising Company, Ltd.

MOTERING NOTES FROM BRIGHTON.

WHETHER it be that the scare of the long-distance trap, together with the A.A.'s declaration of war on the *genus* "road-hog," are exerting a salutary influence, or whether the exuberant "scorcher" is voluntarily realising the error of his ways, the fact remains that from the non-motoring point of view there has been a perceptible improvement in the nature of the car traffic on the London-Brighton road these last three or four weeks. I say this on the authority of the local cycling world, and of country residents personally known to me who, while by no means afflicted with motorphobia, have often railed hotly against instances of inconsiderate driving that happen to have come directly under their notice. After all the give-and-take policy is best for both sides—but if the motorist does a little of the giving by curbing the fiery impulse of his mechanical Pegasus, I hope, in everybody's interests, the police won't continue to do the taking!

THE recent "battués" at Haywards Heath, while not without their irritating side, seem to have cleared the air, and encouraged the basis, at least, of a sort of *entente cordiale* between

one of the most enthusiastic lady-motorists in the district—who drove a speedy Weigel car; M. Bartholdi (Brouhot), the Hon. Charles Brand (Berliet), M. Bianchi (Milano), Mr. Scott (Napier), Mr. White, Messrs. Kayzer and Jones (Daimlers), Mr. Redhead (Delaunay-Belleville), and Mr. Andrews (Argyll). Most of these were lunching at the Metropole. Those famous comedians, the Poluski Brothers, who revel in a Clement-Talbot car, were combining business with pleasure at Brighton last week, exploring the country by day and amusing crowds at the Alhambra by night. They "stabled" at the Brighton and Sussex Garage, where were also the cars of the Marquis de Caumont La Force (Peugeot), Mr. Ingram (Darracq), Mr. Bayley (Rover), Mr. Marshall (Humber), and Messrs. Batchelor and Barrow (De Dions).

THEY have been busier at the local garages this week than for a long time, receiving visitors who made Brighton their headquarters for the Goodwood races. The motor-car has completely ruined the old racing habit of securing quarters on the South Coast within easy driving distance of the picturesque and historic course hard by the old cathedral city of Chichester, and

The First Trial Trip of the new British Army Airship.

the motorist and his "natural enemies." Of course, the long-distance trap will be in evidence this ensuing week-end, and probably during the few days immediately following, for the summer Turf carnival in Brighton will then be making things exceptionally lively all round. But the golden rule for the Brighton-bound motorist from town to observe is to keep just under a speed of twenty-five miles an hour all the way down. As long as he takes that simply and by no means unreasonably restrictive precaution, he will have nothing to fear, for the Chief Constable of Sussex himself has stated, in open court, that he will only take proceedings against drivers who exceed the twenty-five mile average.

NEVERTHELESS, police persecution in the past has done a great deal of mischief, and some little time may elapse ere any degree of confidence is likely to be restored. I am told that some motorists who used to be tolerably regular week-enders at Brighton have lately been favouring Tunbridge Wells and sea-coast towns further east, while many of those who still visit London-by-the-Sea make the journey by a circuitous route, to avoid possible trouble *en route*. Among the visitors to Brighton last week-end were Mr. Chaplin, of Henfield—whose mother is

from Brighton to Goodwood is a delightful run, through the most charming district of West Sussex.

SAXONIAN.

THE War Office competition for Light Tractors already announced in our columns will commence in February, 1909, and last until the middle of the month. Entries are to be made not later than the last day of August, and detailed particulars of the competition can be obtained on application to Capt. Bagnall-Wild, secretary of the Mechanical Transport Committee, at the War Office, London, S.W.

At the recent meeting of the Ligue Internationale des Associations Touristes, held in Stockholm, it was decided to hold the 1909 congress in London, on the invitation of the Motor Union, and for 1910 in Brussels. Among the matters dealt with at the Stockholm gathering were the indication of roads closed to traffic and of Customs houses; recognition of driving licences and car licences; recognition of number plates; danger, hotel, repairer, and motor house signs; an international road book; and tourists' identification papers to enable letters, &c., to be claimed at post-offices.

THE SOCIAL WHIRL.

THE King's departure from town on Monday marked the close of the London season, which has lasted little more than six weeks—as contrasted with three or four months in the Victorian era. Still it has been full of activity, and the motor-car has proved itself a factor in enabling both His Majesty and his Consort to testify to their interest in the social, political, international, sporting, and municipal life of the people. Last week the King paid a visit to the Hungarian Exhibition at Earl's Court, motoring to the Warwick Road entrance, and subsequently entering his car again at the Queen's Palace and driving through the grounds to the Western Gardens. On Saturday his Majesty trained to Wolferton, proceeding to Sandringham by motor-car, and subsequently making a tour of his estate to inspect the improvements in progress.

ON Monday the Goodwood House parties assembled, and although the King and Queen travelled by train a great many went down by car. In fact, the Duke of Richmond's party is largely made up of motoring peers and peeresses. Their Majesties are staying with the Duke at Goodwood House.

THE Prince of Wales, accompanied by Earl Grey and the members of the Viceregal Household, have been motoring among the farm houses and "habitants" of the Petit Cap district, where His Royal Highness was introduced to many leading French-Canadians. The Prince's interest in motoring is steadily growing, and although his enthusiasm is not so great as is that of the King, he recognises its value as a social force. That was first declared when he paid his first visit to a motor-car exhibition at the Agricultural Hall, London, some years ago.

SIR STANLEY BOIS, whose attendance at the Motor Union meet at Harrogate on Saturday gave the Ceylon A.C. representation at an English function, is a partner in one of the leading firms in Colombo, and was knighted three years ago. He is a member of the Legislative Council of Ceylon, and his recreations when at Colombo, where he has made his home, are music and motoring.

BETTWS-Y-COED was full of motorists at the week-end. On Saturday the North Wales Automobile Club held a gymkhana at Gwydyr Castle Park, when Col. Sandbach secured the Motor Union's medal for winning the largest number of events. Among the visitors was the Lord Chief Justice of Ireland. On Sunday the delightful little place was visited by about forty cars, the Cheshire and Manchester Automobile Clubs having a joint meeting there, instead of in the more police-trapped locality at which they originally intended to meet.

LADY GEORGE HAMILTON is staying at Deal, and while out motoring on Monday afternoon at Sandwich, a horse which had bolted with a trap came towards the vehicle. The chauffeur wisely drove the car to the left side of the road, thus averting an accident. A few minutes later Lady Hamilton in alighting from the car fell and received a shaking. I am glad to learn that no injury was inflicted, and that she was able to re-enter her car and shortly after proceed on her way back to Deal Castle.

SIR LEWIS M'IVER, whose recent letter to the *M.C.J.* on London traffic has attracted some attention, has been M.P. for West Edinburgh for a dozen years or more. When he writes of the traffic in Berlin, Hamburg and Cologne Sir Lewis is on familiar ground, for he was educated at Bonn before entering the Indian Civil Service. He is an enthusiast for the electric automobile for town use, having possessed such a vehicle for four years, saving a considerable sum on his stable account as a result. In fact, "as to the argument of working expenses and tear and wear it is a better car now than when it started"—an eulogy which cannot be applied to every car, whether in society or not. Lord Westbury's reply to Sir Lewis M'IVER's letter appeared last week.

SIR GEORGE ABERCROMBY, BART., who won the Third All Comers' Handicap Sweepstakes at Brooklands, is again an entrant and will drive his 58.1-h.p. Fiat on both days of the August meeting. His baronetcy was created as long ago as 1636, and he has become quite up-to-date in regarding motoring as one of the finest of modern sports. Although only two ladies are to appear on the track on Bank Holiday, several of the cars which competed in the Ladies' Handicap a month ago will be driven by their owners, and among the competing cars will be "Pobble"—the winner of the ladies' event—"Delilah," "Guarded Flame," "Linda," "Gollywog," "Grayling," and "Little Dorrit." The naming of cars is not proceeding very rapidly.

VISCOUNT CURZON, the son of Earl Howe, Lord Chamberlain to H.M. the Queen and a sub-lieutenant of the Royal Naval Volunteer Reserve, is shown in the accompanying illustration at the wheel of the 40-h.p. six-cylinder Napier he has lately acquired. The feature of the vehicle is that it is provided with two interchangeable bodies. In the picture it is seen as a smart two-seater specially equipped for long distance touring, the rear portion being very spacious, and adapted for carrying luggage and the various impedimenta necessary for long journeys. For

Viscount Curzon at the wheel of his 40-h.p. Six-Cylinder Napier.

town use during the London season the touring body is replaced by a double landaulet. The painting is in Viscount Curzon's own colours, viz., brown relieved with fine lines of black, whilst the upholstery is in dark brown leather.

THERE is a sound of motor-cars in the closely packed constituency of Haggerston, where the Hon. Rupert Guinness, a member of the R.A.C. and a vice-president of the North Middlesex A.C., is a candidate. Mr. Guinness was a famous sculler in his much younger days—he is still on the sunny side of forty—and his brother is M.P. for Bury St. Edmunds. The father of these two politicians is Lord Iveagh, whose name was prominent at one time in connection with the Iveagh-Pirie scheme of road locomotion for Ireland, and all the family are keen motorists. Haggerston is such a small place that the advent of a great fleet of motor-cars might prove of advantage to the opposing side, as it did at the general election in Bow and Bromley. Then so many automobiles were sent to the support of Mr. Arthur Du Cros on the election day that there were not only enough for his friends, but nearly all his opponents were able to go to the poll in his cars.

LOLLIUS.

SOME CURRENT TOPICS.

The Danger of Exhaust Gases in Closed Garages.

The necessity of seeing that there is ample ventilation in any building, such as private or public garages, where the engines of motor-cars are run for any length of time, has frequently been referred to in these pages. In view of the attention to the question of the toxic effect of the fumes from petrol engines which has lately been given in the columns of the two leading medical journals, it may not be amiss to once more allude to the subject here. That the carbonic oxide contained in the exhaust gases, unless quickly got rid of, can have very serious effects, is evidenced by a case cited by Dr. C. R. Box, F.R.C.P., in which "a young fellow in charge of a 40-h.p. car returned with the car to a private garage accompanied by another chauffeur. Having taken the car in, they completely closed the garage by pulling

See to the Ventilation!

Sir W. Gowers, in the course of a recent paper quoted in the "British Medical Journal," mentioned another case in which the victim was an Army officer, 38 years of age, a healthy subject previously, who first became affected by a perversion of taste, in so much that sweet things appeared to taste saline, and *vice versa*. Then his speech became affected, and throat trouble followed, and finally numerous muscular troubles supervened. The doctor treating him did not at first inquire the nature of his employment, which was that of testing petrol engines, but advised a cessation from work. Treatment followed, and the patient recovered. Returning to his employment the same symptoms again returned, and eventually he was obliged to permanently cease the occupation. A study of the case led Sir William to the decision that the only apparently assignable cause of these characteristically toxic effects was the products of the imperfect combustion of petrol, and he points out that the habitual inhalation of carbonic oxide gas has been known to

The New York-Paris Race.—The Scene in Berlin on the arrival of the Protos Car.

down the roller shutters with which it was provided. There was no other opening to the air with the exception of a staircase to the upper storey. The time was about 4 p.m. They then proceeded to manoeuvre the car about the garage, for which purpose the engine was kept running. At 4.30, experiencing a sense of vertigo and constriction of the head 'worse than headache,' but no nausea, they went upstairs to get some tea. About this time people outside the garage heard considerable shouting and commotion from within, and remarked upon it. At 5.45, on the return of another car, the garage was unlocked, and the two young fellows were found insensible upstairs. They must have lain insensible for over an hour, although the windows upstairs were open. They were immediately carried down into the open and soused with water, and even about fifteen minutes later both were in a completely dazed condition, and were unable to stand. The next day they were both all right, but had only an imperfect recollection of what had happened subsequently to their leaving the garage proper and going upstairs. The treatment adopted was free ventilation and the administration of hot strong tea, which was handy."

cause polyneuritis affecting the legs and also nervous disorder. It will be seen that the exhaust of a petrol motor, when the latter is run in closed premises, has a real element of danger, and that the motorist or garage owner will, I am sure, be well advised to see that whenever engines are being tested all the available doors and windows are open to ensure a plentiful circulation of fresh air.

Motor-cars and Health.

After the many diatribes that have been hurled by the general public against motor-cars in general and motor-buses in particular, it is refreshing to learn, on the authority of a West End physician, that the present healthy condition of London is due to the increasing number of automobiles and the diminution in horse traffic. According to this authority "if the Government would forbid horses in London the death rate would decrease by half, their presence on the streets being detrimental to the public health. On the other hand, the smell emitted by automobiles, although certainly not pleasant, is one of the finest disinfectants going, clearing the air of all germs and impurities."

ARCANUM.

At the Bray Petty Sessions a fine of 5s. has been imposed upon a local gentleman who was using an unlicensed motor bath chair.

THE mileage of tramways in the United Kingdom is said to be 2,349. This on the authority of Mr. A. L. C. Fell, the Chief Officer of the L.C.C. Tramways.

THE attention which has recently been devoted in the pages of the *M.C.J.* to the question of the setting of valves of petrol motors has led Mr. C. Crastin, of 16, Tollington Road, Holloway, N., to devise an instrument by means of which the relative

position of pistons and valves of petrol and gas engines in accordance with different valve settings can be readily shown. By means of this device, which Mr. Crastin—whose connection with the motor trade dates from the early days of the movement—has named the "Crastinograph," the position of the piston at the various periods of inlet valve opens, ditto closes, exhaust valve opens, ditto closes, can readily be shown in diagram form. As will be seen from the accompanying illustration, it consists of a disc, divided into degrees and into various circles, and a flat strip of steel adapted at one end to receive a pin and at the other a pencil. By means of the circles it is possible to fix the pin at any desired position as regards stroke; at the same time, the effective length of the metal strip can be adjusted, thus enabling the valve setting to be demonstrated in terms of piston position for engines of any stroke and length of connecting rod. The new instrument should prove useful and interesting to motor engineers generally, and especially to teachers of motor classes.

THE Maharajah of Nepal has placed an order with the Daimler Company, through Messrs. Jeremiah Lyon and Co., 4, Lombard Court, London, E.C., for a 30-h.p. Blackdown landaulet.

ALBUMS of photographs of motor-cars have been made up by the Motor House, of 314-318 and 366-368, Euston Road, N.W., which they are prepared to send to prospective motorists informing them of their requirements.

A NEW fluid known as "Evaporine" has lately been put on the market by the Vulite Company, Ltd., of 4, Euston Buildings, London, N.W., for the purpose of removing and preventing incrustation in the radiators and water tanks of motor-cars as well as in the water jackets of the engine cylinders.

DURING the hearing of a case at Yarmouth the senior magistrate said he believed the version given by a defendant, a boy, whereupon the Chief Constable retorted that it was "rather thick" to believe the lad and not the policeman. Mr. De Caux, the senior magistrate, protested against such a comment on the part of the Chief Constable.

WE regret to learn that Mr. J. Keele met with an unfortunate accident on last Monday week while being driven from Manchester to London. Rounding a corner, the car ran into two brewer's wagons, which were on the wrong side of the road. As a result of the collision, Mr. Keele was thrown several yards, damaging his kneecap so severely that he will be unable to keep his racing engagements at Brooklands on the 1st and 3rd inst.

HERE AND THERE.

THE Central Motor Works at Paisley, belonging to Messrs. Hamilton, McDonald and Co., are well able to undertake motor repair work.

THE amalgamation of the London General, the Road Car

Co. and the Vanguard Motor Omnibus companies is now an accomplished fact so far as the shareholders are concerned.

LOCAL motorists have organised a procession of automobiles round a portion of Guernsey for the pleasure of visitors.

MR. W. ROOTES has a well-equipped garage at Hawkhurst, where he has a competent staff of motor repairers.

THE Buckingham Rapid Transit Company, which has lately been formed in Buckingham, Quebec, has placed an order for an Albion 16-h.p. char-à-banc.

MR. HENRY FARMAN arrived in New York on Monday last and met with an enthusiastic reception. He hopes to make the first trial of his aeroplane on American soil at Oyster Bay to-day (Saturday).

FOLLOWING the recent announcement that Prince Henry of Prussia had patented a glass screen cleaning device comes the news that an improved propeller for motor-boats has been invented by Prince Christian of Hohenlohe.

THE Sussex Centre of the N.C.U. has informed the Motor Union and the R.A.C. that unless more consideration is paid by motorists to the safety of cyclists, N.C.U. members will feel it incumbent to co-operate with the police against the inconsiderate driving of motor-cars.

ACCORDING to the report of the British Consul at Havre, the total number of motor-cars carried by steamers on the various routes between England and France in 1907 was 3,131—an average of over eight per day all the year round—as against 2,655 in 1906. The following are the numbers for the respective routes:—Dover to Calais, 21 cars; Calais to Dover, 27; Folkestone to Boulogne, 796; Boulogne to Folkestone, 963; Dieppe to Newhaven, 310; Newhaven to Dieppe, 162; Southampton to Havre, 463; Havre to Southampton, 389.

MESSRS. GROSE, LTD., Northampton, are now fitting their One-Minute detachable motor chain cases to the following cars when ordered:—Daimler, Panhard, Siddeley, Rochet-Schneider, Züst, Vinot, &c. They can, in fact, be fitted to any make of

chain-driven vehicle. The makers claim that the cases reduce the noise of chains to the minimum, and insure sweet running; if the chains are well greased at the time of fitting no further attention is required for at least 4,000 miles.

IN responding to the toast of "The Prize-winners" at the annual luncheon given to farmers in connection with the Essex Hunt, Mr. J. Waltham, of Stanford Rivers, said that for a man to attend the meet of the hounds in a motor-car was the greatest insult that could be offered an English farmer. Motor-cars were disliked by farmers because they did not eat oats, and because they reduced the number of horses.

Correspondence.

[Letters to the Editor should be addressed to the offices, 37-33, Charing Cross Road, London, W.C.]

THE GRAND PRIX RACE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have read with interest the remarks on the subject of the Grand Prix race in the last issue of the *M.C.J.* For my own part I cannot see that the Grand Prix contest for big cars now serves any useful purpose. The old Gordon Bennett may have done good in improving the breed—to use a horsey term—of the powerful touring cars, but these have been brought to such a high state of mechanical construction that they no longer need any help of this kind. If the French have had enough of races under any of the rules that have prevailed during the last three years, I think it would be well if, instead of proposing new rules, they were to drop the Grand Prix, so far as regards heavy cars, altogether.

As a motorist of moderate means, I was very much interested in the wonderful performance of the single-cylinder machines in the Grand Prix des Voiturettes. The progress that has been made in light car construction in France during the past year or so has been extremely marked, and if, as is generally claimed, the experience gained in races of this kind has an effect in increasing the all-round efficiency of cars used for ordinary purposes, the coming year should see a further notable improvement. If our neighbours across the Channel must organise an annual race, I for one would like to see it devoted to small cars.—Yours truly,

BUXTONIAN.

The Coventry-Humber Six-Cylinder Car belonging to Dr. Page-Robertson, of Gourrock, N.B.

The doctor writes enthusiastically of his vehicle, and informs us that he is averaging fifteen miles to the gallon of petrol.

THE SCOTTISH MOTOR SHOW.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I enclose herewith copy of a letter I have to-day sent to the Secretary of the Society of Motor Manufacturers and Traders, Ltd., London, in connection with the above show. I shall be obliged if you will publish same in your next issue.—Yours truly,

DAVID A. FAIRLEY.

Secretary Scottish Motor Trade Association, Ltd.

COPY.

July 27th, 1908.

To the Secretary,
Society of Motor Manufacturers and Traders, Ltd.,
Maxwell House, Arundel Street, Strand, London.

The 12th Annual Scottish Motor Exhibition.
Waverley Market, Edinburgh.

22nd to 30th January, 1909 (inclusive).

Dear Sir,—I am in receipt of your letter of the 23rd inst., in reply to which I have to state that the policy of the Society of Motor Manufacturers and Traders, Ltd., in connection with the Scottish Exhibition is antagonistic to the interests of the motor industry in Scotland. The Scottish Motor Trade Association is not only one of the oldest in the United Kingdom but it has proved itself invaluable as developing the motor trade in Scotland. Owing to the vital importance of this question the Scottish Motor Trade Association, Ltd., have submitted to you the reasons for the continuance of the Motor Show in Scotland, and also offered to send a deputation to London to discuss the whole matter with your council. I regret the latter have neither answered the Scottish

Motor Trade Association's reasons, nor have they received the deputation. On the contrary, they have refrained from giving their reasons, and have not even communicated the terms of their resolution, both of which, considering the importance of the matter to Scotland, should, I think, have been done.

You will please understand that the Scottish Exhibition will be held as usual on the dates above mentioned. The matter has been fully considered by my association, and they are unanimously in favour of proceeding with the 1909 Exhibition in Edinburgh. My council have taken steps to prevent the agents in Scotland from signing any bond that would disable them from exhibiting in Edinburgh, and you may assume that they will refuse to sign the agents' bond which your society seeks to impose upon them. All the leading agents in Scotland concur in this policy and have agreed not to sign your bond.—Yours truly,
(Signed) DAVID A. FAIRLEY, Secretary.

RAILWAY LEVEL CROSSINGS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I trust you will find a small space in your paper re above. On July 27th I witnessed what might have been a very disastrous railway accident at Crawley, L.B. and S.C.R. Very scanty lights are placed on the gates blocking the main London and Brighton road at the above station. At about 9.10 p.m. a large-bodied Daimler car of about 35-h.p. was proceeding through the Crawley High Street towards Brighton at about fifteen miles per hour, when the gates were across the road for an express train of holiday makers to pass. The driver of the car did not notice the road was blocked until quite close to the gates, when he had to apply his brakes rather smartly to bring his car to a standstill, otherwise the results would have been disastrous.

Surely the railway company can be compelled when blocking any road to place a light on that can be seen at a good distance, or have the people who may be travelling on the road to be killed before any action is taken?

Trusting this may come under notice of someone in authority, that the evil may be remedied either by placing four lamps on the gates, or two larger ones than they now have.—Yours truly,

ONLOOKER.

SHOULD WOMEN MOTOR?

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—The philosophic amateur in the House of Commons is just now in conflict with the motor expert, offering pretentious argument on the speed of automobiles, but the question foremost in the minds of lovers of beauty spots is whether the motor-car is to be harnessed for family purposes, and, if so, should women motor? The bungling of parliamentary stupidity some years ago, in consequence of a three-mile-per-hour-limit preceded by a red flag, put the clock of progress back, which was remedied by a swing of the speed pendulum to twenty miles, giving unlimited possibilities to motor enterprise. Statistics and racing trials now place the maximum and minimum speed of automobiles to over 100 miles per hour, with an average of 30; therefore paterfamilias is much perturbed in mind as to whether such speed proclivities will prove distracting to his wife and bairns. Twenty miles an hour, with the car in safe hands, may be a low limit of restriction, and even thirty would be acceptable, always provided motor drivers were governed by the Golden Rule; but are they?

The highways and byways are our most valuable national, and even international, possession, for upon them the health and strength of the race depend, and visitors from our Colonies, to say nothing of our American, French, German and other friends from abroad, refer to the British Empire as a land of the free, and the British a sport and liberty loving people. Not only so, but the Englishwoman is known all the world over as a pioneer traveller, inspired by a sense of freedom, envied by other folk, men and women alike. It is she who takes the challenge in the palm of her hand, daring all and fearing nought, knowing that her honour and safety are an Englishman's most cherished trust. Automobilists, therefore, who are parliamentarians, the geniuses who control motor capitalism, motor enterprise, and motor manufacture, are invited in the interests of trade and family life to consider thoughtfully the question of "Should Women Motor?"

There are now on the market some twenty-five motor-cars built for purposes of modest motoring, capable of being harnessed for the family and home circle, well-suited to the skilful handling of a lady, if she be holder of the Royal Automobile Club driving and technical certificates. Very few families can afford the expenses of a chauffeur, and it seems a pity that a car should be stabled for five and a half days a week merely because the man of the house is away, busy at his profession or pre-occupied by the more important bread-winning duties.

Motor-driving for ladies has got to come sooner or later, and surely it behoves the sensible men interested in the sport, pastime and

trade, to bestir themselves in preparing the way and clearing the road for feminine conquest, as automobilism will never be really popular for the million until woman reigns supreme as queen of the automobile.—Yours truly,

N. G. BACON.

A COVENTRY CASE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I would ask you to warn through your columns fellow motorists against the danger in visiting Coventry by car at the present time. At the Police Court (Coventry), on a recent Friday, at the opening of the first case against a motorist the prosecuting solicitor made the statement that at a meeting of the Warwickshire Council a resolution had been passed that the sum of £15,000 must be raised to make good the roads in the Coventry district which had been damaged by motor traffic, and that many stop watches had recently been purchased for the police to enable motor traps to become the order of the day.

I had the misfortune to be "trapped" whilst driving a friend's 8-h.p. Rover (four-seater) with three passengers on board and carrying heavy baggage. On being "held up" at end of trap I was informed that a measured quarter of a mile had been covered by me in 43 sec., equalling twenty-one miles per hour, but that the charge of driving in excess of speed limit would not be made, but "driving to the common danger."

The road was devoid of traffic, with the exception of one tram I passed and a cart which came from an opposite direction to which I was travelling. The police swore that the little overburdened 8-h.p. Rover entered the trap at the rate of over forty miles per hour, but slowed up towards the end of the measured distance.

Notwithstanding my explanation to the Bench that under the most favourable conditions the car in question could not travel at a greater speed than thirty miles per hour, owing to its engine speed and gear, I was mulcted to the extent of £4 8s. 6d. If Mr. Harry Smith, managing director of the Rover Company, is prepared to accept the constable's evidence, then he should be a proud man indeed, for, in producing an 8-h.p. car having a slow-running engine and low top gear which will exceed forty miles per hour, a most marvellous and mysterious piece of mechanism has emanated from his works.—Yours truly,

HENRY P. CARTER.

A HINT TO DRIVERS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I make bold to trespass upon your generosity in order to ventilate a subject which I am sure you and your readers will find interesting. I will preface my remarks by saying that I have had a very long and constant experience of driving through the crowded streets of London, and I may, therefore, be permitted to say that I am thoroughly acquainted with the various characteristics of the many weird and strange drivers it has been my lot to meet with. But perhaps, of all the traditions connected with driving in the streets, that of holding out the wrong arm by a driver who wants to turn into a side street is perhaps the most remarkable. Let me say that "A" is driving in front, and "B" is driving another vehicle behind. Both are proceeding in the same direction, and are quite properly on the left side of the road. The intention of "A" is to turn into a side street on the same side of the road, but he erroneously throws out his right arm instead of the left, with the result that "B," on seeing the signal, keeps close in to the left side of the road, by which time, however, "A" is at right angles with "B," who narrowly escapes running into him.

It surely cannot be a difficult thing for a driver to remember to throw out the arm corresponding with the side of the road that he wants to turn off into, but very few people seem to realise this important yet simple rule. I have had a number of adventures, both minor and major, through others' neglect of these simple rules, and in writing to you upon the subject I have only the one solitary idea in my mind, which is, to draw the attention of gentlemen who may perhaps warn their drivers to remember that the proper observance of the above hint will perfect them in their driving.—Yours truly,

T. H. DEY.

CHARGING ACCUMULATORS FROM SMALL DYNAMOS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I notice that you are answering queries with regard to the charging of accumulators, and therefore venture to write you on the subject. I have a dynamo generating current at 100 volts, and have got my two wires (having ascertained which is + and —). How many candle-power must I have in the one circuit to charge my four-volt accumulator, which, according to instruction, should be charged at the rate of one ampere for ten hours?—Your truly,

J. R. WILSON.

[To charge a four-volt accumulator which requires one ampere for the charging rate, it will be necessary to put two 16 c.p. lamps in the circuit. At 100 volt pressure a 16 c.p. lamp takes .8 ampere, and therefore two of these will give a trifle over one ampere when the 4-volt accumulator is in circuit. If 16 c.p. lamps are not available, three lamps of 8 c.p. will do; these take about .4 ampere each; or if it is preferable to charge for a long time at a slow rate, two 8 c.p. lamps will be sufficient.]

SOLID v. PNEUMATIC TYRES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to the description of the Torkington tyre in the last issue of the *M.C.J.*, I should be glad if any reader could inform me how much more power it would take to drive a car fitted with solids than if it were shod with pneumatic tyres? I have been informed by different people that it takes nearly double the power, but I cannot believe it to be right.—Yours truly,

J. T. O.

[In connection with the point raised by our correspondent, we may mention that Mr. Lyons Sampson, M.I.Mech.E., recently carried out some gravitation tests to ascertain how the Torkington tyre compared in rolling resistance with pneumatics. The following results were obtained:—A 30-40-h.p. limousine car, weighing with passengers 42½ cwt., was allowed to run down from the brow of a hill from a predetermined point, the distance which it ran in each experiment being carefully measured. When fitted with Torkington tyres it travelled 1,677 yds., or 76 yds. further than when equipped with 920 mm. by 120 mm. pneumatic covers inflated to 80 lb. pressure, and 254 yds. further than when the same tyres were inflated to 50 lb. pressure only. The maximum speed attained in each case was about 43 miles per hour. From these figures it would seem that the new solid tyre neither slows the car nor absorbs more power than pneumatics.]

ENGINE STARTING TROUBLES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Will any of your readers kindly tell me how to overcome the following difficulty? I have a small car fitted with an 8-h.p. single-cylinder

The Durham-Churchill Char-a-banc used for excursion purposes by Mr. V. Gerard, of the Belgrave Hotel, Chester.

engine, magneto ignition, which I can always start at the second turn of the handle when commencing a journey or when the engine is cold, but after running some miles and stopping I have to turn sometimes a dozen or more times to start the engine. Why should it be more difficult to start when the engine is warm; would an auxiliary accumulator set for low tension magneto remove the difficulty?—Yours truly,

EPSOM.

[We are inclined to think that our correspondent's trouble is not at all to do with the ignition, as if this were the case he would have the same difficulty when starting cold. The trouble is generally reversed, trouble in starting cold, and not when hot. We should be rather in favour of trying the compression, and if found to be weak when hot, use a somewhat thicker lubricating oil. This appears to be the only possible trouble, as the engine will readily start when the lubricating oil is cold and will cause a good compression, but when it is warm is likely to let the compression pass the piston.]

LOW TENSION SPARKING PLUGS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—It would be interesting to learn what has become of the various low tension ignition systems, those in which the contact spark is produced by means of make and break devices, operated magnetically instead of mechanically, that have been brought out during the past few years. At one time it seemed as if the idea would become a popular one, but they all seem to have disappeared. The object of the low tension plug device is, of course, to secure whatever advantages the contact spark possesses, and at the same time eliminate the numerous and somewhat vulnerable moving parts required to produce a properly timed mechanical make and break in each combustion chamber.—Yours truly,

ENGINEER.

THE MOTOR UNION AT HARROGATE.

ON Saturday Mr. C. McWhirter presided at the meeting of the General Committee of the Motor Union in the Municipal Offices at Harrogate, when the Mayor welcomed the motorists on behalf of the town.

It was reported that the number of individual members who had joined the Union direct was now 5,000, and that with the members of affiliated clubs the membership was over 15,000. Grants had been made in a number of appeals in the courts, and the Union is also supporting financially resistance to the attempt of a Metropolitan magistrate to end licences with the third offence for exceeding the speed limit in the Royal Parks. The point raised bears upon the successful appeal by the Union against the endorsement of licences under the Parks Regulation Act. A reply was agreed upon to a letter from the Local Government Board, asking the views of the Union upon proposals for the prohibition of armoured or steel studded tyres. The Union is of opinion that the evidence did not justify the entire prohibition of this type of tyre, but a suggestion was made for meeting the views of the local road authorities. The Union further expressed the view that the additional cost of maintaining trunk roads in consequence of the increased traffic should be met by grants from the State. Approval was given to the report of the Union's delegates to the International Touring Clubs' Congress at Stockholm, and it was agreed to invite the touring clubs of Europe to hold their annual Congress in London next year. Certain amendments were ordered to be promoted to the Town Planning Bill now before Parliament, with a view to improving the main roads through the suburbs of large towns. The Union's Foreign Handbook was reported to have been published that day. The meeting resolved to oppose before the Board of Trade the Mid-Lincolnshire Light Railway Bill, with a view to safeguarding the interests of users of the highway in respect to level crossings. An interview with the Inland Revenue authority with

Some of the Crippled Children of New York off for an Outing to Coney Island.

reference to the use of industrial alcohol for internal combustion engines was reported. It appeared that the Government would not oppose the use of alcohol, provided that the revenue is safeguarded by the use of a satisfactory denaturant.

Votes of thanks were passed to the Mayor and Corporation and the Yorkshire and Harrogate Clubs for the welcome extended to the Union.

The annual dinner was held at the Hotel Majestic, Harrogate, in the evening. Mr. E. H. Hepper, chairman of the Yorkshire A.C., presided, and was supported by the Mayor of Harrogate (Dr. Neville Williams), the town clerk (Mr. J. Turner Taylor), Sir Stanley Bois (Ceylon), Mr. C. McWhirter, Mr. C. P. Wilson (hon. secretary of the Yorkshire A.C.), Mr. Rees Jeffreys, and others.

The Chairman, in proposing "The Motor Union of Great Britain and Ireland," said he regretted the absence of the chairman of the Motor Union. He regretted the split between the Royal Automobile Club and the Motor Union, but he hoped they would come together again and be one happy family for the benefit of motoring. The Motor Union had done much in furthering considerate driving. There was much to be said for pedestrians, and motorists must do all they could to stop dust and the aggressive action of people who did not see eye to eye with them. He referred to the number of motor accidents during the past week or two. They were very distressing, but whether they were the fault of the motorists or the main roads he could not say. But he could say that motorists saved the lives of many careless pedestrians. If people would not step off the causeway in front of motorists there would not be so many accidents.

Mr. H. A. Watson (York), chairman of the North Yorkshire Automobile Club and a member of the Executive of the Motor Union, responded. He said that the work which had been accomplished by the Motor Union could only have been done by a well-managed organisation,

and its constitution appealed to the public and the Government departments. He urged that all motor organisations should act in concert, which would be a step in the right direction in bringing about a reconciliation between the R.A.C. and the Motor Union.

The toast of "Our Hosts" was honoured on the proposition of Mr. McWhirter. Replies to the toast were made by Mr. C. P. Wilson, hon. secretary of the Yorkshire A.C., and Dr. Holroyd, hon. secretary of the Harrogate Club.

Sir Stanley Bois, representative of the Ceylon A.C., proposed "The Mayor and Corporation," to which the Mayor replied. In doing so his Worship said the magistrates of Harrogate did not consider that there was any necessity at all for police traps along a quiet road in the open country.

The last toast was the health of the Chairman.

ROAD REPORTS.

KINGSTON.—The Kingston Corporation have treated a portion of Eden Street, one of the main roads through the town, largely used by motorists, with a new dust-laying material, which permits of the granite being rolled in dry. Hopes are entertained of its efficiency in allaying the dust nuisance. It is claimed that a road so treated will last from three to five years.

FINDON.—Efforts are being made by the parish council of Findon to secure the imposition of a speed limit of ten miles an hour on motor-cars on the Horsham and Worthing road.

HINDHEAD.—A dispute is proceeding between the Hambledon Rural District Council and the National Trust for the Preservation of Places of Beauty and of Interest with respect to the excavation of stone on Hindhead Common for the purpose of road repair. Major Edward F. Coates, Chairman of the Surrey County Council, has asked that the petition from Hindhead for a maximum speed limit for motors in that locality shall be brought before the Highways Committee of the Surrey County Council at their next meeting.

LEWISHAM.—The police control at Loampit Vale, Lewisham, has been in daily operation during the last week or so.

CARDIGANSHIRE.—In Cardiganshire stop-watches are to be provided for the use of the police engaged in timing the speed of motor-cars at several cross roads in the county.

COVENTRY.—Police traps of a quarter of a mile in length are being worked on the Birmingham road at Allesley, and at Anstey, along the London road just out of Coventry.

LYNTON AND LYNMOUTH.—The district roads are in excellent condition for motoring. A proposed new road across Lyn Down is objected to, as it is thought it would place Lynton and Lynmouth, especially the latter, out of the line of motor traffic.

HERTFORDSHIRE.—At a meeting on Monday of the Herts County Council, the following local authorities applied for orders constituting a speed-limit for motor-cars passing along certain highways specified—viz., Elstree Parish Council, Great Berkhamsted Urban District Council, St. Albans Rural District Council, Stevenage Urban District Council. The Council approved of orders being applied for limiting the speed of cars on these roads to ten miles an hour. The Herts medical officer of health, in his annual report presented to the County Council at the same meeting, stated that from experience at Baldock it is concluded that a slag and tar construction, if laid on the roads in dry weather, costs slightly more than ordinary macadam, but lasts three times as long, and is practically dustless.

NEWCASTLE.—At Seaton Burn, near Newcastle-on-Tyne, is a police "control"; another is frequently worked at Stanington, in the same district.

HIGH WYCOMBE.—The London and Oxford main road at High Wycombe has for some distance been experimentally tarred and found to be beneficial to motorists as well as minimising the dust nuisance. The Town Council of Wycombe has decided to extend the tarring, and the Buckinghamshire County Council is contributing half the cost.

WOKING.—The Surrey County Council have made an application to the Local Government Board to fix a reduced speed limit of ten miles an hour for motor-cars in parts of the urban districts of Woking and Walton-on-Thames.

WINDSOR.—Police traps are now a feature of the roads around Windsor.

PRESTON.—In the police court at Preston on Monday a new trap was disclosed.

KINGSTON.—The borough surveyor of Kingston is making some experiments with regard to the use of "Flasom" as a preventive of the dust nuisance in certain streets in that Surrey town.

SELBY.—Police traps on the Doncaster road at Brayton have lately led the way to Selby Petty Sessions.

MIDDLESEX.—The Middlesex County Council have agreed to ask the Local Government Board to make regulations limiting to ten miles an hour the speed of motor-cars in High Street, Brentford; in Upper Teddington Road, and High Street, Hampton Wick; and through Great Stanmore from Clutterbuck's Brewery to Marsh Lane, and along the whole of Church Street.

HOUNSLOW.—The experiments of the local authority for Hounslow to deal with the dust problem this year have proved very satisfactory as well as economical. The most successful material used was a preparation of oil tar, which on the Bath road cost only 1d. per square yard, as against an average of 1-28d. for watering in the customary manner.

CLUBS AND ASSOCIATIONS.

MOTOR UNION.

THE Motor Union has issued a statement of the Legal and Legislative Defence Fund for 1908, which shows a total expenditure of £543 in legislative and legal defence as well as in opposing speed limit applications. The total receipts have been £59, leaving an excess of expenditure of £486.

BROOKLANDS.

THE entries for the meet of Brooklands A.R.C. to-day (Saturday) are as follows:—

The Fourth All-comers' Handicap Sweepstakes, about 5½ miles.—J. E. Hutton, Hutton, "Little Dorrit"; G. C. G. Moss, Arrol-Johnston, "Guarded Flame"; G. A. Phillips, 19.6-h.p. Coventry-Humber; P. C. Kidner, 20.5-h.p. Vauxhall; P. D. Stirling, 25.6-h.p. Hutton; G. C. Colmore, 14.7-h.p. Humber; B. M. Thornton, 22.5-h.p. Ford; H. G. Nalder, Berliet, "Grayling"; A. Gsal, 35.7-h.p. Westinghouse; R. Wavell-Paxton, 52.1-h.p. F.I.A.T.; G. H. Levick, 25.6-h.p. Napier; G. H. Levick, 6.2-h.p. Delage; T. Faulkner, 24.8-h.p. Mercedes; W. B. R. Moorhouse, F.I.A.T., "Linda"; M. L. Braithwaite, 17.5-h.p. West; D. Pigot, Darracq, "Delilah"; A. C. Godwin-Smith, 22.4-h.p.

Mercedes; D. Pigot, Darracq, "Delilah"; S. F. Edge, 90-h.p. Napier F. R. Fry, 59.6 h.p. Mercedes.

The Journalists' Handicap, about 5 miles.—W. Whittall, 8.05-h.p. Rover; W. G. Aston, 13.9-h.p. De Dion; C. J. Bertelli, 7.5-h.p. O.T.A.V.; J. Owen, 25.6-h.p. Thornycroft; R. V. Beveridge, 8.9-h.p. Sizaire; R. J. Plateau, 19.6-h.p. Belsize; Eustace Gray, Porter Lind say.

The official entries for Monday's events are as follows:—

The August Trophy, about five miles.—I. Bullough, 44.5-h.p. Junior; G. C. G. Moss, Arrol-Johnston, "Guarded Flame"; P. D. Stirling, 25.6-h.p. Hutton; T. Faulkner, 24.8-h.p. Mercedes; A. H. Moreing, 38.1-h.p. Daimler; Harold Agar, 17.5-h.p. Leader; H. G. Nalder, Germain, "Yellow Peril"; G. H. Levick, 6.2-h.p. Delage; G. H. Levick, 25.6-h.p. Napier; G. Duveen, 34.5-h.p. Mercedes; W. B. R. Moorhouse, 58.1-h.p. Fiat; G. F. Scantlebury, 8.9-h.p. Sizaire; W. Whiteway, 24.1-h.p. Calthorpe; O. S. Thompson, Austin, "Pobble"; H. C. Halahan, 17.5-h.p. Dennis; F. A. Bolton, 59.6-h.p. Ariel; C. Hobson, 27.9-h.p. Nagant-Hobson; C. Hobson, 48.6-h.p. Brasier; Sir George Abercromby, 58.1-h.p. Fiat; A. Van Hoboken, 71.7-h.p. Mercedes; C. A. Bird, 34.5-h.p. Mercedes; G. Russell-Miller, 22.4-h.p. De la Buire; P. G. Wavell-Paxton, 52.1-h.p. Fiat; H. Browning, 23.3-h.p. Rover.

The Midland Club's Hill Climbing Competition at Shelsley Walsh.—The Scene at the Starting Point.

Certus; O. S. Thompson, Austin, "Pobble"; H. Taylor, 20.1-h.p. Clement-Talbot; F. A. Bolton, 59.6-h.p. Ariel; O. Cupper, Metallurgique, "Gollywog"; C. Hobson, 27.9-h.p. Nagant-Hobson; C. Hobson, 48.6-h.p. Brasier; Sir George Abercromby, Bt., 58.1-h.p. F.I.A.T.; W. J. Jochems, 48.6-h.p. Mercedes; A. J. Palmer, 33.4-h.p. Napier; H. Browning, 23.3-h.p. Rover; C. A. Bird, 34.5-h.p. Mercedes; F. R. Fry, 76-h.p. Mercedes; C. J. Bertelli, 7.5-h.p. O.T.A.V.; S. Straker, 18.8-h.p. Shamrock, Straker-Squire; T. H. Shaw, 21-h.p. New Leader; G. R. S. Darroch, 71.7-h.p. Darracq; Frank Eason, 22.5-h.p. Buick; Charles Jarrott, 6.2-h.p. Sizaire; E. A. Humphreys, 45.2-h.p. Hermes.

The Merit Trophy, about 5½ miles.—I. Bullough, 44.5-h.p. Junior; G. C. G. Moss, Arrol-Johnston, "Guarded Flame"; P. D. Stirling, 25.6-h.p. Hutton; A. H. Moreing, 38.1-h.p. Daimler; H. G. Nalder, Berliet, "Grayling"; G. H. Levick, 25.6-h.p. Napier; T. Faulkner, 24.8-h.p. Mercedes; G. E. Duveen, 34.5-h.p. Mercedes; G. F. Scantlebury, 8.9-h.p. Sizaire; G. H. Levick, 6.2-h.p. Delage; O. S. Thompson, Austin, "Pobble"; H. C. Halahan, 17.5-h.p. Dennis; F. A. Bolton, 59.6-h.p. Ariel; C. Hobson, 27.9-h.p. Nagant-Hobson; C. A. Bird, 34.5-h.p. Mercedes; C. J. Ratcliff, 27.3-h.p. Beeston-Humber.

The second Montagu Cup, about 30 miles.—J. E. Hutton, 76-h.p. Mercedes; H. G. Burford, 76-h.p. Mercedes; H. G. Burford, 59.6-h.p.

The First O'Gorman Trophy, about 100 miles.—S. F. Edge, Napier, Grand Prix; S. F. Edge, 60-h.p. Napier; J. E. Hutton, Hutton, "Little Dorrit"; D. Pigot, Darracq, "Delilah"; E. W. Lewis, 67.5-h.p. Deasy; H. G. Burford, 59.6-h.p. Mercedes; H. G. Burford, 76-h.p. Mercedes; F. R. Fry, 59.6-h.p. Mercedes.

A match will also be run between Miss Muriel Thompson and Miss Christabel Ellis.

HARTLEPOOLS.

ON Saturday the motor reliability trial in connection with the Hartlepool Automobile Club was repeated, the previous trial, which took place under terrible weather conditions some days ago, having been declared void. The route was the same as on the previous occasion—namely, from West Hartlepool to Helmsley and back—about 96 miles. Six cars competed, their times of starting and finishing being as follows:—

Mr. George Jones (16-20-h.p. Argyll), start 1 h. 30 min., finish 7 h. 7 min. 43 sec.; Mr. C. P. Sanderson (15-h.p. Coventry Humber), start 1 h. 33 min., finish 7 h. 31 min.; Mr. C. E. Smith (35-40-h.p. Mercedes), start 1 h. 36 min., finish 7 h. 18 min. 43 sec.; Mr. J. W.

Merryweather (14-16-h.p. Argyll), start 1 h. 39 min., finish 7 h. 21 min. 50 sec.; Mr. B. Pym (20-h.p. Beeston Humber), start 1 h. 42 min., finish 7 h. 23 min. 50 sec.; Mr. C. McAdams (14-16-h.p. Belsize), start 2 h. 6 min., finish 7 h. 57 min. 11 sec.

The cards have yet to be worked out and the result declared.

WEST SURREY A.C.

THE fifth annual gymkhana of the club was held on Saturday at Prior's Field, Godalming. The weather, which had been somewhat threatening, remained all that could be desired, and a concourse of about 400 members and guests witnessed the proceedings, there being seven events, for which fifteen entries had been received. The results were as follows:

Tilting at the Ring.—Winner, Mr. L. Pullman, 16-h.p. Aries, 47 points; 2nd, Mr. J. F. Ponsford, 43 points; runners-up, Messrs. E. Fairtlough and Buttemer, 33 points each.

Ten-mile Limit Race.—This was run over a course of a quarter of a mile, and resulted in a victory for Miss Houghton, 14-h.p. Renault, in 90.4-5 sec., 9.02 miles per hour; Mr. J. F. Ponsford, 8-h.p. Clement, being second with 10.36 miles per hour.

Starting Race.—1, Mr. Fairtlough, 12-h.p. Darracq; 2, Mr. A. Williams, 10-h.p. Wolseley.

Passenger Race.—Winner, Dr. Hussey, 20-h.p. Pilgrim, with Mrs. Buttemer as passenger; 2nd, Mr. Swinburne with Miss Davis.

Skillful Driving Competition.—Winner, Mr. R. Buttemer, 14-h.p. Renault; 2nd, Mr. J. F. Ponsford.

Archery Race.—Ladies had to be taken as passengers, each passenger to shoot six arrows at a target. Best time won after deducting 12 sec. for a hit, and twenty for a bull. Scores were, however, uniformly nil, the only target that was nearly hit being one of the drivers, and the winner proved to be Dr. Hussey; second, Mr. L. Pullman.

Musical Chaire.—Winner, Mr. Swinburne, with Miss Hills; second, Mr. Buttemer, with Miss Fetter.

Messrs. S. Beavor, C. W. Crawley, and Hopkins Walters acted as judges, with Mr. J. E. Sparkes; times were taken by Mr. H. H. Griffin, while Messrs. Bryan Hook and Graeme Watt assisted the

The 32-h.p. Metallurgique recently delivered to the Earl of Carnarvon.

chairman in supervising the arrangements, which went off without a hitch.

The presentation of prizes by Mrs. F. Howard Fairtlough concluded the most successful gymkhana yet held by the club.

HULL AND DISTRICT.

THE Hull and District Automobile Club held an interesting competition on Saturday, the same taking the form of a "pace judging" competition. Dr. W. H. Coates (chairman of the committee) acted as starter, timekeeper, and judge, being assisted by Mr. H. Strong (assistant secretary).

The starting point of the route was at Tranby Lane end at Anlaby, and the route taken was by Kirkella, Kirkella Grange, South Cave, Elloughton, Welton, Melton, Ferriby, and Cemetery Lane, Hessle, back to the starting point.

There were nine entrants, of whom six faced the starter. Three prizes were offered by Mr. A. J. Atkinson (president of the club), Mr. G. Wade, and the Hull City Garage Company, the committee deciding to award two prizes. The order of merit was as follows:—1, Dr. E. H. Howlett; 2, Mr. A. T. Simpson. The other competitors in order were:—Mr. J. Webber, Mr. J. Walton, Mr. W. Fenner, and Mr. George H. Strong (hon. secretary of the club). The two winners were very close to one another in order of merit, Dr. Howlett being within 49 seconds of the scheduled time at his allotted speed, whilst Mr. Simpson was within 53 seconds of the scheduled time at his allotted speed.

YORKSHIRE.

ON Monday, Mr. H. R. Kirk, of Leeds, one of the vice-presidents of the Yorkshire A.C., invited the members of the club to a motor meet and garden party in his delightful grounds at Castle Grove, Headingley, Leeds. About 130 members and friends attended. The weather was favourable and a very enjoyable afternoon was spent by those who accepted Mr. Kirk's invitation. As the guests arrived they were intro-

duced by the hon. secretary and treasurer (Mr. C. P. M. Wilson) to Mr. Kirk in the hall of Castle Grove, after which they proceeded to the lawn to partake of afternoon tea and refreshments. An orchestra, under the leadership of Mr. A. Workman, ably read numerous selections. Nothing had been overlooked by Mr. Kirk in providing pleasure and comfort for his guests. Amongst those present were the following: Mr. John Kirk and Mr. R. S. Kirk (Leeds), Mr. and Mrs. Arthur Kirk (Pannal), Mr. and Mrs. J. Scott (Leeds), Mr. and Mrs. A. S. Russell (Ilkley), Mr. W. Rees Jeffreys, Mr. D. H. Thornton (Birkenshaw), Mr. and Mrs. F. W. Sutcliffe (Huddersfield), Mr. and Mrs. E. H. Hepper (Leeds), Mr. and Mrs. L. Hey (Leeds), Mr. J. Newton (Manchester), Mr. and Mrs. C. F. Guest (Barnsley), Mr. and Mrs. J. D. Fawcett (Leeds), and Mr. and Mrs. R. Winn (Leeds).

After enjoying the refreshments, a move was made to the field in front of the house, where Mr. Kirk had set out a course and made arrangements for a gymkhana. The prize winners were Mr. Arthur Kirk, who won the B.m.b. Competition, and Mr. F. W. Roberts, who won the Tortoise Race, whilst Mr. Jack Mortimer carried off second prize in both events.

MIDLAND.

ON Saturday the Midland A.C. held their annual hill-climb at Shelsley Walsh, over a course that must be regarded as almost an ideal one for such a purpose. The hill is in the private grounds of Mr. M. H. Taylor, of Court House, Shelsley Walsh, Worcestershire, so that there was no disturbance of the ordinary traffic. The cars were weighed at Martley, and the course selected measured 1,000 yards, with an average gradient of 1 in 8, the steepest portion being 1 in 6. The times of the cars in the open hill climb were as follows, the placing being also given:—

| Car. | Driver. | Time. | | Placing. |
|------------------------------|----------------------|-------|--------|----------|
| | | min. | sec. | |
| 20-h.p. Lanchester ... | G. H. Lanchester ... | 2 | 15 4.5 | 2 |
| 28-h.p. Lanchester ... | T. H. Barnsley ... | 1 | 52 | 7 |
| 20-h.p. Vauxhall ... | Percy C. Kidner ... | 1 | 31 2.5 | 1 |
| 20-h.p. Sunbeam ... | F. Eastmead ... | 2 | 15 3.5 | 22 |
| 10-12-h.p. Humber ... | G. A. Phillips ... | 2 | 24 4.5 | 18 |
| 40-h.p. Napier ... | J. F. Browning ... | 1 | 27 2.5 | 3 |
| 60-h.p. Napier ... | H. C. Tryon ... | 1 | 5 2.5 | 14 |
| 35-h.p. Deasy ... | P. Graham ... | 1 | 35 | 20 |
| 65-h.p. Mercedes ... | H. C. Burford ... | 1 | 17 4.5 | 28 |
| 58-h.p. Daimler ... | G. S. Barwick ... | 1 | 8 1.5 | 24 |

| 38-h.p. Daimler ... | A. J. Astbury ... | 1 | 34 2.5 | 16 |
| 14-h.p. Allday ... | F. W. Huband ... | 2 | 24 1.5 | 15 |
| 40-50-h.p. Ariel ... | F. A. Bolton ... | 1 | 14 3.5 | 26 |
| 25-h.p. Clement-Talbot ... | W. T. Stokes ... | 1 | 49 1.5 | 6 |
| 10-h.p. Clement-Talbot ... | T. W. Bowen ... | 3 | 19 3.5 | 5 |
| 40-h.p. Austin ... | S. Hands ... | 1 | 31 2.5 | 10 |
| 20-h.p. Allday ... | E. J. Blakemore ... | 2 | 34 2.5 | 19 |
| 38-h.p. Daimler ... | A. Farnell ... | 1 | 23 2.5 | 4 |
| 40-h.p. Metallurgique ... | Warwick Wright ... | 1 | 11 4.5 | 9 |
| 14-h.p. Allday ... | E. Armstrong ... | 2 | 31 3.5 | 17 |
| 58-h.p. Daimler ... | H. C. Holder ... | 1 | 17 3.5 | 29 |
| 14-16-h.p. Belsize ... | Mrs. E. A. Riley ... | 2 | 27 2.5 | 21 |
| 14-h.p. Allday ... | S. Downing ... | 2 | 22 | 11 |
| 14-h.p. Allday ... | C. E. Simms ... | 2 | 53 | 23 |

The first four cars, according to time, were:—(1) 60-h.p. Napier, which created a new record for the hill; (2) Mr. G. S. Barwick's 58-h.p. Daimler; (3) Mr. E. M. C. Instone's 58-h.p. Daimler and Mr. Warwick Wright's 40-h.p. Metallurgique, which was only 2-5 sec. behind.

On the handicap the cup presented by the president of the Midland A.C., Mr. P. S. Foster, was awarded to Mr. P. C. Kidner's 20-h.p. Vauxhall, Mr. G. H. Lanchester's 20-h.p. Lanchester and Mr. A. Farnell's 38-h.p. Daimler being second and third respectively.

In the Closed Event Handicap the competitors were Messrs. R. D. Todd, 20-h.p. Allday; C. J. Newey, 10-h.p. De Dion; C. A. Bird, 40-h.p. Mercedes; Arthur Cox, 9-h.p. Riley; W. Guilding, 12-h.p. Star; W. B. Kent, 14-16-h.p. West Aster; V. Riley, 12-h.p. Riley; G. Bird, 30-35-h.p. Ariel; G. W. Hands, 25-30-h.p. Calthorpe; L. Antweiler, 13-20-h.p. Calthorpe; W. Allday, 20-h.p. Allday; G. F. Heath, 18-h.p. Minerva; W. Pilkington, 10-16-h.p. Talbot; G. H. Lanchester, 20-h.p. Lanchester; T. H. Barnsley, 20-h.p. Lanchester; C. Sangster, 40-h.p. Ariel; A. J. Astbury, 38-h.p. Daimler; F. A. Bolton, 40-50-h.p. Ariel; W. T. Stokes, 25-h.p. Talbot; T. W. Bowen, 10-h.p. Talbot; H. C. Holder, 58-h.p. Daimler; S. Downing, 14-h.p. Allday; C. E. Simms, 14-h.p. Allday.

IPSWICH AND EAST SUFFOLK.

BY permission of Lord Rendlesham, the annual speed trials of the Ipswich and East Suffolk A.C. were held in East Rendlesham Park on Saturday. The cars were "weighed in" at Wickham Market Railway Station.

Mrs. Hackblock won the Ladies' Club on her 10-h.p. Adams car. In Class 1 for amateurs Dr. Brown, on his 8-h.p. De Dion, made best time in both the kilometre and the mile run, Mr. A. List, 8-h.p. De Dion, being

second in the latter event, and Mr. G. H. Grant, 8-h.p. Rover, being second in the kilometre test. In the class for larger cars, Mr. Dixon Hepworth, 14 h.p. V.S. and M. Ltd. was first in the mile, and Mr. Gordon Stewart, 15-h.p. Talbot, in the kilometre. In the trade class some very close times were registered, Mr. C. R. Garrard, 21-h.p. Talbot, being first.

At the Somerset A.C. Hill Climb on Saturday afternoon a Daimler car made fastest time of the whole competition.

THE Club House at 119, Piccadilly, is to be closed for purposes of cleaning and decoration from to-day (August 1st), and will remain closed for the whole of the month of August. During this period the Junior Athenæum Club (116, Piccadilly, W.) has consented to admit members of the R.A.C.

CASES AGAINST MOTORISTS.

EXCEEDING THE PARK LIMIT.

Mr. Alfred Vanderbilt was summoned at Marylebone Police Court for exceeding the motor-car speed limit in Regent's Park. Mr. Ware appeared for Mr. Vanderbilt, who, he said, expressed regret that he was ignorant of the park regulations. Mr. Plowden remarked Mr. Vanderbilt would have to submit as best he could to the strain of 40s. and 2s. costs.

DISMISSAL.

James Morris, chauffeur to the Archbishop of Westminster, was summoned, at Stratford, for negligently driving a motor-car, and farther for, after an accident, refusing to give his name and address. It was alleged that in passing two lady cyclists on the road his car touched their bicycles and knocked them off. He gave one of them 2s. 6d. to mend a broken spoke. Defendant denied that he touched the cyclists. The Chairman said the Bench had come to the conclusion there was no negligent driving and dismissed that summons; there was a technical offence for not giving the name and address, and there would be a fine of 1s. and 4s. costs.

JUDGES OF SPEED.

A quaint comparison in the matter of speed was made before the justices at the Reading Petty Sessions on Saturday, when Bertie Tripp, the motor-car driver of Mr. Arthur Dean, of Pangbourne, was summoned for driving his car to the danger of the public. John Holmes, the chief witness for the prosecution, said he and three others had to jump into a ditch to avoid being run over by the motor. Asked at what speed defendant was driving, he said the pace was as fast as the mail trains which proceeded through Pangbourne Station; whilst another witness said that before he could look round the car had passed out of sight round a corner 100 yards away. Other evidence was to the effect that the car was travelling at the rate of between thirty and fifty miles an hour. A fine of £2, with costs 19s. 6d., was imposed.

EXCEEDING LEGAL LIMIT.

On Monday six motorists were fined at Windsor, seven at Preston, nine at Bromley (Kent), three at Salisbury, two at Steyning, and five at Haywards Heath.

Seven motorists have been fined at Dumbarton for exceeding the legal limit at Old Kilpatrick and other places in the district.

A local doctor has been fined three guineas for exceeding the legal limit of ten miles per hour in the burgh of Auchtermarder.

On Tuesday a motorist was fined £15 at Feltham, and another £10 and costs at Haywards Heath.

The police established a trap at Lulhamstead, wherein seven motorists returning from the Newbury races were captured. They were all fined when, in course of time, they appeared in the local court.

Eight motorists summoned at Rugby were fined sums varying from 10s. to 15s., with costs.

At the Midhurst Petty Sessions, on the 23rd ult., several cases against motorists for exceeding the legal limit were heard, and fines amounting to £82, exclusive of costs, were imposed.

MOTOR SCOUT AND POLICE SERGEANT.

Before the Guildford County Magistrates on Saturday, a summons was heard against Sergeant Baker, of the Surrey Constabulary, for assaulting an A.A. "patrol" named William Mason, at Witley, on June 26th. Mr. Marshall Hall, K.C., who appeared with Mr. Rowland Harker for the prosecution, said that the desire of the Automobile Association was not to go against the police but to co-operate with them in putting down furious and reckless driving. So long as the police persisted in regarding them as opponents instead of allies, friction was bound to exist. The charge in this case was a technical one, and he merely asked that the sergeant should be bound over. It was stated in evidence that Sergeant Baker, thinking Mason was warning Lord Colville's chauffeur against a police trap, came out of his concealment and warned the scout not to give such information. Mason denied doing so, and, after some conversation, the sergeant took hold of the scout's badge and turned it over to look at the number. Baker absolutely denied that he touched Mason. The magistrates stopped the case, and dismissed it with costs.

NO PRINCELY EXEMPTION.

Among the defendants fined at Morpeth for exceeding the speed limit was Charles McKenzie, chauffeur, of Alnwick, who had to pay £1 for going through a control on July 3 at 26.41 miles an hour. The defendant said he was on duty for the Prince and Princess of Wales at Alnwick Castle, and was sent to Newcastle in connection with the royal

visit to the city that day. He was also told to be back at Alnwick Station for the return of the Prince and Princess in case his services should be needed when their Royal Highnesses reached Alnwick by train. He tried to keep as near the limit as possible. He drove the Princess during the week of the royal visit to the North.

SUSPENSION OF LICENCE.

Colin Defries has appeared to a summons for driving a motor-car at an excessive speed in Bromley Road, Catford. Mr. Barker prosecuted for the Commissioner of Police, and said defendant had many times been convicted for exceeding the speed limit, and had twice had his licence cancelled. Mr. Gill, magistrate, fined the defendant £50, with 5 gs. costs, the licence to be suspended during the term for which it was issued, and the defendant to be disqualified from holding a licence for twelve months.

AUTOMOBILE ACCIDENTS.

ABOUT five miles from Buxton, at the foot of a long, gradual descent known as Long Hill, a motor-car came to grief the other night. The driver of the car was Mr. J. H. Bennett, and he had with him three friends and a chauffeur. When the descent of Long Hill was nearly accomplished Mr. Wilson, who was sitting in front at Mr. Dillon's feet, either slipped or fell from the car, and Mr. Dillon in attempting to catch him fell off also. Through Mr. Bennett's turning round to see what had happened the car got out of its course, swerved to the right-hand side of the road, and, breaking through a wall, fell down a sloping embankment for about 20 ft., where it remained. Mr. Bennett was thrown violently out and received serious injuries to the body and legs, one of which has a compound fracture; Lock, the chauffeur, was badly

The Leyland 2-3 ton Van recently supplied to Messrs. Hamptons, Pall Mall, London, S.W.

bruised; and Messrs. Dillon and Wilson were both bruised and shaken.

A MOTOR-OMNIBUS, containing thirty-four members of the Whitefield and Hatchliffe Urban District Council, who had been inspecting the Bury Corporation Waterworks, was going down an incline recently near Burnley when the brakes failed to act and the vehicle dashed into a cart loaded with stone. Both vehicles were smashed, and ten of the council party were injured. Councillor Cunliffe, J.P., received a deep wound in the head, Councillor Wallwork a broken leg, and Councillor Parker a broken nose.

A COLLISION occurred on Tuesday between motor-cars at the junction of two streets at Inverness. In one car were Mr. and Mrs. Andrew Carnegie and their little daughter, and the other car was occupied by Mr. Peile Ross and two ladies. A lamp and mudguard on Mr. Carnegie's car were smashed. The damage to Mr. Ross's car was more serious, one of the front wheels being bent inwards. Occupants of the cars fortunately escaped injury.

POLICE CHARGED WITH PERJURY.

THOMAS EDWARDS and James Butler, constables of the Surrey Police, were before the Guildford Bench on Monday on a charge of perjury while giving evidence supporting a summons against the chauffeur to Sir Archibald Macdonald, Bart., on the ground that he did not stop when called upon at Witley. It was stated that Edwards jumped into the road fifty yards in front of the car, shouted and waved his hands, but that no notice was taken. On Tuesday Edwards was discharged and the summons against Butler was withdrawn.

FORTHCOMING EVENTS.

AUGUST.

- 1st (Sat.).—Brooklands A.R.C. meeting.
 • Entries finally close for the International "four-inch" race for the Tourist Trophy.
 Manchester M.C.'s reliability trial for motor-cycles, fore-cars, &c.
 2nd-3rd.—Newcastle and District M.C.C. reliability contest.
 3rd (M.).—Brooklands A.R.C. meet.
 3rd and 4th.—Run of the Motor C.C. from London to Land's End.
 8th (Sat.).—Visit of the Kent A.C. to Brasted Chart.
 8th (Sat.).—Bristol and Glos. A.C. at Standish House.
 12th (W.).—A.C. of Belgium—Circuit des Ardennes and the Liedekerke Cup race.
 15th (Th.).—Northants A.C. speed trials at Castle Ashby.
 21st (F.).—Ballinaslaught hill climb of the Irish A.C.
 22nd (Sat.).—Annual race meeting of the A.C.U. at Shepherd's Bush.
 Invitation of Sir D. Salomons to the Keat A.C. to visit Tunbridge Wells.
 23rd (Sun.).—A. C. du Rhone Mont Pilat trial.
 29th (Sat.).—Meet of the Lincolnshire Motor Club at Lincoln.
 Mont Ventoux hill climb of the A.C. Vauclusien.
 Leicester A.C. gymkhana.
 30th (Sun.).—Southen M.C. run to Great White Horse Hotel, Ipswich.

LIGHTING-UP TIMES—LONDON.

| | | | |
|-----------------|------------|------------|------------|
| August 1st—8.49 | 3rd—8.45 | 5th—8.40 | 7th—8.38 |
| " 2nd—8.47 | " 4th—8.42 | " 6th—8.39 | " 8th—8.35 |

To find the approximate lighting-up time in August for Birmingham 12 minutes should be added to the above times, 17 for York, 21 for Manchester, and 43 for Glasgow.

COMPANY NEWS.

TORKINGTON TIRES.—£100,000. To adopt an agreement with Torkington Tires (Parent Syndicate), Ltd., and A. W. Torkington, and to carry on the business of planters, growers, and manufacturers of and dealers in indiarubber, asbestos, and gutta percha, manufacturers of and dealers in motor-cars and vehicles, &c. 16, Victoria Street, Westminster.

W. AND G. DU CROS.—£10,000. To take over (1) the general engineering business carried on by Harvey du Cros at Acton Vale, W., but not including the business carried on by the said vendor as exclusive concessionaire of Panhard and Levassor for Great Britain and Ireland and the Colonies, and (2) the business of motor-car dealers carried on by W. du Cros and G. du Cros at 14, Regent Street, S.W.

RAILLESS ELECTRIC TRACTION COMPANY.—£5,000. Agreement with M. Schiemann and F. Mombert.

A REMEDY.

When business is slow,
 My spirits are low,
 And all my affairs go awry;
 E'en when it seems sure
 I'm doomed to endure
 The very same trials till I die;
 There's one thing for me,
 When care I would flee
 And summon new courage and zeal.
 That never grows old:
 'Tis better than gold—
 A spin in my automobile.

By G. E. Bird in *Automobile Topics*.

MODEL MOTOR-BOAT REGATTA.

A REGATTA was held at Wembley Park Lake on Saturday for model motor-boats. The first race was for boats over 4 ft. in length, the distance of the contest being 145 yards. First place went to Mr. W. H. Arkell's 5 ft. 6 in. petrol boat Moraine II., which covered the course in 32 sec. Mr. F. N. Sharp's 5 ft. 6 in. petrol boat Varuna was second in 35 sec., and Mr. W. Smith's 5 ft. petrol boat Belvedere third in 38 sec. The 77 yards race for boats under 4 ft. in length went to Mr. C. Davis's one metre steam boat Una in 25 sec., Mr. T. B. Duff's 3 ft. 3 in. steam Imp being second in 33 sec., and Mr. R. Church's 3 ft. 1 in. steam Mavis third in 37 sec.

THE list of the successes with "Shell" motor spirit at recent motoring events is steadily growing and now includes victories at the Ramsgate, Littlehampton, and Brighton motor-boat races, the Wolverhampton A.C.'s reliability trials, the Aston Hill climb, the Coventry M.C. hill climb, and the Brooklands motor track.

BUSINESS NEWS.

THE London depot of the Avon India Rubber Company, Ltd., of Melkham, Wilts., is now located at 35, Long Acre, W.C., the temporary premises at 31, Brooke Street, Holborn, E.C., having been closed.

THE STANDARD MOTOR COMPANY, LTD., 1, Albany Street, London, N.W., have compiled a price list and telegraphic code of duplicates of every piece used in the construction of the Standard 20 h.p. six-cylinder vehicle. Every user of this make of car should secure a copy of the list, which is issued in a form that should render it extremely handy.

FROM Ariel Motors, Ltd., we have received a photograph of Mr. Charles Sangster, holding the two silver cups awarded to Ariel cars in the recent Two Thousand Miles reliability trials. In Class J a 30-40-h.p. Ariel took the first prize, while in class L a 40-50-h.p. vehicle did the same, the latter also making fastest time on all five hills irrespective of class.

MESSRS. BUSSEY BROS., of 29 and 31, Montpelier Vale, Blackheath, S.E., have a garage a couple of minutes' walk from the railway station. Extensive alterations are now being carried out to cope with the growing business.

THE Protos car which reached Paris on Sunday last, and was thus the first to finish the New York-Paris race, was equipped with Dunlop detachable rims and tyres.

MESSRS. WARWICK WRIGHT, LTD., are the sole concessionaires for the Glascoire shock absorber.

THE Hutchinson Tyre Company will shortly be removing from 13, Maddox Street, London, W., to Kingsway.

MESSRS. MORS (ENGLAND), LTD., have received a letter from one of their clients who purchased a 17-23-h.p. Mors car about two years ago, stating that he has travelled many thousands of miles in it, and made repeated journeys to Paris and back, under all conditions of roads and weather, and that it has never failed him. He adds:—"I can safely say that during the whole time it has never cost me more than £5 for repairs, and it is in as good and reliable condition as when I first had it."

THE addition to Mr. G. H. Warne's hotel at Worthing will add to the popularity of the place. A garage for the motor-cars of visitors adds to the attractions of one of the best hotels on the south coast.

ELSEWHERE in the present issue will be found a condensation of an interesting article on "Australia for Motoring Tourists," from the pen of Mr. Roy Sandford, late of Lithgow, N.S.W., which was recently published by our American contemporary, "The Motor Age."

ONE day last week we had an 80-mile spin on a car fitted with one of the Coventry Simplex Motor Company's latest 16-18-h.p. four-cylinder engines, and found that not only was the vehicle speedy on the level but also an excellent hill-climber, Stoneleigh Hill, near Coventry, being scaled on top speed. We may add that the car, which is geared 4 to 1 on the back axle, weighs 18½ cwt., exclusive of the two passengers. The engine, which has cylinders 86 mm. bore by 92 mm. stroke, runs extremely quiet in operation, while the petrol consumption worked out at 25 miles to the gallon.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

To insure insertion communications and contributions must be in the Editor's hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case, otherwise no liability will be accepted.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment for same is directly specified in forwarding, and the terms arranged before publication.

THE Motor-Car Journal.

VOL. X.]

LONDON, SATURDAY, AUGUST 8, 1908.

[No. 492.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

THE Committee of the R.A.C. has just accorded a special vote of thanks to the officials and judges who contributed to the arduous work in connection with the recent International Touring Car Trial. While thus engaged a discussion also took place with regard to the organisation of a similar event for next year. It was eventually moved that an endeavour be made to hold in 1909 a trial on practically identical lines to that of 1908, a proposal that evoked considerable discussion. Ultimately an amendment was moved, seconded and carried to the effect "that the question of holding a trial for touring cars in 1909 be deferred until the next meeting." This resolution was satisfactory so far as it went, and if it leads to a reconsideration of the whole position the trade will thank Mr. Lionel de Rothschild and Mr. A. Armitage for their action at the last meeting. The truth is that those engaged in the automobile industry would find the recurrence of such a long-drawn-out event as the 1908 trial a considerable task upon their resources. The difficulty of the situation is also increased by the fact that the Trial is held at the time when they should be busy attending to the business of selling rather than testing their vehicles. It is a moot point whether the club would not be well advised to save the industry from the self-imposed taxation of these trials till at least 1910—a policy which we believe would be welcomed generally by the trade throughout the country.

The Bishop and the Car.

Several vicars have deplored the added dignity associated with the use of the automobile by bishops, while others have taken the wiser view that anything which enables the leaders to better acquaint themselves with the personnel of their diocese is to be welcomed. The provision of a motor-car is now regarded as almost an essential equipment for the ecclesiastical dignitary who takes his duties seriously, and the saving in time that is secured has most considerably added to the amount of work which bishops are really able to do.

The Car and the Sabbath.

Now that bishops have become motorists, and, of course, have found their way to local police courts, the car is not denounced by church and chapel goers to the extent of their early vituperation. Still, however, they complain of the way in which the attractions of the automobile are preferred to the ministrations of the preacher. They will be interested to learn that the idea of using the automobile to fill instead of empty the churches in summer time has taken hold of some communities in the New England States. Recognising the theory that many people who own motor-cars will not keep them in the garage on Sunday, the Bible class of the First Congregational

Church, of Holyoke, Mass., decided to induce automobilists to use their vehicles for the purpose of carrying the aged, infirm and otherwise incapable to church. The project caught on, and scores who otherwise could not get to church were swiftly conveyed to and from the Sunday services, and the owners of the cars actually enjoyed the work quite as much as their passengers did. The movement is reported to have spread throughout Connecticut.

The Danger of Exhaust Gases.

THE recent experience on Submarine boat No. 9 was the subject of a question in the House of Commons before Parliament rose for the holidays. Owing to a mechanical defect on this craft, a large quantity of exhaust gases escaped into the boat. The effect of the carbon monoxide on the men was so rapid, according to Mr. McKenna, the Secretary to the Admiralty, that it was almost impossible to guard against the occurrence of mishaps of this kind. Engines, however, had so much improved since submarine boats were first built that such an escape of petrol gas as white mice would serve to register was no longer to be feared. We trust that the Admiralty will not overlook the dangers of exhaust gases such as were fully emphasized in the "British Medical Journal," and in our own Journal as recently as last week.

Pure Exhaust.

A PURE Exhaust Prize Sub-committee of the R.A.C. has been sitting to consider the organisation of a competition along the lines suggested by its title. Tests are to be made for CO, oxygen and CO₂, the results largely to depend on low CO in relation to low oxygen. In addition to the comparative tests on the road there will be tests in the Motor House, and from samples of gas taken on the Brooklands Track while a car is travelling at various rates of speed. Various detail regulations have yet to be made, but doubtless the competition will present many points of interest and, maybe, some of value.

The Parliamentary View.

BOTH the House of Lords and the House of Commons have been discussing motor-car speed and various matters incidental to the subject. Apparently the authorities, however, are not alarmed at the present position of the subject, and there is little fear of any haphazard legislation coming along to restrict the growth of the industry. That much we gather from the official spokesmen of the Government in both branches of the Legislature. The Earl of Halsbury was in favour of drastic measures against motorists; Sir Francis Channing would have the speed limit reduced considerably; and Mr. A. S. Wilson went so far as to specify ten miles an hour as a reasonable limit to the latter. Mr. Henry Chaplin was in favour of stronger action against those who drove cars; and Lord Willoughby de Broke would have drivers give up the use of the horn. These are about the worst things urged against the motorist, on whose behalf Lord Montagu said many right and reasonable things, Earl Russell also defending the motorist with characteristic zeal. But the most important references

were made in the House of Commons, where Mr. Walter Long expressed the view that the speed limit, inserted in his own Act against his wish, was really of no use. The fact that it led to the un-English practice of setting police traps was also against it from a practical point of view. Mr. Burns, who is really responsible for the motoring legislation, was equally against police traps, and went on to suggest that the police should make Section 1 of the present Act the basis for nearly all their actions, for, as he said, "it detracted from the proper and dignified duties of the police to be engaged in trapping motors"—a view that motorists have always held, but one that the magistrates have been slow to accept.

Section 1 or 9.

A CASE heard at the South West London Police Court is not only illustrative of police methods, but suggests a line of prosecution that may become more frequent in the future than it has been in the past. A lady visitor to London was motoring in Streatham when she was stopped by the police and subsequently summoned for driving a motor-car at a speed dangerous to the public. In giving evidence for the prosecution the witnesses estimated that the vehicle was

A Reminiscence of the 2,000 Miles Trials.—The 20-24-h.p. Junior Car which competed in Class F, and which only lost eight minutes on the road—two for adjusting a chain, one for filling the radiator, and five for changing a sparking plug.

travelling at twenty miles an hour, and so insistent were they on this point that the magistrate, Mr. De Grey, intervened with the remark that this was the legal speed of motor-cars, and that a stop watch was the only means of securing reliable evidence on the point. He, therefore, dismissed the prosecution apparently because the police summoning under Clause 1 of the Act gave evidence which properly belonged to cases summoned under Section 9. There is evidently a growing tendency in London suburbs to rely upon the former section of the Act, and the police are not likely to repeat the mistake which lost them the case at the South West London Police Court.

Traps and Fines.

NOT only are motor traps being lengthened by the police, but the fines inflicted on motorists by the magistrates are also showing an unkindly rising in a corresponding degree. Recently, the Hampshire police established a "control" in the parish of Compton, on the main road from Winchester to Southampton. The results have been fairly good from the point of view of the county exchequer, but although the cases heard have been numerous, the individual fines have not been excessive.

On Saturday, however, a new policy seems to have entered the heads of the Bench, and heavy penalties were inflicted in several cases. We notice a growing inclination on the part of magistrates in Sussex and Surrey as well as in Hampshire, to increase the fines, a fact which should make motorists extremely wary as to how they proceed along the main roads of that district—if, in fact, they use them at all.

The Daimler Scholarship.

DR. H. S. HELE-SHAW has been examining about a score of entrants for the Daimler engineering scholarships which were announced last year with a view to obtaining for the well-known motor company at Coventry a new supply of promising raw material. Dr. Shaw's questionings have been designed to discover the natural ability of the applicants, and to ascertain their practical knowledge rather than their theoretical equipment. The system of the test provided by the Daimler Company was that half of the total marks obtainable by those in the competition should be awarded on Dr. Hele-Shaw's report, the other half being as the result of the Science and Art examinations. The results will not be made known for some time, but we would again congratulate the Daimler Company on the efforts they have made to incite young men to qualify for important engineering posts.

Speed in the City.

DR. F. J. WALDO, the Coroner of the City of London, has on several occasions indicated to juries the advisability of making representations to the City authorities with regard to the speed of motor vehicles passing through the narrow streets of London. At the conclusion of a recent inquiry he suggested that the Court of Common Council should renew the application for a reduction of the maximum speed limit to ten miles an hour throughout the City, and, the jury agreeing, the recommendation was sent to the proper authorities. The result of this action was seen at the last meeting of the Corporation before the holidays, when the chairman of the City Purposes Committee proposed that steps should be taken to give effect to the suggestion. After some discussion the resolution was referred back pending a conference to be held with the police authorities. The point, however, seems to have been that the City, acting on the suggestion of Mr. Herbert Gladstone, on the occasion of a recent deputation with regard to the motor-'bus traffic, intends to carry out the suggestion—a proposal already enforced in the narrow streets of the City by the congestion of traffic.

A Car Census.

SOMEWHAT of an innovation in matters of local government has been made by the District Committee of the County Council at Kingussie, where, on the suggestion of the road surveyor, it has been decided to take a census of motor-cars passing through the district for the fortnight ending the 15th inst. Neighbouring county road surveyors are being asked to assist in the matter, the idea being to ascertain the exact amount of motor-car traffic on the public roads of the locality. We would suggest that in cases where similar proceedings are being taken elsewhere, it would be well to include horse-drawn traffic in any calculations, so that some comparative results may be obtained.

The Dust Trials.

AT the meeting of the committee of the R.A.C. held before the holidays, the chairman of the Dust Committee said that the dust trials held on the 20th and 21st ult. on the Brooklands Track had been successful and had provided further interesting information in regard to the dust problem. In spite of some adverse criticisms in the Press, he said, the members of the committee would see from the photographs submitted that the

difference between cars as regards dust-raising was most marked, and the judges anticipated little difficulty in placing the first and second cars in each class. This year the Dust Committee made some entirely new experiments, *e.g.*, all the bad points of cars were imitated on a vehicle hired by the club for the purpose, and the photographs showed the Dust Committee where modifications might be made in car construction.

Police Confidence.

◆ TWENTY-TWO summonses against motorists for exceeding the speed limit were dealt with at the Battle Petty Sessions, on the 29th ult. Mr. Lawson Lewis, who prosecuted on behalf of the police, explained that the officers who were on duty at each end of the measured distance made it a rule to stop every car, and as many as 200 had been stopped in one day. Replying to the Chairman, who expressed a doubt as to whether some of the cases came within the jurisdiction of the Bench, Mr. Lewis said the arrangement was made for the convenience of all generally. He added that they had to consider

visitors can see Great Britain. What the steamship companies are doing for American visitors to England the Great Western Railway is also doing for provincial trippers to London. Last summer we illustrated the motor Observation Car which was put in service under the auspices of this company late in the season, and which is now again extending Englishmen's knowledge of the capital of the Empire. What with this G.W.R. motor vehicle and the "Seeing London" motor char-a-banc, which continues to find its largest *clientele* amongst American visitors to London, there is now no need to lament the lack of opportunities of doing the sights of the capital in double quick time.

Maps for Motorists.

◆ THE value of publicity even to Government Departments has been illustrated in the recent returns of the Ordnance Survey, which has during the last year or two done much to secure that the public shall know of the excellent series of maps issued under its auspices. Maps on the

The Lancashire Club's Hill Climb at Rivington Pike.—The Scene near the Starting Point.

where they had the greatest confidence in selecting the venue. "That is a nice compliment," returned the Chairman. We say nothing.

The Car for Sightseers.

◆ WE understand that the Cunard Steamship Company has lately inaugurated a departure which should quickly become popular with Trans-Atlantic passengers. Several years past many of the wealthy Americans who annually visit our shores have either sent their motor-cars on in advance or have arranged with one or other of the leading London firms to provide for an automobile with an experienced chauffeur meeting them on landing at Liverpool. Apparently recognising the growing tendency in this direction, the steamship company has now arranged for motor vehicles to be at the disposal of passengers requiring them as soon as they land at Liverpool. Those who are only here for a short stay are thus able to visit the Shakespeare or Milton country and the other points of interest to visitors from the United States, or to take extended motor tours to the North. The scheme was inaugurated on the recent arrival of the *Mauretania*, and should do much to quicken the pace at which

four, ten, and sixteen miles to the inch scale are now completed for the United Kingdom, with the exception of about 760 square miles in Cornwall, Lincoln, and Pembroke. With regard to the maps on the scale of one inch to the mile no part of the country now remains unrevised for more than fifteen years, so that it will be seen that the Ordnance Survey is becoming as up-to-date as its resources will allow. Seeing that motorists are probably the greatest users of such maps in the country, it might be well for the Survey as well as for the publishers of similar publications to take fuller advantage of the facilities which the motor press offers for making their publications known to their most frequent users.

MANY private persons possessed of public spirit have lately placed warning signs at dangerous corners in order to maintain the safety of our highways and secure the safe passage of motorists. At a corner near Godstone, Lady Greenwell has put a M.U. sign to denote a concealed turning, and at Newmillerdam, on the Barnsley and Wakefield road, Sir Thomas Pilkington has placed one calling for a reduction of speed through the village. The M.U. has also received an application through the A.A. from Mrs. J. Hope for a sign notifying a concealed entrance drive at Heron's Ghyll Uckfield, Sussex.

MOTORING IN MEXICO.

AN interesting trip in Mexico was undertaken during February last by Messrs. J. L. Lawrence and H. L. Schultze, who made the journey from San Marcos to Tepic on a Napier 40-h.p. six-cylinder car, which had been specially constructed to the order of Don Faustino Somerella, of Tepic. One of the conditions of purchase was that the vehicle should be driven over the stage road from San Marcos, a distance of ninety-three miles, the only other car having made this trip successfully in the past being a 35-h.p. vehicle of American construction. The first part of the journey to El Rodeo, a distance of fifteen miles from San Marcos, and the first stage coach stop, is comparatively good going, although hilly as El Rodeo is approached, some of the gradients touching as much as 25 per cent. or 1 in 4. This village is at the foot of the mountain of Ingeniero, and from this point the trail zig-zags with steep gradients to the summit, a distance of $2\frac{1}{2}$ kilometres. The roadway is cut in the side of the mountain, and from the summit the winding road,

About midway between Ahuacatlan and Tetetlan the track passes by the volcano Ceboruco, and for a distance of twelve miles very deep volcanic sand is encountered. This volcano started in active eruption thirty-nine years ago, and continued so for fourteen years, causing the almost total destruction of live stock in the district. Tetetlan has 1,000 inhabitants, and has one of the oldest churches to be found in the Republic, and one of the original sanctuaries of Santa Maria de Guadalupe.

The next village is Chapalilla, five miles from Tetetlan, the old stronghold of the bandit Lozada, who was known by the name of the Tiger of Alica. The country roundabout is extremely mountainous and precipitous. The next stage stop is San Leonel, a distance of fourteen miles from Chapalilla, whilst two miles beyond is the hacienda of La Labor. At this point the road begins to improve, though still mountainous. This property belongs to Don Faustino Somerella, to whose order, as already stated, the car was built, sugar cane and corn being largely grown. The next village passed is San Cayetano, six miles from La Labor, where there are two large tequila distilleries, owned

Motoring in Mexico.—On the Plaza at Ixtlan.

[El Automovil en Mexico.]

with seven distinct turns, can be clearly traced, affording a very impressive view to the eye. This is the most difficult part of the journey, as the gradients in places approximate 1 in 3, whilst the surface is of very rough limestone. The country in this district is covered with stunted trees, and is practically uncultivated.

From El Rodeo to the Arroyo de Agua, the next stage post, is about ten miles. There is practically no road, the track being scattered with large limestone boulders all the way. After leaving Arroyo de Agua, the next stopping place is Ixtlan, a distance of fifteen miles. This is the centre of a large mining district, and is a beautiful little city, with about 10,000 inhabitants. The only means of communication with the outside world is by the regular stage coach running between San Marcos and Tepic. After ploughing through eight miles of heavy sand Ahuacatlan is reached. This is another stage post, and has a population of 4,000 people. Ahuacatlan is proud of the distinction of being the first town in the territory of Tepic to be lighted by electricity.

by the Riba y Cervantes family of Mexico. A further six miles over fair roads and Tepic is reached. The roads round about the city are all passable, but have some heavy gradients, in many cases of one in four.

The highest point reached during the trip was the summit of Ingeniero, with an altitude of over 6,500 ft. The city of Tepic lies at an altitude of 6,500 feet, and has 15,000 inhabitants.

THE PARK MOTOR COMPANY, of 216, Tottenham Court Road, London, W.C., are doing a large business in letting Mercedes cars for hire. During the holidays they had several high grade vehicles out in different parts of the country. Arrangements are made to hire out the cars with qualified drivers, and those desirous of spending their holidays abroad or at home will find the Park Motor Company well able to add to the comfort and delights of touring by car.

GOSSIP FROM PARIS.

If Dundreary had lived in the present epoch instead of having appeared on the stage of the Haymarket Theatre in the sixties of the nineteenth century, he would between two sneezes have declared that the speed limit, especially round Paris, "is a thing no fellah can understand." A friend of mine who recently came to Paris in his car went out one afternoon to visit the suburbs. He knew the speed limit in the city was 20 kilometres an hour and naturally thought it could not be less in the comparatively quiet outlying districts. But no sooner had he passed through the city gates and entered the deserted avenues of Neuilly than he was caught and was told he must not exceed 12 kilometres an hour. He was annoyed at the "proces verbal" which was drawn up against him, but, moderating his speed to the limit, he drove off and soon after reached Bezons, where another official made signs to him to stop. To his amazement he had incurred another fine! He had been driving at more than 6 kilometres an hour! When he got back to his hotel he was very disgusted. To his English mind the regulations were the inverse of common sense. He is not alone in holding that opinion; it is shared by all French motorists who are constantly pulled up for excess of speed when going much less fast than the butcher's cart or the milkman's van, which, being drawn by horses, are not interfered with. Evidently the unification of the speed limits in towns and villages must sooner or later be effected by an Act of Parliament. Now it depends in each commune on the goodwill or hostility of the mayor towards the new means of locomotion.

STRAW hats! Ninety per cent. of the male population of Paris wear them. They are very light and look cool and comfortable, though the round straw hat especially is often very hard and apt to be blown off by every little gust of wind. Who has not been amused at watching a man run after his hat, which always sets off afresh rolling on its brim just as he is stretching out his hand to seize it! Sometimes the hatless gentleman, rushing madly amidst the carts, carriages, and automobiles in a crowded thoroughfare, in despair slashes out with his stick to stop it, and in doing so generally pins it to the ground in the mud, or sets it rolling faster than ever. Well, it was after a frantic race of this sort that a day or two ago a middle-aged gentleman wearing the ribbon of the Legion of Honour struck out so violently with his stick at his fugitive hat that he lost his balance and fell prostrate in the middle of the Boulevard de la Madeleine. In a moment the congested traffic was stopped altogether by the crowd of people rushing to assist the unfortunate man lying groaning in the mud. He had sprained his ankle so seriously that he could not stand. "What is it?" Of course everyone wanted to know. And what could it be but a motor-car which had knocked down and probably killed a poor innocent pedestrian? A taxi-cab driver who, when the hat-hunter slipped down just in front of his car, had put on the brake and stopped short, was near being lynched. I cannot say what would have happened if the victim of this hat-hunting accident had not intervened. Between two groans he told the sergents de ville who were carrying him to the shop of a neighbouring chemist that he had not been run over. Nevertheless nine-tenths of the "sympathising" crowd dispersed reluctantly, believing that the taxi-cab must have been in some way responsible for the "terrible accident." Oh those motor-cars!

THE storm in the Issy-les-Moulineaux tracup has subsided. After many successive visits to the Prefect of Police and to the War Minister, the officials of the French Aero Club have obtained from M. Lepine the assurance that so far as he is concerned the experiments with aeroplanes will be tolerated on the Issy parade ground from 4 a.m. to 6 a.m. in summer and from 6 a.m. to 8 a.m. in winter—that is to say, from sunrise till the arrival of the troops for morning drill. However, the aviators will have to pay 18 francs 50 centimes (14s. 10d.) every time they take their machines out of their sheds, or rather every time they warn the police, as they must do, of their intention to make

experiments. The sum is not large, but it will, nevertheless, constitute a heavy tax, as the weather will most surely frequently prevent the aviator from carrying out his projected experiments on the day fixed for them. All the same, he will have to pay for the nine policemen posted at the gates of the drill ground, and if that number is found insufficient to keep the public at a safe distance the aviator will have to pay for a greater number. The War Minister's ratification of this arrangement has not yet been given, but it is confidently expected. This partial restoration of Issy-les-Moulineaux to the aviators is no doubt satisfactory to those who only wish to perfect their machines and to learn to manage them before undertaking really important flights, but the time has come when a larger field is required. The French Aero Club is seeking it with all the greater desire to succeed in finding a convenient spot near Paris, because the currents of air created on the parade ground of Issy-les-Moulineaux

by the buildings and trees surrounding it, and by the hills at Meudon, are most treacherous. They were the sole cause of the accidents which befell Henry Farman and Bleriot. Compared with the eddies, a fairly strong wind blowing steadily from one direction is supportable.

MARNEY.

M. BERLIET has lately taken out a patent for an arrangement in which the exhaust gases from the engine are utilised to lubricate the chains of a chain-driven petrol car. The burnt gases, after passing through the silencer, are conveyed by pipes to cases enclosing the chains, and pass thence through small holes to the air. It is claimed that the gases, being charged with oil, lubricate the chains and repel any external dust.

THE "FORREST" GEARLESS TWO-SEATED CAR.

MESSRS. J. A. WADE AND CO., of Forrest Street, Park Lane, Liverpool, have during the past year or so been turning out a little two-seated car which, by reason of its simple form of gearless transmission, has attracted much attention in the North. We are this week able to illustrate in Fig. 1 a general view of the latest pattern of the "Forrest" vehicle, which is well adapted for the use of doctors and other professional men, as well as of those in search of a small runabout at a moderate price. The motive power, which is located in the fore part of the frame, consists of an 8-h.p. two-cylinder V-type engine, 84 mm. bore by 110 mm. stroke. The ignition is by coil and accumulators and the water circulation on the thermo-syphon system, the radiator having an extra large cooling surface, separate water intake and outlet pipes for each cylinder being also fitted.

The feature of the car lies in the transmission, the usual change-speed gear-box being replaced by a friction or rolling contact drive. Friction-driven vehicles, notwithstanding many attempts to popularise them, have not hitherto met with any marked success. Messrs. Wade have, however, devoted much time and thought to their development, and, so far as we are able to judge from a short trial run, we see no reason why the

Fig. 1.—The "Forrest" 8-h.p. Two-Seated Car.

system should not in the case of the light two-seated car illustrated give satisfactory results. Certainly from the point of view of simplicity it has much to commend it, the arrangement adopted being such that by the removal of the bonnet the whole of the engine and speed-changing gear is at once easily accessible.

As will be seen from Fig. 4, the engine is set slightly to the left side of the chassis. The crankshaft, which is provided with a large ball thrust bearing, is parallel to the axles, and carries on its end a large disc A. On a shaft at right angles thereto is another disc B so mounted that while it must rotate with its shaft, it can be moved laterally along the latter. By varying the position of the driven disc, the periphery of which is leather covered, in relation to that on the engine shaft, any desired speed between zero and the maximum, about eighteen miles per hour, can be obtained in both a forward or backward direction. The facing of the disc B is formed of four leather rings, which, while lasting from 4,000 to 5,000 miles, can be readily and cheaply renewed. Special attention has been paid to securing a constant pressure between the surfaces in contact by the provision of a spring loaded device which automatically compensates for inequalities of surface of the discs, or imperfections of alignment. To this end the disc B is normally held up to its work by the pull exerted by two comparatively small coil springs E. The variation in gear is effected by depressing the pedal D, which pulls the disc B out of contact with A against the action of the springs, and through the medium of the lever M sliding B along its shaft to the desired position, when, on releasing the pedal, contact is again made between the two and the drive taken up. A stop is

fitted to prevent the disc B from being shifted across the centre of A, and so unintentionally putting in the reverse. The sliding disc and its squared shaft and operating gear are mounted on a swinging frame C, which is moved back bodily, against the action of the springs, by the pedal action, through the rack and pinion device seen in Fig. 2. Provision is made for holding the discs out of engagement when they are relatively in the neutral position—i.e., when the edge of the disc B faces the centre of the

Fig. 2.—Front Elevation of Chassis of "Forrest" Car.

one marked A. Every care is taken to avoid the possibility of grease getting on to the driving surfaces, and so reducing the efficiency of the drive.

The power is conveyed to the rear live axle through a long universally-jointed shaft and bevel gear, the angularity of the different portions of the shaft being very slight, either in a horizontal or vertical plane, when the chassis is loaded, so that the wear on these joints is very small. Rack and pinion steering is employed, and ample brake power is furnished by a pedal-operated brake on the cardan shaft, and two hand-operated band brakes working on drums on the rear wheels. The wheel-base is 6 ft. and the track 4 ft.; the road wheels are shod with 750

Figs. 3 and 4.—Plan and Elevation of "Forrest" Car.

by 80 mm. tyres. In addition to the two-seated car illustrated the firm are also building, on similar chassis, a light delivery van and a three-seated brougham. The latter is of novel design; the doors are at each side, at an angle from the driver's seat (which is in the centre), thus allowing for wide entrance, and giving a clear and unobstructed view in front from either of the rear seats. A small table, which can be used for light parcels or as a writing desk, is also provided.

THE SOCIAL WHIRL.

THE King and Queen with Princess Victoria concluded their visit to Goodwood on Saturday. Arrangements had been made for their Majesties to motor to Portsmouth *en route* for Cowes by way of Lavant, Funtington, and Westbourne, and a special draft of police had been sent out to keep the road clear, but an alteration was made in the arrangements at the last moment, with the result that the Royal visitors spent nearly half an hour at St. Mary's Hospital, Chichester. Very few people recognised the King's two motor-cars as they turned from North Street into Priory Street shortly after three o'clock. The Royal cars were preceded by another belonging to the Duke of Richmond and Gordon, who was accompanied by his daughter, Lady Helen Gordon-Lennox. With his Majesty, in addition to the Queen and the Princess, were the Marquis de Soveral, the Hon. Charlotte Knollys, and Mr. Harry Stonor.

APROPOS of the return of the Prince of Wales from his Canadian trip, I learn that five motor-cars were supplied by the Comet Motor Company, Ltd., of Montreal, for H.R.H. and suite.

and then being whirled away to some other centre of pleasure. The railway companies, of course, are suffering from the same cause. That was clearly apparent at Goodwood last week. On one of the race days, for example, the Queen and Princess Victoria visited Arundel Castle in the afternoon, motoring from Goodwood with the Marquis de Soveral, the Countess of March, and other members of the Duke of Richmond's house party. Then, too, the West Dean Park party, which is always one of the largest, was not only conveyed to the course in cars but made quite a motoring meet when departing at the conclusion of the gathering, the guests of Mrs. William James including Lord Essex, Lord Charles Montagu, Mr. and Mrs. Arthur James and Mr. Rochfort Maguire. On the Cup day Earl and Countess Fitzwilliam motored to the races from Portsmouth Harbour, where they had been entertaining a party of friends on the Kathleen.

M.P.'s have speedily got away from Westminster, where they will be unknown until the autumn session, beginning on October 12th. Many are going abroad; but apparently more intend spending the vacation in Scotland, where Mr. Galloway Weir would like to preserve his beloved Highlands from the wicked motorists. Mr. Joseph Walton, M.P., intends to have several

The Garden Party given to the Members of the Yorkshire Club by Mr. H. B. Kirk at his residence at Castle Grove, Headingley, Leeds. (Photo by) (Owen Brooks.)

The Comet car is a Canadian product, and its use by the Prince was much appreciated by loyal colonials.

At the Brighton races on Tuesday, Wednesday and Thursday of this week a special Motor Enclosure was provided for motor-cars, the price of admittance to which was £1 per day. At Goodwood last week the number of motor-cars attending the races was greater than ever before, thus emphasising the growth which was so noticeable at Ascot. On the Cup day at the latter races an official return of the traffic showed that 1,501 motor-cars were driven to the stands between 11 a.m. and 2.15 p.m. as compared with 1,166 on the corresponding day of 1907. This year there were only 1,107 other vehicles, so that the preponderance of the automobile was completely established.

In the Whitehall Rooms of the Hotel Metropole, W.C., the other day, the Earl of Beesborough, C.V.O., C.B., gave some apt illustrations of the change that is coming over the social life of the country. As chairman of the Gordon Hotels he is well able to feel the pulse of Society in this direction; and he gave it as his settled opinion that motor-cars were directly responsible for adding to the difficulties of catering by attracting an "in-and-out business," visitors going to the hotel for only a short stay

days' motoring in Ireland, where, I would remind 'him, the police are sportsmen, and—outside Phoenix Park, Dublin—do not object to a car that is speedy as well as good looking.

A STORY was going round the smoke room of the House of Commons last week to the effect that the little daughter of a M.P. was taken to the British Museum. In the Egyptian Galleries a halt was made in front of the mummies, whereupon the following colloquy is said to have taken place: "Will you tell me, papa, why this old woman"—in allusion to the heavily-shrouded figure of an Egyptian princess—"is enveloped in bandages?" The father replied, abstractedly: "Oh, I suppose she met with some accident." "And what, please, is the meaning of the letters 'B.C. 1461' at the feet of the mummy?" "Oh, that, my child," was the rejoinder, "was no doubt the number of the motor-car by which she was run over and killed."

ACCOMPANIED by Col. Colbrook Carter, Lady Wantage motored from Lockinge House to Harwell the other afternoon to open a bazaar in the Vicarage grounds. Advantage was taken of the occasion to parade many army veterans and old volunteers who had served with the late Lord Wantage.

LOLLIUS.

THE MOTOR-CAR OF YESTERDAY, TODAY AND TO-MORROW.

IT is said a prophet is never great in his own country, and, to quote a philosopher who lived many ages before motor-cars existed, "There is much wisdom in not prophesying unless you know." This quotation may serve a useful lesson to those who would attempt to say—"Has the car reached its finality in development?" Only a few years ago it would have been as hard for designers to contemplate the car of 1908 as for the warriors of Boadicea, who went to battle in their chariots, to have imagined the steam-engine. The motor-car is without doubt the most wonderful piece of mechanism yet produced. Until its advent, to obtain a speed of twenty miles per hour masses of metal were assembled amounting in the aggregate to anything up to sixty or seventy tons. Many express engines when loaded with coal and water exceed 100 tons. Now the position is reversed; the total weight of a high-powered racing car, including water and petrol, is under 1,200 kilos, and a speed of over 100 miles per hour is attained.

We are told by the occultist that in the world before this one propulsion by mechanical means was not unknown, and that airships were the ordinary medium of transit; but, without going into the dim and distant past, it may be interesting to follow from a less remote period the many changes that have taken place and

who ran journeys from the West End to the Mansion House, but it met with much opposition from bankers, merchants, and others, who claimed that if such things were allowed upon the roads horses would depreciate in value, and the streets would become so dangerous that an exodus of the residents and occupiers would follow!

Having traced the development of the object under review down to a comparatively recent date, viz., 1840, we find from this time that railways seemed to be the all-engrossing subject of research amongst engineers, and no real headway was made until Herr Otto produced his gas engine. This inventor, after spending considerable time and money, found much difficulty in getting anyone to work his patent. At last Messrs. Crossley took it up, and with what success is too well known to need repetition here. Events then quickly trod on the heels of one another, but not in England. Restrictions on this side of the Channel prevented any advancement being made. The speed was limited and so many other annoying regulations were made that engineers who were willing to spend time and money on evolving a workable machine gave it up for the time being. During this time Levassor, De Dion, and others across the Channel were advancing by leaps and bounds in France, which was also the birthplace of the great motor races, with the inauguration of which, in 1894, a new chapter in motor evolution was commenced. This race was won by a Panhard car at the frantic (?) speed of ten miles per hour!

Motor Racing in the United States.—A View of the Elkhwood Track, Long Branch, N.J.

brought the car to its present state of efficiency. The Far East claims to have been the introducer of the self-propelled vehicle, many years before the Christian era. Leaving, however, the fields of romance, we must come to the West for facts based on a solid foundation. The French, in combination with their neighbours in Belgium, have always been keen on producing some means of bridging space, and it was in the fifteenth century, according to a document still preserved at Antwerp, that the first mechanical vehicle was made. Nothing more is known of the machine, and we must move on some 400 years, thus bringing us to the early part of the nineteenth century, before we again hear of the Iron Horse. A car was then made and put upon the road by Trevithick; but he, like all pioneers, met with endless obstacles, and after a few trial trips the powers that were in those days proved too strong for him, and he had to reluctantly give up his enterprise. It makes one giddy to think of the possibilities of what "might have been" if such a brain had been allowed a free hand, or, better still, had received assistance instead of the reverse, for it must not be forgotten that approximately twelve years ago in England any self-propelled vehicle was only capable of, and by regulation was restricted to, practically a walking pace, while it also had to be preceded by a man carrying a red flag. The recent meeting in the City proves the truth of the old adage that "history repeats itself," for the writer remembers his grandfather saying how he was interested in a steam carriage brought out by one Hancock,

Each succeeding year saw an acceleration of speed until the first in the present century, when a Mors car beat record with an average of fifty odd miles per hour. Indeed a grand advancement from a ten miles per hour average in so short a space of time. It is not intended here to go into the details of cars, but many experts hold that a point has been reached when any radical improvement can only be obtained either by a more economical use of steam as applied to automobiles; or, as the turbine has revolutionised the propelling force of the sea-going vessel, shall we see a similar application to land transport? E. T. H.

FROM Messrs. A. E. Oakley and Co., 8, Allsop Street, Upper Baker Street, London, W., come particulars of a device known as the Shrapnel Splashguard, which they are making for a company of that name. The device, which is intended for use on the wheels of motor-buses and cabs to prevent them splashing mud in bad weather, consists of a plate or frame having near its apex a bearing of simple form which serves to carry it on the wheel hub. The lower end of the guard consists of a fabric made by meshing together steel links of great strength after the manner of "chain mail." This produces a material which is so flexible that it can be adjusted quite close to the road, and by virtue of its own flexibility, and owing to the floating method of detachment already referred to, it can strike stones without suffering damage or having its functions disorganised.

SOME CURRENT TOPICS.

The Cost of Upkeep.

Details gathered directly from the user by various makers have, in many instances, formed valuable contributions to the fund of general information on the subject of the cost of motor-ing. The outcome of a prize competition for chauffeurs recently held in America is the latest instance in point, furnishing as it does an astonishing revelation of the possible maintenance cost of new high-powered and well-made machines. In this case the first prize went to the chauffeur who drove a six-cylinder car a distance of 11,683 miles, during which time the cost of repairs only amounted to £2 9s. Ten prizes were altogether awarded, they including six vehicles with mileages ranging from 5,155 to 7,570 to their credit, on which nothing has been spent for repairs. While the cases in question may to some extent be exceptional, they are interesting as showing what it is possible to accomplish when proper care and attention is devoted to seeing that cars are kept *au point* by drivers who take a thoughtful interest in the machines under their charge.

A Long Motor-cab Journey.

That the motor-cabs in London are not merely being used for journeys in the metropolis, but are frequently called upon to make long runs, is evidenced by the appearance of the "taxi"

HERE AND THERE.

A NEW garage has been opened in South Clerk Street, Elinburgh, by Messrs. Rossleigh, Ltd.

THE question of a trial of non-slip devices for motor-cars is before the Expert and Technical Committee of the R.A.C.

ONE of the newspapers at Indianapolis, U.S.A., is now using a number of motor-boats for the delivery of papers to the summer cottages on the banks of the White River.

THE Thomas American car, the second of the competitors in the New York-Paris motor race to finish the journey, arrived in the French capital on Thursday last week.

THE SCOUT MOTORS, LTD., of Salisbury, and Mr. W. H. Light, Gillingham, Dorset, have lately installed H.F. vulcanising plants to deal with the tyres of motorists in their respective districts.

MR. LLOYD GEORGE is about to undertake a motor-car trip through Germany, when he will make enquiries into several subjects in which, as Chancellor of the Exchequer, he is naturally interested.

IT is the intention of the U.S. Army Board of Ordnance to ask the next session of Congress for an appropriation of £200,000 to be used in experiments with dirigible airships, such as are now being tried in Europe.

A Frequent Incident in the Summer Season.

at the recent race meetings at Epsom, Newbury, Sandown and other courses. What is probably the longest trip a motor-cab driver has so far been called upon to undertake was that recently made by several members of the Eccentric Club from London to Plymouth and back. From Mr. E. Lockwood, one of the party, I learn that the journey both ways of 414 miles was performed in 31 hrs. 10 min., including stops for meals and refreshment. The cab, a 10-12-h.p. Humber, did the journey magnificently, carrying five persons and their luggage. Some of the hills met with were exceptionally severe, especially between Chard and Honiton and Exeter and Ashburton, but the vehicle negotiated them without difficulty. The machine registered £16 0s. 8d. on the journey. ARCANUM.

It is announced that the Mercedes car which, driven by Lautenschlager, won the Grand Prix, has been purchased by Mr. Robert Graves, of New York, and will be entered by him for the Vanderbilt Cup race.

MR. J. T. O'LOGHLEN, the proprietor of the Zetland Hotel, Cashel, Connemara, has become the owner of a 16-h.p. Clement-Talbot car, which he is placing at the disposal of visitors at his place for conveyance to and from the fishing. He has leased the Golla river and lakes as well as some lakes on the Ballinahinch waters for the use of visitors.

THE SECRETARY FOR WAR has given the expenditure by the War Office upon aeronautical work during the last five years as follows:—In 1903-4, £14,600; 1904-5, £19,150; 1905-6, £23,600; 1906-7, £20,750; 1907-8, £16,500. The estimated expenditure for 1908-9 is £13,750.

REGULATIONS creating an Australian Volunteer Automobile Corps have been approved by the Governor-General in Council, and have been issued to the officers commanding in the various States. Steps will at once be taken to bring into being this latest addition to the defensive forces of the Commonwealth.

As mentioned in a recent issue, we have reprinted the table giving the details of the setting of valves of petrol motors, published in the *M.C.J.* of June 6th. Being mounted on stiff card it should prove a handy means of reference in motor repairing establishments, and we shall be glad to send a copy gratis to any reader making application for the same.

AT Wednesday's meeting of the London Corporation the County Purposes Committee submitted a report as to the more effectual regulation of motor traffic in the City, stating that in their opinion legislation is necessary to deal with it; and asking for authority to take such steps as they might be advised in reference thereto, with power to confer upon the subject with the Police Committee and such other authorities as might be deemed advisable.

CAPTAIN LORD CHARLES FITZMAURICE has lately acquired a Miesse 20-24-h.p. petrol car.

A MOTOR-CYCLE quick package and messenger service has recently been established at El Paso, Texas.

We illustrate herewith the motor ambulance recently built by Messrs. Humber, Ltd., Coventry, to convey convalescent children to and from the Plaistow Fever Hospital. The chassis, which is of the 10-12-h.p. Coventry Humber type, has an elongated body of neat and light construction, which accommodates six children on

each side, together with a nurse. By an ingenious arrangement the front portion of the seating can be converted into a cushioned surface upon which the children can lie down. The vehicle is fitted with electric light and a speaking tube for communication between the nurse and driver; the question of ventilation has been carefully considered, while to facilitate disinfection the cushions are made detachable.

AT 3, Inverkip Road, Greenock, Mr. Leslie has a motor garage, from which he also carries on a large business in the hiring out of motor-cars.

THE election of the Hon. Rupert Guinness as M.P. for Haggerston makes up the representatives of the R.A.C. in the House of Commons to forty-five.

MOST emphatic as to the growing rivalry of the car with the rail was the exodus of motor-car parties from Brighton hotels each of the days of the Goodwood meet.

WE regret to learn that as the result of a fall from the saddle, on Saturday last, Mr. Charles Friswell sustained a fractured collar-bone. His many friends will wish him a speedy recovery.

SOLDIERS serving at Aldershot whose term of colour service will expire shortly have been invited to join a class of instruction in motor-car driving, which was formed this week at the Mechanical Transport Depot.

THE postal authorities of Washington, D.C., U.S.A., have decided to inaugurate exhaustive tests of motor-cars in the collection of the mails with a view to substituting them for horses and wagons in the district of Columbia.

THE General Purposes Committee of the Worthing Town Council are recommending that speed limits of six miles an hour should be imposed on motor vehicles plying for hire in the town, this being further reduced to four miles on rounding any corners.

BETWEEN April 1st and June 30th 123 motor-cars, 79 motor-cycles, and 114 changes of ownership were registered in Surrey; 1,524 motor-car drivers' licences were issued during the same period, the total receipts on the motor-car account being £536.

MR. J. R. MORRISON suggests, in the "Financial News," that motorists should acquire the London, Chatham, and Dover Railway, the Great Central Railway, and the East London Railway, at their present share quotations, and convert the lines into motor roads.

MR. PHILIP SAYERS, who has been well known in the automobile business for some years, more particularly in the branch concerned with the designing and building of stylish motor bodies, has opened an office at 3, Long Acre, London, W.C. He will be pleased to fit the chassis of present or prospective motorists with any particular type of body—a class of work in which he has proved the possession of sound as well as original ideas.

MESSRS. DENNIS BROS. have lately completed a 35-h.p. triple phaeton for Mr. G. Booker, of Barnsley; the vehicle is to be used for hire purposes, especially for taking parties on long tours. It is most luxuriously upholstered, and has ample room for luggage. Pneumatic tyres are fitted to the front wheels, solids being used at the back.

A LITTLE work on Sports Management, including a chapter on the organisation of a motor gymkhana, comes from Mr. H. Hewitt Griffin, who for a number of years has been connected with the journalistic side of cycling and motoring. Doubtless it will be of value to many who are called upon to organise such happenings. It is published by the Putney Press, Ltd., of Putney.

MOTORING visitors to Southport will find the extensive garage of Mr. R. Woodhead, adjoining the Winter Gardens in Lord Street, well adapted to their needs. An idea of the extent of the premises may be gathered from the fact that there is accommodation for 100 cars on the ground floor, a number of separate private lock-up boxes being also available. Mr. Woodhead is an official repairer to the R.A.C. and is well equipped to carry out all classes of repairs.

WHILE in Nottingham recently we made our way to the finely located and well equipped garage of the Humber Company. This is right under the shadow of the Castle, and has entrance among most pleasant surroundings, being in the main road skirting the city, and thus accessible to all visitors. It is well built for its purpose, and, in addition to the garage for cars, there is also a stockroom, repair shop, and every means of overhauling vehicles. It easily takes rank amongst the chief of the many such establishments in Nottingham.

WE illustrate herewith a new non-skid tyre devised by Messrs. H. and E. Walker, which is about to be put on the market by the Bradford Vulcanising Company, 96, Manningham Lane, Bradford. As will be seen, the feature of the tyre is that the tread is composed of rubber projections of a special oval shape evenly spaced round the circumference. At each side is a row of small studs, which can be either of steel or rubber; the

latter are set at an angle to the road, so that, should the car show any tendency to skid, the tyre, in rolling a little out of the perpendicular, causes the studs to grip the road surface and so arrest the skid. Some time ago the firm fitted a set of the cove s (380 by 120 mm.) to a car which has since been driven over 2,000 miles. Although the bulk of the running was performed in very bad weather, the firm inform us that the tyres fully responded to their expectations, no tendency to skid being shown by the vehicle.

CONTINENTAL NOTES.

British Motorists in France.

During the past week or so there has been a large influx of British motorists into France. Among those who have arrived with their cars are Lord Byron (58-h.p. Daimler); Mr. J. Ponsonby, London (35-h.p. Panhard); Mrs. Temple Patterson and Mrs. F. Robertson, London (60-h.p. Napier); Mr. Levin, London (24-h.p. Panhard); Lord Templemore (58-h.p. Daimler); Mr. and Mrs. Band (75-h.p. Mercedes); Mrs. Miller Fothergill, London (40-h.p. Renault); Mr. Hutchinson, London (45-h.p. Delaunay-Belleville); Sir Everard Pauncefort Duncombe (58-h.p. Daimler); Mr. and Mrs. F. R. Birdsall, London (35-h.p. Mors); Mrs. and Miss Mackenzie, London (24-h.p. Panhard); Lady Maryon Wilson (40-h.p. Daimler); Mr. and Mrs. Arthur E. Abrahams, London (30-h.p. Leon Bollee); Sir Richard William Levinge (24-h.p. Panhard); Mr. James Logan and Mr. Walter Ridley, London (32-h.p. Clement); and Mr. John R. A. Gibb, London (45-h.p. Napier).

Aeronautical News.

MR. ROUMÉGOUX, of Montreal, has arrived in Paris to experiment with an aeroplane of his own design, the special

results of which the prizes will be awarded. A flexibility trial for six-cylinder cars, to show the maximum and minimum (without stopping the road wheels) speed these vehicles are capable of, will be held the same day. Entries, at the rate of £2 per car, will be received up to September 17th.

Motor Vehicles for Postal Work.

A trial of motor vehicles for postal work was recently held by the Italian Ministry of Posts and Telegraphs. Over twenty entries were received, but the number of cars actually competing was reduced to five—namely, two S.P.A.'s, a Fiat, a Fides, and a Florentia. The tests lasted for about a fortnight, the distance covered being upwards of 1,240 miles. The points taken into consideration were regularity of working, speed, and load carried, the prize being awarded to the S.P.A. Company. The vehicle, which carried a useful load of just over 2 tons, was fitted with a 28-h.p. four-cylinder motor, 110 mm. bore by 145 mm. stroke.

Public Services in Montenegro.

A contract has just been arranged between the Government of Montenegro and Messrs. Laurin and Klement, of Jungbunzlau,

Racing at Brooklands.—M. Naudin at the wheel of the Sisaire-Naudin Car on which he won the All-Comers' Handicap.

feature of which is that it can rise direct into the air without having recourse to wheels. It is stated that the aeroplane manoeuvres freely in the air, and the inventor claims to be able to lift a ton weight with his machine.—The new French Army airship République made a flight of thirty miles over Paris on Saturday last.—The first Russian aero club has just been formed at Odessa, under the presidency of Gen. Baron Kaulbars, who proposes to buy an aeroplane of the Farman-Delagrange type.—The French Minister of War has, it is announced, placed an order for a second military airship.

Speed Trials at Evreux.

As has already been briefly announced in this column, "Les Sports," of Paris, is organising a series of speed trials on the level and on a hill, to be held at Evreux on September 20th. In the racing section categories will be provided for motor-cycles, cars up to 400 kilogs., ditto from 400 to 600 kilogs., ditto over 600 kilogs., Targa Florio type vehicles, Grand Prix voiturettes and Grand Prix heavy cars. For touring vehicles there are altogether fourteen classes. The run in the morning will be over a flying kilometre, this event serving as an elimination contest, the first three or four in each category being eligible for the mile hill climb, on the

Bohemia, whereby this firm undertake to organise and maintain by their own vehicles, and on their own account, a postal motor service throughout the principality, with a subvention from the State. The contract, which is for a period of fifteen years, carries with it a monopoly of supplying and running public motor vehicles of every kind both for passenger and goods traffic. This enterprise will result in the opening up of vastly improved communication between the Austrian port of Cattaro and Cetinge, Niksic, Podgorica and other towns in Montenegro.

Miscellaneous Items.

M. F. Max Richard, President of the Chambre Syndicale de l'Automobile, has been appointed Consulting Engineer in Paris to the R.A.C.—An electrical fire service car is to be added to the equipment of the Fire Brigade of Aix-la-Chapelle.—The Russian Ministry of Railways and Communications has placed an order for a Laurin-Klement 3-ton petrol lorry.—The King of Greece has ordered an 18-30-h.p. Opel car.—A company has just been formed in Paris with a capital of £8,000, to be known as La Compagnie Generale des Automobiles de Livraison.—The Swiss Automobile Club is arranging to hold a reliability trial of industrial motor vehicles early next year.

MOTERING ACCESSORIES.

A New Magneto Plug.

We illustrate herewith the details of the new pattern Eisemann sparking plug for use in connection with high-tension magnetos, which has just been put on the British market by the United Motor Industries, Ltd. Differing from the old type in principle and detail, the new plug may be said to contain quite original features. The insulating material is a porcelain (1) of secret and special composition capable of withstanding high and varying temperatures. No matter how good a porcelain may be, however, if the method of ramming it in the body is faulty and no allowance is made for maximum expansion trouble is sure to ensue. In the new plug a careful study has been made of this and it is claimed that high tension leaks *via* a cracked porcelain are absolutely impossible. Another difficulty with magneto ignition is that when the current generated is increased beyond the normal the plug points almost touch after a time, by reason of the transference of metallic particles from the positive to the negative pole. This transference of material is helped by the soft nature of the metal used and its incandescent state during action. In the new Eisemann this difficulty is overcome by a triple-pronged centre electrode of nickel (2) and a negative electrode of nickel with a 4-turn spiral of platinum wire (3) securely attached thereto. By reason of the three points from which the high tension current passes it is claimed that the plug will last at least three times as long as the

ordinary single electrode pattern. The method of bedding down the porcelain is simple and clean; the top of the shoulder of the porcelain rests on a thick washer of asbestos in the body of the plug (4). The locking nut (5) binds down on two copper-mounted washers (6) which sit on the under face of the porcelain shoulder. Needless to say the binding nut is rounded to shape the latter, so that sharp pressure on the porcelain is avoided. It may be added that the porcelain is ribbed (7) with the object of increasing the surface distance between the centre electrode nuts and the body, to prevent short circuits. There is also a well in the cylinder end of the porcelain for soot and burnt oil accumulation. The plug units are all easily detachable for replacement or examination.

The New Stepney Wheel Flange Fitting.

As already explained in a previous issue, the Stepney Wheel Company have recently put on the market a new patented flange wheel, which enables the Stepney spare wheel to be fitted in position in much less time and with much less trouble than hitherto. In view of the fact, however, that many queries have been raised by prospective users, a few words dealing with these points may be of interest and assistance to many other motorists. Before the introduction of the flange the Stepney wheel could not be attached to the car wheel until the tyre was deflated in order to enable the sliding hooks of the auxiliary wheels to grip round the edge of the rim. It was found that sometimes the tyre stuck to the latter, and that in this way considerable time was lost. The new flange is a ring with the minimum of weight consistent

with sufficient strength for its purpose, which by means of bolts and nuts is fitted permanently to the wooden felloe of each of the car wheels. When a puncture occurs the Stepney wheel is no longer fixed to the bead of the wheel rim, but to the flange, the fitting of the Stepney being thus greatly expedited and simplified. The new flange further offers the advantage that the spare wheel can be fitted without deflating the old tyre and by equipping the Stepney with a steel-studded tyre this wheel can be used in wet weather as an excellent non-skid device.

For the purpose of fitting, holes are bored to the number of the spokes on the car wheel, and as some have twelve and others ten or fourteen spokes, when ordering a new Stepney wheel with complete set of flanges it is imperative that the exact number of spokes should be stated. This is important, as cars very often have wheels with twelve spokes at the back and ten in the front, even when the tyres are of the same size. When attaching the new flanges to the wheels the holes should be bored at a distance of about one inch from the spokes, while the bolts should on no account be fixed through the spokes themselves. The flange, which can be easily fitted to the ordinary standard pattern artillery wheel without the necessity of taking off either the wheel or the tyre, does not take the ordinary pattern Stepney spare wheel, but specially shaped clamps (sliding hooks) are necessary. The makers are, however, able to alter at a small cost the old pattern Stepneys to suit the new flange attachment.

The Stepney wheel, when fitted to the flange, creeps a little, but this is claimed to be an advantage, as it lessens any undue or sudden strain being given to the gears or other working parts through the clutch being too fierce, the flange giving the necessary slip. Provision is, however, made to prevent this creeping or slipping if desired. The new flange is only about one inch in width and is fixed in the middle of the wooden felloe of the car wheel, close to the rim. Although the new pattern has only been on the market a few weeks the Stepney Company have already received orders in excess of their anticipation, not only from motorists at home but also from the Colonies.

Lyxavon.

There are many motorists who find it difficult to use gloves when making small adjustments on their cars, with the result that their hands soon become dirty and greasy. It is therefore a good plan to have on hand some cleansing medium in the stable; indeed, it might be carried on the car, so as to be ready for use in emergencies. Among the many preparations of the kind is that made by the Lyxavon Company, of Prospect Place, Barnsbury, N., which, in consequence of its many advantages, is steadily gaining in popularity. Lyxavon is a special liquid soap which it is claimed does not merely remove the dirt from the surface, but actually dissolves it out of the pores of the skin. In the case of greasy hands, the preparation is equally effective, a small quantity in conjunction with cold water quickly removing not only all trace of the grease, &c., but also any objectionable smell. The new liquid soap is supplied in tins of convenient size.

Dust Coats.

The fact that we, in the south, have had so many days of fine weather with the accompanying dust upon the roadway gives added interest to the selection of motoring garments placed before those who travel on cars by Messrs. Charles Baker and Co., Ltd., whose establishment is at 137 and 140, Tottenham Court Road, London. The firm have a large selection of liveries for chauffeurs and have also a good range of dust coats for motorists generally. These are made in several materials and characterised by the same stylish design and good finish. Waterproof coats and new umbrellas motor coats are specialties of the firm, and are of particular interest to those motorists who may be preparing for rainy days.

Goggles.

Many types of motor goggles are now stocked by the leading agents for motor accessories, to the bewilderment of those who wish to make a prompt selection. Among these the Collapsible Cup motor goggles of Messrs. Aitchison and Co., whose many establishments in London are well known, and who have a Yorkshire branch at 37, Bond Street, Leeds, present features of neatness, lightness, and protection that give them distinction among such devices. The spring front Collapsible Cup goggles are made in a variety of patterns and sizes, and, whilst the glasses are devised so as not to distress the eye, the masks fit easily and close to the face, and, at the same time, they have not an unsightly appearance.

Correspondence.

[Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.]

A HINT TO DRIVERS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Replying to Mr. Dey's letter in the last issue of the *M.C.J.* while no doubt there is much to be said in favour of his argument, there are difficulties in the way of adopting the plan he proposes. In the first place, even as an old motorist, I was unaware that the holding out of an arm was an indication that the driver was going to turn; I fancy that the signal is as frequently used to warn following traffic that he is easing up or going to stop. Secondly, in these days of covered cars, and even high-backed open vehicles, the only means a driver has to warn those behind him is by means of his right hand, for if he put out his left it would never be seen.—Yours truly,

SEASIDE.

THE DANGER OF EXHAUST GASES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Your contributor "Arcanum" has done well to draw attention to the dangerous effects to one's health of exhaust gases in con-

drawing office—so much so, in fact, that at a very conservative estimate the efficiency was decreased 25 or 30 per cent. After the employees had been subjected for two or three months to this poisonous atmosphere the physical condition of almost all was visibly impaired. They complained of loss of appetite; nearly all suffered constantly from headache and depression; and in at least two cases the heart action was to a certain degree affected. Eventually the testing department was removed to a large open-sided building, since which everyone in the drawing office (which was under the supervision of the writer, and, therefore, the only department of which he can speak with perfect assurance) has returned to a normal condition, and a marked increased efficiency of the department is evident.—Yours truly,

CHIEF DRAUGHTSMAN.

GRAPHITE AS A LUBRICANT.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to "Bristolian's" letter in a recent issue of the *M.C.J.* I am a firm believer in the use of graphite for engine lubrication.

The Motor Volunteer Race from Vienna to Berlin.—An Early Arrival in the German Capital.

finer spaces. I was for some time connected with a firm engaged in the manufacture of petrol motors. The drawing office, pattern shop, general offices and testing room were all in one building. The two latter occupied the ground floor and the other two departments and a store room the first floor. Between the testing room and general office was a stout wooden partition. Two stairways provided with doors, sometimes closed and more often open, and the shaft of a lift permitted the gases to rise from the testing room below to the second floor, where only a thin and poorly-constructed partition divided the drawing office and pattern shop from the main store room. At first so little testing was being done that the air appeared perfectly clear, yet slight headaches and an extreme lassitude became common.

As the amount of testing increased the condition of the atmosphere became evident to the eye, and when this work was at a maximum the air in the drawing office was quite commonly blue with smoke, and although the staff arrived in the morning in a perfectly normal condition, by eleven o'clock not one person in the room would be free from a most severe headache. Some small respite was gained during the dinner hour, but by two o'clock in the afternoon the gases had again made themselves evident, and usually the headaches were accompanied by considerable depression. Naturally, this had a marked effect upon the work of the

drive a four-cylinder car, and about once a month clean all the old oil out of the base chamber and fill it with fresh oil. I then take about two teaspoonfuls of flake graphite and divide it into four parts and blow it, with a copper tube, into the cylinders when the piston is at the end of its stroke, so that the graphite remains on the walls of the cylinders. I have been making a practice of this for two years, and have yet to have the first dirty sparking plug from the effects of the graphite.—Yours truly,

S. W. T.

MOTOR DRIVERS' LICENCES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Some time ago I received a complaint from a member of the C.T.C., who is a motor-cyclist, that, while in other places it was the practice of the local authorities entrusted with the power and duty of issuing drivers' licences under the Motor Car Act, 1903, to issue and renew such licences for a full period of twelve months from the date of issue or renewal, the practice in Midlothian of recent years has been to issue or renew only up to December 31st next ensuing, thus requiring those who held licences dated subsequent to

January 1st to have them extended for the balance of the period of twelve months, or run the risk of being convicted of a breach of the Act if found riding on or after January 1st following.

I have been in communication with the clerk to the County Council of Midlothian in regard to the matter, and I am pleased to inform you that I have now received a letter from him stating that he has been "in correspondence with the Secretary for Scotland on the subject, and as a result drivers' licences will in future be issued or renewed for a period of twelve months from the date of issue or renewal."

As the change in the practice of the Midlothian County Council may interest some of your readers who are resident in the county, and may help others who may have suffered from a similar practice on the part of their local authority—unless, indeed, Midlothian stands alone—I take the earliest possible opportunity of sending you the information of the alteration.—Yours truly,

ALFRED J. F. MITCHELL,

Hon. Sec. to the Lothians District Association of the C.T.C.

SIGNALLING BY HORN.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have seen some "Rules and Courtesies of the Road" in which a correspondent suggests a simple method of signalling by the horn an intended alteration of direction. But why devise a new method when a very satisfactory one exists already—namely, the rule of the road at sea?

One short blast means that I am directing my course to starboard (to the right); two short blasts, that I am going to port (to the left); three short blasts, that I am going astern. One long blast denotes that I am going straight ahead and gives warning to small boats, &c., to get out of the way.

The Star 16-h.p. Live Axle Landulet recently supplied by the Star Engineering Company to the Birmingham Baths and Parks Committee.

The long blasts could, of course, only be used by cars fitted with electric horns, sirens, Gabriels, &c., but a car fitted with an ordinary horn could, instead, give a rapid succession of short blasts.

The three blasts would be useful when coming out backwards from a motor house or from a lane after taking a wrong turning, &c.

There are now a large number of drivers on the road who have been taken from the Naval Motor School; they would all recognise at once these signals.—Yours truly,

W. S. LEVISON GOWER.

CAB WHISTLES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—With regard to street noises and their abatement, one which is becoming a greater nuisance in London daily is the cab whistle. As motor taximeters are undoubtedly the most popular, although the least available at present, why should it be necessary to whistle three times for a vehicle so often required? If someone in authority would only think to make the call 1 for a motor-cab, 2 for a hansom, 3 for a four-wheeler, this neighbourhood, like many others situated in Central London and in the midst of places of entertainment, would be rendered a little pleasanter to live in.—Yours truly,

CHARLES PINOLI.

SOLID v. PNEUMATIC TYRES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—The gravitation test referred to in the last issue of the *M.C.J.* is very interesting. What would be the result of a similar test on a 6-h.p. De Dion? Would it travel as far on Torkington tyres as on 700 mm. by 85 mm. Dunlop pneumatics pumped to 65 lbs. or 70 lbs. pressure?

sure? Perhaps this experiment has been tried, and, if so, the result would be most interesting to a large number of motorists.—Yours truly,
CL 3.

[The question raised by our correspondent is undoubtedly of interest to users of small cars. The experiment with Torkington tyres has, so far as we know, not been extended to small power vehicles. Perhaps some of our readers, who have had experience with cars fitted with solid tyres, will furnish some information as to the results obtained, especially with regard to the effect, if any, on the speed.]

IGNITION TROUBLES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have had a good deal of trouble with the ignition of my 6-h.p. owing to the fusing of the platinums of the make and break. I have put in a new coil without benefit, and suspect that the charging of the accumulator of 40 ampere hours capacity is at fault. Could you give me any advice, or could you inform me whether it would be better to charge my accumulators by means of a primary battery?—Yours truly,
L. W.

[If the trouble is caused by the accumulators, it would be advisable to make certain that they are in proper order before trying charging by primary battery, as this is a somewhat expensive method to employ. First ascertain if the dilute acid in the cells is at the right strength, namely, a specific gravity of 1.200 when charged. If it is lower than this more acid must be added to make it correct. Then have the accumulator well charged, making sure that it is charged at the rate of 3 amperes for twelve hours. When fully charged it should give 4½ volts on a reliable voltmeter. Accumulators of 40 ampere hours capacity are often undercharged owing to want of thought, or they are charged at a rate which is too low for the capacity; possibly they may be charging at 1 ampere for eight hours, which is obviously not sufficient, so that the plates are never fully charged, and the accumulator soon runs down. Unless "L. W." can get them charged at the above rate, it would be better to employ four cells of a primary battery, as cells of the types mentioned will easily give three amperes if the voltage is kept up, and by the use of four cells for the primary this can be done. It should be remembered, when charging from a primary, that the current in the circuit is produced by the difference in the voltage between the accumulator and the battery, so that it is necessary to keep the charging voltage of the primary at least two volts above that of the accumulator.]

PISTON CLEARANCE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I should be glad if you could give me some information as to what is considered the best practice in clearance between the body of the piston and the cylinder walls of a petrol motor. In other words, what should be the difference in diameter in thousandths of the piston body and the cylinder of a motor having a bore and stroke of respectively 3½ in. by 4 in. I have been told that some manufacturers make this 4/1000 and others recommend making the piston 2/1000 smaller at the top than at the bottom, on account of the higher temperature reached by the top of the piston.—Yours truly,

R. A. S.

[The usual amount of piston clearance is from 2/1000 to 4/1000 of an inch; some manufacturers allowing more, some less, this depending greatly on the cooling surface. The clearance on a cylinder 3½ in. bore with average cooling surface would be approximately 3/1000. The principle of the piston being larger one end than the other is very seldom used, most being perfectly parallel.]

AN ENGINE QUERY.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have a four-cylinder 24-30-h.p. car which I have now been driving for nearly six months. I am sorry to say, however, that it is very little used on account of the trouble when mostly starting away with the car. It runs very well for the first mile or so and then one cylinder will miss fire and then another will do the same. Then the car will be running on two cylinders—first one cylinder and then another will miss fire. Next engine commences to knock and then in a few minutes all four cylinders will fire correctly and the car will go splendidly, but on coming to a small hill knocking will commence again; and it seems as if the engine has not enough power, but that I put down to the misfiring; the carburettor is correct, as there is a good flow of petrol and all seems clean. The four tremblers on the coil seem to all have a nice buzzing sound, as I have them nicely adjusted, but I may say that one cylinder misses fire more than the other, and has done so ever since the car was bought. I have wondered if it could be the fault of the coil, as everything else seems right. I have even put a new high tension wire and new plug to the cylinder that misses most, but it does not make it any better. I should be glad of any assistance you can give me in locating the cause of the trouble.—Yours truly,

CARDIFF.

[The misfiring complained of by our correspondent may be due to many causes. This kind of misfiring generally occurs when the contact breaker is dirty, or perhaps the coils are adjusted too tightly. If these are not the causes, we should recommend that the aid of a competent man be obtained to thoroughly inspect and locate the difficulty, as nothing is so annoying as electrical troubles.]

RACING AT BROOKLANDS.

—♦—

ALTHOUGH last Saturday's meeting at Brooklands was favoured both with fine weather and interesting racing, the attendance of the general public was extremely disappointing, the only part in which any degree of activity was observable being the paddock, where, among others, we noticed Prince Francis of Teck, the new chairman of the Royal Automobile Club, and Count Adalbert von Sierstorff, of the German Imperial Automobile Club.

Thirty-five entries had been received for the fourth All Comers' Handicap Sweepstakes, over a distance of 5½ miles; the contest was divided into three heats and a final. There were seven starters in the first section, which resulted in the following being eligible for the final:—C. Hobson, 27.9-h.p. Nagant-Hobson (2 min. 6 sec. start); C. A. Bird, 34.5-h.p. Mercedes (1 min. 34 sec.); Sir George Abercromby, 58.1-h.p. Fiat (1 min. 4 sec.); M. L. Braithwaite, 17.5-h.p. West (2 min. 50 sec.) Some interest in the second heat was evinced owing to the fact that it witnessed the appearance at Brooklands of Louis Naudin, one of the designers of the Sizaire-Naudin car, and who took part in the recent Grand Prix des Voitures. A new British car, the 22.4-h.p. Certus with friction drive, also made a satisfactory debut on the track, A. C. Godwin-Smith, who had 2 min. 38 sec. start, driving it into third place. The Sizaire-Naudin, which had the largest time allowance (4 min. 24 sec.), completed the first lap ere all the competitors had been sent off, and proved an easy winner, Naudin finishing over a minute in advance of H. Taylor, 20-h.p. Clement-Talbot (2 min. 24 sec.). J. C. Colmore, 14.7-h.p. Humber (3 min. 6 sec.), also qualified for the final. An objection, the nature of which was not

miles per hour—the highest sustained rate that has so far been recorded on the Brooklands track. Lane was only about 60 yards behind and would have been closer had he not thought he had another lap to go and made for the fork, instead of the finishing straight; at the cost of a burst tyre he managed to pull round, too late, however, to catch Newton. Resta was third and Pyne fourth, both, however, being some distance behind. Hutton retired in the third lap and Pigot at about the half distance.

The Merit Trophy contest, which followed, brought out a field of thirteen competitors. The event was a 5½ mile handicap, the time allowance being on a cylinder dimension basis. F. A. Bolton's 59.6-h.p. Ariel was on the scratch mark, while G. F. Scantlebury's 8.9-h.p. Sizaire had the maximum start (3 min. 21 sec.). The latter was never caught, and proved an easy winner, H. G. Nalder, Berliet "Grayling" (42 sec.), being second, and C. Hobson, 27.9-h.p. Nagant-Hobson (1 min. 6 sec.), third.

The novelty of the afternoon was the 5 mile Journalists' Handicap, for which seven entries were received. Only five, however, faced the starter, there being one absentee, while R. V. Beveridge's 8.9-h.p. Sizaire-Naudin "jibbed" on the way to the starting point. J. Flatau was the first home on his 19.4-h.p. Belsize (18 sec. start); W. Whittall 8-h.p. Rover (1 min. 31 sec.), being second; and C. J. Bertelli, 7.5-h.p. O.T.A.V. (1 min. 31 sec.), third. The scratch man, J. Owen, finished fourth on his 25.6-h.p. Thornycroft, but would have run into third place had he not made for the fork instead of the straight on the last round.

Unhappily the misadventure and the fatal accident which occurred in the last race of the day are the outstanding features of the racing on Bank Holiday. The full story has already been told in the

The Accident at Brooklands.—The burning remains of the 76-h.p. Mercedes.

announced, was lodged against the winner, but was over-ruled. The third heat included two or three competitors who had been rejected from the previous runs owing to their cars not being provided with the regulation rear number disc. Mr. S. Straker's 18.8-h.p. Shamrock was not allowed to start from a similar cause. The order of the first four at the finish was J. E. Hutton, "Little Dorrit" (42 sec.); B. M. Thornton, 22.5-h.p. Ford (2 min. 30 sec.); O. S. Thompson, Austin "Pobble" (1 min. 28 sec.); and G. A. Phillips, 19.6-h.p. Humber (2 min. 6 sec.). Eleven cars turned out for the final. Naudin was again round before all the competitors had been despatched, and he crossed the finishing line fully a minute and a half before any of his rivals, thus carrying off the first prize. There was a keen struggle between the other competitors, the second place falling to C. Hobson, 27.9-h.p. Nagant-Hobson; J. E. Hutton, "Little Dorrit," being third; and G. C. Colmore, 14.7-h.p. Humber, fourth.

The great event of the day was the Second Montagu Cup race for cars of a cylinder dimension between 145 and 235, and over a distance of about thirty miles. There were six competitors, C. Lane and D. Resta each driving Grand Prix Mercedes cars, J. E. Hutton a 76-h.p. Mercedes; H. Pryne, Lord Northcliffe's 59.6-h.p. Mercedes; F. Newton a 90-h.p. Napier; and D. Pigot the "Delilah." The latter gave trouble at the starting point and only got into its stride after a delay which put it quite out of the running. Lane, on Mr. Burford's car, was the first away, followed by Resta, they leading for two laps. Newton had, however, reduced the distance between him and the latter, and in the third round ran into second place. The order was unchanged until 5½ laps had been completed, when the Napier forged to the front, the second half of the contest being a ding-dong struggle between the two rivals. Although Lane made several attempts to get in front he was unable to overhaul Newton, who crossed the line first, after completing the 30 miles at an average speed of 101½

daily press, and but the briefest chronicle need now be made. But coming within a year of the first fatality of the track, it has cast a gloom over the frequenters of Brooklands, which will not lightly lift. ¶

The first event on the programme was the August All Comers' Handicap, over a five mile course. This was run in two heats, the first five in each being allowed to compete in the final. In the first the Nagant-Hobson was the leader from the start, and reached the finish as the second and third were entering the straight. The Fiat and Austin gave a good race for second place, and the final positions were as follows:—C. Hobson, 27.9-h.p. Nagant-Hobson, 1 min. 16 sec., 1; Sir George Abercromby, 58.1-h.p. Fiat, 20 sec., 2; O. S. Thompson, Austin "Pobble," 42 sec., 3; A. H. Moreing, Daimler "Billy," 51 sec., 4; G. C. G. Moss, Arrol-Johnston "Guarded Flame," 1 min. 7 sec., 5; also ran, G. H. Levick, Napier "Perrier," scratch.

The second heat produced a field of ten starters and there was a keener result, although neither heat was productive of excitement. The close running of those behind the first two proved the excellence of the handicap. A. Van Hoboken won by about half the length of the finishing straight from C. A. Bird, and it was notable that the quartette of Mercedes cars occupied the first four positions, the placing being as follows:—A. Van Hoboken, 71.7-h.p. Mercedes, 20 sec., 1; C. A. Bird, 34.5-h.p. Mercedes, 47 sec., 2; G. E. Duveen, 33.5-h.p. Mercedes, 56 sec., 3; T. Faulkner, 24.8-h.p. Mercedes, 1 min. 9 sec., 4; W. B. R. Moorhouse, Fiat "Linda," 20 sec., 5; also ran, G. F. Scantlebury, 8.9-h.p. Sizaire, 2 min. 45 sec.; H. G. Nalder, German "Yellow Peril," 27 sec.; P. D. Stirling, Hutton "Dolly Varden," scratch; W. Whiteway, 21.4-h.p. Calthorpe, 1 min. 33 sec.; H. Agar, 17.5-h.p. Leader, 1 min. 57 sec.

The final produced the best of the three races, C. Hobson winning by about fifty yards from A. Van Hoboken, who was followed by A. H. Moreing on the Daimler "Billy."

The match between the two ladies who had competed in the first ladies' race at Brooklands gave Miss Muriel Thompson a repetition of her former victory by about 200 yards. The distance was one of three miles and the result was as follows:—O. S. Thompson's Austin "Pobble," Miss Muriel Thompson, 1; G. C. G. Moss' Arrol-Johnston "Guarded Flame," Miss Christabel Ellis, 2. Miss Thompson was at scratch, and Miss Ellis had an allowance of 9 sec.

The First O'Gorman Trophy was presented by Mr. Mervyn O'Gorman, for motor-cars without limitation of the motive power, provided that it be wholly mechanical, and without limitation as to the kind of fuel, the method of its delivery to the working parts, or the use of auxiliaries, such as compressed oxygen, acetylene, or others. The only limitation was that the cars should have two seats only. The course was one of 100 miles and the event attracted seven entrants. Of these Lord Northcliffe's 59-8-h.p. Mercedes did not start, those actually racing being S. F. Edge's 60-h.p. Napier, F. Newton, J. E. Hutton's Hutton "Little Dorrit," Owner; E. W. Lewis's 67-5-h.p. Deasy, Owner; D. Pigot's Darracq "Delilah," Owner; S. F. Edge's 59-2-h.p. Napier, J. G. Reynolds; H. G. Burford's 76-h.p. Mercedes, C. Lane. Both Lane and Reynolds were making their debut on the track at the August meeting, and evidently intended to force the pace from the beginning. The former quickly shot ahead, and, followed by Reynolds, led for seventeen laps, when he had to stop owing to a punctured tyre. Reynolds's Napier thus gained first place, Newton apparently saving himself in the first half of the race. Lane getting going again the Mercedes quickly gained, and on Reynolds experiencing similar ill-luck took up the running with Newton, whom he passed before the end of the twentieth lap. Thus they progressed another five laps, Reynolds following third. Then, as he was on the opposite end of the track from the paddock, Reynolds's Napier was seen to leave the course and overturn into the soft ground below. It was with intense relief that both driver and mechanic were seen to rise a few moments later—a miraculous escape. They were brought into the steward's room in the paddock, while the others continued their course. Then came the cry of another mishap—this time a fatal one. With only a few laps to run, and still well in front, Lane's Mercedes was seen to swerve where the track crosses the River Wey and fall backwards from the banking. The mechanic, William Burke, was killed instantaneously, but the driver escaped, although badly bruised and out about the face. The car was quickly enveloped in flames, and the engine found several yards from the chassis. F. Newton, on the 60-h.p. Napier, was completing the distance when the accident occurred, and won at the average speed of 98½ m.p.h. J. E. Hutton's "Little Dorrit" completed twenty-eight laps; E. W. Lewis, on his 67-5-h.p. Deasy, retired early. This unhappy mishap caused the abandonment of the match between S. F. Edge and C. Jarrott, which had occasioned considerable interest.

TRAFFIC REGULATIONS IN LEEDS.

THE first case under the new bye-laws of the Leeds Corporation with regard to the regulation of traffic has just been heard, when the chauffeur of a local doctor was summoned under Section 2 for not keeping to the left or near side of the crossing opposite the Midland Railway Station and not regarding the directions of the constable stationed at the crossing. The case was dismissed.

The regulations under which this case was brought to court were made in March of the present year, and apply to streets in which the tramways are laid and which are liable to be obstructed by reason of the amount and nature of the traffic. They are to the following effect:—

"Every person riding or driving shall approach, pass, and turn out of any crossing in any of the above-mentioned streets on or from the left or near side of such crossing in accordance with the direction given by word or signal of the constable stationed at such crossing to direct the traffic. Every driver or person in charge of any cart, wagon, lorry, or other heavy or slow moving vehicle in the above-mentioned streets shall (except when overtaking another vehicle) keep the same on the left or near side of the road and keep as near as possible to the footway or kerbstones on that side."

THE "FOUR-INCH" RACE.

FIVE further entries have been received for the International race to be held in the Isle of Man on September 24th, bringing the number of entries at present to forty, viz., two S.C.A.T. cars entered by Mr. John Newton, of Manchester, a third Vinot car entered by M. Vinot, a Piccard car by Mr. Morgan Donne, and Mr. H. B. Browning's Rover. The entrants are asking for the cylinders of their cars to be examined at their works during the months of August and September. This arrangement will prevent any disappointment in the Isle of Man. The cylinders of the first three cars will also be examined after the race.

MESSRS. E. J. DAVIS AND CO., of the Rapidising Engineering Works, Great Eastern Road, Stratford, E., have recently introduced a set of pliers especially adapted for manipulating piston rings, which should be of interest to motor repairers. It is claimed that by their aid a set of rings can be taken off and replaced under three minutes by an unskilled workman without fear of breaking, twisting, or damaging them in any way, and also without fear of damage to the operator's fingers.

THE KETTLEBY HILL CLIMB.

BELOW we give the final results of the competition for the Du Pre Challenge Cup held on Kettleby Hill on the 11th ult., and fully reported on page 453 of our issue of July 18th, when the times of the various cars were given. The winner of the cup was Mr. P. E. Tressider on his 15-h.p. Talbot, Mr. F. A. Bolton being credited with the fastest time on his 40-50-h.p. Ariel.

| Member's Name. | Maker's Name and H.P. of Car. | Marks. | Order of Merit. |
|---------------------|-------------------------------|--------|-----------------|
| P. E. Tressider ... | 15-h.p. Talbot ... | 77-8 | 1 |

AUTOMOBILE ACCIDENTS.

WHILE motoring on Saturday evening from London to Bexhill, Mr. and Mrs. Kerpel met with a serious accident at Southsea, near Newhaven. When going down a hill the car ran into a telegraph pole, and the occupants were thrown out into the road, sustaining severe injuries.

A MOTOR-CAR accident occurred at Cambridge early on Saturday morning. Mr. Fred W. Barker, of Stourbridge, was driving two other gentlemen to Birmingham, and, after having been on the road all night, arrived at Cambridge at half-past four. While passing along Jesus Lane, Mr. Barker, according to his own statement, "dozed off," and the car, which ran into a pillar-box, crossed the pavement, and smashed into the wall surrounding the grounds of Jesus College. The off-side front wheel was knocked off, and the front of the car badly damaged, but the occupants escaped unhurt. Mr. Barker stated that he was driving at a medium pace.

WHEN passing through the tunnel at Reigate on Monday a motor-car is alleged to have knocked down a London cyclist, who now lies in Redhill hospital.

A MOTOR-CAR, which was being driven to Goodwood one day last week, overturned while climbing Dunton Hill. The car belonged to Mr. Percy Hall, and the occupants were a lady and gentleman and the chauffeur. The car ran back down hill. A wheel got in a ditch, and the vehicle overturned. The lady and gentleman escaped without any injuries, but the chauffeur sustained a broken collar-bone and injury to one of his shoulders.

A LAD seven years of age or thereabouts, living in Lancing, had a remarkable escape from very serious injury the other evening. He was running to and fro across the road near the Coastguard station, when he was run over by a motor-car coming from the direction of Worthing. An eye-witness says that the car was being driven very slowly, and it was impossible to avoid the lad, who ran right in front of it. The car pulled up almost immediately, but the front part of the vehicle went over the boy. No bones were broken, although the boy had, of course, sustained a number of bruises and abrasions. A constable eventually took the injured lad to the Worthing Hospital, where he was detained.

SEVERAL motor mishaps occurred on Tuesday. Near Aberdeen, two miners were severely injured by a motor-car by which they were run down; between Kenilworth and Leamington a motor-bus ran off the road into a cottage, injuring several of the passengers; and at Wroxham a car came into collision with a wagon containing some members of the Norfolk Imperial Yeomanry.

MR. H. A. SMITH, who has had a long career in the motor world, has been appointed works manager at the Deasy Motor Company, Ltd., Coventry. Mr. Smith received his early experience at the Daimler Motor Company, Ltd., as far back as 1896; later he was appointed assistant works manager for the Kingsburgh Motor Construction Company, and gained a lot of experience in omnibus work. We understand that the Deasy Company, in addition to their present standard cars of 25, 35, and 45-h.p., intend bringing out a 15-h.p. four-cylinder model for next season, and are manufacturing engines for pumping and electrical lighting purposes.

CLUBS AND ASSOCIATIONS.

ROYAL.

THE "Graphic" Challenge Trophy Race is to be held in the Isle of Man on September 23rd, entries closing on the 16th prox. On the same day the Henry Edmunds hill climb will be held on the Mountain Road in the Isle of Man, entries closing on the same date as those for the Graphic Trophy.

MOTOR UNION.

SATISFACTION was expressed at the July General Committee meeting at the work the M.U. is endeavouring to accomplish in persuading

The Lancashire Club's Hill Climb at Rivington Pike.—Mr. A. Farnell on the 30-h.p. Daimler on which he made fastest time in Class C.

local authorities to erect notices respecting alternative routes before motorists come upon watersplashes—a subject which has been urged from time to time in the M.C.J. The ford on the road between North Elmham and East Dereham, Norfolk, has frequently been complained of. An offer of two notices was made to the County Council provided the authority or the District Council would supply the posts and see to erection and maintenance. The Union also suggested that sign-posts should be put up to show that the road leads to Dereham in one direction and Elmham on the other. A reply has been received from the County Engineer, stating that a notice has been placed on the sign-post at each turn with the word "Ford" painted on it in conspicuous red letters.

MOTOR CLUB.

ON Wednesday of last week the Motor Club held a house dinner presided over by Col. W. J. Bosworth, the chairman. About ninety sat down and later adjourned to the Palace Theatre, where, thanks to the courtesy of Mr. Alfred Butt, who had a special programme arranged, a very cheery evening was spent. Amongst other things were pictures on the cinematograph of the Grand Prix at Dieppe and the Motor Gymkhana at Hastings, which was organised by the club. These pictures were, of course, of special interest to the automobile world, as they represented the two sides of motoring, sport and pleasure.

BROOKLANDS.

IN view of certain statements which have been made in regard to the speeds attained in the recent Fiat-Napier match, the tapes used with the electric timing apparatus at Brooklands have been submitted to and examined with the greatest care by the Competitions Committee of the R.A.C., and the committee has formally placed on record that it is entirely satisfied with the accuracy of the records.

LINCOLNSHIRE.

SKEGNESS is very popular among motorists, and it is therefore not surprising that over fifty fully-laden motor-cars were driven there from all parts of the county of Lincolnshire on Thursday week, when the officers of the 4th and 5th Lincolnshire (Territorials) entertained the members of the Lincolnshire A.C. The regimental sports proved very attractive.

LANCASHIRE.

THE Lancashire Automobile Club held a most successful hill climbing competition on Thursday of last week on Rivington Pike, about a mile from Horwich. Being on a private road the competitors were able to compete in peace, and it would have been in comfort had not the rain descended in quite an exceptional fashion, contriving to spoil what would have been a most enjoyable afternoon.

There were about sixty cars entered in the nine classes, each doing two runs up the hill. A gold medal was given in each class to the en-

trant of the car doing the fastest time on the first time and to the entrant of the car doing the best performance in the second, this being on a handicap based on the times taken over the first ascent.

Mr. Cross, of Blackburn, was the secretary of the meeting, Mr. J. E. Baxter judge, Mr. F. Straight timekeeper, and Mr. Ebbelwhite timekeeper and starter. The official times are as follows:—

Cars whose R.A.C. engine rating is not greater than 13-h.p.

| Name. | 1st run. m. sec. | 2nd run. m. sec. |
|---|---------------------|---------------------|
| W. Biscombe, 10-12-h.p. Zedel, four-cylinder ... | 2 12 2.5 | 2 17 3.5 |
| C. Jarrott, 9-h.p. Sizaire-Naudin, one-cylinder | 2 20 | 2 12 2.5 |
| C. Parrish, 9-h.p. Sizaire-Naudin, one-cylinder | 2 55 | 2 49 1.5 |
| V. Riley, 12-h.p. Riley, two-cylinder ... | 2 0 1.5 | 1 55 |
| Dr. Stephenson, 10-h.p. Midland, two-cylinder | 4 7 1.5 | 4 12 3.5 |
| H. Warrener, 10-h.p. Alldays and Onions, two-cylinder ... | 3 41 1.5 | — |

Cars whose engine rating is greater than 13-h.p. but not greater than 16-h.p.

| | | |
|---|----------|----------|
| C. Bertrand, 15-18-h.p. Zedel, four-cylinder ... | 2 15 2.5 | 2 32 3.5 |
| F. W. Huband, 14-h.p. Alldays and Onions, four-cylinder ... | 2 39 1.5 | 2 45 2.5 |

Cars whose engine rating is greater than 16-h.p. but not greater than 20-h.p.

| | | |
|--|----------|----------|
| W. Ashford, 16-h.p. Stella, four-cylinder ... | 2 10 2.5 | 2 37 3.5 |
| C. R. Garrard, 15-h.p. Talbot, four-cylinder ... | 1 22 | 1 19 4.5 |
| J. Hodson, 16-h.p. Bell, four-cylinder ... | 2 59 4.5 | 2 53 1.5 |
| Percy C. Kidner, 21-h.p. Vauxhall, four-cylinder | 1 14 4.5 | 1 15 1.5 |
| Mrs. E. A. Riley, 14-h.p. Belsize, four-cylinder | 2 11 4.5 | 2 10 2.5 |
| T. H. Woollen, 15-h.p. Talbot, four-cylinder ... | 1 13 1.5 | 1 22 4.5 |

Cars whose engine rating is greater than 20-h.p. but not greater than 25-h.p.

| | | |
|---|----------|----------|
| R. Crosaley, 20-h.p. Belsize, four-cylinder ... | 1 44 2.5 | 1 55 3.5 |

B—C. Bertrand, 15-h.p. Zedel. Class C—P. C. Kidner, 21-h.p. Vauxhall. Class D—Oscar Copper, 26-h.p. Metallurgique. Class E—J. Dootson, 25-h.p. Talbot. Class F—S. F. Edge, 40-h.p. Napier. Class G—A. Farnell, 30-h.p. Daimler. Class H—H. Hollingdrake, 35-h.p. La Buire. Class I—S. F. Edge, 60-h.p. Napier.

Winners of gold medals in the handicap: Class A—C. Parish, 9-h.p. Sizaire-Naudin. Class B—F. W. Huband, 14-h.p. Alldays. Class C—J. Hodson, 16-h.p. Bell. Class D—T. Rothwell, 20-h.p. Rothwell. Class E—J. Ferguson, 28-h.p. F.I.A.T. Class F—Warwick Wright, 40-h.p. Metallurgique. Class G—J. A. Sutcliffe, 35-h.p. Daimler. Class H—E. W. Lewis, 35-h.p. Deasy. Class I—Ariel Motors, Ltd., 40-h.p. Ariel.

MANCHESTER A.C.

In our issue of the 25th ult. we reported the hill-climbing competition held by the Manchester A.C. on a hill within a short distance of the city, and having an average gradient of 1 in 12. The horse-power was ascertained by the formula $\frac{D^2 \times \sqrt{S} \times N}{5}$ and the handicap was

worked out by the formula $\frac{\text{Weight}}{\text{Time} \times \text{h.p.}}$

The 60-h.p. Napier entered by Mr. J. Newton gained the prize for

| Entrant. | H.P. and type. | Cylinder diam. | No. of cyls. | H.P. $D^2 \times \sqrt{S} \times N$ 5 | Weight. | Time above fastest. | Figure of merit. | Time placing. |

| W. Watson, 60-h.p. Napier, six-cylinder | 48 3-5 | 51 4-5 |

Based on the foregoing times the following awards have been made:—

Winners of the silver cups: For the open handicap, 35-h.p. Deasy; Closed (Members') Handicap, A. J. Ferguson, 28-h.p. F.I.A.T.; for the fastest time of the day, W. Watson, 60-h.p. Napier.

Winners of the open gold medals for the fastest times in each class up the hill on the first run: Class A—Victor Piley, 12-h.p. Riley. Class

the fastest time, whilst the prize for the best performance on handicap, irrespective of class, was obtained by Mr. F. W. Hobday on a 7-h.p. Sizaire et Naudin. An interesting feature of the meeting was the appearance of the 22-h.p. S.C.A.T. entered for the Isle of Man Race, and which was only 8 1/2 sec. slower than the 60-h.p. Napier.

The results have now been officially notified as shown in the accompanying table.

MOTOR YACHT CLUB.

THE fifth annual trials of the Motor Yacht Club were held on the 30th and 31st ult., when the judges recommended that the following awards be made:—

CLASS I.

A bronze medal for reliability and engine starting to C. Grahame White for "Carissima."

A bronze medal for ease of manoeuvring to the Davis Paraffin Carburettor Company for "Davis."

CLASS II.

A silver medal for reliability, consistency of running and engine starting to Dixon Brothers and Hutchinson for "Lotus."

Bronze medals for reliability to Messrs. H. and C. Swayne for "Zonia," and to Dixon Brothers and Hutchinson for "Roxana I."

A bronze medal for reliability and ease of manoeuvring to Miss Larkins for "Cid."

A bronze medal for ease of manoeuvring and stopping and reversing to the Imperial Paraffin Boat Syndicate for "Resolute."

A bronze medal for design and construction of hull and installation to C. Maudslay for "Maudslay I."

CLASS III.

A gold medal for reliability, consistency of running, engine starting, stopping and reversing, ease of manoeuvring, design and construction of hull and installation to Capt. R. T. Dixon, R.E., for "Sphinx."

The judges also decided to award a special bronze medal to Messrs. Boulton and Paul for "Comrade," as a successful example of the application of a simple low-powered and inexpensive motor as an auxiliary to a small sailing vessel.

MANCHESTER MOTOR-CYCLE CLUB.

THE Manchester Motor-cycle Club has concluded a reliability trial from Manchester to Cheltenham and back. On the outward journey, a distance of 177 miles, the following made the run without a stop:—J. Tytler, Reed, Kettle, Heaton, Groes, and Leigh. The fastest time on the hill climb was done by A. Moorhouse, who unfortunately punctured thirty miles from home. The return home was made by way of Daventry, Lichfield, Nantwich, and Altrincham.

ROAD REPORTS.

THE Buxton Urban District Council have tried tar-spraying on portions of Park Road and Manchester Road, and other roads in the district are to be treated in a similar manner.

HELENSBURGH.—The Secretary for Scotland has granted the application of the Helensburgh Town Council for the restriction of the speed of motor-cars within a scheduled area of the town to ten miles an hour.

CASES AGAINST MOTORISTS.

THE LONG TRAP AGAIN.

In defending a motorist charged with exceeding the legal speed limit, at Haywards Heath, Mr. Parkes Taylor thought the long distance traps were very fair, but he considered an offending motorist should be stopped at the end of the measured distance by the police and told that he had been timed, because it might be that a motorist had a speedometer with a maximum speed. The chairman (Colonel Campion) said the Bench had found the £10 scale of fines adopted to have done good service.

"DANGEROUS" OR "EXCESSIVE."

Mrs. Julia Abrahams, a visitor to London, staying at Bailey's Hotel, South Kensington, answered at the South-West London Court to a summons, at the instance of the police, for driving a motor-car at a speed dangerous to the public. The defendant drove her car along Streatham High Road, and passing a tramcar on the off-side, ran into the rear of a trap proceeding close to the kerb on the near side, damaging the vehicle and hurling the occupants into the road. The lady's chauffeur, who was sitting behind her, leaned over and assisted to stop the car. The witnesses for the prosecution estimated the speed of the car at twenty miles an hour. Mr. de Grey at this point intervened with the remark that twenty miles an hour was the recognised speed of motor-cars. Inspector Jays referred his worship to the section which read "dangerous to the public having regard to all the circumstances and conditions of the traffic." Another witness, a tramcar driver, said that the defendant drove across the tram metals between two tramcars proceeding in opposite directions, and ran into the trap with the disastrous consequences

A Reminiscence of the Irish Reliability Trials.—The Imperial Starling 8-h.p. Car driven by Mr. R. V. Greenwood.

PRESTON.—A measured quarter of a mile from the Station Road to Barton Church, near Preston, is being utilised by the police for the capture of speedy motorists.

WORKSOP.—The Worksop Urban District Council are petitioning the County Council of Nottingham to apply to the L.G.B. for a speed limit of ten miles per hour for cars passing through the borough.

RIPON.—The Highways Committee of the Ripon City Council are recommending the County Council to apply for the limitation of speed in several of the narrow streets of the city.

COVENTRY.—Traps have lately been frequent on the Birmingham road.

CROMER.—At Cromer a trap has been established from the top of Cliff Avenue, Norwich Road, to a point opposite Mount Street.

SUSSEX.—At Flimwell the police recently set a trap for motorists, and as many as 200 cars were stopped in one day on the measured distance. The result was that several motorists subsequently appeared before the Battle Bench.

EASTBOURNE.—Owing to allegations with regard to the dangers to horses from the use of calcium chloride, the Eastbourne Rural District Council have deferred taking action on their recent resolution to make experiments with that substance in connection with the mitigation of the dust nuisance.

DURHAM.—The roadway on the main road from Gateshead to Shotley Bridge at Fugate Bar will be closed until Monday morning, the alternative road being by Whickham and Broom Lane.

REIGATE.—The main Brighton road being under repair, motorists from Brighton to London should take the Reigate main road after leaving Horley, and those going to the seaside should turn to the right at Gatton Point after leaving Merstham and then proceed through Reigate.

mentioned. Mr. de Grey said that the defendant was summoned for driving at an excessive speed, and that speed could only be ascertained by means of a stop-watch. The fact that there was an accident was no evidence of dangerous or excessive driving. Holding this view he dismissed the prosecution.

At Grantham, on Saturday, three motorists were fined £5 each for exceeding the legal limit.

Batches of cases against motorists have been heard at Hailsham, Spelthorne, Kingston, Odiham and Barnet.

COMPANY NEWS.

SCOTTISH MOTOR CARRIERS, LTD. £2,000. To carry on the business of manufacturers, merchants, owners, and repairers of, and dealers in, motor-omnibuses, automobiles, coaches, cars, cabs, wagons, ships, and other vessels, &c. Private company, with only two subscribers, viz.: W. G. Malcom, 499, Eglinton Street, Glasgow, and D. H. Penman, 180, Hope Street. £20. Registered office: 175, St. Vincent Street, Glasgow.

MR. A. G. POWER, of Dublin, has recently purchased a 12-h.p. Metallurgique; cars of the same make, of 18-h.p. and 26-h.p., have lately been delivered to Mrs. Ould and Mr. Bevan Petman in London.

A NEW process of brazing aluminium has been devised by Messrs. Griffin and Stone, Ltd., of Stonev Stanton Road, Coventry, and is being applied by them to all kinds of repairs to engine, crank cases, gear-boxes, and other aluminium castings. The repaired parts can, it is claimed, be chipped, filed, turned, bored, tapped, or machined in the same way as any other part of the casting.

FORTHCOMING EVENTS.

AUGUST.

- 8th (Sat.).—Visit of the Kent A.C. to Brasted Chart.
Bristol and Glos. A.C. at Standish House.
Essex M.C. open race meeting at the Stadium, Shepherd's Bush.
Somerset A.C. gymkhana at Fairfield, near Bridgwater.
- 13th (Th.).—Northants A.C. speed trials at Castle Ashby.
Hull and East Riding A.C.C. non-stop run of 200 miles.
- 15th (Sat.).—Coventry M.C. Motor Cycle hill climb at Newnham Hill, Deventry.
Lincolnshire A.C. hill climb at Syston.
- 19th (W.).—Cheshire A.C. Reliability Run.
- 21st (F.).—Ballinaslaught hill climb of the Irish A.C.
- 22nd (Sat.).—Annual race meeting of the A.C.U. at Shepherd's Bush.
Invitation of Sir D. Salomons to the Kent A.C. to visit Tunbridge Wells.
Manchester A.C. club run.
Southend and District competition at Laindon.
- 23rd (Sun.).—A.C. du Rhone Mont Pilat trial.
- 29th (Sat.).—Meet of the Lincolnshire Motor Club at Lincoln.
Mont Ventoux hill climb of the A.C. Vaclusien.
Leicester A.C. gymkhana at Freeman's Meadow, Aylestone Road, Leicester.
Essex M.C. 200 miles Reliability Trial.
- 30th (Sun.).—Southend M.C. run to Great White Horse Hotel, Ipswich.

SEPTEMBER.

- 4th and 5th.—Reliability Consumption Trial of the Essex C.A.C. at Norwich in connection with the R.A.C. provincial meet.
- 5th (Sat.).—Aston Hill climb of the Herts C.A.A.
Provincial meet of the R.A.C. at Norwich.
Richmond M.C.C. week-end at Henley.
- 12th (Sat.).—Brooklands A.R.C. meet.
- 17th (Th.).—Touring car competition of the A.C. of Holland through that country.
- 19th (Sat.).—Provincial meet of the Motor Union at Oxford.
North Middlesex A.C. 100 miles reliability run.
Manchester A.C. reliability run for small cars.
- 20th (Sat.).—Meet of the Hull Auto Cycle Club and the Lincolnshire Motor Cycle Club at Brigg.
Annual Hill Climb of the Bristol and Gloucestershire A.C.
Lunch of the Kent A.C. at Dover.
Herts C.A.C.'s climb for cars at Aston Hill.
- 26th (F.).—Welsh A.C. reliability trial for motor-cycles.
- 26th (Sat.).—N.W. London M.C.C. petrol quantity judging competition.
Invitation to the Kent A.C. by Mr. and Mrs. Schlentheim to Chislehurst.
- 27th (Sun.).—Southend M.C. run to White Hart Hotel, Braintree.

OCTOBER.

- 2nd (F.).—Gaillon Hill Climb.
- 3rd (Sat.).—Brooklands A.R.C. meeting.
- 11th (Sun.).—First International Road Congress and Exhibition at Paris.

NOVEMBER.

- 26th (Th.).—400-mile International Grand Prize Race of the Automobile Club of America.

LIGHTING-UP TIMES—LONDON.

| | | | |
|-----------------|-----------|-----------|-----------|
| August 8th—8.35 | 10th—8.33 | 12th—8.30 | 14th—8.26 |
| 9th—8.34 | 11th—8.32 | 13th—8.28 | 15th—8.22 |

To find the approximate lighting-up time in August for Birmingham 12 minutes should be added to the above times, 17 for York, 21 for Manchester, and 43 for Glasgow.

THE Belfast depot and show rooms of the Maddox Street Motor Company, Ltd., are at 48, York Street.

MESSRS. FRISWELL, LTD., have just received at their showrooms, 1, Albany Street, N.W., a new 60-h.p. six-cylinder car of the well-known Peugeot manufacture, and will be pleased to give a trial run to any interested motorist.

AT a special meeting of the Motor Manufacturing Company (1907), Ltd., held last week, when Mr. Ashley Lumby was appointed a director, it was announced by the chairman that, owing principally to the great success of their six-cylinder engines, the entire output of the company had been sold for a period of two years.

THE Duke of Portland was one of the first notable motorists to adopt Dunlop detachable rims; the latest is the Duke of Manchester. There is every indication that its racing successes have convinced the automobile world of the merit of this rim, the number of wheels received weekly for treatment having increased to such an extent as to necessitate the opening of new works in London.

BUSINESS NEWS.

ON the 25th ult. the North West London M.C.C. held a consumption test, which resulted in a win for a private owner, Mr. W. A. Jacobs, on a 3½-h.p. Rex motor-cycle, the consumption working out at no less than 178 miles to the gallon—surely a record in fuel consumption.

THE UNITED MOTOR INDUSTRIES, LTD., recently sent one of their Simplex speedometers to the Royal Automobile Club for a test on the calibrating instrument. On the certificate that has been issued in regard thereto we find that the recorded error at a speed of twenty miles per hour, equals .34 per cent., and at thirty miles .85 per cent., a degree of accuracy that has rarely been reached in these instruments before.

MR. M. STOCKS and Mr. Boyle Laurence, of London, Mr. E. O. Quike, of Exeter, and Mr. W. Gresham, of Torquay, are four recent purchasers of Metallurgique cars. That of Mr. Laurence is of 40-h.p., and the other three are 40-h.p. models.

MR. E. W. EVANS, of Dolgelly, has written to the Star Engineering Company stating that he recently climbed the very steep hill at Fishguard on his 7-h.p. Star car, which he has now driven over 8,000 miles.

MESSRS. GEORGE POLKEY, LTD., whose lamps are well known to motorists, ask us to remind readers that motor lamps sent to them for repair should be despatched to the Hockley Lamp Works, Pilsford Street, Birmingham, and not to their London office at Finsbury Pavement, E.C. At Birmingham they have every facility for the repair as well as for the manufacture of such accessories.

As compared with previous years there has been a considerable falling off in the number of craft in the roadstead for the Cowes week. "I do not think I have ever in my life known Cowes roadstead to look so empty on a Saturday before race week," said an official of the London Yacht Club on the 1st inst. He attributed it to commercial depression and—of course—motor-cars.

WE have received a copy of the latest volume of the road map issued gratis to owners of Humber cars by Messrs. Humber, Ltd., Beeston and Coventry. The map under notice, which covers the south-east portion of England, has been specially prepared for the use of motorists, and has been produced in handy form for the car pocket. The map scale is five inches to the mile; it is very clearly printed, and the twenty sections into which the portion of England referred to has been divided are canvas backed, and are extremely easy to follow, running as they do consecutively from left to right. Included in the work is an index to the various towns and places given on the maps, together with the names and addresses of Humber agents. In addition the book contains 121 motoring routes, giving the distances between towns. The map is contained in a neat transparent celluloid cover, and is certainly an acquisition to the motorist's library.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

To insure insertion communications and contributions must be in the Editor's hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case, otherwise no liability will be accepted.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment for same is directly specified in forwarding, and the terms arranged before publication.

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

"STANDS SCOTLAND WHERE IT DID?"

WHEN the Royal Automobile Club determined to hold trials which should invade Scottish territory, the representatives of automobilism north of the Tweed determined to assert themselves, with the result that the Scottish Reliability Trial was continued as a separate entity; and the larger event became overclouded by the one of lesser extent.

Apparently the policy of attempted interference with the rights of Scottish motorists is being developed by the Society of Motor Manufacturers and Traders in a way that has been fully explained in our columns by Mr. David A. Fairley, the secretary of the Scottish Motor Trade Association. This organisation has hitherto held an Exhibition which has been most useful to the motor trade of Scotland. Now the Society meeting in London has decreed that none of those who have become "bonded" together shall exhibit at Edinburgh, or, indeed, at any provincial exhibition—a dictatorial assumption that is naturally resented by the Scottish traders, who are unanimous in their intention to go forward with their plans for 1909. Their position is perfectly consistent and they can be trusted not to be overawed by the menaces of a southern body. The latter should take heed of the lesson of the Scottish Trial, which, as the letters on the Trial question on another page amply show, is regarded as of more importance than the British event.

Naturally the many firms that have hitherto kept outside the pale of the Society's influence are watching the position with something akin to eagerness. They see in the Edinburgh Exhibition an excellent opportunity of reaching the Scottish market and of opening agencies in places from which they may have hitherto been excluded; and the Scottish agents, for their part, are showing a disposition to avail themselves of the help of the "free and open" manufacturers who have held aloof from the "bond," recognising that its continued operation will prove irksome to many of the signatories. Hitherto there has been a section of the trade that (like the animals mentioned in ancient writ, without any regard to the ultimate deep place to which they descended, went gleefully forward), have simply done certain things because other people have thus advised them.

The Scottish trade, however, is resolved on making a strong stand—a stand which should give a profitable opportunity to those firms that have withstood the blandishments that have tempted others into the web.

As a matter of fact, those who have not signed the bond are in a most favourable position, and at Edinburgh, Manchester, and again at the Agricultural Hall, London, will have full opportunities of extending their business to an extent that will excite the envy of those who have subscribed to the "bond."

MR. W. MORRISS, an ex-member of the Longton (Staffs) Town Council, has designed a new flying machine of the heavier than air type, which he claims will move against any ordinary head wind. The power will be supplied by a 20-h.p. petrol motor.

At the moment of going to press we learn that the period of practicing for the forthcoming races in the Isle of Man has been extended to three weeks, a concession that will be appreciated by the competitors. The R.A.C. has also been able to arrange for an extension of time in the morning from 7.30 to 8 a.m.

COMMENTS.

Motor-cars in Racing Centres.

NEWMARKET is seriously agitated by reason of the presence of so many speedy motor-cars in the streets leading to the grounds whereon racing horses are exercised. The activities of the police do not, according to the speakers at a meeting held in the town on Monday afternoon, eliminate the risks that are run; and so the trainers of racehorses have resolved to ask Mr. C. D. Rose, M.P. for the division, ex-chairman of the R.A.C., and a good sportsman as well, to suggest to the L.G.B. that it would be reasonable to grant a ten mile limit for motor-cars in the district. Newmarket is not the only locality that is periodically disturbed by the presence of the automobile. Last week it was the turn of the hamlets about Chichester. The presence of the motor-car in racing quarters is not like'y to decrease, as the organ of the Royal Society for the Prevention of Cruelty to Animals testifies in its current issue, wherein reference is made to the excellent custom of its Windsor branch in giving water free to the horses taking people to the Ascot racecourse. This year over four thousand gallons of water were given away from the water carts which went round the course quenching the thirst of the animals. "We hope," adds our contemporary, "that the branch will be able to continue it year by year—at all events until the day when the many thousands attending the races will all be brought to the course by motor-cars."

Traders' Cars.

IN view of the way in which the public mind is being inflamed against the motor-car it behoves every user of an automobile to consider his relation to the whole body of the motoring world. More especially would we impress upon the heads of firms in the motor industry the necessity of exercising strict supervision over those who drive cars bearing traders' numbers. Often have these been responsible for outbursts directed against private motorists. Hence the warning thus mildly conveyed in the hope that those driving trade cars will accept the hint and recognise the harm they can do to the industry by neglect of what is the first duty of motorists, viz., to respect other users of the road.

Motor-car Imports and Exports.

THE renewal of activity which occurred in June in the imports of foreign motor-cars and parts into this country proved to be of a temporary nature, the returns for July showing a decrease as compared with the corresponding month of 1907 of £34,808. Of complete cars 421 were imported during the month, of the value of £145,142. The number of chassis imported was 306, valued at £99,076, while parts were responsible for £166,760, giving a combined total for July of £410,978, as against £445,786 in the corresponding month of last year. The gross imports of cars (2,724 in number), chassis (1,882), and parts during the first seven months of the current year amounted to only £2,598,076, as contrasted with £2,934,688 in the corresponding period a year ago. Turning now to the section relating to the exports of British automobile productions, these again show a slight decrease—from, in the aggregate,

£108,836 in July, 1907, to £83,993 last month. Altogether 137 complete cars (£54,665) and 5 chassis (£1,725) were despatched from this country in July, as well as parts to the extent of £40,730. The gross shipments during the seven months ending with July are returned at £677,139, which contrasts with £692,542 in the similar period of last year.

The Speed of Trams.

NOT only has the Local Government Board made known that it is willing to investigate the merits of any devices that may be introduced to mechanically prevent motor-cars from exceeding a certain limit, but the Board of Trade is also displaying interest in indicators of the speed of tramcars. Intimation has been sent to the organisations concerned with the tramway world to the effect that the Board is now inquiring into a suggestion that speed indicators should be fitted to tramway cars, complaints of excessive speed having been general and frequent. The Board asks to be furnished with information the organisations may possess regarding the trustworthiness and the cost of any speed indicators now on the market. They add that for the purposes of tramcars it is desirable that the indicator should be reliable for speeds as low as four miles an hour as well as for maximum speeds.

Mrs. E. M. C. Instone at the wheel of the 58-h.p. Daimler which made fastest third time at the Shelsley Walsh Hill Climb. Mr. Instone is seen standing by the side of the car in conversation with Mr. G. S. Barwick, a director of the Daimler Company.

The Roads and the Dust.

IN view of the International Road Congress which is to be held in Paris in October next, the experiences of the county surveyors who have lately given scientific attention to the subject of the prevention of dust proves of more than usual interest. It is understood that Mr. H. P. Maybury, who has done much for the Kentish highways, will read a paper showing the improvements he has effected, and that reference is also likely to be made to the excellent roads of Mr. E. Purnell Hooley in Nottinghamshire. We have lately gone into the subject with the county surveyors of two or three typical English districts, and their conclusions should be of considerable value to readers who may be taking part in or following the proceedings of the Congress. Mr. H. E. Stilgoe has tar sprayed over 100 miles of macadam road in Birmingham this season with very beneficial results, so much so that it has been unnecessary to use the water cart on any of the macadam roads thus treated. He has also used tar macadam and has employed a bituminous binder in lieu of the ordinary material generally used for binding macadam roads. Mr. F. F. Bull, the county surveyor of Cheshire, agrees that tar macadam is the least likely to add to the dust nuisance and is now trying experiments with

this material, the results of which should give some reliable data as to its efficiency. Nearer south, Mr. G. W. Manning, surveyor to the Staines Rural District Council, believes that the best material for road construction, having regard to the needs of motor traffic, is Tarmac, while an equally satisfactory result has also been found with ordinary roads when stone bound with a tarvia binder. In Surrey Hahnite has given good results, and so sanguine are the surveyors that we believe the next few years should witness a great advance towards perfection.

The Position in Scotland.

IMPORTANT action is now being taken between the Scottish Automobile Club and the Chief Constables of many of the leading counties north of the Tweed with regard to the complaints which have been made from time to time as to fast, reckless and inconsiderate driving of cars upon public roads. Several warnings have been given both by the police and by the Committee of the Club, but in a minority of cases they have been unheeded, with the result that the official representatives of automobilism in Scotland have now resolved to assist the police in dealing with what they regard as an evil of the present position. Arrangements have consequently been made to co-operate with the guardians of the law in the selection of places where cars should be timed, and the Scottish A.C. has appointed special agents to take the time of vehicles in conjunction with the police, who are to be supported in the prosecution of offenders. This action will have relation to the driving of cars in populous towns and villages or in places where both parties to the arrangement agree that speeds exceeding the legal maximum are improper in the circumstances. In return for this support the Club has been able to secure an insurance that "timed distances" will be suspended in many places where they have hitherto been noticeable.

Ninety Years Ago.

NINETY-TWO years ago the Attorney-General of that day rose in the House of Commons to move "for leave to bring in a Bill, the object of which was the protection of the lives and limbs of His Majesty's subjects, by correcting the enormous abuses of stage-coach drivers. Within these few days [we quote from Hansard] it would be hardly credible what a number of applications he had received on this subject. Some accounts were enough to freeze one with horror. A gentleman of veracity had informed him that on Tuesday, May 21st, at 5.30, the Trafalgar and Regulator coaches set off from Manchester, and got to Liverpool at 8.20, doing this journey in 2 hrs. 50 min., at the rate of twelve miles an hour." We do not know what would happen if the present Ministry brought in a Bill to restrain gentlemen travelling northward for "The Twelfth" to a speed of twelve miles an hour. The revival of this speech is, however, opportune at the present time, when so many correspondents are filling the columns of three London "dailies" with attacks on the speedy travel of motor-cars. Probably in a hundred years their letters may be quoted as instances of the slowness of the people of the early years of the twentieth century.

Motorists and the Dust.

WE commend to the notice of anti-motorists an unimpassioned article in the "Spectator," in which it is rightly urged that "the normal motorist is specially alive to the dangers of the road, owing to the fact that he uses the road so much more than the non-motorist," and that he "is quite as anxious not to be run into as he who hates all forms of self-propelled traffic with a deadly and unreasoning hatred." That the motorist is really anxious to make the conditions of travel more pleasant than they now frequently are is also apparent from the report of the Berkshire A.C. on another page. That organisation recently voted the sum of £50 for tar spraying in the county of Berkshire; and the money is now being distributed in the

form of bonuses upon any sums raised locally in the villages of the county. Thus there is practical evidence of the real desire of the motorist to secure the easy and safe passage of all users of the roadway as well as the comfort of residents.

At the Garden City.

ORIGINALLY it was hoped that the motor-car would play an important part in the development of the Garden City at Letchworth; but, thus far, only one firm that has been located there has utilised the motor-lorry to any extent. Every night the residents of the new city hear the wagon of Messrs. J. M. Dent and Co., the publishers, setting forth on its journey to London, and those who do not come to town may see it again in the morning. On the side roads of the estate an occasional motor-cycle is seen, but motor-cars frequently pass along the main roads between Norton and Letchworth. The city is divided by the railway, and all traffic has to pass under a long and narrow railway arch that should be

Now and again, however, it is well to be brought face to face with the actual facts of the matter. On Monday at Arundel a dozen motorists were summoned for exceeding the legal limit, the fines aggregating £33 and costs. On the same day motorists provided the chief business at the Steyning Petty Sessions, the defendants having been caught at Washington, Upper Beeding and Henfield. In six cases the fines totalled £30, a warrant was threatened in one instance where the defendant did not appear, and the licence of a Brighton chauffeur was suspended for three months. Haywards Heath was busy from the same cause on the same day and nine cases produced over £100 in fines. On Saturday several summonses were heard at another court, and in one case the prosecution was instituted by the police on the complaint of the Mid Surrey Cycling Club; in all nine cases produced nearly £30, to say nothing of the costs. Other benches which have lately distinguished themselves in this way are Kingston, Winchester, Shoreham, Wokingham—to mention only four. But the profitability of the motorist to the county funds is not confined to the south.

The Remains of the Zeppelin Airship after the Disaster.

widened—not only for the convenience of those who travel, but the safety of those on foot. Recently the main residential avenue has been laid with tar so effectually that the dust nuisance is unknown, and now that the estate owners of the Garden City have shown such a regard for motorists as well as themselves, the County Council of Hertfordshire is seeking to impose a ten mile limit on some of the roads leading to the northern part of the place, notably the Norton, Willian, and London roads. Similar restrictions are also sought for roads in the neighbouring town of Baldock.

Excessive Fines.

WE sometimes wonder if motorists realise the extent to which they contribute to the county funds. Every week in our "Cases against Motorists" instances are given of the profitable nature of the hauls that are made by the police from time to time, but so numerous are the cases that we cannot possibly find room to record all the reports that reach us.

Several northern Petty Sessions are becoming notorious in this respect—notably Macclesfield, Tadcaster—where nine motorists were fined on Monday—and Grantham. Equally disturbing reports come to us from Launceston, Hereford, and some of the Western counties.

Victorian Enterprise.

WE have received a copy of No. 1 of the monthly journal of the A.C. of Victoria, of which His Excellency the Governor, Sir Reginald Talbot, K.C.B., is the president. The news is varied, and among the items recorded is the organisation of a motor-car meet in September for the officers of the American fleet, who will then be visiting the Colony. A dangerous hill is being avoided by the construction of a new road, advocated to the Ministry by the club, and reference is also made to a revision of traffic regulations in Melbourne, the erection of danger signs outside the city, and the occupancy of a club room by the members, who now number 300.

A TRIP INTO KENT.

"To Eltham will I, where the King is."

SO says Exeter in Shakespeare's Henry VI., and doubtlessly many a motorist has passed this ancient town without thinking of its many interesting associations, being probably more intent on the trap that, anyway last year, existed in the neighbourhood. Henry VIII. came and kept Christmas here, and, according to Hall's Chronicle, Cardinal Wolsey took the oath as Lord Chancellor in Eltham Chapel. Another authority has it that Richard II. resided there and took much delight in the pleasantness of the place. Princess Bridget, fourth daughter of Edward IV., too, was born and baptised there. But I fear I weary my readers with this town of old memories and so must on. Court Road, the first turning out of Eltham Court, is a good route to Chislehurst. On the left, a little to the side of the road, is the Eltham Golf Club, the clubhouse of which was concerned in the scandal that wrecked Mr. Parnell's career. Soon the Common is reached and Camden Place should be made for. Outside, a tall cross commemorates the Prince Imperial's death. Here lived Napoleon III. and here he died in 1873, and probably many a time did the Empress drive from the Place through Eltham, up Well Hall Road to the Shop at Woolwich, as the Royal Military Academy there is called, and where the Prince Imperial was educated. Under Camden House are some

The Entrance to the Hall of King John's Palace, Eltham.

very interesting caves; according to tradition they at one time were used as a hiding place by the Danish invaders—hence they are called "Daneholes." Some romantically say that they were made by smugglers, and that at times they held much contraband; others declare they were prehistoric flint workings, and the more prosaic declare that they are mere chalk quarries, the chalk being used for road making as well as for ballast for the ships that were at one time built at Woolwich.

The pits are certainly worth seeing, and a very short run will take the would-be underground explorers to the Bickley Arms. After leaving Camden House, pass through a gateway, and then carefully descend a hill; at the bottom turn to the right, and just past the railway on the opposite side is the Bickley Arms. Mr. Field, who has an office at the adjoining stable, is the owner of the caves, and I have to express my thanks to him for his kind permission to reproduce the photograph which illustrates this part of the article. He provides guides, without whom it is not safe to enter, as there are some sixty miles of passages, which wander in all directions. Having obtained the necessary leader and the also useful lamps which are provided, the journey can soon be started. Near the commencement is a narrow opening, by which there is a ledge, and the guide tells how on that seat in the old days the sentinel guarded or slept. Passages innumerable are traversed, and

finally a chamber of fair dimensions is reached. This was said to have been a chapel, and near is a recess—the priest's room; in fact, if for a moment the external surroundings were forgotten, and if only the walls were of darker colour, you could easily imagine you were in the catacombs of St. Calixtus in the Via Appia, outside of Rome. All that is required is to dress the guide as a monk—the recesses are there, the earthy smell is present, and with a little imagination you can add where the bodies should be as well as the broken flask that in Rome is said to have held the blood of the early Christian martyrs. The forty-six feet deep well is shown, as well as the bones of some pre-historic ox.

The central road should be taken across the common, and then, *via* St. Paul's Cray Common, through a lovely district, to St. Paul's Cray, where there is a flint church, the west doorway of which has some peculiar toothed ornamented mouldings. Keeping to the right, St. Mary's Cray and Orpington can be reached. At this latter place Mr. Ruskin not only printed, but also made the paper, for his books. I advise turning to the left at St. Mary's Cray and going among the hop-bearing and strawberry fields by Kevington and Crockenhill to Eynsford. At the latter place turn sharply to the right and the lovely valley of the Darent is seen, with its blooming nursery gardens and cherry orchards. Eynsford Castle has an outer wall that is horseshoe in shape; the old gateway is on the north side, and there is a small chamber, or remains of one, hollowed out near the doorway. In the Norman period it must have been an imposing pile. There is a story that the owner in the time of Henry II. was excommunicated after Becket's martyrdom; and that since then the castle has been untenanted except, of course, by ghosts. A little further on, on the right, is Sir W. Hart Dyke's Jacobean seat, Lullingstone Castle, where there is an ancient music room, with a handsome ceiling. Among the treasures to be seen is an ancient copper bowl, decorated with enamelled Roman ornaments. It was found in 1860, when the railway was being built, and was probably the memorial of some female grave.

Close by the house is the church, that contains some interesting memorials to the various lords of the manor, including a most imposing one to Sir John Peche. I always think that the poet Drayton must have been thinking of this neighbourhood when he wrote these lines about the county:—

Oh! famous Kent,
What county hath this Isle that can compare with thee?
Thou hast within thyself as much as thou canst wish—
Thy wines, venison, fruit, thy sorts of fowl and fish:
As what with strength comports, thy hay, thy corn, thy wood,
Nor anything doth want that anywhere is good.

Two miles, and Shoreham is reached. Here in the church are some relics of Commander Cameron's expedition, and the rood screen is worth seeing. Another two miles and the former site of the Archbishop of Canterbury's palace is seen—Otford. But a small octagonal tower and a little of the cloistered side remain. Near is a spring, St. Thomas's Well, and legend has it that the water came only after Becket had struck the ground with his staff, and that the saint used it for his bath. For many a year after his death the water was credited with marvellous healing powers, and people came from far away to get their ailments cured.

Those bound Maidstone way should here turn to the right by Beechy Lees, along the old Pilgrim's Way—the road the old pilgrims took to Canterbury—and those desiring, and not minding an extra few miles, can likewise take it, even if they be going to Tonbridge, as by turning off at Wrotham they can run straight down by Ightham, Shipborne, through Frith Wood and so to Tonbridge. It is a much prettier route than the more direct one *via* the Bat and Ball to Sevenoaks and thence by River Hill. It was in November last that I took this way, and the view was glorious. It brought to my mind those words of Longfellow:—

There is a beautiful spirit breathing now
Its mellow richness on the clustered trees,
And from a beaker full of richest dyes,
Pouring new glory on the autumn woods,
And dipping in warm light the pillared clouds.
Morn on the mountain, like a summer bird,

Lifts up her purple wing, and in the vales
The gentle wind, a sweet and passionate wooer,
Kisses the blushing leaf, and stirs up life
Within the solemn woods of ash deep-crimsoned,
And silver beech, and maple yellow leaved,
When autumn, like a faint old man, sits down
By the wayside a-weary.

I had, anyway, to sit down, as the road was bad, and one of the back tyres punctured, and the work of putting in a fresh tube and pumping it up made a roadside rest desirable. While waiting I encountered a fellow motorist, who had had better luck than I; just before he kindly stopped to see if he could render aid, he had heard a loud roar; undoubtedly he thought one of his tyres had gone; on getting down they were found to be intact, and while inspecting them he heard another explosion, which on investigation was found to come from the Maxim Company's private artillery range, where some cannon were undergoing tests.

About five miles and Wrotham is reached, the road being a little distant from any villages. Seemingly some of the early pilgrims were not above the failings of the modern tramp, and the inhabitants probably wisely built their houses at some distance from the roads taken by them. A small edible snail, that is to be found along this track, is reputed to have been originally introduced by the pilgrims. Just below the Way, on the right, some two miles from Otford, is Kemsing Church, which is built on the site of an old castle. The church contains an interesting brass in memory of Thomas de Hop. It was at Wrotham that Sir Thomas Wyatt's adherents were defeated in the time of Queen Mary. The church is partly Early English, and contains a fourteenth-century oak screen, as well as some very fine brasses. Turning to the right at Wrotham the road to Borough Green can be followed; here, again, turn to the right and that beautiful old village Ightham is speedily reached. The houses are very old, and the gables are enriched by carved barge boards. The church dates from the twelfth century. There are some fine monuments, including one to Dame Dorothy Selby, who foiled the gunpowder plot by deciphering the warning letter sent to Lord Montague.

After seeing the church I suggest a walk through the village. Near where the roads fork is an old-fashioned grocer's shop, and here until quite recently lived Mr. Benjamin Harrison, who in his spare time has done much original work, and in the opinion of many authorities has pushed back the antiquity of man to a period much more remote than had been previously proved, and on the plateau of the chalk downs near him has found the very earliest traces of man. Pass the Sevenoaks road, ascend a steep lane, and after leaving the schools and the gorse-covered green, and having obtained permission and the needful key, mount the steep fir-covered spur, passing a most picturesque gnarled and moss-grown beech tree, as well as some silver birches, and Oldbury Camp is reached, and the stone roof-covered shallow caves known as the Rock Shelters. Here, according to the old flint implements found, once resided a race who hunted, and, what is more, used primitive needles, for bone needles have been found, as well as flake stone knives, which, it is conjectured, were used to skin the beasts slain. What wondrous tales these old stones tell! The walk through the camp is most enjoyable; it is like a bit of Scotland. The walk should be continued to Ivy Hatch and Rose Wood, where neolithic pit traces can be seen. The man who lived here was probably short and dark haired, somewhat like the Bretons of to-day; the hippopotamus had died out, as well as the cave lion, and he was no more a mere hewer out of caves, and, though he still hunted the reindeer and urus, he also cultivated the soil, as is proved by the primitive spades or digging sticks found, as well as by the "cultivation terraces" seen in this part. Those who are interested can spend hours and may, perhaps, in some of the old pits find many a relic of long, long ago.

If time permits, the outpost of Oldbury Camp, Raspit Hill, should be visited. This is also known as Beacon Hill, which in Queen Elizabeth's time was used to transmit intelligence as to enemies, &c., via Coxheath and Crowborough, and so on to Hampstead Heath and London. Ightham can be reached by

returning through Stone Street and Styant's Bottom, or, what is better, the car can be sent on, and after seeing the camp can be mounted at either Ivy Hatch or Stone Street, and then, in about a mile, the Moat House is reached. It was not far from here that attempts were in recent years made to find coal, but, after sinking some hundred feet and not bottoming clay, the operations were abandoned. The Moat House is, without doubt, one of the most interesting and charming of all the old houses in Kent. Its situation is ideal. The moat is fed by a neighbouring stream, and probably the original house was built on a little island, thus the name of the house and village, eyot meaning island—Ightham or Eyotham being the hamlet of the eyot—but this is disputed. The oldest part dates back to Edward III., and was built in 1180 by Sir Ivo de Haut; anyway, he started the building, and at different periods it has been added to. The grim walls, the Tudor gateway, the quaint gables, Elizabethan outbuildings, the chapel and the painted ceiling, in which can still be noted the badges of Henry VIII. and Katherine of Arragon, all lend a romantic interest to the place. It brings one back to the days of one's childhood. In such a place the Sleeping Beauty may have been found and awakened by Prince Charming; here secret passages must surely exist; here may many a baron robber have issued forth, raided the neighbourhood, and brought home a beautiful, unwilling bride. What

The Caves at Chislehurst.

fantastic dreams it conjures up, what stories of the "good old days" thought of in our youth, when the stories of Harrison Ainsworth were read and believed in.

Yet over all there hung a cloud of fear,
A sense of mystery the spirit daunted,
And said as plain as whisper in my ear,
The place is "haunted."

The billiard-room is an ideal spot, with its comfortable recessed fireplace, and just outside the moat, merely a door to open, and but a step, and the unsuccessful player can, if he so desire, commit suicide by drowning. What delight to sit at twilight in the summer near the door!

(To be concluded.)

THE Automobile Club of America has definitely announced the course at Savannah, Ga., for its "Grand Prize of America," and work has been started to prepare it for the race. The route is 26.73 miles long, and will be covered fifteen times, making a total distance of 400.85 miles. While the road surface is excellent, no record-breaking speed can be expected on account of the great number of turns. There are at least a dozen right-angled corners, and two or three even sharper; the longest straightaway stretch is about two and a half miles.

B

GOSSIP FROM PARIS.

WILBUR WRIGHT is the hero of the day, and he deserves all the admiration he has awakened. His performances at Le Mans convinced the last of the French sceptics that he really flew in 1905. It was not only that he repeated in public the feats he formerly accomplished in private, but it was the manner in which it was done. Farman, Delagrangé, Bleriot, Esnault-Pelterie and others have flown, but in Wilbur Wright's flights there is that stability of the machine which opens up an almost immediate future for the aeroplane as a means of locomotion. It would be difficult to exaggerate the importance of this epoch-making demonstration of the conquest of the air being an accomplished fact. Compared with those of other aviators Wilbur Wright's machine is a marvel. It has a smaller bearing surface, is propelled by a heavy, but much less powerful motor, turning two propellers making no more than 400 revolutions a minute. Nevertheless, it flies! People wondered to see Wilbur Wright choose the little racecourse of Le Mans for his experiments, on the success of which depended the £20,000 to be paid by M. Lazare Weiller for the right to work his patents in France. When they saw him turn and twist about in the air at will like a big sea-gull, thanks to his system of bending the wings of his

invaded by steerable balloons." "What about the aeroplanes?" I inquired. As he has been studying the solution of the problem of flight by the heavier-than-air for a number of years, and as he was, I believe, the first man in France to construct an aeroplane, it is natural he should feel confidence in them. At any rate, he replied by declaring that if the English were not likely to see a French army fly into their country with the object of conquering it as the Normans did, it would, nevertheless, be safe to bet that a man on an aeroplane would cross the Channel before the end of 1910. He added, "I am acquainted with more than one aviator who cherishes the ambition of accomplishing the feat and who is studying the best means of making his flying machine float in case of an accident happening to it during the crossing."

EVERY tourist motoring in France has experienced the annoyance, and perceived the danger resulting from the railway level crossings so numerous in the country. A law has been made prohibiting the creation of any more by new lines, but those which exist will remain. The regulations concerning them are puzzling, yet on their observance depends the responsibility of the railway company in case of accident. At level crossings where trains are constantly passing the gates should be closed at night and be provided with two red lights, while at less fre-

Gargnano.

Riva.

TOURING IN ITALY.—TWO VIEWS ON LAKE GARDA.

machine, their wonder was dispelled and transformed into admiration. Captain Ferber, who, so to speak, introduced the Wright Brothers to the European public by publishing in the August, 1905, number of the "Revue d'Artillerie" the documents concerning their flights sent to him from America by Mr. Chanute, told me he was convinced the aeroplane would in a short time operate a greater revolution in the world than even the automobile has effected. Another enthusiastic French aviator said to me, "What Wright has done is admirable, but his machine is not perfect, far from it. The American has shown us that something practical and nearer perfection can be made, and we will make it."

ONLY a few hours before the destruction of the "Zeppelin" I was sitting with Captain Ferber at a café on the Boulevard Montmartre talking about the future of steerable balloons and aeroplanes. He was certainly very far from foreseeing the imminence of the disaster which befell the German airship, but it was quite evident the captain was well aware of the possibility, not to say the probability, of a serious accident happening during the twenty-four hours' flight of the monster steerable balloon. The misfortune goes far to give weight to the remark he made jokingly, "Oh! John Bull need not be afraid of seeing his island

quented crossings one light is sufficient at the closed gate during the night. However, at level crossings where the gates are, on an average, opened less than fifty times in the twenty-four hours, the railway company is not obliged to put any light, but the gates should be left open and only closed during the passage of a train. There is, however, yet another category of level crossings which is particularly dangerous for motorists on unfrequented roads at night. The gates at these crossings should always remain closed, and their presence is not necessarily indicated by any light at all. It is, perhaps, no very great consolation to know that if a motorist dashes against a gate which should remain open during the night the railway company is responsible, but it is deplorable to think that if an automobilist travelling on an unfrequented road wrecks his machine against a closed level crossing gate which he cannot see in the dark he is precluded from claiming damages from the railway company.

MARNEY.

DR. D. W. CURRIE, of Hilden, Tillicoultry, N.B., has written to the Rover Company, Ltd., stating that the other day his Rover 8-h.p. car without any preparations climbed with ease the hill at Amulree which was found so severe a test by many competitors in the recent Scottish Reliability Trials.

THE SOCIAL WHIRL.

THE PRINCESS OF WALES motored from Frogmore on Saturday morning to meet the Prince of Wales on his return from his Canadian visit and from Cowes. On Tuesday the Princess, accompanied by Prince Edward of Wales, returned by motor, calling at the Franco-British Exhibition on the way to Frogmore. His Royal Highness has since gone to Scotland for the shooting, visiting Mr. Arthur Sassoon, at Tulchan Lodge, Advie, where the motor-car will be largely *en evidence*. Motoring will also be in the programme of the Premier, who is staying with his family at Slains Castle, Aberdeenshire, whither his new 45-h.p. Napier preceded him.

PRINCESS VICTORIA of Schleswig-Holstein and the three Princes of Battenberg, who are staying in the Isle of Wight, motored from Osborne to Yarmouth on Tuesday afternoon and visited the old castle, which now forms part of the Pier Hotel. The royal visitors remained for afternoon tea, and after a stroll round the ancient town returned to Osborne.

THE MARQUIS OF BREADALBANE, whose motoring enthusiasm was related in the *M.C.J.* of the 25th ult., where also appeared a portrait of his lordship on his car, has let his place at Auchmore, Perthshire, to Mr. A. O. Worthington. This has 11,000 acres for sport and is a magnificent residence at the head of Loch Tay, familiar to all Scottish motorists.

MRS. KIDSTON, the wife of the Premier of Queensland, has been motoring in Ayrshire during the last few days. Unfortunately, while on the Howwood and Beith road, near Roadhead, Lochwinnoch, the car in which she was riding collided with a motor-cyclist, who sustained fatal injuries. Sir Robert Finlay, the ex Attorney-general for England, was motoring along a rugged road at Inverfarigaig Pass, on the shores of Loch Ness, Inverness-shire, when the car went over an embankment. Sir Robert happily escaped uninjured, as did also the chauffeur. I hear of another accident which will probably be recorded as a "motor mishap," although the automobile was wholly blameless. The Hon. A. G. Mulholland, who is the eldest son of Lord Dunleath, was motoring in the north of Ireland last week. Going from Newcastle, co. Down, to Downpatrick, a horse took fright and jumped into the car, the motorists having an alarming experience and a wonderful escape.

SOME important trigonometrical surveying has been done by the Royal Engineers in Perthshire during the last few days, and the work will be continued during the present month. Capt. L. W. King is in charge of the party, which has been divided into two sections, one being stationed at Dunkeld and the other at Aberfeldy. Logierait is the centre for consultation in connection with the survey, and motor-cars are being used for transport purposes as well as maintaining constant communication between the two sections.

MANY motor-cars were to be seen in the neighbourhood of Guisborough, in Yorkshire, on the occasion of the water tableaux which attracted considerable patronage from the gentry round about. A garage was thoughtfully provided for those who travelled from the Darlington and Northallerton districts, each about twenty-four miles from Guisborough, the roads being in good trim.

It is becoming the custom in many places for parties to go by motor-car to distant parts of the country for purely social purposes. Under the guidance of Mr. W. O. Utting, of Walsall, fourteen local councillors and friends had a delightful run through East Anglia the other day. They trained to Fakenham and started on three automobiles for a splendid tour, skirting the park of Lord Hastings at Melton Constable, and going on to Sheringham and Cromer, making a stay at the Royal Links Hotel at the latter place. After a ramble a re-start was made

from the Grand Hotel to Wells and the seat of the Earl of Leicester at Holkham Park. Thence the way was to Hunstanton, Sandringham, Lynn, and back again to Fakenham—an ideal day's holiday.

A WORTHING week is likely to be one of the attractions of the south coast this year, the event developing out of the annual regatta, which generally takes place at the end of August. On one day a motor carnival will be held, and Mr. G. H. Warne, who has already been promised a run of the Lancashire A.C. to Worthing during next month, has consented to assist in its organisation. Mr. Warne is, of course, known to all visitors to the town, and the additions to his hotel, lately noted in the *M.C.J.*, are proving gratifying to visitors as well as to the enterprising owner.

MR. FRANCIS A. BOLTON, J.P., is the president of the Derby and District A.C., and on the occasion of a recent competition invited all the members to his picturesque residence at Moor Court, Oakamoor, North Staffordshire. Unfortunately the weather was treacherous on that occasion. Mr. Bolton again invited his motoring friends to Moor Court on Saturday last, when a most enjoyable time was spent. Mr. Bolton has been a keen motorist since 1900, during which time he has owned more

Mr. Francis A. Bolton, J.P., the President of the Derby and District Automobile Club.

than a dozen cars of various types, his latest acquisition being a 40-50-h.p. Ariel, on which he participated in the Midland A.C.'s recent hill climb at Shelsley Walsh.

AN interesting social event has been arranged by the North-Eastern Automobile Association to take place on the Polo Grounds, Gosforth Park, Newcastle-on-Tyne, to-day (Saturday). This will consist of a combined gymkhana for polo-ponies and motor-cars—quite a unique association, and one that I understand from Mr. J. E. Hodgkin the motorists of the North-east coast are organising in conjunction with the Northumberland Polo Club.

MR. RICHARD HAMPSON JOYNSON, of Chasefield, Bowden, Cheshire, and of Alt Skeith, Aberfoyle, Perthshire, whose death was recently announced in these columns, left estate valued at £241,009 18s. 8d. gross. He bequeathed £10,000 to his son-in-law, Mr. W. Joynson-Hicks, M.P., the chairman of the Motor Union, and to his daughter, Mrs. Grace Lynn Joynson-Hicks, property worth £200,000, including all his jewels, household and personal effects, horses, carriages, and consumable stores, and his residences, Chasefield and Alt Skeith, as well as £100,000.

LOLLIUS

Should a 2,000 Mile Trial be held in 1909?

VIEWS OF PARTICIPANTS IN THIS YEAR'S EVENT.

INTRODUCTION.

LAST week we referred to the discussion which had taken place at a meeting of the Committee of the Royal Automobile Club as to the advisability of holding a trial next year on similar lines to that of 1908. So far as the Club is concerned the matter is still in abeyance, and the whole subject will come up again at the next committee meeting. We have on several occasions written of the absence of any real necessity for such tests in these days of reliability, and our views have met with considerable support from those who have been closely identified with the industry. With regard to the future we feel strongly that such long-drawn-out trials are unnecessary, and that if the Club would give the trade a year's rest from the worry attached to the preparation for, as well as the participation in, such an event, it would be rendering its greatest service to the industry.

Our invitation to the contestants in this year's 2,000 mile and also the Scottish Trial has produced replies which amply confirm the view expressed in recent issues, and should cause the Committee of the R.A.C. to pause in any attempt which may be made to devise another expensive and extensive programme for the automobile manufacturer and agent. Owing to the holidays some well-known names are absent from the Symposium, but we hope to continue the publication of a series of letters from competitors in this year's Trial, which should prove conclusively that there is no desire for a repetition of the 1908 event.

UTTERLY UNNECESSARY.

Messrs. H. M. Hobson, Ltd., are of the opinion that the "Royal Automobile Club long-distance trials for touring cars will, in the future, be utterly unnecessary. They are enormously costly to the manufacturers, and the general public do not fully appreciate the trials and difficulties through which the cars have to pass, nor recognise the fact that even for a car to have completed the whole trial is a proof of the extraordinary endurance of the machine. In the early days of the motor trade no doubt long-distance trials were of the utmost importance to enable buyers to gauge the durability of motor-cars in general, and give them an opportunity of forming an opinion of the most reliable firms with whom to place their orders."

Messrs. Brown Bros., Ltd., write:—"One of the main points is, we certainly do not think it is any good having another similar trial to this if the manufacturers are going to be allowed, the same as they were this year, to put in cars which were not of their standard manufacture. We do not consider a trial of a car that is specially built up for a special purpose to be a trial at all, as it does not show in any way what the manufacturer's regular selling car will do. But, on the other hand, it gets advertised to the public as though it were one of the regular cars which he manufactures, and to manufacturers who enter their regular touring cars we consider it is most unfair. As to the question of whether a trial of this description is any good to the manufacturers, it is really very hard to say. We certainly do not think there is any necessity to put a car through the trials that the Scottish Club put cars through in Scotland. No man would require to go over the road they sent their cars over, and we think it quite useless to have trials over roads which no tourist ever thinks of going over. As a firm, we are of the opinion that it is very questionable if any more of these trials will do any good. We think enough have been held."

A REST TILL 1910.

Mr. T. Blackwood Murray, B.Sc., writing on behalf of the Albion Motor Car Company, Ltd., is "certainly of opinion that the R.A.C. would be well advised not to hold any further Reliability

Trials before 1910. If such trials are not held too often the public undoubtedly take a greater interest in them, and they are of correspondingly greater value as an advertising medium to the manufacturer."

NOTHING PROVED.

Messrs. Middleton and Townsend, of Edinburgh, were not competitors in the 2,000 miles trial this year, but were competitors in the Scottish Trials. Their views are as follows:—"Personally, we do not think the 2,000 miles trial is desirable and think that the Scottish Trials are quite severe enough to test any car thoroughly. The journey of the cars in the 2,000 miles trial, with the exception of the Scottish run, to us proves nothing. It merely shows that a car is capable of going slowly along good level roads with an occasional hill-climb of practically no severity, and the finish of the trial at Brooklands we think is quite out of place for touring cars."

TRIALS ARE USELESS.

The Junior and Otav Cars Company, Ltd., "consider that a trial similar to the 2,000 miles lately concluded is not only unnecessary, but absolutely useless. In common with other manufacturers of first-class cars, we entered a 20-24-h.p. Junior for these trials, and as the performance of our car was one of the outstanding features, we think we can speak with some authority on the subject. Our car, as you are aware, went through the whole of the trial with a loss of only six marks for reliability (four for changing a sparking plug, and two for adjusting chain, on the rank, before starting in the morning), but we do not consider this proves very much to the buying public, as we guarantee every car we sell for a period of two years, which represents a distance of between 6,000 and 10,000 miles. While, we are, at all times, prepared to put our cars to the most stringent tests, we should not be willing to waste any money by entering them for a reliability trial, should one be held next year, as we far prefer to give the public the benefit of the money thus saved."

NO ORDERS TRACEABLE.

Messrs. Sidney Straker and Squire, Ltd.:—"Although we have participated in most of the public trials, commencing with the War Office Trials in 1901, we have never yet been able to trace a single order to any trial in which we have taken part. Further than that, we are distinctly of the opinion that trials no longer afford the manufacturer any information which is of any value in regard to his productions. Of course, some years ago, when the self-propelled vehicle was in an admittedly imperfect state, trials of this nature were of very considerable value, but since that time it may be said that, generally speaking, the self-propelled vehicle has arrived at such a state of perfection that it is obviously impossible to institute a trial of sufficient length to be of any great value either to the manufacturer or the user. Generally speaking, the manufacturer can only improve his vehicles now from the data which he accumulates himself from those vehicles which are in daily use, and where the use extends over an infinitely longer period than could be possibly covered by any official trial. Our own experience is that the using public, knowing a great deal more about motor vehicles than they did a few years ago, attach little or no importance to the results of trials of this nature. So far as commercial vehicles are concerned, they are guided almost entirely by the results obtained by their friends, or from trials instituted and observed by themselves, and no doubt this to a very large extent, especially in regard to the former procedure, is applicable to the pleasure car trade. The expense entailed by manufacturers is very considerable, and is altogether out of proportion to any benefit derived from trials of this nature."

LITTLE PUBLIC INTEREST.

Mr. Thomas Shaw, of Dundee:—"My own opinion is that if the club goes on with it they will get even less support than they received this year—and there were so few cars finished in the various classes that the public could really not be expected to take very much interest in it, and the honour of securing the awards is rather an empty one. In the first place, if conducted on similar lines it occupies too much time; and at the busiest part of the season it must be very inconvenient for all except the large firms to have their best men occupied for at least six weeks at a time when they must be very badly wanted for other work. In the second place, it is so long from start to finish that long before the finish the public have lost all interest in it, therefore I do not think in the present state of the trade that any trial should be held which occupies more than a week.

Scotland is admirably suited for reliability trials, and I am strongly of the opinion that they should be left to the Scottish Club. I do not want to belittle the R.A.C. Trial, but I am quite sure the cars that received awards in the Scottish one will reap more benefit from a commercial point of view. Everyone, I think, admits the Scottish Trial was a very severe one, and anything beyond that, I consider, was a waste of time and money."

A TRIPLE OBJECTION.

Mr. P. C. Kidner, of the Vauxhall Motors, Ltd.:—"Our objections to this year's trials may be entered under three heads, i.e., tremendous expense, length of time taken, inadequacy of the trials to really test a car.

We do not consider that 2,000 miles at 20 m.p.h., even with a few stiff hills, really tests the modern touring car. Our car, as you know, came off after the Brooklands race in a perfect condition and has since done 3,000 more miles, including numerous hill-climbing competitions, without being touched in the way of overhaul or repair. At the same time we feel that a longer trial is impossible for several reasons, expense being the chief one. Another point we should like to see included would be a careful inspection and trial of each car by a competent committee of judges on the lines of the Motor Yacht Club's reliability trials for motor-boats, who would note and publish the points, good or bad, in the competing cars both of construction, road running, hill climbing, cleanliness, accessibility, and many other points.

We must confess we are unable to suggest any method of satisfactorily testing the modern car on the spur of the moment, but before other trials are decided on we should strongly urge the authorities promoting them to call a meeting of manufacturers and agents to thoroughly ventilate the subject."

THE SCOTTISH TRIAL SUFFICIENT.

Mr. Thomas Cureton, of the Sunbeam Motor Car Company, Ltd., writes:—"We did not enter for the last R.A.C. Long Distance Trial because we do not think it would serve any useful purpose so far as the public or motor manufacturers are concerned. We believe that the most useful trials are the Scottish Reliability Trials, which are most carefully carried out, and the cars run under ordinary touring conditions. In our opinion, anyone wishing to buy a car cannot do better than investigate its performances in these trials, and if the car has done well, it can be taken as positive proof that the vehicle is reliable. Moreover, we consider that the eight hundred miles of the Scottish Trials is quite enough to prove all that can be proved by a reliability trial, because to test the modern car to destruction would take more like twenty thousand than two thousand miles; therefore, seeing that the Scottish Trials are sufficient to teach the public or makers all that is required, why go to the additional expense of the R.A.C. Trials?"

Messrs. Wilfrid Foulis, Ltd., of Edinburgh, say, "that in our opinion the Scottish trials, which have been so successful in the past, fulfil all the requirements of a reliability trial."

Mr. Herington, of Ariel Motors (1906), Ltd., thinks "the matter in question should be left solely to the discretion of British manufacturers, and we would suggest that the R.A.C. take a vote on the matter from British manufacturers only. It is a question which we think should be left entirely for the trade to decide for or against."

A NEW SPLASH GUARD.

IN a recent issue we referred to a new splash guard which has lately been put on the market by Messrs. A. E. Oakley and Company to prevent motor vehicles splashing mud in bad weather. This week we are able to illustrate another arrangement having a similar object which has been devised by Mr. C. Chetwynd Ellison, of Monckton, near Barnsley. As will be seen from Fig. 1, which shows the guards fitted to a 15-h.p. Humber car, they are made of leather and are attached to a bar

Fig. 1

or T piece pivotally supported on a small stud secured in the axle cap, and held in place by a split pin passed through the stud. The guards are so arranged that they can move vertically or laterally, should any obstruction be met on the road, any excessive movement being, however, prevented by means of a light connection between the leather and the wings of the car. Provision is made so that the guards can be adjusted at the proper height from the ground. In dry weather, when the guards are not required, they can be removed in the space of about a minute and refitted equally as quickly.

Mr. Monckton has used them on his car for some time and has had some photographs taken to show their efficacy in preventing plashing. In Fig. 2 a man is seen standing at the side of a muddy

Fig. 2.

road wearing a white dust coat, the effect of driving the car past him, with and without the guards, at a speed of 20 miles per hour being clearly depicted. The idea is one which is well worthy the attention of those interested in the running of motor-bus and cab services, as, with the increasing number of vehicles now in use, the question of preventing mud splashing to the annoyance of pedestrians is one that may have to be seriously considered in the near future.

SOME CURRENT TOPICS.

The Cost of Repairs.

Now that the touring season is in full swing motorists are meeting with new experiences, some pleasant and some otherwise. Particularly is this the case as regards the variations in the prices for petrol, oil, and other accessories that rule in different parts of the country. In connection with repairs, too, automobilists are often somewhat surprised at the extent of the bill when the same is presented for carrying out any little job that has been found necessary on the car. One of the readers of the *M.C.J.*, who has recently been touring in the Lake district, has sent in particulars of an instance of what he considers an excessive charge. Finding two small holes in the pipe which conveys the oil from the crank case of the engine to the mechanical oil distributor, he stopped at a small roadside garage and asked for a man to take the pipe down, which was done. The pipe was then tested in a bucket of water and two pieces of solder were applied to make the hole up. The motorist in question adds: "We put the whole thing back and the time taken was 30 min. The whole job was done on the road side, the charge for which was six shillings. I consider that, seeing no tools were used with the exception of a movable spanner and soldering iron, this is extortionate, and it only makes people who are on tour chary of calling at any garage on the road. As showing the other side

ment. But when the garage owner has a clear idea of the advantages of cleanliness and order, he is usually able to do a great deal toward remedying even this defect in his surroundings. The question of charges, too, as is pointed out above, is one which needs careful consideration. Once a garage, no matter how limited its scope, has been placed on an orderly basis, and organised along right lines, it becomes attractive to motorists.

A Deasy Souvenir.

Calling on Mr. W. G. Williams, at the depot of the Deasy Motor-Car Manufacturing Company, Ltd., at 10, Brompton Road, Albert Gate, London, S.W., on Tuesday, I found him busily perusing the latest publication of the well-known concern. This is a delightful souvenir of the creditable performances of the Deasy cars in the recent 2,000 miles and Scottish Trials. The excellent sketch map will convince readers as to the arduous nature of the Trial, and the lucid chronicle of each day's running of the two cars will be proof of the reliability of this particular type of vehicle, whose irreproachable records are official testimony that should stand them in good stead with prospective motorists. I had previously assured myself as to the fact that the 35-h.p. and the 25-h.p. cars engaged in the Trials were standard productions as supplied to customers, and since the trials Mr. Horace Walker, of Bristol, has gone over practically the

Motoring in Canada.—A Meet of the Winnipeg Automobile Club.

of things, on my return I had to call at a garage in Kendal, owing to having lost a fan belt, and to one of the oil pipes being made up. I was in the place about half an hour, and the firm supplied the fan belt and did the small necessary repair, yet I was only charged the sum of 2s. 6d. This firm, I am pleased to say, hold the appointment of the R.A.C. as repairers."

The Needs of the Country Garage.

The motoring tourist has many opportunities of contrasting broadly the garage conditions afforded by the typical establishment in large towns and the average country equivalent which stands as substitute for it by necessity, though seldom from choice. A garage may be considered as serving a three-fold purpose, namely that of a store for the supply of fuel, lubricant and other necessities; a machine shop, where repairs of any kind may be carried out; and a repository for the safe storage of cars when the same are not being used. In view of the relatively small amount of business as compared with a large town garage, it is not to be expected that a country establishment shall be so perfectly equipped and carry such a large stock of supplies and spare parts as those in busy centres, yet there is no doubt that considerable improvement could be effected in many of them. It is true that in a small garage it is difficult to separate the various divisions of work, and that confusion and its kindred difficulties follow very often merely through lack of space, and possibly want of funds to establish a systematic arrange-

whole of the Scottish course on his Deasy car with not a single involuntary stop—proof that a private owner can obtain as good results as those credited to the appointed driver. Our columns have lately testified two more recent successes of the car, notably at the Lancashire A.C.'s hill climb at Rivington Pike, and London readers will be interested in an inspection of the show-rooms of the Deasy Motor-Car Manufacturing Company, Ltd., which are immediately opposite the Knightsbridge "tube" station. Readers interested in the picturesque as well as the practical should apply for a copy of this souvenir.

ARCANUM.

NEWS is to hand from Australia that another attempt to cross the Continent by motor-car is being made by Messrs. Dutton and Auger. It will be recalled that a short while ago these two adventurous motorists attempted to cross from Adelaide to Port Darwin, but were defeated when they reached the Northern Territory by the heavy tropical rains and were compelled to temporarily abandon their 20-24-h.p. Talbot car at Tennent's Creek and return by train, as the country had become impassable. Mr. Dutton has now purchased a new 25-h.p. Talbot car to do the journey over again, and, guided by the experience gained on his initial trip, there is every possibility of his succeeding. It is the intention of the motorists when they reach Tennent's Creek to pick up the 20-24-h.p. car they left there and drive it on.

CONTINENTAL NOTES.

The 1909 Prince Henry of Prussia Touring Competition.

It is reported that a new route is being mapped out for the 1909 Prince Henry of Prussia touring competition, and that the finishing point will be in South Germany. The speed trials will be again held in the Forstenrieder Park, Munich, while the hill-climb will probably take place in Austria.

British Motorists in France.

Recent British visitors with their cars to France include :— Mr. and Mrs. Grunenbaum, London (60-h.p. Daimler) ; Mr. Shepard, Birmingham (24-h.p. Fiat) ; Sir William Adby (24-h.p. Rochet-Schneider) ; Mrs. Dunlop, London (15-h.p. Mors) ; Mr. Houston, London (40-h.p. Siddeley) ; Mr. and Mrs. Sharp, London (60-h.p. Napier) ; the Marchioness of Casteja, Scarsbrick Hall, Lancashire (Delaunay-Belleville) ; Mr. S. D. Samuel, London (40-h.p. Panhard) ; Mr. and Mrs. Bennett, London (50 h.p. De

low weight and small space occupied, six ; ease and rapidity of fitting and dismounting, and maintenance of apparatus in good order, four ; cost, six ; quickness of inflating operation, twelve ; inflation of tyres by ordinary air, twelve. Entries, at the rate of £1 per apparatus, will be received by the Commission de Tourisme de l'A.C.F., 8, Place de la Concorde, Paris, until December 1st. A sum of £80 will be divided in prizes in connection with the competition.

Aeronautical News.

The leading events of the week in the aeronautical world have been the disaster to the Zeppelin dirigible airship and the success of Mr. Wilbur Wright's first public trials with his aeroplane. The former took place at Echterdingen, near Stuttgart, last week, the airship catching fire during a storm and being entirely destroyed. At Le Mans, France, on Saturday, Mr. Wright succeeded in flying nearly two kilometres in 1 min. 46 sec. without mishap. Again on Monday and Tuesday he made successful

Prince Alexander Sols of Austria—next to the driver—preparing to follow the competitors in the recent Motor Volunteer Run from Vienna to Berlin. [Allgemeine Automobil Zeitung.]

Dietrich) ; Mr. and Mrs. J. Barker, London (24-h.p. Delaunay-Belleville) ; the Duchess of Manchester (40-h.p. Fiat) ; Sir Henry Samuel (30-h.p. De Dion) ; and Baron J. Von Knoop, London (40-h.p. Argus).

A Competition of Tyre Inflating Devices.

During the course of the Paris Salon, in December next, the French Automobile Club will hold an international competition of all classes of tyre inflating apparatus, excepting those which employ compressed gases in separate receptacles. Firms may enter one or more different arrangements, and where it is intended that the same is to be operated by the engine, it must be properly installed on a car. The tests will be carried out on a 935 by 135 mm. tyre, which will have to be inflated to a pressure of 6 kilos. per sq. centimetre. The award will be made on a point basis, the maximum number to be gained being, certainty of operation and durability of apparatus, twelve ; ease of adaptation to different cars, eight ; ease of operation, twelve ;

flight. Through the aid of private contributions the Austro-Hungarian military authorities are acquiring a dirigible airship of German construction.

Motor Vehicles in the French Military Manoeuvres.

The French Ministry of War has invoked the aid of the Chambre Syndicale de l'Automobile in procuring at least eighty motor wagons for use in connection with the military manoeuvres, which are to extend over twelve days next month, in the Blois, Tours, Chateauroux, and Bourges district, and in which over 100,000 soldiers will take part. The vehicles, which will be used exclusively for the transport of provisions and water to the troops, must have a minimum load capacity of two tons and be capable of covering sixty to seventy miles daily, loaded over half the distance. The eighty trucks will be divided up into classes, according to their weight and speed, a certain number being placed at the service of each army corps or division. Fuel, oil, and grease are provided by the Government, and, in addition,

a station is provided for each convoy, where necessary spare parts can be kept and slight repairs undertaken. The indemnity to the owners of the trucks is one franc per horse-power per day. Two men must accompany each wagon; they will be granted payment at the rate of two and a-half francs a day for their services, and will rank as reserves in the motoring corps.

An International Automobile Congress.

The International Congress on Automobilmism which, at the instigation of the French Minister of Public Works, is to be held in Paris in October next, has been fixed for the 5th of that month. The object of the gathering is to consider means of facilitating the entry of motorists and their cars from one country to another. The French Touring Club has already proposed

The O.T.A.V. Voiturette which, driven by Mr. G. J. Bertelli, secured third place in the Journalists' Handicap at the August meeting at Brooklands.

The vehicle, which was only received from Italy two days before the race, and had therefore not been tuned up, is a standard car, the body, &c., having been removed for the purpose of the race.

that the authorities in France should not require visiting motorists on arrival to register their cars and obtain a *permis de conduire*, but should recognise the official number plates and driving licences issued in other countries. As the desirability of encouraging motor touring is being increasingly recognised, this may serve as a basis of discussion at the Congress.

Miscellaneous Items.

A Mercedes six-cylinder car was last week driven from Paris to Carlsbad, a distance of about 650 miles, in 23½ hours, the net time, deducting stoppages, being 19½ hours.—The Grand Duke Paul of Russia has ordered a Lorraine-Dietrich 15-h.p. six-cylinder car.—The members of the International Road Congress to be held in Paris in October are to be officially received by the Paris Municipal Council at the Hotel de Ville on the 12th of that month.—The Automobile Club of Spain has succeeded in inducing the Spanish Government to adopt the triptique system, by means of which foreign motorists belonging to recognised automobile clubs will be able to take their cars into the country free of customs duty.—Owing to difficulties with the authorities it has been decided to abandon the Mont Cenis hill climb this year.—Motorists who intend driving from Calais to Paris should take note of the fact that a thick layer of broken stones has been put on the Paris-Calais road at a point near Airaines, 20 kilometres from Beauvais. There is no warning sign-post, and the layer of stones, which extends right across the road, cannot, owing to a bend, be seen until a car is within a few yards of the spot.—A motor-bus service has lately been started in Moscow. At present only two sixteen-seated vehicles are at work.—Some experiments are being made in Munich with a new dust-preventing preparation known as "Epphygrit."

SOME USEFUL NOTES.

EVERY owner should possess a plan of the wiring of the ignition system of his car. If it is not supplied by the makers, he should draw out one himself, so that it is always ready for reference.

Too much care cannot be taken in seeing that no dirt or waste is put into the oil reservoir of a car, as one or more of the leads from the same may be clogged up, and before it is noticed a bearing may be ruined.

MOVING the steering wheel while the car is at rest tends to unduly strain the joints between the wheel and the front road wheels. Of course, there may be times when it is difficult to avoid moving the steering gear while the car is at rest, especially when turning in narrow roads; but as far as possible the rule should be adhered to of never forcing round the steering until the road wheels are moving.

IN fitting a speedometer or mileage-indicator to a car it is absolutely necessary to have the driving gears, which are mounted on one of the road wheels, exactly centred on the latter, otherwise the gears will wear quickly and will also be noisy. Occasionally the gear is mounted eccentrically in regard to the bearing centre of the wheel, with the result that during part of the revolution the teeth are fully in mesh, and during the rest only the edges are engaged. If the centre of the hub cannot readily be found, then the inside of the rim can be used, taking care to have all points on the circumference of the gear equidistant from the rim.

MOST of the parts of motor-cars are occasionally cleaned from necessity rather than choice, but the silencer is frequently entirely neglected. To the average driver the silencer is simply a sheet iron case, which by some means prevents the noise of the exhaust from becoming a nuisance. Consequently the interior of most exhaust boxes after a time resembles a coke oven, and when eventually taken apart is far from a pleasant thing to handle. The deposits can sometimes be removed with a brush,

Mr. Ruggeron, who represents the Ariel Company in Portugal, at the wheel of his new 30-40-h.p. Ariel Car.

but a scraper is needed in most cases. Most silencers create some back pressure, which is due to the constricting of the stream of exhaust gases and to breaking them up. When a deposit lines the walls it becomes necessary after a while to use a cut-out. This is particularly true on small motors, where the power loss may be as great as 35 per cent. in case of dirty silencers. The remedy is obvious.

At the foot of Pains Hill, at Cobham, on the Portsmouth road, will be found the well-equipped establishment of the Cobham Motor Works.

A MOTION urging the Town Council to apply for a L.G.B.

restriction of the speed of motor-cars to 10 m.p.h. is about to be moved at the meeting of the Sheffield Corporation.

THE late Mr. Thomas Thursfield left his motor-car and its accessories to his man-servant, Philip Tudor, "for his kindness to his brother and myself."

A NEW liquid metal polish known as "Electra," for cleaning the bright parts of motor-cars, has lately been put on the market by Messrs. Lane Bros., of the Electric Works, South Lambeth, S.W.

AT the Victoria Garage, Nottingham, Messrs. Andrew King and Company, Ltd., have good facilities for serving motoring visitors, and also conducting a growing business in the sale and exchange of automobiles.

A CARDIFF taxi-cab driver recently drove his cab, a 10-12-h.p. Coventry Humber of standard pattern, containing three passengers, from Cardiff to London and back—a matter of 340 miles, at an average speed of sixteen miles per hour.

A NEW garage at Settle, specially erected for Messrs. Lancaster, is now practically completed. The premises, which are spacious, well lighted and admirably fitted for the housing and repairing of cars, are located near the main road from Hellifield to the North.

FROM the Vacuum Oil Company comes a copy of the new edition of their handbook dealing with Mobiloils. This gives full particulars of the various brands of these well-known lubricating oils, and will be found well worth perusal by motorists who take a practical interest in their vehicles.

WE learn from the Wolseley Tool and Motor Car Company, Ltd., that the output of Siddeley cars from their works at Adderley Park, Birmingham, during the months of June and July totalled 298 vehicles, in addition to a considerable number which were despatched from their factory at Crayford.

THE County Chemical Company, Ltd., Birmingham, have lately introduced a new spring terminal for use in connection with sparking plugs which appears to possess features of merit. No nut is employed to fasten the terminal, which, while perfectly secure, can be instantly attached and detached even while the engine is running and without danger of shock.

THE latest American motoring accessory is the Nasalfilter, a little device to keep the nose and head passages free from dust. It consists of a frame of sterling silver, held in place by springs, and fine linen stretched inside the ovals. It is claimed that the filter fits snugly and comfortably into the nostrils, and that when worn the only portion that is visible is the silver wire bridge connecting the two ovals.

A HORSE in a garage certainly seems out of place, but that is what the curious may see any day at the Zacharias Motor Garage at Asbury Park, N.J., U.S.A. The animal is used to haul cars to and from the washing stand, instead of having them pushed by man-power, and the owner states that he gets the moving done in one-third the time. There is also a considerable saving in wages, as some five or six men are dispensed with by the new arrangement.

MESSRS. SHIPPEY BROTHERS, of 13 and 14, King Street, Cheapside, E.C., are placing on the market a new compound known as "Chemical Decarbonizer," to be used for cleaning and renovating petrol and gas engines. It is supplied in sealed cans of two sizes—No. 1 for single and double-cylinder motors, and No. 2 for four and six-cylinder engines. It is claimed that by removing carbon deposits from an engine every month by means of the new preparation the power of the average motor will be increased from 15 to 25 per cent. by its use, according to the age and construction of the same, and further that it will reduce the petrol consumption. Messrs. Shippey are issuing an interesting pamphlet describing the merits of the new compound, copies of which will be sent on application.

MR. LLOYD GEORGE has just motored from Carlsbad to Bayreuth.

APPLICATIONS of oil-tar are being made on the Hampton Court Road, Surrey.

A NEW steam car known as the "Arden" is being put on the market by the Arden Works, of Fenton Road, Halifax.

THE increase in the cost of road construction in Cheshire is this year, 22 per cent. more than last.

THE Rev. Henry Russell Wakefield, rector of St. Mary's Church, Marylebone, has recently purchased a Standard 20-h.p. car.

MR. F. NASH has a motor depot in Fisherton Street, Salisbury, where he is doing business with local and visiting motorists.

IN a recent issue we referred to the ingenious auto-syphon for transferring petrol from tins to the car tank without loss or danger which had been devised by Mr. W. Dean Williamson, of Orrell, Wigan. The device has now been taken up by Messrs. Alfred Dunhill, Ltd., Euston Road, London, N.W., who are putting it on the market as the "Dunhill Auto-Syphon." To empty a tin of petrol it is only necessary to attach the apparatus by means of the screw cap, which is of a convenient shape for

tightening by hand, and then press in the sides of the tin, the latter being placed on a higher level than the tank. A very slight pressure only is required to start the syphoning, after which the tin is emptied automatically. It is impossible to lose any petrol by splashing or otherwise where the Auto-Syphon is employed, and all particles of dust, &c., which may be in the spirit are effectually prevented from entering the tank by means of a filter.

MR. E. W. HILL, of Bridgwater, has kept a careful record of his costs since February, 1907, in running a 30-h.p. Beeston Humber. During twelve months the car covered 5,430 miles at a total cost of £42 14s., made up as follows:—Petrol, £17 10s.; lubricants, £4 14s. 6d.; tyres, £17 2s. 6d.; charging accumulators and carbide, £3 7s. The car did an average of eighteen miles per gallon of petrol, and it will be seen that the total cost of running works out at rather less than 2d. per mile.

MESSRS. SLATER, BATTY AND COMPANY, of Hitchin, are becoming well known throughout the county as motor-car advisers. Mr. W. J. Willmott, who is a resident of the town, has had a 6-h.p. car supplied by them which he has run several thousand miles in eighteen months without a breakdown, while the Daimlers, Argylls, Vulcan and other vehicles advised to clients have brought glowing eulogies to the firm. They not only advise but they know how to overhaul cars before handing them over to future owners.

Correspondence.

(Letters to the Editor should be addressed to the offices, 37-38, Charing Cross Road, London, W.C.)

AN ENGINE TROUBLE—AND ITS SOLUTION.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—
"Though plunged in ills, and exercised in care,
Yet never let the noble mind despair."

These words of Phillips seem surely to apply to motor torts, and I came across a case recently which appeared to show that this aphorism could be used with regard to motor worries, and as the case in point seemed of interest, I thought that maybe your readers might like the history of it. Scene: a country garage; dramatis personæ, a worried and perplexed motor-car owner, who drives and looks after his own automobile; the still more worried and harassed garage owner and fitter; crowd of sympathetic motor owners and chauffeurs. The motorist was expatiating on his case; the car, a single-cylinder one, was, as a rule, a dream, but now she was the opposite of angelic. The engine started, but the horses, or

spindle, and, as a result, though the lift was correct, the tension of the spring was too strong, and so the valve did not open soon enough, the engine, consequently, not getting a sufficient charge. As soon as the cap was slackened back a few turns the fault was cured and once more the engine pulled, as she then got her proper charge. When the motorist had filled up with petrol and was leaving they were all jubilant. Truly, most motor worries are due to poor trifles, which the noble mind neglects and scorns.—Yours truly,

C. T. W. H.

RACING AT BROOKLANDS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Referring to the races at Brooklands on Saturday, the 1st inst., it appears that an impression exists that the Sizaire car which won

Mr. Percy Richardson at the wheel of one of the latest 45-h.p. Sheffield-Simplex Cars at the entrance to Alnwick Castle, Northumberland.

most of them, had fled; there was no power on the road. The cotter of the automatic inlet valve had broken, and the motorist had fitted a new inlet valve cap and pin, and since then there had been a marked loss of power. He was a careful man and had a gauge for the inlet valve lift, and that was all right. For a whole day they wrestled with the problem; the compression was good; still they had ground in the inlet and exhaust valves, and had inspected the piston and rings, which were in splendid condition. The sparking plug was cleaned, the coil trembler platinum points adjusted and dressed with a file, the accumulators tested and found to give 4.4 volts. Then the carburettor was dismantled, the jet was clear, the gauze at the air intake was clean, as well as the strainer washer where the petrol pipe opened into the float chamber. They had even gone further and inspected the gear-box and its shafts and bearings; there was no play, and after running they were cool, as were also the brake drums. Still the engine felt as if there was a brake on. The water circulation had likewise received attention and was found faultless, and even the commutator wipe was ideal, and the fibre wheel did not show any irregular wear, and was perfectly true with the wipe.

The riddle seemed impossible of solution, when a quiet little chauffeur solved it. It was, though they had not noticed it, the inlet valve; the new cap had a longer stem that screwed on to the valve

the Merit Trophy was a special vehicle built for racing purposes. The race in question, however, was one in which the car was handicapped under ordinary R.A.C. rating according to its size, and the result proved that the 12-h.p. single-cylinder Sizaire was the most efficient car amongst the whole of the entrants. The car was owned and driven by Mr. Scantlebury, a private user, and was a standard 12-h.p. car, sold by us to him in the ordinary way of business. In view of the special preparation which cars usually receive when they are intended to compete at Brooklands, we think this award of merit given to the Sizaire is noteworthy.

In connection with the All-Comers' Handicap, a car was entered by Mr. Jarrott which was specially constructed for racing. It was a 4 in. bore and travelled at the remarkable speed of over fifty-five miles an hour. This was partly due, no doubt, to the very skilful handling of the car by M. Naudin, but as indicating the extraordinary efficiency of the Sizaire this performance is also worthy of a great deal of attention. We cannot see that the handicappers were to blame, by reason of the fact that it was the first time this car had competed, and it was not to be expected that a single-cylinder car of such small dimensions would obtain such an extraordinary speed.—Yours truly,

CHARLES JARROTT AND LETTS, LTD.

THE ACCIDENT AT BROOKLANDS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have heard it stated in connection with the unfortunate accident to the Mercedes car at Brooklands, that the gear-box and some of the ball bearings were badly smashed, thus leaving an impression that the cause of accident might be attributed to the breakage of some of these parts. I had occasion on Wednesday last week to visit the scene of the accident, and I made a careful inspection of the remains of the vehicle on behalf of "Lloyd's," with whom the car, driver and mechanic were insured under a "Red Cross" Brooklands policy. In view of the statement above referred to, I feel it only fair to the makers of the car to state that there was no sign whatever of any such breakages. The gear-box and its bearings were intact, and the point which impressed me most was the almost complete absence of broken parts, notwithstanding that the chassis, axles, driving shafts, and steering connections were twisted out of recognition. So far as the insurance was concerned, I advised the underwriters to pay the full amount insured, and this has already been done.—Yours truly,

W. C. BERSEY.

ACCESSIBILITY.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—As it may be presumed that motor-car designers are just now busy getting out the plans for next year's models, the moment is opportune to draw attention to the need for greater accessibility of those parts requiring adjustment or lubrication from time to time. There are still many vehicles which leave considerable room for improvement in this direction. I know that there are some who hold the opinion that if parts are put up in the best manner, they very seldom need attention or adjustment. However, this may be, I myself am strongly in favour of accessibility, as usually the buyer has no assurance that crank shaft bearings, which are difficult to get at to adjust, are necessarily so made and placed as to be long lived. Such parts as the contact maker are still too often placed in inaccessible positions. Valves are now usually rather easy to get at, but there is considerable scope for improvement as regards the facility with which the valves and springs can be removed even on many of the latest models. There are other parts which I might mention as being worthy of attention, but I will conclude by stating that infrequent need of adjustment does not form an adequate excuse for making a part very difficult to get at, especially upon vehicles likely to be used for touring. Accidents and breakages will occur, even on the best made machines, and these may render replacement necessary where skilled labour is not to be had.—Yours truly,

COUNTRY MOTORIST.

A Circus Parade Novelty.

To demonstrate the smooth running of the modern automobile a motor-car agent at Saginaw, Mich., U.S.A., recently took part in a circus parade in that town in the way depicted in the above illustration.

AN ENGINE QUERY.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—In reply to the inquiry by "Cardiff" in the last issue of the *M.C.J.* re engine trouble, there is no doubt whatever that the cause of the trouble is due to a choked exhaust. If "Cardiff" will disconnect the silencer he will find that the car will run as it should do; when disconnected take silencer to pieces and clean same.—Yours truly,

A. D. BARTON.

AN OLD CAR.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Your correspondent "A. A. A." says it would be interesting to know how some of the old stagers who have kept their original possessions running are getting on. I think my own experiences will be of interest to him and others. On the 9th ult. I started with three others on "Peggy," my little 6½-h.p. Darracq, as shown in the accompanying photo taken on our return, for a fortnight's tour in the South of England. We touched Marlborough, Stonehenge, Taunton, Glastonbury, Cheddar, Weymouth, Southampton, Brighton, Tonbridge, covering altogether about 560 miles, the car running perfectly the

whole time, without a single involuntary stop, using only about sixteen gallons of petrol. This is the more remarkable, as the car was built in 1900, and has been in constant work ever since. I should very much like to know if any other vehicle of a like age is putting through such a creditable performance this season as mine has done.—Yours truly,

GEORGE HAMILTON.

AN ENGINE TROUBLE.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—When my car is at rest, with the motor, which has four cylinders, running as slow as possible—about 250 revolutions per minute, on pulling the throttle open any additional amount the engine will slow down before speeding up. If the throttle is pulled open quickly the motor will stop entirely. The carburettor is the so-called automatic type, with a separate air valve held closed by a light spring. I should be glad if you could assist me in locating the cause of the trouble.—Yours truly,

GLOUCESTER.

[It is very difficult to determine the cause of this trouble, as our correspondent does not state the type of carburettor fitted to his car. It would appear, however, from the symptoms given that the air valve requires a slightly stronger spring to prevent too much air passing in upon opening the throttle.]

THE SIZE OF BEVEL PINIONS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I should be glad if any reader of the *M.C.J.* could inform me what is the smallest size of bevel gear pinion it is desirable to use on a motor vehicle. I have made many enquiries on the subject, but find a difficulty in securing any definite and reliable information.—Yours truly,

LINDUM.

FOUND, on Tuesday, the 4th inst., between Kidderminster and Stourbridge, a Hill's patent tyre inflator gauge. Owner can have same on application to Mr. C. Bray, Broadwaters Cycle Depot, Kidderminster.

A SMALL lever key, with the label attached "key motor tools," was picked up on the road near the premises of Messrs. Hoskins, Oates and Co., at Wellington, Somerset, on the 9th inst. It can be obtained by the owner on application to that firm.

A TAIL lamp has been found on the road between Andover and Salisbury. If the loser will communicate with the secretary of the Automobile Association, Princes Buildings, Coventry Street, W., with a full description of the lamp, every assistance will be afforded him in recovering same.

MR. E. C. JONES, of Carmarthen Street, Llandilo, will be glad to hear from the owner of the car on which he left his overcoat, in the pockets of which were sparking plugs and various tools. The occasion was the last Sunday in July, and the incident occurred in connection with a break-down at St. Clear, Pembrokeshire.

CLUBS AND ASSOCIATIONS.

ROYAL.

IN conjunction with the third provincial meeting of the R.A.C. General Committee, which takes place at Norwich on Saturday, September 5th, an inter-club meet will be held. The programme has been arranged as follows:—

Saturday, September 5th.—10.30 a.m., reception of the Club by the Mayor of Norwich, and meeting of the General Committee at the Blackfriars Hall; 12.0 mid-day, visit to the Cathedral; 3.30 p.m., gymkhana at Crown Point; 7.30 p.m., third provincial dinner of the Royal Automobile Club and annual dinner of the Norfolk Automobile and Launch Club.

Sunday, September 6th.—10.30 a.m., run by cars to Wroxham, meeting at the Horse Shoe hotel, going thence by motor-boats (provided by members of Norfolk Automobile and Launch Club) to Horning; 1.0 p.m., lunch at the Swan Hotel, Horning; 4.0 p.m. to 5.0 p.m., tea at Rivercroft, Wroxham, by kind invitation of Mr. and Mrs. H. L. Clark.

The headquarters for the week-end will be the Maid's Head Hotel, Norwich. At Norwich the proprietors of the following motor houses will allow free accommodation for motor-cars of members and associates taking part in the meeting:—Messrs. Howes and Son, Chapel Field; Messrs. Mann, Egerton, and Co., Ltd., 5, Prince of Wales Road; Mr. A. Spaul, Castle Hill; Messrs. Thorn, St. Giles; the Victoria Garage Company, St. Stephen's Road.

The first entries received for the Henry Edmunds Hill Climb are from Mr. S. F. Edge, who has entered two cars for the "Graphic" trophy race.

Journey).—M. W. Randle, E. Nelson, H. R. Mayo, Miss Muriel Hind, L. Cutler, A. D. E. Craig, J. O. M. Dixon.

THE Auto-Cycle Union's annual ride from London to Plymouth and back, which began from Thames Ditton at 9 p.m. on Friday, finished on Saturday night. Of twenty-nine original starters, twenty-one reached Plymouth, and that number set out on the return ride on Saturday morning. The first rider to reach Thames Ditton was H. G. Cove, on a 4-h.p. H.G.C., who arrived at a quarter past eight. He was followed by six others before 9 p.m., so that these seven qualified for awards, other than certificates, for accomplishing the double journey in twenty-four hours. W. O. Bentley, 5-h.p. Rex, and W. H. Bashall, 3½-h.p. Triumph, arrived at 8.17 p.m.; W. E. Burkin, 2½-h.p. Laurin and Klement, G. L. Fletcher, 2-h.p. Moto-Reve, and Eli Clark, 2½-h.p. Douglas, at 8.19 p.m.; and C. H. Barfield, 3½-h.p. Triumph, at 8.47 p.m.

BROOKLANDS.

ON Saturday, 12th Sept., the races to be run under the auspices of the Brooklands A.R.C. will include the sixth 36-h.p., the fourth 40-h.p., the third 60-h.p., and the fifth 90-h.p. race—all of 150 sovs. The programme will also include an All-comers' Handicap Sweepstakes, the September Sweepstakes, for cars of a horse-power of not less than 22-h.p. R.A.C. rating and not more than 36-h.p. R.A.C. rating, the following cars being barred:—Hutton, Metallurgique and Napier; the Large September Sweepstakes, for cars of a horse-power of not less than 35-h.p. and not more than 59-h.p. R.A.C. rating, the 48-h.p. Brasier being barred; the Change Sweepstake and an Obstacle Race. Entries for all these events will close on the 4th Sept. The distance of the race

Last week Mr. F. A. Bolton, J.P., gave an "At Home" at his residence at Moor Court, Oakmoor, Staffs, to the Members of the Derby and District Automobile Club, of which he is the President. The photograph reproduced above depicts a group of the visitors on the Terrace.

MOTOR UNION.

SEVERAL additional subscriptions have been received by the Motor Union towards its Legal and Legislative Defence Fund, but there is still a considerable excess of expenditure over income in regard to this fund for the current year.

AUTO-CYCLE UNION.

THE committee of the Auto-Cycle Union has confirmed the recommendations of the judges, and has made the following awards in the recent Land's End to John o' Groat's Trial:

Gold Medals: No Marks Lost (Trade Entries).—W. H. Wells, M. Geiger, G. Lee Evans, J. Slaughter, J. Marshall, P. H. Cockroft, R. Moore, C. A. Palmer. Gold Medals: Marks Lost (Trade Entries).—O. C. Godfrey, 18 marks; F. W. Applebee, 7 marks.

Gold Medals: No Marks Lost (Private Owners).—J. Tassell, S. W. Carty, A. D. Nicholson, Gordon Gibson, F. Dover, F. C. Mustard, C. E. Murphy, R. W. Duke, H. C. Harrott, A. Manning Lomax, H. H. Dommett, Robert King, J. Haslam, Sir R. K. Arbuthnot, Bart., R.N., W. E. Merritt, J. Ewing Adam, A. M. Tatham, A. E. Wilding, H. D. Seale, and H. R. Dougal. Gold Medals: Marks Lost (Private Owners).—F. S. Barnwell, 79 marks; W. H. Outwin, 8 marks; A. H. Omerod, 10 marks; T. K. Hastings, 17 marks; W. Milnes, 13 marks; H. B. Lewis, 11 marks.

Silver Medals: Marks Lost (Trade Entries).—A. J. Sproston, 195 marks; F. W. Barnes, 92 marks. Silver Medals: Private Owners).—E. Gwynne, 125 marks.

Bronze Medals (Trade Riders Finishing the Journey).—G. L. Fletcher, J. V. Robinson. Bronze Medals (Private Riders Finishing the

will be 3, 3½ and about 5 miles, save in the case of the 90-h.p. race, where the distance is 21½ miles.

On October 3rd the Brooklands Grand Prix race will be run.

RECORDS OF SPEED.

THE following certificate, signed by Mr. E. de Rodakowski, official timekeeper to the Royal Automobile Club for the Brooklands electric automatic chronograph, has been given of performances in the first race for the O'Gorman Trophy on the 3rd inst.:

(1) Time of race from start to finish of winning car (Mr. S. F. Edge's 60-h.p. Napier, driven by F. Newton): 71 min. 31.88 sec., equal to 83.88 miles per hour. (2) Ten laps, with flying start (laps starting at mile post 1 m. 10 ch.) completed by leading car (Mr. H. G. Burford's 76-h.p. Mercedes, driven by C. Lane) in 17 min. 34.65 sec., equal to 94.6 miles per hour. (3) Twenty laps, with flying start (laps starting at mile post 1 m. 10 ch.) completed by leading car (Mr. H. G. Burford's 76-h.p. Mercedes, driven by C. Lane) in 38 min. 24.45 sec., equal to 86.43 miles per hour. (4) Thirty laps, with flying start (laps starting at mile post 1 m. 10 ch.) completed by leading car (Mr. S. F. Edge's 60-h.p. Napier, driven by F. Newton) in 58 min. 27.7 sec., equal to 85.17 miles per hour.

Fastest flying lap accomplished by each of the competing cars (laps starting at mile post 1 m. 10 ch.): No. 1 car, Mr. S. F. Edge's 60-h.p. Napier (driven by F. Newton), 24th lap, time 110.15 sec., equal to 90.39 miles per hour. No. 2 car, Mr. E. W. Lewis's 67.5-h.p. Deasy (driven by E. W. Lewis), 3rd lap, time 123.8 sec., equal to 80.42 miles per hour. No. 3 car, Mr. S. F. Edge's 59.2-h.p. Napier (driven by J. G. Reynolds), 5th lap, time 101.95 sec., equal to 97.67 miles per hour. No. 4 car, Mr. H. G. Burford's 76-h.p. Mercedes (driven by C. Lane), 5th lap, time 98.9 sec., equal to 100.675 miles per hour. No. 6 car, Mr.

J. E. Hutton's 25.6-h.p. Hutton "Little Dorrit" (driven by J. E. Hutton), 4th lap, time 119'05 sec., equal to 83'625 miles per hour.

KENT.

THE last luncheon meet of the season of the Kent Automobile Club was held at the Dolphin Hotel, Herne Bay, on Saturday the 25th ult., when nearly forty members were present. Sir Alfred Watkin took the chair, and the guests included Mr. Iggulden, the chairman of the Urban District Council, Mr. Jubb, the Clerk to the Council, and Mr. Palmer, Surveyor to the Urban District Council. After the usual loyal toast had been honoured Dr. Tamplin proposed the health of Sir Alfred Watkin and alluded to the interest Sir Alfred manifested in the affairs of the club. Dr. Styan in a very happily worded speech stated how pleased the committee were to see the chairman and officials of the Urban District Council there as their guests, and thought that much of the friction which occurred in some districts was due to the want of better acquaintance between the authorities and the motorists. Mr. Iggulden in replying thanked the members for the cordial way in which they had received the toast, and referred to the fact that his council had always done their best to meet motorists on equitable terms, and he trusted that the Kent A.C. would make a point of visiting Herne Bay again. After the Chairman had proposed a very hearty of thanks to the hon. secretary for the trouble he had taken in connection with the club, the party broke up temporarily whilst the committee meeting was being held.

DERBY AND DISTRICT.

ON Saturday last the members of the Derby and District Automobile Club and their friends, by invitation of the president, Mr. Francis A. Bolton, J.P., visited his picturesque residence, Moor Court, Oakamoor, this being Mr. Bolton's second invitation this year. Oakamoor is a tiny little village on the Churnet, lying well to the left of Ashbourne and Leek, in the prettiest part of North Staffordshire. Surrounded by chains of hills whose slopes are deep with verdant woods, approachable by elevated terraced roads and wealthy in spots of quiet pastoral beauty, it would have been impossible to have chanced upon a more delightful meeting-place. On Saturday, however, the district bore a very animated appearance, and about three o'clock cars of all descriptions began to arrive from Derbyshire, Nottinghamshire, Leicestershire and the northern parts of Staffordshire, and these were lined up in the park surrounding Moor Court and the members and their friends were received in the inner grounds by Mr. Bolton and his household.

The afternoon turned out beautifully fine and full advantage was taken of the opportunity afforded to stroll through the conservatories and beautifully laid out gardens.

Mr. Bolton left nothing to chance with regard to the comfort and enjoyment of his guests, selections being rendered in the park by the Oakamoor brass band. A further attraction was provided in a secluded corner of the south lawn, where, on a tastefully arranged natural stage, beneath a canopy of rich foliage, Mr. J. W. Gibson, Longton, at intervals gave a very pleasing programme of songs, sketches, &c. Soon after six o'clock the guests commenced to disperse, all being loud in their praise of the kindness of the president in affording them such an enjoyable afternoon.

Amongst those present were Mr. Alfred Swingle, Smalley; Mr. Wm. Hart, J.P., and party, Derby; Mr. Arthur Ford and party, Uttoxeter; Mr. and Mrs. Geo. B. Fletcher and party, Derby; Mr. and Mrs. A. R. Robotham, Quarndon; Mr. Alan Ford and party, Uttoxeter; Mr. A. E. Chambers and party, Uttoxeter; Mr. C. Turner Leech and party, Quarndon; Mr. and Mrs. Barnard Sadler, Burton-on-Trent; Rev. Currey, Mr. F. E. Currey and party, Turnditch; Mr. and Mrs. Chas. J. Allin and party, Derby; Mr. Harry Ford and party, Uttoxeter; Mr. Jas. A. Doran and party, Leicester; Mr. F. G. Keeling and party, Uttoxeter; Miss Kniveton, Derby; Mr. Percy E. Joule, assistant secretary, &c.

ESSEX.

THE Essex Motor Club had a successful day at the Stadium at the Franco British Exhibition, on Saturday last. There were four motorcycle events and good racing delighted the spectators.

In the final of the five miles handicap for racing motor-cycles H. V. Colver (2½-h.p. Matchless) won by about 600 yards in 5 min. 44.3-5 sec.; W. M. Genn (2½-h.p. Eland), was second and D. R. Clarke (2½-h.p. New Century) was third.

The ten miles handicap for tourist machines was run in heats over distances of five miles, the full journey being made in the final, which resulted as follows:—1, R. O. Clark (5-h.p. F.N.); 2, C. Gibson (3½-h.p. Triumph); 3, W. W. Genn (2½-h.p. Eland).

Several attempts were made at the one mile record of 1 min. 2 sec. standing to the credit of C. R. Collier, but the nearest approach was that of H. V. Colver (2½-h.p. Matchless) in 1 min. 3.4-5 sec.

Excitement occurred in the one hour record race for the Du Cros Challenge Trophy. In this the engines were limited to 76 mm. by 76 mm. H. V. Colver (2½-h.p. Matchless) covered 49 miles 220 yds.; C. E. Bennett (2½-h.p. Mansfield) 44 miles 1,150 yds., and G. H. Gerhard (2½-h.p. Brookland) 42 miles 1,030 yds. Colver's handlebar broke off near the central lug at the end of his tenth mile, while Bennett's machine caught fire shortly after, the Diamond powder recently referred to in our columns being used effectually to extinguish it.

BERKSHIRE.

A MEETING of the committee of the Berkshire A.C. was held on Saturday last at the Great Western Hotel, Reading. Major E. R. Portal (chairman) presided, and there were also present Messrs. S. à Court, L. H. Baxendale, C. H. Dodd, the Marquis of Downshire, Messrs. Robert Harrison, E. A. Potter, and Shrapnell Smith (treasurer).

It was decided to hold a "closed" hill climb at Red House Hill, Wantage, on Saturday, the 29th inst., first run at 12 noon. An invitation to take part will be extended to the members of the North Berkshire A.C.

The Marquis of Downshire invited members to hold a gymkhana at Easthampstead Park, Wokingham, on Saturday, September 19th, and this date was agreed to.

An invitation was received from Mr. A. F. Clarke for a meet of the members at his residence, Midgham House. It was noted, with regret, that the date proposed—August 29th—had already been allocated to the Wantage fixture.

At the recent Hill Climbing Contest held by the Transvaal Automobile Club at Turfontein Nek, a typical South African gorge up the side of a mountain, two Star Cars won second and third places and a gold medal for best all-round performance in the contest. The above illustration depicts one of the successful vehicles ascending the hill.

A considerable amount of routine business was transacted. The hon. secretary reported that the £50 voted by the club for tar-spraying in the county of Berkshire was being usefully turned to account in numerous villages in the form of bonuses upon any sum raised locally.

MANCHESTER MOTOR.

THE trials from Manchester to Cheltenham and back (347 miles), with a hill-climbing competition on Lurking Hope Hill, were brought to a successful finish. Out of twenty-two entrants only five survived the ordeal of completing the course with a non-stop run without loss of marks. These are:—H. Reed (4-h.p. Dot), J. Tytler (3½-h.p. Triumph), C. Kettle (3½-h.p. Triumph), O. Gross (4½-h.p. Eagle Runabout), W. Heaton (5-h.p. Twin Rex).

A MIXED hill climb will be held by the Southern Motor Club on the last Sunday in the present month or the first Sunday in September.

Mr. A. MCALPIN, the secretary of the Leicestershire A.C., informs us that the gymkhana to be held by his club on the 29th inst. in aid of the Leicester Cripples' Guild will be open to all motorists, whether connected with the county or not.

AMONG the delegates of the Institution of Municipal and County Engineers to the International Roads Congress in Paris on October 11th and the following day will be Messrs. E. P. Hooley (Nottingham), J. A. Brodie (Liverpool), H. E. Stilgoe (Birmingham), and the County Surveyors of Hampshire, Buckinghamshire, and Middlesex.

MR. H. VERLEY, Mr. A. Welling, and Mr. G. Owen are among recent London purchasers of 26-h.p. Metallurgique cars.

CASES AGAINST MOTORISTS.

LIGHTS ON CARS.

At Mortlake Petty Sessions, Benjamin Farley, of Westmorland Road, Paddington, was fined £6 and costs for driving a motor-car at night without exhibiting a light showing the direction in which the car was travelling. A constable deposed to seeing defendant driving a motor-car across Barnes Common at two o'clock on the morning of July 23rd. There were no lights on the front of the car, and when witness stopped him he said the lamp had just gone out. Defendant was driving at about twelve miles an hour. There was a light at the rear of the car.

HIGHER FINES AT CHRISTCHURCH.

At Christchurch several motorists have lately been summoned for driving in a manner dangerous to the public. During the hearing of the cases the chairman stated that hitherto the Bench had been very lenient, but that in future it was their intention to materially increase the amount of fines levied on motorists.

EXCEEDING LEGAL LIMIT.

The penalty of £20 and £1 10s. 9d. costs was imposed at the Guildford County Bench on Saturday upon Frederick J. Lightfoot, of Shepherd's Bush, for having driven a motor-car at a greater speed than twenty miles an hour at Thurley. Defendant said his employer was wet through, and asked him to drive fast to get home. Five previous con-

ROAD REPORTS.

TRURO.—The police have lately instituted motor traps in various parts of Cornwall. One is near Green Bottom, between Truro and Chacewater.

NORTH DEVON.—Largely through the generosity of Lord Fortescue, who has given most of the land, a new road has been cut from Somerset to North Devon. Constituting the trunk road from Lynton to Dulverton and Exeter, it has a gradient of one in eleven, and will be appreciated by motorists, whose only access to this part of the country from Somerset has been by way of the precipitous Countisbury Hill. The road, which has taken several months to construct, is now ready for use.

BUCKINGHAMSHIRE.—Sir Edmund Verney, who is himself a motorist, has been advocating to the Buckinghamshire County Council that they should ask the L.G.B. to issue an order limiting the speed of motor-cars to ten miles an hour wherever there are continuous human habitations on either or both sides of the thoroughfare for a quarter of a mile.

GODSTONE.—In consequence of motor traffic the life of a road in the Godstone (Surrey) district, so it was stated at the last meeting of the Godstone Rural District Council, was only two years, compared with four formerly.

BEDFORDSHIRE.—Motorists passing through the village of Sharnbrook, Bedfordshire, should pay particular attention to the caution signs, and are asked to drive with the utmost consideration, firstly because the

Farmers and Motor-Cars.

Many of the farmers in Kansas have within the past few years become enthusiastic motorists. The above illustration depicts a meet of farmers at Garden City, Kansas, U.S.A. [Motor Age.]

victions for driving to the common danger and at excessive speed were proved.

ALLEGED MANSLAUGHTER.

At Hoveham Police Court, Harold Burnett Gylee, of 2, Lawreston Gardens, Larkhall Rise, Clapham, London, S.W., has surrendered to his bail, charged, on a coroner's warrant, that he did feloniously kill and slay Mabel Mary Denman, at Shipley, by running over her with a motor-car on the 3rd inst. The magistrates decided to adjourn the hearing till 10 a.m. on Wednesday, the 12th inst. Bail was applied for and allowed prisoner in his own recognizances in the sum of £100 and Mr. W. C. Holloway as another surety in a like amount.

UNSUCCESSFUL CLAIM FOR DAMAGES.

At Westminster County Court Messrs. H. and G. Duffield sued the Earl of Ronaldshay, M.P. for Hoveham, for damages to a horse and cart. Mr. Cranstone, for the plaintiffs, said that they were cartage contractors, and on April 1st they sent an uncovered cart to 47, Pall Mall. The vehicle was pulled up there, and the driver went into the shop. He came out again, and got into the cart, with instructions to go to Duke Street. He had just started when a motor-car came along, and the hub of the rear hind wheel caught the front wheel of the plaintiffs' cart, tearing away the front part and knocking the horse on to the pavement. The defence was that the motor-car was being driven at a moderate pace, when the van was pulled out, without the carman giving any signal. His Honour Judge Woodfall held that the plaintiffs had failed to make out their case and gave judgment for the defendant with costs.

corners are cramped, and, secondly, in recognition of the reasonable attitude which the authorities in this county have always adopted towards drivers.

NUNEATON.—There is a dangerous corner leading to the market place at Nuneaton at which several accidents have lately occurred. The other day a coroner's jury expressed the view that the Corporation should acquire the site at that particular corner with a view to securing the safety of the public.

WESTMINSTER.—Grosvenor Square is about to be given over to the road repairers, and is to be entirely repaved at a cost of £5,000. The Westminster City Council are spending nearly £20,000 on road repairs in Westminster this season. Northumberland Avenue, from Villiers Street to the Embankment, will be "up" until the 31st inst., and the same thoroughfare at the Whitehall Place end will be under repair from August 17th to September 7th.

MR. T. S. LEA, formerly northern traveller for Argylls Ltd., has been appointed sales manager to the Clement-Talbot Company, Ltd. The Stanhope Motor-cab Company, of 11, Queen Victoria Street, London, E.C., is operating 10-12-h.p. Darracq vehicles fitted with bodies by Messrs. E. and H. Hora, Ltd., of Peckham.

MESSRS. H. P. ROSE, LTD., of Frith Street, Shaftesbury Avenue, London, W.C., have lately opened a large motor garage at Bedford Place, Brighton, where provision is made for carrying out repairs of all kinds. Messrs. Rose are also district agents for the Singer and Riley cars.

ROADS AND DUST.

IN the course of a paper read at the annual meeting of the Institute of Cleansing Superintendents, Mr. H. Percy Boulnois, Deputy Chief Engineer to the Local Government Board, gave the following as the principal reasons for excessive dust on the roads:—

- (1) The great speed at which motor vehicles are driven.
- (2) The draught under the car, especially where the body is low, thus forcing the dust through a sort of funnel.
- (3) The sucking action of the pneumatic tyres on the surface of the road.
- (4) The centrifugal force of the periphery of the wheels tending to throw particles of dust a considerable distance.

With regard to the supply of dust he gave the following as the chief factors:—

- (1) The disintegration of the materials with which the surface of the road is constructed, by the traffic, and by climatic influences. The amount of this depends largely on the class of materials used.
- (2) Imported dirt, or mud, from other roads, from the wind blowing it from the fields in the country, and from yards and other places in towns.
- (3) Animal droppings, which are considerable both in towns and in the country.
- (4) The "spewing up" of the earth foundation in the case of improperly constructed roads.

Preparations of tar, specially prepared so as to be thoroughly viscous, have recently been used in this country and abroad with fairly good results.

The tar can be applied to the surface of existing macadamised roads, either by hand or by one of the several tar-spraying machines now on the market. In order to get any beneficial and lasting effect the following points, among others, require special attention:—

- (a) The surface of the road must be brought to a proper and even contour, and be thoroughly swept and brushed before the tar is applied.
- (b) The weather must be dry during the operations, and immediately after.
- (c) The tar must be in a sufficiently viscous condition and applied at a temperature of about 200 deg. Fahr.
- (d) The tar must be carefully and evenly spread over the surface of the road.
- (e) The tar should, if possible, penetrate well into the interstices of the road metal.

THE BROOKLANDS FATALITY.

AT Weybridge an inquest has been held into the circumstances attending the death of Herbert Mark Burke, the mechanic, whose death on the Brooklands track on Bank Holiday we reported last week. The witnesses were the father of the deceased, Mr. J. E. Hutton, and some eye-witnesses. In summing up, the coroner congratulated the driver of the car on his escape, and told the jury that he did not think they would be justified in saying that there was anything defective in the manufacture of the gear. He could not see what good could come of these races. It might be satisfactory to a man to be able to say that he had been round the track for some many thousands of miles in so many hours, but the matter ended there. So long, however, as they kept to the track they could hurt only themselves. He was fond of motoring himself, yet he was afraid there was a tendency of this motor track to induce people to drive fast. There was a very strong feeling at the present time against motor-cars, and he could not help thinking that these races were doing more harm to the industry than they would ever gain by this breaking of records. The jury found that the death was purely accidental. They suggested that if there were any defects on the track they should be brought to the notice of the authorities.

POLICE "CONTROLS."

IN Sussex the Pulborough to Arundel road has become the scene of police activity.

AMONG police traps in frequent operation north of the Tweed are those on the road from Killiecrankie to Pitlochry, and around Callender, Dumfries, Arbroath, Helensburgh, Stirling, Bridge of Allan, and Coupar Angus.

THE three measured distances that have lately been the cause of many motorists appearing at the Steyning Petty Sessions have been at Rock, Washington; Dacre Gardens, Upper Beeding; and at Henfield Common.

THERE is a trap near the Bramham cross roads, Tadcaster.

THERE is a measured distance between Compton and Otterbourne, in Hampshire.

TWYFORD is now the scene of a measured half mile.

NEW traps are reported from the main road to Scotland, just beyond Preston.

CAPTAIN MITCHELL-INNES, Chief Constable, says that circumstances have made it imperative for increased supervision of traffic on the Sleaford to Lincoln high road, and on the Lincoln to Newark high road, within the parts of Kesteven, Lincolnshire.

A MEASURED quarter of a mile is often watched by police in the Wrexham district.

A NORFOLK WARNING.

THE following notice issued by the Norfolk County Council is a courteous and sensible effort likely to repress inconsiderate driving:— "Whenever in the opinion of a policeman a car is being driven at a dangerous rate, he is to stop the car by holding up his hand, inspect the driver's licence, and make a note of it, and inform the driver that in his opinion he is going at too great a speed having regard to the circumstances of the locality. He is to caution the driver and to inform him that the caution will be recorded, and if he is subsequently found to be driving at a speed dangerous to the public, he will be proceeded against, and the fact of his previous caution will be mentioned to the magistrates. The policeman will also politely request the owner of the car, if present, to direct his chauffeur to drive with due consideration for the convenience of other users of the road."

THE "FOUR-INCH" RACE.

COMPLETE list of entries for this event is as follows:—

Messrs. J. K. Starley, Rover; S. F. Edge, Hutton; Ernest A. Rosenheim, Arrol-Johnson (two); Harry Smith, Rover; J. W. Stocks, De Dion-Bouton; J. E. Hutton, Hutton; A. Rawlinson, Darracq; A. Loe Guinness, Darracq; John Hargreaves, Darracq; L. Coatalen, Hillman-Coatalen (two); J. Newton, S.C.A.T. (two); Thomas Hampson, Vulcan; Walter Phillips, Coventry-Humber; T. C. Pullinger, Beeston-Humber (two); Warwick Wright, Metallurgique (three); J. E. Hutton, 24.8-h.p. Berliet (two); Tom Thornycroft, Thornycroft; D. S. Hodge, Thornycroft; P. D. Stirling, Hutton; Gordon Usmar, Vinot; Roland Outhwaite, Vinot; G. W. Hands, Calthorpe; T. Russell Fletcher, Calthorpe; Philip Graham, Deasy; Edmund W. Lewis, Deasy;

The Napier 45-h.p. Six-Cylinder Car recently delivered to the Rt. Hon. H. H. Asquith, the Prime Minister of England.

This car is fitted with a double landaulet body to seat five in the interior, and is designed with a view to being used either in town or in the country.

Geoffrey Moss, Arrol-Johnston; Guy V. Baxendale, Thornycroft; A. Gaal, Westinhouse (two); L. Molon, Vinot; Morgan Donne, Piccard; Harold S. Buckley, S.C.A.T.; H. B. Browning, 23.3-h.p. Rover. All save the three exceptions noted are of 25.6-h.p.

COMPANY NEWS.

ROYAL AUTOMOBILE CLUB BUILDING COMPANY, LTD.—Registered with a capital of £100,000 to acquire lands or buildings in London and to provide and maintain a club building or buildings. Registered office, 112, Piccadilly, W.

MOTOR INDUSTRY FINANCE COMPANY, LTD.—Capital, £100. To carry on the business of dealers in motors, motor-cars, and appliances for motor-cars and vehicles, financiers, &c.

RIGFORD TYRE COMPANY, LTD.—Capital, £25,000. To acquire and turn to account certain patents.

MOTOR firms who are stock-taking will be interested to learn that Mr. Spong, of 205, Shaftesbury Avenue, London, W.C., is open to buy any scrap or job lines of tyres, &c.

REO MOTORS, LTD., Broad Sanctuary, Westminster, have just received a cable from America showing the remarkable performance which the Reo made in the recent Glidden Tour. The telegram received is as follows:—Reo touring car finished Glidden Tour, Saratoga, July 23rd, perfect score, defeating six cars costing over 3,500 dol. each besides eleven other machines higher priced than the Reo. The Reo Roadster has beaten all the Hower Trophy contestants for machines costing under 2,500 dols.

FORTHCOMING EVENTS.

AUGUST.

- 15th (Sat.).—Coventry M.C. open motor cycle hill climb at Newnham Hill, Daventry.
 Essex M.C. twenty-four hours' ride for members only to York and back to Woodford.
 Lincolnshire A.C. hill climb at Syston.
 North-Eastern A.A. gymkhana, Polo Ground, Gosforth Park, Newcastle.
 Walthamstow M.C. run to Hunsdon.
 19th (W.).—Cheshire A.C. Reliability Run.
 21st (F.).—Ballinaslaught hill climb of the Irish A.C.
 22nd (Sat.).—Annual race meeting of the A.C.U. at Shepherd's Bush.
 Invitation of Sir D. Salomons to the Kent A.C. to visit Tunbridge Wells.
 Manchester A.C. club run.
 Southend and District competition at Laindon.
 23rd (Sun.).—A. C. du Rhone Mont Pilat trial.
 29th (Sat.).—Meet of the Lincolnshire Motor Club at Lincoln.
 Mont Ventoux hill climb of the A.C. Vauclussen.
 Leicester A.C. gymkhana at Freeman's Meadow, Aylestone Road, Leicester.
 Essex M.C. 200 miles Reliability Trial.
 30th (Sun.).—Southend M.C. run to Great White Horse Hotel, Ipswich.
 31st (M.).—Closing day for the entries for the Army Council Light Tractor Trials to be held in February, 1909.

SEPTEMBER.

- 4th and 5th.—Reliability Consumption Trial of the Essex C.A.C. at Norwich in connection with the R.A.C. provincial meet.
 5th (Sat.).—Aston Hill climb of the Herts C.A.A.
 Provincial meet of the R.A.C. at Norwich.
 Richmond M.C.C. week-end at Henley.
 12th (Sat.).—Brooklands A.R.C. meet.
 17th (Th.).—Touring car competition of the A.C. of Holland through that country.
 19th (Sat.).—Provincial meet of the Motor Union at Oxford.
 North Middlesex A.C. 100 miles reliability run.
 Manchester A.C. reliability run for small cars.
 20th (Sat.).—Meet of the Hull Auto Cycle Club and the Lincolnshire Motor Cycle Club at Brigg.
 Annual Hill Climb of the Bristol and Gloucestershire A.C.
 Lunch of the Kent A.C. at Dover.
 Herts C.A.C.'s climb for cars at Aston Hill.

LIGHTING-UP TIMES—LONDON.

| | | | |
|------------------|-----------|-----------|-----------|
| August 15th—8.22 | 17th—8.18 | 19th—8.14 | 21st—8.10 |
| 16th—8.20 | 18th—8.16 | 20th—8.12 | 22nd—8.8 |

To find the approximate lighting-up time in August for Birmingham 12 minutes should be added to the above times, 17 for York, 21 for Manchester, and 43 for Glasgow.

"SHE."

She has a thousand whims and ways,
 She's changeful as the sky above her—
 And, dear as are her charms to me,
 Her faults are plain for all to see,
 And yet—I love her!

To-day she's docile, patient, sweet,
 And none could find a cause for chiding;
 For, like a saint, submissive, mild,
 She'll follow meekly as a child
 My gentle guiding.

To-morrow she's a wayward thing—
 A creature full of moods, caprices;
 And only when the day is past,
 And we with anger part at last,
 The conflict ceases.

My blessing—curse! My hope—despair!
 And these within an hour I vote her;
 Yet tho' she prove my death at last,
 Thro' storm and shine I'll hold her fast—
 My pride—my joy—my—motor.

—Brooklyn Life.

AUTOMOBILE ACCIDENT.

At the inquest at Kirkclevington, near Stockton-on-Tees, on Andrew Priestley, chauffeur, who was killed through the overturning of a motor-car while rounding a corner on the main road between Thirsk and Stockton, another chauffeur described the corner as one of the most dangerous in England. The jury returned a verdict of "Accidental death," adding the opinion that the corner should be made safer.

STEALING A MOTOR-CAR.

At Audover County Bench, last week, John Blythe and John Scanlan, two privates in the Royal Scots Greys at Tidworth, were charged with stealing a motor-car, valued at £500, the property of Major McEwen, of the Cameron Highlanders. The prosecutor said he left the car in a shed at Tidworth Barracks, and the next morning it was gone. The men were apprehended at Freefolk, near Whitechurch. When charged Scanlan said: "We went to the shed, lit the lamps, and drove the motor away. We ran out of petrol or you would not have caught us." The men were each sentenced to six months' imprisonment with hard labour.

BUSINESS NEWS.

FROM the Pendleton Radiator Company, Claremont, Bolton Road, Pendleton, Manchester, comes a copy of the new catalogue they have just issued; the list gives illustrations and full particulars of the various types of radiators, engines, silencers, mudguards, petrol and oil tanks, &c., they are now turning out for the trade.

A CLIENT of the Crypto Electrical Company, of 155 and 157, Bermondsey Street, London, S.E., has written to the firm stating that with the Crypto Motor Generator he purchased in June, 1905, he has so far charged 1,612 ignition accumulators of all sizes, and that the machine is still running night and day.

THE next motor auction sale of the London and Paris Exchange Motor Agency, of Shaftesbury Avenue, W.C., will be held on the 26th inst.

BENZ MOTORS, of 160-196, Great Portland Street, London, W., inform us that they are now prepared to accept orders for motors specially built for boats, of the following sizes:—8-h.p. single-cylinder, 12-h.p. two-cylinder, and 24-h.p., 35-h.p., and 45-h.p. four-cylinder.

THE Mors car which Mr. Charles Jarrott was to have driven in the match with Mr. S. F. Edge at Brooklands on the 3rd inst., and which was fitted with Dunlop detachable rims and tyres, has been entered, so equipped, for the races at Bologna, Italy, on September 6th and 7th next.

AT Brooklands, on the 1st inst., the first, second, and final heats of the All Comers' Sweepstake were won by users of Shell motor spirit, as was also the Montagu Trophy. On the second day, August 3rd, the second heat of the August Trophy race and the O'Gorman Trophy were also secured by cars propelled by Shell.

A LOSS of 447,000 passengers by the L. and S.W.R. Company last half-year is attributed by Sir Charles Scotter to the competition of tram-cars, motor-buses, and motor-cabs in the suburbs of London.

MESSRS. THOS. H. NICE AND COMPANY, who have establishments at Stowmarket, Diss and Ipswich, have just opened a new garage and repair works at 21, Abbey Street, Bury St. Edmunds. This is well equipped for all classes of motor repairs, and there is a special department for dealing with motor tyres by the H.F. process. The works are under the management of competent engineers, and Mr. Nice personally supervises all the work carried out.

TO CORRESPONDENTS.

All communications intended for insertion in this Journal or relating to Editorial matters should be addressed to THE EDITORIAL DEPARTMENT, MOTOR-CAR JOURNAL, 27-33, Charing Cross Road, London, W.C., and must be written on one side of the paper only. Letters must in all cases be accompanied by the name and address of the writer, as no notice will be taken of anonymous communications.

To insure insertion communications and contributions must be in the Editor's hands by Tuesday forenoon of the week in which the same are intended to appear. Disappointment may be caused by non-compliance with this rule, and to avoid this earlier receipt, if possible, is necessary.

Photographers, both professional and amateur, are invited to send photographs of current events or of motoring scenes and incidents. The fee, if any, required for reproduction should be stated in each case, otherwise no liability will be accepted.

The Editors cannot undertake to return MSS. or drawings, although every effort will be made to do so in the case of rejected communications. Where such are regarded as of value, correspondents are requested to retain copies.

The Editors do not hold themselves responsible for the opinions expressed by their correspondents, or for statements and facts which do not appear in the editorial columns.

The Editors and Publishers beg also to state that they will accept no responsibility for unsolicited contributions, even if used, unless payment for same is directly specified in forwarding, and the terms arranged before publication.

THE Motor-Car Journal.

VOL. X.]

LONDON, SATURDAY, AUGUST 22, 1908.

[No. 494.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

SINCE we circularised the competitors who took part in this year's trial with regard to that event, the Society of Motor Manufacturers and Traders have issued a letter to their members which seems to have been little to the taste of some of the leading traders—judging from the reply of Mr. G. Du Cros to the communication, and which finds a place in our symposium this week. It has been abundantly evident that the trade has become heartily tired of the 1908 trials and that its members have had enough of such tests for many years to come. Not all the flogging of the committee of the R.A.C. can revive vitality in the 2,000 miles. It is as lifeless as the proverbial door nail. That point settled, it now remains to be seen whether the industry requires anything of a trial of the car *per se*. Certainly there is no enthusiasm for such an expenditure, and many will support the suggestion of Mr. Du Cros that once in a decade is quite often enough. There would undoubtedly be time for improvements to be effected by designers, and those engaged in the trade could be earning money in the meantime. If we are to have trials, they should be limited to special points where something is demanded by the public, and the Club would be better employed in suggesting means by which automobiles could be rendered less pronounced disturbers of the dust on the road surface than in projecting a plan for expending the maximum of money in the minimum of time. It has gravely collected a number of photographs and its committee is busily cogitating over recent runs at Brooklands. Meanwhile the plain man is asking "What is the good of it all?" We shall see.

A L.G.B. Circular.

ONE result of the agitation that has been conducted in the columns of the daily Press is seen in the promised issue of a circular letter by the Local Government Board to the local authorities—apparently to appease the wrath of "Constant Reader" and the other gentlemen who write to the papers. This is to be issued by the President of the Local Government Board, asking for information as to the effect of motor-car traffic on the roads within their jurisdiction. It is understood that among the interrogatories sought will be a query as to how far the main roads are monopolised by the users of motor-cars and motor-traction-engines, and with what danger to vehicles and passenger traffic. The circular may be the precursor of new legislation next year.

Transatlantic Visitors.

As the "Empress of Britain" was leaving the Liverpool landing stage the other day, a motor-car drove up, giving the occupants, Mr. and Mrs. W. H. Beale, of Chicago, three minutes in which to catch the boat. Evidently some of our Transatlantic visitors do not waste time; and the way in which they see England by motor-car would surprise many stay-at-home Britishers. Often they bring their own cars, the arrangements for transport being made by such firms as Messrs. G. W. Sheldon and

Co. What actually takes place is seen in the following instance:—About ten days before Mr. B. anticipated leaving New York he ran his car into the firm's packing warehouse in Chicago, where it was cased and sent on to New York. There it was shipped to Naples by the same steamer by which the owner was sailing. At Naples the car was uncased by the packers' agent and delivered to the chauffeur, the case being knocked down and shipped back to Messrs. Sheldon and Co. The owner toured through Italy, Germany, Switzerland, Spain, France and England, finally arriving at Liverpool just in time to join the steamer on his return passage to Chicago *via* Canada. The representatives of the shippers met Mr. B. on the gangway of the vessel and took over his car and chauffeur. They are now recasing the car in the original case in which it was shipped to Naples and are despatching it to Chicago by the s.s. "Celtic." The owner has no trouble whatsoever in the matter; he simply releases his car a few days before leaving Chicago, takes it up on his arrival at Naples, uses it until the actual time of his sailing on his return passage, and takes it over again a few days after his arrival in Chicago.

The "Four Inch" Race.

PRACTISING over the course for the "Four Inch" Race in the Isle of Man has, as we were able to announce last week, now been extended to three weeks instead of two, namely, from Monday, 31st inst., until Tuesday, 22nd prox., both days inclusive, Sundays excepted. The Isle of Man authorities have also extended the time for practising from daylight until 8 a.m. under certain restrictions, and not 7.30 a.m. as previously arranged. After 8 a.m. no car entered for the race will be allowed on the course, and no competitor will be allowed to drive on the course, or on any part of it, on any car after that hour on any day, either as a passenger or otherwise. Before landing for the purpose of practising every car must have its number distinctly painted on the radiator in figures not less than 12 in. high and 1½ in. wide. On landing the cars have to be registered at the office of the Highway Board, Athol Street, Douglas, before they can proceed on to the roads. The 25·6-h.p. Rover cars which were entered in the "Four-Inch" Race by Mr. J. K. Starley and Mr. Harry Smith have been withdrawn, as Mr. Smith states that the cars cannot possibly be ready in time for the race. The only Rover car now competing is entered by Mr. H. B. Browning.

Street Cleaning in Town.

MOTORISTS who use their cars for pleasure, and who have regard for the credit of the automobile, will join with the City Engineer of London in expressing the hope that the companies responsible for the motor-bus services in town will take steps to secure the emptying of the trays now provided to catch the oil that has hitherto been deposited on the surface of the streets. At present about 77,000,000 gallons of water are used every year in street cleansing in the City of London. Considerable additional work has been given the department owing to the large quantity of oil deposited by motor-buses, and attention is drawn to the fact that although the Commissioner of Police for the Metropolis has given orders that suitable trays should be provided for intercepting the oil, the nuisance

continues—though, it is acknowledged, in a lesser degree. Due provision should now be made for emptying these trays and so preventing that addition to the substances on London pavements that add to the dangers and the difficulties of the streets.

A Triple Success.

IN the Mile End Road, in East London, where motor-bus mishaps and onslaughts on their drivers have lately alternated, the police have measured an eighth of a mile, at either end of which is an officer with a stop watch, one giving to the other a signal by handkerchief as any motor vehicle suspected of excessive speed enters the officially "controlled" area. The other day the police had a varied haul, catching the driver of a trolley and trailer who was travelling at eight m.p.h. instead of the maximum of five m.p.h.; a motor-bus driver who should not have been going more than twelve m.p.h., was driving at the rate of twenty m.p.h.; and, thirdly, a motor-cyclist was journeying at twenty-six m.p.h. instead of a maximum of twenty m.p.h. Naturally, after hearing such a variety of cases, the magistrate gave a little judicial admonition, which was summed up in the reflection that "life need never hurry at such a rate."

Touring in Italy.—The House of Carracci at Bologna.

Pleasure Services.

IN the August number of the "Industrial Motor Review"—the reduction of the price of which to 2d. per month is a matter of considerable concern to all who are interested in the commercial motor vehicle—gives a specimen programme of a Welsh pleasure service, indicating how well visitors to Llan-dudno are catered for in the matter of motor trips. This year more than in any previous season the motor vehicle in public use at the seaside and inland holiday resorts has demonstrated its value. Mishaps, too, have been so infrequent that reliability has been equally well proved, and altogether it may now be said that the day of the horse-drawn vehicle for pleasure purposes when on holiday bent is nearly at an end.

The Proposals of a Motorist.

A MOTORIST who subscribes himself the owner of three automobiles has been writing his proposals to deal with the problems attendant on the coming of the car. He would abolish the speed limit—as would, we believe, Mr. John Burns if the eyes of certain M.P.'s were not watchful—and institute special restrictions in places of populous resort. On the occasion of an accident the driver of the car should, according to this suggestive person, be imprisoned; and, should the owner of the

vehicle be abroad at the time of the trouble, the car should be prohibited from carrying passengers for some term of months, or, "it may be, for years." Then he would, being the owner of three cars, raise the taxes to £5 for those below 10-h.p.; to £10 for those between 10 and 15-h.p.; to £15 for all from 15 to 20-h.p.; and £20 if the cars were over that rating. To the licences the photos of the owners should be attached, and it should be compulsory that the licences should be taken out and the cars registered in the districts in which the owners reside. Accompanying these expensive notions is the proposal that the revenue thus obtained should be devoted to the maintenance of the roads, so that the motorists should reap some of the advantages of the heavy imposts. But they must not be specially taxed; all forms of traffic should bear their share of the burden.

Medical Officers and Motor-cars.

COUNTY surveyors and similarly situated officials connected with the local government of the country have long recognised the importance of the motor-car as a means of easing their duties, and also rendering it possible to perform the maximum of public service in the minimum of time. Now the medical officers of the country, having seen the assistance that the automobile has proved to their professional confreres in private practice, are apparently desirous of adapting it to their branch of the profession. Speaking at a meeting in Westmorland the other day, Dr. Craven, the medical officer for a western district of the county, said the time was coming when it would be necessary to provide medical officers with motor-cars. It was absurd, he said, to pay officers good fees and then to allow them to waste their time riding bicycles. Everyone now recognises the value of time—save the bucolic authorities that sometimes thwart the progress of motoring in their districts—and hence the transition from the bicycle to the automobile is only barred by one consideration in many places, viz., the initial expense.

Modesty its own Reward.

ANOTHER owner of a motor-car is wanted—not by the police, but by the members of a cycling club who have become conscious of the fact that motorists are quite as human as other people. In the neighbourhood of Rutley, on the Eastbourne road, recently, one of the members of the Rutland Cycling Club was upset by some sheep and was rendered unconscious. He was conveyed to a cottage, but the nearest doctor lived some five or six miles away. The first motor-car that came along was, however, stopped, and the owner conveyed the injured man to Uckfield Cottage Hospital. Both the Rutland Cycling Club and the member who was the victim of the accident are anxious to get in touch with the owner of the motor-car and to thank him for his signal service.

The Considerate Motorist and the Inconsiderate Public.

WE are glad to see that the Earl of Cranbrook, who has only recently become the owner of a car, has joined in the correspondence now flooding the London papers with a letter that should convince the reasonable man of the justice of the position taken by the average motorist. He never drives himself, but keeps a very careful eye upon the chauffeur, and "I see how badly dogs, children, and the public, especially cyclists, seem to look after their own safety, and how important it is that a chauffeur should never pass another vehicle at rest, or indeed drive anywhere where people are about, except at a pace which enables him to stop at once should anyone step into the road before him, as people are only too apt to do. I would add to this that any driver, whether of a motor or horse vehicle, or cyclist, causing an accident and not pulling up to assist, and giving his name and address, should be liable to imprisonment without the option of a fine. I cannot agree with the suggestion to prohibit the use of the horn. When indiarubber tyres were first introduced, people found it necessary to put bells on their horses to

enable foot-passengers to cross the road safely, as even the feet of the horses did not make noise enough to attract attention. Motors are absolutely silent, and the danger to the public without some system of calling attention would be immense. In the country every cart goes in the middle of the road, many of the drivers are asleep, and it would be necessary to pull up and shout every time you came to a vehicle. In villages, without some noise, children would be constantly crossing the road to their own great risk."

The R.A.C. at Norwich.

LAST week we gave the detailed programme of the R.A.C. provincial meet to be held at Norwich in September. There will be the usual mayoral reception, meeting of the general committee and visit to the cathedral—motorists seem to have a partiality for assembling in these cathedral cities, Chester, Hereford, and Lincoln having already been thus favoured, and Oxford being on the present year's list. A gymkhana and the dinner will conclude the Saturday's proceedings, while the members of the Norfolk Automobile and Launch Club will provide the craft for a trip on the Sunday. Several local garages are providing free accommodation for the cars of members and associates taking part in the meeting.

Farmers and the Car.

AT the annual show of the Harrogate Agricultural Society, Dr. Neville Williams, the mayor of the town, arrived on the show ground in an automobile—an incident which a speaker at the luncheon compared to a vivisectionist attending a rabbit show. A remarkable feature of the speeches was the absence of the vituperation which was wont to mark "agricultural oratory" on such occasions. Most of the speakers acknowledged that the motor was not exactly the bugbear to farmers that it was once said to be, and that it could even be turned to their advantage.

London Traffic Report.

WE are promised next month an addendum to the report of the Royal Commission on London traffic issued three years ago. There is more congestion of traffic in the streets of London to-day than ever before, notwithstanding that several thousand motor-cars, including nearly two thousand motor-buses and cabs, have replaced far more than the equivalent of horsed vehicles. The congestion is the more noticeable owing to the speed with which a crush of vehicles gets together. Of the traffic hold-ups which take place at such places as the Mansion House and Wellington Street, eighty per cent. of the vehicles are motor driven. In the pre-motor vehicle days it took several minutes for ten or fifteen horsed vehicles to collect. Now twenty and thirty motor vehicles will be held up within thirty seconds. The cause of the increasing congestion of traffic appears from this bare statement to be the speed of the motor vehicles. This view is in some respects correct. The real cause of the congestion, however, is the slowness of horsed vehicles. Something must be done quickly in order to prevent absolute confusion in all the busy metropolitan centres, and slow moving traffic should be relegated to the side streets—and the sooner the better.

Traffic in the City.

WE understand that the members of the Corporation of the City of London are by no means satisfied with the present state of affairs with regard to motor traffic in their small but important area. A special meeting is shortly to be held to consider proposals for a bill dealing with the noise as well as the speed of motor vehicles, chiefly omnibuses, in the City. It is understood that Mr. A. J. Balfour is willing to introduce a Bill on the subject in the House of Commons. This, of course, he

will do in his capacity as senior member for the City of London, and the fact that he is a motorist, as we are able to picture in the accompanying illustration, gives confidence to those who are leading the agitation in the City.

Mr. Balfour as a Motorist.

WE are able this week to give the latest photograph of the Right Hon. A. J. Balfour. This was taken only a few days since outside his London residence, just as he was about to start on a lengthy journey. The car is his latest six-cylinder Napier, his eighth car of that type. Mr. Balfour is thoroughly *au fait* with everything in connection with automobilism, and evinces the greatest interest in its development. The landaulet body is on novel lines, and is the outcome of Mr. Balfour's own ideas and suggestions. The whole of the roof is of leather, and is constructed to fold right back with the portion behind the rearmost window, and when so folded forms a com-

pletely open touring car. On account of his multifarious duties Mr. Balfour finds his cars of the greatest service. At the same time he takes full advantage of the pleasures to be obtained from motoring, his favourite seat being alongside the driver.

THERE is nothing to worry about in the suggestion made by a London morning journal which ought to have known better, that Mr. John Burns is likely to prohibit the Four Inch Race in the Isle of Man. Manxland is beyond the sphere of influence of the L.G.B.

AT a meeting of the joint committee of the creditors and shareholders of Argyll Motors Ltd. (in liquidation), it has been decided to continue the business of manufacturing pleasure and commercial motor vehicles, and to keep all depots fully supplied with cars and spare parts. The committee expressed confidence in the future of the Argyll cars, and are making arrangements looking to a reconstruction of the company in a manner calculated to benefit all concerned.

THE SOCIAL WHIRL.

THE King has been enjoying several motor rides in the Ischl district, a noteworthy incident of his visit to the Emperor of Austria being the latter's first motor-car trip. On Wednesday of last week the Emperor Francis Joseph called for King Edward at the Hotel Elisabeth, Ischl, in a car belonging to his son-in-law, Prince Leopold of Bavaria. The King and the Emperor went for a drive along the valley of the Traun, Prince George of Bavaria being seated by the chauffeur to direct the pace. At Weissenbach they stayed awhile, alighting at the hotel where the accompanying photograph was taken.

THE Queen of Spain spent Friday night of last week at the Grosvenor Hotel, London, and on Saturday morning she received several visitors. Just before noon she left in a motor-car for luncheon at the Spanish Embassy. The Queen left the Embassy soon after half-past one o'clock in a motor-car for Southampton, where she was met by Princess Henry of Battenberg, Princess Christian, and Princess Louise and the Duke of Argyll. The latter had motored from Osborne Cottage to Cowes on the way to meet their Royal relative.

NEW members of the Royal A.C. include the Earl of Carnarvon, D.L., Lord Castletown, D.L., Sir J. Murray Scott,

King Edward VII. and the Emperor of Austria returning to the Hotel at Weissenbach after the latter's first motor ride.

Bart., J.P., Sir Vincent Caillard, Mr. C. J. O'Donnell, M.P., and Mr. F. H. Lambert.

THE marriage of Mr. Winston Churchill on the 15th prox. will be one of the principal social events of the autumn, and apparently the daily papers are already prepared to give him and his fiancée much publicity during the few days that intervene. On Monday he motored with his mother, Mrs. Cornwallis West, and Miss Clementine Hozier from Salisbury Hall, St. Albans, to London, and subsequently the ladies drove off from 12, Bolton Street, W., in the car for some shopping—facts which were of such transcendent importance that they have not only been paragraphed but they have also been pictured in the Press.

CONSIDERABLE interest has been taken at Scarborough in the motor-car used by Lieutenant-General Baden-Powell, commanding the Northern Division of the Territorial Army. The caravan character of this enables it to be used as an office by day and a sleeping apartment, if necessary, by night. For three weeks the famous soldier has been almost continuously on the car, without which he could scarcely have accomplished the work he has done in connection with the Territorials.

CAPT. W. ALLANSON and Miss Katherine Poland, a niece of the famous K.C., were married at St. Peter's, Cranley Gardens, London, on Tuesday. Coming out of the church the newly-

wedded pair entered a motor-car and started on the honeymoon trip, the bridegroom acting as his own chauffeur. To the rear of the car a pageboy had surreptitiously attached a lucky shoe.

IF all motorists were as considerate as the Princess of Wales, public opinion would be much more inclined towards the movement. While motoring from Frogmore to Wrest Park, Silsoe, Ampthill, the residence of the American Ambassador and Mrs. Whitelaw Reid, the Princess of Wales's car accidentally ran over and killed a favourite fox terrier dog belonging to Mr. Robert Edmonds, proprietor of the George Hotel, Rickmansworth. The Princess immediately stopped the car and sent for the owner of the dog, to whom she expressed her great regret. A letter has since been received by the owner, again conveying the Princess's sincere regret at the accident, and in sending a fox-terrier puppy the Princess expressed the hope that in course of time it may replace in the children's affections their late favourite.

AN exciting motor-car accident occurred on the Ferry to Lake Side road, on the west side of Windermere Lake, the other night. Mr. Joseph Bliss, of Boarbank Hall, Grange, prospective Liberal candidate for North Lonsdale, had been touring in company with Mrs. Bliss, Mr. James Travis, Liberal agent, and a chauffeur, and in ascending Cūnsey Hill the steering gear and brakes of the car failed to act. The vehicle swung round and turned over, Mr. and Mrs. Bliss being pitched into the roadway. The chauffeur was pinned down, and Mr. Travis was under the car. The latter, however, was able to get out uninjured, but the car had to be raised to release the chauffeur. Mrs. Bliss was cut and bruised on the face and wrist. Mr. Bliss was but slightly bruised, and, fortunately, the chauffeur suffered only from shock.

SIR HORACE PLUNKETT continues his interest in the work of the Irish A.C., and is a most assiduous chairman of the committee. At the last meeting I understand that arrangements were made for having the additional garage which is being taken at 134, Lower Baggot Street, Dublin, got ready for the Horse Show week. Previously the pressure at the Dawson Street garage has been very heavy at such times, and the new building will be a great convenience.

THE R.A.C. is fortunate in being able to introduce a novelty into its provincial meeting at Norwich, next month. In addition to the gymkhana on the Saturday, which Mrs. Russell Colman will permit to be held at Crown Point, there will be a motor-boat run on the Sunday, after which Mr. and Mrs. H. L. Clark, whose hospitality is known throughout East Anglia, will entertain the visitors to tea at Rivercroft, Wroxham.

MR. AND MRS. HAMILTON MCKOWN TWOMBLY and their daughter have gone on a motoring expedition to Cumberland to visit the lakes. They return to the Ritz Hotel, London, in a few days. Other Americans who have been motoring here recently include Mr. Manson, who spent five days in exploring the south coast, Major Hoppin and Mr. and Mrs. Cortlandt Bishop, the latter just come from Paris.

MOTORISTS and residents interested in Overstrand village, a select residential resort, which is much frequented by those touring in Norfolk, will be glad to learn that, at the instigation of Sir Edgar Speyer and Mrs. Macmillan, the Roads Improvement Association has approached the Norfolk County Council with a view to the road through the village being tar painted. The Association was authorised to offer the Council £20 towards the cost, and the County Surveyor (Mr. T. H. B. Heslop) has now been able to give instructions to the District Surveyor to put the work in hand.

MR. R. E. EDMONDSON, the Secretary of the Motor Club, informs me that that enterprising organisation is inviting Mr. Wilbur Wright to visit England and demonstrate the capacities of his flying machine on the track at Brooklands.

LOLLIUS.

Should a 2,000-Mile Trial be held in 1909?

VIEWS OF PARTICIPANTS IN THIS YEAR'S EVENT.

FOLLOWING the views of participants in the 2,000 miles and Scottish Trials which were given in our last issue, we now continue the Symposium with further letters received from other leading competitors. The unanimity that has been expressed against holding such a long and arduous contest as that which diverted the attention of the trade from ordinary business for a month of the present year amply justifies the action of Mr. Lionel Rothschild, at the meeting of the R.A.C. Committee, when he secured the postponement of the discussion to the next meeting of that body.

It is evident that those who have had actual experience in the matter are convinced that the Scottish Trial not only gives a test which is greater than any ordinary touring car is likely to have to undergo in ordinary service in the same period of time, but that the expense of the longer event is out of all proportion to the results obtained. We believe that the public will uphold the views of the trade to a greater extent than is officially recognised, and that if it were possible to have a plebiscite of the motoring community the universal view would be against an expenditure which leads to very little actual improvement in the cars. Of course we recognise the value of the trials in the past—a fact which is proved when we remind the newer generation of motorists that the first organised trials on the road in this country were those initiated by the *M.C.J.* in connection with one of the early exhibitions at the Agricultural Hall, London; but those days have passed, and individual manufacturers and agents can be trusted to do all that is necessary without the expensive incentive to improvement said to be provided by these trials.

NO ADEQUATE RETURN.

Mr. George Du Cros, of Messrs. W. and G. Du Cros, Limited, replying to our letter on the subject, sends us a copy of a letter written to the Society of Motor Manufacturers and Traders on the subject, in which he says:—"In reply to your circular issued on the 10th August, *re* the 2,000 miles trials, I do not think it is necessary to deal with this subject in the form in which you have sent it out, as the conclusion we have come to as a result of taking part in the recent trials is that these are no longer necessary for the trade. The trial which we took part in was supposed to be for standard cars: we are of opinion that very few standard cars were run with the exception of our own. The term touring body is very elastic, as may have been noticed on some of the freaks which were accepted by the Automobile Club under this category. I do not consider the system of judging a good one when the element of luck is taken into consideration. The expenses are extremely high to the manufacturer and a number of them unnecessary. I am certainly of opinion that the trade will be well advised not to support trials of this nature, except once in ten years, both from the point of view of expense and public interest."

Messrs. H. Coltman and Sons' opinion is not very favourable to long trials such as the 2,000-mile trial held this year. "We cannot see that there is an adequate return for the trouble and expense incurred by entrants, excepting perhaps the makers of the winning car. Results of trials in the past have not proved that the most reliable car for the general buyer is that made by the makers of the successful cars in these long distance trials. So much depends on the road risks and the driver that it seems impossible for equality of conditions for each competing car in such long through town and country trials."

Mr. J. W. Stocks, managing director of the De Dion-Bouton (1907) Ltd.:—"With reference to your comments in the issue of the *M.C.J.* of the 8th inst., I do not think that it is necessary or desirable to hold any long trial, at any rate next year.

As far as my own firm is concerned, the amount of time expended over these trials would be more profitably employed in other directions."

IRISH AND SCOTTISH TRIALS SUFFICIENT.

Messrs. Chambers Motors, Ltd., "still hold the same opinion as regards the R.A.C. long distance trial as we did before it came off. An entrance fee of £50 is much too large for a small car, and, added to the expense necessarily incurred during the time the trial lasts, makes a considerable sum, practically prohibitive to all except very large firms. There is too much expense already in the motor trade through trials, shows, hill-climbs, &c., without adding to the number. The ratio of weight to power in the class (B) which we are personally interested in is too high. We have always aimed at building our cars as light as possible, consistent with strength, and the proof of our endeavours is to be seen in the Scottish Trial results of 1907 and 1908. Finally, we consider the Irish and Scottish Reliability Trials are quite long enough, taken in conjunction with the awful roads which exist practically all over Ireland and a considerable part of Scotland, to test a car severely."

NO SUPPORT.

Messrs. Bell Bros., write:—"Our opinion is that we entirely disagree with such a trial, not, however, that we have the slightest fear of our productions failing to stand such a test, but that we do not see our way to go to the great expense and trouble that such tests cost. In a week's trial, such as that in Scotland, we are firmly of opinion that a car can be tested to the fullest extent, and therefore one to run on the more level roads of England with a speed test on Brooklands is not required. The public are not requiring racing machines, and as the last R.A.C. trial was run that was practically what ought to be supplied if one desired to come out successful."

The improvement in the general touring vehicle is what is wanted, and not freaks specially got up for such competitions. Further, in our opinion, the need for such trials is far less to-day than three or four years ago, as, generally speaking, such great improvements have been made in every make of vehicle, that for it to cover two or three thousand miles in short time is nothing out of the way. If the R.A.C. run a similar trial in the coming year to that held this year, we shall decline to support it."

WRITING on the subject of Ordnance maps, Mr. J. T. Wood, of Chandlersford, Hants, suggests that all contour lines should be shaded in colour or stippled. This would enable users of the map to take in the lie of the country at a glance, and save the wearisome tracing out and the following up of the contour lines for any specific purpose.

MEETINGS of creditors and shareholders were held on Tuesday under the winding-up order made against West (Ltd.) motor-car manufacturers, of London and Coventry. The liabilities were returned at £11,716, of which £5,187 is expected to rank, against assets £6,493, subject to debenture claims for £5,000. The deficiency as regards shareholders is returned at £26,080. The company was formed in July, 1905, to acquire the businesses of C. J. West and Co. (Ltd.) and the West (London) Motor Company (Ltd.), carried on in Coventry and London respectively. The whole of the capital was subscribed by the directors and their friends. The loss on the trading was explained by the cost of production in proportion to the selling prices, to changes in design, cost of advertising, and money expended on Motor-Car Trials. A receiver on behalf of debenture holders was appointed in May, 1908. Mr. Oscar Berry, chartered accountant, was appointed trustee.

A TRIP INTO KENT.

(Concluded from page 523.)

THE road should be retraced as far as Ivy Hatch, then turn sharp to the left, and, skirting the wood and leaving the inn on the left, the border of the wood can be followed as far as Godden Green. At this point a turning to the right pierces the wood and leads to Seal, a quaint old village, worthy of a visit, if merely to see the brasses in the church. We had, however, spent rather longer than we had intended at the old camp, so, instead of turning

Ruins of Otford Palace.

to the right and reaching Sevenoaks by Seal, we journeyed to the left and so entered Sevenoaks just above Knole Park, the entrance to which is opposite the church. A sloping avenue of beeches, and then between two picturesque lodges, and after passing along a wood-crowned hill, the old house of the Sackvilles is seen. Here it was that Henry VIII. was entertained in 1509; Queen Elizabeth, too, stayed here, and Cranmer used it as his residence when not at Otford. Since 1603 it has been in the possession of the family of the present owners—the Sackvilles. The house is a typical baronial hall and most imposing, with its square towers and embattled gateways. There are some hundred rooms, but only seventeen are shown on Fridays when the public are admitted. Passing through the porter's lodge, where an entrance fee of 2s. per head has to be paid, the Green Court is entered. On one side is a statue of Venus rising from the bath, on the other a cast of the gladiator Repellens. The surrounding rooms are mostly private apartments of the owners. A gateway, surmounted by a fine oriel window, leads to the Stone Court. Here there is an Ionic colonnade, supporting an open gallery, above which a stone shield attracts attention. Beneath, under the gallery and fixed in the wall, are the fossil remains of a great Irish elk, which, according to Professor Owen, is one of the finest specimens of that extinct species in the whole country. From here the Great Hall is entered. At the lower end is an elaborately carved music gallery; the windows are decorated with the arms of Queen Elizabeth and those of the Earl of Essex. The fireplace contains some fire-dogs brought from Hever Castle; they bear the arms of Henry VIII. and Anne Boleyn. Incidentally it may be remarked that few old castles exist in which the initials of that monarch with those of one of his consorts are not to be discovered.

On the raised floor at the end is a statue of Demosthenes, bought in Italy by the third Earl of Dorset; the arrangement

of the drapery is superb. The paintings are mostly portraits by Van Dyck, Reynolds and Lawrence; the one of George IV. by the latter is worthy of note. Under the staircase is a fine marble, representing the goddess Egeria, and half-way up, in case, are the coronation robes of the third Duke of Dorset. Gardini the violinist, by Gainsborough, should be seen. In the Brown Gallery are many historical portraits, including Cromwell by Walker and Lely's Charles II. On the old furniture, which is chiefly of the time of Elizabeth and James I., we noticed little bags that some facetious members of our party thought contained sweets and were placed there for the benefit of "bored" visitors. Inspection, however, proved the contents to be camphor, which, in addition to being a restorative, is reputed to have an opposite effect on moths. Our facetious friends found further subject for remark in Lady Betty Germaine's bedroom, where the ancient fire screens brought forth the suggestion that that lady was in the habit of indulging in the popular, but perhaps vulgar, game of "Aunt Sally" in her bedroom; the fire screens certainly had a resemblance to the figures used on Hampstead Heath for that pastime. The bed, with its embroidered counterpane, said to be the work of Lady Betty herself, is beautiful, if, perhaps, not quite in accordance with modern hygienic ideas. Here there are two pictures by Wouvermans that should be seen—a landscape and a stable; Teniers' "Quack Doctor" is also very fine. This last is in the sitting-room, as is Ferrare's "The Offering of the Wise Men" and Garafalo's "Judith with the head of Holofernes."

A piece of tapestry merits attention; it shows Van Dyck and the master of the tapestry works, Sir Francis Crane. In the spangled dressing room a portrait of Nell Gwynne and one of La Belle Stewart, Duchess of Richmond, will certainly attract attention. The billiard room and Leicester Gallery is likewise full of portraits, a Van Dyck portrait of Sir Kenelm Digby seems to show the very soul of an English gentleman of the period. In the Venetian Bedroom there is a Paul Veronese, a Doge of Venice, that reminds one of the famous picture by that artist in the Vatican, the Vision of St. Helena, the colouring is so typical

The Inner Court Yard of the Moat House, Ightham.

of his work. The furniture of ebony and silver originally prepared for King James will attract attention. The ballroom has panelled walls and a finely ornamented ceiling. Those who wish to see some really fine works of art should reserve their time for a prolonged stay in the Crimson Drawing Room. The Quakeress, and Count Ugolino and his two sons starved to

death in the prison at Pisa, will demand anyone's attention; the expression, the clear colouring is marvellous. Peg Woffington, the actress, and the Gipsy Fortune Teller may also be mentioned. The dining room is hung with portraits, chiefly of literary men, including one of Dryden. He once stayed in the house, and after dinner, perhaps in the very room in which his portrait now stands, the guests, to pass the time, agreed that each should write an impromptu, and that Dryden should decide on their respective merits. All excepting Charles, the sixth Earl of Dorset, took their self-imposed task most seriously; he, however, but penned a line and threw it on the table, and yet his effort received the prize. All will understand Dryden's choice, for the Earl's effusion ran as follows:—"I promise to pay Mr. John Dryden or order £500 on demand."

In the Cartoon Gallery there are some copies by Mytens of the Raphael pictures, the originals of which are in Hampton Court; they illustrate the Sacrifice at Lystra, Christ's charge to Peter, the Miraculous Draught of Fishes, St. Peter and St. John healing the Lame Man at the Gate of the Temple, the Sorcerer who was struck with blindness, and the Death of Ananias. The furniture is chiefly of the 17th and 18th century, and the settees and chairs are covered with crimson figured velvet. The fire dogs are of silver and beautifully chased. The chapel should be visited; the tapestry there is beautiful; that on the north wall represents scenes from the Passion of Christ and is said to be the

THE INTERNATIONAL ROAD CONGRESS.

THE programme of the International Road Congress, which is to be held in Paris in October next, has now been issued. The proceedings of the Congress will be divided into eight sections, and altogether ninety-nine papers will be read, France contributing thirty-seven, Great Britain seventeen, Belgium fifteen, Germany twelve, the United States eight, Holland three, Austria and Switzerland two each, and Italy, Portugal and Russia one each. As has already been mentioned in these columns, the points to be considered at the Congress include the materials used in constructing roads, the means of counteracting wear and dust, watering, turnings and obstacles, the deterioration caused by new kinds of locomotion, and signals and sign-posts indicating dangerous gradients, distances, altitudes, and the like. Not only the wear and tear caused by motor vehicles but the reciprocal action of different kinds of thoroughfares on tyres and cars generally will be discussed. The Congress will open with a reception on October 11th; on the 12th there will be a full meeting at the Sorbonne followed by the opening of the exhibition in the Tuileries Gardens; the various sections will meet on the morning of the 13th and in the afternoon there will be visits to various places of interest in the Paris district.

Chassis of Vinot 12-16 h.p. Car.—(See next page.)

gift of Archbishop Cranmer. Over the altar, under the east window, there is a representation in carving of the Crucifixion, the figures—of which there are some twenty—stand out as if alive.

I have, of course, only touched upon the many wonders and beauties of Knole, but I am sure that the view in driving up to the house would alone repay for the journey, and in addition the drive there is through the most beautiful part of Kent, but with only one blot—on the main roads police traps abound. Still, on those I give, when I did the trip they were conspicuous by their absence, and the art treasures of Knole are bound to interest all visitors. If time permits I advise staying the night at Sevenoaks. The Crown I know, from actual experience, to be a most comfortable hotel, and the surroundings of the garden lend an extra fragrance to the after dinner coffee and cigar. In addition good car accommodation is provided. C. T. W. H.

GALASHIELS has a capital garage in its Market Square, thanks to the enterprise of the Border Cycle and Motor Company, Ltd.

THE White Bulletin just to hand from the White Company, Carlow Street, Camden Town, N.W., is an interesting specimen of the commercial literature issued from the United States. The illustrations are interesting and prove the variety of the uses to which the White cars are put. Mr. Frederic Coleman will be pleased to send copies to readers of the M.C.J.

The programme on the ensuing days is as follows:—October 14th, excursion to Versailles; October 15th, meetings of sections; October 16th, excursion to Fontainebleau; October 17th, closing meeting; October 18th to 20th, excursion to Nice and district; October 21st, visit to Monte Carlo.

The Roads Improvement Association of Great Britain is taking an active part in the Congress, papers being contributed by five delegates. Colonel Crompton will deal with "Improvements in Self-Propelled Vehicles so as to Reduce Road Wear," the Hon. C. S. Rolls on "The Effect of the Road Surface on Vehicles," Lord Montagu of Beaulieu on "The Value of Good Roads," and the hon. secretary (Mr. Rees Jeffreys) on "Systems of Highway Administration Compared—Their Influence on Cost and Efficiency." A paper is also being contributed by Dr. H. S. Hele-Shaw, F.R.S.

AN automobile tour through Patagonia has recently been completed by Doctor Molinary Laurini on a 20-h.p. Fiat car.

NEW uses of the automobile are not easy to find, but variants are constantly coming into notice. For instance, a party of the Milwaukee Chamber of Commerce recently made a tour of the southern Wisconsin harvest fields for the purpose of getting some idea of the crop conditions. Instead of making use of the railway trains and hired horse-drawn vehicles, they made the journey on a large touring car, covering about 350 miles in two days.

THE VINOT 12-16-H.P. CAR.

THE new model lately put on the market by Messrs. T. J. Harman and Co., the British agents for the Vinot cars, comprises numerous points of interest, and bids fair to quickly become as popular, even if not more so, than in France, where it is built. From the general view of the chassis on page 545, as well as from the description appended, it will be seen that the vehicle, although of medium power, is throughout on up-to-date lines.

The motive power is supplied by a four-cylinder engine (Fig. 1), which, in accordance with the R.A.C. rating, develops

Fig. 1.—The Vinot 12-16 h.p. Four-Cylinder Engine.

16-h.p. The cylinders, which have a bore of 80 mm. and a stroke of 110 mm., are cast in pairs; the valves are all located on the left side and operated off a single cam shaft. The valve tappets are provided with means of adjustment, and the top of each is fitted with a rubber buffer, which add to the quiet running qualities of the engine. The timing gear is enclosed in an aluminium casting independently of the crank-case, and provision is made for supplying this with lubricant through a detachable brass filling cap. The water circulation is maintained by a gear-driven centrifugal pump and a framed ribbed-tube radiator with air-inducing fan.

Fig. 2.—The Vinot Change Speed Gear Box.

The mixture is furnished by an automatic carburettor provided with a throttle controlled both by hand and foot levers. The ignition is by means of a gear-driven Simms-Bosch high-tension magneto; the point of ignition is fixed, the usual advance and retard lever being thus dispensed with. The crank shaft, which is of forged steel, is supported on three long bearings of special metal. The oiling of the motor is effected by a mechanical lubricator mounted on the dashboard and driven by a belt off the rear end of the cam shaft.

The clutch is of the leather faced cone type. Light springs

are fixed below the leather, these being adjustable by means of a series of six studs. The shaft which connects the clutch with the gear-box is provided with a double universal joint to allow for any want of alignment between the two parts, and to permit of either being dismantled without disturbing the other. Fig. 2 gives a view of the somewhat novel form of change speed-gear box employed. As will be seen, it is built up of a steel—in place of the usual aluminium—cylinder with detachable ends, a large inspection lid being also provided. Three speeds and a reverse, with direct drive on top, are provided by a double train of sliding pinions which work on a hexagonally-shaped shaft. The control is by the Vinot Company's special system of vertical gate, which has been in use for several seasons past. The slots in the gate are set one above the other, a trigger on

Fig. 3.—The Vinot Gear-Box Dismantled.

the change-speed lever moving a sliding pin, which, when in position for one slot of the gate, automatically closes the other. In action the driver merely has to lift or release the trigger, and push or pull the lever according to the speed required, in lieu of moving the lever laterally, as is the case with the more conventional type of gate change. The final transmission is by a cardan shaft and bevel gear to a live axle of strong design. The torque is taken up by a pressed steel bar of substantial dimensions; the top half of the differential casing is so arranged that it can be readily detached to allow the bevel gear to be inspected.

The frame is of pressed steel, narrowed in front to increase the lock of the steering wheels, and raised at the back to clear the differential casing. Special attention has been devoted to the suspension, long semi-elliptic springs being fitted at the front and three-quarter elliptics at the rear. The usual foot and hand con-

Fig. 4.—The Vinot Live Axle.

trolled brakes are fitted, they being all of the internal expanding metal-to-metal variety, with ample provision for easy adjustment. Ball-bearings are, it may be added, fitted to all parts except the engine. The wheel-base is of ample length to allow either a closed or open side-entrance body to be fitted to the chassis. The car is extremely quiet in operation, especially on the top direct speed, on which the bulk of the running is done. Altogether the new vehicle is an excellent example of a modern four-cylinder vehicle of medium power and moderate price.

QUEEN MARGHERITA OF ITALY arrived at Chamonix on Tuesday, after crossing the Great St. Bernard Pass, where she lunched with the monks at the hospice.

CONTINENTAL NOTES.

The Coupe de Normandie.

A light car race organised by "L'Etoile Sportive Caennaise" was run off on Saturday last on a 62 kilometre course, taking in Caen, Bayeux and Tilly-sur-Seulles, this having to be covered four times to give a total distance of 428 kilometres, or 267½ miles. There were seven starters in the category for cars of the Grand Prix de Voiturettes type, Barriaux on an Alecyon shod with Dunlop tyres proving the victor in 2 hours 49 min. 25 sec., Bac on a Werner being only 27 seconds behind. The winner's average speed was equal to nearly fifty-five miles per hour.

(45-h.p. Mercedes); Mr. Thew, London (35-h.p. Berliet); Miss E. Van Wart, London (40-h.p. Pilain); Mr. Gulback, London (40-h.p. Berliet); Mr. Mackintosh, London (60-h.p. Napier); Mr. Maurice Farkoa and Mr. and Mrs. Dennis, London (24-h.p. Peugeot); Mr. W. Cunard and Mr. and Mrs. Hurn, London (40-h.p. Itala); Mr. Demas (35-h.p. Berliet); and Mrs. Douglas (24-h.p. Vinot-Deguingand).

Touring in France.

The Motor Union of Great Britain and Ireland has appointed M. P. B. Hamon, Rue des Cordiers, St. Malo, an agent for the purpose of passing members' cars through the French Customs, and obtaining for motor driving licences at this

Count Alexander Androway, the President of the Hungarian Automobile Club, at the wheel of his 40-h.p. Fiat.
(Allgemeine Automobil Zeitung.)

The Provence Automobile Meeting.

The automobile club of Salon is organising a series of flying kilometre and five kilometre speed trials for the 27th inst. They will be held on the road between Salon and Arles, France, and be open for all classes of vehicles. Prizes will be awarded to the winners in each category, while in addition the fastest car in the racing section over the five kilometres will carry off the Rothschild cup.

British Motorists in France.

British motorists touring on the Continent with their cars include:—Mr. Porter, London (75-h.p. Itala); Mr. Labouchere, London (35-h.p. Daimler); Mr. and Mrs. McAllister, London (45-h.p. Renault); Mr. and Mrs. Toudiman, London (60-h.p. Fiat); Sir Richard Martin (30-h.p. Berliet); Sir John Campbell

port. This makes the fifth agent the Union has appointed in France, the other ports at which they have representatives being:—Havre, M. H. Burton, 7, rue Beranger; Boulogne, M. P. Sergeant, 14, rue Victor Hugo; Dieppe, M. Maurice Beck, 24, rue de Sygogne; Marseilles, Messrs. Gellatly, Hankey and Co., 8, rue de la République.

Aeronautical News.

The Aero Club de Belgique is offering a Grand Prix d'Aviation of £800 to the owner of a Belgian built aeroplane which within three years from August 1st last flies a distance of twenty-five kilometres without touching the earth. The German airship "Parseval" made successful trial flights round Berlin on Friday and Saturday last week, the vessel being in the air nearly three hours. It was out again on Monday, when, owing to a

somewhat hasty descent, Captain von Krogh, who was in charge, sustained a broken leg. Owing to the syndicate under whose auspices Mr. Henry Farman took his aeroplane to the United States not having fulfilled its obligations, he set sail on Saturday last from New York to Cherbourg. Mr. Wilbur Wright, who made several flights on his aeroplane at Le Mans last week, met with a slight accident on the 13th inst., when one of the wings of the apparatus was damaged. The work of repair was put in hand at once, and the intrepid aeronaut expected to be able to restart his trials on Thursday. So far his longest flight is one of 8 min. 13½ sec. duration, but Mr. Wright hopes to considerably improve on this in the near future. He has obtained permission to practice on the military drill ground at Anvours, about twelve kilometres from Le Mans, and he is already having a shed constructed on the spot. The grounds cover a large level space several miles long, and here he will have a better opportunity for undertaking long flights. The French military steerable balloon République made a two-hours' trip around Paris on Monday. The distance covered was about sixty kilometres.

Motor Vehicles in Military Operations.

The latest adaptation of the automobile is a motor plough, by means of which an army on the march will be able to throw up entrenchments easily and quickly. The machine, which has been designed by M. Riester, an engineer of the French Ecole Centrale and an artillery reserve officer, will, it is claimed, dig

SOME USEFUL NOTES.

AN excellent cleaning medium for the reflectors of acetylene lamps is liquid ammonia, '880, which removes all the deposit. The reflectors should afterwards be polished with metal paste.

THE toggle mechanism of the foot brake at the rear of the gear case, and the pin holding together the two brake shoes, should be occasionally lubricated, as well as all the joints in the operative mechanism from the pedal to the brake itself.

To prevent rust on wheel rims it is a good plan to paint them with a mixture of shellac and finely pulverised flake graphite, mixed to a stiff paste. After treating the rims as indicated, it will be found that they are very even and a waterproof film of great smoothness is formed. The graphite is absolutely inert and there need be no apprehension regarding a detrimental effect upon the rubber.

FORTUNATELY, most cars are now fitted with covered oil retainers or grease cups on the pivot pins of the steering rods, and sometimes on the joints between the steering arms and the cross bar. If these and other joints of the steering gear are so fitted or are surrounded by grease bags, they are likely to be well oiled, but otherwise they require an occasional application of the oil can. This applies to all ball or pin joints in the gear. Failure to attend to the above leads to the rapid accumulation

The Start of the Outing given by the Ontario Motor League to the Orphan Children of Toronto.

trenches 1½ ft. deep and about 4½ ft. broad, at the rate of six miles an hour, a bank 2½ ft. high being at the same time thrown up.

Miscellaneous Items.

A public motor-car service has lately been inaugurated between Dauba and Hirschberg, Bohemia.—A motor-car service for the conveyance of both passengers and goods is being established between Amerigo and Berja-Adva, Spain.—The aeronautical section at the forthcoming Paris Salon promises to be of a much more interesting character than hitherto, as quite a number of new designs are expected to be on view.—A company is being formed to inaugurate a public motor-car service between Domfessel and Altwiler, Germany.—According to a recent return there are at present twenty-two motor-cars owned and in use on the island of Corsica, of which eight are employed in public service work.—Close upon thirty entries have been received for the Calvaire hill-climbing competition, which is to be held at Trouville on Sunday next.—An 180-kilometre race for light cars, known as the Circuit du Languedoc, is being organised by the Sporting Club de Nîmes for October 11th next. It will be held on a thirty-kilometre course, which, starting at Saint Gervazy, takes in Bezouze, Lafoux and Collias, this having to be covered six times.—Seventeen entries have been received for the Coupe Florio race for big cars, which is to be held on the Bologna circuit on the 6th prox., while for the Targa Bologna, contest for vehicles with engines of a maximum bore of 130 mm. to be run off on September 7th, there will be twenty competitors.

of slack in the steering system, with the attendant danger and inconvenience.

WHEN separating sections of gear-boxes or crank cases, it will sometimes be found that the parts stick together after the bolts have been removed. Care should be taken in separating them, especially if the parts are of aluminium, as is usual. Driving a chisel or screw driver between their edges may make a nick which will spoil their oil-tight fit, or a burr may be raised which will prevent the parts from coming together properly. The application of too great force may cause the parts to spring. Gently prying at a large number of points after the stuck parts have been tapped all around with a light hammer will generally separate them without damage.

AFTER using a car for a long time a motorist becomes very sensitive to any change in running conditions, both as to variations in the sound of its operation and its motion. A squeak, due to some unlubricated part, is very sure to be detected, and the sensation due to the car running on a flat tyre is not likely to elude the driver's attention for any great distance. He will also very quickly notice if any one of the feeds of the sight feed lubricator ceases to work and will be quick to detect any change in the working of the water circulation indicator, if one is used, and no conscious attention, practically, is required to attend to these matters, the care which is shown for them becoming entirely involuntary.

THE Victoria Motor Works and garage at Mablethorpe are owned by Messrs. Berry Brothers, who also stock petrol, tyres and accessories.

IT is gratifying to learn from a letter which Col. W. H. Campion, the chairman of the Haywards Heath Bench, has addressed to the papers, that "the Haywards Heath Bench have no prejudice against the proper use of motor-cars."

THE Hon. Wm. Kidston, Premier of Queensland, who is now in this country, has bought a large car to take with him to the Colony when he leaves next month.

A USEFUL wrench for easily loosening the security bolt of tyres and other wing nuts is described in a recent issue of our French contemporary, "Omnia." The device is made of flat steel and is about three-sixteenths of an inch thick. The handle A is of a convenient length, depending on the size of the wing

nut, about five times the spread of the wings being the usual practice. Two slots, B, are cut at right angles to each other in the circular body, and their intersection, C, is enlarged to accommodate the screw or bolt upon which the wing nut turns. The wrench is placed on the wing nut so that the wings enter the slots and are operated by the movement of the handle.

MR. L. A. VAN RIJN, of Singapore, Straits Settlements, has recently taken out a patent for a disc wheel made of rubber in one piece or in several parts vulcanized together, the wheel being thicker at the centre than at the periphery. The rubber disc is attached to the hub by gripping it between two flanges drawn together by bolts.

A TRIAL of R.R.H. patent wheels commenced on the 18th inst., over the route of the 1908 Scottish Reliability Trial, and additional ground, to make a total of 1,000 miles. The car, a 16-20-h.p. Mass, is in charge, for entrants and patentees, of Mr. W. S. Macharg, and is officially observed for the Scottish Automobile Club by Mr. William Reid.

THE signposting of the London-Dover-Folkestone road, which has been undertaken by the Motor Union, has commenced. The first sign, a special cast iron one, has been erected by the London County Council on Westminster Bridge. The enamelled signs for the remainder of the road have also been delivered to the Kent County Council, who have undertaken the erection.

AFTER discussing a proposal to apply for a speed limit in the highways in their locality, the Burley in Wharfedale District Council have consented to the application. One of the speakers remarked that if the Council omitted to use the steam roller it might go hard with the tyres of motorists—a suggestion which, however, was apparently disregarded by other members of the local body.

IN connection with the scholarships offered by the Daimler Motor Company, Mr. J. A. Mackle, of Liverpool, who was educated at St. Francis Xavier's College and Liverpool University, has been awarded the major scholarship. Minor scholarships have been granted to Messrs. R. B. Burton, of Nottingham, G. S. Bower, of Marsden, near Huddersfield, H. C. Harrison, of Norwich, and Gordon Avery, of London.

MESSRS. STAREYS AND WOOLLEYS, at Nottingham, have a long lineage, the former firm dating back in the history of the carriage building industry of Nottingham some 130 years and the latter going back more than a quarter of a century. The recent combination has given them a very strong position, the joint business being one of the largest of the kind in the Midlands. They have devoted much attention to motor-car bodies, and we lately had the opportunity of confirming the opinions of satisfied patrons that engineering knowledge and technical skill work in association on their premises.

HERE AND THERE.

A SERVICE of motor omnibuses has just been established by the London and North-Western Railway Company between Mold station and the Loggerheads.

THE District Council of Redruth are considering the placing of signs warning motorists of dangerous places in their district.

THE War Office are inviting tenders for the supply of a number of motor vehicles.

MESSRS. CONNELLY AND SONS have put a motor-bus into service in the city of Hereford, and already it has proved its convenience to the public.

AT the request of the local motorists the Camelford District Council is communicating with the responsible authorities concerning stones laid on the road at Otterhead and not rolled.

THE Municipal Council of Dartmouth (Devon) are in the market for either a covered motor (steam or internal combustion engine), dust wagon, or a light steam tractor and two trailers suited for harbour purposes.

THE Craven Automobile Company, whose headquarters are at Skipton, are about to open a fine new garage on the highway between Ilkley and Leeds, which should prove useful to motorists on that particular stretch of road.

MR. G. T. RICHARDS has opened an office at Mansfield Chambers, 17, St. Anne's Square, Manchester, where he intends to specialise on the designing of automobile chassis both for pleasure cars and petrol-driven commercial vehicles.

AT the annual meeting of the Great Southern and Western Railway of Ireland, Sir William Goulding, Bart., said the first class receipts showed a slight reduction of £745, which was mainly attributable to the more general use of motor-cars.

ONE of the great features of the Industrial Exhibition recently held at Winnipeg, Canada, was a series of trials of light agricultural motors, which was inaugurated to compare their performances with those of horse-drawn implements. The competition was of an eminently practical nature, being carried out in the open field. The various tractors, among which were the "Universal," of Messrs. Saunderson and Company, of Elstow, Bedford, and the "Marshall," of Messrs. Marshall and Company, Ltd., Gainsborough, were set to draw ploughs, harrows, seedling drills, &c. The turning capacity and ease of manipulation of the motors and ploughs when entering and leaving the field at the headlands were thoroughly demonstrated. Traction tests on rough tracks with loaded wagons and the belt power capacities of the motors for driving threshers were also included in the competition.

AMONG the many useful fittings marketed by the United Motor Industries, Ltd., is the Alpha compression valve, by means of which the amount of compression in a petrol motor may be regulated so as not to exceed a predetermined limit when starting the engine, and so prevent the danger of back firing. The device is so arranged that, when in action, any surplus contents of the cylinder above the amount necessary to produce such

predetermined pressure automatically escapes to the outer air. The valve body carries an outwardly opening valve normally retained on its seat by means of a spring; the lead at which the valve will open is readily adjustable by means of a nut on the valve spindle. We illustrate herewith the latest innovation in connection with the device—an arrangement for opening and closing the compression valves of a four-cylinder engine from the dashboard of the car.

IN Barnton Street, Stirling, Messrs. Henderson Bros. have a large garage together with a completely-equipped motor repair shop.

MR. W. K. VANDERBILT has ordered an Isotta-Fraschini car of the type which took part in the recent A.C.F. Grand Prix des Voiturettes race.

THE Mexican Electric Omnibus Company has started a service of electrobuses between the Zocalo and the Colonia Roma, in the city of Mexico.

ON Saturday an examination in connection with their driving certificate was held by the R.A.C. at the Ordnance College Workshop at Woolwich.

MESSRS. FRISWELL, LIMITED, have just received the first delivery of the new Peugeot 12-16-h.p. live axle cars, which can now be inspected by interested motorists at their depot at 1, Albany Street, London, N.W.

THE Metropolitan Asylums Board are inviting tenders for the supply of two motor-omnibuses, such to be delivered by the 31st inst., at the offices of the Board, Embankment, London, E.C.

FROM the Ordnance Survey comes a new map of Warwick and Leamington, in which the routes are marked in the now well-known style, so as to be of real service to motorists. These maps are published by Mr. T. Fisher Unwin.

WE illustrate herewith the 24-26-h.p. van supplied early in December last by Commercial Cars, Ltd., to Messrs. Allen and Hanburys, Ltd., of London and Ware. Although of two-ton

capacity, the average load of the vehicle is only 20 cwts., and the daily journeys about 56 miles, the total mileage during the first six months being 8,400. The firm have altogether three vans, and report that they have displaced five horse vehicles and do more work. The vehicle illustrated usually does long country journeys, whereas the two others, which are of a smaller type, are mostly employed on town and suburban routes. The latter are at the present moment doing the work of two horse vans each.

WHEN Sir William Vincent, Bart., arrived at the Surrey Quarter Sessions at Kingston, on Tuesday, to preside over the first court, he explained his late arrival by stating that his motor-car broke down. Fortunately one of the grand jury was passing and took him on to the court.

THE exports of motor-cars and parts from the United States during June last attained a value of only £142,144 as compared with £146,410 in the corresponding month of 1907. Great Britain heads the list with £58,600, Canada being second with £28,310, and France third, with £20,895.

AT Chester, on Monday, Lord Kenyon presided over a meeting of subscribers to the fund for the purchase of a motor-car, which it is proposed to present, on behalf of the diocese, to the Bishop of St. Asaph. It was reported that £606 had been received. It was decided to close the subscription list on September 29th, and to appoint a small committee, including Lord Kenyon and Lord Harlech, to decide on the car to be purchased.

A MOTOR brake is now running daily between Dover and Whitstable via Canterbury.

ORIGINALLY the Brooklands track was assessed at £3,500. The assessment was reduced to £1,500, and the Chertsey Union Assessment Committee has now further reduced the amount to £1,000.

THE Corporation of Southampton are inviting tenders for the supply of an 8-h.p. two-seated motor-car with a long wheel base. They should be delivered to the Town Clerk on or before the 1st prox.

THE Manchester Watch Committee has reversed its previous decision as to the licensing of motor-omnibuses for use on the southern side of the city and has granted licences for the running of such vehicles.

MR. CHARLES GARRETT, of the Grange Gardens, Alresford, Hants, the head gardener to Lord Ashburton, has won the Argyll car offered by Messrs. Lipton's, Ltd., in connection with their recent Limerick competition.

BEFORE the lamented death in France of Mr. Hall Watt he had agreed to entertain the crippled children of Hull to a motor drive which was being arranged for them by local motorists. Although his benevolent intention was frustrated by his untimely death, the children are to have their motor drive, this taking place to-day (Saturday), to Hornsea. Dr. Melbourne and Mr. H. Walker are making the necessary arrangements in connection with the event.

ACCORDING to a consular report, there exist up to the present very few cars in Greece, the majority being owned by the Royal Family. Owing to the bad roads, absence of stores where fuel can be purchased, and want of repairing shops in the country, it will be a considerable time before this means of transport becomes general. Recently a few motor-lorries have been put on the road between Marathon and Athens, for the conveyance of passengers and fresh fish.

THE American Automobile Association has secured permission from the Board of Supervisors of Nassau County, Long Island, to hold the elimination trials for the Vanderbilt Cup race on October 10th, and the contest itself on October 24th. The association is required to give a bond of £5,000 to repair any damage done to the roads, and it further agrees to guard the course with 1,200 men, in addition to the sheriff's deputies. The course as laid out is said to be very fast, it being fairly level, with macadam roads. It will be over a stretch of 11 miles of the new Motor Parkway, which will be completed in time for the elimination trials. The remainder of the course lies along adjoining roads, the total distance round being 25.4 miles, with eight sharp turns and one level crossing.

THE Attorney-General for Queensland has recently had a run of 3,000 miles through the Colony on a motor-car, and has thus demonstrated the suitability of that Colony for automobiles. The worst obstacles encountered were the dry river beds of a soft sand, on which the wheels of the vehicle could not get a grip. The broken country between Charleville and Chinchilla, with its wash-outs and mud holes, was also difficult, but only meant slow travelling. On the Darling Downs the roads proved distinctly good. The experienced chauffeur, when interviewed after the trip, said: "Western Queensland, in my opinion, is one of the finest countries in the world for motor-cars. For ten months of the year, judging by what I saw, it is very well suited for motoring, except for some of the rivers, and places here and there, which could be made good locally at very little cost. Comparing the western country roads with the roads of similar districts in America, they are more than favourable. They are quite on a par with the roads of the north-west provinces of Canada, which I have motored over, and are supposed to be the best in the world. As a fact, a motor-car can go anywhere where a horse and vehicle can." In regard to a question as to whether a special car should be designed for Queensland roads, he said, "I do not think a big clearance is necessary. What is wanted is particularly strong springs, wide wheels, a light body, and large power. Now that the practicability of the western country for motor-car travelling has been made absolutely clear, I expect to see some of the big pastoralists procuring cars of their own."

GOSSIP FROM PARIS.

"It is easier and less dangerous than what I am doing here," was Wilbur Wright's reply to my question as to whether he could cross the English Channel on his flying machine. He had been occupied three days in repairing the broken wing of his aeroplane, and had had time to recover from the annoyance he felt, not at the accident, which he described as nothing, but an incident due to his being a little out of practice in directing his machine, and at the public that invade his operating ground whenever it is thought he will fly. He was, therefore, quite calm and collected while he was showing me his wonderful machine and explaining to me the advantages of his means of starting and of the light sledge on which his aeroplane is mounted. With his sledge he could, after crossing the Channel, alight almost anywhere. I cannot affirm he has the intention of attempting to achieve the feat, but, when I said that in the case of his undertaking such a sensational flight I hoped he would take me with him, he replied quietly he thought it would be better to go alone. Wilbur Wright scouted the idea of starting from the beach, skimming over the water, and alighting on the sands of the opposite shore. If he ever crossed the Channel on his aeroplane he would start from the cliff, keep at about 100 yards above the water and come down well inland. At that altitude the people in the boats which would surely be following him would, if anything happened to the motor, see him glide down and would come to his rescue, whereas if he were flying low they might not know what had happened. Wilbur Wright considers that all that is required to cross the Channel on an aeroplane is fairly fine weather, a smooth sea, and a motor which can be relied on for at least three-quarters of an hour. When he has remained in the air sixty minutes and covered in that time a distance of thirty-one miles, as he confidently hopes to do before he leaves Le Mans, Wilbur Wright will be able to say whether he thinks his motor is sufficiently reliable to enable him to undertake an aerial trip from France to England.

"No invention has ever proved useless, and the flying machine will certainly not be an exception." Wilbur Wright is quite sure of that, especially as he foresees that in the near future every army will be provided with a fleet of aeroplanes destined to render eminent services in reconnoitring. "They can be easily transported to the scene of operations, and a simple tarpaulin thrown over them is sufficient to protect them against a gale of wind which would prove fatal to a big steerable balloon, for which an enormous shed must be provided." The American aviator will not, however, admit that the utility of flying machines will be limited to war. They will, he is confident, be employed for many other useful purposes of which we have no idea at the present moment. The machine has "come to stay" and unsuspected uses will be found for it. The flying machine will not be simply a reconnoitring instrument and a toy in the hands of the rich, but it will be a means of civilisation and progress. The American's method of starting and landing have been severely criticised by various French aviators, but, from a careful inspection of the starting apparatus, I must confess it is not cumbersome. A couple of them could be packed in a military wagon, and Wilbur Wright has demonstrated at Le Mans he can return to his starting point, and that with his two long wooden skate blades, resembling the Swiss skis, he can land on rough ground which would demolish the steel wheels and framework on which the French aeroplanes are mounted.

I HAVE asked a good many people what good result they expect from the International Road Congress which will meet in Paris next October. "Oh, it will begin and end in talk," was the reply of a gentleman who has participated in more than one international gathering. Most of the other personalities whom I questioned were less pessimistic, though they almost all pointed out that even supposing the discussion at the Congress should demonstrate clearly the best kinds of roads for town and country and the most effectual manner of keeping down the

dust, the main question, that is to say, the means to provide the money which would be required to carry out the suggestions must necessarily remain to be found. "I do not pretend to know what will be done in other countries, but I can confidently predict there will not be much done in France for a long time, at least not in the rural districts," was the opinion of a man who, from his long experience as a Government official, knows what the French Administration is. However, if, so far as I have been able to discover, no very important immediate practical results are expected from the Congress, great preparations are being made for it. Learned reports, supported with official information and statistics, are being prepared on all questions concerning roads and road-making, and will be presented at the gathering. That assembly will doubtlessly nominate commissions to study the documents and to report on the reports. In the end the Congress, at a plenary meeting, will surely adopt the conclusions of the reports of its commissions, and that would be the end of it, if a very agreeable tour through France had not been organised to enable the Congressmen to judge of the condition of the French highways.

THE fatal accident which happened to Mr. Sands at Poissy has been seized upon by a good many enemies of the self-propelled vehicles as a pretext for attacking automobilism in general and for demanding severe penalties for fast driving. Marquis De Dion, in answering one of those attacks which appeared in the "Matin," puts the affair in a nutshell. He says

From a Sketch] A French Level Crossing. [in La Locomotion Automobile.

"An American motoring from Deauville to Poissy went at an average speed of 100 kilometres an hour and killed himself on arriving at his destination. You demand the application of severe regulations which would be vexatious for all motorists because unfortunately a certain number of them travel at exaggeratedly high speed and constitute, you say, a danger for the public. Well, the motorist of whom you speak as having been a danger for the public, has just proved that he could travel very fast without injuring anyone on the road. Then the penalty which could be inflicted on him if the Bill presented to Parliament by the Minister of Public Works were to be voted by the Chamber and Senate and promulgated as law would be very benign in comparison to that which he applied to himself, since he condemned himself to death, and at the same time suppressed, in so far as he was concerned, the prerogative of the President of the Republic to commute his sentence."

MARNEY.

AN ingenious yet simple device for cleaning front glass screens has recently been put on the market by the Glass Front Cleaner Manufacturing Company, of Chicago. The device, which is known as the "Lookout Cleaner," consists of a light squeegee hinged to the frame on the right of the screen; by means of a light handle it can be turned through a quarter of a circle, thus clearing the glass of any rain or moisture which clouds the screen and prevents the driver having a clear view ahead. The cleaner can be readily attached and detached, so that it need only be kept in position in bad weather.

MOTORING ACCESSORIES.

The Autoclipse Motor Lamp.

We have lately been afforded a demonstration by Messrs. Brown Bros., Ltd., at their depot in Great Eastern Street, London, E.C., of the many scientific points of construction in the Autoclipse motor lamps, for which they are the sole licensees for the British Empire. The lamp is made on really sound lines, while the strong and serviceable materials of which it consists give the Autoclipse lamp a position of favour which cannot be ignored by motorists anxious to provide for the shortened day that is now coming upon us.

Fig. 1.

Fig. 2.

Briefly stated, the main point of this device is the provision of a self-ecliping mechanism enabling the driver to eliminate the dazzling glare of the central rays from his light when meeting other traffic, or when passing through towns, whilst the long distance rays which are projected far ahead show the road beyond. The side rays serve an important function in illuminating hedges or other objects on each side of the road. When the ecliping mechanism is put into operation the motorist is still provided with a light which enables him to easily thread his way in and out of the traffic, but without making himself a positive nuisance to other people on the roadway or the pave-

Fig. 3.

Fig. 4.

ment. In Fig. 1 is shown the ecliping disc when in actual service. It will be noticed that this is interposed between the burner and the reflector, being operated by a lever at the rear of the lamp. So that this lever shall be pulled down on both lamps on the car simultaneously a Bowden flexible wire is provided, thus enabling the device to be easily and instantly worked whenever desired. When the Autoclipse disc is placed out of action a very powerful light is given, consisting of intense parallel or long-distance rays emanating from behind the flame striking the hyperbolic reflector, from whence they are reflected and directed against the plano-convex lens.

Here they are focussed and projected in rays of great penetrative power. This special combination permits the use of lens of large diameter and long focus in a comparatively small lamp. On the other hand, the short distance rays from the light emanating from the front of the flame are thrown directly on the lens, being magnified and diffused at the sides as is familiar to those who have observed the growing use of the Autoclipse lamp by motorists throughout the country. The light is exceptionally penetrating, and even when running at a high rate of speed it is not in any way deteriorated. We notice that with each size of lamp is given an exact statement of the candle and projection power. That shown in the illustration Fig. 2 is the model B with 4,200 candle power. Its projection power is 600 ft.; that combined of two lamps is 850 ft.

In connection with the Autoclipse motor lamp the generator should be of a relative size to correspond with the lamp. That supplied is entirely automatic, securing a uniform light and enabling a high quality of illumination until the whole of the carbide is exhausted. The generation also ceases as soon as the water cock has been shut off, and the device can be used at a later time without re-charging. The generator is on the diving bell principle, the gas being produced by the water soaking through the capillary pad at the bottom of the carbide reservoir. When sufficient gas has been evolved the water is automatically forced away from the carbide, so that no more is generated until the first supply has been used. In Fig. 3 we show a sectional sketch of the device which is self-explanatory when we say that 1 represents the water reservoir, 2 the carbide chamber, 3 bottom of the same, 4 the zinc cage, 5 cotton filter washer, 6 felt capillary pad, 11 the gas tap, 12 stopper for filling, 13 escape for excess of gas, 14 extra water valve, 16 condenser.

Fig. 5.

In connection with the Autoclipse lamp reference may also be made to the lamp bracket shown in Fig. 4, which is adjustable from 4 to 6 in. in width, and can easily be set at any desired angle so as to show the light where it is required.

If desired, the Autoclipse motor lamp can be supplied without the self-ecliping mechanism, in which case the motorist is provided with a brilliant light from a lamp of sound workmanship and construction designed on thoroughly scientific lines with a view of giving the best possible results. In the device we have referred to Messrs. Brown Bros. have a speciality likely to find increasing favour with motorists.

The "Dewhart" Luggage Carrier.

Messrs. A. J. Dew and Co. have established themselves at 8, Hart Street, High Holborn, W.C., near to Mudie's Library and of convenient access from many parts of London, as dealers in motor requisites of every description. They have issued an excellent pocket handbook of their "Dewhart" motor accessories for the motorist. At the present moment attention may well be drawn to their luggage carrier, which, when open, gives an appearance such as we are able to illustrate in Fig. 5. This is self-explanatory from the sketch. It will suffice to say that the device is 29 in. by 20 in. and will fit any car. It is well finished in black enamel, the side supports being plated, and the carrier thus gives a good appearance to the rear of the vehicle, as it can be easily fitted and folded up when not in use into a small space and be of no inconvenience whatever. The utility of Messrs. Dew and Co.'s new luggage carrier is such as should lead to a consideration of its claim even by those motorists who have nearly finished their touring for the season. The fact that it can be so easily folded up when not in use is an advantage which should lead to its permanent adoption on the cars of those owners who frequently get away from crowded centres into the heart of the country.

Correspondence.

(Letters to the Editor should be addressed to the offices, 27-33, Charing Cross Road, London, W.C.)

THE TRIALS OF 1909.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I notice in your issue of the 15th inst. that many of the well-known competitors in connection with the trials organised by the Royal Automobile Club have been giving their views as to the desirability or necessity of holding in 1909 such a test as kept many from more profitable business in 1908. Perhaps you will allow me, as a member of the public, to congratulate the trade on the unanimity shown in the character of the correspondence in your columns. I am afraid that a good many firms have hitherto been led to participate in these trials by anticipating the entry of their rivals. They have felt that if Messrs. So-and-So entered they could not afford to stand outside the circle, but the views of many firms which you have published should convince the Club that even if they do attempt a programme approaching in any degree the ambitious project of this year, they will be doomed to disappointment if not to failure. The truth is that neither the trade

THE POSITION AT NEWMARKET.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—At a meeting held at Newmarket, certain statements were made likely to cause misunderstanding as to the policy and work of the Automobile Association. Will you, therefore, kindly grant me space for the following plain statement of fact?

Newmarket has received attention of the most friendly nature from motoring organisations in general and the Automobile Association in particular. For the best part of one year we have defrayed the expense of a special "point duty" patrol, whose instructions have been to arrest the progress of all motorists, and draw attention to the fact that a special speed limit was in force, and that, apart from this, the greatest care must be observed through the town.

We failed to understand why the local authorities in the shape of one or two police officers could object to the assistance of our official until, on one occasion, they thought fit to take proceedings against him.

A View on the Course in Savannah on which the International Race for the Grand Prize of the Automobile Club of America will be run in November next.

nor the public want these trials, the industry having now risen to such a position that the prospective motorist feels he can rely in a great measure upon the private performances of vehicles without so much regard to the official declarations as to what they have done in circumstances much more severe than they are likely to be called upon to do in ordinary work.—Yours truly,

W. B. WALKER.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—The correspondence which you have published from firms engaged in the industry concerning the trial question has caused me an inquiring mind. Why cannot the Society of Motor Traders undertake this work? It is generally understood that they have large funds which have accumulated during recent years, and their employment for the development of the industry would be regarded with pleasure by those of the public who wish to see the trade prosper as it ought to do. Perhaps it might be well if, at the next meeting of the society, or even at that which is to be held in connection with the exhibition question, some declarations were made as to the amount of these funds, the purpose for which they are intended, and whether it is proposed to devote any of them to the promotion of reliability or other trials of a similar character.—Yours truly,

AN OBSERVER.

The reason then became apparent to every observant student of human nature. It was obviously better that motorists should not know of the existence of a speed limit, should not even be reminded of the fact, and having quite unwittingly broken a regulation, should be stopped, summoned, and fined. So far as can be judged from the evidence, it was far better for Newmarket that a motorist should not be told, in order that his unwitting breach of regulations might involve proceedings, conviction, and a fine which automatically relieved the local expenditure. The A.A. official was prosecuted for obstructing the police in what they were pleased to think was their duty. The point was one of most vital importance, not only to automobilists, but to the peace of the community who use the roads. The case was dismissed without calling on the evidence for the defence.

A report of the Newmarket meeting, from which it was apparently deemed advisable to exclude representatives of the Press, was issued for publication on Monday evening. One of the suggestions implied that in the case referred to a Bench composed of three motorists and one non-motorist had merely given the Association the benefit of the doubt. The obvious innuendo as to bad faith on the part of His Majesty's magistrates will probably be dealt with locally. Suffice it to say that the innuendo was framed in such a way that no single person could be held responsible for it.

I appeal to the impartiality of the Press on one point and on one point alone. We did our utmost to improve the state of affairs in that

town. We have incurred an expense of close upon £100 in order that danger and discomfort to racehorses should be minimised. Apparently Newmarket, as represented by a body of gentlemen whose opinions could not bear the light, does not want any protection from us. We will, therefore, save our money for the future and withdraw our man.—Yours truly,

STENSON COOKE.
Secretary, A.A.

THE SIZE OF BEVEL PINIONS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—Replying to "Lindum's" inquiry in the last issue of the *M.C.J.*, it is often desirable to use a pinion with a small number of teeth in a bevel gear drive. This is generally the case where a large reduction ratio is desired, as otherwise the gear would be so large as to necessitate a casing of almost impossible dimensions. Thirteen teeth are about the smallest number that should ever be used in a bevel pinion, if the teeth are of the ordinary form. But some manufacturers are using pinions with eleven teeth, and I believe that gears with as few as ten teeth have been occasionally used. There are two objections to the use of pinions with a small number of teeth. First, it concentrates the wear on a few teeth, so that the wear of each tooth is large and frequent adjustment is necessary. Second, the teeth are undercut so much that their strength is greatly reduced. This latter objection has been overcome in a few instances by changing the relation of the pinion teeth to their pitch cone.—Yours truly,

R. H. A.

The Maharajah Sahab of Morvi at the wheel of the Daimler Car supplied to him through the Bombay Agents of the Wolseley Company.

MOTORISTS AND JUSTICE.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—On Friday evening last, at 6 p.m., whilst driving a voiturette through Kingston, and when just the London side of the bridge, a man obviously very much the worse for drink staggered in front of our car and held up his arms for me to stop; the car at the time was travelling at a crawl. Immediately upon my stopping the man stepped up and dealt my passenger, Mr. Cecil Nathan, a director of the Certus (Gearless) Company, Ltd., a violent blow with his fist. My passenger was just in time to receive the force of the blow upon his arm instead of his head, for which it was intended. Luckily for us the whole incident was witnessed by many persons, including the constable on point duty, and who had just signalled to me to proceed. He at once rushed forward and arrested the man. Although at considerable inconvenience to us both, we decided to prosecute the assailant in the interests of motorists in general, to prevent a premium being placed upon assaults of this unwarrantable and vindictive type on motorists, and especially as the constable desired us as witnesses. On Saturday morning the prisoner was sentenced by the Kingston magistrates to pay a fine of 20s., or in default to go to prison for fourteen days for being, "Drunk and disorderly, and for committing a most unprovoked assault."

Now we venture to suggest that the cause of justice is scarcely served by such a slight sentence in comparison with the amounts of the fines inflicted by magistrates upon motorists for exceeding the twenty miles per hour speed limit, which speed, it can hardly be gainsaid, in nine cases out of ten, is not in the least degree dangerous, or that a car at that speed is not under perfect control. Had we been exceeding the ten miles per hour limit in Kingston, in the eyes of the police, we should have been allowed no defence and should have been fined for the first offence the sum of £5 and 9s. 6d. costs. In addition to this, on sentence being passed

the prisoner called out that he would "see us later," or some such words. Whether the prisoner is to receive further punishment for this threat of violence or not I do not know. We leave it to the British public to judge whether justice has been meted out to motorists as a whole in this case.—Yours truly,

GODWIN SMITH.

ECONOMIES ON ROADWAYS.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—A few days ago I noticed in one of the London dailies a paragraph re the cost of roads, in which it was stated that an additional expense of several thousands of pounds has been incurred through having to treat the roads with tar, and this was entirely owing to motor traffic. It will be read with interest by many thousands of your readers that in the same paper of the 17th inst. it states:—"Tar dressing so adds to the wear-resisting qualities on the highways that so far as can now be seen it will more than repay its cost by the saving it effects in road maintenance."

This is important; but there is a further saving in scavenging and watering. In many parishes, before the roads were tarred, they were swept daily. Now the rule is to sweep them about once a week and they are not watered. The saving on these two items must be immense.—Yours truly,

E. WHOMES.

RAISING THE BODY OF THE CAR.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—For my holiday in August I generally drive some hundreds of miles in an open dogcart, through Staffordshire, Shropshire, Wales, and Cheshire, and, speaking generally, I find that drivers of motor-cars are less reckless than they were a year or two ago. Chauffeurs, when driving alone, are the chief offenders.

The construction of the present car is at fault. The body should be about two feet from the ground. This would not only lessen the toll of human life and the plague of dust, but it would also steady the drivers—they could not then swing around turns at the pace they do. Moreover, they would command a better view of the road. I am glad to know that my views have met with considerable, and perhaps I may say general, approval. At present it is practically, if not absolutely, hopeless for any man to be run over by a motor without being crushed to death. For that reason alone there should be the space I have mentioned from the body of the car to the ground, with no levers or anything else to spoil this humane improvement. A farmer has just remarked to me that dogs and sheep would also often be spared by the improvement.—Yours truly,

T. H. PEATE.

[Perhaps some of our readers will favour us with their views on this suggestion, of the Rev. T. H. Peate, who is well known in Buxton, and whose familiarity with the road is not confined to the hills of Derbyshire.]

ACCUMULATOR TROUBLES.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have lately been having some trouble owing to my accumulator constantly running down. I have examined all the wiring and can find no flaw in the same. Similarly I have tested the contact maker and other parts, but without locating any cause for the trouble. I recently went for a run, and having gone about forty or fifty miles found the accumulator had run down. The voltmeter at starting had registered 4½ volts, and the car had run quite well up to the time of stopping, when the accumulator only showed about three volts. I should feel obliged if you or any of your readers could assist me in the matter.—Yours truly,

R. H. T.

[Provided that the voltmeter is accurate, and that no fault of an intermittent character exists in the wiring, the most probable cause of the trouble is that the accumulator requires fresh acid and rinsing out with water to clear all loose particles of material in the cell. The capacity of an accumulator rapidly declines when the density of the acid falls below a certain point, and if the acid is old, the voltage may fall as soon as the density has dropped below the amount that charging has brought it up to. "R. H. T." should test a little of the acid with a hydrometer; to be correct it should be at 1.200 approximately. If it should be as low as 1.0 the accumulator cannot be properly charged.]

MESSRS. W. H. SMITH AND SON write with regard to the reference to the Garden City in our last issue to say that they have had a petrol motor vehicle running at Letchworth for the past year, and that this week they are putting on a new and more powerful car. "In the future," continue the firm, "doubtless all manufacturers of any but very heavy goods will use commercial motors for journeys not exceeding fifty miles from London, especially when, as in our case, deliveries have to be made to many different points in London. Manufacturers have hardly yet grasped the great convenience of motor delivery enabling them to deliver goods practically unpacked, which avoids the expense and worry of collecting empties. Commercial motoring is still in its infancy, but it is a lusty infancy that is bound to develop into an industry of the first importance."

CLUBS AND ASSOCIATIONS.

ROYAL.

UNDER the scheme of association founded by the club this year the number of motorists now included in that organisation is 15,287. Four additional bodies have accepted the scheme, viz., the Coventry Motor Club, the Hull and District Automobile Club, the North-Eastern Automobile Association and the Society of Road Traction Engineers.

ROADS IMPROVEMENT ASSOCIATION.

EARL CADOGAN, K.G., in his capacity of president of the Roads Improvement Association (Incorporated), has addressed a circular letter to the road authorities of Great Britain asking them for certain statistics respecting what has been done to deal with the dust problem. This information is specially required for the International Road Congress, convened by the French Government, which is to be held in Paris in October. A form has been circulated asking for a return of the length, area and cost of the roads (a) laid with dustless road material, (b) treated with a surface coating of tar and (c) treated with other palliatives. Information is also sought as to the comparative cost, results, notes of efficiency, &c. The returns when collated and summarised will be of considerable value to road authorities and will be very useful to the Paris Congress. It is estimated that the cost of collecting and summarising these reports will be about £150, and contributions towards this expense will be gladly received by the hon. secretary of the Roads Improvement Association (Incorporated), 1, Albemarle Street, Piccadilly, London, W.

LINCOLNSHIRE.

By the kindness of Sir John Thorold, Bart., the annual hill climb of the Lincolnshire A.C. for the President's Cup was again held at Syston Park, near Grantham, on Saturday last. The day was a charming one, and a large number of spectators and non-competing members in their cars attended the meet, which is always of an enjoyable nature. The competition was held under the closed competition rules of the Royal A.C., and the handicap was arranged by the Competitions Committee of the Lincs. A.C. Each competitor was allowed two runs, the best to count. The total distance was 1,240 yards, and varied in gradient between 1 in 46 and 1 in 9.6, which was the slope for the last 330 yards.

Dr. Hogarth again won the cup with his 7.5-h.p. Clyde, although, as a matter of fact, the highest marks were obtained by Mr. R. M. Wright's 20.08-h.p. Talbot, which was not eligible for the cup, but which took the prize for the best performance on the handicap open to all members of the club. The fastest run of the day was that of Capt. H. E. Newsum's 55.8-h.p. Daimler.

The following are the results, cars being placed in order of merit:—

CLASS A (cars not exceeding 14-h.p.)

| Competitors. | Make of car. | H.P. as per R.A.C. rating. | Time in sec. | |
|-----------------|--------------|----------------------------|--------------|----------|
| | | | 1st run. | 2nd run. |
| † R. G. Hogarth | Clyde | 7.5 | 170½ | — |
| T. W. Mays | De Dion | 13.94 | 122½ | 122 |
| W. E. West | Alldays | 11.24 | 167 | 182½ |

CLASS B (cars not exceeding 25-h.p.)

| | | | | |
|-----------------|--------|-------|------|------|
| † R. M. Wright | Talbot | 20.08 | 76½ | 78 |
| † W. Nissler | Talbot | 20.08 | 93½ | 95½ |
| W. A. Tomlinson | Humber | 19.6 | 150 | 140½ |
| B. Smith | Masa | 22.3 | 149½ | 128½ |

CLASS C (cars exceeding 25-h.p.)

| | | | | |
|-----------------|----------|------|-----|------|
| † H. G. Nalder | Germain | 30 | 75½ | 75 |
| H. G. Nalder | Berliet | 35.7 | 88½ | 67 |
| H. E. Newsum | Daimler | 55.8 | 63 | 60½ |
| R. G. Hogarth | Talbot | 27.6 | 85 | 82½ |
| R. H. Fowler | Siddeley | 25.1 | 115 | 110½ |
| Sir H. B. Bacon | Wolseley | 32 | 91 | 93 |
| C. W. Pennell | Siddeley | 34.2 | 96½ | 95 |
| R. M. Wright | Daimler | 35.7 | 80½ | 80 |
| J. A. Cole | Humber | 35.7 | 100 | 98 |
| G. E. Sanders | Berliet | 35.7 | — | 96 |
| T. W. Mays | Napier | 38.5 | 117 | — |

* Winner of President's Cup.

† Not eligible for Cup or Class Prize, but winner of Special Prize.

‡ Winners of Class Prizes. Capt. Newsum takes the second prize in Class C.

NORTH EASTERN A.A.

A MOTOR-CAR and polo pony gymkhana, organised by the North-Eastern Automobile Association and the Northumberland Polo Club, took place on Saturday afternoon on the Polo Ground, Gosforth Park, Newcastle-on-Tyne. Happily the complete success of the proceedings was assured by charming weather, and the faultless management of Mr. J. E. Hodgkin and Mr. R. E. Lambton. How easily the modern motor-car is controlled was strikingly illustrated in the Bending Race. There was a gallant struggle for supremacy between Mrs. F. T. Maling and Mr. A. E. George,

and the fact that the latter, one of the principals of the firm of Messrs. George and Jobling, motor engineers, only secured the verdict by the narrow margin of a single point, strongly emphasises the great nerve and accomplishments of Mrs. Maling as a motorist. Mr. H. E. Galloway on a 10-h.p. Stanley steamer gained a decisive win in the motor bomb race. In the musical chairs event the ladies were alert aspirants for honours. It resulted in a victory for Miss Leather, who was an occupant of a 40-h.p. Berliet, driven by Mr. E. W. Leather. Mr. H. E. Galloway secured the Lord Barnard Challenge Cup with the highest aggregate of thirty-five points for the several events. The Association Cup was awarded to Mr. E. W. Leather for the next best aggregate, namely twenty, and the Association silver medal to the driver of J. R. Perrett's 25.38-h.p. Richard-Brasier for scoring the highest points in the paid drivers' class.

NORTHAMPTONSHIRE.

ABOUT 140 members and friends of the Northamptonshire A.C. were recently entertained by the president of the Club, Sir Thomas Hesketh, Bart., to a garden party at Easton Neston. During the afternoon a gymkhana was held on the lawns in front of the hall. Dr. Simpson very kindly acted as judge, Dr. Hope and Mr. A. N. Mobbs as clerks of the course and observers, and Mr. Sidney Harris (the hon. secretary) as starter. Mr. C. W. Bartholomew, Mr. Wood, and others gave useful assistance in setting out the course for the various events, which were as follows:—Crawling Race: 1, Mr. H. R. Greening; 2, Mr. H. Lineham. Motor House Race: 1, Mr. A. Wicksteed; 2, Mr. W. B. Moorhouse. Rolling Race: 1, Mr. C. Wicksteed; 2, Mr. W. B. Moorhouse. The Academy Stakes: 1, Mr. Wood; 2, Mr. H. R. Greening. At the conclusion of the even's the judge awarded the first prize to Mr. H. R. Greening and the second prize to Mr. W. B. Moorhouse.

The Lincolnshire Club's Hill Climb.—Mr. W. Nissler on the 20-h.p. Talbot.

COVENTRY.

In the Coventry Motor Club's hill climb at Newnham the first in Class 1 was Mr. P. Baker, on his 2½-h.p. Minerva; in Class 2, Mr. J. Marshall (3½-h.p. T. T. Triumph); Class 3, Mr. A. A. Scott (3-h.p. Scott); Class 4, Mr. A. A. Scott (3-h.p. Scott); Class 5, Mr. A. M. Startin (5-h.p. Riley tri-car); and Class 6, Mr. Scott, on the same machine that had been successful in Classes 3 and 4, it being fitted with the Scott gear for the purpose of the classification.

KENT.

MEMBERS of the Kent A.C. are notified of some important alterations in their fixtures for the autumn. The meet which was to have been held to-day (Saturday) at the house of Sir David Salomons has been postponed till September 5th, as will be seen from reference to the forthcoming events on another page. On the following Saturday a visit will be paid to Mr. W. Willis, at the Philippines, Brasted Chart.

SCOTTISH.

THE Scottish A.C. has made some new arrangements with the North British Railway Company with regard to the ferrying of motor-cars at Crianlarich and other places. The charges will be as follows:—Crianlarich to Tulloch, £1 5s. 1d. per ton; Crianlarich to Fort William, £1 11s. 7d.; Bridge of Orchy to Tulloch, 19s. 1d.; Bridge of Orchy to Fort William, £1 8s. These charges are all per ton, station to station, and the minimum charge is as for one ton per car. If covered trucks be used an additional charge of 10s. each will be made for them, and the agents at the forwarding station will, under ordinary circumstances, be

able to supply a suitable vehicle at one day's notice, but they cannot, of course, guarantee this in every instance.

THE Accrington and District Motor Cycling Club has now thirty-eight members, and has commenced its career with a midnight run to Rhyll.

In the Manchester Motor Club's annual cycle reliability trials the winner of the Triumph cup, gold medal, and prize for the hill climb on formulae was Mr. Otto Cross.

ENTRIES for the closed hill-climbing competition of the Yorkshire A.C., at Pateley Bridge, on the 12th prox., close on September 7th. They should be made to Mr. C. P. Wilson, 24 and 25, Basinghall Buildings, Leeds.

THE Hertfordshire County A.C. has adopted a novel club car badge in the form of a stag's head, thus utilising a feature which is prominent in the arms of the county and supplying the motorists of that club with yet another badge with which to decorate their cars.

The 35-h.p. Talbot Limousine-Landaulet recently completed by Messrs. Clement-Talbot, Ltd., for Mrs. E. M. Cox, Radipole Manor, Dorset.

THE TIRADE AGAINST MOTORISTS.

IN our comment on page 540 we refer to the present outburst of feeling against motorists, and herewith give a selection from the newspaper correspondence on the subject as well as references made in public meetings, prefacing the interesting chronicle with a reprint of a handbill now being extensively circulated in rural districts, to the following effect:—

MEN OF ENGLAND!

Your Birthright is being taken
from you by
Reckless Motor Drivers.

You have the same right to use the public roads as you have to use the houses you live in, without having your lives endangered.

Reckless Motorists drive over and kill your children.
Reckless Motorists drive over and kill both men and women.
Reckless Motorists kill your dogs.
Reckless Motorists kill your chickens.
Motorists fill your houses with dust.
Motorists spoil your clothes with dust.
Motorists, with dust and stink, poison the air you breathe, thus injuring your health.

Reckless motorists have compelled one hundred thousand people to withdraw their horses and carriages from the public roads. It is estimated that one hundred thousand men have been thrown out of employment in consequence. It is estimated that five hundred thousand cyclists have been compelled to give up cycling through the reckless driving of motorists. You cannot ride, drive, or walk on the public roads without the danger of being killed by reckless motorists.

Men of England, will you stand this tyranny any longer? Rise up, join together, and bring pressure upon your representatives in Parliament, and otherwise make it unpleasant and costly to the tyrants who endanger your lives.

Mr. C. Gould suggests that, to diminish reckless driving, a carefully planned system of licensing should be adopted, and "upon presentation at the end of a year, a licence free from marks of demerit should entitle the driver to a service stripe and a certificate of merit, and he should be known as an efficient and expert driver according to the number of stripes so attained.

All cars which are capable of exceeding the maximum legal speed limit should be painted a certain distinctive colour, says one correspondent of the "Daily Mail." When taking out a Government licence the owner should state how many counties he wishes to travel in and pay, say, five shillings for each; at this rate a complete touring licence for England and Wales would cost only about £15.

At the meeting of the Northwich Rural District Council a member

said that the term "motor devils" was the only name he could give the speedy motorists who passed his way.

Presiding at a luncheon in connection with the Haxby Show, Mr. H. H. Riley Smith referred to the motor nuisance and said that the real remedy was to revert to the toll-bar system. Not to have a toll-gate at every four or five miles, but to have a toll-office at every entrance to a county, and to adopt a system whereby a motorist could obtain a ticket which would entitle him to use the roads.

CASES AGAINST MOTORISTS.

MAGISTERIAL DISCRETION.

In imposing a penalty on a motorist summoned to the Leeds City Court the Stipendiary Magistrate (Mr. C. M. Atkinson) said that ordinarily he imposed a fine of £5 for exceeding a speed of twenty-five miles an hour and £3 for a speed of between twenty and twenty-five miles an hour. In this case, however, he understood that the defendant was not one of the usual wealthy class of motorists, but one who drove his car for a living, so the fine would be on the lower scale.

In fining a motoring defendant £5 and costs at Bromsgrove, the Chairman (Major Wiggins) said the Bench was dealing leniently with him, and future cases would be more severely dealt with. They were determined to put a stop to dangerous driving. With public feeling as high as it was motorists were now on their trial.

HEAVY HAULS.

Four motorists have been fined at Torpoint.

Several motorists were summoned at Grantham on Saturday for exceeding the speed limit of twenty miles an hour. Fines of £2 and costs were imposed.

At Worthing, on the 12th inst., seventeen cases were heard against motorists, the fines imposed ranging from £2 to £4. On the same day at Hailsham six motorists were summoned, one of whom was fined £21 11s. on two summonses.

COMMITTED FOR TRIAL.

Harold Gylee, of Clapham, was on the 12th inst. charged at Horsham on a coroner's warrant with the manslaughter of Mabel Denman, at Shipley. The Bench decided that the case must go for trial at the assizes.

EXCEEDING LEGAL LIMIT.

At Stranraer four motorists have lately been fined for exceeding the legal limit on the highway. Traps had been set on the road from Sandmill to a cottage at High Balyett.

On Saturday at the Petworth Petty Sessions seven motorists were fined amounts ranging from 10s. to £3 for various offences, chiefly exceeding the legal limit at Coldwaltham.

DISMISSALS.

William Jones, chauffeur, living at Bettws-y-coed, was charged at Carnarvon, on Saturday, with driving through Llanberis at a speed dangerous to the public. Defendant said he did not exceed ten miles an hour. He was driving several American gentlemen, one of whom told him not to "lick creation," as they wanted to view the scenery. The case was dismissed on payment of costs.

John Douglas, chauffeur, was charged at Alnwick with driving a motor-car to the danger of the public at Alnmouth on the 2nd inst. The chairman said, as there seemed to be some doubt in the case, it would be dismissed.

At Wigtown Sheriff Court, Robert Lumsden, Newton-Stewart, was charged with exceeding the speed limit on the road between Newton-Stewart and Glenluce on July 21st. Two policemen gave evidence to the effect that the accused was driving at the rate of twenty-four miles an hour. Mr. W. M. Kelly, agent for the defence, in cross-examining the witnesses, brought out the fact that the stop-watches used by the police cost only 20s. each, and a watchmaker stated in the box that watches of that class were not to be depended upon to give accurate timing. Mr. Kelly also contended that the evidence of two constables stationed a mile apart was not sufficient to secure a conviction, as there was no corroboration of their statements that they started their watches at the times stated. The Sheriff, in finding the charge not proved, said that according to the Act he could not accept the evidence of one witness as sufficient, even if he had every confidence in the witness. Accordingly he must dismiss the case.

James W. Barber has been summoned at Deal for driving a motor-car at a dangerous speed. The police-constable estimated the pace at 10 to 12 miles per hour; a local J.P. at 30 m.p.h. and the defendant at 5 m.p.h. In giving their decision, the Mayor said they did not think the evidence was sufficient to warrant a conviction. The Bench dismissed the case.

TUESDAY'S RECORD.

On Tuesday five motorists were fined at Shoreham, six at Newmarket, nine at Odiham, three at Lewes and several others at Newcastle, Rugby, and elsewhere. In one case at Newmarket three leading trainers gave evidence against the driver of a car. News of only one escape reached us, viz., at Westminster, where on magisterial suggestion a summons was withdrawn.

OWING to the expiration of the lease the plant and stores of the Halle Spring Wheel Syndicate, Ltd., at Tunnel Avenue, East Greenwich, is to be put up for sale by auction on September 9th.

ROAD REPORTS.

CROYDON.—The Addiscombe Road and Shirley Road, at Croydon, are under repair, and Wickham Road is being tarred. The tramway route from East Croydon Station to Addiscombe along Cherry Orchard Road will be under repair during the next few days. The Selsdon Road, which is the main road to Selsdon from the Brighton Road, is being paved with wood at the Brighton Road end, and will be under repair during the next three weeks. The repairs on this road can be avoided by entering it *via* Junction Road from the Brighton road.

HULL.—The Beverley road is being repaved. Special caution should be exercised at the bridge over Holderness drain on the Hedon Road. This bridge is in course of reconstruction, and in the meantime cars must use as an alternative the Tenywrury bridge alongside.

KENT.—The bill for tar-painting the roads in Kent, says the county surveyor in his annual report, amounted to £3,500—a charge entirely due to motor-car traffic. On the main trunk roads, the inspector states, high-speed cars with armoured tyres continue to cause much damage.

FRECKLETON MARSH.—A little grievance exists in connection with the toll at Freckleton Marsh, on the Blackpool road. If a member of the Lancashire A.C. presents his badge he is allowed to pass the toll on a payment of 4d., while if he has forgotten the badge the full six-penny toll is demanded.

EAST GRINSTEAD.—The main portion of the High Street at East Grinstead is to be made up in the way that has been successfully done at Eton and Staines during the last two years. This process consists of the binding of metal with a special preparation of tar mixed with fine

EAST SUSSEX.—The following main roads in East Sussex will be under repair during next week:—Road between Silverhill (Robertsbridge) and Ticehurst Boundary on Flinwell road. Road between Harrow Bridge and Westfield. Mr. George W. Warr, district surveyor to the Steyning East Rural District Council, reports that the steam rollers will be at work on the Dyke Road Avenue, Dyke Road, just beyond the tram terminus, until about the 27th inst.

AUTOMOBILE ACCIDENTS.

ON Saturday Mr. George Robey, who is appearing at the Palace, Blackpool, was driving his motor-car along the Marine carriage drive, when he knocked down a nine-years-old girl, Eliza Gomersall. Mr. Robey took the child in his car to a surgery, and then home. Fortunately no bones were broken.

A MOTOR accident has occurred on the outskirts of Denbigh, in which Mr. Timson, partner of the accessories firm of Timson Bros., Birmingham, has met his death. The car appears to have skidded in the neighbourhood of Fael Gwaryrog, running into a wall and toppling over. Mr. Timson was pinned beneath it, the other occupants being seriously but not fatally injured.

MR. HALL CAINE had arranged to preside on Monday at a swimming fête in Ramsey at which Mrs. Hall Caine was to distribute the prizes. During the afternoon, however, the following telegram was received from him: "Motor-car ran down the carriage drive and is completely wrecked. Nobody injured at all, but my nerves utterly broken. Cannot possibly be with you to-day. Extremely sorry."

The 30-h.p. 12-seated Single-Deck Motor-Bus recently supplied by the Maudsley Motor Company, Ltd., to the Midland Railway Company for service between Desborough and Rothwell.

granite chippings. A coating of this is first put over the road and then the metal is rolled until the preparation begins to work through. Another coating is then put on top, rolled in, and finished off.

WORCESTER.—Consideration has been given by the Worcester Shopkeepers' Protection Association to the speed of motor-cars, and a resolution has been passed that, owing to the enormous damage sustained by the shopkeepers on the main roads of the city by their goods being spoiled by dust raised by motor traffic, a request be made to the local authority to frame immediately a bye-law limiting the speed to eight miles an hour.

OXFORD.—According to the county surveyor of Oxford, seventy-one signs have been put up in various parts of the county under the Motor Car Act. Although he reports that drivers of cars rarely take any notice of such signs, he urges landowners to continue the policy which has been begun by some of them of cutting down the high hedges at awkward corners.

WALES.—As evidence of the improvement that has taken place in the Welsh roads, we learn of a motorist who toured in North Wales on a 20-h.p. Beeston Humber car, his headquarters being established at Barmouth. The vehicle carried five passengers and their luggage from Dolgelly and over the mountain passes to Dinas, Mawddwy and Bala. The summit of the mountain road is 1,700 ft. above sea level, and for nearly seven miles the road is rising, gradients varying from one in five to one in twelve for a great part of the distance. These roads had hitherto been regarded as almost impassable to wheeled vehicles, but apparently have no terrors for the modern motor-car.

WHILST a large motor-car belonging to Messrs. Whiteley's was proceeding along White Horse Road, Croydon, on Tuesday, it collided with a private motor-car owned by Mr. William M'Blane, of Croydon. Both were travelling in the same direction. Whiteley's car, the rear vehicle, caught one wheel of the other, and swung it round into a pony and trap owned by a grocer, which were standing just outside the shop. Both pony and trap were knocked through the shop window, wrecking it entirely. The cart was smashed, and the pony severely injured.

A MOTOR-CAR accident, resulting in the death of a chauffeur and serious injury to an Inverness doctor, occurred on Tuesday afternoon on a precipitous road on the western shore of Loch Ness, near Fort Augustus. Dr. John Kerr and a chauffeur named Robert Hamilton were motoring to Fort Augustus on a car of 10-12-h.p. When they were running along a steep hill road the car failed to take a bend, and striking the parapet of a small stone bridge it dashed over an embankment, falling a considerable distance. The chauffeur was killed instantly, while Dr. Kerr was badly injured and rendered unconscious. On learning of the accident Dr. Luke motored to Fort Augustus to attend to the patient.

FROM the United Motor Industries, Ltd., comes an illustrated circular of the "A.E.C." carburettor they have lately put on the market. A feature of the apparatus is that provision is made for adjusting the air and petrol from the outside, and that there are no small or delicate parts to get out of order. It is claimed to be not only very economical but to render the engine extremely flexible.

FORTHCOMING EVENTS.

AUGUST.

- 22nd (Sat.).—Annual race meeting of the A.C.U. at Shepherd's Bush. Manchester A.C. club run.
Southend and District competition at Laindon.
- 23rd (Sun.).—A. C. du Rhone Mont Pilat trial.
- 29th (Sat.).—Meet of the Lincolnshire Motor Club at Lincoln. Berks A.C. closed hill climb at Wantage.
Mont Ventoux hill climb of the A.C. Vauclusien.
Leicester A.C. gymkhana at Freeman's Meadow, Aylestone Road, Leicester.
Essex M.C. 200 miles Reliability Trial.
- 30th (Sun.).—Southend M.C. run to Great White Horse Hotel, Ipswich.
- 31st (M.).—Closing day for the entries for the Army Council Light Tractor Trials to be held in February, 1909.
Daily practice begins for the Isle of Man Trials, from daylight to 8 a.m.

SEPTEMBER.

- 4th and 5th.—Reliability Consumption Trial of the Essex C.A.C. at Norwich in connection with the R.A.C. provincial meet.
- 5th (Sat.).—Aston Hill climb of the Herts C.A.A.
Lancashire A.C. gymkhana.
Invitation of Sir D. Salomons to the Kent A.C. to visit Tunbridge Wells.
Provincial meet of the R.A.C. at Norwich.
Richmond M.C.C. week-end at Henley.
- 12th (Sat.).—Brooklands A.R.C. meet.
- 17th (Th.).—Touring car competition of the A.C. of Holland through that country.
- 19th (Sat.).—Provincial meet of the Motor Union at Oxford.
North Middlesex A.C. 100 miles reliability run.
Manchester A.C. reliability run for small cars.
Meet of the Hull Auto Cycle Club and the Lincolnshire Motor Cycle Club at Brigg.
Annual Hill Climb of the Bristol and Gloucestershire A.C.
Lunch of the Kent A.C. at Dover.
Herts C.A.C.'s climb for cars at Aston Hill.
- 23rd (W.).—Graphic Trophy and Henry Edmunds Competitions in the Isle of Man.
- 24th (Th.).—The "Four Inch" Race in the Isle of Man.
- 25th (F.).—Welsh A.C. reliability trial for motor-cycles.
- 26th (Sat.).—N.W. London M.C.C. petrol quantity judging competition.
Invitation to the Kent A.C. by Mr. and Mrs. Schlenheim to Chislehurst.
- 27th (Sun.).—Southend M.C. run to White Hart Hotel, Braintree.

LIGHTING-UP TIMES—LONDON.

| | | | |
|-----------------|------------|-------------|-------------|
| August 22nd—8.8 | 24th—8.3 | 26th—7.59 | 28th—7.55 |
| " 23rd—8.6 | " 25th—8.1 | " 27th—7.57 | " 29th—7.53 |

To find the approximate lighting-up time in August for Birmingham 12 minutes should be added to the above times, 17 for York, 21 for Manchester, and 43 for Glasgow.

CONCESSION TO THE PUBLIC.

WRITING to the "Times," Mr. Max Pemberton suggests that the concessions to be made by the motorist to the public should be as follows:—

- (1) Submission to and a strict observance of a speed limit of twelve miles an hour in all villages and in such urban districts as seem fit and proper to the central authority.
- (2) A faithful observance of the following rules of safe driving:—
 - (a) Never to take a sharp corner at more than a walking pace.
 - (b) Never to overtake another vehicle upon a corner.
 - (c) Never to drive the engine down hill.
 - (d) To slow down upon passing pedestrians and other traffic.
 - (e) To avoid the mania for taking doubtful openings in traffic, a habit very exasperating to the public and attended by much risk.
 - (f) Not to drive faster than twenty miles an hour at night under any circumstances, and to limit the speed to ten or fifteen miles an hour wherever other traffic or pedestrians are likely to be met.
 - (g) To slow the car down to ten miles an hour at all cross-roads where a clear view is not obtainable.
 - (h) To give cyclists plenty of room and avoid the inconsiderate and ungentlemanly practices by which they suffer so much inconvenience.
- (3) The general habit of unselfishness, thus lessening the evils of the dust question and appeasing a large section of the public which would bear no hostility to the motor if it were not for the dust question.
- (4) The suppression of the open exhaust, dear to the heart of wild chauffeurs and of vain and foolish owners.

These are simple matters, and their observance should be a pleasure to every considerate driver, according to the novelist.

THE balance-sheet of Messrs. Benz and Co., of Mannheim, Germany, for the last financial year shows a net profit of £34,608, out of which a dividend of 8 per cent. is being declared.

POLICE "CONTROLS."

THE police have now a measured 1,200 yards down the Lickey Hill, on the old Birmingham road at Bromsgrove.

VISITORS to Folkestone from London should be extremely careful, many traps having been established on the road.

IN the Colsterworth district of Lincolnshire, and also about Grantham, Newark and Stamford, great care should be taken.

NEWMARKET is again the scene of trapping.

TRAPS are being worked on both sides of Shooter's Hill every week end.

AMONG the Hampshire traps, which are many, special intimation has recently been received of those on the London side of Petersfield, at Romsey, on the Winchester and Salisbury road, and near the barracks on the Christchurch-Bournemouth road.

A POLICE TRAP is reported from Church Street, Cromer.

THE police are frequently watchful of motorists in the Matlock district and a trap may be met anywhere between the station at Rowsley and Homeford Cottage, on the Derby road. We understand the trap is in operation every Sunday.

COMPANY NEWS.

CERTUS GEARLESS COMPANY.—£25,000. To acquire the assets and liabilities of the Certus (Gearless) Company, Ltd., and to carry on the business of engineers and manufacturers of motor and other cars, &c. Minimum cash subscription, £6,400. 43-4, Great Windmill Street, W.

DUNLOP GARAGE AND MAINTENANCE COMPANY.—£40,000. As title. Agreement with Dunlop Pneumatic Tyre Company, Ltd. Private. 14, Regent Street, S.W.

BURTON MOTOR COMPANY.—£3,000. To take over business of automobile and general engineers, &c., carried on by A. M. Mason and R. G. Mason, at Burton, as Mason Brothers. Private. 1, Bridge Street, Burton-on-Trent.

STEALING A CAR.

LAST week we recorded a case at Andover in which two men were sentenced to imprisonment for stealing a motor-car. A similar case has occurred at Middlesbrough, where John Peacock and Carl Blower were charged with breaking into the garage of Dr. Glen, of South Bank. They had broken the lock of the garage door, taken the car out, altered the number from D 121 to D 12, and then had a drive into the country. After a trip of about twenty miles they ran into a ditch near Northallerton. The prisoners were sent to gaol for two months without hard labour.

BUSINESS NEWS.

THE Motor House, whose accessories department is at 318, Euston Road, London, N.W., have issued a new list of special accessories they have now in stock at prices which should suit the motorist of moderate means.

THE Dunlop detachable rim has, until a few weeks ago, been manufactured by the Stevenson Wheel Company, of Coventry. The enormous growth in demand has, however, led to the organisation of a new concern, absorbing the Stevenson Company, with the title of the Dunlop Rim and Wheel Company, Ltd. In addition to taking over the entire production of the well-known detachable rim, the new company will develop the Stevenson Company's fixed wheel and rim business. The increase of manufacturing facilities afforded by the new concern will result in a speedier production of detachable rims and a more ready conversion of fixed into detachable rims.

WE had a run a few days since on a 25-h.p. Maudslayi two-ton lorry. The vehicle had been temporarily converted into a char-a-banc to carry twelve passengers. Although fitted with twin solid tyres we were agreeably surprised at its smooth running at twenty miles per hour. All ordinary gradients were taken on the top speed. What struck us most, however, was the absolute rigidity and firmness when travelling at high speed, and consequently freedom from excessive vibration.

MESSRS. C. F. F. WEARNE AND CO., motor engineers, Singapore, have recently taken delivery of a Standard 20-h.p. six-cylinder car, and are at present engaged in a run through Java and Sumatra, giving demonstrations of the vehicle's capabilities to intending clients.

THE MOTOR CAR EQUIPMENT COMPANY, 1727, Broadway, New York, has recently introduced a useful fitting in the form of an electric fan intended for use in limousines. The fan, the motor of which is worked off a six volt battery, is intended to be placed in the roof of the car, and, being very powerful, keeps the air inside always cool and fresh.

SIR BACHE CUNARD is one of the latest to acquire a "Sheffield-Simplex" six-cylinder car, which he has been using in Scotland during the past few weeks. He writes in glowing terms of the silence and smooth way it runs and its ability to take hills at top speed.

MR. C. W. SPENCER, lately superintendent of the Canadian Northern Railway, has purchased a White steam car for use in Montreal.

UNDER the title "Is your Tyre Pressure Right" the Palmer Tyre Company, Ltd., of 119-123, Shaftesbury Avenue, W.C., have just issued a booklet, a perusal of which should prove useful and instructive to all motorists. A copy can be obtained by application to the Palmer Company.

COMMENTS.

DANIELS MOTOR BICYCLE (1885)

ON several recent occasions we have pictured the interest of the President of the United States, and also of the two rivals for succession to his high office, in the motor-car, and now, apparently, the automobile is to play an unusual part in the Presidential election. The Board of Governors of the Professional Chauffeurs' Club of America, at a representative meeting, have resolved that "the organisation take an active and energetic part in the coming election of President of the United States." At the assembly it was pointed out that the drivers of motor-cars could control the conveyance of voters in connection with elections, and if they were organised doubtless could considerably harass, or otherwise, the voting strength of any candidate. Evidently they do not in the first instance propose to play any tricks upon the contestants such as are reminiscent of the hustings days in this country. Instead, they have adopted a political platform and are asking for (1) the abolition of prosecutions for merely technical violations of law, (2) the abandonment of vicious police traps, (3) the removal of biased judges from the Bench, (4) the general improvement of the roads of the country. Motorists in this country could equally well subscribe to such a policy.

To Norwich.

NEXT Saturday the R.A.C. will hold a provincial meeting at Norwich, when H.S.H. Prince of Teck will preside. The route recommended for those Londoners motoring to the Meet from London is as follows, the distance being 114 miles:—London, Finchley, Chipping Barnet, Potter's Bar, Hatfield, Hertford, Ware, Braughing, Barkway, Barley, Babraham, Six Mile Bottom Station, Newmarket, Barton Mills (Mildenhall on left), Thetford, Attleborough, Wymondham, Norwich. Those travelling by car from Nottingham should go *via* Bingham, Bottesford, Grantham, Great Ponton, Colsterworth, Bourne, Spalding, Holbeach, King's Lynn, Swaffham, East Dereham, Norwich (118 miles). From Northampton the route of 110 miles is:—Yardley, Hastings, Turvey, Bedford, Roxton, St. Neots, Eltisley, Cambridge, Newmarket, Barton Mills (Mildenhall on left), Thetford, Attleborough, Wymondham, Norwich. Motorists are urgently requested to exercise the utmost caution and to display every consideration in driving through Newmarket, as a number of race-horses are continually upon the roads, and especially upon those leading to the Heath.

The Motor Union Handbook.

THE latest evidence of the activity of the Motor Union is the production of a Foreign Handbook, which will prove of the greatest value to all contemplating a tour on the Continent. The publication, without being bulky, is extremely complete, and includes the full customs and road regulations for France, Algeria and Tunis, Austria-Hungary, Balkan States, Belgium, Bulgaria, Denmark, Egypt, Finland, Germany, Greece, Holland, Italy, Norway, Portugal, Roumania, Russia, Servia, Spain, Sweden, Switzerland, and Turkey, and also gives con-

siderable information on these points as to America, Australia, South Africa, and Asia, India, China, and Japan. An alphabetical list of the principal towns and villages, with the leading hotels, garages, and motor repairers, forms a very useful section, while an itinerary of twenty-one selected routes, lists of reliable maps, road books and guides, references to places of interest near the towns, an excellent dictionary of technical phrases in English, German, French, and Italian, touring notes, railway and steamship facilities, &c., are other sections of a valuable production. In the 200 pages there is a mass of useful information, and, so far as we can see from a cursory examination, no point has been overlooked. The Handbook is of a size that can be conveniently carried in the pocket.

A Small Census.

How thoroughly the automobile is becoming the ordinary vehicle of the road is suggested by some figures which have been published as the result of a census taken by the Malden and Coombe Council in connection with a petition to be presented to the Surrey County Council. During twelve days recently at Coombe Lane twelve traction engines, the same number of trailers, and 693 motor-cars passed along—few of which were owned by local residents. The actual comparison of horse and motor traffic works out as follows:—

| | | | | |
|-----------------------------------|-----|-----|-----|--------|
| Heavy 4-wheeled trade vehicles | ... | ... | ... | 1,293 |
| Light 4-wheeled trade vehicles | ... | ... | ... | 1,041 |
| Heavy 4-wheeled pleasure vehicles | ... | ... | ... | 99 |
| Light 4-wheeled pleasure vehicles | ... | ... | ... | 2,292 |
| Light 2-wheeled pleasure vehicles | ... | ... | ... | 1,421 |
| Cycles | ... | ... | ... | 12,725 |
| Traction engines and trailers | ... | ... | ... | 12 |
| Motor-cars | ... | ... | ... | 693 |
| Horse riders | ... | ... | ... | 408 |
| Pedestrians | ... | ... | ... | 83,012 |

Motor-cars are, considering that they have only been introduced during the last few years, quite a conspicuous feature of the census.

Teaching the Public.

THE return of the London school children to their lessons seems to give added reason for the letter from Mr. Samuel Roberts, M.P., to the Education Committee at Sheffield suggesting that school children should be cautioned against crossing the roads in front of motor-cars. The teachers could, as we have previously pointed out, do a great deal to compel attention to the folly associated with playing on the roadway when motor-cars are likely to come along. Unfortunately, however, the negligence of the public is not limited to children at school, but many grown-ups are often as careless and as hesitating in crossing the roadway as are the members of the younger generation.

Licences in Scotland.

IN our issue of the 8th inst. attention was drawn to the way in which the licences of motor drivers were being issued by the Midlothian County Council, which refused to issue permits to drivers of motor-cycles and motor-cars extending beyond the 31st December in the year of issue, thus causing great inconvenience. Thanks to the efforts put forth locally by

Mr. A. T. Mitchell, the hon. secretary to the Lothians District Association of the C.T.C., who raised the matter in our columns, the County Clerk has now decided, after correspondence with the Secretary for Scotland, to issue, or renew, drivers' licences for a period of twelve months from the date of issue or renewal, as is general elsewhere.

A Trio of Tragedies.

ON Monday an inquest was held at Islington on the body of a man who had had fourteen ribs fractured by the wheel of a van drawn by three horses passing over him; at the same court the same coroner (Dr. Danford Thomas) inquired into the circumstances attending the death of a labourer run over by a horse-drawn dray. This occurred in the Green Lanes, and a doctor who was passing in his motor-car at the time of the accident said the deceased was killed almost instantaneously. And, again, on the day when these inquests took place a third was held in Islington in connection with the death of a child who had been fatally injured by a van drawn by a horse. This series of fatalities were published together in a morning paper under the heading of "Street Fatalities—Difficulties of London Traffic," as though they were but incidentals of the day's work. Had motor-cars been concerned the title would have been far more emphatic as to the daily "Toll of the Motor," or some equally obtrusive and insolent reference to a modern convenience.

From a Sketch

An Up-to-Date Prison Van.
(in La Locomotion Automobile.)

The Clubs and the Central Organisation.

ON two or three occasions we have reminded our readers that the time is drawing near when the compromise in the affiliation of clubs to the central bodies will have to come to an end and those in the provinces will have to declare one way or the other. With a view to bringing about a clear understanding the Manchester A.C. has taken a tactful part in the attempt to induce the R.A.C. and the M.U. to accept a joint scheme of affiliation. Upon this matter they are now circularising those clubs which accepted the compromise last year, and thus it is hoped to avert the inconvenience that is likely to arise should the clubs be compelled to affiliate with one or the other organisation named and yet unable to affiliate with both.

Police as Patrols.

APPARENTLY the resources of magisterial wisdom are not yet exhausted, and the presiding magistrate at the Linton Petty Sessions, near Newmarket, has suggested a means of checking the speed of motorists which will commend itself to those who are advocating the revival of the toll-gate and other ancient means of stopping the excessive speed of vehicular traffic. He suggested that an effective method of stopping the present speedy rate of things would be for a number of police

constables to travel along the road on motor-cars at 20 m.p.h., and stop every car that passed them. Provided that the police carried a red flag—or some other conspicuous device—above the car, so that its whereabouts would be revealed, few motorists would object to the innovation. Certainly they would not try to pass the police, whose public presence on automobiles would find many supporters in the industry. Objection to the police has generally arisen when they have been concealed behind hedges.

A Fair View of Things.

AT last week's meeting of the Lancashire County Council, Alderman Shuttleworth reported that the cost of road maintenance had increased from £223 to £246 per mile within the last twelve months. According to the officers who had been specially asked to report on the matter a very large proportion of the increase was due to the heavy motor wagons, the Lancashire main roads not having been constructed for heavy traffic of that description. In his view pleasure automobiles were not to blame to any considerable extent. This impartial view of things is quite refreshing after the many outbursts that have lately occurred at meetings of councils of much less importance than that which is concerned with the County Palatine.

A Parish Council in a Police Trap.

THE Clayton Parish Council at their last meeting fell into a kind of motor trap. A strong protest was sent to the Chief Constable about a Sunday motor-cycle competition recently on Clayton hill. The official complaint caused enquiries. The police could not ascertain that any motor competition took place, and the story appears to have come to this, that the Chairman of the Parish Council saw motor-cycles practising up and down the hill, the residents saw a gathering of some sort, and a newspaper report of a hill climb was taken to confirm the conclusion arrived at that motor-cycles were concerned, whereas the competition was confined to the ordinary cycle. Many complaints about motorists are almost as groundless.

Passive Resistance.

A NEW form of the Passive Resistance movement was suggested on Monday when Mr. Harold Wallis, of Stroud Green, objected to pay his rates because the Borough Council of Hornsey had declined to do anything to regulate or reduce the speed of motor-cars passing through that district. He told the magistrates at Highgate that though the Council had the power to limit the speed to ten miles an hour, and though he had brought the matter forward on many occasions during the past five years, they had done nothing. Seeing that there had been many accidents caused by motor-cars in the neighbourhood, he took that form of calling attention to the inaction of the Borough Council in the matter. Apparently he was satisfied with the verbal protest, and now will probably pay his rates in peace if not exactly in content.

A new Missionary of the Road.

THE efforts of men—as vain as was Mrs. Partington's effort to withstand the Atlantic with her mop—to stay the advance of the motor-car would be amusing but for their association with a blind, and often a blatant, prejudice which seeks to thwart all progress. The Highways League has lately flooded the newspapers with columns of figures detailing the mishaps credited to the motor-car; now from Hove comes news of another effort to arrest the advance of the automobile movement. Mr. William Mayner, who resides in the pleasant suburb of a town which has profited greatly from the motor-car, is forming an Anti-Dangerous Motorists' League, which is to print handbills and posters calling on Englishmen to use their public roads in safety

from the motor-cars. These will be circulated by Mr. Mayner throughout England from a dog-cart on which he is to tour the country. It would have been more interesting had he travelled by means of a motor-car, and so given the British nation an opportunity of learning what he regards as the legitimate speed at which a car should pursue its way.

Organisation in India.

RECENTLY we referred to a scheme which was being developed in India for the formation of an Automobile Club for the whole of the country. This has been formulated by Major D. Warren, and would not only cultivate reciprocal relations with kindred institutions in England and abroad, but would be organised on almost identical lines to the Royal A.C. in these islands. Owing to the enormous size of India, however, it

shall be able to make use of the railway from Blantyre—which I had not counted on—the motor was absolutely indispensable if only for that journey. I am going to start on my European round. To-morrow I celebrate at Likwenu, Sunday at Zomba, then on to Blantyre and Chiromo. Realise the fact of eleven motors in Zomba, four in Blantyre, over twenty in the country; a motor union in Zomba for petrol and spares; a motor-car of 8-h.p. lately arrived for the Governor; a chauffeur for the Government; and a traffic motor-wagon to run between Zomba, Blantyre, and Liwonde. My motor has already covered well over five hundred miles in the service of the mission, and this, be it noted, during the rainy season." It should be pointed out that the distance from Liwonde, in the north of the territory, to Blantyre, the rubber and coffee growing capital in the centre of the country, is ninety miles *via* Zomba; whilst Chiromo, another station mentioned in the letter, is eighty

A View of the Course on which the Coupe des Voiturettes Contest will be held in France next month. A Sharp Turn at Pierrefonds.

might be found advantageous to divide the Dependency into four sub-divisions, namely, north, south, east and west, giving to each district some local authority and retaining the supremacy for the central organisation. Several matters which have long been settled in this country would require attention from the club for India, such as the delivery of petrol in places a distance from Calcutta and Bombay, matters of insurance and the establishment of repair depots. All these are aspects of the subject in which India is at present lacking.

Motors and Missions.

NOT only are bishops in this country becoming motorists, but we learn that on some of the mission fields of Africa the automobile is being utilised in the interests of missionary effort. The Rev. A. M. Jenkins, of the University Mission in Central Africa, is now regularly using a motor-bicycle in connection with his work. It lessens his time spent in travelling very considerably, and, to use his own words, "The motor-bicycle is a tremendous boon. I am expected to visit Chiromo at least once a quarter, and were it not that I

miles due south of Blantyre, and to reach it from the capital necessitates the motor crossing two ranges of hills.

As we went to Press the members of the conference convened by Prince Francis of Teck to consider the Isle of Man races were assembling at the R.A. Club-house.

THE entire Manx course will be hand-swept before the dust-laying operations begin. For the dust-laying itself a cheaper and more rapid method has been devised than previously, namely, the use of traction engines and trailers. This work can start at Ramsey and at Quarter Bridge at the same time, and be continued until the two operations reach mid-way. The mountain road is in reasonably good order; that part from the White Gate below the Bungalow to the Keppel gate is somewhat loose, but the Highway Board has promised to remove all the loose stones before the practice begins, and to continue that operation from time to time, so that on the day of the race it will be clear of loose stones. Permission has been given to tar the road for 100 yards from the Sulby Bridge towards Sulby, and to take all other precautions that the R.A.C. may deem advisable for the protection of the bridge.

MOTERING TO THE KILLARNEY OF MEXICO.

By FRED M. DEAN.

TWO reasons prompted us to take the trip. In the first place we were in dire need of recreation from business cares. What better way to spend a vacation than by motoring over the mountains to that Killarney of Mexico, Lake Chapala. The trip would furnish plenty of exhilarating sport and excitement, and perhaps some manual work, the best

Motoring in Mexico.—A Strip of Good Road near Jalos.

panacea for overworked minds, and the Lake would furnish us the finest duck shooting in the world. Lastly, we wanted to silence by something conclusive the scoffers at the Club, who held that it was impossible to drive any motor across the sand and rocks between Aguascalientes and Guadalajara. For two years my 1905 Reo car had served me faithfully in carrying me between Aguas and the mines at Asientos, and I was confident that if the feat were in the realms of possibility my old car would do the trick.

We hurriedly made preparations for a two weeks' absence. I gave the car a good overhauling and fitted it out all round with new tyres and tubes. As we were to pass through a practically virgin country, where a motor-car is an unknown contrivance, we stocked it with a complete Paris-Pekin outfit. On the running boards we strapped cases containing 50 galls. of petrol. Extra tyres adorned the bonnet, and on the luggage carrier at the rear we carried a huge box of provisions to last us for several days. The tonneau we filled with bedding, block and tackle, spade, pick, crowbar and sledge, only leaving room for a seat for the Doctor's Mozo Juan, who was to act as cook, valet, and general help. Before the days of the good Diaz the country which we were to traverse was a hotbed of brigands, and lest the clans had failed to realise the merits of our twentieth century steed, we took with us also two shot guns, one Winchester rifle, two revolvers, and 600 rounds of ammunition. We certainly were a formidable expedition, and the car, fully equipped, would have tipped the scales at nearly 30 cwt. In appearance we would have rivalled the German around the world contestant before the German army came to its assistance.

Our start from Aguas on January 26th of the present year was uneventful. Far ahead lay the brown undulating mountains, over whose gashed and riven flanks we must pass in order to reach the goal ahead. As far as Teocaltiche we followed a typical Mexican road—two ruts and a hog's back between. But long practice had made me more or less expert at these high-ways, and the 70 kilometres were covered in four hours—not Brooklands speed, of course, but a pace which, if persisted in, would land us without trouble at the lake. The road still stayed with us as we rolled out of Teocaltiche. But our joy was

short-lived, for at Morisco it abruptly ended. Before us stretched endless ploughed fields and further ahead still stone covered hills. A reconnoitre discovered not even a mule trail, and so, commending ourselves to the kind fates, we found an opening in the stone fence and dropped into the furrows. To the blasé motorist in search of thrills I can strongly recommend a ploughed field. Like a ship in a storm we swayed and careened over a good two miles of fertile soil. The field traversed, we came to the bank of the creek. Could we make it? The Doctor and Juan descended and waded knee deep across, and then gave us the signal to make an attempt. I open the throttle wide, and the good old car snorts through the muddy water and rushes triumphantly up the dry bank to the other side. More ploughed fields greet us and we again start our swaying career towards the distant mountains. A few miles further on we come to a barbed wire fence; we cut it ruthlessly and emerge on to a broad rock strewn slope. For hours we have seen not a sign of life, but as we emerge we view in the distance a band of gaily-blanketed peons.

"Are we on the right trail to Jalos?"

"Como no, senor. Follow the curve of land towards the hills," and our tired eyes sight along brown hands that point the way towards a gap in the rugged horizon. We tack on to a new burro trail and bump our way painfully along until we come to an abrupt hillside of solid rock. Its sides and flanks bristle with outcropping rocks. There is no way to surmount it unless we cut out a path, therefore we bring the sledge and crowbar into commission. In an hour or so we have the face of the mountain fairly well manicured; the largest obstacles we prise into the valley below. The small rock teeth we smash into some semblance of smoothness, and then comes the block and tackle. We fit a Spanish windlass at the top, connect it by rope with the nose of the frame of the car, and then laboriously pull and push until the car finally surmounts the rugged crest. We feel we are entitled to a rest and we sink to the ground with satisfaction. The climb finished, we are inclined to make light of our efforts,

Motoring in Mexico.—A Halt for Lunch.

and between puffs of our cigarettes we smile at the rocky teeth below us. But how little we knew really of the trials that awaited us.

(To be continued.)

THE owner of a motor-boat plying for hire without a licence in the Bay on Bank Holiday has been fined 5s. and costs at the Barry Police Court, for contravention of the local bye-laws.

THE SOCIAL WHIRL.

KING EDWARD gave a luncheon at the Hotel Weimar, Marienbad, on Monday, in honour of the Duke and Duchess of Saxe Coburg and Gotha. The guests arrived in their motor-cars and subsequently drove with the King to the golf links. His Majesty showed great interest in the automobile of the Duke of Saxe Coburg, which carried six lamps surmounted by crowns.

DURING her stay in this country Her Majesty the Queen of Spain is using a Daimler car of the standard 42-h.p. Milverton landaulet type, painted the royal colours—blue, lined red—the chassis being painted red, lined blue. The upholstery is in mottled drab cloth and the front seats in leather to match. The doors are embellished with the Spanish coat of arms, and the car looked very smart on Monday when the Queen and her brothers drove from Osborne Cottage to Bembridge for tea.

THE Duchess of Wellington was motoring on Monday afternoon with her daughter from Ewhurst Park, Basingstoke, to London, and when near Kew Bridge the chauffeur was passing an electric tramcar. At that moment a horse and van emerged from a yard, and the van and motor-car came into collision, the driver of the former being severely hurt. The occupants of the car were not injured.

THE Earl and Countess of Malmesbury have left Heron Court, near Christchurch, on their motor-car to pay some visits in the North of England. They will be away till the end of September.

THE Earl of Clarendon, the president of the Hertfordshire County A.C., is at Brides-les-Bains. He will not return to The Grove, Watford, where he recently entertained his fellow motorists of the county, till the third week of next month.

LORD and Lady Londonderry were entertaining friends all last week for the Stockton races, and each day took their party to the course in motor-cars.

ROMAN Catholics of South London, having gathered £500 to purchase a motor-car for Dr. Anigo, Roman Catholic Bishop of Southwark, the Bishop has decided to use the money instead for the support of poor missions in his diocese.

THE HON. MRS. LYNTHURST BRUCE, who was known to fame as Miss Camille Clifford, was in a motor-car mishap the other afternoon in Wellington Street, within a few minutes' walk of the offices of the M.C.J. The car in which she and her husband were travelling was run into by another vehicle, but both cars maintained their balance. Mr. and Mrs. Bruce received a violent shaking, but were otherwise unhurt. The back wheels of their car were slightly damaged, and the front of the other vehicle was twisted. Mr. Bruce telephoned for another car at his garage in York Road, Waterloo, and on its arrival he and his wife proceeded to their destination.

AMONG the chauffeurs lately "presented at court" have been those of the Premier, the Duke of Westminster, Baroness von Eckhardstein, Lady Milburn, Sir Frederick Johnstone, Sir Gilbert Greenall, Sir W. D. Pearson, M.P., and Deputy Inspector-General Biddulph. A chauffeur who drove Princess Louise de Bourbon to Goodwood has been fined at Guildford, where has also appeared a driver who drove some officers to a conference with General Smith-Dorrien in the recent manoeuvres.

Few towns are so well provided in the way of well-equipped garages as is the Bournemouth district—a centre which is one of the favourite week-end resorts of both London and Birmingham motorists. Most of the principal hotels have garages for those who stay at their establishments, and a few others have arranged so that their patrons can have reliable

accommodation for motor-cars as well as for themselves. Among the many other garage proprietors who place themselves at the service of motorists on all occasions are the following well-known firms:—Messrs. Edmunds and Co., Christchurch Road; Mr. C. Pooss, Commercial Road; Messrs. Walkinton Bros., Holdenhurst Road; Messrs. E. Mens and Co., Palmerston Road; Messrs. Edwards and Co., Old Christchurch Road; the Imperial Motor Works, Holdenhurst Road; Messrs. Huntingdon and Graham, and Mr. A. MacArdle.

A WEEK or two ago I referred to the probability of a Motor Carnival being organised in connection with the Worthing Regatta Week this year, and in connection with this Mr. F. C. Dee now kindly sends a copy of the entry form for the events of September 2nd—the day to be devoted to a decorated motor procession. Entries should be made to Mr. W. E. Tree, hon. sec., 177, Montague Street, Worthing, on Monday next at the latest.

THOSE engaged in the industry seem to be out of town almost entirely just now—judging by the appearance of the dining room of the Motor Club on recent days, but in a few weeks its wonted brightness and activity will be resumed.

The Meet of the Members of the North Berkshire Automobile Club at Hinton Manor, Faringdon, by invitation of Capt. and Mrs. Leder-Symonds.

A MEMBER of the R.A.C. has been wondering why children throughout the country stand by the roadside with a notebook writing down the numbers of passing cars. The problem has puzzled motorists since the days when automobiles were first lettered and numbered, and is one of those inscrutable mysteries not yet satisfactorily fathomed. Probably in a duller season some of the "dailies" may be able to settle the point.

ACCORDING to Sir Martin Conway over 4,000 motor-cars were garaged for the August Bank Holiday at Folkestone. He writes:—"Most of these cars came from outside Kent and brought money into Kent. It is not unlikely that they spent some £10 apiece in the county. At that rate Kent profited to the tune of some £40,000 in three days. The day when the cars were counted on the Folkestone road was a busy one, but not the busiest. As many as 1,000 cars have been counted in one day on the same road. Of course, the bulk of them were not Kentish cars. Thus, of the first hundred that passed, sixty-four were London cars, thirteen Kentish, twenty-three from other counties. Thus it is clear that good roads and reasonable police have the effect of bringing people into the county from outside, thus making a market in the county itself for its produce and industries."

LOLLIUS.

GOSSIP FROM PARIS.

M. ARCHDEACON is of opinion that the French press has gone a little far in proclaiming the "considerable superiority" of Wilbur Wright's flying machine over those of his fellow countrymen. He finds two great defects in it; the one is the absence of a tail, which gives automatic stability to the French aeroplanes, and the use of a sledge instead of wheels, necessitating a special apparatus for starting on a flight. While refraining from any sort of personal appreciation, I find it interesting and important to note that M. Archdeacon, who is an authority on aviation, says the tail or hind planes serve exactly the same purpose as the hind wheel of a bicycle, and that compared to the Farman-Delagrangé aeroplane the Wright machine is a monocycle. It requires an acrobat such as Wilbur Wright or his brother to manage it, as it is always pitching and tossing about. Great skill and long practice is required to steer it. "Never could such an aeroplane be put into the hands of the public any more than a monocycle between the legs of an ordinary cyclist." Farman and Delagrangé would, he thinks, never have learned to fly if they had been put on Wright's machine. It took the Wrights six years' practice with gliding apparatus to obtain their present dexterity. As for Wilbur Wright beating Farman's officially controlled record of twenty minutes in the air, M. Archdeacon considers it very

Mr. Wilbur Wright.

— From a Caricature Sketch

[in the "Auto."

likely he will, but he looks forward with pleasure to the struggle for superiority which must inevitably follow, and in which he believes his fellow countrymen will not figure badly. The French aviators, says M. Archdeacon, with perfect truth, are stopped at the present moment by the motor in their attempts to make long flights, and he is far from being convinced Wilbur Wright will not encounter the same difficulty in his two projected long flights of an hour's duration each. "I am sure his motor has numerous imperfections and that it is likely to get hot during a long flight." Consequently this authority declares that from "the point of view of a machine destined to be put into the hands of an ordinary person, I contend that the Wrights' aeroplane is behind ours, that the absence of a tail is a great mistake, and that the mounting of the apparatus on skis is another."

THERE are of course a good many motorists in Switzerland, and even motor manufactories in that beautiful country, but, with its mountains and traffic regulations it cannot be called a paradise for self-propelled vehicles or for those who drive them. I will admit that many of the speed regulations existing in certain districts which seem simply incomprehensible may be

justified by reasons a dweller in plains cannot appreciate. But most surely some of them are inspired by a perhaps natural aversion to anything which disturbs the equanimity of the quiet life of the inhabitants, especially if it does not bring with it an immediate pecuniary advantage. But the Swiss are carrying their love of peace a little too far. A gentleman who has just returned from a motoring tour tells me that, though he carefully observed what seemed to him the ridiculous regulations prohibiting motor-cars on certain roads and imposing unnecessarily slow speed limits on others, he was stopped by a gendarme, rural policeman, or some such official, because, wishing to avoid the possibility of a collision on a narrow road with endless turnings at the foot of a steep mountain, he sounded his syren. To his amazement the man in uniform told him he had violated the regulations and was liable to a fine, and even hinted that in the case of committing a second offence of that heinous character he might be put into prison. Feeling utterly bewildered, for he had not yet realised the fact that his syren was the culprit, the tourist asked the official what he had done to incur such terrible penalties. Thereupon the gentleman in the cocked hat pulled out of his pocket the little book containing the regulations for motor-car traffic, and read aloud Clause 6. It stipulates that every automobile must be provided with "a sonorous horn to the exclusion of every other signal." The Swiss do not, it appears, at all appreciate the shrill sound of the syren, though it can be heard at a much greater distance than their regulation "sonorous horn." Indeed, certain Swiss journals having taken up the matter, demand that every foreign motorist, on entering the country, should be obliged to leave his syren in the hands of the Custom House officers at the frontier till he returns, and that every syren found on a car on the territory of the Confederation should be simply confiscated.

OH those taxi-cabs! That is the cry of almost everybody in Paris, even of those who use them every day. The truth is that most of the drivers go at a speed which makes the fare quake in his shoes even if he is a man who has himself driven at 150 kilometres an hour in the Grand Prix race. These drivers are undeniably expert, otherwise the number of accidents would be much larger. The danger is, however, not only for the occupants of the vehicle but for the unfortunate pedestrians who must sometimes cross the roadway. The cab drivers appear to think they need never slacken speed, and that to blow their horn is quite enough; when twisting sharp round a corner they take an evident pleasure in sounding a formidable blast which sends everybody, and especially old ladies, elderly gentlemen and children, flying before them. Something must be done to put a stop to this sort of thing, otherwise discredit will be thrown on the new means of locomotion. It is difficult for the police to interfere except in the case of accident, so M. Japy de Beaucourt, a member of the French Automobile Club, has written to the papers to propose a remedy which he thinks will be successful. He would require every taxi-cab to be provided with a shrill whistle, which would be blown automatically immediately the speed limit was exceeded. A policeman would at once stop the car and take its number. Should no policeman hear the whistle the evidence of two persons would suffice to insure the condemnation of the offending driver to a fine. MARNEY.

MESSRS. DENEHEY AND CO., of Lower Baggot Street, Dublin, have had a good season in connection with their garage on the main Dublin road at Bray, as well as with their new showrooms in the Irish capital itself. Under the management of Mr. J. W. Favell they are undertaking motor body building and engineering repairs.

THE touring maps of the East, South, North and West of London published by Messrs. Gall and Inglis, of London and Edinburgh, are proving of great service to motorists, the scale of half an inch to the mile giving opportunity for clear indication of the bye-roads as well as the main highways of the country within sixty miles of the Capital.

THE MOTOR PROBLEM.

IT would seem as though the daily newspapers are singularly short of "copy" at the present time, seeing the kind of letters which are being admitted to their columns, apparently without any consideration of accuracy or reason. There was a time when such illuminating subjects as the decline of the Marriage Rate, the appearance of the Sea Serpent, the ripening of the Big Gooseberry, and other subjects filled the newspapers at this season of the year. Now, however, the alleged ravages of the motor-car, its spoliation of British scenery, its murderous career along quiet lanes and its general demeanour have come as "a boon and a blessing" to the sub-editorial room. The result is that the feelings of the Public are being aroused, and the Correspondence Columns having thus excited attention to the subject, the pictorial aid of "Punch" and other humorous persons has been invoked to add to the cloud of dust now being thrown at the newspaper reader.

A strange thing about all this is that so many motorists who, in the early days, encountered the ridicule that attached to the pioneers of the new movement and successfully withstood the prejudice that surrounded the advent of the motor-car are now apparently capitulating with regard to the present storm. For our own part, we would assert with considerable emphasis that the dangers of motor-car traffic are constantly decreasing, and this despite the growing number of vehicles now upon the road. The drivers are more capable than they were five or six years ago; experience of the road and of the car has given them more nerve and control; and the dangers of the earlier days are being forgotten in the confidence and ability which must do much to secure a sense of safety. Unfortunately the pedestrian, like the "Constant Reader," is not always very definite in his views or in his methods; and the hesitating old gentleman who, passing from the roadway to his club, halts in the centre of the thoroughfare and then runs towards the bonnet of a motor-car, narrowly averting self-invited disaster, gets in a flurried state by the time he reaches the library—and then follows the inevitable letter to the "Times."

In addition to this advance in the chauffeur—a fact which any Londoner can realise if he will only mentally compare the motor-bus driver of to-day with the novice of a year ago—there is a growing insistence on consideration to others on the part of owners with regard to their drivers, and Sir Frederick Milner, whose orders to his chauffeur we reproduce, is no exception to the general rule. Sir Frederick's strict orders are:—1. To keep within the speed limit as far as he can, even on the open roads. 2. To slow down to under ten miles at every danger signal, or at any turning where he cannot clearly see what is on the road. 3. Never to exceed ten miles in any village, whether the road is clear or not. 4. To give the widest possible berth to all traffic, whether wheeled, bicycles, or pedestrians. 5. To pull up at once if any animal shows sign of nervousness, or if the driver or rider holds up his hand. He has a 30-h.p. car, and when he has been riding therein has "often looked behind and been astonished at the little dust raised even when going a fair speed." "In the villages I do not raise so much dust as a carriage," adds Sir Frederick. "I have never met with incivility, nor have I even seen anyone show the least sign of annoyance."

We doubt whether it is wise to take the tirade against motorists so seriously as has been done by several of our contemporaries. When Parliament reassembles the newspapers will have no room for such fulminations as now scintillate through their columns; and we shall hear nothing of the Motor Horror, and similar creations of the Press. It is an interesting coincidence that when the newspapers had columns of automobile advertisements they received few letters against motor-cars; but now that such announcements have declined their kind readers have assisted them to fill their columns with motoring comments of another character.

MESSRS. WARWICK WRIGHT, Moore-Brabazon, and Oscar Cupper will drive the three Metallurgique cars in the four-inch race in the Isle of Man.

THE ISLE OF MAN RACES.

LORD RAGLAN, Lieut.-Governor of the Island, has consented to present the trophy to the winner of the "Four-Inch" Race at the Palace Theatre, Douglas, on the evening of the race. He will also present on the same occasion the "Graphic," "Henry Edmunds," and the A.C.U. Trophies to their respective winners.

THE Secretary of the Highway Board of the Isle of Man has drawn our attention to the fact that the three weeks allowed by the Highway Board for practising should be taken as calendar weeks, and therefore practising will not commence until the morning of Thursday, September 3rd.

As is announced in the news of the Auto Cycle Club on another page, there are now thirteen entries for the international motor-cycle race on the 22nd prox. The allowance of petrol this year for the single-cylinder machines will be one gallon for 100 miles, and for multi-cylinder machines one gallon for 80 miles, as against one gallon for 90 miles and one gallon for 75

The first of the three Vinot Cars entered for the "Four-Inch" Race in the Isle of Man.

miles last year, when in the respective classes the winners covered 94½ miles and 87 miles. The lowest consumption, however, of any competitor in the single-cylinder class was R. M. Brice, 129 miles to the gallon, and in the twin-cylinder class, W. M. Heaton, 107 miles to the gallon. The last day for entries for this year will be Monday next.

MR. J. H. ATHERTON, of the Addison Motor Company, will patrol the course on his 8-h.p. Phoenix car during the preliminary preparations for the Four-Inch Race to see that the Akonia dressing on the roads has been "well and truly" laid.

THE Chief Constable of the Isle of Man will not only swear in special constables on the occasion of the forthcoming races, but will also thus ceremoniously recognise the officials of the R.A.C. on the Course, in order that their authority may be indisputable.

AT Ballacraigne a tyre depot will be established and a replacement and replenishment depot will be located at Ramsey. At both these places there will be timekeepers, lap scorers, and scoring boards, which will be of use chiefly for the information of the competitors when they draw up to change tyres or replenish in any way, and who may desire to know their position in the race.

WE understand that several of the firms connected with the automobile industry, who have in the past spent considerable money in advertising their specialities on the roads and elsewhere in Manxland during the week of the motor races, have wisely decided to refrain from such extravagance this year.

MOTORING NOTES FROM BRIGHTON.

DESPITE the vigorous protests of the motoring world against the over-zealous attentions of the police on the road between Brighton and London, it seems obvious, judging from the past month's experience, that the average motorist still cherishes a sneaking fondness for the Brighton road in general, and Brighton itself in particular. As far as I can hear, the Sussex police "trappists" have sensibly modified their attitude, and the really careful and considerate motorist has nothing to fear. Indeed, there would be a sudden end of the trouble if only the incorrigible "scorcher" could be obliterated as completely as he deserves. But a county magistrate staying at the Royal York Hotel here a few days ago told me he and his own car had two very narrow escapes from serious disaster on the way down, simply and solely through the reckless craze for speed that obsessed the occupants of two other cars on the road. That being so, it is merely human nature to anticipate that that gentleman will eagerly embrace the opportunity of making "awful examples" of the next offenders who may be brought before him!

LAST Sunday, however, usually the principal day of the seven for "netting" motorists, was absolutely unproductive. One might have raced to Brighton at Grand Prix speed without annoying or endangering anyone—had one cared to face the

The three 20-h.p. Single-Deck Buses which are now in service in the Town of Carlsbad, Austria.

(Allgemeine Automobil Zeitung.)

elements—for it was, without exception, the most wretched, dismal day of the whole summer. The drivers of the few cars that did turn out must have been glad to get the melancholy business over. Motoring temporarily ceased to be a pleasure, and was merely a more convenient means than the railway of getting from one point to another. Things were naturally very slack at the favourite haunts of the motoring fraternity—the Metropole, the historic Old Ship and the Royal York. But he would be a misanthropist indeed who could not be happy under any conditions at the former, for instance, probably the finest, and, socially speaking, the smartest hotel on the coast. Among those who had motored down to the Metropole for the week-end were Sir Edward W. Hamilton (Renault), Sir F. Robertson (Gladiator), Mr. Todd and Mr. Knox (Mercedes), Mr. Jones and Mr. Baker (Daimler), Mr. Boyd (Humber), Mr. Wood (Argyll), and Mr. F. J. Smith (Clement).

THE hopelessly stagnating effect of the weather was manifest at the garages in the town; actually, when I looked in about four p.m. at that of the Brighton and Sussex Motor Works, behind the Grand Hotel, they had not "stabled" a single car all day. I was interested in a vehicle that was *en garage* there belonging to a Mr. Stickley, a young American tourist, who arrived from France last Saturday after "doing Europe" by motor, and who is staying this week in Brighton. His car is a six-cylinder 30-h.p. "Franklin," the feature of which is that the cylinders are air-cooled. As the vehicle is the first of its kind seen in Brighton, it is naturally attracting considerable attention on the part of motoring experts.

SAXONIAN.

CONTINENTAL NOTES.

Racing in Italy.

Considerable interest is being taken in Italy in the two races which are to be held on the Bologna circuit on the 6th and 7th prox. The event on the first day, which is known as the Florio Cup contest, is for cars of the Grand Prix type having engines of a maximum bore of 155 mm. in the case of four-cylinder motors. The race is over a distance of 528 kilometres (330 miles), equal to ten laps of the 52.8 kilometre circuit, which takes in Borgo-Panigale, Castelfranco, Sant Agata, and San Giovanni in Persiceto. Seventeen entries have been received for the contest, the drivers of the vehicles and the order of starting being shown below:—

| Order of Starting. | Car. | Drivers. |
|--------------------|-------------|------------------------------|
| 1 7 13 | De Dietrich | Daray, Minoia, Trucco. |
| 2 8 | Motobloc | Pierron, Gauderman. |
| 3 9 14 | Mors | Demogeot, Garcet, Landon. |
| 4 10 15 | Fiat | Lancia, Nazzaro, Wagner. |
| 5 11 16 | Clement-B. | Gabriel, Hautvast, Shephard. |
| 6 12 17 | Itala | Cagno, Fournier, Piacenza. |

It was anticipated that both the Mercedes and Benz Companies would take part in the race, but no entries from them having been received, it has resulted in a contest between France

and Italy, the former being represented by eleven and the latter by six vehicles.

The Targa Bologna race, which will be held on the 7th prox., will be over eight laps of the same course, equal to 422½ kilometres (264 miles), and is open for four-cylinder cars having a bore between a minimum of 120 mm. and a maximum of 130 mm., and to six-cylinder vehicles with a bore between a minimum of 90 mm. and a maximum of 107 mm. When the list closed it contained the names of the twenty competitors appended:—

| Order of Starting. | Car. | Drivers. |
|--------------------|------------------|---------------------------|
| 1 | Diatto-Clement | Primavesi. |
| 2 13 | Franco | Buzio, Carliolati. |
| 3 14 | S.P.A. | Picoli, Sassoli. |
| 4 15 19 | Bianchi | Tommaselli, Bronbilla, X. |
| 5 16 | Zust | Maggioni, Zust. |
| 6 | Isotta-Fraschini | Sandini. |
| 7 17 20 | Junior | Tamagni, Radice, Galli. |
| 8 | De Dietrich | Parran. |
| 9 | Berliet | Porporato. |
| 10 | Fiat | Valentin. |
| 11 | Darracq | Airoldi. |
| 12 18 | Itala | Ravetti, Pizzigalli. |

The Coupe de Normandie.

The light car race organised by "L'Etoile Sportive Caennaise," which was run off on Saturday, the 15th inst., was over a distance of 155 miles and not 267½ miles, as stated in our last issue. In the class for cars of the Grand Prix de Voiturettes type, the best time, 2 hrs. 49 min., was made by Barriaux on an Alcyon. In the category for four-cylinder cars up to 85 mm. bore the winner

was Pellecat on an Aries, his time, 2 hrs. 47 min., being the fastest of the day.

A Proposed Racing Track in France.

A syndicate has been formed at Clermont-Ferrand with a capital of £2,000 and the title La Société d'Etudes du Circuit Permanent, to develop the scheme for the construction of a permanent motor racing track and aeroplane trial ground in the Puy-de-Dôme district of France.

British Motorists in France.

Recent British visitors to France include Mrs. Douglas and Mrs. Amos, of London (24-h.p. Vinot), Captain Jaffray (40-h.p. Daimler), Sir Constantine Phipps (20-h.p. C.G.V.), Colonel and Mrs. Pollack, of Horsham (40-h.p. Berliet), Sir Kenneth Muir Mackenzie, of London (40-h.p. Panhard), Mr. H. Packett, of London (25-h.p. Panhard), Lord Templemore (30-h.p. Delaunay-Belleville), and Mr. Charles S. Henry (28-h.p. Daimler.)

A new Circus "Turn."

At the Busch Circus, Hamburg, a "turn" which has recently attracted attention is that in which the Saxon brothers form the support of a bridge over which is driven a motor-lorry weighing, with its six passengers, nearly four tons.

Aeronautical News.

On the 19th inst. M. Legagneux accomplished a flight of 250 metres in 12 sec. with Captain Ferber's aeroplane at Issy-les-Moulineaux. A new aeroplane known as the Gastambide-Mengin made its appearance at Issy on the 20th inst. The apparatus, which is fitted with a 50-h.p. petrol motor, made several flights, including one of 300 ft., carrying two passengers. On Saturday, however, it met with an accident, when alighting on the ground, which practically wrecked it. Another new arrival at Issy is the combination aeroplane and steerable balloon devised by M. Malecot, and with which some successful trials have been made. The balloon part consists of a cigar-shaped gas-bag, 33 metres long, and of a capacity of 1,054 cubic metres. An aeroplane, 20 metres long, is suspended beneath the balloon by ropes. The planes are inclined at a sharper upward angle than usual. A 30-h.p. motor is fitted into a sort of cage, where there is also sufficient room for a pilot and a mechanic. Below the aeroplane there is a basket, which can carry a weight of 600 lb., and which helps both in giving the entire airship greater stability and in maintaining the aeroplane at a proper angle. To rise from the ground, the pilot causes the basket, with the weight, to move back by means of a pulley, which changes the centre of gravity in the aeroplane, and sends it gliding upward under the impulse of the propeller. The advantage of a mixed airship of this description is claimed to consist in the fact that less gas is needed to inflate the balloon, and that, in case an accident should occur, the aeroplane would be able to continue its flight alone for some distance, or, at any rate, would act as a parachute in coming down. Mr. Wilbur Wright renewed his aeroplane trials at the Auvours Camp, near Le Mans, on the 21st inst., when he executed two flights, lasting respectively 1 min. 49 1-5 sec. and 2 min. 14 sec. A banquet in honour of Mr. Wright was given by the Farmers' Union of Sarthe at La Fleche on Sunday last. Berlin was treated to a novel spectacle on Thursday last week when two airships—the Gross and the Parseval—manœuvred over the German capital for nearly two hours. The Gross was out again on Friday, the 21st inst., with the Crown Prince of Germany as passenger. Mr. Henry Farman, who arrived back in France from the United States on Monday, was interviewed at Cherbourg, and expressed confidence in his ability to accomplish a flight of an hour before very long.

A Motor-car Breakdown Stops a Theatrical Performance.

A somewhat amusing incident took place at Bagnieres de Bigorre, in the South of France, one day last week. A performance of "Sherlock Holmes" was to have taken place at the local theatre, but owing to the non-appearance of the principal actor the play could not be given. It appears that M. Gémier, the actor in question, had set out from Cauterets for Bagnieres in the morning, and that the car had broken down on the Col

du Tourmalet, nearly 7,000 ft. above sea level. The irony of the incident is found in the fact that the theatrical posters bear the notice, "Thanks to his remarkable motor-car M. Gémier always arrives in time."

A German Hill Climbing Competition.

The Mid-German Automobile Club of Eisenach is organising a hill-climbing competition on the road between Eisenach and Fortha for September 6th next. The competing machines will be divided into three classes (1) up to 6-h.p. (2) up to 10-h.p. and (3) over 10-h.p.

German Motor-car Imports and Exports.

An extremely quiet state of affairs continues to prevail as regards the imports of motor-cars into Germany. The arrivals of pleasure and industrial motor vehicles and chassis into the country during the six months ending June last only attained a value of £352,533, as compared with £534,241 in the corresponding half-year of 1907. During the same periods the

M. Pellecat at the Wheel of the Aries Four-Cylinder (84 mm. by 110 mm.) Car on which he made fastest time in the recent Coupe de Normandie Contest.

value of the similar exports from Germany increased from £339,700 to £346,370.

Motor Postal Services in France.

The French Post and Telegraph authorities in Paris are about to invite tenders for the carriage of the mails between Monsempron-Libos and Montagu-du-Quercy, and between Sainte-Foy-la-Grande and Marmande (Lot-et-Garonne) by motor vehicles.

Miscellaneous Items.

A company has been formed in Lyons to build motor-buses and lorries, the feature of which will be a rotary engine.—A motor-bus service by means of two German Daimler 30-h.p. single deck vehicles has just been started between Kirchberg and Ilshofen, Wurtemberg.—A number of Belgian road authorities are reported to be about to visit England to inquire into the steps that have been taken to alleviate the dust nuisance, and in particular to examine roads that have been treated with tar preparations.—The Autocycle Club de France has postponed its reliability run from Paris to Trouville and back, which was to have been held on the 25th, 26th and 27th inst., until the middle of next month.—The French military "service de santé" last week carried out some trials in the Paris district with a number of motor vehicles specially adapted for the transport of wounded soldiers in time of war.—The Automobile Club Vaclusien has postponed the Mont Ventoux hill-climbing competitions, which were to have been held this week end, until Sept. 10th and 13th.

SOME CURRENT TOPICS.

Taxes on Motor-Cars and the Horse Power Question.

The practice of giving the engine of a motor-car a double rating, which has prevailed during the past year or so, is likely to receive a setback in France. Hitherto in fixing the taxes on motor-cars—which are on a horse-power basis—the authorities have taken the lower figure, and thus, in the case of an 18-24-h.p. car, the tax has been at the 18-h.p. rate. By a circular just issued the French Minister of Finance announces that in future the maximum and not the minimum figure will be taken, so that the 18-24-h.p. vehicle will have to pay on the 24-h.p. scale. Unless the new arrangement results in manufacturers once again adopting a single horse-power rating, it is estimated that the new basis of taxation will result in an annual addition of at least £20,000 to the coffers of the State.

opening in the case. There must be many owners who, in the course of their motoring career, have come across similar little points in their cars which they consider might easily be improved, and, as the information would doubtless prove useful to manufacturers, who are now preparing their models for the 1909 season, I shall be glad to receive suggestions from any motorists who have experienced difficulties of the kind mentioned.

See the Ignition is Retarded.

It is an old saying that "familiarity breeds contempt," but familiarity with one's car should not cause a motorist ever to lose sight of the necessity of seeing that his ignition lever is retarded before starting up the engine, otherwise he may receive a nasty rap on the knuckles from the starting handle, even if nothing more serious results. In the early days of the movement it was

The Special 35-h.p. 2½-ton Baggage Car recently built by the Austrian Daimler Company for use in connection with the Public Service between Predazzo and Neumarkt, in the Southern Tyrol.

Some needed Improvements.

The letter on "Accessibility" which recently appeared in the correspondence columns of the *M.C.J.*, drawing the attention of designers of motor-cars to the need of greater accessibility of those parts requiring adjustment or lubrication from time to time, was well to the point, for it must be admitted that, although considerable progress has been made in recent years, many cars are still far from being perfect in this direction. It has been the experience of many motorists to find that, whilst in chassis form, every part of a car appears to be most accessible, when fitted with the body it is only with considerable trouble and difficulty that adjustments can be effected or the necessary replenishment of oil or grease given to the gear-box and differential case. Taking a couple of examples from my own car, it is quite a task to dismount the water-circulating pump when the same requires repacking, while it is almost impossible to pour oil into the gear-box without making a mess, owing to a fixed part of the car body extending right across the centre of the small

not unusual to meet an automobilist with his arm in a sling as a result of a back-fire, and, although accidents of the kind are perhaps not now so numerous, the fact remains that unless the precaution is taken of first retarding the ignition the operation of starting a petrol engine may be fraught with serious danger. At the same time I must confess I was surprised to read that at the recent convention in America of the International Association of Accident Underwriters the Chairman of the Automobile Hazard Committee presented a report in which it was stated that no less than 49·2 per cent. of all automobile accidents—in the United States, I presume—are caused by "back kicks." Only 14·8 per cent. of the accidents are caused by persons being thrown from motor-cars, and 13·1 per cent. by collisions. When one considers how frequently accidents of the two last mentioned kinds figure in the newspapers, it would appear that in the course of a year a great number of persons must be injured by the starting handle suddenly flying back in the reverse direction.

ARCANUM.

Forty motor-cars, lent by the owners, carried 200 crippled children of Preston and the district on a half-day's excursion to Lytham on Saturday.

THE Blackpool Watch Committee have decided to grant licences for electric buses to run on the roads not served by the electric tramways.

THE Automobile Club of Victoria is arranging a trip by motor-car for the officers of the United States fleet visiting Melbourne on the 4th prox.

THE Barry District Council is considering an application from the London Electro Bus Company for permission to allow motor-buses to run in that locality.

IN connection with the Automobile Club of America's race meeting in Savannah in November next, it is proposed to organise a 200-mile race for light cars.

AT the premises of Messrs. Frazer and Sons, at Pitlochry, Messrs. Burberry have been holding an exhibition of motoring and other clothing for sportsmen who are now holidaying in Perthshire.

THE French coachbuilders have invited the members of the Institute of British Carriage Manufacturers to hold their annual autumnal meeting in Paris in September next, and the invitation has been accepted.

A SUBWAY is to be constructed beneath the area in front of Blackfriars Bridge (London) on the City side, so that pedestrians will be able to avoid the dangers of the considerable vehicular traffic that passes that point.

AN engagement is announced between Mr. Robert Codrington, Administrator of North-Western Rhodesia, and Miss Dorothea Frances, elder daughter of Mr. and Mrs. Alfred Bird, of Solihull, Warwickshire. Mr. Bird's associations with the R.A.C. and his work in connection with the Isle of Man races is well known to our readers.

AT Monday's meeting of the Scottish A.C. a letter was read from the secretary of the Scottish Motor Traders' Association offering the members of the Club the privilege of admission to the Scottish Motor Show in Edinburgh in January next, and asking the renewal of the patronage of the Club. The latter was cordially granted.

DURING the twelve months ending with June last 1,045 motor-cars, valued at £500,027, and automobile parts estimated at £98,181 were imported into the United States, the total of £598,208 comparing with £968,455 in the preceding fiscal year. Of the complete cars imported 793 were French, 132 Italian, 65 British, and 32 German.

A TELEGRAM from Australia on Tuesday announced that Messrs. Dutton and Aunger had succeeded in making the journey from Adelaide to Port Darwin on a 25-h.p. Talbot car. On a previous attempt a 20-24-h.p. vehicle had to be abandoned at Tennant's Creek, in the Northern Territory, owing to the country being impassable by reason of the heavy tropical rains.

A MOTOR-CAR explosion was the cause of a fire at Slough on Sunday morning. A new type of engine was being tested when an explosion occurred, and the car was quickly enveloped in flames. Efforts to remove it from the shed proved unavailing, and the flames spread to a warehouse and corn stores, three lots of stabling, a carpenter's shop, and several outbuildings, which were all damaged.

A NEW sparking plug intended for use in connection with both accumulator and high tension magneto ignition is being put on the market by Mr. F. Krause, of 7, Larden Road, Acton Vale, W. A feature of the plug, which is made under the Hosch patents, is that the inner end of the central terminal is in the form of a four pointed star. For accumulator ignition only one of these points is used, the others being turned out of the way, while in the case of magnetos two of the points are employed, there being thus some held in reserve should those in use become fouled up. The parts of the plug are all made so that they are readily detachable, and due provision is made for the expansion of the insulating material.

HERE AND THERE.

SEVERAL good motor tours have been arranged in and around Ilkley, giving pleasure to motorists, and, we trust, a profit to the promoters.

WHEN in Worthing a few days ago we noticed a car on which the owner had mounted on the luggage rail a cage for the transport of his dog. The animal seemed quite at home in its novel position.

Two separate applications have been made to the Secretary for Scotland for the repeal of Prohibition Motor-Car Orders formerly granted to county authorities. In both instances the request has been granted.

MESSRS. RICHARD PAPE, LTD., of Albion House, New Oxford Street, London, W.C., who are putting the "Fors" accumulator on the market, will be exhibiting their speciality at the Electrical Exhibition at Manchester during October. Motorists in the North of England will then be able to investigate the claims of this excellent accumulator, particulars of which are given in the firm's catalogue.

WE illustrate herewith the new two-seated car built on racing lines which has just been put on the market by the Star Cycle Company, Ltd., Wolverhampton. The vehicle is fitted with a two-cylinder engine, developing 10-h.p. The gear-box gives three forward speeds and a reverse, the final transmission being by a cardan shaft and bevel gear to a live axle. Hoffmann

ball bearings are fitted throughout except the engine. The wheels are shod with Dunlop 700 by 85 heavy tyres. The petrol tank capacity is six gallons. We understand that the firm have given the car a thorough test, and are highly satisfied with its capabilities, both from the point of view of speed and reliability.

INITIAL steps toward the formation of an American national society for the advancement of the science of aerial navigation have been taken in Washington. The new organisation is to be known as the National Aeronautical Society, and will be devoted to facilitating work of scientists engaged in research and experimentation in aerodynamics.

THE Antarctic expedition which left France on Monday last under the command of Dr. Charcot carries with it three motor-sleighs. Each machine accommodates four persons, and is provided with a 4½-h.p. motor. The centre driving wheel is fitted with cogs which grip the ice, and can be covered with wire or cord netting when going over soft snow. The idea is, that by using power-driven sleighs dogs can be dispensed with.

THE Engineers' Supply Stores, of 25, Sumner Street, Southwark, S.E., are supplying many things of interest to our readers, and have large stocks of india-rubber goods, aluminium castings, belting, and other productions of concern to the engineering side of the motor industry. They are now supplying the "Wescot" overall—one of the cheapest and most efficient overalls now available—to the special features of which we hope to refer in an early issue.

Correspondence.

(Letters to the Editor should be addressed to the office, 37-38, Charing Cross Road, London, W.C.)

THE TRIALS OF 1909.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—With regard to the questions you raise as to the 2,000 miles trial being held in 1909, I am not at all keen either one way or the other.

This year I entered a 26-h.p. Metallurgique car in the Scottish trials, but did not run in the 2,000 miles trial, as it seemed to me that the longer trial would be very costly and scarcely desirable.

Our object all the time has been to demonstrate the good qualities of the car in as cheap a manner as possible, because, obviously, the purchaser has to pay in the long run for all these trials that are carried out, and for which various firms feel compelled to enter.

I make a point of not entering costly trials unless our customers are likely to benefit to an adequate extent in learning something about our cars that they previously did not know.

The Scottish trial route has been held by many people this year to have been too severe. I do not agree with this. We did not find it at all too severe, but certainly any car that got through might be safely bought by any intending purchaser.

With regard to future trials, there is only one point that I am really keen upon, and that is that no allowance should be made for

The above illustration shows a 10-12-h.p. Coventry Humber car, with driver and five passengers, ascending London Street, Dunedin, New Zealand, which has a gradient of 1 in 7.

The owner writes that the car has covered 7,000 miles since last December without a mechanical stop of any description.

weight except weight carried, so that a really light car that is not only light but also strong, by being made in the right way of the right stuff, may have a chance of success. In other words, weight, such as passengers carried, should be the only kind of weight for which allowance should be made, and, if the Scottish Club will make this alteration in their rules, they will then have an ideal trial capable of eliminating all the weaklings, and quite long enough for prospective customers to judge the merits of the car.

I have entered three cars for the "Four Inch" race in the Isle of Man to support the club and for the good of the sport, but I fear it was rather the sporting side than the *f. s. d.* aspect of the venture that interested me.—Yours truly,

WARWICK J. WRIGHT.

RAISING THE BODY OF THE CAR.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—The letter of the Rev. T. H. Peate in your issue of the 22nd inst., on which you invite comment, raises a question of much interest to motorists. The raising of the body, crank case, &c., has much to recommend it from the point of view of saving life of pedestrians, for many accidents which now terminate fatally would, in my opinion, result in nothing worse than, say, a broken rib, if the body escaped impact with the lower heavy machinery of the car, which strikes and crushes it against the road. It is not the wheels, but the other portions of a car, which mutilate and mangle the unfortunate victim of an accident.

The other day I saw a dog badly injured; a car ran over his hind quarters, his head was struck by the front axle or crank case, then by the gear case, and lastly by the live axle, rolling him over and over and leaving him more dead than alive on the road. Last winter I was driving a heavy tandem dogcart with narrow iron tyres and ran over a similar-sized dog. I pulled up and looked round only to see the dog, much frightened, yelping and flying off at full speed. I am aware that a motor-car is much heavier than a dogcart, but I think that the width, resiliency, and softness of its indiarubber tyres would very considerably counteract the increased weight.

There are, however, other points to consider in raising the body and machinery two feet from the ground. In the first place, it would do little good raising the body unless the axles also were raised, and that would mean larger wheels. Now how would that affect speed? Then raising the centre of gravity would have a tendency to make the car top heavy and unwieldy and sway from side to side if anything like speed was indulged in on uneven roads. This would have the effect of producing an injurious lateral pressure on the tyres, if it did not rip them off the rims altogether, with disastrous effects to both the car and its occupants. Plausible as is the suggestion at first sight of the Rev. Mr. Peate, I think if carried out it would do more harm than good. It would increase the number of accidents to cars, and merely transfer to the occupants the risk of accident which other users of the road now run.

While on this subject, may I suggest a small, but useful at times, improvement in the shape of the front wings? As a rule they now terminate horizontally, and if they strike a person would cut into and seriously injure him. If they were made in a semi-circular form, the front portion bending down to the level, say, of the axle, and splayed outwards, they would then push away from the car anything they came into contact with.—Yours truly,

S. R. C.

MOTOR-CARS ON THE ROAD.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—A report of a discussion in the Cheshire County Council of the motor question mentions something of the discomfort I experienced from a passing motor-car, a matter of little importance; but I should like your permission to summarise the argument which it was used to illustrate, as it embodies a point which I think is too little insisted on. Briefly, it runs thus:—

1. The roads exist for the enjoyment of all.
2. Light motor traffic, chiefly owing to the dust it raises as at present conducted, has deprived the bulk of the users of these roads of their due enjoyment of them for the benefit of a relatively very small section of users.
3. The dust is especially caused by the smallness of the space between the bottom of the car and the surface of the road, so that even at a quite moderate pace excessive dust is raised.
4. If the power were given to stipulate for a proper minimum space between the bottom of the car and the surface of the road, a considerable part of the trouble would be over, as it would become dangerous to go very fast, especially in turning corners (owing to the higher centre of gravity), and both speed and dust would be automatically reduced, probably to a reasonable degree.

All this is, of course, irrespective of the necessity of going very slowly through inhabited parts where children are frequently forced to resort to the streets for lack of other place to go to.—Yours truly,

T. RAFFLES BULLEY.

THE MOTOR PROBLEM.

To THE EDITOR OF *The Motor-Car Journal*.

SIR,—The extremely moderate tone of the letters of Mr. Max Pemberton and other motorists almost disarms criticism, but practically all their suggestions amount to this; abolish the speed limit and trust to the honour and good sense of motorists to use the public roads with decency, and at the same time punish motorists in case of accident with Draconian severity.

It will be strange if a House of Commons, with an overwhelming Liberal majority, upsets the decision of the House of Commons of 1903, when the speed limit was not only insisted on, but further power given to local authorities to further limit and control the speed.

Laws are made to be obeyed or altered. No motorist in the House has ever attempted to bring forward a Bill or resolution to abolish the speed limit, but certain motorists in and out both Houses practically say: We do not like the law, we will not obey the law; we will throw every possible obloquy and contempt on the magistrates and police who endeavour to enforce the law. We will use our enormous wealth to employ scouts to enable us to break the law with impunity, and gratify our selfish expensive amusement at the public expense.

Moderate motorists will suffer badly by the abolition of the speed limit, and will be constantly exposed to the risk of being summoned for

driving to the common danger, and that must be purely a matter of opinion and not of fact.

With regard to punishment, surely all history teaches us that revengeful punishments invariably defeat their object. What satisfaction is it to anyone who loses a dearly-loved one to know the driver or owner is severely punished? What does the man in the street say when he sees that in the parks where the aristocracy and plutocracy disport themselves the speed is strictly limited and the law strictly enforced—no talk of police traps there—and where the millions are, motorists traverse the streets at the pace of a galloping horse?

Abolish the speed limit and we will revert to the evil days when "there was no king in Israel, and everyone did that which was right in his own eyes."

Offenders from the ages have protested against laws they did not like, but in the meantime those who have some voice in affairs, some consideration for the public, can do no better than insist on the public safety.—Yours truly,

J. CATHCART WASON.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—Among the many futile schemes for removing or modifying the motor craze, I think that of replacing the horn by the bell the most unwise. Low notes are more audible than high ones, and, being rather deaf, my experience is that, although I can perfectly hear the horn of a motor which is overtaking me, the bell of a bicycle is quite inaudible, and whilst cycling I have noticed that almost invariably the grey-headed

thing our querist can do is to tackle the question of improving the mixture-producing properties of his carburettor. The jet might, for instance, be tried with a shade larger hole, and the float needle and the balance weights may be inspected in order to see that they work perfectly. The quantity of air admitted by the main and auxiliary ports may require regulating, and it is possible that the throttle itself does not work perfectly. We are sure that an intelligent overhaul of the carburettor will prove the solution of the difficulty.]

A REGRETTABLE INCIDENT.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—A car with three gentlemen passengers ran over a dog a mile from Ingleton, on the main road from Settle, on Thursday, the 13th, about 1 p.m. Though they were called up and signalled and they looked back, seeing the owner and the dog in the road, they drove on, heedless of all. An eye-witness is my informer, and great indignation is naturally felt at such conduct. I send my card.—Yours truly,

B 56.

WORN VALVE STEMS.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have a car fitted with an Aster two-cylinder engine and find that the valve stems have worn down nearly a quarter of an inch. I conclude the tappets which operate them are similarly worn. Can you

A Group of Cars outside the Motor Club, Coventry Street, London, W.

[It is a common sight to observe a string of motor-cars assembled outside the Motor Club during luncheon time, the privilege of being thus able to leave their vehicles being highly appreciated by many members.]

driver of a cart pays no attention to my bell until I am close to him, whilst a child hears it at a great distance.—Yours truly,

R. F. WILLIAMS.

AN ENGINE DIFFICULTY.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I have a 10-12-h.p. car of a well-known make which gives me a good deal of trouble at times by missing in the rear cylinder. My theory is that the front cylinder fires first, and that the second one does not draw in enough gas, and consequently the charge fails to ignite, as it fires perfectly when running alone with the front cylinder cut off. If you, or any of your readers, can suggest a remedy, I should be very glad to learn how to overcome the difficulty. The tendency to miss is lessened, I find, by advancing the spark abnormally and racing the engine, which, however, is not exactly what one likes to do.—Yours truly,

T. H. J.

[The difficulty described sounds very much like faulty carburation, in which case "T. H. J." is to a certain extent on the right track in assuming that one cylinder gets gas at the expense of the other. Without knowing the particulars of the carburettor and the shape of induction branch it is not easy to indicate precisely just where to say the fault lies. It being a two-cylinder engine, two charges are fired consecutively and then there is a pause. For this reason the first cylinder to receive the gas gets the best chance of obtaining the lion's share if there is any starvation of supply, as would appear to be the case here. The best

suggest any remedy for this, so that the valves may get their original lift.—Yours truly,

M. C.

[A good method to lengthen the valve stems when worn is to drill a piece of metal up a short distance to fit the end of the stem and allow a solid piece at the bottom to rest on the tappets; this need not be made fast, or it will not be possible to get valve stems through the guide; the spring of the valve will be quite sufficient to hold it in place.]

A NEW ROAD IN DEVON.

TO THE EDITOR OF *The Motor-Car Journal*.

SIR,—I beg to say that the new road by Brendon Steep, between Lynton and Lynmouth, is now complete and open for traffic. If motorists are kind enough to help in paying the sum guaranteed by a few local inhabitants, the hotel keepers at Lynton and Lynmouth will kindly receive any subscriptions for that purpose. The gradient is one in ten and the width 20 feet, and it will be found to be quite a good road.—Yours truly,

EDWIN B. JEUNE.

A CORRESPONDENT is desirous of ascertaining the name and address of the makers of a carriage pump known as the Hydrometer No. 3 Robin's patent.

A COVER, size 880 by 120 mm., was found on the roadside between Ware and Buntingford on August 15th. Owner may have same on applying, giving description, to Mr. E. E. Darville, Buntingford, Herts.

IRISH AUTOMOBILE CLUB HILL-CLIMBING COMPETITION.

THE annual hill-climbing competition of the Irish Automobile Club was held at Ballinaslaught Hill, near Newtown Mount Kennedy, in co. Wicklow, on Friday last week.

The cars were divided into classes according to their chassis price, and there were two categories, an Open Section and an Amateur Section. The fastest car in each class was awarded a medal, and in addition there were two cups offered, in the Open and Amateur section respectively, to the car making fastest time after deduction of handicapping allowance. The handicaps were arranged by taking an average of the times accomplished in previous competitions, and although this method of arriving at the result may not be quite so satisfactory as the formula, it has the merit of enabling the competitors to know the winners at the end of the competition.

The cup in the Amateur Section was won by Mr. J. B. Dunlop's 16-20-h.p. Calthorpe, while in the Open Section the honour was secured by Mr. S. T. Robinson's 15-h.p. Clement-Talbot. The distinction of making the fastest time was secured by the six-cylinder Napier, fitted with Dunlop tyres, which in the hands of Mr. Cundy ascended the hill in much faster time than it had done in the Irish trial.

Class C (under £250 chassis price).—N. S. Drury's 12-18-h.p. Riley, 7 min. 24 1-5 sec.; Capt. R. G. O'Callaghan's 10-12-h.p. Swift, 8 min. 17 sec.

Class D (under £350 chassis price).—J. B. Dunlop's 16-20-h.p. Calthorpe, 4 min. 12 sec.

Class E (under £450 chassis price).—S. Pringle's 15-h.p. Clement-Talbot, 3 min. 33 sec.; J. E. Mills' 15-h.p. Clement-Talbot, 3 min. 53 2-5 sec.; T. T. Meeredy's 15-h.p. Clement-Talbot, 5 min. 6 3-5 sec.; Major R. A. F. Kingscote's 14-20-h.p. Germain, 5 min. 18 3-5 sec.

Class F (under £550 chassis price).—George Jacob's 24-h.p. Minerva, 4 min. 13 2-5 sec.

Class G (under £700 chassis price).—C. D. O'Callaghan's 48-h.p. Daimler, 2 min. 46 3-5 sec.; A. V. Fitzherbert's 30-40-h.p. Daimler, 2 min. 52 2-5 sec.

Henry Ford Challenge Cup. Open Section.—Won by (1) S. T. Robinson's 15-h.p. Clement-Talbot, 2 min. 53 2-5 sec., less 42 2-5 sec. handicap—2 min. 10 4-5 sec.; (2) T. Henshaw's 48-h.p. Daimler, scratch, 2 min. 24 sec.; (3) S. F. Edge's 60-h.p. Napier, 2 min. 7 2-5 sec., plus 23 4-5 sec. handicap, 2 min. 31 1-5 sec.

HENSHAW CHALLENGE CUP. (Amateur Section).

(1) J. B. Dunlop's 16-20-h.p. Calthorpe, 4 min. 12 sec., less 1 min. 40 3-5 sec. handicap—2 min. 31 2-5 sec.; (2) C. D. O'Callaghan's 48-h.p.

The Irish Club's Hill-Climbing Competition at Ballinaslaught.—Mr. H. S. Huet starting on his 10-h.p. Royal Starling Car.

SECTION I. (Open).

Class A (two seaters, chassis price under £150).—H. S. Huet's 10-h.p. Royal Starling, 7 min. 5 2-5 sec.; J. P. Phibb's 15-h.p. O.T.A.V., 8 min. 34 3-5 sec.

Class B (two seaters, chassis price under £200).—Chambers Motors' 10-12-h.p. Chambers, 4 min. 41 sec.; R. W. Archer's 15-h.p. Ford, 5 min. 15 4-5 sec.; Smeddie Kennedy's 8-10-h.p. S. and K. Simplex, 6 min. 19 4-5 sec.; Chenard and Walker's 8-9-h.p. C. and W., 7 min. 9 1-5 sec.

Class C (under £250, chassis price).—T. Wood's 14-15-h.p. Belsize, 5 min. 58 4-5 sec.; Capt. R. G. O'Callaghan's 10-12-h.p. Swift, 8 min. 17 sec.

Class D (under £350 chassis price).—J. B. Dunlop's 16-20-h.p. Calthorpe, 4 min. 12 sec.; J. Dallas Pratt's 14-h.p. Vulcan, 5 min. 25 2-5 sec.

Class E (under £450 chassis price).—S. T. Robinson's 15-h.p. Clement-Talbot, 2 min. 53 2-5 sec.

Class F (under £550 chassis price).—P. Robinson's 28-h.p. Minerva, 2 min. 36 sec.

Class G (under £700 chassis price).—T. Henshaw's 48-h.p. Daimler, 2 min. 24 sec.

Class H (over £700 chassis price).—S. F. Edge's 60-h.p. Napier, 2 min. 7 2-5 sec.

SECTION II. (Amateurs).

Class B (under £200 chassis price).—A. K. Moe's 16-h.p. Reo, 4 min. 57 4-5 sec.; J. G. Drury's 8-h.p. Rover, 8 min. 19 3-5 sec.

Daimler, 2 min. 46 3-5 sec., scratch, 2 min. 46 3-5 sec.; (3) S. Pringle's 15-h.p. Clement-Talbot, 3 min. 33 sec., less 42 2-5 sec. handicap, 2 min. 50 2-5 sec.

THE General Petroleum Company have started their own store and canning works in Bournemouth.

FROM Messrs. Leo Ripault and Co., 64A, Poland Street, Oxford Street, W., comes a sample of a new Oleo insulated terminal they have lately put on the market. The device, which is intended for quickly attaching or detaching ignition wires from sparking plugs, accumulators, &c., takes the form of a round vulcanite cap. The bared end of the wire is passed through an opening in the side of the cap and rests in a chamber, into which a brass plug with solid top is screwed to make a perfect contact. The lower end of the brass plug is open, so that it can be pressed on to the special adapter on the sparking plug.

THE ELECTRIC IGNITION COMPANY, LTD., of Sparkbrook, Birmingham, have just issued a large map or explanatory chart illustrating most clearly the proper method of wiring for one, two, three, four, or six cylinder cars, fitted with E.I.C. ignition of any type. This chart also explains the coupling of combined ignition and lighting sets, and a combination which automatically signalises the extinction of either side or tail lamps. We understand that a copy of the map will be sent to anybody applying for the same, and mentioning the M.C.J. We have also received a copy of this company's new catalogue, which gives illustrated descriptions and prices of all the E.I.C. electrical devices, including a number of novelties only just placed upon the market.

CLUBS AND ASSOCIATIONS.

THE MOTOR UNION.

MOTORISTS visiting New Zealand will be glad to learn that Mr. M. Arthur Jenny, of "Wyalla," Nile Street, E., Nelson, who has just become a life member of the Union, will be pleased to give them any information within his power as honorary correspondent of the Union. Mr. Jenny is the first motorist to introduce the car badge of the Union, —the badge of the considerate driver—to New Zealand.

Nearly £130 has been subscribed to the Legal and Legislative Defence Fund of the Motor Union, in response to the appeal recently mentioned in our columns.

An attractive programme has been arranged by the Oxford and District Automobile Club, which is to entertain the Motor Union at its twelfth provincial meeting and dinner to be held at Oxford, on Saturday, September 19th. During the afternoon the visitors will be conducted over the University and other places of interest, and the Oxford and District A.C. will provide tea.

AUTO-CYCLE UNION.

THE next council meeting of the Auto-cycle Union will be held at Leamington Spa on Saturday, October 10th, an invitation having been received from the Town Council to hold the meeting there.

Permission has been received from the highway authorities of the Isle of Man by the Auto-Cycle Union to hold the international tourist

not exceeding ninety by ninety, or equivalent. Gear ratio not to exceed four to one, with twenty-six inch wheels. First prize, gold medal; second, silver medal; third, bronze medal. In the final, Gordon Gibson's 3½-h.p. Triumph was 1st, with W. W. Gunn's 2½-h.p. Eland 2nd, and G. L. Fletcher's 2-h.p. Moto-Reve third; won by over a quarter of a mile. Time, 7 min. 30 2-5 sec.

One Hour Scratch Race for the Motor Cycle Challenge Cup. (Record fifty-one miles 540 yards, by C. R. Collier, on July 13th, 1907.) First prize, £5; second, £2; third £1. Engines not exceeding 76 by 76:—H. V. Colver's (holder) 2½-h.p. Matchless (distance fifty-two miles 1,650 yards) 1; C. R. Collier's 2½-h.p. Matchless (fifty miles 380 yards) 2; R. G. Bell's 2½-h.p. N.S.U. (forty-four miles 1,100 yards) 3. There also ran G. H. Gerhard's 2½-h.p. Brooklands (forty miles 920 yards), F. Toman's 2½-h.p. Laurin and Klement (forty miles 260 yards).

Colver got away with the lead, and, going strongly, gradually overlapped his opponents. At the finish he had travelled two miles 1,270 yards more than Collier, who was second. This is a new world's record for seventy-six by seventy-six machines.

Five Miles Open Handicap, for machines with engines not exceeding seventy-six by seventy-six or equivalent. *M.C.J.* Challenge cup:—

Heat 1.—D. R. Clarke's 2½-h.p. New Century, 10 sec. start, 1; E. W. Caswell's 2½-h.p. Caswell, 50 sec. start, 2. Won by a mile. Time, 7 min. 36 4-5 sec.

A Petrol Motor Launch on the Rhine at Cologne.

trophy race for motor-cycles on Tuesday, September 22nd, over the same course as last year, namely, St. John's, Ballaoraine, Kirkmichael, Devil's Elbow, St. Germain's, Peel, and back to St. Johns. The following is a list of entries received:—C. R. Collier, Matchless, holder (single-cylinder class); H. Rem Fowler, Norton, holder (two-cylinder class); Triumph Cycle Company, 3½-h.p. Triumph; Triumph Cycle Company, 3½-h.p. Triumph; Triumph Cycle Company, 3½-h.p. Triumph; Bat Motor Company, 6-h.p. Bat; W. H. Wells, 5-h.p. Vindec-Special; R. W. Ellis, 3½-h.p. Rex; W. H. Bashall, 3½-h.p. Triumph; G. Gordon-Gibson, 3½-h.p. Triumph; Noel E. Drury, 5-h.p. J.A.P.; C. B. Franklyn, 3½-h.p. Chater-Lea J.A.P.; C. S. Perryman, 5-h.p. Norton.

On Saturday, at the Stadium of the Franco-British Exhibition, the annual race meeting of the Auto-Cycle Union was included in a programme of sports comprising swimming, running, walking, cycling, and other pastimes. The motoring events were a one mile time-trial for flying start, in which there was nine entrants; the five miles tourist handicap, with twenty-three competitors; one hour scratch match, which attracted seven entrants; and a five mile open bicycle handicap for the *M.C.J.* Challenge Cup, this bringing out a dozen competitors.

The results were as follows:—

One Mile Time Trial, for machines with cylinder capacity of seventy-six by seventy-six, or equivalent. First prize, £5; second, £2; third, £1. "Auto-motor Journal" Challenge Cup:—D. R. Clarke's 2½-h.p. New Century, 1 min. 53-5 sec., 1; C. E. Bennett's 2½-h.p. Mansfield, 1 min. 6 2-5 sec., 2; H. V. Colver's 2½-h.p. Matchless, 1 min. 11 3-5 sec., 3. There also ran C. R. Collier's (holder) 2½-h.p. Matchless, 1 min. 13 1-5 sec.; R. G. Bell's 2½-h.p. N.S.U., 1 min. 19 1-5 sec.; E. W. Standing's 2½-h.p. Ioner, 1 min. 28 1-5 sec. G. H. Gerhard's 2½-h.p. Brooklands did not finish.

Five Miles Tourist Handicap, for touring machines with engines

Heat 2.—H. V. Colver's 2½-h.p. Matchless, 5 sec. start, 1; C. E. Bennett's 2½-h.p. Mansfield, scratch, 2. Won easily. Time, 6 min. 24 sec.

Heat 3.—R. G. Bell's 2½-h.p. N.S.U., 40 sec. start, 1; C. R. Collier's 2½-h.p. Matchless, scratch, 2. Won by 300 yards. Time, 6 min. 18 1-5 sec.

FINAL.

THE INCORPORATED INSTITUTION OF AUTOMOBILE ENGINEERS.

THE programme for the session 1908-9 includes the following arrangements:—October 14th, presidential address, "Some problems of the motor-car," by Dugald Clerk, F.R.S., M.Inst.C.E., F.C.S.; November 11th, "A complete test of a modern petrol engine" (power, thermal and mechanical efficiency, exhaust products at various powers and speeds), by Bertram Hopkinson, M.A., M.Inst.C.E., Professor of Mechanism and Applied Mechanics, Cambridge University; December 9th, "How the weight of the motor-car is made up," by Mervyn O'Gorman, M.I.Mech.E., M.I.E.E.

The following papers and discussions have been arranged for the general meetings of the Institution in 1909:—Messrs. F. H. Royce, M.I.Mech.E., "Causes of wear in motor machinery"; G. H. Baillie, "Carburettor experiments"; Horatio Ballantyne, F.I.C., F.C.S., "On specifying the quality of petrol"; F. R. S. Bircham, "The use of small internal combustion engines for marine work"; L. A. Legros

M.I.Mech.E., "Transmission"; E. H. Cozens-Hardy, M.I.Mech.E., M.I.E.E., "Motor-cabs"; Mr. R. Lawrence, M.I.Mech.E., "Valve setting"; Dr. W. Watson, D.Sc., F.R.S., "Petrol engine experiments."

MOTOR CLUB.

Mr. WILBUR WRIGHT is amongst the recently-elected members of the Motor Club, and will shortly be visiting England.

LINCOLNSHIRE.

A MEETING of the committee of the Lincolnshire A.C. was held at Sleaford on Thursday of last week. The situation arising out of the increased police activity on the roads was considered, and a course of action, which will be communicated to members individually, was decided on.

Correspondence between the Manchester A.C. and the Motor Union on the question of affiliation was considered, and it was decided to support an endeavour which is being made by several clubs to induce the Royal A.C. to accept a joint scheme of affiliation together with the Motor Union. This would, it is hoped, avert the disastrous consequences which are likely to result at the end of this year if clubs are bound to affiliate with one or the other and are unable to affiliate with both.

It was decided to hold a meet of the club at Revesby early in September.

The following were elected members of the club:—Messrs. W. H. Watson, Temple Bruer; A. W. Dean, Dowsby Hall; A. E. Dixon, Bourne; and W. S. Royce, Donington.

The 30-cwt. Van recently built by Messrs. Dennis Bros., Ltd., for Messrs. Gurney, Family Grocers, Hereford.

NORTH BERKSHIRE.

ON Thursday of last week the North Berkshire A.C. held a successful gymkhana in the beautiful grounds of Hinton Manor, by invitation of Captain and Mrs. Loder-Symonds. The first event was a Driving Competition, between bowls and various obstacles. The premier prize of gold sleeve-links was awarded to Mr. H. Woodward, who drove a 9-h.p. De Dion, and the second prize to Mr. E. Bond, driving a 27-h.p. Ariel.

The second event was for ladies, Tilting at the Ring, in which the Hon. Ethel Dormer carried off the first prize of an antique clasp, while Miss May Loder-Symonds won the second prize of a gold bracelet; the third, a silver mounted bottle, falling to Miss Woodward.

The meeting was well attended, quite a hundred guests assembling for tea at the Manor, and afterwards inspecting the handsome prizes presented by Captain and Mrs. Loder-Symonds.

MANCHESTER MOTOR.

ON Saturday the Manchester Motor Club held a successful petrol consumption test. Seventeen cars and nine cycles competed, and the event was so successful that it is probable another competition will be held shortly. The positions of the first six cars were:—1, V. G. New (Siddeley); 2, H. Hollingdrake (La Buire); 3, J. H. Charlesworth (Darracq); 4, H. J. Meldrum (Riley); 5, A. B. Albert (Riley); 6, P. A. G. Bell (Bell). The first prize for motor-cycles was won by A. J. Morehouse (34-h.p. Triumph), who did 16½ miles at the rate of 148 miles per gallon. H. Reed (4-h.p. Dot) would have claimed the second prize, but he failed to wait for the official checker. Others making the same mis-

take, the prize went to C. Kettle (Triumph), who went off the course completely, but luckily waited to be checked. The petrol stewards were Messrs. A. J. Bell and F. C. Hunt.

MIDLAND.

THE hon. secretary of the Midland A.C. has issued the following notice to the members:—My Committee had under consideration the question of the dust nuisance, which is largely answerable for the great amount of prejudice now shown in many ways towards motorists in general. May I ask you, on behalf of my Committee, to have the greatest regard for all other users of the highway, both by driving carefully through towns and villages, and by slowing up when passing anyone on the road. I should like to ask you also to use your influence with any of your friends who are motorists.

SCOTTISH.

THE Scottish Automobile Club has intimated substantial objections to the application by the Ayrshire County Council for the fixing of a ten mile limit in the villages of High Fenwick and Minishant.

A meeting of the General Committee of the Club was held in Edinburgh on Monday. Mr. John Adam occupied the chair.

It was reported that application for speed limits had been lodged by the following authorities:—County of Midlothian, Burgh of Broughty Ferry, County of Berwick (Burgh of Coldstream), County of Inverness, County of Sunderland, County of Ayr, and that suitable representation had been submitted to the Secretary for Scotland on the subject.

Further consideration was given to the matter of inconsiderate and fast driving, and the progress of negotiations with the police for co-operation towards suppression of same by timing of cars and otherwise. Reports as to the result of the action already taken were all satisfactory. The chairman reported that representatives of the Club had attended, by invitation, a meeting of the Chief Constables Club of Scotland, at which about forty Chief Constables were present; that they had been very favourably received, and had been asked to submit a memorandum of the proposals of the Club, in writing.

On the recommendation of the Competitions Committee it was agreed to have a closed hill-climb on Cairn-o'-Mount on Saturday, September 19th, and it was agreed to offer prizes under a system of handicap or classification to be determined by the Competitions Committee. It was reported that the Scottish Motor Traders' Association has asked the Club to conduct a hill climb open to members of that body and to cars personally owned by them, on the same day and place, and this was cordially assented to.

A lengthy discussion took place on the subject of trials in 1909, and remits were made to the Trials Committee on the subject.

At the suggestion of the Commercial Vehicle and Industrial Committee it was agreed to hold a commercial vehicle parade in Glasgow on Monday, October 5th, and in connection therewith to inaugurate a prize scheme open to vehicles which have been in use since January 1st, 1908, under which money prizes will be awarded to the drivers who, in the opinion of the Judging Committee, on the basis of condition and appearance of their vehicles, and on other data to be supplied, merit the award. It was agreed to divide the entrants into four classes:—1. Vehicles driven by internal combustion engines, carrying 1 ton or under; 2. Vehicles driven by internal combustion engines, carrying over 1 ton and under 35 cwt.; 3. Vehicles driven by internal combustion engines, carrying over 35 cwt.; 4. Steam vehicles. Three prizes, contingent on a specified number of entries, of £4, £2 and £1 are to be given in each class.

VICTORIAN MOTOR CYCLE.

FROM our Australian correspondent comes a copy of the programme of the Victorian Motor Cycle Club, which has headquarters in the Amateur Sports Club in the Equitable Buildings, Collins Street, Melbourne. Among the most interesting fixtures are the following:—September 26th, hill climb at Heidelberg; October 17th, ten mile road race; November 7-9th, reliability tour; December 5th, track meeting; December 25-27th, Christmas tour.

MR. W. A. YEAMAN made the fastest time in the hill-climbing contest of the Dundee and District Motor Cycle Club at Lunley Den.

AN inter-club meet of motor-cycling organisations in the Midlands was held at Stratford-on-Avon on Saturday last. The clubs participating were the Birmingham, Burton-on-Trent, Coventry, Oxford Bocardo, Sutton Coldfield, and Worcester motor-cycle clubs.

MR. A. N. DEAKIN, of Messrs. Warwick Wright, Ltd., has just started a tour throughout England, Ireland and Scotland on a 1909 pattern 26-h.p. Metallurgique. Mr. Deakin is calling upon all the principal agents as he proceeds, and will be stationed in Dublin throughout next week. Motorists or agents who care to have demonstrated to them the many excellent qualities of these cars should write to Messrs. Warwick Wright, Ltd., at 110, High Street, Marylebone, London, W., making an appointment, when Mr. Deakin will be pleased to call and give facilities for trying the new model.

CASES AGAINST MOTORISTS.

UNLICENSED MOTOR-CAR.

William Bailey, of East Greenwich, was summoned at Greenwich for having kept a motor-car without a licence. It was stated that defendant had two automobiles, and a licence for one only. Mr. Benwell, for the defence, urged that the one car was used for business purposes only, and, after hearing the evidence, Mr. Gill stated that no doubt Mr. Bailey had a *bona fide* belief that a licence could be dispensed with. The car, however, was not constructed or adapted solely for the conveyance of goods, and the defendant must pay a fine of 20s. and 2s. costs.

HEAVY HAULS.

At the Godalming Borough Bench several motorists have been summoned for exceeding the legal limit, for driving without a red light in the rear, and for other offences. At Prescot (Liverpool) Petty Sessions some drivers have also been fined for exceeding the legal limit, as were three others at Worthing a day or two ago. At Rugby fifteen motorists have been fined on one day sums ranging from £1 to £3, the latter being inflicted on the Duke of Westminster and others caught in a trap during the recent Polo week there.

Twenty cases against motorists for exceeding the speed limit were heard at Worthing on the 19th inst. Fines ranged from £2 to £8, the aggregate being about £70.

Two motorists have been fined at Frodsham for exceeding the legal limit between Frodsham and Chester.

Six motorists were fined at Carlisle on Saturday for exceeding the legal limit. Several motorists were fined sums totalling £26 at Hereford for speedy motoring down Swainshill. A number of motorists were summoned at Midhurst Petty Sessions and at Wetherby on Friday of last week, a trio were fined as the result of a trap near Bickerton. Several motorists were fined at Basingstoke on the 19th, and on Saturday fines amounting to £111 were inflicted on drivers of cars at Kingston.

Motorists have also been before the Bench at Warwick (3), Arundel, Haywards Heath (4), Havant, Carlisle, Newcastle (4), Perth (3), Selby (fines, £49), Darlington (£2), Stonehaven (£2), Wokingham (seven cases involving fines of £19).

COMPANY NEWS.

In the case of new companies the file number is given at the end of the particulars.

DENT MOTORS.—£10,000. Private. (99,152).

SAFETY VEHICLE SYNDICATE.—£5,000. To acquire certain patents and an experimental motor-car, and to adopt an agreement between F. Lamplough and the Albany Manufacturing Company, Ltd., of the first part, the said F. Lamplough of the second part, G. J. Shave of the third part, the said Albany Manufacturing Company, Ltd., of the fourth part, R. P. Davis of the fifth part, J. Paterson of the sixth part, and this company of the seventh part. 37, Chancery Lane, W.C. (99,190).

MINERVA MOTORS.—£20,000. 40, Holborn Viaduct, E.C. (99,251).

SWAN, LTD., has been registered with a capital of £10,000 to acquire the business carried on at 212-216 and 228, Pentonville Road, London, N., by B. Swan and C. Swan as S. Swan and Co., and to carry on the business of motor-car dealers, &c. Registered office, 216, Pentonville Road, London, N.

ROAD REPORTS.

HARROW.—Applications are being sent to the Middlesex County Council for a speed limit of ten miles an hour over a number of roads in the Harrow district.

STAFFORD.—A ditch which runs down between the carriage way and the footpath on the steep Radford Bank, near Stafford, for about 150 yards, and has been a source of danger to motorists for some time, has been filled up.

WORTHING.—A direction post has been placed over the fountain in the Town Hall Square at Worthing by the Corporation indicating the Broadwater and Brighton main road. This will be a great convenience to motorists, who are frequently being puzzled owing to the fact that four roads open out from the Circus.

GRANTHAM (Lincs).—Care should be exercised when driving in Anwick, on the Sleaford and Tattershall road, owing to the bridge at Anwick being now under repair.

WEST SUSSEX.—The West Sussex County Council have issued a circular letter to the district authorities pointing out the wear and tear on the main roads by heavy motor traffic. It is understood that some of the local authorities will, as the result of this circular, discountenance such traffic use in official service. The Local Government Board has recently made a regulation at the instance of the County Council of West Sussex, to the effect that motor-cars shall not be driven at a speed exceeding ten miles per hour over so much of the main road from London to Brighton (including High Street) as extends from its junction with Black Dog Lane to the southern boundary of the parish of Ifield, and over so much of the main road from Crawley to Horsham as extends from

its junction with High Street to a point in the main road situate ten yards south of its junction with Springfield Road.

GLASGOW.—The Scottish Automobile Club have given five tons of chemical dust-laying substance to the District Committee of the Lower Ward of Lanarkshire, and this is being laid on two miles of the Glasgow-Stirling road.

THE TIRADE AGAINST MOTORISTS.

THE Coventry Rural District Council have decided to support a memorial to the Prime Minister which is being promoted by the Road Union with reference to securing effective control of motor traffic. The medical officer of health (Dr. C. W. Iliffe), who is also coroner for Coventry and North Warwickshire, said that thousands of unhealthy microbes were being disturbed every day by the pace of the motors and set free in the air; that it was known that people who were obliged to be constantly on the main roads suffered from a peculiar sore throat, and that there was a large increase of asthma. He urged the council to support the memorial on sanitary grounds.

ALLUDING to motor traffic at the Bowland Rural District Council's meeting at Clitheroe, the chairman, Mr. Garnett, said he would like to restrict the speed of automobiles through villages to ten miles per hour, and let motorists drive any speed they liked outside such areas.

THE Rural District Council of Kidderminster has passed a strongly-worded resolution with regard to the destruction caused to roads by motor-cars. Mr. M. Tompkinson, the chairman, speaking as a motorist, said it was time that the Legislature should make it impossible for

An Australian Motor Depot.—The Premises of Messrs. Dalgety and Co., Ltd., Melbourne.

motor-cars to pass through towns and villages at a pace of more than ten miles per hour.

ON the reading of a letter from the Association for Securing Effective Control of Motor Traffic at the Chester Board of Guardians, asking them to support a memorial to the Prime Minister on the subject of motor traffic, a chorus of members replied in the affirmative. One of the members, Mr. Rowe Morris, mentioned the case of a person wanting to sell some hay, who was asked whether the hay had been obtained from a field near the highway. On being informed that it was, the would-be purchaser refused to buy.

THE magistrates at Lancaster are said to be as determined as ever to inflict high fines on the unfortunate motorists brought before them. "We are not on our defence," one is reported to have said to a Press representative. "We are simply applying the law to the best of our ability. It is no use handling some of these gentry of the road with the gloves on. The punishment must fit the crime, and the fines we enforce are little enough when you consider that every time a motorist succumbs to the passion for excessive speed he is a source of great danger to the public. We are not going to allow these flighty gentlemen to run amok along the King's highway if we can stop it."

W. W., in the "Daily Telegraph," asks:—"Why not insist on a readable board, and instead of a dim lamp, which is utterly inadequate for its purpose, make it illegal at night to have other than an enclosed light, with the numbers cut in glass, so that the illumination is behind instead of at the side? I am sure this would enable many more of the offenders to be caught."

THE Rev. F. P. Bacon Phillips, of Crowhurst Rectory, Sussex, suggests that toll gates should be reconstructed to deal with motor-car traffic.

"No kid glove legislation," writes Mr. R. C. Clephan, of Tynemouth. "No car should be allowed to go quicker than the horse anywhere, and at a very much slower pace in the towns and through villages."

THE "Morning Leader" is distinguishing itself by the persistency with which it publishes compiled summaries of alleged motor accidents;

adding, however, that in compiling "this list we have given the circumstances as far as ascertainable under which the accident happened, realising that the blame should not in all cases rest on the motorist."

THE chairman of the Malling (Kent) Police Court has stated that the local Bench will deal severely with all cases of dangerous driving by motorists along the roads of that district.

AUTOMOBILE ACCIDENTS.

ON Sunday a collision occurred at Bromfield, near Ludlow, between a motor-car and a motor-cyclist. The latter was fatally injured.

AT Birmingham on Saturday night an old woman named Mary Taylor was knocked down by a motor-car, and received such injuries that she died in the hospital half an hour after admission. The woman, who is sixty-five years old, was crossing the road at Hockley Hill, when the motor ran into her and knocked her down, the wheels passing over her body. It is stated that the deceased woman came from behind a tramcar, hesitated, and then went forward.

ON Thursday of last week a motor-car ran into a herd of Shorthorn cattle at Shap, on the main north road through the Lake district, and two animals were so badly injured that they have had to be slaughtered.

ON Friday of last week the jury investigated the circumstances of the accident in which Mr. E. H. Timson, head of the firm of Timson Bros., of Birmingham, met his death. This occurred, as already reported, near Denbigh, and in the end the jury without hesitation returned a verdict of "Accidental death," they and the coroner expressing deep sympathy with Mrs. Timson and the family.

POLICE "CONTROLS."

A TRAP has recently been in frequent working order on the London side of Chelmsford.

THERE is a trap at North Gate, Morpeth, on the Great North Road. In reply to the suggestion of the solicitor for the defence of a motorist recently summoned to the Morpeth Sessions, the justices' clerk intimated that the Bench took a great interest in the control and were satisfied with it.

BOROUGHBRIDGE is being frequently made the scene of police trapping operations.

BETWEEN Knutsford and Helmes Chapel, which are eight miles apart, a police trap has been established.

THERE is a police trap in operation on the main road from Oxford to Banbury, about a mile on the Banbury side of the village of Adderbury and three miles from Banbury.

ON Thursday members of the County Constabulary took up a position on the road through the wood to the south of the Memorial Arch at Edzell, near Dundee, and held a watching brief for the law all day. As a result it is said that no less than seven cars were held up and their numbers "taken."

THERE is a ten-mile limit in the village of Bankfoot, near Crieff and Auchterarder, and several motorists exceeding that speed therein have been fined.

POLICE traps are working in the villages of Kingstown and Horrabay, near Carlisle, on the main road to Scotland.

THE police have a trap at Barton, near Preston, in which several motorists have lately been caught.

CONSTABLES, although they have not yet established a control, are very watchful of motorists on the north road from Gosforth.

THERE is a measured distance on the public highway between Dunkeld and Pitlochry, on which several motorists have lately been caught.

A MEASURED distance has been established at Swainshill, near Hereford.

THERE is a measured furlong on the York road, near Bickerton, about three miles from Wetherby.

DURING the recent visit of the Maharajah of Nepal to this country two six-cylinder Napier cars were used continuously by him and his suite for various State and other functions they attended. On his departure the Maharajah expressed himself as being greatly pleased in every way with the satisfaction the cars were giving him.

A 15-H.P. HUMBER car recently supplied to Sir Sydney Olivier, Governor of Jamaica, has met with an untimely fate, it having been destroyed by a fire, which involved a number of carriages and the building in which they were standing. The damage is estimated at £2,000. It is interesting to note that the car was running perfectly up to the date of the contretemps, and had given the utmost satisfaction to the owner.

MESSRS. HANS RENOLD, LTD., Progress Works, Manchester, have just issued a useful booklet dealing with motor chains, which has been specially prepared for the use of motorists. The pamphlet includes a table showing the various sizes (English and French) of the Renold motor chains, together with some instructions for ordering. Then follows a useful list of motor-cars and suitable chains for the same, particulars of chain joints and spare parts. The concluding pages are devoted to hints on the lengthening or shortening of chains, road repairs, the advantages and care of chains, and a lighting-up table. Copies of the booklet can be had on application to the firm.

FORTHCOMING EVENTS.

AUGUST.

29th (Sat.).—Meet of the Lincolnshire Motor Club at Lincoln. Berks A.C. closed hill climb at Wantage. Leicester A.C. gymkhana at Freeman's Meadow, Aylestone Road, Leicester.

Essex M.C. 200 miles Reliability Trial.

30th (Sun.).—Southend M.C. run to Great White Horse Hotel, Ipswich.

31st (M.).—Closing day for the entries for the Army Council Light Tractor Trials to be held in February, 1909.

Daily practice begins for the Isle of Man Trials, from daylight to 8 a.m.

SEPTEMBER.

4th and 5th.—Reliability Consumption Trial of the Essex C.A.C. at Norwich in connection with the R.A.C. provincial meet.

5th (Sat.).—Aston Hill climb of the Herts C.A.A.

Lancashire A.C. gymkhana.

Invitation of Sir D. Salomons to the Kent A.C. to visit Tunbridge Wells.

Provincial meet of the R.A.C. at Norwich.

Richmond M.C.C. week-end at Henley.

12th (Sat.).—Brooklands A.R.C. meet.

13th (Sun.).—Mont Ventoux hill climb of the A.C. Vaclusien.

14th-26th.—International Rubber and Allied Trades' Exhibition at Olympia, London.

17th (Th.).—Touring car competition of the A.C. of Holland through that country.

19th (Sat.).—Provincial meet of the Motor Union at Oxford.

North Middlesex A.C. 100 miles reliability run.

Manchester A.C. reliability run for small cars.

Meet of the Hull Auto Cycle Club and the Lincolnshire Motor Cycle Club at Brigg.

Annual Hill Climb of the Bristol and Gloucestershire A.C.

Lunch of the Kent A.C. at Dover.

Herts C.A.C.'s climb for cars at Aston Hill.

23rd (W.).—Graphic Trophy and Henry Edmunds Competitions in the Isle of Man.

24th (Th.).—The "Four Inch" Race in the Isle of Man.

25th (F.).—Welsh A.C. reliability trial for motor-cycles.

26th (Sat.).—N.W. London M.C.C. petrol quantity judging competition.

Invitation to the Kent A.C. by Mr. and Mrs. Schlenheim to Chislehurst.

27th (Sun.).—Southend M.C. run to White Hart Hotel, Braintree.

OCTOBER.

2nd (F.).—Gaillon Hill Climb.

3rd (Sat.).—Brooklands A.R.C. meeting.

11th (Sun.).—First International Road Congress and Exhibition at Paris.

International long distance balloon race.

11th-18th.—International Road Congress at Paris.

LIGHTING-UP TIMES—LONDON.

Aug. 29th—7.53 — Aug. 31st—7.49 — Sep. 2nd—7.45 — Sep. 4th—7.41
" 30th—7.51 — Sep. 1st—7.47 — " 3rd—7.43 — " 5th—7.39

To find the approximate lighting-up time in August for Birmingham 12 minutes should be added to the above times, 17 for York, 21 for Manchester, and 43 for Glasgow.

BUSINESS NEWS.

PALMER TYRE, LTD., announce that they have found it necessary to transfer their cycle and motor-cycle departments to more commodious premises at 103, St. John Street, Clerkenwell, London, E.C. The motor tyre business will be carried on, as hitherto, at 119, 121, 123, Shaftesbury Avenue, W.C.

THE Daimler Company have made arrangements with Messrs. Dalgety and Company, Ltd., Melbourne, for the sole selling rights of Daimler cars throughout Australia. During the past week six cars, all of the open touring type, were dispatched to them.

THE Secretary to the Admiralty has written to Messrs. Carless, Capel and Leonard conveying the appreciation of the Lords Commissioners of the prompt and obliging manner in which they carried out orders for the supply of petroleum spirit for H.M. submarines at ports on the East Coast during the recent naval exercises in the North Sea.

MESSRS. BROWN BROS., LTD., have put down a special plant for repairing motor lamps and motor horns, and undertake to renovate all makes of such accessories. This work is done in connection with their depot at 22-32, Great Eastern Street, London, E.C.

FROM Messrs. Boulton and Paul, Ltd., engineers, Norwich, comes a copy of their new catalogue of the "Novic" steel boats. Full particulars and illustrations are given of the different types of vessel turned out, as also of the Novic two and four-cylinder marine motors, reverse gears, &c.

APPROPOS of the forthcoming "Four Inch" race in the Isle of Man, we learn that no less than fifteen competitors are pinning their faith to Ilo lubricants.

THE Motor-Car Journal.

LONDON, SATURDAY, SEPTEMBER 5, 1908.

[No. 496.]

Published Weekly by CORDINGLEY & CO., 27-33, Charing Cross Road, London, W.C.

COMMENTS.

TO our Correspondence columns this week Prince Francis of Teck, the chairman of the R.A.C., sends an important letter dealing with the dust problem and the allegations of inconsiderate driving against those who have control of motor vehicles on the roads. Two or three points of particular interest deserve some further consideration, and the suggestion that motorists should provide themselves with speedometers should have the advantage of giving them means of rebutting the police evidence in court. There are many reliable types now upon the market, and the selection of that particularly suited to any make of car is not a difficult matter. His Serene Highness deprecates the use of the siren, as does another correspondent in our columns this week, and the addition of mirrors on the car will add another fitment to the number of accessories required by motorists. The intimation that the club intends to make a study of the causes of, and remedies for, the complaints made against automobilists, and the suggestion that the "technical work of the club should occupy a secondary position at this stage," lead to the hope that the unanimous declaration against Trials of the character that have lately been held, recently noticed in our columns, has not been without its effect on those who direct the policy of the R.A.C. Whilst the central organisation is becoming alive to the exigencies of the situation, and, ignoring the reckless statements of the correspondents of general newspapers, is dealing practically with responsible critics, the provincial clubs are also doing what they can in the matter. The Manchester A.C., for instance, which has no fewer than 350 members, is asking them to report to the committee any case of reckless or careless driving which is considered worthy of censure. The offender is to be communicated with, and where the first caution is not sufficient to secure the desired results, proceedings may be instituted. We trust that the strongly outlined policy of the Manchester Club may have useful effect in silencing much of the opposition which is now heard throughout Lancashire.

The "Four Inch" Race.

A SPECIAL meeting of the committee of the R.A.C. was held at the Club House in Piccadilly, London, W., on Monday, to consider what action, if any, should be taken in regard to the running of the "Four Inch" Motor-car Race in the Isle of Man. Prince Francis of Teck, the chairman of the Club, presided, and, although the proceedings were private, official intimation was subsequently given that a decision had been unanimously come to to the effect that the contest should be held in accordance with the regulations which have already been issued. It was stated that every precaution would be taken to prevent the risk of accidents to competitors and spectators alike, and mention was also made of the fact that no accident had occurred on any previous occasion on which races had been run in the Isle of Man. This, however, ignores the injury to Mr. Clifford Earp

on the occasion of the speed trials at Douglas in connection with the Eliminating Race for the Gordon Bennett race, and also the many mishaps that have occurred while practicing for subsequent events.

The Patents Act.

THE important clause in the new Patents Act relating to foreign manufacturers holding British patents being required to establish factories in this country for the carrying out of their inventions has now come into force, and its application will be watched with interest by the British industry generally and the motor trade in particular. So many cars have special points and accessories which have been patented in this country by foreign firms that it will be interesting to see how quickly the trade is regarded as of sufficient value to warrant commencing the manufacture in Great Britain. Doubtless some firms will consider the advisability of starting works, and rumour is already rife as to the makers of accessories arranging with English firms to take up the manufacture of their patents. This will doubtless do much to further the demand for British made articles in connection with automobilism—a cry that has been fostered with assiduity by motorists in London. Certain it is that many American and German manufacturers in other industries have already arranged for the establishment of new works in England, and negotiations are pending in many towns now angling for more local industries. Every year a large number of patents owned by residents abroad are registered at the British Patent Office, and in 1907 no fewer than 2,901 of German origin were thus notified here, as well as 2,595 from the United States, 769 from France, 257 from Austria-Hungary, 178 from Switzerland, and 111 from Italy.

Milk Delivery by Motor Vehicle.

EVIDENCE of the value of the automobile in connection with the agricultural interests of the country is freely obtainable, and now the "Industrial Motor Review" has shown its service as a means of assisting the marketing of dairy produce. The difficulties of transit so far as concern milk and other perishable food supplies are well known. The ordinary methods of horse and rail delivery are not at all satisfactory, the frequent handling consequent in sending milk from farm to station and thence by rail to be transferred to another vehicle is not at all conducive to its proper condition. We are glad to learn that at least one enterprising firm in the Emerald Isle has seen its way to secure the prompt despatch of the milk direct from the farm to the consumer or the depot, not only with the minimum amount of handling the cans, but also in the shortest space of time. Messrs. Mooney and Sons, of Blackrock, County Dublin, have their dairy and produce farms at Baldonell, and for some months have had in use for milk delivery two motor vehicles, which have proved very serviceable, and have given them undoubted advantages over their rivals. The first car they had in service was an 8-h.p. Benz, the rear of which is fitted with a special platform for two large milk cans or barrels from which the firm's retail delivery can be made as well as the quantities brought direct from the farms. Their second motor vehicle is a 6-h.p.

Daimler fitted with a van body. This was originally used as a char-a-banc, and being very strongly built, has proved its suitability for comparatively heavy loads. In addition to milk, other produce of a perishable nature, such as butter, eggs, and vegetables, are carried.

Stones on the Highway.

A MOTORIST was recently charged at Cirencester for driving a motor-car on the Stratton footpath. It was said by the police constable that he had thus driven for a distance of 100 yards. When spoken to he called attention to the sharp stones on the road surface and later attempted to justify his action before the Bench owing to the roughness of the road. This, however, did not prevent him being fined for having committed the technical offence. So many cases of this kind have lately been brought to our notice that we would suggest to some of the motoring organisations that they should advise the county and police authorities to arrange some scheme of fair dealing to motorists under such circumstances. When the county surveyor has made it really unsafe for the motorist to journey on the roadway it seems scarcely equitable that the police should come along and secure a conviction because the motorist seeks the safety of himself without in any way inconveniencing the public.

Touring in Holland.—The Museum at the Hague.

Progress in Victoria.

In our Club Intelligence this week we give some interesting figures showing the success of the Automobile Club of Victoria, which is now entertaining the principal officers of the United States fleet, at whose disposal seventy-two motor-cars have been placed. We also learn for our correspondent that a Motor Bill will be before the Colonial Legislature in a few weeks based to a great extent on the Act that is in operation in this country, but without any legalised speed limit. An active Roads Committee of the Club has been formed, which is attending to the erection of white enamelled dangersigns with bright red lettering. These are 36 in. wide by 20 in. high, and are now being placed at the most dangerous parts of the roads.

Naming Villages.

THE suggestion of Mr. Cann, who is associated with the organisation of a passenger service on the South Coast, with regard to the names of English villages has been made to us on several occasions. As a matter of fact the postal authorities now require that the local Post Office shall bear the name of the village in which it is situated prominently painted for the convenience of passers by. Recently we have taken up this matter with the Postal authorities so as to secure that those locally responsible shall attend to the work. Mr. Cann goes even further than we have done, and would have the names of the

villages indicated in larger letters, much after the manner of railway stations. The suggestion, of course, is intended to be of particular service to motorists, who are not always able to consult their maps when touring in places which are unfamiliar to them. The work is also attracting the attention of the A.A. and the M.U., and already many such notices have been put up by the former organisation.

Two Charges for one Offence.

THE point which Mr. W. E. Rowcliffe elucidated at the Llanidloes County Sessions last week is one that motorists on tour should remember. They may at any time be called before the Bench on charges which require intricate knowledge to refute. In the case which is referred to on another page, a motorist was charged with reckless and negligent driving, and mention was also made as to speed. Mr. Rowcliffe thereupon referred the magistrates to the appeal case of *Rex v. Wells*, which was decided before Lord Alverstone on May 17th, 1904. That was a case in which the motorist was summoned for driving to the danger of the public and at too great a speed. Lord Alverstone held that the conviction was bad because of duplicity, there being two separate charges contained in the summons. On the finding of that case Mr. Rowcliffe asked the Llanidloes Bench to dismiss the summons, which they did.

A Ducal View.

No one will doubt the agricultural interest of the Duke of Rutland, and his declarations with regard to police traps made on the occasion of the Melton Horse Show should carry weight with those farmers who freely rail against motorists. He asserted, and everyone who drives a car will agree with him, that automobiles should be driven slowly through villages, by cross roads and when rounding corners. These are counsels of safety for the motorist as well as for the public. The driver of a car is fully aware of the danger of rushing along at a headlong pace, and that knowledge should restrain his speed more than any antics of police hiding behind hedges. But, said His Grace, if motorists were on a perfectly straight road he did not see why they should not be allowed to go at a fairly reasonable high speed without being trapped by a policeman who probably did not understand his stop watch.

In the Vet's Service.

THOSE engaged in the business of selling motor-cars should never ignore any likely opening when trying to reach a new circle of clients. We hear of a veterinary surgeon in the city of Salisbury who is now employing a motor-car instead of a horse when making his calls. He is continually visiting training stables, grazing grounds and farms, often as many as twenty or thirty miles apart. The railway service is practically impossible to him, and he finds that by the use of the automobile he can get through twice as much work as formerly in the minimum time. Possibly the idea of the veterinary surgeon calling upon his patients in an automobile may seem somewhat incongruous, but it is only a proof of the ubiquity of the motor-car.

A Defence.

THE chairman of the Midhurst Rural District Council has been arguing with members of that body with regard to the alleged dangers of motor traffic, and, although he did not succeed in converting them to his view, we would express thanks for the stand he made on behalf of the much-maligned motorist. He declared that the suggestion as to the damage to crops by motor-cars was absurd, and hoped that the dust nuisance would be dealt with in some other way than by attacking those who drove motor vehicles. There were many out-of-the-way places in the county which derived immense benefit from the

motor-car traffic, and to do anything to divert them to other districts was scarcely wise from the point of view of the local ratepayers.

Canadian Caution.

◆ In the Colonies, as at home, the tirade against motorists seems to be one of the features of the newspapers in a dull season. It has become so pronounced in Canada that the Ottawa Valley Motor Car Association is sending out a circular urging its members to take care that they recognise the spirit as well as the letter of the law. Securing the number plate, keeping it free from dirt, the renewal of licences and similar minor matters are, it is suggested, points upon which motorists should be careful. If such were the case and automobilists observed these

get down in reasonable time without the incidental cost of cabs' "advance luggage," railway charges, and the many incidental expenses attached to the operation of leaving London. The fact that the journey is made with the minimum inconvenience is another good point in favour of the change.

Motor Meet in Wales.

◆ THE Welsh A.C. has invited the Motor Union to hold a provincial gathering in South Wales early next year. This will be the first Motor Union meet in that important district, and should do much to give a fillip to the whole movement in the Principality. We understand that the Welsh Club has ordered seventeen Motor Union signs and notices, viz., ten "school," two "concealed turning," and five "reduce speed

King Edward's Visit to Austria.—His Majesty accompanying the Emperor Francis on the latter's first run on an automobile. *(Allgemeine Automobil Zeitung.)*

points whenever they went out on their cars, the present severity of the public against them might be minimised.

Motor-'buses for Holiday Traffic.

◆ SOME owners of motor-'buses in London have had a good season this year in connection with the private hire of their vehicles for families going to the seaside—competition with the railway companies that will not be appreciated at the Clearing House, but yet it has done much to minimise the many harassing little worries associated with the annual vacation. Hardly a day has passed without several motor-'buses being seen on the way from London to fashionable resorts on the south coast, filled with the luggage of large families, all of whom are able to

through village." The villages to be dealt with are Parkmill, Sketty and Loughor.

The Trader's Mark.

◆ It is understood that the police, particularly in the London area, are instituting several proceedings under the Motor Car Act, 1903, in connection with the identification marks used by manufacturers and dealers. We would take this opportunity of advising the trade to be careful that they carry out the legal requirements, otherwise, in the present condition of things, they might find themselves in a difficult position in the police court. Whenever a car is sent out from the depot an entry should be made, and the record book should be kept thoroughly up to date.

MOTURING TO THE KILLARNEY OF MEXICO.

(Concluded from page 562.)

THE country around us is the wildest imaginable. We are on the side of a mountain in the midst of apparently endless gulches and ravines. Huge boulders bar the way on every side. We look in vain for some broad outlet and decide to skirt the mountain by means of a narrow trail which winds between two almost solid

Motoring in Mexico.—The Car and its Load.

alls of rock. We push on. The car creaks and strains. The floor of the gulch is rounded, and two of the wheels of the car are always inches higher than their companions. At times we stop in desperation, for the walls of the little canon are so close together that we cannot pass without removing some of the outcropping rocks. But there is no returning, and as long as the motor does not fail we must ever on. After what seems hours of this toil we hear the shout of Juan, who has gone ahead to reconnoitre; we leave the car and rush ahead. No wonder he shouted for joy, for the gully opened out on to a broad slope at whose foot runs a sparkling mountain stream. Across and beyond stretches a vast plain marked by burro trails. The crossing of the ravine took time, for the banks were steep and soft. Fortunately two vaqueros came along as we were about to make the ford, and their strong lariats and powerful ponies proved of the greatest assistance. Once across we follow blindly the winding burro trail until the sun sinks and the tropical night comes on with all its rush. We are just outside the town of Jalos, and, in view of its unsavoury reputation, we decide to sleep in the open, rather than entrust our lives to the mercies of its unscrupulous inhabitants. We park the car, make a frugal meal of hard bread and our tinned provisions, and stretch ourselves out on our blankets in the shelter of the towering cactus palms. It is only in the morning, when refreshed from our previous day's journey, that we have the nerve to look at our speedometer. From 11.30 a.m. to 6 p.m. on the previous day we had only covered 31 kilometres. We pass through Jalos, whose surly denizens view our "devil wagon" with amazement and even fear. No wonder, for we learn that ours is the first four-wheeled vehicle of any kind to reach their inhospitable place.

From Jalos our road winds up another mountain side, and for a full three-quarters of a mile we creep up a 12 per cent. grade covered with shifting rock. At the top, however, a surprise awaits us in the shape of a twenty miles' stretch of perfect road. We rush forward at the best speed our engine can drive us. It seems a motorist's Paradise. Good things cannot last for ever, however, and the perfect carretera came to an end far too soon. An endless succession of winding burro trails, arid fields flanked by barbed wire fences and stone barriers followed. We are in a land of total barrenness. No green trees or verdant, fertile vegetation greets our dust-filled eyes, naught but dull grey sage, mesquite and yellow cactus. Above and all

around tower bleak and desolate hills. The trails wind and twist like a tortured snake. Fortunately, the ground of the valley is hard and firm, and in spite of the twistings and turnings we are able to make good progress. Darkness finds us on a stretch of level country miles from any inhabited place. We light our gas lamps, wrap ourselves in our coats as a protection against the cool night air—for we are 6,000 feet above the level of the sea—and rush onwards until sheer fatigue causes us to camp for the night. This time we consult our speedometer before we turn in, and find to our satisfaction that it registers 192 kilometres for the day.

The next morning we advance over country which is by far the hardest we have yet experienced. The ground is fairly level, but covered with thousands of rocks, ranging in size from marbles to balloons. No matter how slowly and cautiously we proceed the car sways terrifyingly on the unevenness of the ground. The wheels catch between the stones and slip with hard jolts into the crevices of the rocks. The car squeaks and groans, as if protesting against the indignities it is made to endure. By degrees the face of the country changes, the long slopes give way to deep sandy stretches, and this tries our engine to the utmost. Like a human being, the motor staggers and shudders—the wheels shriek as they revolve uselessly in the treacherous element.

Repeatedly we have to fill the radiator and tanks—the heat of the midday combined with the heavy first gear work causes the radiator to steam and emit jets of boiling water. We get through the sand only to come to a turbulent stream running between deep clay banks. Of course there is no bridge and so we cut a path down the steep banks and advance cautiously. Half way across, just as the front wheels are about to grip the outer bank, the rear wheels begin to slip horribly. Water and mud is churned up on every side, the car careens slowly over and sinks helplessly into the glue-like soil. We alight and attach the block and tackle, open the throttle and push and strain with all our might. But it is no use—we are stuck tight.

We clamber to the bank above and survey the country about. As if to mock our efforts, a broad, level prairie covered with tall grass smiles at us. If we could only reach the crest of the

Motoring in Mexico.—Preparing to Camp Out for the Night.

fields it would be easy sailing for a while at least. At last we spy in the distant field a crowd of peon labourers tilling the ground with a primitive plough drawn by several powerful oxen. At first they refuse us assistance, and it is only by means of several silver pesos that we are finally able to enlist their help.

Our way now seems reasonably clear, and our only preoccupation is to clear the chain case from time to time of the weeds and bush that grow around us. The sun was high in the heavens

and we had passed several small streams without difficulty, when without warning we came to the edge of a half-dried arroyo. It was so narrow and so apparently shallow that we made no attempt to measure its depth. This was a decided mistake, as we afterwards learned to our cost. The Doctor and Juan descended, and I rushed forward with all speed. But, horror of horrors, it was like driving into a tank of lye. Half-way across the motor stalled completely, and the car sank gradually down until the wheels were nearly out of sight. At once we lightened the car of all its baggage, and called to our assistance some peon farmers on the bank. But with three oxen pulling and twenty natives hauling and pushing we were unable to even stir the car in its tracks. The clay held it like a chain. For hours we laboured and strained—all to no avail. Visions of our poor car rusting away in this muddy stream came to our minds. Then a bright thought struck the Doctor. Why not divert the stream and dig the car out? One Mexican can accomplish but little, but thirty can work wonders if given the time. Thirty feet above, the banks were low, and here they speedily built an improvised dam of rock, bush, and trees, that lowered the water around the wheels to a mere couple of inches. Another hour and we had dug a swamp of mud away from the frame, and by more laborious pushing and tugging we had climbed out of what once had promised to be the grave of our hopes.

It was impossible to advance without the aid of a guide, and after much parleying we finally secured from a hut in the little town of San Jose de Gracias a man who knew the country. The town is well named, and a prayer of thanksgiving arose when he climbed to the running board. I shall always hold in deep esteem the wonderful eyes of that swarthy Mexican. Verily they were like searchlights to us. In a vast wilderness that remained a mystery even when lighted up by our powerful lamps, he directed us truly from trail to trail, and by eleven that night had piloted us safely to the top of the mountain that overlooked the town of Atotomilco. Far below us glittered the lights of the city, but as the mountain side was dim in the darkness, we decided to wait until morning to make its descent.

And it was well that we did so, for morning brought us a sight that made us hesitate. No trail led down its rocky descent, whose grade was without exaggeration one in three. We made the most complete preparations for the descent. Juan and the Doctor went before with rocks ready to drop before the wheels at a moment's notice, and then with all brakes on, ignition retarded, and using low gear as a brake, we slid slowly down the slope. At the town we were told that ours was the first vehicle that had passed either up or down the hill in twenty-five years before our advent, and I do not doubt it, the drop being about 1,800 feet, and the distance about $1\frac{1}{2}$ miles.

To properly describe the glories of the country through which we passed from here to the lake would tax the powers of a Byron. On either side of the perfect road tall palms nodded and swayed in the warm breeze. As far as the eye could see extended luxuriant groves of orange, lemon, mango and banana. Gone were the trails of mud and rock, the bridgeless chasm and desolate huts of adobe, and in their place appeared as if by magic velvet macadam, gentle streams and the gay villas and quintas of the rich hacendados. The lake was fully up to expectations—a perfect sheet of azure water, whose tangled banks sheltered myriads of quail and duck.

The return trip was uneventful. Without mishap we passed through the flourishing villages of La Barca, Irapuato, La Piedad, Leon and Lagos, arriving in Aguas Calientes after forty-eight hours on the road. The scoffers were hard to find upon our return to the Club. Like the Arabs, they had silently folded their tents and stolen away. But we did not care to gloat over them; we had proved to our entire satisfaction the marvellous possibilities of the present-day motor. To be able to successfully negotiate a country where even horseback riders are hard put to impress one with the full meaning of what good roads are to a country. Truly there can be no more improving influence in the reorganisation of travel and traffic than the strong, sensibly constructed motor-car like the Reo.

THE SOCIAL WHIRL.

KING ALFONSO has been motoring in the grounds at Osborne, and playing golf. The King and Queen, Princess Henry of Battenberg, and the three princes of Battenberg have also been enjoying excursions to Chale, Blackgang, and Ventnor. On Monday His Majesty was in London. After a visit to the Franco-British Exhibition he motored to Euston, whence he went to Rugby for a game of polo, reaching the ground by motor-car from the railway station.

THE PRINCESS LOUISE (Duchess of Argyll) has been the guest of Countess Grosvenor and Mr. George Wyndham, M.P., at Saughton Grange. Her Royal Highness arrived on Saturday, and on Tuesday was driven to Chester in the Duke of Westminster's motor-car, the motoring party including Lady Victoria Manners. The Princess left the Grange on Wednesday.

EARL CARRINGTON, President of the Board of Agriculture, has made an inspection of the Crown small holdings at Moulton Seas-End, near Spalding, and also at Wingland, on the borders of Lincolnshire and Norfolk. His lordship, who travelled by motor-car, was accompanied by Viscount Wolverhampton, the Right Hon. Ailwyn Fellowes, Mr. F. W. Verney, M.P., Mr. Henry Broadhurst, and Mr. Rider Haggard. When he was M.P. for Leicester, Mr. Broadhurst was not always complimentary in his references to motorists. I trust he now recognises the errors of his earlier words.

LORD and Lady Haverham left South Hill Park, Bracknell, Berks., on Saturday for a motor tour in the east of France. This is one of the peerages created two years ago, Baron Haverham being previously known as Sir A. D. Hayter, M.P. for Walsall for many years.

UNFORTUNATELY the weather was unfriendly to the Motor Yacht Club management, and the regatta and Olympic races in Southampton Water were robbed of much of their pleasure by the pitiless wind and rain that hurled defiance at the motor boats. Despite all this, however, there was a large gathering on the official "Enchantress," including, at different times during the meeting, the Duke of Westminster, Lord Howard de Walden, Commander Mansfield Cumming, and other enthusiasts. The Duke of Westminster steered his Wolsley-Siddeley boat in some of the events, having Captain St. George Clowes and Mr. J. F. Laycock as his amateur crew.

WITH reference to the proposed presentation of a motor-car to the Bishop of St. Asaph some difficulty arose owing to his lordship's disinclination to accept the gift, for the same reason as was assigned by the Roman Catholic Bishop referred to last week. His scruples have, however, been overcome on condition that the vehicle is to be recognised as a diocesan car rather than as one belonging personally to the bishop himself. He is about to be visited by Mr. Lloyd George, who has returned from Germany quite enthusiastic as to the motor-car, and doubtless the Chancellor of the Exchequer will be able to arouse something of the same feeling in the mind of his friend the Bishop.

LORD OSBORNE BEAUCLERK has been staying with his mother, the Duchess of St. Albans, at Newtown Anner, Clonmel, and enjoying a series of motor trips into the surrounding country.

MOTOR-CARS are having official recognition at the meetings of the British Association at Dublin this week—not merely for the purpose of excursions, but for the conveyance of members from one section to another. Each morning the vehicles have assembled in the College Park, where they have been drawn up ready for the scientists and learned persons constituting this famous British society. Sir Horace Plunkett took a keen interest in securing the loan of cars from motorists resident in Dublin.

ACCORDING to an Aberdeenshire County Councillor no man, "from the Prime Minister downwards, can be trusted to drive a motor-car and retain his integrity." LOLLIVS.

THE "FOUR-INCH" RACE.

IN our last issue we gave an illustration of one of the Vinot cars which will take part in the "Four-Inch" race. We are now able to reproduce photographs of several more of the vehicles which have been built for the contest. The first

Fig. 1.—The Vulcan "Four-Inch" Car with its driver, Mr. Thomas Rimmer, at the wheel.

picture depicts the Vulcan with its driver, Mr. Thos. Rimmer, at the wheel. The vehicle, which is the production of the Vulcan Motor Co., Ltd., Southport, varies from the standard chassis only in that it is built specially low, and that the artillery wheels will be replaced by Rudge-Whitworth wire wheels in the race. The engine, which has four cylinders 4 in. bore by $4\frac{1}{2}$ in. stroke, is equipped with two separate ignitions, high tension magneto, and accumulator and coil, so that if one fails the other can be used. Three speeds and a reverse are furnished by a gate-controlled gear-box, the final transmission being by a cardan shaft and bevel gear to a live axle.

THE vehicle which the Calthorpe Motor Company, Ltd., have prepared for the race is depicted in Fig. 2, its driver, Mr. Harry Robinson, being shown at the wheel. Except that the chassis has been lightened, the steering put in a more inclined position,

Fig. 2.—The Calthorpe "Four-Inch" Car, with Mr. Harry Robinson at the wheel.

and wire road wheels adopted, the vehicle follows the standard lines of the Calthorpe Company's 25·46-h p. car. The engine has four cylinders, 4 in. bore by $4\frac{1}{2}$ in. stroke. Other details comprising a Hele-Shaw disc clutch, a four-speed "gate" change gear-box giving direct drive on the third speed, and cardan shaft drive.

ONE of the Beeston Humber cars which have been specially

built for the race is shown in Fig. 3. The main frame, which is of pressed nickel-steel, is provided with a secondary one upon which the engine and gear-box are carried. The engine comprises four separately cast cylinders, the bore being 4 in. A noticeable feature of the design is that the whole of the valve tappet gear and cam shafts is carried in the top of the cylinders in a gunmetal case. The valves are set at an angle of 45 degrees and open directly into the domed portions of the cylinders. The ignition is by high-tension magneto, the sparking plugs being located in the centre of the cylinder heads. The carburettor is of the Beeston Humber standard automatic type. The petrol tank is fitted underneath, or near, the driver's seat, and has gravity feed, with auxiliary hand pressure pump. A notable feature of the car is that the radiator is not in the front part of the bonnet, as usual, but is located behind the engine, the water circulation being on the thermo siphon system. The transmission is through a leather-cone clutch, four speed gear-box and cardan shaft to a live axle of the usual Humber floating type, the shafts being carried throughout upon ball bearings. The wheel base of the car is 8 ft. 6 in. with a track of 4 ft. 2 in.; wire wheels of the Humber detachable pattern are fitted, and these will be shod with 815 mm. by 105 mm. tyres.

THE Coventry Humber vehicle, which has been specially designed for the event by Mr. G. W. A. Brown, who will drive it in the race, is shown on page 583. The car presents many

Fig. 3.—One of the Beeston Humber "Four-Inch" Cars.

novel features; the engine is of the four-cylinder type, 3·97 in. bore by 6 in. stroke, and develops nearly 70-h.p. at 2,400 revolutions per minute. Both high-tension magneto and accumulator and coil ignition are provided, and the petrol is fed by pressure to the carburettor. The vehicle is fitted with a four-speed gear-box, the ratio of the speeds being 8·8 to 1, 5·5 to 1, 2·8 to 1, and 1·99 to 1, the direct drive being on the third speed. The live axle is of a novel type, while the road wheels are of the Humber detachable pattern, with 815 by 105 mm. tyres. The wheel base of the car is 8 ft. and the track 4 ft. 3 in.

MOTOR fire appliances in the metropolis continue to increase. The London County Council has just decided to order two additional petrol motor escape vans from Messrs. Merryweather and Sons, of Greenwich. These will be similar to two such machines ordered last year, and when delivered Captain Hamilton, the chief officer, will have no fewer than fifteen motor appliances made by the Greenwich firm.

DURING the last few months the Panhard and Levassor Repair Works of Messrs. W. and G. Du Cros, Ltd., Acton Vale, W., have had many cars in their extensive premises for overhaul, adjustment or repair. At least a score of different types of vehicles have thus been handled by the staff under the direction of Mr. W. A. Turpin, while the Panhards which have been dealt with include some machines of the year 1902.

The Horse Nuisance.

[illegible]

these animals might be taught to regulate their habits to proper opportunities; and that, failing this, some simple contrivance could be arranged, which, attached to the horse or its vehicle, would afford a receptacle for all objectionable matter during the animal's presence on the public roads. Curiously enough, the question has also been engaging the attention of Mr. E. F. Spurrell, the Borough Surveyor of Holborn. In his opinion

private individual, endeavouring to secure for universal use an appliance that can be attached to the shafts of vehicles to intercept the droppings of horses, and is now preparing the conditions of a competition of such devices. He intends to offer the total amount received as a prize to the competitor who may be selected by the managing directors of three or more firms employing large numbers of horses, who will act as judges.

Beware of Thieves !

A BUENOS-AYRES correspondent reports that the motor movement continues to make steady progress in the Argentine Republic. During the present month the Touring Club Argentino is holding a series of flying kilometre speed trials, while the Moto Club Argentino will in October organise a reliability run of cars offered for sale by private owners. The Automovil Club Argentino is making arrangements for an automobile exhibition to be held in the Pavillon Las Rosas, at Palermo, in November. Full particulars of the show can be obtained from M. Victor Laborde, 272, Suipacha, Buenos-Ayres.

GOSSIP FROM PARIS.

It is becoming more evident every day that French motorists do not appreciate too long journeys in their cars. I know from personal acquaintance with many of them who two or three years ago found infinite pleasure in a trip from Paris to the South of France, North Italy, or even Spain, that nowadays few of them would care to undertake such a journey, and even when a motorist would like to hold the steering-wheel during a few days' trip his wife or sister persuades him it would be much nicer to go by train and to use the motor-car for excursions after they have got comfortably installed in an hotel at their contemplated destination. This means of touring is now so frequently adopted that the railway companies, which, fearing their competition at the commencement of the touring movement, tried to put a spoke in the wheel of the motor-cars by refusing to carry them except at an almost prohibitively high rate, are now catering for their custom! They not only convey them on trucks attached to express trains at a reasonable tariff, but are offering other facilities in the way of special covered vans.

WHEN automobilism was in its infancy it was not, perhaps, astonishing there should have been a great many people incapable of appreciating its advantages and who had recourse to all sorts

A Snapshot at Sindal.

of "tricks," as they called them, to annoy motorists. Among those "innocent tricks" were the stretching of wires across the road, destined to cause an accident to the car if not to decapitate the driver. It might be imagined the time for such tricks had passed. It seems it is not. Even close to Paris, between Versailles and Vaucresson, there is an autophobe mayor who quite recently laid five "traps" for automobiles in the shape of deep trenches across the highway. The pretence was they were required to let off the water, but they were made in such a way as to render an accident inevitable to a car going at high speed. Several automobiles were more or less damaged, and it was not till the Automobile Club of Versailles had taken up the matter that the autophobe official consented to suppress the trenches.

THE worst of it is that in the present state of the law the motorist in France is entirely disarmed in presence of such outrages. He can neither obtain damages nor the punishment of anyone who may have dug a trench across the road on the pretence it is wanted to drain off water. I have been told by a deputy that as this "innocent trick" has been practised freely in many parts of France during the present summer, he will, when M. Barthou's Bill for the regulation of automobile traffic comes on for debate in the Chamber, propose that a clause be inserted into it making the setting of such "traps" for motor-cars a punishable offence.

THE catch rhyme at Le Mans has been for many days,

C'est difficile
De voir voler Orville,
C'est bien plus dur
De voir voler Wilbur.

Hundreds of people who went regularly every morning to the artillery range at Auvours to see Wilbur Wright fly sang it to the tune of the Matichiche while driving back and while loitering about the streets of Le Mans till the evening, when they made another useless visit to the American aviator. The weather was not always very propitious, but on several occasions the wind was almost still at dawn and at sunset, and the impatient public failed to comprehend why he did not fly. Most surely under the same circumstances a French aviator would have flown half-a-dozen times if for nothing else but to please the crowd. But Wilbur Wright is not that sort of man. He has come to do work by which he expects to earn £20,000, and he intends to go about it as he thinks best without troubling himself to satisfy the curiosity of people whom he did not invite. I do not say he is wrong, but the effect has been that a lot of journalists have taken offence and are trying to make their readers believe the machine of Wilbur Wright is such a bad one that even he is afraid to mount it. In a word, the American aviator had during the dark, dismal, blustery days at the end of August what is called *une mauvaise presse*. A French aeronaut who is now turning his attention

Mr. H. C. Christiansen at the wheel of the 22-h.p. Delaunay-Belleville which secured the first prize.

to aviation, and who stayed at Le Mans six days to see Wright fly, tells me that though his hope was deceived he does not regret his visit. In examining Wright's aeroplane in its shed he learned a lesson which will not be lost. Nevertheless he said, "But, after all, I do not understand why the Wrights made so much mystery about their aeroplane, while the French aviators were, so to say, building and experimenting their machines in public."
